'Splitting' may help us to understand one way in which disability is seen as part of a system in which value is attributed to body parts. The disabling of the body part or function is then part of a removal of value. The gradations of value are socially determined, but what is striking is the way that rather than being incremental or graduated, the assignment of the term 'disabled,' and the consequent devaluation are total. That is, the concept of disabled seems to be an absolute rather than a gradient one. One is either disabled or not. Value is tied to the ability to earn money. If one's body is productive, it is not disabled. People with disabilities continue to earn less than 'normal' people and, even after the passage of the Americans with Disabilities Act, 69 percent of Americans with disabilities were unemployed.⁵ Women and men with disabilities are seen as less attractive, less able to marry and be involved in domestic production.

The ideology of the assigning of value to the body goes back to pre-industrial times. Myths of beauty and ugliness have laid the foundations for normalcy. In particular, the Venus myth is one that is dialectically linked to another. This embodiment of beauty and desire is tied to the story of the embodiment of ugliness and repulsion. So the appropriate mythological character to compare the armless Venus with is Medusa.⁶ Medusa was once a beautiful sea goddess who, because she had sexual intercourse with Poseidon at one of Athene's temples, was turned by Athene into a winged monster with glaring eyes, huge teeth, protruding tongue, brazen claws, and writhing snakes for hair. Her hideous appearance has the power to turn people into stone, and Athene eventually completes her revenge by having Perseus kill Medusa. He finds Medusa by stealing the one eye and one tooth shared by the Graiae until they agree to help him. Perseus then kills Medusa by decapitating her while looking into his brightly polished shield, which neutralizes the power of her appearance; he then puts her head into a magic

5. *New York Times*, October 27, 1994, A22 [Davis's note]. The Americans with Disabilities Act was passed in 1990.

6. The pairing of beauty with ugliness is further carried out in Venus's marriage to Vulcan, who is himself both ugly and disabled by his lameness. Lameness tends also to be associated in an ableist way with impotence—as it is, for example, in W. Somerset Maugham's *Of Human Bondage* [1915; Davis's note]. Davis gives one version of the myth. In most accounts, Medusa is one of

three monstrous sisters, the Gorgons, the sight of whom turns the gazer to stone. The hero Perseus (the son of Zeus, king of the gods, and the mortal Danaë) is able to kill her, helped by the gods and by the coerced Graiae, the Gorgons' sisters. Poseidon is the Greek god of the sea; Athene (Athena), the Greek goddess of war, the arts and crafts, and wisdom. Vulcan is an Italian fire-god, identified with the Greek Hephaestus, god of fire and especially the forge.

wallet that shields onlookers from its effects. When Athene receives the booty, she uses Medusa's head and skin to fashion her own shield.

In the Venus tradition, Medusa is a poignant double. She is the necessary counter in the dialectic of beauty and ugliness, desire and repulsion, wholeness and fragmentation. Medusa is the disabled woman to Venus's perfect body. The story is a kind of allegory of a 'normal' person's intersection with the disabled body. This intersection is marked by the power of the visual. The 'normal' person sees the disabled person and is turned to stone, in some sense, by the visual interaction. In this moment, the normal person suddenly feels self-conscious, rigid, unable to look but equally drawn to look. The visual field becomes problematic, dangerous, treacherous. The disability becomes a power derived from its otherness, its monstrosity, in the eyes of the 'normal' person. The disability must be decapitated and then contained in a variety of magic wallets. Rationality, for which Athene stands, is one of the devices for containing, controlling, and reforming the disabled body so that it no longer has the power to terrorize. And the issue of mutilation comes up as well because the disabled body is always the reminder of the whole body about to come apart at the seams. It provides a vision of, a caution about, the body as a construct held together willfully, always threatening to become its individual parts—cells, organs, limbs, perceptions—like the fragmented, shared eye and tooth that Perseus ransoms back to the Graiae.

In order to understand better how normalcy is bred into ways of viewing the body, it might be productive to think about the body as it appears in art, photography, and the other visual media. There has been a powerful tradition in Western art of representing the body in a way that serves to solidify, rather early on in history, a preferred mode of envisioning the body. This tradition, identified by Kenneth Clark, has been most clearly articulated in the 'nude'. The nude, as Clark makes clear, is not a literal depiction of the human body but rather a set of conventions about the body: 'the nude is not the subject of art, but a form of art.' Or, as he says, the nude is 'the body re-formed.'⁷ If that is the case, then the nude is really part of the development of a set of idealized conventions about the way the body is supposed to look.

While some nudes may be male, when people talk about 'the nude' they most often mean the female nude. Lynda Nead, in a feminist correction of Clark, points out that 'more than any other subject, the female nude connotes "Art."⁸ And in that tradition, the Venus becomes the vortex for thinking about the female body. The Venus is, rather than a subject, a masculine way of fashioning the female body, or of remaking it into a conceptual whole.

I emphasize the word 'whole,' because the irony of the Venus tradition is that virtually no Venuses have been preserved intact from antiquity.

9. Adolf Furtwängler (1853–1907), German classical archaeologist; see his *Meisterwerke der Griechischen Plastik* (1893, *Masterworks of Greek Sculpture*).

1. Clark, *The Nude*, p. 89 [Davis's note].

Indeed, one of the reasons for the popularity of the Venus de Milo was that from the time it was discovered in 1820 until 1893 when Furtwängler's⁹ scholarship revealed otherwise, the statue was, according to Clark, 'believed to be an original of the fifth century and the only free-standing figure of a woman that had come down from the great period with the advantage of a head.'¹

The mutilation of the statues is made more ironic by the fact that their headless and armless state is usually overlooked by art historians—barely referred to at all by Clark, for example, in the entirety of his book. The art historian does not *see* the absence and so fills the absence with a presence. This compensation leads us to understand that in the discourse of the nude, one is dealing not simply with art history but with the reception of disability, the way that the 'normal' observer compensates or defends against the presence of difference. This is a 'way of seeing' not often discussed in art criticism. Of course, one can consider that art historians are really just making the best of a bad situation, but it is possible to make a number of further observations.

First of all, the headlessness and armlessness of Venuses link them, structurally, with the Medusa tradition. Many of these Venuses have in effect been decapitated. There seems to be a reciprocal relationship between the decapitations of Medusa in myth and of Venus in reality. It seems that the Venus is really only made possible in coordination with the Medusa—that Aphrodite can romp because Medusa can kill. So it is a fitting dialectic that Medusa's beheading is contained within every broken Venus. The speechlessness of the art historian about the mutilation of his objects of beauty and desire is the effect of his metaphoric transformation to stone. This lapsus² in speech is really an avoidance, a wish to avoid the castrating, terrifying vision of Medusa—the disabled, the monster, who is also the disabler. In a larger sense, as Nead suggests, all visions of the female nude, particularly in the Venus tradition, are attempts by male artists and critics to gird themselves against the irrationality and chaos of the body—particularly the female body:

It begins to speak of a deep-seated fear and disgust of the female body and of femininity within patriarchal culture and of a construction of masculinity around the related fear of the contamination and dissolution of the male ego.³

In thinking about disability, one can extend this argument and say that the fear of the unwhole body, of the altered body, is kept at bay by depictions of whole, systematized bodies—the nudes of Western art. The unwhole body is the unholy body. Or as Kaja Silverman points out⁴ about images of the body in film, society creates a 'protective shield' that insulates it against the possibility of mutilation, fragmentation, castration.

2. Falling, slip (Latin); slips of the tongue are discussed by Freud in *The Psychopathology of Everyday Life* (1901).

3. Nead, *The Female Nude*, pp. 17–18 [Davis's note].

4. Kaja Silverman, "Historical Trauma and Male Subjectivity," in *Psychoanalysis and Cinema*, ed. E. Ann Kaplan (New York: Routledge, 1990), p. 14 [Davis's note].

Indeed, the systematization of the body by artist and critic suggests a linearity, a regularity, a completeness that belie the fragmentary, explosive way the body is constitutively experienced. Clark exemplifies this systematic approach in discussing the Esquiline Venus of the fifth century, the first embodiment of these conventions.

But she is solidly desirable, compact, proportionate; and, in fact, her proportions have been calculated on a simple mathematical scale. The unit of measurement is her head. She is seven heads tall; there is the length of one head between her breasts, one from breast to navel, and one from the navel to the division of the legs . . . fundamentally this is the architecture of the body that will control the observations of classically minded artists till the end of the nineteenth century.⁵

The amnesia of art historians to the subject of mutilation and decapitation (the Esquiline Venus has no head) is not accidental. The most we get from Clark in his entire book is one wistful mention of a Greco-Roman depiction of the three graces as 'a relief in the Louvre, headless, alas.'⁶ The 'alas' speaks volumes. This amnesia, this looking away from incompleteness, an averting of the attention, a sigh, is the tip of a defensive mechanism that allows the art historian still to see the statue as an object of desire. So the critic's aim is to restore the damage, bring back the limbs, through an act of imagination.⁷ This phenomenon is not unlike the experience of 'phantom limb,' the paradoxical effect that amputees experience of sensing their missing limb. In the case of the art historian, the statue is seen as complete with phantom limbs and head. The art historian does not see the lack, the presence of an impairment, but rather mentally reforms the outline of the Venus so that the historian can return the damaged woman in stone to a pristine origin of wholeness. His is an act of reformation of the visual field, a sanitizing of the disruption in perception.

This is the same act of imagination, or one might say control, that bans from the nude the representation of normal biological processes. For example, there are no pregnant Venuses, there are no paintings of Venuses who are menstruating, micturating, defecating—lactating and lacrimating⁸ being the only recognized activities of idealized women. There are no old Venuses (with the exception of a Diana by Rembrandt⁹). One might think of a pregnant Venus as a temporarily disabled woman, and as such banned from the reconstruction of the body we call 'the nude.' Clark distinguishes between prehistoric fertility goddesses, like the Willendorf Venus,¹ images

5. Clark, *The Nude*, p. 75 [Davis's note].

6. *Ibid.*, p. 91 [Davis's note]. The Graces: daughters of Zeus who personified beauty and grace, they were the constant attendants of Aphrodite/Venus.

7. This phenomenon corresponds to the filmgoer's experience of watching stories of disability. As Martin Norden points out, when disability is depicted in film, there is a strong tendency to erase or fix the "problem" by the end of the film (*Cinema of Isolation: A History of Physical Disability in the Movies* [New Brunswick, N.J.: Rutgers University Press, 1994], pp. 59ff.). For instance, no one recalls that Luke Skywalker in *Star Wars* [*The Empire Strikes Back*, 1980] lost

his lower arm in a battle with his father, Darth Vader. At the end of the film, a techno-intensive prosthesis is fitted on his stump, and for the sequels he acts as if his hand had grown back. No short-circuits or balky fingers are ever a problem in the sequels [Davis's note].

8. Weeping.

9. Rembrandt van Rijn (1606–1669), Dutch painter. Diana: a Roman goddess identified with the Greek Artemis, goddess of the hunt.

1. A 4" limestone statue of a woman (ca. 25,000 B.C.E.), found near the Austrian town of Willendorf in 1908; its head is covered with a braided pattern, and it is obese, with huge breasts.

of fertility and pregnancy, and the differently ideal Grecian versions which are never pregnant. As Nead notes, 'Clark alludes to this image of the female body [the Willendorf Venus] as undisciplined, out of control; it is excluded from the proper concerns of art in favour of the smooth, uninterrupted line of the Cycladic [Greek] figure.'² As artists and art historians shun the fluids and changes in shape that are incompatible with the process of forming the 'regular' body, the evidentiary record of mutilated Venuses must be repressed by a similar process.

A cautionary word must be said on the decapitated and armless Venuses. While it is true that male statues equally are truncated, the incompleteness of the female statues suggests another obvious point that has been repressed for so long—violence. Did all these statues lose their arms and heads by sheer accident, were the structurally fragile head and limbs more likely to deteriorate than the torso, were there random acts of vandalism, or was a particular kind of symbolic brutality committed on these stone women? Did vandals, warriors, and adolescent males amuse themselves by committing focused acts of violence, of sexual bravado and mockery on these embodiments of desire? An armless woman is a symbol of sexual allure without the ability to resist, a headless nude captures a certain kind of male fantasy of submission without the complication of the individuality and the authority granted by a face, even an idealized one. We do not know and will probably never know what happened to these statues, although the destruction of the Parthenon³ figures has been documented as done by occupying soldiers. The point is that the violence against the body, the acts of hacking, mutilation and so on, have to be put in the context we have been discussing. An act of violence against a female statue is constitutively different from that against a male statue—and these are acts that can be placed in a range of terrorist acts against women during war. Such acts create disabled people, and so, in a sense, these Venuses are the disabled women of art. To forget that is again to commit acts of omission of a rather damning nature.

Of course, a statue is not a person. But as representations of women, the Venus statues carry a powerful cultural signification. The reaction to such statues, both by critics and other viewers, tells much about the way in which we consider the body both as a whole and as incomplete. One point to note is that the art historian, like Clark, tends to perform a complex double act. On the one hand, the critic sees the incomplete statue as whole, imagines the phantom limbs in order to defend against incompleteness, castration, the chaotic or 'grotesque body,' as Peter Stallybrass and Allon White have, using Bakhtinian terminology, called it.⁴ On the other hand (if indeed our standard is *two* hands), the critic and the artist are constantly faced with the fragmentary nature of the body, analyzing parts, facing the gaze of the missing part that must be argued into existence.

2. Nead, *The Female Nude*, p. 19 [Davis's note].

3. The chief temple to Athena, built (447–432 B.C.E.) on Athens' Acropolis; the Acropolis was seized by the Turks in 1458, and during a Venetian bombardment in 1687 the explosion of a powder magazine in the temple destroyed the center of the building. Many sculptures decorated the structure.

4. See Peter Stallybrass and Allon White, *The Politics and Poetics of Transgression* (Chicago: University of Chicago Press, 1987) [Davis's note]. The Russian theorist MIKHAIL BAKHTIN (1895–1975) discusses the "carnavalesque" and the "grotesque body" in *Rabelais and His World* (1965).

The model for the fragmentary nature of the nude is best illustrated by the famous story of Zeuxis, as told by Pliny.⁵ When Zeuxis painted his version of Aphrodite, he constructed her from the parts of five beautiful young women of his town of Kroton. His vision of the wholeness of Aphrodite was really an assemblage of unrelated parts. Likewise, the critic in regarding the whole nude must always be speaking of parts: 'their torsos have grown so long that the distance from the breasts to the division of the legs is three units instead of two, the pelvis is wide, the thighs are absurdly short.'⁶ The whole can only be known by the sum of its parts—even when those parts are missing. John Barrell has detailed the reactions of eighteenth-century men to the Venus de' Medici, and noted how they tended to examine every detail of the statue.⁷ Edward Wright, for example, tells observers to 'strictly examine every part' and a typical account read thus:

One might very well insist on the beauty of the breasts. . . . They are small, distinct, and delicate to the highest degree; with an idea of softness. . . . And yet with all that softness, they have a firmness too. . . . From her breasts, her shape begins to diminish gradually down to her waist; . . . Her legs are neat and slender; the small of them is finely rounded; and her feet are little, white, and pretty.⁸

Another carped:

The head is something too little for the Body, especially for the Hips and Thighs; the Fingers excessively long and taper, and no match for the Knuckles, except for the little Finger of the Right-Hand.⁹

These analyses perform a juggling act between the fragmentation of the body and its reunification into an hallucinated erotic whole.¹ In imagining the broken statues, the critic must mentally replace the arms and the head, then criticize any other restoration, as does Clark in attacking the reconstruction of the Venus of Arles: 'the sculptor Girardon² . . . not only added the arms and changed the angle of the head, but smoothed down the whole body, since the King was offended by the sight of ribs and muscles.'³ The point here is that the attempt of the critic to keep the body in some systematic whole is really based on a repression of the fragmentary nature of the body.

One might also want to recall that for the Greeks these statues, while certainly works of art, were also to be venerated, since they were representations of deities. For the Greeks, Aphrodite was not a myth; she was a goddess whose domain was desire. It somehow seems appropriate that the ritualistic or reverential attitude toward these statues, pointed out by Walter Benjamin,⁴

3. Clark, *The Nude*, p. 87 [Davis's note].

indeed their very appearance in stone (which Page Dubois sees as a cultic representation of the bones of the female spirits⁵), has been reproduced in the attitude of that most secular of worshippers, the art critic. For the Venus has a double function: she is both a physical and a spiritual incarnation of desire. In that double sense, the critic must emphasize her spiritual existence by going beyond her physical incarnation in fallible stone, and her mutilations, to the essential body, the body of Desire, the body of the Other.

We can put this paradox in Lacanian terms. For Lacan, the most primitive, the earliest experience of the body is actually of the fragmented body (*corps morcelé*).⁶ The infant experiences his or her body as separate parts or pieces, as 'turbulent movements.' For the infant, rather than a whole, the body is an assemblage of arms, legs, surfaces. These representations/images of fragmented body parts Lacan calls *imagos* because they are 'constituted for the "instincts" themselves.'

Among these *imagos* are some that represent the elective vectors of aggressive intentions, which they provide with an efficacy that might be called magical. These are the images of castration, mutilation, dismemberment, dislocation, evisceration, devouring, bursting open of the body, in short, the *imagos* that I have grouped together under the apparently structural term of *imagos of the fragmented body*.⁷

The process that builds a self involves the enforced unifying of these fragments through the hallucination of a whole body, 'a Gestalt, that is to say, in an exteriority,' as Lacan has pointed out. The process 'extends from a fragmented body-image to a form of its totality . . . and, lastly, to the assumption of the armour of an alienating identity.'⁸ When the child points to an image in the mirror—at that stage Lacan calls 'the mirror phase'—the child recognizes (actually misrecognizes) that unified image as his or her self. That identification is really the donning of an identity, an 'armor' against the chaotic or fragmentary body.

In this sense, the disabled body is a direct *imago* of the repressed fragmented body. The disabled body causes a kind of hallucination of the mirror phase gone wrong. The subject looks at the disabled body and has a moment of cognitive dissonance, or should we say a moment of cognitive resonance with the earlier state of fragmentation. Rather than seeing the whole body in the mirror, the subject sees the repressed fragmented body; rather than seeing the object of desire, as controlled by the Other, the subject sees the true self of the fragmented body. For Lacan, because the child first saw its body as a 'collection of discrete part-objects, adults can never perceive their bodies in a complete fashion in later life.'⁹ This

6. The term *corps morcelé* is a bit more vivid than "fragmented body," the now-standard translation of the term into English. *Morceler* is defined

as "to divide up into pieces." It more actively carries the concept of chopping, cutting, or hacking. Thus the *corps morcelé* might more accurately be called "the cut-up body." However, I will retain the standard usage, for the sake of uniformity [Davis's note].

7. Lacan, "The Mirror Stage" [see above], in *Écrits: A Selection*, trans. Alan Sheridan (New York: Norton, 1977), pp. 2, 11 [Davis's note].

9. Ellie Ragland-Sullivan, *Jacques Lacan and the Philosophy of Psychoanalysis* (Urbana: University of Illinois Press, 1987), p. 21 [Davis's note].

repressed truth of self-perception revolves around a prohibited central, specular moment—of seeing the disabled body—in which the ‘normal’ person views the Medusa image, in which the Venus-nude cannot be sustained as a viable armor. In Lacanian terms, the *moi*¹ is threatened with a breaking-up, literally, of its structure, is threatened with a reminder of its incompleteness. In a specular, face-to-face moment, the ego is involved in what J. B. Pontalis calls ‘death work,’ which involves the ‘fundamental process of unbinding [of the ego], of fragmentation, of breaking up, of separation, of bursting.’² Thus the specular moment between the armored, unified self and its repressed double—the fragmented body—is characterized by a kind of death-work, repetition compulsion in which the unified self continuously sees itself undone—castrated, mutilated, perforated, made partial. In this context, it is worth noting that the Venus tradition involves castration at its very origin. Aphrodite is said to have been born from the foam of Uranus’s genitals which Cronus threw into the sea after castrating his father.³ The dynamic is clear. Male mutilation is mitigated by the creation of the desirable female body. The disabled body is corrected by the wholeness of the constructed body of the nude. But, as has been noted, the emphasis on wholeness never entirely erases the foundation of the Venus tradition in the idea of mutilation, fragmented bodies, decapitation, amputation.

If we follow these terms, the disabled Venus serves as an unwanted reminder that the ‘real’ body, the ‘normal body,’ the observer’s body, is in fact always already a ‘fragmented body.’ The linking together of all the disparate bodily sensations and locations is an act of will, a hallucination that always threatens to fall apart. The mutilated Venus and the disabled person, particularly the disabled person who is missing limbs or body parts, will become in fantasy visual echoes of the primal fragmented body—a signifier of castration and lack of wholeness. Missing senses, blindness, deafness, aphasia, in that sense, will point to missing bodily parts or functions. The art historian in essence dons or retains the armor of identity, needs the armor as does Perseus who must see Medusa through the polished shield. The art historian’s defense is that mirror-like shield that conjures wholeness through a misrecognition linking the parts into a whole.

What this analysis tells us is that the ‘disabled body’ belongs to no one, just as the normal body, or even the ‘phallus’ belongs to no one. Even a person who is missing a limb, or is physically ‘different,’ still has to put on, assume, the disabled body and identify with it.⁴ The disabled body, far from being the body of some small group of ‘victims,’ is an entity from the earli-

1. Me (French), a Lacanian term for the self.

2. Ctd. in Ragland-Sullivan, *Jacques Lacan*, p. 70 [Davis’s note]. Pontalis (1924–2013), French psychoanalyst.

3. Robert Graves, *The Greek Myths* (New York: Penguin, 1957), p. 49 [Davis’s note]. Uranus (literally, “Sky”; Greek), the first ruler of the world, was born from Gaia (Earth); Cronus was the youngest of their children (and was himself overthrown by Zeus).

4. Irving Kenneth Zola pointed out that people with disabilities are mostly born into “normal”

families. Thus they are socialized into ableist culture and have to adopt their disabled identity. “We think of ourselves in the shadows of the external world. The very vocabulary we use to describe ourselves is borrowed from the society. We are *de*-formed, *dis*-eased, *dis*-abled, *dis*-ordered, *ab*-normal, and most of all an *in*-valid” (“Communication Barriers between ‘the Able-Bodied’ and ‘the Handicapped,’” in *Psychological and Social Impact of Physical Disability*, ed. Robert P. Marinelli and Arthur E. Dell Orto [New York: Springer, 1984], p. 144) [Davis’s note].

est of childhood instincts, a body that is common to all humans, as Lacan would have it. The 'normal' body is actually the body we develop later. It is in effect a Gestalt—and therefore in the realm of what Lacan calls the Imaginary. The realm of the 'Real' in Lacanian terms is where the fragmented body is found because it is the body that precedes the ruse of identity and wholeness. Artists often paint this vision, and it often appears in dreams 'in the form of disjointed limbs, or of those organs represented in exoscopy . . . the very same that the visionary Hieronymus Bosch has fixed for all time.'⁵

In understanding this point, we can perhaps see how the issue of disability transcends the rather narrow category to which it has been confined. Just as, I claim, we readers are all deaf, participating in a deafened moment, likewise, we all—first and foremost—have fragmented bodies. It is in tracing our tactical and self-constructing (deluding) journeys away from that originary self that we come to conceive and construct that phantom goddess of wholeness, normalcy, and unity—the nude.

One might even add that the element of repulsion and fear associated with fragmentation and disability may in fact come from the very act of repressing the primal fragmentariness of the body. As Freud wrote, 'the uncanny is in reality nothing new or foreign, but something familiar and old-established in the mind that has been estranged only [in] the process of repression.'⁶ The feelings of repulsion associated with the uncanny, *das Unheimlich*, the unfamiliar, are not unlike the emotions of the 'normal' when they are visualizing the disabled. The key to the idea of the uncanny is in its relation to the normal. *Heimlich* is a word associated with the home, with familiarity—and with the comfortable predictability of the home. The disabled body is seen as *unheimlich* because it is the familiar gone wrong. Disability is seen as something that does not belong at home, not to be associated with the home. Freud notes that the terror or repulsion of the uncanny is ambivalent, is found precisely in its relation to and yet deviance from the familiar. That the uncanny can be related to disability is made clear when Freud cites specifically 'dismembered limbs, a severed head, a hand cut off at the wrist' as *unheimlich*.⁷ What is uncanny about dismemberment seems to be the familiarity of the body part that is then made *unheimlich* by its severing. As Freud wrote, 'the *unheimlich* is what was once *heimisch*, homelike, familiar; the prefix "un" is the token of repression.'⁸

But in this equation I think Freud is actually missing the earlier repression of the inherently fragmentary nature of the original body *imago*. The homeliness of the body, its familiarity as whole, complete, contained, is based on a dynamic act of repression. Freud is assuming that the whole body is an *a priori* given, as he had done with the concept of the ego. But as Lacan has shown more than adequately, the ego is a multifaceted structure

5. Lacan, "The Mirror Stage," p. 4 [Davis's note]. "Exoscopy": a view from the outside. Bosch (ca. 1460–1516), Dutch painter whose best-known works feature grotesque figures that sometimes combine human, animal, vegetable, and inanimate parts.

8. *Ibid.*, p. 51 [Davis's note].

to be understood in its philosophical complexity. Likewise the ground of the body, its materiality given by Freud, needs a re-analysis. The route of disability studies allows for this revisioning. In this process, the *heimisch* body becomes the *unheimlich* body, and the fragment, the disabled parts, can be seen as the originary, familiar body made unfamiliar by repression. Dominant culture has an investment in seeing the disabled, therefore, as uncanny, as something found outside the home, unfamiliar, while in fact where is the disabled body found if not at home?

I have been concentrating on the physical body, but it is worth considering for a moment the issue of madness. While mental illness is by definition not related to the intactness of the body, nevertheless, it shows up as a disruption in the visual field. We 'see' that someone is insane by her physical behavior, communication, and so on. Yet the fear is that the mind is fragmenting, breaking up, falling apart, losing itself—all terms we associate with becoming mad. With the considerable information we have about the biological roots of mental illness, we begin to see the disease again as a breaking up of 'normal' body chemistry: amino acid production gone awry, depleted levels of certain polypeptide chains or hormones. Language production can become fragmentary, broken, in schizophrenic speech production. David Rothman⁹ points out that in eighteenth- and nineteenth-century America, insanity was seen as being caused by the fragmented nature of 'modern' life—particularly the pressures brought to bear on people by a society in which economic boundaries were disappearing. This fragmenting of society produced a fragmentation of the individual person. So the asylums that sprung up during this period recommended a cure that involved a removal from the urban, alienated, fragmented environment to rural hospitals in which order and precision could be restored. 'A precise schedule and regular work became the two characteristics of the best private and public institutions. . . . The structure of the mental hospital would counteract the debilitating influences of the community.' As Rothman notes, 'Precision, certainty, regularity, order' were the words that were seen as embodying the essence of cure.¹ The mind would be restored to 'wholeness' by restoring the body through manual labor. However, needless to add, one had to have a whole body to have a whole mind. The general metaphor here continues to be a notion of wholeness; order, clean boundaries, as opposed to fragmentations, disordered bodies, messy boundaries.

If people with disabilities are considered anything, they are or have been considered creatures of disorder—monsters, monstrous. Leslie Fiedler has taken some pains to show this in his book *Freaks*.² If we look at Mary Shelley's *Frankenstein*,³ we find some of the themes we have been discussing emerge in novelistic form. First, we might want to note that we have no name for

9. American social and medical historian (b. 1937).

2. *Freaks: Myths and Images of the Secret Self*

(New York: Simon and Schuster, 1978); Fiedler (1917–2003) was an American literary and cultural critic.

3. The 1818 tale of horror by Mary Shelley (1791–1851), English novelist and wife of PERCY BYSSHE SHELLEY.

the creation of Dr. Frankenstein other than 'monster.' (This linguistic lapsus is usually made up for in popular culture by referring to the creature itself as 'Frankenstein,' a terminology that confuses the creator with the created.) In reading the novel, or speaking about it, we can only call the creature 'the monster.' This linguistic limitation is worth noting because it encourages the reader to consider the creature a monster rather than a person with disabilities.

We do not often think of the monster in Mary Shelley's work as disabled, but what else is he? The characteristic of his disability is a difference in appearance. He is more than anything a disruption in the visual field. There is nothing else different about him—he can see, hear, talk, think, ambulate, and so on. It is worth noting that in popular culture, largely through the early film versions of the novel, the monster is inarticulate, somewhat mentally slow, and walks with a kind of physical impairment.⁴ In addition, the film versions add Ygor, the hunchbacked criminal who echoes the monster's disability in his own. Even in the recent film version by Kenneth Branagh, the creature walks with a limp and speaks with an impediment.⁵ One cannot dismiss this filtering of the creature through the lens of multiple disability. In order for the audience to fear and loathe the creature, he must be made to transcend the pathos of a single disability. Of course, it would be unseemly for a village to chase and torment a paraplegic or a person with acromegaly. Disabled people are to be pitied and ostracized; monsters are to be destroyed; audiences must not confuse the two.

In the novel, it is clear that Dr. Frankenstein cannot abide his creation for only one reason—its hideous appearance. Indeed, the creature's only positive human contact is with the blind old man De Lacey, who cannot see the unsightly features. When De Lacey's family catches a glimpse of the creature, the women faint or run, and the men beat and pursue him. His body is a zone of repulsion; the reaction he evokes is fear and loathing. The question one wants to ask is why does a physical difference produce such a profound response?

The answer, I believe, is twofold. First, what is really hideous about the creature is not so much his physiognomy as what that appearance suggests. The *corps morcelé* makes its appearance immediately in the construction of the monster. Ironically, Dr. Frankenstein adapts Zeuxis's notion of taking ideal parts from individuals to create the ideal whole body. As he says, 'I collected bones from charnel houses. . . . The dissecting room and the slaughter house furnished many of my materials.'⁶ From these fragments, seen as loathsome and disgusting, Frankenstein assembles what he wishes to create—a perfect human. It is instructive in this regard to distinguish

4. According to Norden, Robert Florey, a writer who contributed to the original *Frankenstein* script, came up with the idea of having Dr. Frankenstein's assistant Fritz break into medical school to steal a brain. He finds the "normal" brain the doctor wanted but then drops it and takes one marked "abnormal" instead [Davis's note]. The French-born writer and director Florey (1900–1979) worked on the best-known (through not earliest) film version, directed by

James Whale (1931).

5. *Mary Shelley's Frankenstein* (1994), which also starred the Irish director Branagh (b. 1960) as Victor Frankenstein.

6. Mary Shelley, *Frankenstein, or The Modern Prometheus* (Oxford: Oxford University Press, 1990), pp. 54–55 [Davis's note]. Prometheus, the Titan punished for giving mortals fire stolen from the gods, is sometimes also credited with creating the human race from mud.

the Boris Karloff incarnation of the creature⁷—with the bolt through his neck—or Branagh's grotesquely sewn creature, from the image that Mary Shelley would have us imagine. Dr. Frankenstein tells us:

His limbs were in proportion, and I had selected his features as beautiful. Beautiful!—Great God! His yellow skin scarcely covered the work of muscles and arteries beneath; his hair was of a lustrous black and flowing; his teeth of a pearly whiteness; but these luxuriances only formed a more horrid contrast with his watery eyes, that seemed almost of the same colour as the dun white sockets in which they were set, his shrivelled complexion and straight black lips.⁸

What then constitutes the horror? If we add up the details, what we see is a well-proportioned man with long black hair, pearly white teeth, whose skin is somewhat deformed—resulting in jaundice and perhaps a tightness or thinness of the skin, a lack of circulation perhaps causing shriveling, watery eyes and darkened lips. This hardly seems to constitute horror rather than, say, pathos.⁹

What is found to be truly horrifying about Frankenstein's creature is its composite quality, which is too evocative of the fragmented body. Frankenstein's reaction to this living *corps morcelé* is repulsion: 'the beauty of the dream vanished, and breathless horror and disgust filled my heart.'¹ Frankenstein attempted to create a unified nude, an object of beauty and harmony—a Venus, in effect. He ended up with a Medusa whose existence reveals the inhering and enduring nature of the archaic fragmented body, endlessly repressed but endlessly reappearing.

Why does the appearance of the monster produce so powerful an affect? Routinely, one might view a deformed person, even a multiply deformed one, without desiring to kill that person. Here we see a man whose skin is strange or unnatural being transposed into the category 'monster.' The element of skin reminds us that the monster as a disturbance in the visual field is linked to the tactile field. The disruption in the skin's surface immediately translates into a threat of touching, of being touched. The idea of touch always initiates a dialectic of attraction and repulsion, of fear, hatred, or erotic attraction. Indeed, from a psychoanalytic viewpoint there is not much difference between these choices. So, inevitably, the disabled body becomes a site of the erotic, as instantly it is perceived in either the Venus or the Medusa scenarios.² In Shelley's novel, after the creation, Dr. Frankenstein

7. In *Frankenstein* (1931), *Bride of Frankenstein* (1935), and *Son of Frankenstein* (1939); the English actor Karloff (born William Henry Pratt, 1887–1969) is best remembered for his roles in these and other horror films.

8. Shelley, *Frankenstein*, p. 57 [Davis's note].

9. Indeed, one could argue that this function of horror films is to remove the element of pity in the visual transaction between "normal" viewer and disabled object. In the place of pity, pure repulsion is made allowable by turning the object with a disability into a criminal, a horror, a monstrosity. While everyone may enjoy a good horror movie now and then, there is a case to be

made that horror films involving physically disabled characters are in fact the equivalent of racist films. The counterbalanced compassionate films showing people with disabilities triumphing over their disability is just the other moment of the same dialectic [Davis's note].

1. Shelley, *Frankenstein*, p. 57 [Davis's note].

2. Women with disabilities are often the target of sexual or physical abuse; children with disabilities or Deaf children are often the victims of child abuse. This impulse to touch is unfortunately seen quite dramatically in these situations [Davis's note].

has rather a peculiar response—he goes to sleep and has a dream about his fiancée:

I thought I saw Elizabeth, in the bloom of health, walking in the streets of Ingolstadt. Delighted and surprised, I embraced her, but as I imprinted the first kiss on her lips, they became livid with the hue of death; her features appeared to change, and I thought that I held the corpse of my dead mother in my arms; a shroud enveloped her form, and I saw the grave-worms crawling in the folds of the flannel.³

The rather incredible set of associations made by Dr. Frankenstein would take pages to explore thoroughly, but what we might want to note here is that the immediate flight from the Medusa image of the monster's fragmented body leads immediately to the Venus body of Elizabeth, seen as frankly erotic. However, upon the first sexual contact the Venus myth immediately deconstructs, and Elizabeth's body initially changes to a corpse, then to the decomposing corpse of Frankenstein's dead mother. The visual leads to the tactile, which then contaminates the normal body. And all these moments lead back to the decomposing, fragmenting body. Later in the novel, when the creature demands a spouse, Frankenstein again creates the fragmented, now female, body. But at the last minute 'trembling with passion, [I] tore to pieces the thing on which I was engaged.'⁴ Frankenstein's explicit reason for failing to give the monster a mate is fear that a race of deformed creatures would populate the earth and threaten the human race.⁵ Thus the risk of the erotic touch, of the frankly erotic agenda for the creature, is seen as a contaminating danger to 'normal' people. So, the fragmented body is hacked up, exploded, into the fragments that make it up.

* * *

In no area is this set of cultural values related to the visual more compelling than in film. Film is a medium whose main goal, one might say, is the construction and reconstruction of the body. The abnormal body plays a major role in the defining of the normal body, and so one might assume that film would be concerned with the issue of disability. Martin F. Norden has recently published the most complete account to date of disability in the film industry, *The Cinema of Isolation: A History of Physical Disability in the Movies* (1994). The remarkable thing about this book is the staggering number of films that have been made about the issue of disability. When I first began to consider the issue of how the disabled body is depicted in film, I came up with my own list of twenty or so films, and I thought that I would mention the occasional way in which the disabled were included in a film industry that mainly focused on the normal body. In other words, I thought

3. Shelley, *Frankenstein*, p. 58 [Davis's note].

4. *Ibid.*, p. 168 [Davis's note].

5. Later in the century Alexander Graham Bell would raise the same specter in regard to a deaf race taking over should deaf people be allowed to marry each other [Davis's note]. Bell (1847–1922), Scottish-born American inventor best

known for producing the first telephone; Davis is referring to his *Memoirs upon the Formation of a Deaf Variety of the Human Race* (1884). Bell's wife was deaf and his mother was nearly deaf, and he was keenly interested in the education of the deaf and in eugenics.

I was dealing with a parallel situation to, say, the depiction in cinema of African-Americans—a marginalized group who rarely appeared in Hollywood films until recently and, if they did, played mainly minor characters or supernumerary roles.

But the facts about the depiction of disability are quite the opposite of what I had thought. The film industry has been obsessed with the depiction of the disabled body from the earliest silent films. The blind, the deaf, the physically disabled were singled out from the very beginning of cinema. * * *

Norden's book lists about six hundred disability-related films in its index, a far cry from my twenty or so. And if one stops and thinks about the subject, one realizes that films concerning people with disabilities are almost always playing at any given time. For example, at the moment I write this sentence on 5 January 1995, I can go see movies about the deaf Beethoven in *Immortal Beloved*, the linguistically deprived girl in Jodie Foster's *Nell*, the emotionally impaired monarch in *The Madness of King George*, and of course the lovable, mentally challenged *Forrest Gump*. In recent years films like *My Left Foot*, *Lorenzo's Oil*, *Rainman*, *Children of a Lesser God*, *Elephant Man*, *Mask*, *Awakenings*, *Stanley and Iris*, to name only a few better-known films, have become major hits. In addition to films centrally about disabled people, there are hundreds of films in which characters, mainly evil, are depicted as using wheelchairs, missing limbs or eyes, walking with a limp, stuttering, and so on.

The point that Norden's book made clear to me is that the cinematic experience, far from including disabilities in an ancillary way, is powerfully arranged around the management and deployment of disabled and 'normal' bodies. Disabled stories, stories of people's bodies or minds going wrong, make compelling tales. But more than that, as with any obsession, there has to be an underlying reason why films are drawn obsessively to the topic of disability. In order to understand why film makers routinely incorporate disabled bodies into films, it might be relevant to ask what else routinely appears in films. The answer is more than obvious: sex and violence. While it is fashionable for liberals to decry the violent content of films, and conservatives to decry the sexual, it might be more accurate for them to think of films as vehicles for the delivery of images of the body in extreme circumstances. The inherent voyeuristic nature of film makes it a commodity that works by visualizing for viewers the body in attitudes that it is otherwise difficult to see. Few people in quotidian life see couples making love on a regular basis, but that is a routine experience to filmgoers. Likewise, most middle-class citizens rarely see dead, mutilated, bleeding bodies, but the average viewer has no shortage of such images.

So films, one could say, are a streamlined delivery system that produces dramatically these bodily images in exchange for a sum of money (as the Coca-Cola industry can be said to be a system for delivering caffeine and sugar, or as cigarettes are really time-release delivery systems for nicotine administration). As novels were seen to be mechanisms for the cultural production of normativity, so films have to be seen in the same regard, with the addition that the phantasm of the body is particularly subject to these normativizing activities.

Films enforce the normal body, but through a rather strange process. The normal body, invented in the nineteenth century as a departure from the ideal body, has shifted over to a new concept: the normal ideal. This normal ideal body is the one we see on the screen. It is the commodified body of the eroticized male or female star. This body is not actually the norm, but it is the fantasized, hypostatized body of commodified desire. In order to generate this body and proliferate its images, films have constantly to police and to regulate the variety of bodily differences. These bodies are the modern equivalents of the nude Venuses, and to keep them viable, to think on and obsess about them, the Medusa body has constantly to be shown, reshowed, placed, categorized, itemized, and anatomized. In short, we cannot have Sharon Stone without Linda Hunt; we cannot have Tom Cruise without Ron Kovic;⁶ we cannot have the fantasy of the erotic *femme fatale's* body without having the sickened, disabled, deformed person's story testifying to the universal power of the human spirit to overcome adversity. As Norden points out, when films about disabled people are made, more often than not the disabled characters get cured by the end of the film.⁷ The tension between the whole and the fragmented body, between the erotic, complete body and the uncanny, incomplete body, must be constantly deployed and resolved through films.

* * *

Throughout this chapter, I have tried to show that the concept of disability is a crucial part of the very way we conceive of and live in our bodies. In art, photography, film, and other media in which the body is represented, the 'normal' body always exists in a dialectical play with the disabled body. Indeed, our representations of the body are really investigations of and defenses against the notion that the body is anything but a seamless whole, a complete, unfragmented entity. In addition to the terms of race, class, gender, sexual preference and so on—all of which are factors in the social construction of the body—the concept of disability adds a background of somatic concerns. But disability is more than a background. It is in some sense the basis on which the 'normal' body is constructed: disability defines the negative space the body must not occupy, it is the Manichean binary⁸ in contention with normality. But this dialectic is one that is enforced by a set of social conditions and is not natural in any sense. Only when disability is made visible as a compulsory term in a hegemonic process, only when the binary is exposed and the continuum acknowledged, only when the body is seen apart from its existence as an object of production or consumption—only then will normalcy cease being a term of enforcement in a somatic judicial system.

8. The converse in a dualistic worldview; Manichaeism sees the world as divided between good and evil, light and darkness, spirit and matter.

GAYLE RUBIN

b. 1949

Political activist, sex dissident, cultural anthropologist, ethnographer of gay communities, feminist, and queer theorist, Gayle Rubin is a groundbreaking figure in the fields of feminism, lesbian and gay studies, and queer theory. Her work accounts for the mechanisms by which gender and compulsory heterosexuality are produced, as well as the inequalities that these systems create, while it challenges the gap between scholarship and activism. More than many scholars working in theory today, Rubin is able to bring theoretical analysis to bear on complex empirical data drawn from the methods of ethnography, drawing theory and data into productive association. As committed to political action as to scholarship, she produced her two landmark essays, "The Traffic in Women: Notes on the 'Political Economy' of Sex" (1975) and "Thinking Sex: Notes for a Radical Theory of the Politics of Sexuality" (1984), while still a graduate student; each alone is enough to secure her position in the canon of feminist theory.

Born in 1949, Rubin grew up in South Carolina and enrolled at the University of Michigan in 1966, becoming involved in local New Left, feminist, and gay politics. "The Traffic in Women" began as a term paper written in a class with the American anthropologist Marshall Sahlins, where Rubin first read the structuralist theories of CLAUDE LÉVI-STRAUSS and JACQUES LACAN that underpin that essay. In 1969 Rubin became the University of Michigan's first women's studies major, a program she designed herself. She began graduate studies at the University of Michigan and, in 1978, moved to San Francisco to undertake a study of gay male leather culture. There, with the writer and transsexual activist Pat Califia and sixteen others, she founded Samois (a name they borrowed from the estate of Anne-Marie, a lesbian dominatrix in Pauline Réage's 1954 novel, *The Story of O*), the first political organization devoted to lesbian sadomasochism. The group disbanded in 1983, and in 1984 Rubin founded a new lesbian S/M organization, the Outcasts, which split up in 1997. During the 1990s, Rubin taught women's studies at the University of California at Santa Cruz. In 1994 she completed her Ph.D. in anthropology at the University of Michigan, with a dissertation on gay leather culture in San Francisco. She is currently an associate professor of anthropology and women's studies at the University of Michigan.

Early on, Rubin was a "pro-sex" activist, becoming prominent in the so-called sex wars of the 1980s—the acrimonious debate that split and continues to divide the feminist movement over the issues surrounding sexuality, especially pornography, sadomasochism, butch/femme roles, and sex work. On the other side of this debate were antipornography groups such as Women Against Pornography and Women Against Violence in Pornography and Media—led by Andrea Dworkin, ADRIENNE RICH, and Catharine MacKinnon—which targeted sex activists, including Rubin and Califia. The disagreement came to a head in 1982 at the ninth conference in "The Scholar and the Feminist" series, held at Barnard College in New York City: its organizing theme was "sexuality." Antipornography groups picketed the conference, handing out leaflets attacking some of the speakers as sexual deviants, while those inside heard papers and attended workshops on an array of controversial topics. Rubin presented an early version of "Thinking Sex," titled "Concepts for a Radical Politics of Sex."

Rubin's two best-known essays, both frequently reprinted in anthologies and readers, have achieved prominence because they effectively articulate major theoretical and historical shifts within the feminist and gay liberation movements. "The Traffic in Women," published in the collection *Toward an Anthropology of Women* (1975),

marks the beginning of a shift away from the activism of movement feminism and toward the academic feminism that would come to dominate feminist work in the 1980s as women's studies programs were institutionalized in American universities. In it Rubin famously coins the term "sex/gender system" to describe "the set of arrangements by which a society transforms biological sexuality into products of human activity, and in which these transformed sexual needs are satisfied." The essay, drawing on theoretical models derived from structuralism (Lévi-Strauss) and psychoanalysis (SIGMUND FREUD and Lacan), also articulates a shift from a feminism rooted in the Marxism of the 1960s New Left toward the poststructuralism that would soon dominate academic feminism. "Thinking Sex," published in 1984 in the *Scholar and the Feminist* conference proceedings, *Pleasure and Danger: Exploring Female Sexuality*, reflects the emerging interest in cultural politics in the 1980s and 1990s, as well as the movement from gay and lesbian studies to queer theory, which focused less on gay identity than on the heterogeneity of sexual practices and identities. Heavily influenced by MICHEL FOUCAULT's *History of Sexuality* (1976; trans. 1978), "Thinking Sex" rejects not only the anti-sex politics of Catharine MacKinnon and Andrea Dworkin but also the lesbian feminism represented by Adrienne Rich's notion of a "lesbian continuum." Whereas Rich's formulation tends to minimize sex and treat all forms of same-sex bonding alike, "Thinking Sex" aims to restore sex to lesbian theory and politics. In this regard Rubin aligns herself with feminists and lesbians who have promoted a progressive sexual politics, including BELL HOOKS, Cherrie Moraga, Joan Nestle, and Esther Newton. The essay anticipates key features of queer theory's agenda that were later articulated by JUDITH BUTLER, EVE KOSOFSKY SEDGWICK, and LAUREN BERLANT and MICHAEL WARNER.

Our selection, "Thinking Sex: Notes for a Radical Theory of the Politics of Sexuality," was written in response not only to the damaging views of antipornography feminists but also to the political ascendancy of the New Right, which was mobilizing in opposition to homosexuality, feminism, abortion, contraception, premarital sex, and the perceived corruption of the young. Antipornography feminists had entered into an uneasy alliance with moral conservatives, such as the commission appointed to investigate pornography in 1985 by President Ronald Reagan and headed by then Attorney General Edwin Meese. In her essay, Rubin attempts to think through the repressive consequences of conservatives' anti-sex position and, at the same time, to articulate "an accurate, humane, and genuinely liberatory body of thought about sexuality."

In times of great social stress, sexuality often takes on a symbolic value beyond its own significance. So Rubin begins with a detailed historical account of several periods in history (the late nineteenth century, the 1950s, and the 1970s and 1980s) when sexuality became a vehicle on which were displaced other anxieties and fears, especially about poverty, disease, warfare, and global annihilation. Long after the details of such struggles are forgotten, they continue to leave their mark in the form of laws, social practices, and ideologies that affect how individuals experience sexuality. Central to Rubin's thesis is the claim that sexuality is not simply a biological function, a private preference, or a psychological state of health or illness; it is also a realm of politics, inequality, and oppression.

Having begun by examining the historical evidence for sexual repression in modern Western societies, Rubin then describes the conceptual tools required for a radical theory of sexuality—one that could identify, explain, and denounce "erotic injustice and sexual oppression." The first task of such a theory is to challenge the conceptual stranglehold of sexual essentialism. Though it is tempting to see sexuality as a purely natural force that has been subjected to artificial social and institutional repression, such a position is neither tenable after Foucault nor particularly helpful in challenging sexual oppression. Drawing on the work of Foucault, of feminist historians such as Judith Walkowitz, and of gay historians such as Alan

Bérubé, Jeffrey Weeks, and John D'Emilio, Rubin argues for a constructivist view of sex: it allows a place for biology and the body, but at the same time recognizes that our experiences of both are always mediated by historically specific cultural conventions, values, and practices. From this perspective, it is possible to question sexual ideologies that constrain our understanding of sexuality within such narrow and rigidly defined categories as male and female, heterosexual and homosexual.

Rubin identifies five ideologies, beyond sexual essentialism, that need to be challenged: sex negativity, the belief that sex is a dangerous and destructive force that must be controlled; the fallacy of misplaced scale, in which small differences in value or behavior are inflated into "cosmic threats"; the hierarchical ordering of sex acts, which distinguishes between those that are labeled good, natural, or normal and those that are considered bad, unnatural, or abnormal; the domino theory of sexual peril, which casts any infraction of the normative as catastrophic for the entire system; and the absence of any concept of benign sexual variation. These are the key components of a nuanced, hegemonic system of status and caste that characterizes and disciplines sexual behaviors. At every level, the dominant system is enforced by social institutions, including the family, law, and religion; by psychoanalysis, psychiatry, and psychology; by popular opinion and the media; and, sadly, by antiporn feminists. In defending nonhegemonic sexual practices and communities, Rubin seeks autonomy to counteract the society-wide pathologization, persecution, stigmatization, demonization, and scapegoating of sexual minorities.

Rubin concludes with a discussion of the three positions that came to dominate the sex wars in U.S. feminism during the 1980s: anti-sex authoritarianism, pro-sex libertarianism, and the so-called moderate position, the belief that the truth lies somewhere between the two extremes. Rubin challenges this middle position with particular force, arguing that it rests on the false assumption that the poles of the debate are equally extreme, thereby mystifying the institutional power of sex negativity and marginalizing radical thought. She pushes her readers to test the limits of their tolerance for sexualities usually labeled perverse, including not only homosexuality and the consumption of pornography but also sadomasochism, pedophilia, and incest.

The failure of feminists to develop a radical theory of sexuality leads Rubin to her most far-reaching and perhaps most misunderstood position in the essay. She argues, as does Sedgwick later in *Epistemology of the Closet* (1990), that theorizing about sexuality needs to be disentangled from theorizing about gender, that feminism cannot be the sole or privileged site of theories about sex. This position revises her analysis of the sex/gender system proposed in "Traffic in Women" without entirely repudiating it. Sexuality cannot be reduced either to biological sex or to socially constructed gender. While gender, anatomical sex, and sexuality are undoubtedly intertwined and while feminism will continue to theorize about sexuality in relation to both gender and biological sex, the binary gender system on which feminist theory relies cannot encompass the kind of sexual diversity Rubin believes to be required by a radical theory of sexuality. Sexuality cuts across systems of oppression, and is thus too complex and diverse to be contained within feminism.

Critics of Rubin's theory of sexuality interrogate her utopian tendencies from two directions. Queer theorists question whether any theory of sexuality, however radical, is elastic enough to embrace all sexual minorities, and feminists point to problems with Rubin's separation of feminist theory and theories of sexuality. Antipornography feminists, moreover, argue that she either ignores or downplays the issue of consent in sex. They accuse her of promoting a libertarian approach to sex and thereby abandoning the historical analysis that characterizes her writing about sexual repression. They also charge her with ahistoricism in drawing on biology to

discuss sexual diversity. Such an analysis, they believe, ignores the social, political, cultural, and economic forms of coercion that women continue to face and that frequently—as in rape and battery—make the question of consent meaningless. Yet in spite of, or perhaps because of, these utopian tendencies, Rubin remains one of the most original voices in both feminist and queer theory.

“Thinking Sex: Notes for a Radical Theory of the Politics of Sexuality” Key-words: The Body, Feminist Theory, Gender, Hegemony, Identity, Institutional Studies, Popular Culture, Queer Theory, Religion, Sexuality

From Thinking Sex: Notes for a Radical Theory of the Politics of Sexuality

I. The Sex Wars

Asked his advice, Dr. J. Guérin affirmed that, after all other treatments had failed, he had succeeded in curing young girls affected by the vice of onanism by burning the clitoris with a hot iron. . . . I apply the hot point three times to each of the large labia and another on the clitoris. . . . After the first operation, from forty to fifty times a day, the number of voluptuous spasms was reduced to three or four. . . . We believe, then, that in cases similar to those submitted to your consideration, one should not hesitate to resort to the hot iron, and at an early hour, in order to combat clitoral and vaginal onanism in little girls.

—Demetrius Zambaco¹

The time has come to think about sex. To some, sexuality may seem to be an unimportant topic, a frivolous diversion from the more critical problems of poverty, war, disease, racism, famine, or nuclear annihilation. But it is precisely at times such as these, when we live with the possibility of unthinkable destruction, that people are likely to become dangerously crazy about sexuality. Contemporary conflicts over sexual values and erotic conduct have much in common with the religious disputes of earlier centuries. They acquire immense symbolic weight. Disputes over sexual behavior often become the vehicles for displacing social anxieties, and discharging their attendant emotional intensity. Consequently, sexuality should be treated with special respect in times of great social stress.

The realm of sexuality also has its own internal politics, inequities, and modes of oppression. As with other aspects of human behavior, the concrete institutional forms of sexuality at any given time and place are products of human activity. They are imbued with conflicts of interest and political maneuvering, both deliberate and incidental. In that sense, sex is always political. But there are also historical periods in which sexuality is more sharply contested and more overtly politicized. In such periods, the domain of erotic life is, in effect, renegotiated.

1. Demetrius Zambaco, “Onanism and Nervous Disorders in Two Little Girls,” in François Peraldi (ed.), *Polysexuality, Semitext(e)*, vol. 4, no. 1, 1981, pp. 31, 38 [Rubin’s note]. Zambaco (1832–1913), physician born in Constantinople;

he advocated radical treatment of masturbation in girls. Jules Guérin (1801–1886), French physician who coined the term “social medicine” and promoted aggressive treatment of masturbation.

In England and the United States, the late nineteenth century was one such era. During that time, powerful social movements focused on "vices" of all sorts. There were educational and political campaigns to encourage chastity, to eliminate prostitution, and to discourage masturbation, especially among the young. Morality crusaders attacked obscene literature, nude paintings, music halls, abortion, birth control information, and public dancing.² The consolidation of Victorian morality, and its apparatus of social, medical, and legal enforcement, was the outcome of a long period of struggle whose results have been bitterly contested ever since.

The consequences of these great nineteenth-century moral paroxysms are still with us. They have left a deep imprint on attitudes about sex, medical practice, child-rearing, parental anxieties, police conduct, and sex law.

The idea that masturbation is an unhealthy practice is part of that heritage. During the nineteenth century, it was commonly thought that "premature" interest in sex, sexual excitement, and, above all, sexual release, would impair the health and maturation of a child. Theorists differed on the actual consequences of sexual precocity. Some thought it led to insanity, while others merely predicted stunted growth. To protect the young from premature arousal, parents tied children down at night so they would not touch themselves; doctors excised the clitorises of onanistic little girls.³ Although the more gruesome techniques have been abandoned, the attitudes that produced them persist. The notion that sex *per se* is harmful to the young has been chiseled into extensive social and legal structures designed to insulate minors from sexual knowledge and experience.

Much of the sex law currently on the books also dates from the nineteenth-century morality crusades. The first federal anti-obscenity law in the United States was passed in 1873. The Comstock Act—named for Anthony Comstock, an ancestral anti-porn activist and the founder of the New York Society for the Suppression of Vice—made it a federal crime to make, advertise, sell, possess, send through the mails, or import books or pictures deemed obscene. The law also banned contraceptive or abortifacient drugs and devices and information about them.⁴ In the wake of the federal statute, most states passed their own anti-obscenity laws.

The Supreme Court began to whittle down both federal and state Comstock laws during the 1950s. By 1975, the prohibition of materials used for, and information about, contraception and abortion had been ruled unconstitutional. However, although the obscenity provisions have been modified, their fundamental constitutionality has been upheld. Thus it

remains a crime to make, sell, mail, or import material which has no purpose other than sexual arousal.⁵

Although sodomy statutes date from older strata of the law, when elements of canon law were adopted into civil codes, most of the laws used to arrest homosexuals and prostitutes come out of the Victorian campaigns against "white slavery." These campaigns produced myriad prohibitions against solicitation, lewd behavior, loitering for immoral purposes, age offenses, and brothels and bawdy houses.

In her discussion of the British "white slave" scare, historian Judith Walkowitz observes that: "Recent research delineates the vast discrepancy between lurid journalistic accounts and the reality of prostitution. Evidence of widespread entrapment of British girls in London and abroad is slim."⁶ However, public furor over this ostensible problem

forced the passage of the Criminal Law Amendment Act of 1885, a particularly nasty and pernicious piece of omnibus legislation. The 1885 Act raised the age of consent for girls from 13 to 16, but it also gave police far greater summary jurisdiction over poor working-class women and children . . . it contained a clause making indecent acts between consenting male adults a crime, thus forming the basis of legal prosecution of male homosexuals in Britain until 1967 . . . the clauses of the new bill were mainly enforced against working-class women, and regulated adult rather than youthful sexual behaviour.⁷

In the United States, the Mann Act, also known as the White Slave Traffic Act, was passed in 1910. Subsequently, every state in the union passed anti-prostitution legislation.⁸

In the 1950s, in the United States, major shifts in the organization of sexuality took place. Instead of focusing on prostitution or masturbation, the anxieties of the 1950s condensed most specifically around the image of the "homosexual menace" and the dubious specter of the "sex offender." Just before and after World War II, the "sex offender" became an object of public fear and scrutiny. Many states and cities, including Massachusetts, New Hampshire, New Jersey, New York State, New York City and Michigan, launched investigations to gather information about this menace to public safety.⁹ The term "sex offender" sometimes applied to rapists, sometimes to "child molesters," and eventually functioned as a code for homosexuals. In its bureaucratic, medical, and popular versions, the sex offender discourse

tended to blur distinctions between violent sexual assault and illegal but consensual acts such as sodomy. The criminal justice system incorporated these concepts when an epidemic of sexual psychopath laws swept through state legislatures.¹ These laws gave the psychological professions increased police powers over homosexuals and other sexual "deviants."

From the late 1940s until the early 1960s, erotic communities whose activities did not fit the postwar American dream drew intense persecution. Homosexuals were, along with communists, the objects of federal witch hunts and purges. Congressional investigations, executive orders, and sensational exposés in the media aimed to root out homosexuals employed by the government. Thousands lost their jobs, and restrictions on federal employment of homosexuals persist to this day.² The FBI began systematic surveillance and harassment of homosexuals which lasted at least into the 1970s.³

Many states and large cities conducted their own investigations, and the federal witch-hunts were reflected in a variety of local crackdowns. In Boise, Idaho, in 1955, a schoolteacher sat down to breakfast with his morning paper and read that the vice-president of the Idaho First National Bank had been arrested on felony sodomy charges; the local prosecutor said that he intended to eliminate all homosexuality from the community. The teacher never finished his breakfast. "He jumped up from his seat, pulled out his suitcases, packed as fast as he could, got into his car, and drove straight to San Francisco. . . . The cold eggs, coffee, and toast remained on his table for two days before someone from his school came by to see what had happened."⁴

In San Francisco, police and media waged war on homosexuals throughout the 1950s. Police raided bars, patrolled cruising areas, conducted street sweeps, and trumpeted their intention of driving the queers out of San Francisco.⁵ Crackdowns against gay individuals, bars, and social areas occurred throughout the country. Although anti-homosexual crusades are the best-documented examples of erotic repression in the 1950s, future research should reveal similar patterns of increased harassment against pornographic materials, prostitutes, and erotic deviants of all sorts. Research is needed to determine the full scope of both police persecution and regulatory reform.⁶

6. The following examples suggest avenues for additional research. A local crackdown at the University of Michigan is documented in Daniel Tsang, "Gay Ann Arbor Purges," *Midwest Gay Academic Journal*, vol. 1, no. 1, 1977; and Daniel Tsang, "Ann Arbor Gay Purges," part 2, *Midwest Gay Academic Journal*, vol. 1, no. 2, 1977. At the University of Michigan, the number of faculty dismissed for alleged homosexuality appears to rival the number fired for alleged communist tendencies. It would be interesting to have figures comparing the number of professors who lost their positions during this period due to sexual and political offenses. On regulatory reform, many states passed laws during this period prohibiting the sale of alcoholic beverages to "known sex perverts" or providing that bars which catered to "sex perverts" be closed. Such a law was passed in California in 1955, and declared unconstitutional by the state supreme court in 1959 (Allan

The current period bears some uncomfortable similarities to the 1880s and the 1950s. The 1977 campaign to repeal the Dade County, Florida, gay rights ordinance⁷ inaugurated a new wave of violence, state persecution, and legal initiatives directed against minority sexual populations and the commercial sex industry. For the last six years, the United States and Canada have undergone an extensive sexual repression in the political, not the psychological, sense. In the spring of 1977, a few weeks before the Dade County vote, the news media were suddenly full of reports of raids on gay cruising areas, arrests for prostitution, and investigations into the manufacture and distribution of pornographic materials. Since then, police activity against the gay community has increased exponentially. The gay press has documented hundreds of arrests, from the libraries of Boston to the streets of Houston and the beaches of San Francisco. Even the large, organized, and relatively powerful urban gay communities have been unable to stop these depredations. Gay bars and bath houses have been busted with alarming frequency, and police have gotten bolder. In one especially dramatic incident, police in Toronto raided all four of the city's gay baths. They broke into cubicles with crowbars and hauled almost 300 men out into the winter streets, clad in their bath towels. Even "liberated" San Francisco has not been immune. There have been proceedings against several bars, countless arrests in the parks, and, in the fall of 1981, police arrested over 400 people in a series of sweeps of Polk Street, one of the thoroughfares of local gay nightlife. Queerbashing has become a significant recreational activity for young urban males. They come into gay neighborhoods armed with baseball bats and looking for trouble, knowing that the adults in their lives either secretly approve or will look the other way.

The police crackdown has not been limited to homosexuals. Since 1977, enforcement of existing laws against prostitution and obscenity has been stepped up. Moreover, states and municipalities have been passing new and tighter regulations on commercial sex. Restrictive ordinances have been passed, zoning laws altered, licensing and safety codes amended, sentences increased, and evidentiary requirements relaxed. This subtle legal codification of more stringent controls over adult sexual behavior has gone largely unnoticed outside of the gay press.

For over a century, no tactic for stirring up erotic hysteria has been as reliable as the appeal to protect children. The current wave of erotic terror has reached deepest into those areas bordered in some way, if only symbolically,

Bérubé, personal communication). It would be of great interest to know exactly which states passed such statutes, the dates of their enactment, the discussion that preceded them, and how many are still on the books. On the persecution of other erotic populations, evidence indicates that John Willie and Irving Klaw, the two premier producers and distributors of bondage erotica in the United States from the late 1940s through the early 1960s, encountered frequent police harassment and that Klaw, at least, was affected by a congressional investigation conducted by the Kefauver Committee. I am indebted to personal communication from J. B. Rund for information on the careers of Willie and Klaw. Published sources are scarce, but see John Willie, *The Adventures of Sweet Gwendoline*, New York,

Belier Press, 1974; J. B. Rund, "Preface," *Bizarre Comix*, vol. 8, New York, Belier Press, 1977; J. B. Rund, "Preface," *Bizarre Fotos*, vol. 1, New York, Belier Press, 1978; and J. B. Rund, "Preface," *Bizarre Katalogs*, vol. 1, New York, Belier Press, 1979. It would be useful to have more systematic information on legal shifts and police activity affecting non-gay erotic dissidence [Rubin's note]. Kefauver Committee: the U.S. Senate Special Committee to Investigate Crime in Interstate Commerce, chaired by Senator Estes Kefauver (D-Tenn.), which held nationally televised hearings to investigate organized crime (1950–51).

7. This successful nationally publicized campaign was led by Anita Bryant, a singer who performed in commercials for Florida orange juice.

by the sexuality of the young. The motto of the Dade County repeal campaign was "Save Our Children" from alleged homosexual recruitment. In February 1977, shortly before the Dade County vote, a sudden concern with "child pornography" swept the national media. In May, the *Chicago Tribune* ran a lurid four-day series with three-inch headlines, which claimed to expose a national vice ring organized to lure young boys into prostitution and pornography.⁸ Newspapers across the country ran similar stories, most of them worthy of the *National Enquirer*.⁹ By the end of May, a congressional investigation was underway. Within weeks, the federal government had enacted a sweeping bill against "child pornography" and many of the states followed with bills of their own. These laws have reestablished restrictions on sexual materials that had been relaxed by some of the important Supreme Court decisions. For instance, the Court ruled that neither nudity nor sexual activity *per se* were obscene. But the child pornography laws define as obscene any depiction of minors who are nude or engaged in sexual activity. This means that photographs of naked children in anthropology textbooks and many of the ethnographic movies shown in college classes are technically illegal in several states. In fact, the instructors are liable to an additional felony charge for showing such images to each student under the age of 18. Although the Supreme Court has also ruled that it is a constitutional right to possess obscene material for private use, the child pornography laws prohibit even the private possession of any sexual material involving minors.

The laws produced by the child porn panic are ill-conceived and misdirected. They represent far-reaching alterations in the regulation of sexual behavior and abrogate important sexual civil liberties. But hardly anyone noticed as they swept through Congress and state legislatures. With the exception of the North American Man/Boy Love Association and the American Civil Liberties Union, no one raised a peep of protest.¹

A new and even tougher federal child pornography bill has just reached House-Senate conference. It removes any requirement that prosecutors must prove that alleged child pornography was distributed for commercial sale. Once this bill becomes law, a person merely possessing a nude snapshot of a 17-year-old lover or friend may go to jail for fifteen years, and be fined \$100,000. This bill passed the House 400 to 1.²

The experiences of art photographer Jacqueline Livingston exemplify the climate created by the child porn panic. An assistant professor of photography at Cornell University, Livingston was fired in 1978 after exhibiting pictures of

2. "House Passes Tough Bill on Child Porn," *San Francisco Chronicle*, November 15, 1983, p. 14 [Rubin's note]. The bill became law in 1984.

male nudes which included photographs of her seven-year-old son masturbating. *Ms. Magazine*, *Chrysalis*, and *Art News* all refused to run ads for Livingston's posters of male nudes. At one point, Kodak confiscated some of her film, and for several months, Livingston lived with the threat of prosecution under the child pornography laws. The Tompkins County Department of Social Services investigated her fitness as a parent. Livingston's posters have been collected by the Museum of Modern Art, the Metropolitan, and other major museums. But she has paid a high cost in harassment and anxiety for her efforts to capture on film the uncensored male body at different ages.³

It is easy to see someone like Livingston as a victim of the child porn wars. It is harder for most people to sympathize with actual boy-lovers. Like communists and homosexuals in the 1950s, boy-lovers are so stigmatized that it is difficult to find defenders for their civil liberties, let alone for their erotic orientation. Consequently, the police have feasted on them. Local police, the FBI, and watchdog postal inspectors have joined to build a huge apparatus whose sole aim is to wipe out the community of men who love underaged youth. In twenty years or so, when some of the smoke has cleared, it will be much easier to show that these men have been the victims of a savage and undeserved witch-hunt. A lot of people will be embarrassed by their collaboration with this persecution, but it will be too late to do much good for those men who have spent their lives in prison.

While the misery of the boy-lovers affects very few, the other long-term legacy of the Dade County repeal affects almost everyone. The success of the anti-gay campaign ignited long-simmering passions of the American right, and sparked an extensive movement to compress the boundaries of acceptable sexual behavior.

Right-wing ideology linking non-familial sex with communism and political weakness is nothing new. During the McCarthy period, Alfred Kinsey and his Institute for Sex Research were attacked for weakening the moral fiber of Americans and rendering them more vulnerable to communist influence. After congressional investigations and bad publicity, Kinsey's Rockefeller grant was terminated in 1954.⁴

Around 1969, the extreme right discovered the Sex Information and Education Council of the United States (SIECUS). In books and pamphlets, such as *The Sex Education Racket: Pornography in the Schools* and *SIECUS: Corrupter of Youth*, the right attacked SIECUS and sex education as communist plots to destroy the family and sap the national will.⁵ Another pamphlet, *Pavlov's Children (They May Be Yours)*, claims that the United

3. George Stambolian, "Creating the New Man: A Conversation with Jacqueline Livingston," *Christopher Street*, May 1980; "Jacqueline Livingston," *Clothed with the Sun*, vol. 3, no. 1, May 1983 [Rubin's note].

4. Paul H. Gebhard, "The Institute," in Martin S. Weinberg (ed.), *Sex Research: Studies from the Kinsey Institute*, New York, Oxford University Press, 1976 [Rubin's note]. Kinsey (1894–1965), American biologist and sex researcher; in 1941 he secured funding from the Rockefeller Foundation, and in 1947 he founded the Institute for Sex Research of Indiana University (now the Kinsey Institute for Research in Sex, Gender, and Reproduction); its first two publications, *Sexual Behavior in the Human Male* (1948) and *Sexual*

Behavior in the Human Female (1953), were best sellers. Joseph McCarthy (1908–1957), as Republican U.S. senator from Wisconsin (1947–57), gained national attention with his sensational and unsubstantiated claims that the State Department and other parts of the government had been infiltrated by Communists; he helped create an atmosphere of suspicion and fear in which all nonconformity became suspect.

5. Phoebe Courtney, *The Sex Education Racket: Pornography in the Schools (An Exposé)*, New Orleans, Free Men Speak, 1969; Dr. Gordon V. Drake, *SIECUS: Corrupter of Youth*, Tulsa, Oklahoma, Christian Crusade Publications, 1969 [Rubin's note].

Nations Educational, Scientific and Cultural Organization (UNESCO) is in cahoots with SIECUS to undermine religious taboos, to promote the acceptance of abnormal sexual relations, to downgrade absolute moral standards, and to "destroy racial cohesion," by exposing white people (especially white women) to the alleged "lower" sexual standards of black people.⁶

New Right and neo-conservative ideology has updated these themes, and leans heavily on linking "immoral" sexual behavior to putative declines in American power. In 1977, Norman Podhoretz wrote an essay blaming homosexuals for the alleged inability of the United States to stand up to the Russians.⁷ He thus neatly linked "the anti-gay fight in the domestic arena and the anti-communist battles in foreign policy."⁸

Right-wing opposition to sex education, homosexuality, pornography, abortion, and pre-marital sex moved from the extreme fringes to the political center stage after 1977, when right-wing strategists and fundamentalist religious crusaders discovered that these issues had mass appeal. Sexual reaction played a significant role in the right's electoral success in 1980.⁹ Organizations like the Moral Majority and Citizens for Decency¹ have acquired mass followings, immense financial resources, and unanticipated clout. The Equal Rights Amendment has been defeated, legislation has been passed that mandates new restrictions on abortion, and funding for programs like Planned Parenthood² and sex education has been slashed. Laws and regulations making it more difficult for teenage girls to obtain contraceptives or abortions have been promulgated. Sexual backlash was exploited in successful attacks on the Women's Studies Program at California State University at Long Beach.

The most ambitious right-wing legislative initiative has been the Family Protection Act (FPA), introduced in Congress in 1979. The Family Protection Act is a broad assault on feminism, homosexuals, non-traditional families, and teenage sexual privacy.³ The Family Protection Act has not and probably will not pass, but conservative members of Congress continue to pursue its agenda in a more piecemeal fashion. Perhaps the most glaring

1. Citizens for Decency through Law, a U.S. anti-pornography organization (founded in 1956; after 1993, it ceased to function on a national scale). Moral Majority: an organization (1979–89) founded by Jerry Falwell and other evangelicals to mobilize social conservatives politically (revived in 2004 as the Moral Majority Coalition).

2. Organization founded in 1923 (as the American Birth Control League) to provide comprehensive reproductive health care and education services. Equal Rights Amendment: though Congress passed a constitutional amendment in 1972 guaranteeing that equality of rights under the law not be abridged or denied on account of sex, the measure did not take effect, because it failed to gain the required ratification by three-quarters of the states by the 1982 deadline.

3. Rhonda Brown, "Blueprint for a Moral America," *Nation*, May 23, 1981 [Rubin's note].

sign of the times is the Adolescent Family Life Program. Also known as the Teen Chastity Program, it gets some 15 million federal dollars to encourage teenagers to refrain from sexual intercourse, and to discourage them from using contraceptives if they do have sex, and from having abortions if they get pregnant. In the last few years, there have been countless local confrontations over gay rights, sex education, abortion rights, adult bookstores, and public school curricula. It is unlikely that the anti-sex backlash is over, or that it has even peaked. Unless something changes dramatically, it is likely that the next few years will bring more of the same.

Periods such as the 1880s in England, and the 1950s in the United States, recodify the relations of sexuality. The struggles that were fought leave a residue in the form of laws, social practices, and ideologies which then affect the way in which sexuality is experienced long after the immediate conflicts have faded. All the signs indicate that the present era is another of those watersheds in the politics of sex. The settlements that emerge from the 1980s will have an impact far into the future. It is therefore imperative to understand what is going on and what is at stake in order to make informed decisions about what policies to support and oppose.

It is difficult to make such decisions in the absence of a coherent and intelligent body of radical thought about sex. Unfortunately, progressive political analysis of sexuality is relatively underdeveloped. Much of what is available from the feminist movement has simply added to the mystification that shrouds the subject. There is an urgent need to develop radical perspectives on sexuality.

Paradoxically, an explosion of exciting scholarship and political writing about sex has been generated in these bleak years. In the 1950s, the early gay rights movement began and prospered while the bars were being raided and anti-gay laws were being passed. In the last six years, new erotic communities, political alliances, and analyses have been developed in the midst of the repression. In this essay, I will propose elements of a descriptive and conceptual framework for thinking about sex and its politics. I hope to contribute to the pressing task of creating an accurate, humane, and genuinely liberatory body of thought about sexuality.

II. *Sexual Thoughts*

"You see, Tim," Phillip said suddenly, "your argument isn't reasonable. Suppose I granted your first point that homosexuality is justifiable in certain instances and under certain controls. Then there is the catch: where does justification end and degeneracy begin? Society must condemn to protect. Permit even the intellectual homosexual a place of respect and the first bar is down. Then comes the next and the next until the sadist, the flagellist, the criminally insane demand their places, and society ceases to exist. So I ask again: where is the line drawn? Where does degeneracy begin if not at the beginning of individual freedom in such matters?"

—Fragment from a discussion between two gay men
trying to decide if they may love each other,
from a novel published in 1950⁴

4. James Barr, *Quatrefoil*, New York, Greenberg, 1950, p. 310 [Rubin's note].

A radical theory of sex must identify, describe, explain, and denounce erotic injustice and sexual oppression. Such a theory needs refined conceptual tools which can grasp the subject and hold it in view. It must build rich descriptions of sexuality as it exists in society and history. It requires a convincing critical language that can convey the barbarity of sexual persecution.

Several persistent features of thought about sex inhibit the development of such a theory. These assumptions are so pervasive in Western culture that they are rarely questioned. Thus, they tend to reappear in different political contexts, acquiring new rhetorical expressions but reproducing fundamental axioms.

One such axiom is sexual essentialism—the idea that sex is a natural force that exists prior to social life and shapes institutions. Sexual essentialism is embedded in the folk wisdoms of Western societies, which consider sex to be eternally unchanging, asocial, and transhistorical. Dominated for over a century by medicine, psychiatry, and psychology, the academic study of sex has reproduced essentialism. These fields classify sex as a property of individuals. It may reside in their hormones or their psyches. It may be construed as physiological or psychological. But within these ethnoscientific categories, sexuality has no history and no significant social determinants.

During the last five years, a sophisticated historical and theoretical scholarship has challenged sexual essentialism both explicitly and implicitly. Gay history, particularly the work of Jeffrey Weeks, has led this assault by showing that homosexuality as we know it is a relatively modern institutional complex.⁵ Many historians have come to see the contemporary institutional forms of heterosexuality as an even more recent development.⁶ An important contributor to the new scholarship is Judith Walkowitz, whose research has demonstrated the extent to which prostitution was transformed around the turn of the century. She provides meticulous descriptions of how the interplay of social forces such as ideology, fear, political agitation, legal reform, and medical practice can change the structure of sexual behavior and alter its consequences.⁷

Michel Foucault's *The History of Sexuality* has been the most influential and emblematic text of the new scholarship on sex. Foucault criticizes the traditional understanding of sexuality as a natural libido yearning to break free of social constraint. He argues that desires are not preexisting biological entities, but rather, that they are constituted in the course of historically specific social practices. He emphasizes the generative aspects of the social organization of sex rather than its repressive elements by pointing out that new sexualities are constantly produced. And he points to a major discontinuity between kinship based systems of sexuality and more modern forms.⁸

5. This insight was first articulated by Mary McIntosh, "The Homosexual Role," *Social Problems*, vol. 16, no. 2, Fall 1968; the idea has been developed in Jeffrey Weeks, *Coming Out: Homosexual Politics in Britain from the Nineteenth Century to the Present*, New York, Quartet, 1977, and in Weeks, *Sex, Politics, and Society*, op. cit.; see also D'Emilio, *Sexual Politics*, *Sexual Communities*, op. cit.; and Gayle Rubin, "Introduction" to Renée Vivien, *A Woman Appeared to Me*, Weatherby Lake, Mo., Naiad Press, 1979 [Rubin's note]. Weeks (b. 1945), British sociolo-

gist.

8. Michel Foucault, *The History of Sexuality*, New York, Pantheon, 1978 [Rubin's note]. FOUCAULT (1926–1984), French philosopher and historian of ideas. For *The History of Sexuality* (1976), see above.

The new scholarship on sexual behavior has given sex a history and created a constructivist alternative to sexual essentialism. Underlying this body of work is an assumption that sexuality is constituted in society and history, not biologically ordained.⁹ This does not mean the biological capacities are not prerequisites for human sexuality. It does mean that human sexuality is not comprehensible in purely biological terms. Human organisms with human brains are necessary for human cultures, but no examination of the body or its parts can explain the nature and variety of human social systems. The belly's hunger gives no clues as to the complexities of cuisine. The body, the brain, the genitalia, and the capacity for language are all necessary for human sexuality. But they do not determine its content, its experiences, or its institutional forms. Moreover, we never encounter the body unmediated by the meanings that cultures give to it. To paraphrase Lévi-Strauss, my position on the relationship between biology and sexuality is a "Kantianism without a transcendental libido."¹

It is impossible to think with any clarity about the politics of race or gender as long as these are thought of as biological entities rather than as social constructs. Similarly, sexuality is impervious to political analysis as long as it is primarily conceived as a biological phenomenon or an aspect of individual psychology. Sexuality is as much a human product as are diets, methods of transportation, systems of etiquette, forms of labor, types of entertainment, processes of production, and modes of oppression. Once sex is understood in terms of social analysis and historical understanding, a more realistic politics of sex becomes possible. One may then think of sexual politics in terms of such phenomena as populations, neighborhoods, settlement patterns, migration, urban conflict, epidemiology, and police technology. These are more fruitful categories of thought than the more traditional ones of sin, disease, neurosis, pathology, decadence, pollution, or the decline and fall of empires.

By detailing the relationships between stigmatized erotic populations and the social forces which regulate them, work such as that of Allan Bérubé, John D'Emilio,² Jeffrey Weeks, and Judith Walkowitz contains implicit categories of political analysis and criticism. Nevertheless, the constructivist perspective has displayed some political weaknesses. This has been most evident in misconstructions of Foucault's position.

Because of his emphasis on the ways that sexuality is produced, Foucault has been vulnerable to interpretations that deny or minimize the reality of sexual repression in the more political sense. Foucault makes it abundantly clear that he is not denying the existence of sexual repression so much as inscribing it within a large dynamic.³ Sexuality in Western societies has been structured within an extremely punitive social framework, and has been subjected to very real formal and informal controls. It is necessary to recognize repressive phenomena without resorting to the essentialist assumptions

9. A very useful discussion of these issues can be found in Robert Padgug, "Sexual Matters: On Conceptualizing Sexuality in History," *Radical History Review*, no. 20, Spring/Summer 1979 [Rubin's note].

1. Claude Lévi-Strauss, "A Confrontation," *New Left Review*, no. 62, July–August, 1970. In this conversation, Lévi-Strauss calls his position "a Kantianism without a transcendental subject"

[Rubin's note]. LÉVI-STRAUSS (1908–2009), French anthropologist. The German philosopher IMMANUEL KANT sets forth his concept of the transcendental subject of thought—about which nothing of an empirical nature can be known—in *The Critique of Pure Reason* (1781).

2. American historian (b. 1948). Bérubé (1946–2007), American historian.

3. Foucault, op. cit., 11 [Rubin's note].

of the language of libido. It is important to hold repressive sexual practices in focus, even while situating them within a different totality and a more refined terminology.⁴

Most radical thought about sex has been embedded within a model of the instincts and their restraints. Concepts of sexual oppression have been lodged within that more biological understanding of sexuality. It is often easier to fall back on the notion of a natural libido subjected to inhumane repression than to reformulate concepts of sexual injustice within a more constructivist framework. But it is essential that we do so. We need a radical critique of sexual arrangements that has the conceptual elegance of Foucault and the evocative passion of Reich.⁵

The new scholarship on sex has brought a welcome insistence that sexual terms be restricted to their proper historical and social contexts, and a cautionary scepticism towards sweeping generalizations. But it is important to be able to indicate groupings of erotic behavior and general trends within erotic discourse. In addition to sexual essentialism, there are at least five other ideological formations whose grip on sexual thought is so strong that to fail to discuss them is to remain enmeshed within them. These are sex negativity, the fallacy of misplaced scale, the hierarchical valuation of sex acts, the domino theory of sexual peril, and the lack of a concept of benign sexual variation.

Of these five, the most important is sex negativity. Western cultures generally consider sex to be a dangerous, destructive, negative force.⁶ Most Christian tradition, following Paul,⁷ holds that sex is inherently sinful. It may be redeemed if performed within marriage for procreative purposes and if the pleasurable aspects are not enjoyed too much. In turn, this idea rests on the assumption that the genitalia are an intrinsically inferior part of the body, much lower and less holy than the mind, the "soul," the "heart," or even the upper part of the digestive system (the status of the excretory organs is close to that of the genitalia).⁸ Such notions have by now acquired a life of their own and no longer depend solely on religion for their perseverance.

This culture always treats sex with suspicion. It construes and judges almost any sexual practice in terms of its worst possible expression. Sex is presumed guilty until proven innocent. Virtually all erotic behavior is considered bad unless a specific reason to exempt it has been established. The most acceptable excuses are marriage, reproduction, and love. Sometimes scientific curiosity, aesthetic experience, or a long-term intimate relationship may serve. But the exercise of erotic capacity, intelligence, curiosity, or creativity all require pretexts that are unnecessary for other pleasures, such as the enjoyment of food, fiction, or astronomy.

4. See the discussion in Weeks, *Sex, Politics and Society*, op. cit., p. 9 [Rubin's note].

5. Wilhelm Reich (1897–1957), Austrian psychoanalyst who settled in the United States in 1939; author of *The Function of the Orgasm* (1927) and *The Sexual Revolution* (1936), he argued that the release of "orgone energy" through sexual activity is necessary for individual and societal health.

6. See Weeks, *Sex, Politics and Society*, op. cit., p. 22 [Rubin's note].

7. St. Paul (d. ca. 67 C.E.), born a Roman Jew; he wrote, "It is good for a man not to touch a woman," but for those who cannot be abstinent

"it is better to marry than to burn" (1 Corinthians 7.1, 9).

8. See, for example, "Pope Praises Couples for Self-Control," *San Francisco Chronicle*, October 13, 1980, p. 5; "Pope Says Sexual Arousal Isn't a Sin If It's Ethical," *San Francisco Chronicle*, November 6, 1980, p. 33; "Pope Condemns 'Carnal Lust' As Abuse of Human Freedom," *San Francisco Chronicle*, January 15, 1981, p. 2; "Pope Again Hits Abortion, Birth Control," *San Francisco Chronicle*, January 16, 1981, p. 13; and "Sexuality, not Sex in Heaven," *San Francisco Chronicle*, December 3, 1981, p. 50 [Rubin's note].

What I call the fallacy of misplaced scale is a corollary of sex negativity. Susan Sontag once commented that since Christianity focused "on sexual behavior as the root of virtue, everything pertaining to sex has been a 'special case' in our culture."⁹ Sex law has incorporated the religious attitude that heretical sex is an especially heinous sin that deserves the harshest punishments. Throughout much of European and American history, a single act of consensual anal penetration was grounds for execution. In some states, sodomy still carries twenty-year prison sentences.¹ Outside the law, sex is also a marked category. Small differences in value or behavior are often experienced as cosmic threats. Although people can be intolerant, silly, or pushy about what constitutes proper diet, differences in menu rarely provoke the kinds of rage, anxiety, and sheer terror that routinely accompany differences in erotic taste. Sexual acts are burdened with an excess of significance.

Modern Western societies appraise sex acts according to a hierarchical system of sexual value. Marital, reproductive heterosexuals are alone at the top of the erotic pyramid. Clamoring below are unmarried monogamous heterosexuals in couples, followed by most other heterosexuals. Solitary sex floats ambiguously. The powerful nineteenth-century stigma on masturbation lingers in less potent, modified forms, such as the idea that masturbation is an inferior substitute for partnered encounters. Stable, long-term lesbian and gay male couples are verging on respectability, but bar dykes and promiscuous gay men are hovering just above the groups at the very bottom of the pyramid. The most despised sexual castes currently include transsexuals, transvestites, fetishists, sadomasochists, sex workers such as prostitutes and porn models, and the lowliest of all, those whose eroticism transgresses generational boundaries.

Individuals whose behavior stands high in this hierarchy are rewarded with certified mental health, respectability, legality, social and physical mobility, institutional support, and material benefits. As sexual behaviors or occupations fall lower on the scale, the individuals who practice them are subjected to a presumption of mental illness, disreputability, criminality, restricted social and physical mobility, loss of institutional support, and economic sanctions.

Extreme and punitive stigma maintains some sexual behaviors as low status and is an effective sanction against those who engage in them. The intensity of this stigma is rooted in Western religious traditions. But most of its contemporary content derives from medical and psychiatric opprobrium.

The old religious taboos were primarily based on kinship forms of social organization. They were meant to deter inappropriate unions and to provide proper kin. Sex laws derived from Biblical pronouncements were aimed at preventing the acquisition of the wrong kinds of affinal partners: consanguineous kin (incest), the same gender (homosexuality), or the wrong species (bestiality). When medicine and psychiatry acquired extensive powers over sexuality, they were less concerned with unsuitable mates than with unfit forms of desire. If taboos against incest best characterized kinship systems of sexual organization, then the shift to an emphasis on taboos against

9. Susan Sontag, *Styles of Radical Will*, New York, Farrar, Straus, & Giroux, 1969, p. 46 [Rubin's note]. SONTAG (1933–2004), American novelist, filmmaker, and literary and cultural critic.

1. In 2003 the Supreme Court struck down anti-sodomy laws, reversing a 1986 ruling that had affirmed their constitutionality.

masturbation was more apposite to the newer systems organized around qualities of erotic experience.²

Medicine and psychiatry multiplied the categories of sexual misconduct. The section on psychosexual disorders in the *Diagnostic and Statistical Manual of Mental Disorders* (DSM) of the American Psychiatric Association (APA) is a fairly reliable map of the current moral hierarchy of sexual activities. The APA list is much more elaborate than the traditional condemnations of whoring, sodomy, and adultery. The most recent edition, *DSM-III*, removed homosexuality from the roster of mental disorders after a long political struggle. But fetishism, sadism, masochism, transsexuality, transvestism, exhibitionism, voyeurism, and pedophilia are quite firmly entrenched as psychological malfunctions.³ Books are still being written about the genesis, etiology, treatment, and cure of these assorted "pathologies."

Psychiatric condemnation of sexual behaviors invokes concepts of mental and emotional inferiority rather than categories of sexual sin. Low status sex practices are vilified as mental diseases or symptoms of defective personality integration. In addition, psychological terms conflate difficulties of psychodynamic functioning with modes of erotic conduct. They equate sexual masochism with self-destructive personality patterns, sexual sadism with emotional aggression, and homoeroticism with immaturity. These terminological muddles have become powerful stereotypes that are indiscriminately applied to individuals on the basis of their sexual orientations.

Popular culture is permeated with ideas that erotic variety is dangerous, unhealthy, depraved, and a menace to everything from small children to national security. Popular sexual ideology is a noxious stew made up of ideas of sexual sin, concepts of psychological inferiority, anti-communism, mob hysteria, accusations of witchcraft, and xenophobia. The mass media nourish these attitudes with relentless propaganda. I would call this system of erotic stigma the last socially respectable form of prejudice if the old forms did not show such obstinate vitality, and new ones did not continually become apparent.

All these hierarchies of sexual value—religious, psychiatric, and popular—function in much the same ways as do ideological systems of racism, ethnocentrism, and religious chauvinism. They rationalize the well-being of the sexually privileged and the adversity of the sexual rabble.

Figure 1 diagrams a general version of the sexual value system. According to this system, sexuality that is "good," "normal" and "natural" should ideally be heterosexual, marital, monogamous, reproductive, and non-commercial. It should be coupled, relational, within the same generation, and occur at home. It should not involve pornography, fetish objects, sex toys of any sort, or roles other than male and female. Any sex that violates these rules is "bad," "abnormal," or "unnatural." Bad sex may be homosexual, unmarried, promiscuous, non-procreative, or commercial. It may be masturbatory or take place at orgies, may be casual, may cross generational lines, and may take place in "public," or at least in the bushes or the baths. It may involve the use of pornography, fetish objects, sex toys, or unusual roles (see Figure 1).

Disorders, 3rd edn, Washington, D.C., American Psychiatric Association [Rubin's note].

The charmed circle:
Good, Normal, Natural,
Blessed Sexuality

Heterosexual
Married
Monogamous
Procreative
Non-commercial
In pairs
In a relationship
Same generation
In private
No pornography
Bodies only
Vanilla

The outer limits:
Bad, Abnormal,
Unnatural,
Damned Sexuality

Homosexual
Unmarried
Promiscuous
Non-procreative
Commercial
Alone or in groups
Casual
Cross-generational
In public
Pornography
With manufactured objects
Sadomasochistic

Figure 1. The sex hierarchy: the charmed circle vs the outer limits

Figure 2 diagrams another aspect of the sexual hierarchy: the need to draw and maintain an imaginary line between good and bad sex. Most of the discourses on sex, be they religious, psychiatric, popular, or political, delimit a very small portion of human sexual capacity as sanctifiable, safe, healthy, mature, legal, or politically correct. The “line” distinguishes these from all other erotic behaviors, which are understood to be the work of the devil, dangerous, psychopathological, infantile, or politically reprehensible. Arguments are then conducted over “where to draw the line,” and to determine what other activities, if any, may be permitted to cross over into acceptability.

All these models assume a domino theory of sexual peril. The line appears to stand between sexual order and chaos. It expresses the fear that

Figure 2. The sex hierarchy: the struggle over where to draw the line

if anything is permitted to cross this erotic DMZ,⁴ the barrier against scary sex will crumble and something unspeakable will skitter across.

Most systems of sexual judgment—religious, psychological, feminist, or socialist—attempt to determine on which side of the line a particular act falls. Only sex acts on the good side of the line are accorded moral complexity. For instance, heterosexual encounters may be sublime or disgusting, free or forced, healing or destructive, romantic or mercenary. As long as it does not violate other rules, heterosexuality is acknowledged to exhibit the full range of human experience. In contrast, all sex acts on the bad side of the line are considered utterly repulsive and devoid of all emotional nuance. The further from the line a sex act is, the more it is depicted as a uniformly bad experience.

As a result of the sex conflicts of the last decade, some behavior near the border is inching across it. Unmarried couples living together, masturbation, and some forms of homosexuality are moving in the direction of respectability (see Figure 2). Most homosexuality is still on the bad side of the line. But if it is coupled and monogamous, the society is beginning to recognize that it includes the full range of human interaction. Promiscuous homosexuality, sadomasochism, fetishism, transsexuality, and cross-generational encounters are still viewed as unmodulated horrors incapable of involving affection, love, free choice, kindness, or transcendence.

This kind of sexual morality has more in common with ideologies of racism than with true ethics. It grants virtue to the dominant groups, and relegates vice to the underprivileged. A democratic morality should judge sexual acts by the way partners treat one another, the level of mutual consideration, the presence or absence of coercion, and the quantity and quality of the pleasures they provide. Whether sex acts are gay or straight,

4. Demilitarized zone, the boundary between two military powers.

coupled or in groups, naked or in underwear, commercial or free, with or without video, should not be ethical concerns.

It is difficult to develop a pluralistic sexual ethics without a concept of benign sexual variation. Variation is a fundamental property of all life, from the simplest biological organisms to the most complex human social formations. Yet sexuality is supposed to conform to a single standard. One of the most tenacious ideas about sex is that there is one best way to do it, and that everyone should do it that way.

Most people find it difficult to grasp that whatever they like to do sexually will be thoroughly repulsive to someone else, and that whatever repels them sexually will be the most treasured delight of someone, somewhere. One need not like or perform a particular sex act in order to recognize that someone else will, and that this difference does not indicate a lack of good taste, mental health, or intelligence in either party. Most people mistake their sexual preferences for a universal system that will or should work for everyone.

This notion of a single ideal sexuality characterizes most systems of thought about sex. For religion, the ideal is procreative marriage. For psychology, it is mature heterosexuality. Although its content varies, the format of a single sexual standard is continually reconstituted within other rhetorical frameworks, including feminism and socialism. It is just as objectionable to insist that everyone should be lesbian, non-monogamous, or kinky, as to believe that everyone should be heterosexual, married, or vanilla—though the latter set of opinions are backed by considerably more coercive power than the former.

Progressives who would be ashamed to display cultural chauvinism in other areas routinely exhibit it towards sexual differences. We have learned to cherish different cultures as unique expressions of human inventiveness rather than as the inferior or disgusting habits of savages. We need a similarly anthropological understanding of different sexual cultures.

Empirical sex research is the one field that does incorporate a positive concept of sexual variation. Alfred Kinsey approached the study of sex with the same uninhibited curiosity he had previously applied to examining a species of wasp. His scientific detachment gave his work a refreshing neutrality that enraged moralists and caused immense controversy.⁵ Among Kinsey's successors, John Gagnon and William Simon have pioneered the application of sociological understandings to erotic variety.⁶ Even some of the older sexology is useful. Although his work is imbued with unappetizing eugenic beliefs, Havelock Ellis was an acute and sympathetic observer. His monumental *Studies in the Psychology of Sex* is resplendent with detail.⁷

Much political writing on sexuality reveals complete ignorance of both classical sexology and modern sex research. Perhaps this is because so few colleges and universities bother to teach human sexuality, and because so

much stigma adheres even to scholarly investigation of sex. Neither sexology nor sex research has been immune to the prevailing sexual value system. Both contain assumptions and information which should not be accepted uncritically. But sexology and sex research provide abundant detail, a welcome posture of calm, and a well developed ability to treat sexual variety as something that exists rather than as something to be exterminated. These fields can provide an empirical grounding for a radical theory of sexuality more useful than the combination of psychoanalysis and feminist first principles to which so many texts resort.

* * *

VI. The Limits of Feminism

We know that in an overwhelmingly large number of cases, sex crime is associated with pornography. We know that sex criminals read it, are clearly influenced by it. I believe that, if we can eliminate the distribution of such items among impressionable children, we shall greatly reduce our frightening sex-crime rate.

—J. Edgar Hoover⁸

In the absence of a more articulated radical theory of sex, most progressives have turned to feminism for guidance. But the relationship between feminism and sex is complex. Because sexuality is a nexus of the relationships between genders, much of the oppression of women is borne by, mediated through, and constituted within, sexuality. Feminism has always been vitally interested in sex. But there have been two strains of feminist thought on the subject. One tendency has criticized the restrictions on women's sexual behavior and denounced the high costs imposed on women for being sexually active. This tradition of feminist sexual thought has called for a sexual liberation that would work for women as well as for men. The second tendency has considered sexual liberalization to be inherently a mere extension of male privilege. This tradition resonates with conservative, anti-sexual discourse. With the advent of the anti-pornography movement, it achieved temporary hegemony over feminist analysis.

The anti-pornography movement and its texts have been the most extensive expression of this discourse.⁹ In addition, proponents of this viewpoint have condemned virtually every variant of sexual expression as anti-feminist. Within this framework, monogamous lesbianism that occurs within long-term, intimate relationships, and which does not involve playing with polarized roles, has replaced married, procreative heterosexuality at the top of the value hierarchy. Heterosexuality has been demoted to somewhere in the middle. Apart from this change, everything else looks more or less familiar. The lower depths are occupied by the usual groups and behaviors: prostitu-

Back the Night, New York, William Morrow, 1980; Andrea Dworkin, *Pornography*, New York, Perigee, 1981. The *Newspage* of San Francisco's Women Against Violence in Pornography and Media and the *Newsreport* of New York Women Against Pornography are excellent sources [Rubin's note].

tion, transsexuality, sadomasochism, and cross-generational activities.¹ Most gay male conduct, all casual sex, promiscuity, and lesbian behavior that does involve roles or kink or non-monogamy are also censured.² Even sexual fantasy during masturbation is denounced as a phallogentric hold-over.³

This discourse on sexuality is less a sexology than a demonology. It presents most sexual behavior in the worst possible light. Its descriptions of erotic conduct always use the worst available example as if it were representative. It presents the most disgusting pornography, the most exploited forms of prostitution, and the least palatable or most shocking manifestations of sexual variation. This rhetorical tactic consistently misrepresents human sexuality in all its forms. The picture of human sexuality that emerges from this literature is unremittingly ugly.

In addition, this anti-porn rhetoric is a massive exercise in scapegoating. It criticizes non-routine acts of love rather than routine acts of oppression, exploitation, or violence. This demon sexology directs legitimate anger at women's lack of personal safety against innocent individuals, practices, and communities. Anti-porn propaganda often implies that sexism originates within the commercial sex industry and subsequently infects the rest of society. This is sociologically nonsensical. The sex industry is hardly a feminist utopia. It reflects the sexism that exists in the society as a whole. We need to analyze and oppose the manifestations of gender inequality specific to the sex industry. But this is not the same as attempting to wipe out commercial sex.

Similarly, erotic minorities such as sadomasochists and transsexuals are as likely to exhibit sexist attitudes or behavior as any other politically random social grouping. But to claim that they are inherently anti-feminist is sheer fantasy. A good deal of current feminist literature attributes the oppression of women to graphic representations of sex, prostitution, sex education, sadomasochism, male homosexuality, and transsexualism. Whatever happened to the family, religion, education, child-rearing practices, the media, the state, psychiatry, job discrimination, and unequal pay?

Finally, this so-called feminist discourse recreates a very conservative sexual morality. For over a century, battles have been waged over just how much shame, distress, and punishment should be incurred by sexual activity.

3. Julia Penelope, "And Now For the Really Hard Questions," *Sinister Wisdom*, no. 15, Fall 1980, p. 103 [Rubin's note].

The conservative tradition has promoted opposition to pornography, prostitution, homosexuality, all erotic variation, sex education, sex research, abortion, and contraception. The opposing, pro-sex tradition has included individuals like Havelock Ellis, Magnus Hirschfeld, Alfred Kinsey, and Victoria Woodhull,⁴ as well as the sex education movement, organizations of militant prostitutes and homosexuals, the reproductive rights movement, and organizations such as the Sexual Reform League of the 1960s. This motley collection of sex reformers, sex educators, and sexual militants has mixed records on both sexual and feminist issues. But surely they are closer to the spirit of modern feminism than are moral crusaders, the social purity movement, and anti-vice organizations. Nevertheless, the current feminist sexual demonology generally elevates the anti-vice crusaders to positions of ancestral honor, while condemning the more liberatory tradition as anti-feminist. In an essay that exemplifies some of these trends, Sheila Jeffreys blames Havelock Ellis, Edward Carpenter, Alexandra Kollantai, "believers in the joy of sex of every possible political persuasion," and the 1929 congress of the World League for Sex Reform for making "a great contribution to the defeat of militant feminism."⁵

The anti-pornography movement and its avatars have claimed to speak for all feminism. Fortunately, they do not. Sexual liberation has been and continues to be a feminist goal. The women's movement may have produced some of the most retrogressive sexual thinking this side of the Vatican. But it has also produced an exciting, innovative, and articulate defense of sexual pleasure and erotic justice. This "pro-sex" feminism has been spearheaded by lesbians whose sexuality does not conform to movement standards of purity (primarily lesbian sadomasochists and butch/femme dykes), by unapologetic heterosexuals, and by women who adhere to classic radical feminism rather than to the revisionist celebrations of femininity which have become so common.⁶ Although the anti-porn forces have

attempted to weed anyone who disagrees with them out of the movement, the fact remains that feminist thought about sex is profoundly polarized.⁷

Whenever there is polarization, there is an unhappy tendency to think the truth lies somewhere in between. Ellen Willis has commented sarcastically that "the feminist bias is that women are equal to men and the male chauvinist bias is that women are inferior. The unbiased view is that the truth lies somewhere in between."⁸ The most recent development in the feminist sex wars is the emergence of a "middle" that seeks to evade the dangers of anti-porn fascism, on the one hand, and a supposed "anything goes" libertarianism, on the other.⁹ Although it is hard to criticize a position that is not yet fully formed, I want to draw attention to some incipient problems.

The emergent middle is based on a false characterization of the poles of the debate, construing both sides as equally extremist. According to B. Ruby Rich, "the desire for a language of sexuality has led feminists into locations (pornography, sadomasochism) too narrow or overdetermined for a fruitful discussion. Debate has collapsed into a rumble."¹ True, the fights between Women Against Pornography (WAP)² and lesbian sadomasochists have resembled gang warfare. But the responsibility for this lies primarily with the anti-porn movement, and its refusal to engage in principled discussion. S/M lesbians have been forced into a struggle to maintain their membership in the movement, and to defend themselves against slander. No major spokeswoman for lesbian S/M has argued for any kind of S/M supremacy, or advocated that everyone should be a sadomasochist. In addition to self-defense, S/M lesbians have called for appreciation for erotic diversity and more open discussion of sexuality.³ Trying to find a middle course between WAP and Samois⁴ is a bit like saying that the truth about homosexuality lies somewhere between the positions of the Moral Majority and those of the gay movement.

In political life, it is all too easy to marginalize radicals, and to attempt to buy acceptance for a moderate position by portraying others as extremists. Liberals have done this for years to communists. Sexual radicals have opened up the sex debates. It is shameful to deny their contribution, misrepresent their positions, and further their stigmatization.

4. Organization of lesbian-feminist sadomasochists (1978–83), co-founded in San Francisco by Rubin.

In contrast to cultural feminists,⁵ who simply want to purge sexual dissidents, the sexual moderates are willing to defend the rights of erotic non-conformists to political participation. Yet this defense of political rights is linked to an implicit system of ideological condescension. The argument has two major parts. The first is an accusation that sexual dissidents have not paid close enough attention to the meaning, sources, or historical construction of their sexuality. This emphasis on meaning appears to function in much the same way that the question of etiology has functioned in discussions of homosexuality. That is, homosexuality, sadomasochism, prostitution, or boy-love are taken to be mysterious and problematic in some way that more respectable sexualities are not. The search for a cause is a search for something that could change so that these "problematic" eroticisms would simply not occur. Sexual militants have replied to such exercises that although the question of etiology or cause is of intellectual interest, it is not high on the political agenda and that, moreover, the privileging of such questions is itself a regressive political choice.

The second part of the "moderate" position focuses on questions of consent. Sexual radicals of all varieties have demanded the legal and social legitimization of consenting sexual behavior. Feminists have criticized them for ostensibly finessing questions about "the limits of consent" and "structural constraints" on consent.⁶ Although there are deep problems with the political discourse of consent, and although there are certainly structural constraints on sexual choice, this criticism has been consistently misapplied in the sex debates. It does not take into account the very specific semantic content that consent has in sex law and sex practice.

As I mentioned earlier, a great deal of sex law does not distinguish between consensual and coercive behavior. Only rape law contains such a distinction. Rape law is based on the assumption, correct in my view, that heterosexual activity may be freely chosen or forcibly coerced. One has the legal right to engage in heterosexual behavior as long as it does not fall under the purview of other statutes and as long as it is agreeable to both parties.

This is not the case for most other sexual acts. Sodomy laws, as I mentioned above, are based on the assumption that the forbidden acts are an "abominable and detestable crime against nature." Criminality is intrinsic to the acts themselves, no matter what the desires of the participants. "Unlike rape, sodomy or an unnatural or perverted sexual act may be committed between two persons both of whom consent, and regardless of which is the aggressor, both may be prosecuted."⁷ Before the consenting adults statute was passed in California in 1976, lesbian lovers could have been prosecuted for committing oral copulation. If both participants were capable of consent, both were equally guilty.⁸

Adult incest statutes operate in a similar fashion. Contrary to popular mythology, the incest statutes have little to do with protecting children from rape by close relatives. The incest statutes themselves prohibit marriage or sexual intercourse between adults who are closely related. Prosecutions are rare, but two were reported recently. In 1979, a 19-year-old Marine met his 42-year-old mother, from whom he had been separated at birth. The two fell in love and got married. They were charged and found guilty of incest, which under Virginia law carries a maximum ten-year sentence. During their trial, the Marine testified, "I love her very much. I feel that two people who love each other should be able to live together."⁹ In another case, a brother and sister who had been raised separately met and decided to get married. They were arrested and pleaded guilty to felony incest in return for probation. A condition of probation was that they not live together as husband and wife. Had they not accepted, they would have faced twenty years in prison.¹

In a famous S/M case, a man was convicted of aggravated assault for a whipping administered in an S/M scene. There was no complaining victim. The session had been filmed and he was prosecuted on the basis of the film. The man appealed his conviction by arguing that he had been involved in a consensual sexual encounter and had assaulted no one. In rejecting his appeal, the court ruled that one may not consent to an assault or battery "except in a situation involving ordinary physical contact or blows incident to sports such as football, boxing, or wrestling."² The court went on to note that the "consent of a person without legal capacity to give consent, such as a child or insane person, is ineffective," and that "It is a matter of common knowledge that a normal person in full possession of his mental faculties does not freely consent to the use, upon himself, of force likely to produce great bodily injury."³ Therefore, anyone who would consent to a whipping would be presumed *non compos mentis*⁴ and legally incapable of consenting. S/M sex generally involves a much lower level of force than the average football game, and results in far fewer injuries than most sports. But the court ruled that football players are sane, whereas masochists are not.

Sodomy laws, adult incest laws, and legal interpretations such as the one above clearly interfere with consensual behavior and impose criminal penalties on it. Within the law, consent is a privilege enjoyed only by those who engage in the highest-status sexual behavior. Those who enjoy low-status sexual behavior do not have the legal right to engage in it. In addition, economic sanctions, family pressures, erotic stigma, social discrimination, negative ideology, and the paucity of information about erotic behavior, all serve to make it difficult for people to make unconventional sexual choices. There certainly are structural constraints that impede free sexual choice, but they hardly operate to coerce anyone into being a pervert. On the contrary, they operate to coerce everyone toward normality.

The "brainwash theory" explains erotic diversity by assuming that some sexual acts are so disgusting that no one would willingly perform them. Therefore, the reasoning goes, anyone who does so must have been forced or

4. Not of sound mind (Latin).

fooled. Even constructivist sexual theory has been pressed into the service of explaining away why otherwise rational individuals might engage in variant sexual behavior. Another position that is not yet fully formed uses the ideas of Foucault and Weeks to imply that the “perversions” are an especially unsavory or problematic aspect of the construction of modern sexuality.⁵ This is yet another version of the notion that sexual dissidents are victims of the subtle machinations of the social system. Weeks and Foucault would not accept such an interpretation, since they consider all sexuality to be constructed, the conventional no less than the deviant.

Psychology is the last resort of those who refuse to acknowledge that sexual dissidents are as conscious and free as any other group of sexual actors. If deviants are not responding to the manipulations of the social system, then perhaps the source of their incomprehensible choices can be found in a bad childhood, unsuccessful socialization, or inadequate identity formation. In her essay on erotic domination, Jessica Benjamin draws upon psychoanalysis and philosophy to explain why what she calls “somasochism” is alienated, distorted, unsatisfactory, numb, purposeless, and an attempt to “relieve an original effort at differentiation that failed.”⁶ This essay substitutes a psycho-philosophical inferiority for the more usual means of devaluing dissident eroticism. One reviewer has already construed Benjamin’s argument as showing that somasochism is merely an “obsessive replay of the infant power struggle.”⁷

The position which defends the political rights of perverts but which seeks to understand their “alienated” sexuality is certainly preferable to the WAP-style bloodbaths. But for the most part, the sexual moderates have not confronted their discomfort with erotic choices that differ from their own. Erotic chauvinism cannot be redeemed by tarding it up in Marxist drag, sophisticated constructivist theory, or retro-psychobabble.

Whichever feminist position on sexuality—right, left, or center—eventually attains dominance, the existence of such a rich discussion is evidence that the feminist movement will always be a source of interesting thought about sex. Nevertheless, I want to challenge the assumption that feminism is or should be the privileged site of a theory of sexuality. Feminism is the theory of gender oppression. To automatically assume that this makes it the theory of sexual oppression is to fail to distinguish between gender, on the one hand, and erotic desire, on the other.

In the English language, the word “sex” has two very different meanings. It means gender and gender identity, as in “the female sex” or “the male sex.” But sex also refers to sexual activity, lust, intercourse, and arousal, as in “to have sex.” This semantic merging reflects a cultural assumption that sexuality is reducible to sexual intercourse and that it is a function of the relations between women and men. The cultural fusion of gender with sexuality has given rise to the idea that a theory of sexuality may be derived directly out of a theory of gender.

In an earlier essay, “The Traffic in Women,” I used the concept of a sex/gender system, defined as a “set of arrangements by which a society trans-

forms biological sexuality into products of human activity.”⁸ I went on to argue that “Sex as we know it—gender identity, sexual desire and fantasy, concepts of childhood—is itself a social product.”⁹ In that essay, I did not distinguish between lust and gender, treating both as modalities of the same underlying social process.

“The Traffic in Women” was inspired by the literature on kin-based systems of social organization. It appeared to me at the time that gender and desire were systemically intertwined in such social formations. This may or may not be an accurate assessment of the relationship between sex and gender in tribal organizations. But it is surely not an adequate formulation for sexuality in Western industrial societies. As Foucault has pointed out, a system of sexuality has emerged out of earlier kinship forms and has acquired significant autonomy.

Particularly from the eighteenth century onward, Western societies created and deployed a new apparatus which was superimposed on the previous one, and which, without completely supplanting the latter, helped to reduce its importance. I am speaking of the deployment of *sexuality*. . . . For the first [kinship], what is pertinent is the link between partners and definite statutes; the second [sexuality] is concerned with the sensations of the body, the quality of pleasures, and the nature of impressions.¹

The development of this sexual system has taken place in the context of gender relations. Part of the modern ideology of sex is that lust is the province of men, purity that of women. Women have been to some extent excluded from the modern sexual system. It is no accident that pornography and the perversions have been considered part of the male domain. In the sex industry, women have been excluded from most production and consumption, and allowed to participate primarily as workers. In order to participate in the “perversions,” women have had to overcome serious limitations on their social mobility, their economic resources, and their sexual freedoms. Gender affects the operation of the sexual system, and the sexual system has had gender-specific manifestations. But although sex and gender are related, they are not the same thing, and they form the basis of two distinct arenas of social practice.

In contrast to my perspective in “The Traffic in Women,” I am now arguing that it is essential to separate gender and sexuality analytically to more accurately reflect their separate social existence. This goes against the grain of much contemporary feminist thought, which treats sexuality as a derivation of gender. For instance, lesbian feminist ideology has mostly analyzed the oppression of lesbians in terms of the oppression of women. However, lesbians are also oppressed as queers and perverts, by the operation of sexual, not gender, stratification. Although it pains many lesbians to think about it, the fact is that lesbians have shared many of the sociological features and suffered from many of the same social penalties as have gay men, sadomasochists, transvestites, and prostitutes.

Catharine MacKinnon has made the most explicit theoretical attempt to subsume sexuality under feminist thought. According to MacKinnon, “Sexuality

is to feminism what work is to marxism . . . the molding, direction, and expression of sexuality organizes society into two sexes, women and men."² This analytic strategy in turn rests on a decision to "use sex and gender relatively interchangeably."³ It is this definitional fusion that I want to challenge.

There is an instructive analogy in the history of the differentiation of contemporary feminist thought from Marxism. Marxism is probably the most supple and powerful conceptual system extant for analyzing social inequality. But attempts to make Marxism the sole explanatory system for all social inequalities have been dismal exercises. Marxism is most successful in the areas of social life for which it was originally developed—class relations under capitalism.

In the early days of the contemporary women's movement, a theoretical conflict took place over the applicability of Marxism to gender stratification. Since Marxist theory is relatively powerful, it does in fact detect important and interesting aspects of gender oppression. It works best for those issues of gender most closely related to issues of class and the organization of labor. The issues more specific to the social structure of gender were not amenable to Marxist analysis.

The relationship between feminism and a radical theory of sexual oppression is similar. Feminist conceptual tools were developed to detect and analyze gender-based hierarchies. To the extent that these overlap with erotic stratifications, feminist theory has some explanatory power. But as issues become less those of gender and more those of sexuality, feminist analysis becomes irrelevant and often misleading. Feminist thought simply lacks angles of vision which can encompass the social organization of sexuality. The criteria of relevance in feminist thought do not allow it to see or assess critical power relations in the area of sexuality.

In the long run, feminism's critique of gender hierarchy must be incorporated into a radical theory of sex, and the critique of sexual oppression should enrich feminism. But an autonomous theory and politics specific to sexuality must be developed.

It is a mistake to substitute feminism for Marxism as the last word in social theory. Feminism is no more capable than Marxism of being the ultimate and complete account of all social inequality. Nor is feminism the residual theory which can take care of everything to which Marx did not attend. These critical tools were fashioned to handle very specific areas of social activity. Other areas of social life, their forms of power, and their characteristic modes of oppression, need their own conceptual implements. In this essay, I have argued for theoretical as well as sexual pluralism.

SLAVOJ ŽIŽEK

b. 1949

By turns maddening, hilarious, politically incorrect, obscure, insightful, tedious, and provocative, the Slovenian philosopher, sociologist, and cultural critic Slavoj Žižek has been likened in the popular press to an academic rock star. The author of more than fifty books since 1989 when his first book, *The Sublime Object of Ideology*, brought him to the attention of critics in the West, he has appeared on talk shows, in the popular press, and in YouTube videos; been the subject of an art installation (*Slavoj Žižek Does Not Exist*); and starred in two movies (*Žižek!* and *The Pervert's Guide to Cinema*). Applying the difficult psychoanalytic theories of JACQUES LACAN through a dizzying array of pop cultural references, Žižek's works realize the convergence of high and low culture that FREDRIC JAMESON describes as a chief characteristic of the postmodern. Predictably iconoclastic, Žižek's intellectual thought has, throughout his career, been marked by a resistance to the dogmas of official culture, whether Marxist, capitalist, Christian, poststructuralist, or psychoanalytic.

Born in Ljubljana, the capital of Slovenia and once part of Yugoslavia, Žižek attended Bežigrad High School and in 1967 enrolled at the University of Ljubljana. There he studied sociology and philosophy, earning a bachelor of arts in 1971 and a master of arts in philosophy in 1975. His master's thesis analyzed the growing influence on European intellectual life of the French structuralists and poststructuralists, including Lacan, JACQUES DERRIDA, JULIA KRISTEVA, CLAUDE LÉVI-STRAUSS, and GILLES DELEUZE. Unable to find work in Communist Yugoslavia because of his connections to dissident intellectuals, Žižek spent two years in Karlovac, discharging his national service in the Yugoslav army. In 1977 he secured a post at the Central Committee of the League of Slovene Communists. During these years Žižek fell in with a group of Slovenian scholars interested in Lacanian psychoanalysis; with them he created the Society for Theoretical Psychoanalysis, the so-called Ljubljana school, whose best-known members include Mladen Dolar, Alenka Zupančič, and Žižek's second wife, Renata Salecl. The group published a journal called *Problemi* and a book series called *Analecta*. In 1979 his friends secured him a better position as researcher at the University of Ljubljana's Institute for Sociology, where he was able to pursue his research interests free from the obligations of teaching and bureaucracy. In 1981 he received a doctor of arts in philosophy from the University of Ljubljana. He then moved to Paris, where he studied psychoanalysis and was analyzed by Lacan's son-in-law, Jacques-Alain Miller. Žižek completed his second doctorate (in psychoanalysis) at the Université Paris-VIII in 1985, after which he returned to Slovenia.

Against the tumultuous backdrop of the dissolution of the former Soviet empire, the establishment of a new Slovenian state, and the emergence of violent nationalist conflicts in the former Yugoslavia, Žižek emerged as a powerful independent voice. In 1990 the first democratic elections were held in Slovenia, and Žižek stood for the presidency as a Liberal Democrat, coming in fifth. He became ambassador of science for the Republic of Slovenia in 1991. Since then, Žižek has held posts at the Institute for Social Sciences at the University of Ljubljana and is currently international director of the Birkbeck Institute for the Humanities, Birkbeck, University of London. He has held visiting positions in the United States at SUNY Buffalo, the University of Minnesota, Tulane University, the Cardozo Law School, Columbia University, Princeton University, the New School for Social Research, the University of Michigan, and Georgetown University.

The role of both European popular culture and Continental theory in Slovenia as forms of resistance to the Communist government influenced Žižek's thinking, accounting for the peculiar blend of politics, pop culture, and high theory that char-

acterizes his writing. Like other cultural critics, Žižek has written on a broad array of topics, ranging from philosophy and psychoanalysis to theology, film, opera, religion, politics, and literature. Because of the volume of his output, the shape of Žižek's career is difficult to characterize. His books, all written in English, seem less to evince a chronological development than to circle restlessly around a few key topics. *The Sublime Object of Ideology*, which launched Žižek's career in 1989, and several subsequent volumes have continued a critique of ideology: they include *Tarrying with the Negative* (1993); *The Plague of Fantasies* (1997), which explores the place of fantasy in ideological critique; *The Ticklish Subject: The Absent Centre of Political Ontology* (1999), which attempts to rehabilitate the Cartesian subject; and *The Parallax View* (2006). Beginning with his 1991 *Looking Awry: An Introduction to Jacques Lacan through Popular Culture*, from which our selection is drawn, much of Žižek's work has focused on using popular culture to elucidate concepts from Lacanian psychoanalysis. While this thread is a constant in Žižek's writing, it is especially central to *Enjoy Your Symptom! Jacques Lacan in Hollywood and Out* (1992; rev. ed., 2001); *The Fear of Real Tears: Krzysztof Kieślowski between Theory and Post-Theory* (2001), which uses the films of the Polish director to defend psychoanalytic film theory against the critique of cognitive film scholars; *Opera's Second Death*, with Mladen Dolar (2001); and *How to Read Lacan* (2007). Žižek turned his hand to religion in *The Fragile Absolute, or Why Is the Christian Legacy Worth Fighting For?* (2000) and *The Puppet and the Dwarf: The Perverse Core of Christianity* (2003). He explored the aftermath of the attacks of September 11, 2001, in *Welcome to the Desert of the Real* (2002) and the second Gulf war in Iraq: *The Borrowed Kettle* (2004). He explores the post-9/11 world in *Violence: Six Sideways Reflections* (2008), *First as Tragedy, Then as Farce* (2009), *The Year of Dreaming Dangerously* (2012), and *Trouble in Paradise: From the End of History to the End of Capitalism* (2014). Religion and politics come together in *Living in the End Times* (2010). In *Event: Philosophy in Transit* (2014) and *Absolute Recoil: Towards a New Foundation of Dialectical Materialism* (2014), Žižek investigates the nature of challenging problems in contemporary philosophy. *Incontinence of the Void: Economico-Philosophical Spandrels* (2017) works at the intersections of philosophy, psychoanalysis, and the critique of political economy, providing new contexts for old Žižekian themes. Other volumes examine the work of such philosophers as the apostle St. Paul, F. W. J. Schelling, GEORG WILHELM FRIEDRICH HEGEL, and Gilles Deleuze. Increasingly Žižek's writing has been in collaboration and debate with contemporary philosophers, including JUDITH BUTLER and GIORGIO AGAMBEN.

The most important influences on Žižek's work have been Hegel in philosophy, KARL MARX in politics, and Lacan in psychoanalysis. From Hegel he takes and extends the concept of the dialectic, the process in which the confrontation between a thesis and its opposite (antithesis) produces a synthesis by means of "overcoming" (*aufgehoben*). Viewed through the lens of psychoanalysis, however, the dialectic produces not synthesis but the realization that contradiction is the necessary condition of identity. The truth is found in the clash of oppositions, in contradiction. Žižek articulates his revision of the Hegelian dialectic most fully in *The Parallax View*, and this attitude toward contradiction accounts for the strong contrarian thread that runs through most of his writing. A self-described Marxist, Žižek owes much of his political thinking to Marxist analytics, in particular its criticism of capitalism, its belief in the possibility of an alternative to global capitalism, and its critique of ideology. Although *ideology* is sometimes perceived as false consciousness, as an error in understanding that can be corrected, for Žižek it forms the horizon and limit of thought. Moreover, he provides a model to explain how the ideologies that, according to Marxists, structure social formations find their way into the psyches of the individuals subject to those ideologies. For this he turns to the psychoanalytic thought of Jacques Lacan as a means of salvaging the "Cartesian subject."

Žižek understands the “cogito,” or subject articulated by René Descartes (1596–1650), not as the usual substantial, transparent, and fully self-conscious “I,” or as an effect of the structure of discourses, but as the empty space left when the rest of the world has been expelled from itself. “Cogito ergo sum,” wrote Descartes (I think, therefore I am). Žižek’s subject or cogito is Cartesian in a way that would have surprised Descartes, who focused on human consciousness and rationality. Žižek, in contrast, delves into the complex psychodynamics of the unconscious and irrationality—the libido (desire), fantasy, and human perversity.

In his early writing, one of Žižek’s favorite pop culture examples for the psychodynamics of the subject are the films of the British director Alfred Hitchcock, best known for such psychological thrillers as *Psycho* (1960) and *The Birds* (1963). Because Hitchcock’s films draw heavily on psychoanalytic themes, exploring unconscious processes, fantasies, and perversions, they have been favorite texts for psychoanalytic film theorists. Much as *Rear Window* (1954) and *Vertigo* (1958) provided LAURA MULVEY texts through which to work out the cinematic mechanisms that constitute the male gaze, these films offer Žižek a means of elucidating some basic Lacanian concepts. Our selection, “The Hitchcockian Blot,” which appeared in a series of chapters on Hitchcock in *Looking Awry*, offers a compelling Lacanian reading of Hitchcock’s oeuvre.

To understand Žižek’s argument, we must map out Lacan’s three psychic orders—the Imaginary, the Symbolic, and the Real—which situate subjectivity in dialogue with the external and internal worlds. The Imaginary is the internalized image of an ideal self, or imago, organized around the idea of wholeness rather than fragmentation. Lacan argues that in early childhood, the subject passes through the “mirror stage”: it must externalize itself (view itself in a mirror) if it is to be coherent. Such externalization opens up a gap between the fiction of totality provided by the image and the actual fragmentation that signals the impossibility of ever attaining that ideal image. The Symbolic constitutes most of what we usually call “reality,” or the social order, including the realm of language, symbol, and law. This is the sphere of the signifier, as defined by FERDINAND DE SAUSSURE. Though its elements—signifier and signified—have no simple positive existence, because they are determined by their mutual differences in a structure of relations, they exert a binding social force on the subject.

While many Lacanian theorists have concentrated on articulating the relationships between the Imaginary and Symbolic orders, Žižek investigates the importance of the Real and its interactions with the Symbolic in the formation of the subject. The Real is somewhat harder to grasp than the other two Lacanian terms. Perhaps it is most helpful to think of it as that which resists incorporation into the Symbolic. In one sense, it is the world before it is carved up by language; thus it is inaccessible to us after our entrance into the Symbolic social world. In our selection, Žižek argues that the Symbolic introduces a cut into the Real, thereby rendering the Real meaningless and senseless; it simply persists as a void in the Symbolic around which the Symbolic structures itself. It is momentarily discernible only when the subject is “looking awry”; it can only be glimpsed in the uncanny eerie effects of an anamorphosis (distorted perspective), in the detail that, “when viewed straightforwardly, remains a meaningless stain, but which, as soon as we look at the picture from a precisely determined lateral perspective, all of a sudden acquires well-known contours.” What Žižek will call the anamorphic blot is that which “sticks out” from a representation and so renders it strange. Hitchcock’s films offer an array of such moments in which the ordinary is rendered uncanny by the director’s manipulation of the image.

Waggishly noting that what “sticks out” is precisely the phallogentric, Žižek locates the Lacanian Real not in details of the plot, not in the film’s narrative, but in its formal apparatus. At stake in the characteristic Hollywood mechanisms for suturing time and space in film—that is, montage—are psychic processes. Žižek

begins by mapping Freud's oral, anal, and phallic stages onto the film technique of montage, techniques of editing by which filmmakers create continuity by suturing (joining) shots together. The phallic stage complicates Mulvey's "male" gaze (though Žižek does not explicitly refer to her essay) by reversing its direction. Žižek's focus is not, like Mulvey's, the woman on the screen as the object of a controlling male gaze. For him, the thing that "sticks out" is the gaze of the other, the point at which the inert image looks back at the spectator, producing "total ambiguity," "denaturing" the image and rendering it uncanny. Žižek demonstrates the gaze of the other in Hitchcock's *Rear Window*; in that film, the window through which the protagonist spies on his neighbors is a "fantasy window," which is rendered strange the moment he meets the gaze of the murderer across the yard. Hitchcock's most characteristic technique for revealing the blot is the tracking shot, which eerily subjectivizes the camera's usually objective gaze, zeroing in on the gaze of the other. Žižek isolates three types of tracking shot in Hitchcock's films.

For Žižek the anamorphic blot "announces an agency that perturbs and hinders the rule of the Name-of-the-Father," namely the maternal superego. The essay tracks a shift in the development of Hitchcock's filmmaking from the "Oedipal journey," which represents the obstacles placed in the way of the heteronormative couple, as in his 1930s films (for example *The Thirty-Nine Steps*), to the "pathological narcissism" represented in later films dominated by the maternal superego (*Psycho*, *The Birds*). In these later films, the protagonist is blocked from developing a "normal" heterosexual relation by the possessive mother's arbitrary demands: the paternal—the law—is ineffectual and the vacuum is filled by an "irrational" maternal.

Finally, Žižek turns to sociology and the modern American family. He tracks the transformation of capitalist society and hegemony from the autonomous individual of the Protestant ethic to the other-oriented organization man of the era just after World War II to the pathological narcissist of later decades. He argues that the domestic dramas and love triangles of Hitchcock's films reflect this social transformation and the disorders that it prompts in family and sexual relations, especially affecting the role of the maternal function.

Žižek's critics argue that his style is uneven and sometimes obscure, that his arguments tend to get lost in the dizzying array of disparate texts he discusses, that his politics remains fixed in traditional categories (especially those of Marxist class analysis), that his work is based on willful misreadings of Lacan and Hegel, and that Lacan ends up too easily as the last word on every contemporary problem, from capitalism to racism. Feminists criticize Žižek's account of the maternal superego as both phallocratic and heterosexist. It seems to draw on a philosophical tradition that sees the masculine (paternal) as rational and the feminine (maternal) as irrational. Yet even though he interprets Hitchcock's films almost entirely through these phallogocentric categories, Žižek does offer feminist theory an intriguing and important reading of the key fantasy structures of misogyny and heterosexual love.

Chapter 5. The Hitchcockian Blot

THE PHALLIC ANAMORPHOSIS¹

ORAL, ANAL, PHALLIC

In *Foreign Correspondent*,² there is a short scene that exemplifies what might be called the elementary cell, the basic matrix of the Hitchcockian procedure. In pursuit of the kidnappers of a diplomat, the hero finds himself in an idyllic Dutch countryside with fields of tulips and windmills. All of a sudden he notices that one of the mills rotates against the direction of the wind. Here we have the effect of what Lacan calls the *point de capiton* (the quilting point)³ in its purest: a perfectly “natural” and “familiar” situation is denatured, becomes “uncanny,” loaded with horror and threatening possibilities, as soon as we add to it a small supplementary feature, a detail that “does not belong,” that sticks out, is “out of place,” does not make any sense within the frame of the idyllic scene. This “pure” signifier without signified⁴ stirs the germination of a supplementary, metaphorical meaning for all other elements: the same situations, the same events that, till then, have been perceived as perfectly ordinary acquire an air of strangeness. Suddenly we enter the realm of double meaning, everything seems to contain some hidden meaning that is to be interpreted by the Hitchcockian hero, “the man who knows too much.” The horror is thus internalized, it reposes on the gaze of him who “knows too much.”⁵

Hitchcock is often reproached for his “phallocentrism”;⁶ although meant as a criticism, this designation is quite adequate—on condition that we locate

1. *Anamorphosis* is the process of making distorted images that are legible only when viewed from a particular perspective or with a particular restorative device (e.g., a cylindrical mirror); also, the image produced by such a process.

2. A 1940 film directed by the British filmmaker Alfred Hitchcock (1899–1980). All films mentioned in this essay are Hitchcock’s, unless otherwise specified.

3. Literally, the point of attachment of an upholstery button. The French psychoanalyst JACQUES LACAN (1901–1981) uses the term to indicate the point at which the signifier and signified are “knotted together” in discourse to stabilize the sliding of the signifier.

4. The sign was divided into *signified* (the meaning conveyed) and *signifier* (the symbol or sound that conveys that meaning) by the Swiss linguist FERDINAND DE SAUSSURE (1857–1913).

5. From this perspective, the denouement of *Dial M for Murder* [1954] is extremely interesting insofar as it *reverses* the usual situation of Hitchcock’s films: “the man who knew too much” is not the hero foreboding some terrifying secret behind the idyllic surface, but *the murderer himself*. That is to say, the inspector traps the murderous husband of Grace Kelly through a certain surplus knowledge—the murderer is caught knowing something that it would not be possible for him to know if he were innocent (the hiding place of

the other key to his apartment). The irony of the denouement is that what provokes the downfall of the murderer is precisely his quick and clever reasoning. If he had been just a little bit more slow-witted, i.e., if, after the key in his jacket had failed to open the door to his apartment, he had been unable to deduce quickly what must have happened, he would have been forever safe from the hand of justice. In the way he sets the trap for the murderer, the inspector acts like a real Lacanian analyst: the crucial ingredient of his success is not his ability to “penetrate the other,” to understand him, to adapt to his reasoning, but rather his capacity to take into account the structuring role of a certain object that circulates among the subjects and entangles them in a network that they cannot dominate—the key in *Dial M for Murder* (and in *Notorious* [1946], the letter in Edgar Allan Poe’s “The Purloined Letter,” etc. [Žižek’s note]. Kelly (1929–1982), American actor who appeared in several Hitchcock films. POE (1809–1849), American writer of poetry, tales, and criticism; the authorized version of his story “The Purloined Letter” was published in 1845. “The man who knew too much” is the title of a film made and remade by Hitchcock (1934, 1956).

6. The psychoanalytic system in which sexual difference is defined as the difference between having and lacking the phallus; the term has come to refer to patriarchal cultural as a whole insofar

the phallic dimension precisely in this supplementary feature that “sticks out.” To explain, let us articulate three successive ways of presenting an event onscreen, three ways that correspond to the succession of “oral,” “anal,” and “phallic” stages in the subject’s libidinal economy.⁷

The “oral” stage is, so to speak, the zero degree of filmmaking: we simply shoot an event and as spectators we “devour it with our eyes”; the montage⁸ has no function in organizing narrative tensions. Its prototype is the silent, slapstick film. The effect of “naturalness,” of direct “rendering of reality,” is, of course, false: even at this stage, a certain “choice” is at work, part of reality is enframed and extracted from the space-time continuum. What we see is the result of a certain “manipulation,” the succession of shots partakes of a *metonymical*⁹ movement. We see only parts, fragments of a never-shown whole, which is why we are already caught in a dialectic of seen and unseen, of the field (enframed by the camera) and its outside, giving rise to the desire to see what is not shown. For all that, we remain captive of the illusion that we witness a homogeneous continuity of action registered by the “neutral” camera.

In the “anal” stage montage enters. It cuts up, fragments, multiplies the action; the illusion of homogeneous continuity is forever lost. Montage can combine elements of a wholly heterogeneous nature and thus create new *metaphorical* meaning having nothing whatsoever to do with the “literal” value of its component parts (compare Eisenstein’s concept of “intellectual montage”¹). The exemplary display of what montage can achieve at the level of traditional narration is, of course, the case of “parallel montage”: we show in alternation two interconnected courses of action, transforming the linear deployment of events into the horizontal coexistence of two lines of action, thus creating an additional tension between the two. Let us take, for example, a scene depicting the isolated home of a rich family encircled by a gang of robbers preparing to attack it; the scene gains enormously in effectiveness if we contrast the idyllic everyday life within the house with the threatening preparations of the criminals outside: if we show in alternation the happy family at dinner, the boisterousness of the children, father’s benevolent reprimands, etc., and the “sadistic” smile of a robber, another checking his knife or gun, a third already grasping the house’s balustrade . . .

In what would the passage to the “phallic” stage consist? In other words, how would *Hitchcock* shoot the same scene? The first thing to remark is that the content of this scene does not lend itself to Hitchcockian suspense insofar as it rests upon a simple counterpoint of idyllic interior and threatening exterior. We should therefore transpose this “flat,” horizontal doubling of the action onto a *vertical* level: the menacing horror should not be placed *outside*, *next to* the idyllic interior, but well *within* it, more precisely: *under* it, as its “repressed” underside. Let us imagine, for example, the same happy

as that system privileges the phallus as the symbol and source of power. It is closely related to *logocentrism*, a term coined by the French philosopher JACQUES DERRIDA (1930–2004), and the two are sometimes combined as *phallogocentrism*. 7. According to SIGMUND FREUD (1856–1939), the Austrian founder of psychoanalysis, the developmental stages through which childhood sexuality passes are the oral, anal, phallic, and (if the oedipal complex is successfully resolved) genital (i.e.,

mature sexuality).

8. The assembling of distinct images or sounds into a sequence (a film-editing technique).

9. That is, displaying a connection through association rather than through resemblance (metaphorical).

1. A form of montage that relies on metaphor, not metonymy, in juxtaposing images. The Russian director Sergei Eisenstein (1898–1948) was an early innovator in cinematic technique.

family dinner shown from the point of view of a rich uncle, their invited guest. In the midst of dinner, the guest (and together with him ourselves, the public) suddenly “sees too much,” observes what he was not supposed to notice, some incongruous detail arousing in him the suspicion that the hosts plan to poison him in order to inherit his fortune. Such a “surplus knowledge” has so to speak an abyssal effect² on the perspective of the host (and ours with it): the action is in a way *redoubled in itself*, endlessly reflected in itself as in a double mirror play. The most common, everyday events are suddenly loaded with terrifying undertones, “everything becomes suspicious”: the kind mistress of the house asking if we feel well after dinner wants perhaps to learn if the poison has already taken effect; the children who run around in innocent joy are perhaps excited because the parents have hinted that they would soon be able to afford a luxurious voyage . . . things appear in a totally different light, although they stay the same.

Such a “vertical” doubling entails a radical change in the libidinal economy: the “true” action is repressed, internalized, subjectivized, i.e., presented in the form of the subject’s desires, hallucinations, suspicions, obsessions, feelings of guilt. What we actually see becomes nothing but a deceptive surface beneath which swarms an undergrowth of perverse and obscene implications, the domain of what is *prohibited*. The more we find ourselves in total ambiguity, not knowing where “reality” ends and “hallucination” (i.e., desire) begins, the more menacing this domain appears. Incomparably more threatening than the savage cries of the enemy is his calm and cold gaze, or—to transpose the same inversion into the field of sexuality—incomparably more exciting than the openly provocative brunette is the cold blonde who, as Hitchcock reminds us, knows how to do many things once we find ourselves alone with her in the back seat of a taxi. What is crucial here is this inversion by means of which silence begins to function as the most horrifying menace, where the appearance of a cold indifference promises the most passionate pleasures—in short, where the prohibition against passing over into action opens up the space of a hallucinatory desire that, once set off, cannot be satisfied by any “reality” whatsoever.

But what has this inversion to do with the “phallic” stage? “Phallic” is precisely the detail that “does not fit,” that “sticks out” from the idyllic surface scene and denatures it, renders it uncanny. It is the point of *anamorphosis* in a picture: the element that, when viewed straightforwardly, remains a meaningless stain, but which, as soon as we look at the picture from a precisely determined lateral perspective, all of a sudden acquires well-known contours. Lacan’s constant point of reference is Holbein’s *Ambassadors*³: at the bottom of the picture, under the figures of the two ambassadors, a viewer catches sight of an amorphous, extended, “erected” spot. It is only when, on the very threshold of the room in which the picture is exposed, the visitor casts a final lateral glance at it that this spot acquires the contours of a skull, disclosing thus the true meaning of the picture—the nullity of all terrestrial goods, objects of art and knowledge that fill out the rest of the picture. This is the way Lacan defines the phallic signifier, as a “signifier without signified” which, as such,

2. Žižek refers to Derrida’s *mise en abyme*.

3. Cf., for example, Lacan, *The Four Fundamental Concepts of Psycho-Analysis* (London: Hogarth

Press, 1977), p. 92 [Žižek’s note]. *The Ambassadors* (1533), a painting by the German artist Hans Holbein the Younger (1497–1543).

renders possible the effects of the signified: the “phallic” element of a picture is a meaningless stain that “denatures” it, rendering all its constituents “suspicious,” and thus opens up the abyss of the search for a meaning—nothing is what it seems to be, everything is to be interpreted, everything is supposed to possess some supplementary meaning. The ground of the established, familiar signification opens up; we find ourselves in a realm of total ambiguity, but this very lack propels us to produce ever new “hidden meanings”: it is a driving force of endless compulsion. The oscillation between lack and surplus meaning constitutes the proper dimension of subjectivity. In other words, it is by means of the “phallic” spot that the observed picture is subjectivized: this paradoxical point undermines our position as “neutral,” “objective” observer, pinning us to the observed object itself. This is the point at which the observer is already included, inscribed in the observed scene—in a way, it is the point from which the picture itself looks back at us.⁴

The Blot as the Gaze of the Other

The finale of *Rear Window*⁵ demonstrates perfectly how the fascinating object that drives the interpretive movement is ultimately the gaze itself: this interpretive movement is suspended when Jeff’s (James Stewart’s) gaze, inspecting what goes on in the mysterious apartment across the yard, meets the gaze of the other (the murderer). At this point, Jeff loses his position as neutral, distant observer and is caught up in the affair, i.e., he becomes part of what he observed. More precisely, he is forced to confront the question of his own desire: what does he really want from this affair? This *Che vuoi?*⁶ is literally pronounced during the final confrontation between him and the perplexed murderer who asks him again and again: “Who are you? What do you want from me?” The whole final scene, in which the murderer approaches as Jeff attempts desperately to stop him by the dazzle of flashbulbs, is shot in a remarkable, totally “unrealistic” way. Where we would expect rapid movement, an intense, swift clash, we get hindered, slowed-down, protracted movement, as if the “normal” rhythm of events had undergone a kind of anamorphic deformation. This renders perfectly the immobilizing, crippling

4. We must be attentive to the diversity of the ways this motif of the “uncanny” detail is at work in Hitchcock’s films. Note just five of its variations:

- *Rope* [1948]: here, we have the spot *first* (the traumatic act of murder) and *then* the idyllic everyday situation (the party) constructed to conceal it.
- *The Man Who Knew Too Much* [1956]: in a short scene in which the hero (James Stewart) makes his way to the taxidermist Ambrose Chappell, the street the hero traverses is depicted as charged with a sinister atmosphere; but in fact things are precisely what they seem to be (the street is just an ordinary suburban London street, etc.), so that the only “stain” in the picture is the *hero himself*, his suspicious gaze that sees threats everywhere.
- *The Trouble with Harry* [1955]: a “stain” (a body) smears the idyllic Vermont countryside, but instead of provoking traumatic reactions, people who stumble upon it merely treat it as a minor inconvenience and pursue their daily affairs.
- *Shadow of a Doubt* [1943]: the “stain” here is uncle Charlie, the film’s central character, a

pathological murderer who rejoins his sister’s family in a small American town. In the eyes of the townsfolk, he is a friendly, rich benefactor; it is only his niece Charlie who “knows too much” and sees him as he is—why? The answer is found in the identity of their names: the two of them constitute two parts of the same personality (like Marion and Norman in *Psycho* [1960], where the identity is indicated by the fact that the two names reflect each other in an inverted form).

- And finally *The Birds* [1963], where—in what is surely Hitchcock’s final irony—the “unnatural” element that disturbs everyday life is the birds, i.e., *nature itself* [Žižek’s note].

The American actor Stewart (1908–1997) appears in several Hitchcock films.

5. Released in 1954.

6. What do you want? (Italian). In Lacanian terms, desire belongs never to the subject but only to the other. But as others in turn do not know what they want, this question triggers an infinite regress.

effect the fantasy object has upon the subject: from the interpretive movement induced by the ambiguous register of symptoms, we have passed over to the register of fantasy, the inert presence of which suspends the movement of interpretation.

Where does this power of fascination come from? Why does the neighbor who killed his wife function for the hero as the object of his desire? There is only one answer possible: *the neighbor realizes Jeff's desire*. The hero's desire is to elude the sexual relation at any price, i.e., to get rid of the unfortunate Grace Kelly. What happens on *this side* of the window, in the hero's apartment—the amorous misadventures of Stewart and Kelly—is by no means a simple subplot, an amusing diversion with no bearing on the central motif on the film, but on the contrary, its very center of gravity. Jeff's (and our) fascination with what goes on in the other apartment functions to make Jeff (and us) overlook the crucial importance of what goes on on this side of the window, in the very place from which he looks. *Rear Window* is ultimately the story of a subject who eludes a sexual relation by transforming his effective impotence into power by means of the gaze, by means of secret observation: he “regresses” to an infantile curiosity in order to shirk his responsibility toward the beautiful woman who offers herself to him (the film is at this point very unequivocal—note the scene where Grace Kelly changes into a transparent nightgown). What we encounter here is, again, one of Hitchcock's fundamental “complexes,” the interconnection of the gaze and the couple power/impotence. In this respect, *Rear Window* reads like an ironic reversal of Bentham's “Panopticon” as exploited by Foucault.⁷ For Bentham, the horrifying efficacy of the Panopticon is due to the fact that the subjects (prisoners, patients, schoolboys, factory workers) can never know for sure if they are actually observed from the all-seeing central control tower—this very uncertainty intensifies the feeling of menace, of the impossibility of escape from the gaze of the Other. In *Rear Window*, the inhabitants of the apartments across the yard are actually observed all the time by Stewart's watchful eye, but far from being terrorized, they simply ignore it and go on with their daily business. On the contrary, it is Stewart himself, the center of the Panopticon, its all-pervasive eye, who is terrorized, constantly looking out the window, anxious not to miss some crucial detail. Why?

The rear window is essentially a fantasy window (the phantasmatic value of the window in painting has already been pointed out by Lacan):⁸ incapable of motivating himself to action, Jeff puts off indefinitely the (sexual) act, and what he sees through the window are precisely *fantasy figurations of what could happen to him and Grace Kelly*. They could become happy newlyweds; he could abandon Grace Kelly, who would then become an eccentric artist or lead a desperate, secluded life like Miss Lonely Hearts; they could spend their time together like the ordinary couple with a small dog, yielding to an everyday routine that barely conceals their underlying despair; or, finally, he could *kill* her. In short, the meaning of what the hero perceives

7. French philosopher and historian of ideas (1926–1984; see above). The English philosopher and reformer Jeremy Bentham (1748–1832) designed an ideal circular prison, which he called the Panopticon (all seeing), in which prisoners could be kept under constant surveillance by a

single guard in a central tower; for Foucault, in *Discipline and Punish* (1975), it is a metaphor for the disciplinary mechanisms of modern society.

8. In Lacan's unpublished 1965–66 seminars, *The Object of Psychoanalysis*.

beyond the window depends on his actual situation this side of the window: he has just to “look through the window” to see on display a multitude of imaginary solutions to his actual impasse.

Careful attention to the film’s soundtrack, especially if we approach *Rear Window* in retrospect, on the basis of Hitchcock’s subsequent films, also reveals unmistakably the agency that hinders the hero’s “normal” sexual relation: the *maternal superego* embodied in a *voix acousmatique*, a free-floating voice that is not assigned to any bearer. Michel Chion⁹ has already drawn attention to a peculiarity of the film’s soundtrack, more precisely, its background sounds: we hear a diversity of voices to which we are always able to assign bearers, i.e., emitters. All *except one*, the voice of an unidentified soprano practicing scales and generally emerging just in time to prevent the fulfillment of sexual union between Stewart and Kelly. This mysterious voice does not originate from a person living on the other side of the courtyard, visible through the window, so the camera never shows the singer: the voice remains *acousmatique* and uncannily close to us, as if its origins were within us.¹ It is on account of this feature that *Rear Window* announces *The Man Who Knew Too Much*, *Psycho*, and *The Birds*: this voice transmutes first into the awkwardly pathetic song by means of which Doris Day reaches her kidnapped son (the famous *Que será será*²), then into the voice of the dead mother taking possession of Norman Bates, until it finally dissolves into the chaotic croaking of the birds.

The Tracking Shot³

The standard Hitchcockian *formal* procedure for isolating the stain, this remainder of the real that “sticks out,” is, of course, his famous tracking shot. Its logic can be grasped only if we take into account the whole range of variations to which this procedure is submitted. Let us begin with a scene from *The Birds* in which the hero’s mother, peering into a room that has been ravaged by the birds, sees a pajama-clad body with its eyes torn out. The camera first shows us the entire body; we then expect it to track forward slowly into the fascinating detail, the bloody sockets of the missing eyes. But Hitchcock instead gives us an *inversion* of the process we expect: instead of slowing down, he drastically *speeds up*; with two abrupt cuts, each bringing us closer to the subject, he quickly shows us the corpse’s head. The subversive effect of these quickly advancing shots is created by the way in which they frustrate us even as they indulge our desire to view the terrifying object more closely: we approach it too quickly, skipping over the “time for understanding,” the pause needed to “digest,” to integrate the brute perception of the object.

Unlike the usual tracking shot that endows the object-blot with a particular weight by slowing down the “normal” speed and by *deferring* the approach, here the object is “missed” precisely insofar as we approach it

9. French composer of experimental music (b. 1947); in his book *Audio-Vision: Sound on Screen* (1990), he applies the term “acousmatic” (*acousmatique*) to sounds that one hears without seeing their source.

1. Cf. Michel Chion, “Le quatrième côté” [“The Fourth Side”] in *Cahiers du cinéma* 356 (1984), pp. 6–7 [Žižek’s note].

2. Whatever will be will be (Spanish), the title of a song composed by Jay Livingston (1915–2001) and the lyricist Ray Evans (1915–2007); in the film, it is sung by the American actor and singer Day (b. 1922).

3. Shot filmed from a camera mounted on a dolly and pushed on rails.

precipitously, too quickly. Thus, if the usual tracking shot is obsessional, forcing us to fix on a detail that is made to function as a blot because of the slow motion of the tracking, the precipitous approach to the object reveals its own hysterical basis: we “miss” the object because of the speed, because this object is already empty in itself, hollow—it cannot be evoked other than “too slowly” or “too swiftly,” because in its “proper time” it is nothing. So delay and precipitousness are two modes of capturing the object-cause of desire, object small *a*,⁴ the “nothingness” of pure seeming. We thereby touch upon the *objectal* dimension of the Hitchcockian “blot” or “stain”: the signifying dimension of the blot, its effect of doubling meaning, of conferring on every element of the image a supplementary meaning that makes the interpretative movement work. None of this should blind us to its other aspect, however, that of an inert, opaque object that must drop out or sink for any symbolic reality to emerge. In other words, the Hitchcockian tracking shot that produces the blot in an idyllic picture is achieved as though to illustrate the Lacanian thesis: “The field of reality rests upon the extraction of the object *a*, which nevertheless frames it.”⁵ Or, to quote Jacques-Alain Miller’s precise commentary:

We understand that the covert setting aside of the object as real conditions the stabilization of reality, as “a bit of reality.” But if the object *a* is absent, how can it still frame reality?

It is precisely *because* the object *a* is removed from the field of reality that it frames it. If I withdraw from the surface of this picture the piece I represent by a shaded square, I get what we might call a frame: a frame for a hole, but also a frame of the rest of the surface. Such a frame could be created by any window. So object *a* is such a surface fragment, and it is its subtraction from reality that frames it. The subject, as barred subject—as want-of-being—is this hole. As being, it is nothing but the subtracted bit. Whence the equivalency of the subject and object *a*.⁶

4. Lacan's *objet petit a* (the *a* abbreviates *autre*, French for “other”) is the unattainable or lost object of desire that the subject never had, the loss brought into being by symbolization itself.
5. Jacques Lacan, *Écrits* (Paris: Seuil, 1966), p. 554 [Žižek's note].

6. Jacques-Alain Miller, “Montré à Premontré,” in *Analytica* 37 (1984), pp. 28–29 [Žižek's note]. Miller (b. 1944), French psychoanalyst, Lacan's son-in-law, and editor of his seminars. “Barred subject”: the subject split by language and the unconscious.

We can read Miller's schema as the schema of the Hitchcockian tracking shot: from an overall view of reality, we advance toward the blot that provides it with its frame (the hatched square). The advance of the Hitchcockian tracking shot is reminiscent of the structure of a Möbius strip:⁷ by moving away from the side of reality, we find ourselves suddenly alongside the real whose extraction constitutes reality. Here the process inverts the dialectic of montage: there it was a matter of producing, through the discontinuity of the cuts, the continuity of a new signification, of a new diegetic reality,⁸ linking the disconnected fragments, whereas here the continual advance itself produces an effect of banking, of radical discontinuity, by showing us the heterogeneous element that must remain an inert, nonsensical "blot" if the rest of the picture is to acquire the consistency of a symbolic reality.

Whence we could return to the succession of "anal" and "phallic" stages in the organization of filmic material: if montage is the "anal" process *par excellence*, the Hitchcockian tracking shot represents the point at which the "anal" economy becomes "phallic." Montage entails the production of a supplementary, metaphorical signification that emerges from the juxtaposition of connected fragments, and, as Lacan emphasized in *The Four Fundamental Concepts of Psycho-Analysis*, metaphor is, in its libidinal economy, an eminently anal process: we give something (shit) to fill out the nothing, that is, to make up for what we do not have.⁹ In addition to montage within the framework of traditional narration (as typified by "parallel montage") we have a whole series of "excessive" strategies that are designed to subvert the linear movement of traditional narration (Eisenstein's "intellectual montage," Welles's "inner montage," and the antimontage of Rossellini,¹ who tried to forgo any manipulation of the material and allow for the emergence of the signification from the "miracle" of fortuitous encounters). All such processes are only variations and reversals within the same field of the montage, whereas Hitchcock, with his tracking shots, changes the field itself: in place of montage—the creation of a new metaphoric continuity by the combination of discontinuous fragments—he introduces a radical discontinuity, the shifting from reality to the real, produced by the very continuous movement of the tracking shot. That is, the tracking movement can be described as a moving from an overall view of reality to its point of anamorphosis. To return to Holbein's *Ambassadors*, the Hitchcockian tracking shot would advance from the total area of the picture toward the erected, "phallic" element in the background that must fall away, remain simply a demented stain—the skull, the inert fantasy-object as the "impossible" equivalent of the subject itself ($\$ \diamond a$),² and it is no accident that we find this same object in several instances in Hitchcock's own work (*Under Capricorn*,³ *Psycho*). In Hitchcock this real object, the blot, the terminal point of the tracking shot, can assume two principal forms: either the gaze of the other insofar as our posi-

tion as spectator is already inscribed within the film—i.e., the point from which the picture itself gazes at us (the eye sockets in the skull, not to mention the most celebrated of Hitchcock's tracking shots, the shot into the drummer's blinking eyes in *Young and Innocent*⁴)—or the Hitchcockian object *par excellence*, the nonspecularizable object of exchange, the “piece of the real” that circulates from one subject to another, embodying and guaranteeing the structural network of symbolic exchanges between them (the most famous example: the long tracking shot in *Notorious*, from the overall view of the entrance hall down to the key in Ingrid Bergman's hand).

We can categorize Hitchcock's tracking shots, however, without reference to the nature of their terminal object, that is, based on variations in the formal process itself. In addition to the zero degree of tracking (which moves from the overall view of reality to its real point of anamorphosis), we have at least three other variants in Hitchcock:

- The precipitous, “hystericized” tracking shot: see the example from *The Birds* analyzed above, in which the camera draws into the blot too quickly, through jump cuts.
- The reverse tracking shot, which begins at the uncanny detail and pulls back to the overall view of reality: witness the long shot in *Shadow of a Doubt* that starts with the hand of Teresa Wright holding the ring given her by her murdering uncle, and pulls back and up to the overall view of the library reading room in which she appears as nothing but a small dot in the center of the frame; or the famous reverse tracking shot in *Frenzy*.⁵
- Lastly, the paradox of the “immobile tracking shot,” in which the camera does not move: the shift from reality to the real is accomplished by the intrusion into the frame of a heterogeneous object. For an example, we can return to *The Birds*, in which such a shift is achieved during one long, fixed shot. A fire caused by a cigarette butt dropped into some gasoline breaks out in the small town threatened by the birds. After a series of short and “dynamic” close-ups and medium shots that draw us immediately into the action, the camera pulls back and up and we are given an overall shot of the entire town taken from high above. In the first instant we read this overall shot as an “objective,” “epic” panorama shot, separating us from the immediate drama going on down below and enabling us to disengage ourselves from the action. This distancing at first produces a certain “pacifying” effect; it allows us to view the action from what might be called a “metalinguistic” distance. Then, suddenly, a bird enters the frame from the right, as if coming from behind the camera and thus from behind our own backs, and then three birds, and finally an entire flock. The same shot takes on a totally different aspect, it undergoes a radical *subjectivization*: the camera's elevated eye ceases to be that of a neutral, “objective” onlooker gazing down upon a panoramic landscape and suddenly becomes the subjective and threatening gaze of the birds as they zero in on their prey.⁶

4. Released in 1937.

5. Released in 1972.

6. This scene, creating as it does a phantasmatic effect, also illustrates the thesis that the subject is not necessarily inscribed in the phantasmatic scene as observer, but can also be one of the objects observed. The birds' subjective view of

the town creates a menacing effect, even though our view—the camera's view—is that of the birds and not that of their prey, because we are inscribed in the scene as inhabitants of the town, i.e., we identify with the menaced inhabitants [Žižek's note].

THE MATERNAL SUPEREGO

Why Do the Birds Attack?

What we must bear in mind is the libidinal content of this Hitchcockian stain: although its logic is phallic, it announces an agency that perturbs and hinders the rule of the Name-of-the-Father—in other words, the stain materializes the *maternal superego*.⁷ To prove it, let us return to the last of the above-mentioned cases: that of *The Birds*. Why do they attack? Robin Wood suggests three possible readings of this inexplicable, “irrational” act by which the idyllic, daily life of a small northern California town is derailed: “cosmological,” “ecological,” “familial.”⁸

According to the first, “cosmological” reading, the attack of the birds can be viewed as embodying Hitchcock’s vision of the universe, of the (human) cosmos as system—peaceful on the surface, ordinary in its course—that can be upset at any time, that can be thrown into chaos by the intervention of pure chance. Its order is always deceiving; at any moment some ineffable terror can emerge, some traumatic real erupt to disturb the symbolic circuit. Such a reading can be supported by references to many other Hitchcock films, including the most somber of them, *The Wrong Man*,⁹ in which the mistaken identification of the hero as a thief, which happens purely by chance, turns his daily life into a hell of humiliation and costs his wife her sanity—the entering into play of the theological dimension in Hitchcock’s work, the vision of a cruel, arbitrary, and impenetrable God who can bring down catastrophe at any moment.

For the second, “ecological” reading, the film’s title could have been *Birds of the World, Unite!*: in this reading, the birds function as a condensation of exploited nature that finally rises up against man’s heedless exploitation. In support of this interpretation, we can cite the fact that Hitchcock selected his attacking birds almost exclusively from species known for their gentle, nonaggressive nature: sparrows, seagulls, a few crows.

The third reading sees the key to the film in the intersubjective relations between the main characters (Melanie, Mitch, and his mother), which are far from being merely an insignificant sideline to the “true” plot, the attack of the birds: the attacking birds only “embody” a fundamental discord, a disturbance, a derailment in those relations. The pertinence of this interpretation emerges if we consider *The Birds* within the context of Hitchcock’s earlier (and later) films; in other words, to play on one of Lacan’s homophonies, if we are to take the films seriously, we can only do so if we take them serially.¹

In writing of Poe’s “The Purloined Letter,” Lacan makes reference to a game of logic: we take a random series of 0s and 1s—100101100, for example—and as soon as the series is articulated into linked triads (100,001,010, etc.), rules of succession will emerge (a triad with 0 at the end

7. The part of the psyche, as described by Freud, that develops by incorporating the moral standards of the parents and community. Since the symbolic in which Hitchcock’s characters exist is patriarchal, the superego is paternal and rational. When the paternal function is absent, the maternal superego is given free rein; Žižek characterizes the maternal superego as irrational and

arbitrary, blocking normal heterosexual relationships.

cannot be followed by a triad that has 1 as its middle term, and so on).² The same is true of Hitchcock's films: if we consider them as a whole we have an accidental, random series, but as soon as we separate them into linked triads (and exclude those films that are not part of the "Hitchcockian universe," the "exceptions," the results of various compromises), each triad can then be seen to be linked by some theme, some common structuring principle. For example take the following five films: *The Wrong Man*, *Vertigo*, *North by Northwest*,³ *Psycho*, and *The Birds*: no single theme can be found to link all the films in such a series, yet such themes can be found if we consider them in groups of three. The first triad concerns "false identity": in *The Wrong Man*, the hero is wrongly identified as the burglar; in *Vertigo* the hero is mistaken about the identity of the false Madeleine; in *North by Northwest* Soviet spies mistakenly identify the film's hero as the mysterious CIA agent "George Kaplan." As for the great trilogy *Vertigo*, *North by Northwest*, and *Psycho*, it is very tempting to regard these three key Hitchcock films as the articulation of three different versions of filling the gap in the Other. Their formal problem is the same: the relationship between a lack and a factor (a person) that tries to compensate for it. In *Vertigo*, the hero attempts to compensate for the absence of the woman he loves, an apparent suicide, on a level that is literally *imaginary*: he tries, by means of dress, hairstyle, and so forth, to recreate the image of the lost woman. In *North by Northwest*, we are on the *symbolic* level: we are dealing with an empty name, the name of a nonexistent person ("Kaplan"), a signifier without a bearer, which becomes attached to the hero out of sheer chance. In *Psycho*, finally, we reach the level of the *real*: Norman Bates, who dresses in his mother's clothes, speaks with her voice, etc., wants neither to resuscitate her image nor act in her name; he wants to take her place in the real—evidence of a psychotic state.

If the middle triad, therefore, is that of the "empty place," the final one is in its turn united around the motif of the *maternal superego*: the heroes of these three films are fatherless, they have a mother who is "strong," who is "possessive," who disturbs the "normal" sexual relationship. At the very beginning of *North by Northwest* the film's hero, Roger Thornhill (Cary Grant), is shown with his scornful, mocking mother, and it is not difficult to guess why he has been four times divorced; in *Psycho*, Norman Bates (Anthony Perkins) is directly controlled by the voice of his dead mother, which instructs him to kill any woman to whom he is sexually attracted; in the case of the mother of Mitch Brenner (Rod Taylor),⁴ hero of *The Birds*, mocking disdain is replaced by a zealous concern for her son's fate, a concern that is perhaps even more effective in blocking any lasting relationship he might have with a woman.

There is another trait common to these three films: from one film to the next, the figure of a threat in the shape of birds assumes greater prominence. In *North by Northwest* we have what is perhaps the most famous Hitchcockian scene, the attack by the plane—a steel bird—that pursues the hero across a flat, sun-baked landscape; in *Psycho*, Norman's room is filled with stuffed mounted birds, and even the body of his mummified mother reminds us of

a stuffed bird; in *The Birds*, after the (metaphorical) steel bird and the (metonymic) stuffed birds, we finally have actual live birds attacking the town.

The decisive thing is to perceive the link between the two traits: the terrifying figure of the birds is actually the embodiment in the real of a discord, an unresolved tension in intersubjective relations. In the film, the birds are like the plague in Oedipus's Thebes:⁵ they are the incarnation of a fundamental disorder in family relationships—the father is absent, the paternal function (the function of pacifying law, the Name-of-the-Father) is suspended and that vacuum is filled by the “irrational” maternal superego, arbitrary, wicked, blocking “normal” sexual relationship (only possible under the sign of the paternal metaphor). The dead end *The Birds* is really about is, of course, that of the modern American family: the deficient paternal ego-ideal makes the law “regress” toward a ferocious maternal superego, affecting sexual enjoyment—the decisive trait of the libidinal structure of “pathological narcissism”: “Their unconscious impressions of the mother are so overblown and so heavily influenced by aggressive impulses, and the quality of her care is so little attuned to the child's needs, that in the child's fantasies the mother appears as a devouring bird.”⁶

From the Oedipal Journey to the “Pathological Narcissist”

How should we locate this figuration of the maternal superego in the totality of Hitchcock's work? The three main stages of Hitchcock's career can be conceived precisely as three variations on the theme of the impossibility of the sexual relationship. Let us begin with the first Hitchcockian classic, *The Thirty-Nine Steps*:⁷ all the animated action of the film should not deceive us for a minute—its function is ultimately just to put the love couple to the test and thus render possible their final reunion. It is on account of this feature that *The Thirty-Nine Steps* starts the series of Hitchcock's English films of the second half of the 1930s, all of which, with the exception of the last (*Jamaica Inn*),⁸ relate the same story of the *initiation of an amorous couple*. They are all stories of a couple tied (sometimes literally: note the role of handcuffs in *The Thirty-Nine Steps*) by accident and then maturing through a series of ordeals. All these films are thus actually variations on the fundamental motif of the bourgeois ideology of marriage, gaining its first and perhaps noblest expression in Mozart's *Magic Flute*.⁹ The parallel could be here expanded to details: the mysterious woman who charges the hero with his mission (the stranger killed in Hannay's apartment in *The Thirty-Nine Steps*; the nice old lady who vanishes in the film of the same title), is she not a kind of reincarnation of the “Queen of the Night”? The black Monostatos, is he not reincarnated in the murderous drummer with blackened face in *Young and Innocent*? In *The Lady Vanishes*,¹ the hero attracts the attention of his future love by playing what?—a flute, of course!

5. In Greek mythology, Thebes was struck by plague because the murderer of Thebes' previous king was in the city; Oedipus, as king, swore to drive the killer out, not knowing that he himself was the murderer and that he had killed his own father.

7. Released in 1935.

8. Released in 1939.

9. One of the most famous operas (1791) of Wolfgang Amadeus Mozart (1756–1791); its characters include the Queen of the Night and Monostatos.

1. Released in 1938.

The innocence lost on this voyage of initiation is best presented in the remarkable figure of Mr. Memory, whose number in the music hall opens and closes the film. He is a man who “remembers everything,” a personification of pure automatism and, at the same time, the absolute ethic of the signifier (in the film’s final scene, he answers Hannay’s question “What are ‘the thirty-nine steps’?”, although he knows the answer could cost him his life—he is simply obliged to honor his public engagement, to answer any question whatsoever). There is something of the fairy tale in this figure of a Good Dwarf who must die in order that the liaison of the amorous couple finally be established. Mr. Memory embodies a pure, asexual gapless knowledge, a signifying chain that works absolutely automatically, without any traumatic stumbling block hindering its course. What we must be careful about is the precise moment of his death: he dies after answering the question “What are ‘the thirty-nine steps’?”, i.e., after revealing the McGuffin,² the secret propelling the story. By disclosing it to the public in the music hall (which stands here for the big Other of common opinion), he delivers Hannay from the awkward position of “persecuted persecutor.” The two circles (that of the police chasing Hannay and that of Hannay himself in pursuit of the real culprit) rejoin, Hannay is exonerated in the eyes of the big Other, and the real culprits are unmasked. At this point, the story could end since it was sustained solely by this intermediary state, by Hannay’s ambiguous position vis-a-vis the big Other: guilty in the eyes of the big Other, he is at the same time on the track of the real culprits.

It is this position of the “persecuted persecutor” that already displays the motif of the “transference of guilt”: Hannay is falsely accused, the guilt is transferred onto him—but whose guilt is it? The guilt of the *obscene*, “anal” father personified by the mysterious leader of the spy network. At the film’s end, we witness *two* consecutive deaths: first the leader of the spy ring kills Mr. Memory, then the police, this instrument of the big Other, shoot down the leader, who falls from his theater box onto the podium (this is an exemplary place of denouement in Hitchcock’s films: *Murder, Stage Fright, I Confess*³). Mr. Memory and the leader of the spy ring represent the two sides of the same pre-Oedipal conjunction: the Good Dwarf with his gapless undivided knowledge, and the mean “anal father,” the master who pulls the strings of this knowledge-automaton, a father who exhibits in an obscene way his shortened little finger—an ironic allusion to his castration. (We encounter a homologous split in Robert Rossen’s *The Hustler*, in the relationship between the professional billiard player, an incarnation of the pure ethic of the game [Jackie Gleason], and his corrupt boss [George C. Scott].⁴) The story begins with an act of “interpellation”⁵ that subjectivizes the hero, i.e., it constitutes him as desiring by evoking the McGuffin, the object-cause of his desire (the message of the “Queen of the Night,” the mysterious stranger who is slaughtered in Hannay’s apartment). The Oedipal voyage in

2. Hitchcock’s term for a particular plot device: a desired object or goal that catches (and distracts) the viewer’s attention but is ultimately of no real importance.

3. Released in 1930, 1950, and 1953, respectively.

4. American stage and film actor (1927–1999). Rossen (1908–1966), American screenwriter,

director, and producer; *The Hustler* (1961) is his best-known film. Gleason (1916–1987), American comedian, actor, and composer.

5. The term used by the French Marxist philosopher LOUIS ALTHUSSER (1918–1990) to refer to ideology’s ability to “hail” or summon individuals as subjects.

pursuit of the father, which constitutes the bulk of the film, ends with the “anal” father’s death. By means of his death, he can assume his place as metaphor, as the Name-of-the-Father, thus rendering possible the amorous couple’s final reunion, their “normal” sexual relation which, according to Lacan, can take place only under the sign of the paternal metaphor.

In addition to Hannay and Pamela in *The Thirty-Nine Steps*, couples tied by chance and reunited through ordeal are Ashenden and Elsa in *The Secret Agent*, Robert and Erica in *Young and Innocent*, Gilbert and Iris in *The Lady Vanishes*—with the notable exception of *Sabotage*,⁶ where the triangle of Sylvia, her criminal husband Verloc, and the detective Ted foreshadows the conjuncture characteristic of Hitchcock’s next stage (the Selznick period⁷). Here, the story is, as a rule, narrated from the point of view of a woman divided between two men, the elderly figure of a villain (her father or her aged husband, embodying one of the typical Hitchcockian figures, that of a villain who is aware of the evil in himself and who strives after his own destruction) and the younger, somewhat insipid “good guy” whom she chooses at the end.⁸ In addition to Sylvia, Verloc, and Ted in *Sabotage*, the main cases of such triangles are Carol Fisher, divided between loyalty to her pro-Nazi father and love for the young American journalist, in *Foreign Correspondent*; Charlie, divided between her murderous uncle of the same name and the detective Jack, in *Shadow of a Doubt*; and, of course, Alicia, divided between her aged husband Sebastian and Devlin, in *Notorious*. (The notable exception here is *Under Capricorn*, where the heroine resists the charm of a young seducer and returns to her aged, criminal husband after confessing that the crime her husband was convicted for was her own.) The third stage again shifts the accent to the male hero to whom the maternal superego blocks access, thus prohibiting a “normal” sexual relation (from Bruno in *Strangers on a Train* to the “necktie murderer” in *Frenzy*).

Where should we look for the wider frame of reference enabling us to confer a kind of theoretical consistency on this succession of the three forms of (the impossibility of) sexual relationship? Here, we are tempted to venture a somewhat quick “sociological” answer by invoking the three successive forms of the libidinal structure of the subject exhibited in capitalist society during the past century: the “autonomous” individual of the Protestant ethic, the heteronomous “organization man,”⁹ and the type gaining predominance today, the “pathological narcissist.” The crucial thing to emphasize here is that the so-called “decline of the Protestant ethic” and the appearance of the “organization man,” i.e., the replacement of the ethic of individual responsibility by the ethic of the heteronomous individual, oriented toward others, leaves intact the underlying frame of the ego-ideal. It is merely its contents that change: the ego-ideal becomes “externalized” as the expecta-

6. Released in 1936.

7. That is, Hitchcock’s first years in Hollywood (1940–47), after he signed a long-term contract with the American producer and studio executive David O. Selznick (1902–1965).

8. Here it is crucial to grasp the logic of the connection between the woman’s perspective and the figure of the resigned, impotent Master. Lacan’s answer to Freud’s famous question “Was will das Weib? What does the (hysterical) woman want?” is: *a Master, but one whom she could dominate*. The perfect figuration of this hysterical fantasy

is Charlotte Brontë’s *Jane Eyre* where, at the end of the novel, the heroine is happily married to the blinded, helpless fatherlike figure (*Rebecca* [1940 film], of course, belongs to the same tradition) [Žižek’s note]. *Jane Eyre* (1847), first novel published by the English writer Brontë (1816–1855).
9. As described in William H. Whyte’s best-selling book on corporate life, *The Organization Man* (1956). The classic study of the “Protestant ethic” is Max Weber’s *The Protestant Ethic and the Spirit of Capitalism* (1905).

tions of the social group to which the individual belongs. The source of moral satisfaction is no longer the feeling that we resisted the pressure of our milieu and remained true to ourselves (i.e., to our paternal ego-ideal), but rather the feeling of loyalty to the group. The subject looks at himself through the eyes of the group, he strives to merit its love and esteem.

The third stage, the arrival of the “pathological narcissist,” breaks precisely with this underlying frame of the ego-ideal common to the first two forms. Instead of the integration of a symbolic *law*, we have a multitude of *rules* to follow—rules of accommodation telling us “how to succeed.” The narcissistic subject knows only the “rules of the (social) game” enabling him to manipulate others; social relations constitute for him a playing field in which he assumes “roles,” not proper symbolic mandates; he stays clear of any kind of binding commitment that would imply a proper symbolic identification. He is a radical *conformist* who paradoxically experiences himself as an *outlaw*. All this is, of course, already a commonplace of social psychology; what usually goes unnoticed, however, is that this disintegration of the ego-ideal entails the installation of a “maternal” superego that does not prohibit enjoyment but, on the contrary, imposes it and punishes “social failure” in a far more cruel and severe way, through an unbearable and self-destructive anxiety. All the babble about the “decline of paternal authority” merely conceals the resurgence of this incomparably more oppressive agency. Today’s “permissive” society is certainly not less “repressive” than the epoch of the “organization man,” that obsessive servant of the bureaucratic institution; the sole difference lies in the fact that in a “society that demands submission to the rules of social intercourse but refuses to ground those rules in a code of moral conduct,”¹ i.e., in the ego-ideal, the social demand assumes the form of a harsh, punitive superego.

We could also approach “pathological narcissism” on the basis of Saul Kripke’s criticism of the theory of descriptions, i.e., from his premise that the meaning of a name (proper or of a natural kind) can never be reduced to a set of descriptive features that characterize the object denoted by it. The name always functions as a “rigid designator,” referring to the same object even if all properties contained in its meaning prove false.² Needless to say, the Kripkian notion of the “rigid designator” overlaps perfectly with the Lacanian notion of the “master signifier,” i.e., of a signifier that does not denote some positive property of the object but establishes, by means of its own act of enunciation, a new intersubjective relation between speaker and hearer. If, for example, I tell somebody “You are my master!”, I confer upon him a certain symbolic “mandate” that is not contained in the set of his positive properties but results from the very performative force of my utterance, and I create thereby a new symbolic reality, that of a master-disciple relationship between the two of us, within which each of us assumes a certain commitment. The paradox of the “pathological narcissist” is, however, that *for him, language does indeed function according to the theory of descriptions*: the meaning of words is reduced to the positive features of the denoted object, above all those that concern his narcissistic interests. Let us exemplify this apropos of the eternally tedious feminine question: “Why do you love me?” In love proper, this question is, of

1. Lasch, *The Culture of Narcissism*, p. 12 [Žižek’s note].

2. Cf. Saul Kripke, *Naming and Necessity* (Cam-

bridge, Mass.: Harvard University Press, 1972) [Žižek’s note]. Kripke (b. 1940), American philosopher and logician.

course, unanswerable (which is why women ask it in the first place), i.e., the only appropriate answer is “Because there is something in you more than yourself, some indefinite X that attracts me, but that cannot be pinned down to any positive quality.” In other words, if we answer it with a catalogue of positive properties (“I love you because of the shape of your breasts, because of the way you smile”), this is at best a mocking imitation of love proper. The “pathological narcissist” is, on the other hand, somebody who is able to answer such a question by enumerating a definite list of properties: for him, the idea that love is a commitment transcending an attachment to a series of qualities that could gratify his wishes is simply beyond comprehension.³ And the way to hystericize the “pathological narcissist” is precisely to force upon him some symbolic mandate that cannot be grounded in its properties. Such a confrontation brings about the hysterical question, “Why am I what you are saying that I am?” Think of Roger O. Thornhill in Hitchcock’s *North by Northwest*, a pure “pathological narcissist” if ever there was one, who all of a sudden, without any apparent reason, finds himself pinned to the signifier “Kaplan”; the shock of this encounter derails his narcissistic economy and opens up to him the road of gradual access to “normal” sexual relations under the sign of the Name-of-the-Father (which is why *North by Northwest* is a variation of the formula of *The Thirty-Nine Steps*).⁴

We can now see how the three versions of the impossibility of sexual relationship in Hitchcock’s films refer to these three types of libidinal economy. The couple’s initiating voyage, with its obstacles stirring the desire of reunification, is firmly grounded in the classical ideology of the “autonomous” subject strengthened through ordeal; the resigned paternal figure of Hitchcock’s next stage evokes the decline of this “autonomous” subject to whom is opposed the victorious, insipid “heteronomous” hero; and, finally, it is not difficult to recognize in the typical Hitchcockian hero of the 1950s and ’60s the features of the “pathological narcissist” dominated by the obscene figure of the maternal superego. Hitchcock is thus staging again and again the vicissitudes of the family in late-capitalist society; the real “secret” of his films is ultimately always the family secret, its tenebrous reverse.

A Mental Experiment: *The Birds* without Birds

Although Hitchcock’s birds do give body to the agency of the maternal superego, the essential thing is nevertheless *not* to seize upon the link between the two traits we have noted—the appearance of the ferocious assailant birds, the blockage of “normal” sexual relations by the intervention of the maternal superego—as a sign relationship, as a correlative between a “symbol” and its “signification”: the birds do not “signify” the maternal superego, they do not

3. It is against the background of this problem that we could perhaps locate the lesson to be drawn from Stanley Cavell’s *Pursuits of Happiness: The Hollywood Comedies of Remarriage* (Cambridge, Mass.: Harvard University Press, 1981), namely a version of the Hegelian theory of repetition in history: the only proper marriage is the second one. First we marry the other *qua* our narcissistic complement; it is only when his/her delusive charm fades that we can engage in marriage as an attachment to the other beyond his/her imaginary properties [Žižek’s note]. For the

German philosopher GEORG WILHELM FRIEDRICH HEGEL (1770–1831), see above.

4. It is because *North by Northwest* repeats the logic of the Oedipal journey that it offers us a kind of spectral analysis of the function of the father, dividing it into three figures: Roger Thornhill’s *imaginary* father (the UN diplomat stabbed in the hall of the General Assembly), his *symbolic* father (the CIA “Professor” who invented the name “Kaplan” to which Thornhill is tied), and his *real* father, i.e., the resigned, perverse villain Van Damm [Žižek’s note].

“symbolize” blocked sexual relations, the “possessive” mother, and so on; they are, rather, the making present in the real, the objectivization, the incarnation of the fact that, on the symbolizing level, something “has not worked out,” in short, the objectivization-positivization of a *failed* symbolization. In the terrifying presence of the attacking birds, a certain lack, a certain failure assumes positive existence. At first glance, this distinction may appear factitious, vague; that is why we shall try to explicate it by means of a fairly elementary test question: how might the film have been constructed if the birds were to function *in fact* as the “symbol” of blocked sexual relations?

The answer is simple: first, we must imagine *The Birds* as a film *without birds*. We would then have a typically American drama about a family in which the son goes from one woman to another because he is unable to free himself from the pressure exerted by a possessive mother, a drama similar to dozens of others that have appeared on American stages and screens, particularly in the 1950s: the tragedy of a son playing with the chaos of his sexual life for what was in those days referred to as the mother’s inability to “live her own life,” to “expend her vital energy,” and the mother’s emotional breakdown when some woman finally manages to take away her son, all seasoned with a touch of “psychoanalytic” salt à la Eugene O’Neill or Tennessee Williams and acted, if possible, in a psychologistic, Actors’ Studio⁵ style—the common ground of the American theater at midcentury.

Next, in such a drama we must imagine the appearance from time to time, particularly at crucial moments of emotional intrigue (the son’s first encounter with his future wife, the mother’s breakdown, etc.), of birds—in the background, as part of the ambience: the opening scene (the meeting of Mitch and Melanie in the pet shop, the purchase of the lovebirds) could perhaps remain as it is; and, after the emotion-charged scene of conflict between mother and son, when the sorrowing mother withdraws to the seacoast, we might hear the cawing of birds. In such a film, the birds, even though or, rather, *because* they do not play a direct role in the development of the story, would be “symbols,” they would “symbolize” the tragic necessity of the mother’s renunciation, her helplessness, or whatever—and everyone would know what the birds signified, everyone would clearly recognize that the film was depicting an emotional drama of a son facing up to a possessive mother who is trying to transfer onto him the price of her own failure, and the “symbolic” role of the birds would be indicated by the title, which would remain unchanged: *The Birds*.

Now, what did Hitchcock do? In his film, the birds are not “symbols” at all, they play a direct part in the story as something inexplicable, as something outside the rational chain of events, as a *lawless* impossible real. The diegetic action of the film is so influenced by the birds that their massive presence completely overshadows the domestic drama: the drama—literally—*loses its significance*. The “spontaneous” spectator does not perceive *The Birds* as a domestic family drama in which the role of the birds is “symbolic” of intersubjective relationships and tensions; the accent is put totally on the traumatic

5. A professional actors’ workshop, founded in 1947; under its longtime director Lee Strasberg (1948–68) it became identified with method acting, in which actors draw on their own experiences and emotional memories. The great

20th-century American dramatists O’Neill (1888–1953) and Williams (1911–1983) wrote many plays dealing with family conflict and thwarted desires.

attacks by the birds, and, within that framework, the emotional intrigue is mere pretext, part of the undifferentiated tissue of everyday incidents of which the first half of the film is made up, so that, against that background, the weird, inexplicable fury of the birds can be made to stand out even more strongly. Thus the birds, far from functioning as a “symbol” whose “signification” can be detected, on the contrary *block, mask*, by their massive presence, the film’s “signification,” their function being to make us *forget*, during their vertiginous and dazzling attacks, with what, in the end, we are dealing: the triangle of a mother, her son, and the woman he loves. If the “spontaneous” spectator had been supposed to perceive the film’s “signification” easily, then the birds should quite simply have been *left out*.

There is a key detail that supports our reading; at the very end of the film, Mitch’s mother “accepts” Melanie as her son’s wife, gives her consent, and abandons her superego role (as indicated by the fleeting smile she and Melanie exchange in the car)—and that is why, at that moment, they are all able to leave the property that is being threatened by the birds: the birds are no longer needed, their role is finished. The end of the film—the last shot of the car driving away surrounded by hordes of calm birds—is for that reason wholly coherent and not at all the result of some kind of “compromise”; the fact that Hitchcock himself spread the rumor that he would have preferred another ending (the car arriving at a Golden Gate Bridge totally blackened by the birds perched on it) and was forced to accede to studio pressure, is just another of the many myths fomented by the director, who was at pains to dissimulate what was really at stake in his work.

It is clear, therefore, why *The Birds*—according to François Regnault⁶—is the film that closes the Hitchcockian system: the birds, the ultimate incarnation in Hitchcock of the Bad Object, are the counterpart of the reign of maternal law, and it is precisely this conjunction of the Bad Object of fascination and the maternal law that defines the kernel of the Hitchcockian fantasy.

1991

HENRY LOUIS GATES JR.

b. 1950

One of the best-known cultural critics in America, Henry Louis Gates Jr. has played a vital role in establishing an African American literary canon. A tireless impresario, he has also helped build institutional structures to study African American literature and has disseminated his views of race and culture through mainstream media, writing for such magazines as *Newsweek* and the *New Yorker* and frequently appearing on television. Our selection, “Talking Black: Critical Signs of the Times” (1988), sets out his credo for present-day African American literary theory, which borrows from but revises mainstream theory with infusions of African American modes of thought and vernacular discourse.

Gates was born and raised in Keyser, West Virginia. After high school, he attended Potomac State Community College but was encouraged by an English instructor to transfer to Yale University, from which he received his B.A. in 1973. While an undergraduate (1970–71), Gates traveled to Africa on a fellowship, visiting fifteen countries and learning about African culture. On his return to the United States he worked as a director of student affairs for the West Virginia gubernatorial campaign of John D. Rockefeller IV, later writing his senior honors thesis on the campaign. He received Mellon and Ford Foundation fellowships that enabled him to undertake graduate study at Cambridge University, where he earned his M.A. in 1974 and Ph.D. in 1979. At Cambridge he worked with the Nigerian writer Wole Soyinka, who exposed him to Yoruba myths and interpretive modes. While in England he also began a journalistic career, working as a London correspondent for *Time* magazine from 1973 to 1975. In 1975 he returned to the United States, attending Yale Law School for a month before changing paths to pursue literary studies. He began teaching at Yale in 1976 as a lecturer in English; by the time he left, in 1985, he had become a full professor and had received several prestigious awards, including a 1981 MacArthur Fellowship. After teaching at Cornell and Duke Universities, in 1991 he moved to Harvard University as W. E. B. Du Bois Professor of the Humanities, director of the W. E. B. Du Bois Institute for African and African American Research, and chair of the Department of African and African American Studies. While chair from 1991 to 2006, he gathered what he called a “dream team” of prominent scholars from several disciplines. In 2006 Harvard appointed him to a prestigious University Professorship.

Gates's work shows the influence of the two poles of his education: the sophisticated reading practices and deconstructive literary theories of the critics affiliated with Yale University in the 1970s, such as PAUL DE MAN, JACQUES DERRIDA, and Geoffrey Hartman, and the indigenous African tradition of literature and interpretation introduced to him by Soyinka. His early critical writing draws on an array of contemporary theory, from sources as diverse as MIKHAIL M. BAKHTIN, NORTHROP FRYE, and Derrida, which he applies to readings of African American literature in an attempt to revalue it and to construct a canon. In his innovative book *The Signifying Monkey: A Theory of African-American Literary Criticism* (1988), he melds the post-structuralist theory of signification rooted in the linguistics of FERDINAND DE SAUSSURE with the African vernacular tradition of “signifyin(g),” which derives from Yoruba oral literature. The latter tradition is evident in present-day practices such as “the dozens” (a game of verbal one-upsmanship) and jazz improvisation. Gates stresses that he uses theory provisionally; his intention is “to develop theories of criticism indigenous to our literatures” by drawing on “black textual tradition.”

By blending contemporary Euro-American theory with African tradition, Gates positions himself as an intermediary between dominant Anglo-American and minority African American literary cultures. Against the conservative view that African American literature lacks aesthetic merit and is valuable only as a social report, Gates urges us to gauge it on its own aesthetic terms, within the vernacular black tradition. Using these criteria, he establishes an African American canon. Against radical black separatist arguments for the exclusive study of African American literature, or Afrocentrism, Gates argues instead for “cultural tolerance,” and he freely makes use of mainstream literary theory as a means to specific ends. Between traditionalists and radicals, between assimilationists and separatists, and between antitheorists and theorists, Gates negotiates a middle path. His ultimate goal is institutional as well as theoretical. As he puts it in our selection, he aims to forge a place for black writing and criticism in “the broader, larger institution of literature.”

“Talking Black” exemplifies Gates's intermediary role, drawing on two competing poles in African American cultural politics—assimilationist and separatist—as well as asserting the status of black writing in mainstream literary culture. Characteristically, Gates calls for simultaneously using critical theory and injecting African American tradition. He foregrounds the example of the early African American intellectual

and religious leader Alexander Crummell (1819–1898), who advocated studying classical languages and obtaining a traditional white education. Most African American critics view this position as overly accommodating, and Gates distances himself from it, stressing that his amalgam of contemporary theoretical approaches and black tradition transforms the theory it employs. “Talking Black,” which originally appeared in the New York–based weekly the *Village Voice*, also exemplifies Gates’s efforts to bridge the gap between the specialized sphere of academic criticism and the public sphere of journalism, efforts that have been remarkably successful.

This middle-of-the-road position has helped win Gates a high degree of public visibility and success, but it has also generated much criticism. Traditionalists believe that the effort to create a separate African American canon degrades the Western canon, whose value, they argue, has been confirmed over time. Some dedicated theorists see Gates’s mainstream writings as a watering-down of his scholarship. On the other hand, Afrocentrist critics consider it a means of accommodating white culture, in effect claiming that Gates has become a latter-day Crummell. Other radical critics judge that he focuses too exclusively on literature and culture rather than on the material conditions of African Americans. Gates unapologetically defines his role as that of a literary critic and argues that attention to black literary tradition and heritage carries an implicit politics, fostering greater cultural recognition for African Americans. Ironically, Gates’s intermediary position, both intellectual and stylistic, fuels his popular influence as well as the attacks of his most cogent detractors.

Talking Black: Critical Signs of the Times

For a language acts in diverse ways, upon the spirit of a people; even as the spirit of a people acts with a creative and spiritualizing force upon a language.

—Alexander Crummell,¹ 1860

A new vision began gradually to replace the dream of political power—a powerful movement, the rise of another ideal to guide the unguided, another pillar of fire by night after a clouded day. It was the ideal of “book-learning”; the curiosity, born of compulsory ignorance, to know and test the power of the cabalistic letters of the white man, the longing to know. Here at last seemed to have been discovered the mountain path to Canaan; longer than the highway of Emancipation and law, steep and rugged, but straight, leading to heights high enough to overlook life.

—W. E. B. Du Bois,² 1903

The knowledge which would teach the white world was Greek to his own flesh and blood . . . and he could not articulate the message of another people.

—W. E. B. Du Bois, 1903

1. African American Episcopalian minister (1819–1898), who earned a degree from Cambridge University (1853) and cultivated scholarship among young blacks. The quotation is from “The English Language in Liberia,” an address delivered in Liberia.

2. African American historian and sociologist (1868–1963; see above), co-founder of the NAACP and the foremost voice of black protest in the early 20th century. Both his epigraphs are from chapter 1 of *The Souls of Black Folk* (1903).

Alexander Crummell, a pioneering nineteenth-century Pan-Africanist,³ statesman, and missionary who spent the bulk of his creative years as an Anglican minister in Liberia, was also a pioneering intellectual and philosopher of language, founding the American Negro Academy⁴ in 1897 and serving as the intellectual godfather of W. E. B. Du Bois. For his first annual address as president of the academy, delivered on December 28, 1897, Crummell selected as his topic "The Attitude of the American Mind Toward the Negro Intellect." Given the occasion of the first annual meeting of the great intellectuals of the race, he could not have chosen a more timely or appropriate subject.

Crummell wished to attack, he said, "the denial of intellectuality in the Negro; the assertion that he was not a human being, that he did not belong to the human race." He argued that the desire "to becloud and stamp out the intellect of the Negro" had led to the enactment of "laws and Statutes, closing the pages of every book printed to the eyes of Negroes; barring the doors of every school-room against them!" This, he concluded, "was the systematized method of the intellect of the South, to stamp out the brains of the Negro!"—a program that created an "almost Egyptian darkness⁵ [which] fell upon the mind of the race, throughout the whole land."

Crummell next shared with his audience a conversation between two Boston lawyers which he had overheard when he was "an errand boy in the Anti-slavery office in New York City" in 1833 or 1834:

While at the Capitol they happened to dine in the company of the great John C. Calhoun,⁶ then senator from South Carolina. It was a period of great ferment upon the question of Slavery, States' Rights, and Nullification; and consequently the Negro was the topic of conversation at the table. One of the utterances of Mr. Calhoun was to this effect—"That if he could find a Negro who knew the Greek syntax, he would then believe that the Negro was a human being and should be treated as a man."

"Just think of the crude asininity," Crummell concluded rather generously, "of even a great man!"

The salient sign of the black person's humanity—indeed, the only sign for Calhoun—would be the mastering of the very essence of Western civilization, of the very foundation of the complex fiction upon which white Western culture had been constructed. It is likely that "Greek syntax," for John C. Calhoun, was merely a hyperbolic figure of speech, a trope of virtual impossibility; he felt driven to the hyperbolic mode, perhaps, because of the long racist tradition in Western letters of demanding that black people *prove* their full humanity. We know this tradition all too well, dotted as it is with the names of the great intellectual Western racialists, such as Francis Bacon, David Hume, Immanuel Kant, Thomas Jefferson, and G. W. F. Hegel.⁷

3. A believer in the innate unity of all black Africans and their overseas descendants; more especially, one active in the movement for the unity and independence of African states (as was Du Bois, beginning in 1900 with the Pan-African Congress in London).

4. A learned society for African Americans that promoted civil rights through scholarly work on African American culture and history.

5. An allusion to one of the plagues said to have

been brought by God against the Egyptians who were holding the Israelites in slavery (Exodus 10.21–23).

6. Prominent American political leader (1782–1850) and the 7th U.S. vice president (1825–32); he was a strong advocate of states' rights and of slavery.

7. Major thinkers who generally (save the slaveholding Jefferson) are not thought of as "racialist": Bacon (1561–1626), English philosopher, scientist,

Whereas each of these figures demanded that blacks write poetry to prove their humanity, Calhoun—writing in a post-Phillis Wheatley⁸ era—took refuge in, yes, Greek syntax.

In typical African-American fashion, a brilliant black intellectual accepted Calhoun's challenge. The anecdote Crummell shared with his fellow black academicians turned out to be his shaping scene of instruction. For Crummell himself jumped on a boat, sailed to England, and matriculated at Queens' College, Cambridge, where he mastered the intricacies of Greek syntax. Calhoun, we suspect, was not impressed.

Crummell never stopped believing that mastering the master's tongue was the sole path to civilization, intellectual freedom, and social equality for the black person. It was Western "culture," he insisted, that the black person "must claim as his rightful heritage, as a man—not stinted training, not a caste education, not," he concluded prophetically, "a Negro curriculum." As he argued so passionately in his speech of 1860, "The English Language in Liberia," the acquisition of the English language, along with Christianity, is the wonderful sign of God's providence encoded in the nightmare of African enslavement in the racist wilderness of the New World. English, for Crummell, was "the speech of Chaucer and Shakespeare, of Milton and Wordsworth, of Bacon and Burke, of Franklin and Webster,"⁹ and its potential mastery was "this one item of compensation" that "the Almighty has bestowed upon us" in exchange for "the exile of our fathers from their African homes to America." In the English language are embodied "the noblest theories of liberty" and "the grandest ideas of humanity." If black people master the master's tongue, these great and grand ideas will become African ideas, because "ideas conserve men, and keep alive the vitality of nations."

In dark contrast to the splendors of the English language, Crummell set the African vernacular languages, which, he wrote, have "definite marks of inferiority connected with them all, which place them at the widest distances from civilized languages." Any effort to render the master's discourse in our own black tongue is an egregious error, for we cannot translate sublime utterances "in[to] broken English—a miserable caricature of their noble tongue." We must abandon forever both indigenous African vernacular languages and the neo-African vernacular languages that our people have produced in the New World:

All low, inferior, and barbarous tongues are, doubtless, but the lees and dregs of noble languages, which have gradually, as the soul of a nation has died out, sunk down to degradation and ruin. We must not suffer this decay on these shores, in this nation. We have been made, providentially, the deposit of a noble trust; and we should be proud to show our appreciation of it. Having come to the heritage of this language we

and statesman; HUME (1711–1776), Scottish philosopher and historian; KANT (1724–1804), German idealist philosopher; Jefferson (1743–1826), drafter of the Declaration of Independence, Founding Father, and 3d president (1801–09) of the United States; HEGEL (1770–1831), German idealist philosopher.

8. The first black American woman poet in the United States (ca. 1753–1784), born probably in Senegal and sold as a slave to a Boston family.

9. Crummell names English and American men

famed for their skill with words: the English poet Geoffrey Chaucer (ca. 1343–1400) and the poet/dramatist William Shakespeare (1564–1616); two poets, John Milton (1608–1674) and WILLIAM WORDSWORTH (1770–1850); two philosopher/statesmen, Bacon and EDMUND BURKE (1729–1797); and two American politicians, the popular author, inventor, and ambassador Benjamin Franklin (1706–1790) and the great orator Daniel Webster (1782–1852).

must cherish its spirit, as well as retain its letter. We must cultivate it among ourselves; we must strive to infuse its spirit among our reclaimed and aspiring natives.

I cite the examples of John C. Calhoun and Alexander Crummell as metaphors for the relation between the critic of black writing and the broader, larger institution of literature. Learning the master's tongue, for our generation of critics, has been an act of empowerment, whether that tongue be New Criticism, humanism, structuralism, Marxism, poststructuralism, feminism, new historicism,¹ or any other "ism." Each of these critical discourses arises from a specific set of texts within the Western tradition. At least for the past decade, many of us have busied ourselves with the necessary task of learning about these movements in criticism, drawing upon their modes of reading to explicate the texts in our own tradition.

This is an exciting time for critics of Afro-American literature. More critical essays and books are being produced than ever before, and there have never been more jobs available teaching Afro-American literature in white colleges and universities. In a few years, we shall at last have our very own Norton anthology,² a sure sign that the teaching of Afro-American literature is being institutionalized. Our pressing question now becomes this. In what languages shall we choose to speak, and write, our own criticisms? What are we now to do with the enabling masks of empowerment that we have donned as we have practiced one mode of formal criticism or another?

There is a long history of resistance to (white) theory in the (black) tradition. Unlike almost every other, the Afro-American literary tradition was generated as a response to allegations that its authors did not, and *could not* create literature, considered the signal measure of a race's innate "humanity." The African living in Europe or in the New World seems to have felt compelled to create a literature not only to demonstrate that blacks did indeed possess the intellectual ability to create a written art, but also to indict the several social and economic institutions that delimited the "humanity" of all black people in Western cultures.

So insistent did these racist allegations prove to be, at least from the eighteenth to the early twentieth century, that it is fair to describe the subtext of the history of black letters in terms of the urge to refute them. Even as late as 1911, when J. E. Casely-Hayford³ published *Ethiopia Unbound* (the "first" African novel), he felt it necessary to address this matter in the first two paragraphs of this text. "At the dawn of the twentieth century," the novel opens, "men of light and leading both in Europe and in America had not yet made up their minds as to what place to assign to the spiritual aspirations of the black man." Few literary traditions have begun with such a complex and curious relation to criticism: allegations of an absence led directly to a presence, a literature often inextricably bound in a dialogue with its harshest critics.

Black literature and its criticism, then, have been put to uses that were not primarily aesthetic; rather, they have formed part of a larger discourse on the nature of the black, and of his or her role in the order of things. The

3. Ghanaian lawyer, writer, and advocate of African nationalism (1866–1930).

relation among theory, tradition, and integrity within black culture has not been, and perhaps cannot be, a straightforward matter.

Despite the fact that critics of black literature are often attacked for using theory and that some black readers respond to their work by remarking that it's all Greek to them, it is probably true that critics of Afro-American literature are more concerned with the complex relation between literature and theory than ever before. There are many reasons for this, not the least of which is our increasingly central role in "the profession" precisely when our colleagues are engulfed in their own extensive debates about the intellectual merit of so much theorizing. Theory, as a second-order reflection upon a primary gesture, has *always* been viewed with suspicion by scholars who find it presumptuous and even decadent when criticism claims the right to stand on its own: theoretical texts breed equally "decadent" theoretical responses in a creative process that can be very far removed from a poem or a novel.

For the critic of Afro-American literature, this process is even more perilous because most of the contemporary literary theory derives from critics of Western European languages and literatures. Is the use of theory to write about Afro-American literature merely another form of intellectual indenture, a mental servitude as pernicious in its intellectual implications as any other kind of enslavement? The key word implied in this panel discussion⁴ is *integrity*. To quote the *Oxford English Dictionary's* definition of the word, does theorizing about a text or a literary tradition "mar," "violate," "impair," or "corrupt" the "soundness" of an "original perfect state" of a black text or of the black tradition? To argue that it does is to align oneself with the New Critics⁵—who often seem not to have cared particularly for, or about, the writing of Afro-Americans—and with their view that texts are "organic wholes" in the first place. This is a critical error.

The sense of "integrity" as it seems to arise in the Afro-American tradition is more akin to the notion of "ringing true," or to Houston Baker's⁶ concept of "sounding." (One of the most frequently used critical judgments in the African-American tradition is "That just don't sound right," or, as Alice Walker puts it in *The Color Purple*,⁷ "Look like to me only a fool would want to talk in a way that feel peculiar to your mind.") That is the sense that black nationalists⁸ call on here, without understanding how problematic this can be. Doubleness, alienation, equivocality—since the turn of the century at least, these have been recurrent tropes for the black tradition.

To be sure, this matter of criticism and "integrity" has a long and rather tortured history in black letters. It was David Hume, after all, who called Francis Williams,⁹ the Jamaican poet of Latin verse, "a parrot who merely speaks a few words plainly." Phillis Wheatley, too, has long suffered from the spurious attacks of black and white critics alike for being the *rara avis*¹ of a

school of so-called mockingbird poets, whose use of European and American literary conventions has been considered a corruption of a “purer” black expression, found in forms such as the blues, signifying, spirituals, and Afro-American dance. Can we, as critics, escape a “mockingbird” relation to theory? And can we escape the racism of so many critical theorists, from Hume and Kant through the Southern Agrarians and the Frankfurt school?²

Only recently have some scholars attempted to convince critics of black literature that we can. Perhaps predictably, a number of these attempts share a concern with that which has been most repressed in the received tradition of Afro-American criticism: close readings of the texts themselves. My advocacy of theory’s value for such readings is meant as a prelude to the definition of critical principles peculiar to the black literary traditions, related to contemporary theory generally and yet, as Robert Farris Thompson³ puts it, “indelibly black.” I have tried to work through contemporary theories of literature not to “apply” them to black texts, but to transform by translating them into a new rhetorical realm—to re-create, through revision, the critical theory at hand. As our familiarity with the black tradition and with literary theory expands, we shall invent our own black, text-specific theories, as some of us have begun to do. We must learn to read a black text within a black formal cultural matrix, as well as its “white” matrix.

This is necessary because the existence of a black canon is a historically contingent phenomenon; it is not inherent in the nature of “blackness,” not vouchsafed by the metaphysics of some racial essence. The black tradition exists only insofar as black artists enact it. Only because black writers have read and responded to other black writers with a sense of recognition and acknowledgment can we speak of a black literary inheritance, with all the burdens and ironies that has entailed. Race is a text (an array of discursive practices), not an essence. It must be *read* with painstaking care and suspicion, not imbibed.

I have tried to employ contemporary theory to defamiliarize⁴ the texts of the black tradition: ironically, it is necessary to create distance between reader and texts in order to go beyond reflexive responses and achieve critical insight into and intimacy with their formal workings. I have done this to respect the “integrity” of these texts, by trying to avoid confusing my experience as an Afro-American with the act of language that defines a black text. This is the challenge of the critic of black literature in the 1980s: not to shy away from white power—that is, literary theory—but to translate it into the black idiom, *renaming* principles of criticism where appropriate, but especially *naming* indigenous black principles of criticism and applying them to our own texts. *Any* tool that enables the critic to explain the complex workings of the language of a text is appropriate here. For it is language, the black

2. German social and aesthetic theorists who gathered at Frankfurt’s Institute for Social Research (founded in 1923); prominent members include THEODOR ADORNO and MAX HORKHEIMER. Southern Agrarians: also known as the Fugitives, a group of Southern poets and critics (many, including JOHN CROWE RANSOM, were associated with Vanderbilt University in the 1920s) who were politically conservative and viewed works of literature as autonomous verbal structures; their

manifesto was *I’ll Take My Stand: The South and the Agrarian Tradition* by Twelve Southerners (1930).

3. African American art historian (b. 1932).

4. A term from the Russian formalist Viktor Shklovsky (1893–1984); defamiliarization is the process through which an object of art “makes strange” what is familiar, so our response to it is not routine and it can be appreciated not as imitative but as an independent work.

language of black texts, that expresses the distinctive quality of our literary tradition. Once it may have seemed that the only critical implements black critics needed were the pom-pom and the twirled baton; in fact, there is no deeper form of literary disrespect. We will not protect the "integrity" of our tradition by remaining afraid of, or naive about, literary theory; rather, we will inflict upon it the violation of reflexive, stereotypical readings—or non-reading. We are the keepers of the black literary tradition. No matter what theories we embrace, we have more in common with each other than we do with any other critic of any other literature. We write for each other, and for our own contemporary writers. This relation is a critical trust.

It is also *political* trust. How can the demonstration that our texts sustain ever closer and more sophisticated readings *not* be political at a time when all sorts of so-called canonical critics mediate their racism through calls for "purity" of the "tradition," demands as implicitly racist as anything the Southern Agrarians said? How can the deconstruction of the forms of racism itself not be political? How can the use of literary analysis to explicate the racist social text in which we still find ourselves be anything *but* political? To be political, however, does not mean that I have to write at the level of a Marvel comic book. My task, as I see it, is to help guarantee that black and so-called Third World literature⁵ is taught to black and Third World and white students by black and Third World and white professors in heretofore white mainstream departments of literature, and to train students to think, to read, and to write clearly, to expose false uses of language, fraudulent claims, and muddled arguments, propaganda, and vicious lies—from all of which our people have suffered just as surely as we have from an economic order in which we were zeros and a metaphysical order in which we were absences. These are the "values" which should be transmitted through critical theory.

In the December 1986 issue of the *Voice Literary Supplement*, in an essay entitled "Cult-Nats Meet Freaky-Deke," Greg Tate⁶ argued cogently and compellingly that "black aestheticians need to develop a coherent criticism to communicate the complexities of our culture. There's no periodical on black cultural phenomena equivalent to *The Village Voice* or *Artforum*, no publication that provides journalism on black visual art, philosophy, politics, economics, media, literature, linguistics, psychology, sexuality, spirituality, and pop culture. Though there are certainly black editors, journalists, and academics capable of producing such a journal, the disintegration of the black cultural nationalist movement and the brain-drain of black intellectuals to white institutions have destroyed the vociferous public dialogue that used to exist between them." While I would argue that *Sage*, *Callaloo*, and *Black American Literature Forum* (BALF) are indeed fulfilling that function for academic critics, I am afraid that the truth of Tate's claim is irresistible.

But his most important contribution to the future of black criticism is to be found in his most damning allegation. "What's unfortunate," he writes, "is that while black artists have opened up the entire 'text of blackness' for fun and games, not many black critics have produced writing as fecund, eclectic, and freaky-deke as the art, let alone the culture, itself. . . . For

5. Literature from the "underdeveloped" countries, many of them former colonies, now dominated by highly industrialized "first world" (largely

Western) nations in a global economy.

6. African American cultural critic and journalist.

those who prefer exegesis with a polemical bent, just imagine how critics as fluent in black and Western culture as the postliberalized artists could strike terror into that bastion of white supremacist thinking, the Western art [and literary] world[s]." To which I can only say, echoing Shug in Alice Walker's *The Color Purple*, "Amen. Amen."

Tate's challenge is a serious one because neither ideology nor criticism nor blackness can exist as entities of themselves, outside the forms of their texts. This is the central theme of Ralph Ellison's *Invisible Man* and Ishmael Reed's *Mumbo Jumbo*,⁷ for example. But how can we write or read the text of "Black Theory"? What language(s) do black people use to represent their critical or ideological positions? In what forms of language do we speak or write? Can we derive a valid, integral "black" text or criticism or ideology from borrowed or appropriated forms? Can a black woman's text emerge "authentically" as borrowed, or "liberated," or revised, from the patriarchal forms of the slave narratives, on the one hand, or from the white matriarchal forms of the sentimental novel, on the other, as Harriet Jacobs and Harriet Wilson attempted to do in *Incidents in the Life of a Slave Girl* (1861) and *Our Nig* (1859)?⁸ Where lies the liberation in revision, the ideological integrity of defining freedom in the modes and forms of difference charted so cogently by so many poststructural critics of black literature?

For it is in these spaces of difference that black literature has dwelled. And while it is crucial to read these patterns of difference closely, we must understand as well that the quest was lost, in a major sense, before it had even begun, simply because the terms of our own self-representation have been provided by the master. It is not enough for us to show that refutation, negation, and revision exist, and to define them as satisfactory gestures of ideological independence. Our next concern must be to address the black political signified, that is, the cultural vision and the critical language that underpin the search through literature and art for a profound reordering and humanizing of everyday existence. We must urge our writers and critics to undertake the fullest and most ironic exploration of the manner and matter, the content and form, the structure and sensibility so familiar and poignant to us in our most sublime form of art, black music, where ideology and art are one, whether we listen to Bessie Smith or to postmodern and poststructural John Coltrane.⁹

Just as we must urge our writers to meet this challenge, we as critics must turn to our own peculiarly black structures of thought and feeling to develop our own languages of criticism. We must do so by drawing on the black vernacular, the language we use to speak to each other when no outsiders are around. Unless we look to the vernacular to ground our theories and modes of reading, we will surely sink in the mire of Nella Larsen's quicksand,¹ remain alienated in the isolation of Harriet Jacob's garret, or masked in the received stereotype of the Black Other helping Huck to return to the raft, singing

7. The best-known novel (1972) by Reed (b. 1938), African American novelist and poet. *Invisible Man* (1952) is the masterpiece of Ellison (1914–1994), African American writer of fiction, essays, and criticism.

8. Accounts of slave life by Jacobs (1813–1877) and Wilson (1808–ca. 1870). Jacobs writes of hid-

ing for nearly 7 years in a small, cramped attic; this is the "garret" to which Gates later refers.

9. American jazz saxophonist and composer (1926–1967). Smith (ca. 1894–1937), American blues singer.

1. *Quicksand* (1928) was the first novel by the African American writer Larsen (1891–1964).

"China Gate" with Nat King Cole under the Da Nang moon, or reflecting our bald heads in the shining flash of Mr. T's² signifying gold chains.

We must redefine theory itself from within our own black cultures, refusing to grant the racist premise that theory is something that white people do, so that we are doomed to imitate our white colleagues, like reverse black minstrel critics done up in whiteface. We are all heirs to critical theory, but critics are also heir to the black vernacular critical tradition as well. We must not succumb, as did Alexander Crummell, to the tragic lure of white power, the mistake of accepting the empowering language of white critical theory as "universal" or as our only language, the mistake of confusing the enabling mask of theory with our own black faces. Each of us has, in some literal or figurative manner, boarded a ship and sailed to a metaphorical Cambridge, seeking to master the master's tools. (I myself, being quite literal-minded, booked passage some fourteen years ago on the *QE2*.³) Now we must at last don the empowering mask of blackness and talk *that* talk, the language of black difference. While it is true that we must, as Du Bois said so long ago, "know and test the power of the cabalistic letters of the white man," we must also know and test the dark secrets of a black discursive universe that awaits its disclosure through the black arts of interpretation. For the future of theory, in the remainder of this century, is black indeed.

1988

2. Lawrence Tureaud (b. 1952), popular African American television and film actor of the 1980s, generally seen in a Mohawk haircut and copious gold jewelry. Huck: title character of Mark Twain's *Adventures of Huckleberry Finn* (1884), who is helped by the runaway slave Jim back to the raft traveling down the Mississippi River. Cole (1919–1965), innovative African American pianist and leading popular singer of the 1950s and 1960s, who had a small role (and sang the title song) in

the 1957 film *China Gate* (dir. Samuel Fuller), which was set in the last days of the French war in Vietnam; Da Nang, in central Vietnam, later became a major American military base.

3. *Queen Elizabeth 2*, a Cunard liner put into service in 1969; until it was replaced by the *Queen Mary II* in 2008, it provided the only regularly scheduled luxury passenger service across the Atlantic. Gates pursued his graduate studies at Cambridge University.

FRANCO MORETTI

b. 1950

A whole lifetime dedicated to reading would be insufficient to explore all the novels that have been published. In attempting a systematic study of such an immense body of works, Franco Moretti argues that close reading is useless for reasons not only of time but of methodology. The extraordinary size of the corpus, declares Moretti, requires a new, quantitative model of literary history: a "distant reading," which strategically subjects the genre to a process of scientific observation and analysis focused on the total phenomenon rather than on individual cases. He sees the rise and fall of novelistic genres not as a series of unrelated events but as a system of temporary structures organized into thirty-year cyclical patterns of dominant forms. Combining structuralist analysis with the *Annales* historiography of Fernand Braudel (1902–1985), Moretti invokes morphology to help explain the transitory historical dominance of hitherto neglected novelistic subgenres. Drawing on models taken from the natural and the social sciences—most notably geography, demography, and quantitative

history—he seeks to elucidate the dynamic interplay between social history and literary form. Moretti aims to construct a rational theory of the history of the novel, which can supplant the dominance of individual works with diverse systems of genres.

Born in Italy, Franco Moretti received his Ph.D. in modern literature from the University of Rome in 1972. After teaching at various Italian universities, he joined the faculty of Columbia University as a professor of comparative literature from 1990 to 1999; in 2000 he accepted the Danily C. and Laura Louise Bell Professorship at Stanford University. That same year, he founded the Stanford Center for the Study of the Novel, an interdisciplinary institute dedicated to promoting discussions on the novel that cut across history and cultures. Founded by Moretti, the Stanford Literary Lab offers a space for collaborative research projects that apply computational criticism to the study of literature. His notion of computational criticism is based on the crucial role of computers in processing massive amounts of data for a quantitative literary analysis.

Moretti gave the Gauss Seminar in Criticism at Princeton University in 1991, the Beckman Lectures at the University of California at Berkeley in 2002, and the Carpenter Lectures at the University of Chicago in 2008. In 2006 he was named to the American Academy of Arts and Sciences. He has also been a fellow at the Wissenschaftskolleg zu Berlin and a scientific adviser to the French Ministry of Research.

Moretti first came to prominence with the publication of *The Way of the World: The Bildungsroman in European Culture* (1987), an influential study that memorably mixes social history and narrative theory. Influenced in part by GYÖRGY LUKÁCS's Marxist theory of the novel, Moretti argues that the coming of age novel is a symptomatic form of modernity—a product of the shifting socioeconomic conditions which mark the period between the French Revolution of 1789 and the numerous national uprisings that convulsed Europe in 1848. From Johann Wolfgang von Goethe's *Wilhelm Meister* (1795–96) to Gustave Flaubert's *Sentimental Education* (1869) and George Eliot's *Daniel Deronda* (1876), the classic bildungsroman registers the reigning contradictions in the rise of the modern bourgeoisie. For Moretti, the bildungsroman is the aesthetic form of modernity par excellence because it reflects a new balance between socialization and individuality and also between mobility and interiority. The genre suggests a picture of bourgeois culture that is multivocal and precarious rather than monologic and static. The relative social freedom of middle-class man rests on a principle of normality that itself requires internalization: each individual must perceive the norm as his own. For Moretti, the bildungsroman confirms a major claim that his subsequent writings develop: “the most profoundly social aspect of literature is its form.”

Moretti focuses on roughly the same period in *Atlas of the European Novel, 1800–1900* (1997), which contains one hundred maps depicting the spatial distribution of nineteenth-century novels. The data he collects throw light on a range of issues that traditional literary histories have not engaged. For example, used as analytic tools, maps of London reveal the city's secret cultural geography; they also uncover relationships between fictional settings and national identities. In *Graphs, Maps, Trees: Abstract Models for a Literary History* (2005), three interconnected essays, Moretti seeks to transform the study of literature by setting forth a scientific model of literary history. “Graphs,” the first chapter and our selection, traces literature through time (“Maps” does the same through space, and “Trees” combines the two in an evolutionary theory concentrating on the morphology of literary genres). In it Moretti argues that literary history is segmented into successive cycles as genres replace each other at intervals of about thirty years. Identifying forty-four British novelistic subgenres over the period between 1740 and 1900, Moretti shows that they emerged largely clustered “in six major bursts of creativity: the late 1760s, early 1790s, late 1820s, 1850, early 1870s, and mid–late 1880s.” Patterns of disappearance are similarly regular. Although there are social and political explanations for the historical dominance of a few types of novels, they cannot account for the simultaneous rise and fall of most others.

According to Moretti, the cyclical rhythm of dominant genres is conditioned by the sequence of generations. Drawing on the work of Karl Mannheim (1893–1947), one of the founders of sociology, Moretti assigns intellectual and aesthetic functions to a generational bond that operates across modern history. Entire systems of genres suddenly vanish from the literary field not primarily through obsolescence—they no longer accurately represent contemporary reality—but because their readers disappear. These formal oscillations reveal, in Moretti's view, a “hidden pendulum of literary history” that also swings between high and low genres, as well as between male and female authors.

The cornerstone of Moretti's literary theory is its methodology, as he shifts focus from individual novels to groups of subgenres. Here he follows the Russian formalists, especially Viktor Shklovsky (1893–1984). Such a broad expansion of the textual corpus renders the list of acknowledged Great Books a tiny speck in a much larger pattern of generic cycles. For Moretti, morphology is not an artistic end in itself but a means of illuminating a neglected “middle layer” of literary studies concerned neither with singular historical events nor with very large periods (the Middle Ages, Renaissance, Enlightenment, etc.). It enables the scientific charting of literature through graphs. A productive marriage of mid-twentieth-century *Annales* historiography and structuralism, Moretti's theory incorporates socioeconomic and demographic factors into a quantitative formal analysis that recasts seemingly unrelated individual phenomena as elements of a collective system of recurrent structures. He rejects the traditional division of literature into distinct periods, proposing instead a cyclical model of literary history. He thereby mirrors the shift made by *Annales* historians, who turned their attention from narrow analyses of isolated events to comprehensive accounts of historical structures of long duration (the so-called *longue durée*).

The wide-ranging effects of this theoretical reconfiguration are exemplified in *The Novel* (2 vols., 2006), a selection in English of essays originally published in Italian in *Il Romanzo* (2001–03), five volumes edited by Moretti and containing more than one hundred essays by dozens of literary scholars. This landmark publication of formal, statistical, thematic, and historical analyses offers the first truly global assessment of the novel. It shows the novel, Moretti argues, to be a complex “planetary form” that reaches across time from the ancient Greeks to the present day and spans national borders. “Countless are the novels of the world,” Moretti claims in the preface to this pioneering work, which offers a rational reconception of literary history, as cultural geography and aesthetic form are fused.

Sometimes called a literary heretic, Moretti has been charged with positivism and criticized for relying on tenuous connections between literary history and the sciences. Other major criticisms can also be leveled against him. His staunch advocacy of structuralist models and quantitative analysis eliminates the autonomy and singularity of individual literary texts. The broad geographic and historical expansion of novelistic genres to include immense numbers of peripheral works discounts the specificity of historical context, eliminating not just close reading but also cultural critique. His omissions are also significant: he overlooks the psychological, moral, and aesthetic functions of literature. Nevertheless, Moretti's theory of novelistic cycles presents an innovative and bold alternative to traditional literary history.

From Graphs, Maps, Trees: Abstract Models for a Literary History

Chapter 1. Graphs

Before the advent of the *Annales*, Krzysztof Pomian once wrote,

the gaze of the historian [was directed] towards extraordinary events . . . historians resembled collectors: both gathered only rare and curious objects, disregarding whatever looked banal, everyday, normal . . . History was an idiographic discipline, having as its object that which does not repeat itself.¹

History *was* . . . Pomian speaks in the past tense here, as is probably accurate in the case of social history, but certainly not for its literary counterpart, where the collector of rare and curious works, that do not repeat themselves, exceptional—and which close reading makes even more exceptional, by emphasizing the uniqueness of exactly *this* word and *this* sentence here—is still by far the dominant figure. But what would happen if literary historians, too, decided to ‘shift their gaze’ (Pomian again) ‘from the extraordinary to the everyday, from exceptional events to the large mass of facts’? What literature would we find, in ‘the large mass of facts’?

All questions that occurred to me some years ago, when the study of national bibliographies made me realize what a minimal fraction of the literary field we all work on: a canon of two hundred novels, for instance, sounds very large for nineteenth-century Britain (and is much larger than the current one), but is still less than one per cent of the novels that were actually published: twenty thousand, thirty, more, no one really knows—and close reading won’t help here, a novel a day every day of the year would take a century or so . . . And it’s not even a matter of time, but of method: a field this large cannot be understood by stitching together separate bits of knowledge about individual cases, because it *isn’t* a sum of individual cases: it’s a collective system, that should be grasped as such, as a whole—and the graphs that follow are one way to begin doing this. Or as Fernand Braudel² put it in the lecture on history he gave to his companions in the German prison camp near Lübeck:

An incredible number of dice, always rolling, dominate and determine each individual existence: uncertainty, then, in the realm of individual history; but in that of collective history . . . simplicity and consistency. History is indeed ‘a poor little conjectural science’ when it selects individuals as its objects . . . but much more rational in its procedures and results, when it examines groups and repetitions.³

A more rational literary history. That is the idea.

1. Krzysztof Pomian, ‘L’histoire des structures’, in Jacques Le Goff, Roger Chartier, Jacques Revel, eds., *La nouvelle histoire*, Paris 1978, pp. 115–16 [Moretti’s note]. Pomian (b. 1934), Polish philosopher, historian, and essayist. The *Annales*: the interdisciplinary journal founded in 1929 by the French historians Marc Bloch and Lucien Febvre, who advocated the study not of exceptional political or military events but of historical structures over the long term (*la longue durée*) in a comprehensive approach that

incorporated economy, geography, and the sociology of everyday life. Their influential approach to historiography became known as the *Annales* School.

2. French historian (1902–1985), leading second-generation member of the *Annales* School. During World War II, he spent 5 years as a prisoner of war in Germany.

3. Fernand Braudel, ‘L’histoire, mesure du monde’, in *Les écrits de Fernand Braudel*, vol. II, Paris 1997 [Moretti’s note].

I

The quantitative approach to literature can take several different forms—from computational stylistics to thematic databases, book history, and more. For reasons of space, I will here limit myself to book history, building on work originally done by McBurney, Beasley, Raven, Garside and Block for Britain;⁴ Angus, Mylne and Frautschi for France;⁵ Zwicker for Japan; Petersen for Denmark; Ragone for Italy;⁶ Martí-Lopez and Santana for Spain;⁷ Joshi for India; and Griswold for Nigeria.⁸ And I mention these names right away because quantitative work is truly *cooperation*: not only in the pragmatic sense that it takes forever to gather the data, but because such data are ideally independent from any individual researcher, and can thus be shared by others, and combined in more than one way. Figure 1,⁹ which charts the take-off of the novel in Britain, Japan, Italy, Spain and Nigeria, is a case in point. See how similar those shapes are: five countries, three continents, over two centuries apart, and it's really the same pattern, the same old metaphor of the 'rise' of the novel come alive: in twenty years or so (in Britain, 1720–40; Japan, 1745–65; Italy, 1820–40; Spain, 1845 to early 1860s; Nigeria, 1965–80), the graph leaps from five–ten new titles per year, which means one new novel every month or two, to one new novel *per week*. And at this point, the horizon of novel-reading changes. As long as only a handful of new titles are published each year, I mean, novels remain unreliable products, that disappear for long stretches of time, and cannot really command the loyalty of the reading public; they are commodities, yes—but commodities still waiting for a fully developed market. A new novel per week, by contrast, is already the great capitalist oxymoron of the *regular novelty*: the unexpected that is produced with such efficiency and punctuality that readers become unable to do without it. The novel 'becomes a necessity of life', to paraphrase the title of a book¹ by William Gilmore-Lehne, and the jeremiads that immediately multiply around it—novels make readers lazy, stupid, dissolute, insane, insubordinate: exactly like films two centuries later—are the clearest sign of its symbolic triumph.

II

The rise of the novel, then; or, better, *one* rise in a history which had begun many centuries earlier, and will go through several other accelerations, as emerges quite clearly from the data on the publication of new novels in Brit-

4. In listing these names, Moretti is referring to specific works (grouped in the notes for ease of reading): William Harlin McBurney, *Check List of English Prose Fiction, 1700–1739* (1960); Jerry C. Beasley, *The Novels of the 1740s* (1982); Peter Garside, James Raven, and Rainer Schöwerling, eds., *The English Novel, 1770–1829*, 2 vols. (2000); and Andrew Block, *The English Novel, 1740–1850* (1961).

5. Angus Martin, Vivienne Mylne, and Richard L. Frautschi, eds., *Bibliographie du genre romanesque français 1751–1800* (1977).

6. Jonathan Zwicker, "The Long Nineteenth Century of the Japanese Novel," in Franco Moretti, ed., *The Novel* (2006), vol. 1; Erland Munch-Petersen, *Die Übersetzungsliteratur als*

Unterhaltung des romantischen Lesers (1991); and Giovanni Ragone, "Italy 1815–1870," in Moretti, ed., *The Novel*, vol. 1.

7. Elisa Martí-Lopez and Mario Santana, "Spain 1843–1900," in Moretti, *The Novel*, vol. 1.

8. Priya Joshi, "India 1850–1900," in Moretti, *The Novel*, vol. 1, and Wendy Griswold, "Nigeria 1950–2000," in *ibid.*

9. Note to figure 1: BARTHES (1915–1980), French literary theorist, critic, and semiotician; the article cited was published in *Annales* in 1960.

1. *Reading Becomes a Necessity of Life: Material and Cultural Life in Rural New England, 1780–1835* (1989). Gilmore-Lehne (1945–1999), American historian.

To enrich our literary chronicles with a few new historical ingredients . . . would be pointless: it's the presuppositions which must change, and the object transform itself. To abolish the individual from literature! It's a laceration, clearly, even a paradox. But a literary history is possible only at this price.

Roland Barthes, 'History or Literature?'

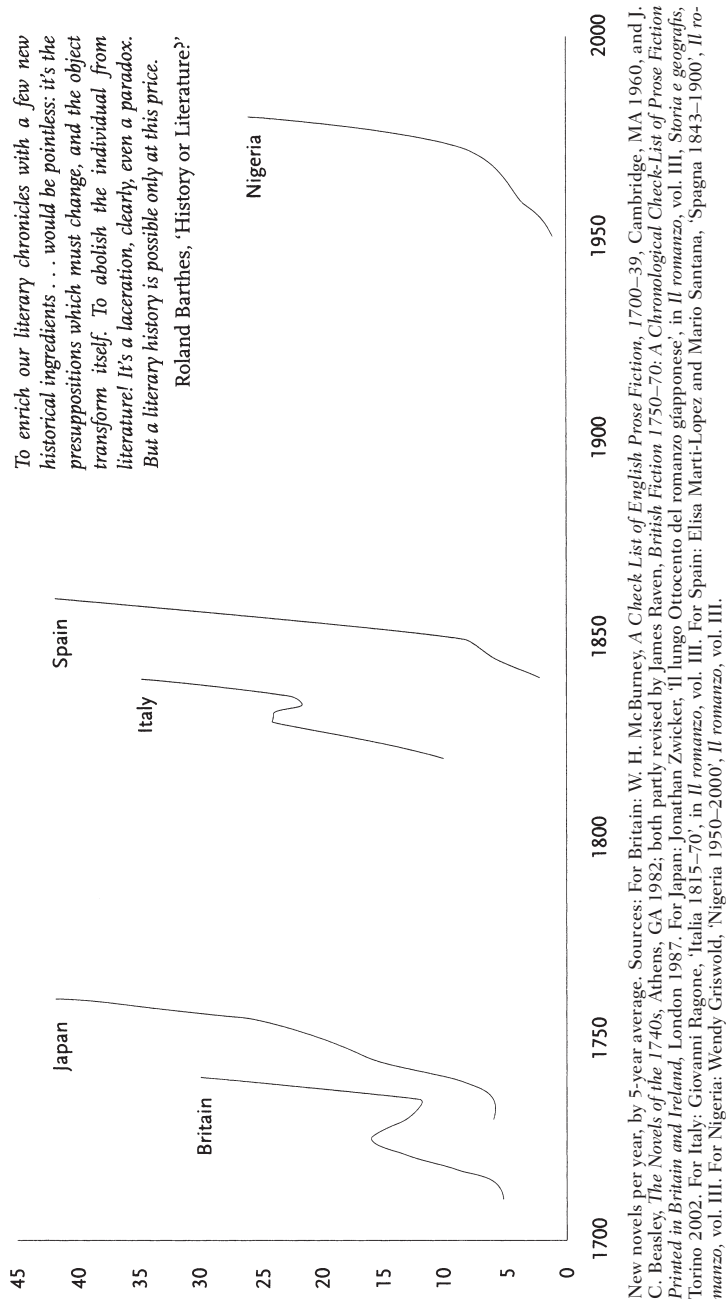

Figure 1. The rise of the novel, 18th to 20th century

New novels per year, by 5-year average. Sources: McBurney, *Check List of English Prose Fiction, 1700–39*; Beasley, *The Novels of the 1740s*; Raven, *British Fiction 1759–70*; Peter Garside, James Raven and Rainer Schöwerling, eds., *The English Novel 1770–1829*, 2 vols., Oxford 2000; Andrew Block, *The English Novel, 1740–1850*, London 1961.

Figure 2. The three rises of the British novel

ain between 1710 and 1850 (figure 2). Here, three phases seem to stand out, each subdivided into a first period of rapid growth and a second one of stabilization, and each modifying in a specific way the social role of the novel. The first phase, from 1720 to around 1770, is the one discussed above: a leap in 1720–40, and a consolidation in the following decades. In the second phase, which runs from 1770 to around 1820, the further increase in the number of new titles induces for its part a drastic reorientation of audiences towards the present. Up to then, I mean, the ‘extensive’ reading so typical of the novel—reading many texts once and superficially, rather than a few texts often and intensely—would easily outgrow the yearly output of titles, forcing readers to turn to the past for (much of) their entertainment: all sorts of reprints and abridgements of eighteenth-century bestsellers, British as well as foreign, plus the old, and even the few ancient classics of the genre. But as the total of new novels doubles, compared to the previous phase—80 in 1788; 91 in 1796; 111 in 1808—the popularity of old books suddenly collapses, and novelistic audiences turn resolutely (and irreversibly) towards the current season.²

The third phase, which begins around 1820, and which unfortunately I can only follow for the first thirty years, is the one in which the *internal composition* of the market changes. So far, the typical reader of novels had been a ‘generalist’—someone ‘who reads absolutely anything, at random’, as Thibaudet was to write with a touch of contempt in *Le liseur de romans*.³ Now, however, the growth of the market creates all sorts of niches for ‘specialist’ readers and genres (nautical tales, sporting novels, school stories, *mystères*): the books

2. ‘In Italy,’ writes Giovanni Ragone, ‘in the first twenty years of the nineteenth century virtually all the bestsellers of the previous century disappear’: ‘Italia 1815–1870’, in *Il romanzo*, vol. III, pp. 343–54. A similar shift seems to occur in France, where, however, the caesura of the revolution [of 1789] offers a very strong alternative explanation. The ‘pastness of the past’ is of course

the key message of the two genres—gothic, and then historical novels—most responsible for the turn towards the present [Moretti’s note].

3. Albert Thibaudet, *Il lettore di romanzi* [*The Reader of Novels*] [1925], Napoli 2000, p. 49 [Moretti’s note]. Thibaudet (1874–1936), French essayist and literary critic.

aimed at urban workers in the second quarter of the nineteenth century, or at boys, and then girls, in the following generation, are simply the most visible instances of this larger process, which culminates at the turn of the century in the super-niches of detective fiction and then science fiction.

Abstract models for literary history . . . and we certainly have abstraction here: *Pamela*, *The Monk*, *The Wild Irish Girl*, *Persuasion*, *Oliver Twist*⁴—where are they? five tiny dots in the graph of figure 2, indistinguishable from all others. But graphs are not really *models*; they are not simplified, intuitive versions of a theoretical structure in the way maps and (especially) evolutionary trees will be in the next two chapters.

Quantitative research provides a type of data which is ideally independent of interpretations, I said earlier, and that is of course also its limit: it provides *data*, not interpretation. That figure 2 shows a first 'rise' (when the novel becomes a necessity of life), and then a second (the shift from the past to the present), and then a third (the multiplication of market niches), seems to me a good account of the data, but is certainly far from inevitable. Quantitative data can tell us when Britain produced one new novel per month, or week, or day, or hour for that matter, but where the significant turning points lie along the continuum—and why—is something that must be decided on a different basis.

III

A—multiple—rise of the novel. But with an interesting twist, which is particularly visible in the Japanese case of figure 3:⁵ after the rise from one novel per month in the mid-1740s to one per week twenty years later (and even more in the following years: between 1750 and 1820, in fact, many more novels are published in Japan than in Britain; a fact which deserves a good explanation!)—several equally rapid downturns occur in 1780–90, the 1810s to the 1830s, and in 1860–70. The fall of the novel. And the reason behind the downturns seems to be always the same: politics—a direct, virulent censorship during the Kansei and Tempō periods, and an indirect influence in the years leading up to the Meiji Restoration,⁶ when there was no specific repression of the book trade, and the crisis was thus probably due to a more general dissonance between the rhythm of political crises and the writing of novels. It's the same in Denmark during the Napoleonic wars⁷ (figure 4), or in France and Italy (better, Milan) in comparable situations (figure 5):⁸ after 1789, the publication of French novels drops about 80 per cent; after the first Risorgimento war,⁹ the Milanese downturn is around 90 per cent, with only 3 novels published in the course of 1849, against 43 in 1842.

4. All novels (a mix of genres) written in English: *Pamela* (1740), by Samuel Richardson; *The Monk* (1796), by Matthew Gregory Lewis; *The Wild Irish Girl* (1806), by Sydney Owenson (Lady Morgan); *Persuasion* (1817), by Jane Austen; and *Oliver Twist* (1838), by Charles Dickens.

5. Note to figure 3: Sadanobu (1759–1829), Japanese feudal ruler who became the shogun's chief minister.

6. The restoration of the emperorship after the long period of rule by shoguns (1192–1868); the reign of the Meiji emperor (1868–1912) was a period of revolutionary political, economic, and social changes, as Japan opened to the West and modernized. Both the Kansei (1789–1801) and Tempō periods were eras of reactionary

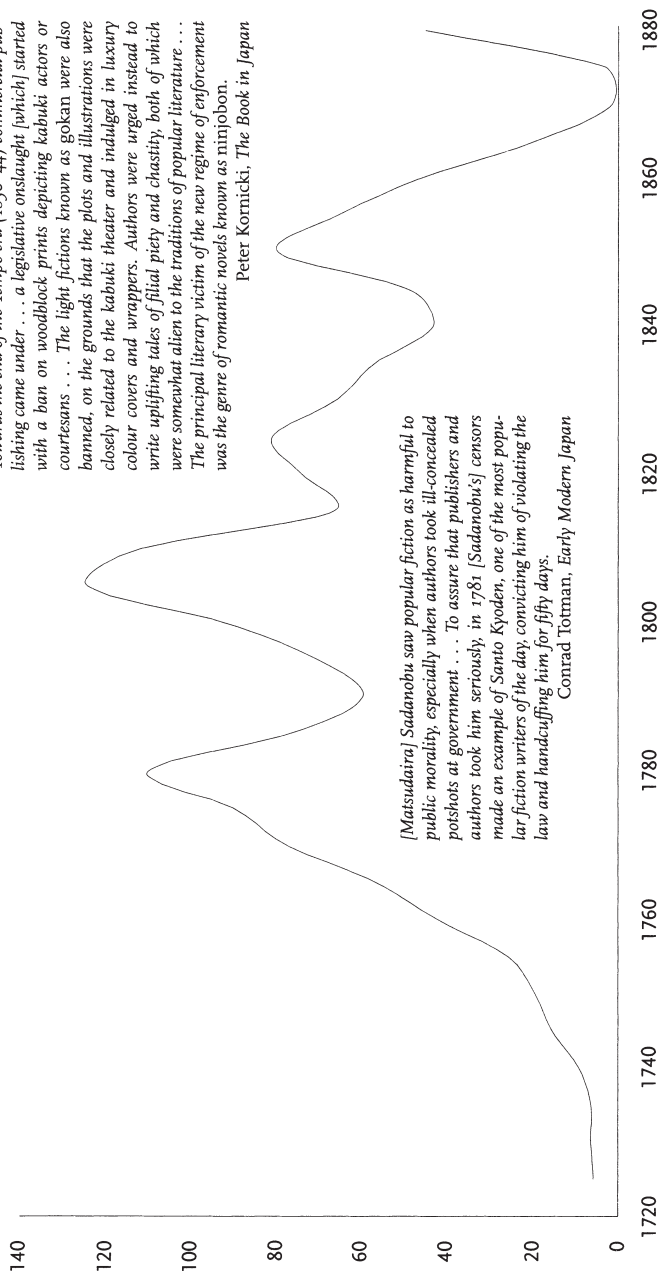

restrictions.

7. Series of wars (1803–15) waged by and against the French military and political leader Napoléon Bonaparte (1769–1821; emperor, 1804–15), who sought to conquer all of Europe and England.

8. Note to figure 5: in 1917 revolutions were occurring in Russia and in Mexico.

9. The Risorgimento (Resurgence, Italian) was the 19th-century nationalist movement in Italy that led to the country's unification. In 1848–49, brief revolutions against Austrian rule broke out from Sicily to Venice, and in their support the independent kingdom of Sardinia unsuccessfully sent its army against Austrian forces.

Towards the end of the Tempō era (1830–44) commercial publishing came under . . . a legislative onslaught [which] started with a ban on woodblock prints depicting kabuki actors or courtesans . . . The light fictions known as gokan were also banned, on the grounds that the plots and illustrations were closely related to the kabuki theater and indulged in luxury colour covers and wrappers. Authors were urged instead to write uplifting tales of filial piety and chastity, both of which were somewhat alien to the traditions of popular literature . . . The principal literary victim of the new regime of enforcement was the genre of romantic novels known as *ninjobon*.

Figure 5. The fall of the novel: France, Italy

The only exception I know to this pattern is the import of British books into India charted by Priya Joshi (figure 6), which rises sharply after the 1857 rebellion;¹ but as Joshi points out, the logic of a colonial relationship is reversed, and the peak is a sign of Britain suddenly accelerating the pace of symbolic hegemony; then, once the crisis is over, the flow returns to its pre-1857 levels.

IV

An antipathy between politics and the novel. Still, it would be odd if *all* crises in novelistic production had a political origin: the French downturn of the 1790s was sharp, true, but there had been others in the 1750s and 1770s—as there had been in Britain, for that matter, notwithstanding its greater institutional stability. The American² and the Napoleonic wars may well be behind the slumps of 1775–83 and 1810–17 (which are clearly visible in figure 2), write Raven and Garside in their splendid bibliographic studies; but then they add to the political factor ‘a decade of poorly produced novels’, ‘reprints’, the possible ‘greater relative popularity . . . of other fictional forms’, ‘a backlash against low fiction’, the high cost of paper . . .³ And as possible causes multiply, one wonders: what are we trying to explain here—two *unrelated individual events*, or two moments in a *recurring pattern of ups and downs*? Because if the downturns are individual events, then looking for individual causes (Napoleon, reprints, the cost of paper, whatever) makes perfect sense; but if they are parts of a pattern, then what we must explain is *the pattern as a whole*, not just one of its phases.

The whole pattern; or, as some historians would say, the whole cycle: ‘An increasingly clear idea has emerged . . . of the multiplicity of time’, writes Braudel in the essay on *longue durée*:

Traditional history, with its concern for the short time span, for the individual and the event, has long accustomed us to the headlong, dramatic, breathless rush of its narrative . . . The new economic and social history

2. That is, the American Revolution (1775–83).

3. James Raven, ‘Historical Introduction: The Novel Comes of Age’, and Peter Garside, ‘The English Novel in the Romantic Era: Consolida-

tion and Dispersal’, in Garside, Raven, and Schöwerling, eds., *The English Novel 1770–1829*; vol. I, p. 27, and vol. II, p. 44 [Moretti’s note].

puts cyclical movement in the forefront of its research . . . large sections of the past, ten, twenty, fifty years at a stretch . . . Far beyond this . . . we find a history capable of traversing even greater distances . . . to be measured in centuries . . . the long, even the very long time span, the *longue durée*.⁴

Event, cycle, *longue durée*: three time frames which have fared very unevenly in literary studies. Most critics are perfectly at ease with the first one, the circumscribed domain of the event and of the individual case; most theorists are at home at the opposite end of the temporal spectrum, in the very long span of nearly unchanging structures. But the middle level has remained somewhat unexplored by literary historians; and it's not even that we don't work within that time frame, it's that we haven't yet fully understood its specificity: the fact, I mean, that cycles constitute *temporary structures within the historical flow*. That is, after all, the hidden logic behind Braudel's tripartition: the short span is all flow and no structure, the *longue durée* all structure and no flow, and cycles are the—unstable—border country between them. Structures, because they introduce repetition in history, and hence regularity, order, pattern; and temporary, because they're short (ten, twenty, fifty years, this depends on the theory).

Now, 'temporary structures' is also a good definition for—genres: morphological arrangements that *last* in time, but always only for *some* time. Janus-like⁵ creatures, with one face turned to history and the other to form, genres are thus the true protagonists of this middle layer of literary history—this more 'rational' layer where flow and form meet. It's the regularity of figures 7 and 8, with their three waves of epistolary novels from 1760 to 1790, and then gothic novels from 1790 to 1815, and then historical novels from 1815 to the 1840s. Each wave produces more or less the same number of novels per year, and lasts the same 25–30 years, and each also rises only after the previous wave has begun to ebb away (see how the up- and down-ward trends intersect around 1790 and 1815). 'The new form makes its appearance to replace an old form that has outlived its artistic usefulness', writes Shklovsky,⁶ and the decline of a ruling genre seems indeed here to be the necessary precondition for its successor's take-off. Which may explain those odd 'latency periods' in the early history of genres: *Pamela* is published in 1740, and *The Castle of Otranto*⁷ in 1764, but very few epistolary or gothic novels are written until 1760 and 1790 respectively. Why the lag? Almost certainly, because as long as a hegemonic form has not lost its 'artistic usefulness', there is not much that a rival form can do: there can always be an exceptional text, yes, but the exception *will not change the system*. It's only when Ptolemaic astronomy begins to generate one 'monstrosity' after another, writes Kuhn in *The Structure of Scientific Revolutions*,⁸ that 'the time comes to give a competitor

4. Fernand Braudel, 'History and the Social Sciences: The *longue durée*', in *On History*, Chicago 1980, p. 27. The first extended treatment of economic cycles was of course Nikolai Kondratiev's *The Long Wave Cycle*, written between 1922 and 1928 [Moretti's note]. *Longue durée*: long period (French), a key concept of the Annales School.

5. That is, with 2 faces looking in opposite directions, like many statues of Janus, the Roman god of entrances and gates and of beginnings.

6. "The Connection of Devices of Plot Formation with General Devices of Style" (1919), by Viktor Shklovsky (1893–1984), Russian formal-

ist literary critic.

7. An English novel (1764) by Horace Walpole, the first Gothic romance. *Pamela* is the first epistolary novel.

8. The landmark publication (1962; 3d ed., 1996) by the American historian and philosopher of science Thomas S. Kuhn (1922–1996); his idea of a "paradigm shift" (e.g., from the Ptolemaic, or geocentric, to the Copernican, or heliocentric, view of the solar system), when the definition of "normal science" changes, has influenced many later thinkers.

The anomaly constituted by the epistolary novel's slump in the 1770s is only apparent, and easily explained: what declines in those years is the publication of all novels, and in fact, as figure 8 shows, epistolary novels were then even more hegemonic on the market—as in 1776, when an impossible 71 per cent of new titles were novels in letters.

New novels per year. Sources: For the epistolary novel: James Raven, 'Gran Bretagna 1750–1830', in *Il romanzo*, vol. III, pp. 311–12. For the gothic novel: Maurice Lévy, *Le roman 'gothique' anglais*, Paris 1995. For the historical novel, I have taken as the basis the checklist provided by Rainer Schöwerling ('Sir Walter Scott and the Tradition of the Historical Novel before 1814', in Uwe Böker, Manfred Markus, Rainer Schöwerling, eds., *The Living Middle Ages*, Stuttgart 1989), and subtracted those texts that also appear in Lévy's bibliography of the gothic; for the later period, I have also used Block, *The English Novel, 1740–1850*.

Figure 7. British hegemonic forms, 1760–1850

All works of art, and not only parodies, are created either as a parallel or an antithesis to some model. The new form makes its appearance not in order to express a new content, but rather to replace an old form that has already outlived its artistic usefulness.

Viktor Shklovsky, *A Theory of Prose*

As more and more novels are published every year, the hegemony of a single genre tends to become less and less absolute: whereas epistolary novels amounted to 30 per cent or more of the market for twenty-five years (and over 50 per cent in the late 1770s), gothic novels only passed the 30 per cent mark for a few years, otherwise hovering around 20 per cent, and historical novels did even worse: all signs of the growing fragmentation of the market into distinct niches which I mentioned earlier. (A full computation of print runs and reprints may however alter this general picture.)

Figure 8. Market quotas of British hegemonic forms, 1760–1850

a chance'—and the same is true here: a historical novel written in 1800, such as *Castle Rackrent*⁹ (or in 1805, like *Waverley*'s¹ abandoned first draft) simply didn't have the incredible opportunity to reshape the literary field that the collapse of the gothic offered *Waverley* in 1814.²

V

From individual cases to series; from series to cycles, and then to genres as their morphological embodiment. And these three genres seem indeed to follow a rather regular 'life-cycle', as some economists would call it. These genres—or *all* genres? Is this wave-like pattern a sort of hidden pendulum of literary history?

Here, the gathering of data is obviously crucial, and I decided to rely entirely on other people's work: since we are all eager to find what we are looking for, using the evidence gathered by other scholars, with completely different research programmes, is always a good corrective to one's desires. So, first Brad Pasanek,³ at Stanford, and then I, consulted over a hundred studies of British genres between 1740 and 1900; there were some dubious cases, of course, and some (not very significant) disagreements in periodization,⁴ and although this is still very much work-in-progress, especially at the two ends of the temporal spectrum, the forty-four genres of figure 9⁵ provide a large enough set to support some reflections.

9. By Maria Edgeworth.

1. An 1814 historical novel by the Scottish poet Sir Walter Scott (1771–1832) that was enormously successful (and that he followed with many more in a similar vein); it was not, as its first chapter claims, begun in 1805.

2. A few more words on why a form loses its 'artistic usefulness' and disappears. For Shklovsky, the reason is the purely inner dialectic of art, which begins in creative estrangement, and ends in stale automatism: 'Each art form travels down the inevitable road from birth to death; from seeing and sensory perception, when every detail in the object is savoured and relished, to mere recognition, when form becomes a dull epigone which our senses register mechanically, a piece of merchandise not visible even to the buyer.' (The passage is from an article collected in *The Knight's Move*, and is quoted by Victor Erlich in *Russian Formalism*, New Haven 1955, p. 252.) This journey 'down the inevitable road from birth to death' can however also be explained by focusing, not so much on the relationship between the 'young' and the 'old' versions of the same form, but rather on that between the form and its historical context: a genre exhausts its potentialities—and the time comes to give a competitor a chance—when its inner form is no longer capable of representing the most significant aspects of contemporary reality. At which point, either the genre loses its form under the impact of reality, thereby disintegrating, or it turns its back to reality in the name of form, becoming a 'dull epigone' indeed. (I develop this point in the appendix to the new edition of *The Way of the World*, "A useless longing for myself": The crisis of the European *Bildungsroman*, 1898–1914', London 2000.) But we will soon see another, more draconian explanation for the disappearance of forms [Moretti's note]. Moretti, *The Way*

of the World: The Bildungsroman in European Culture (1st ed., 1987).

3. See Brad Pasanek, "Eighteenth-Century Metaphors of Mind: A Dictionary" (Ph.D. diss., Stanford, 2006).

4. When specialists disagreed, I always opted for the periodization arising out of the more convincing morphological argument: in the case of industrial novels, for instance, I followed Gallagher rather than Cazamian, although the latter's periodization of 1830–50 would have fitted my argument much better than Gallagher's 1832–67. For details, see 'A Note on the Taxonomy of the Forms', p. 2285 [Moretti's note]. See Catherine Gallagher, *The Industrial Reformation of English Fiction: Social Discourse and Narrative Form, 1832–67* (1985); Louis Cazamian, *The Social Novel in England, 1830–50: Dickens, Disraeli, Mrs. Gaskell, Kingsley* (1903).

5. Note to figure 9: the genres named by Moretti are associated specifically with the periods shown. Kailyard school: movement in Scottish fiction that idealized village life (a "kail-yard" is a cabbage garden). New Woman novel: novel focusing on middle-class women seeking social and economic independence at the turn of the century. Cockney school: novelists who wrote about London working-class life. Chartist novel: novel focusing on the British working-class movement (1838–48) that took its name from a petition, the People's Charter, calling for such reforms as universal male suffrage. Conversion novel: that is, a novel of religious conversion (usually from Anglicanism to Roman Catholicism). Newgate novel: novel that features criminals as main characters (Newgate was a famous London prison). Silverfork novel: novel focusing on the elegance of aristocratic high society. Anti-Jacobin and Jacobin novels: novels against and in favor of the extreme supporters of the French Revolution.

For sources, see 'A Note on the Taxonomy of the Forms' on page 2285.

Figure 9. British novelistic genres, 1740–1900

Forty-four genres over 160 years; but instead of finding one new genre every four years or so, as a random distribution would have it, over two thirds of them cluster in just thirty years, divided in six major bursts of creativity: the late 1760s, early 1790s, late 1820s, 1850, early 1870s, and mid–late 1880s. And the genres also tend to *disappear* in clusters: with the exception of the turbulence of 1790–1810, a rather regular changing of the guard takes place, where half a dozen genres quickly leave the scene, as many move in, and then remain in place for twenty-five years or so. Instead of changing all the time and a little at a time, then, the system stands still for decades, and is then ‘punctuated’ by brief bursts of invention: forms change once, rapidly, across the board, and then repeat themselves for two–three decades: ‘normal literature’, we could call it, in analogy to Kuhn’s normal science. Or think of Jauss’s⁶ ‘horizon of expectations’: a metaphor we tend to evoke only ‘negatively’ (that is to say, when a text transcends the given horizon), but which these graphs present instead, ‘positively’, for what it is: figures 7–8 showing how difficult it actually is to transcend the hegemonic horizon, figure 9 presenting the multiple horizons active at any given moment, and so on.

VI

Normal literature remains in place for twenty-five years or so . . . But where does this rhythm come from? Shklovsky’s hypothesis (however modified) cannot explain it, because the connexion between the decline of an old form and the rise of a new one implies nothing about the regularity of the replacement. And widespread regularity: not just the few hegemonic genres, but (almost) all genres active at any given time seem to arise and disappear together according to some hidden rhythm.

The simultaneity of the turnover, at first sight so uncanny, is probably the key to the solution. When one genre replaces another, it’s reasonable to assume that the cause is internal to the two genres, and historically specific: amorous epistolary fiction being ill-equipped to capture the traumas of the revolutionary years, say—and gothic novels being particularly good at it. But when several genres disappear *together* from the literary field, and then another group, and so on, then the reason has to be different, because all these forms cannot have run *independently and simultaneously* into insoluble problems—it would be simply too much of a coincidence. The causal mechanism must thus be *external* to the genres, and *common* to all: like a sudden, total change of their ecosystem. Which is to say: a change of their audience. Books survive if they are read and disappear if they aren’t: and when an entire generic system vanishes at once, the likeliest explanation is that *its readers vanished at once*.

This, then, is where those 25–30 years come from: generations. Not a concept I am very fond of, actually, but the only one that seems to make sense of figure 9. And indeed, in Mannheim’s⁷ great essay of 1927, the best evidence for his thesis comes precisely from the aesthetic sphere: ‘a rhythm in the sequence of generations’, he writes, following Mentré’s *Les générations sociales*,⁸ published a few years earlier,

is far more apparent in the realm of the *séries libres*—free human groupings such as salons and literary circles—than in the realm of the

6. Hans Robert Jauss (1921–1997), German literary theorist.

7. Karl Mannheim (1893–1947), Hungarian-born

German sociologist.

8. *Social Generations* (1920), a thesis by the French historian François Mentré (1877–1950).

institutions, which for the most part lay down a lasting pattern of behaviour, either by prescriptions or by the organization of collective undertakings, thus preventing the new generation from showing its originality . . . The aesthetic sphere is perhaps the most appropriate to reflect overall changes of mental climate.⁹

Overall changes of the mental climate: the five, six shifts in the British novelistic field between 1740 and 1900. But since people are born every day, not every twenty-five years, on what basis can the biological continuum be segmented into discrete units? Mannheim again:

Whether a new *generation style* emerges every year, every thirty, every hundred years, or whether it emerges rhythmically at all, depends entirely on the trigger action of the social and cultural process . . . We shall therefore speak of a *generation as an actuality* only where a concrete bond is created between members of a generation by their being exposed to the social and intellectual symptoms of a process of dynamic destabilization.¹

A bond due to a process of dynamic destabilization; and one who was eighteen in 1968² understands. But again, this cannot possibly explain the *regularity* of generational replacement, unless one assumes—absurdly—that the ‘destabilizations’ themselves occur punctually every twenty-five or thirty years. And so, I close on a note of perplexity: *faute de mieux*,³ some kind of generational mechanism seems the best way to account for the regularity of the novelistic cycle—but ‘generation’ is itself a very questionable concept. Clearly, we must do better.⁴

VII

Normal literature remains in place for a generation or so . . . It’s the central group of figure 10,⁵ which rearranges the forty-four genres according to their duration, and where about two thirds of them last indeed between 23 and 35 years.⁶ The one large exception is formed by those genres—nine years, ten, twelve—on the left end of the spectrum: why so short-lived? Almost certainly,

9. Karl Mannheim, ‘The Problem of Generations’, in *Essays on the Sociology of Knowledge*, London 1952, p. 279 [Moretti’s note].

1. *Essays on the Sociology of Knowledge*, pp. 303, 310 [Moretti’s note].

2. From Mexico City to Belgrade, 1968 was marked by numerous student uprisings—especially in France, where demonstrations in Paris grew into a massive revolt, joined by a general strike of millions of workers.

3. For lack of something better (French).

4. A possible solution: at some point, a particularly significant ‘destabilization’ gives rise to a clearly defined generation, which occupies centre stage for 20–30 years, attracting within its orbit, and shaping after its mould, slightly younger or older individuals. Once biological age pushes this generation to the periphery of the cultural system, there is suddenly room for a new generation, which comes into being simply *because it can*, destabilization or not; and so on, and on. A regular series would thus emerge even without a ‘trigger action’ for *each new generation*: once the generational clock has been set in motion, it will run its course—for some

time at least. (This is in fact Mentré’s approach to the problem, especially in the long chapter in which he sketches an unbroken series of generations throughout French literature from 1515 to 1915) [Moretti’s note].

5. Note to figure 10: see Katherine Sobba Green, *The Courtship Novel, 1740–1820* (1991). *Cecilia* (1782) was the second novel by the English novelist and diarist Fanny Burney (1752–1840); her extremely popular first publication, *Evelina* (1778), was an epistolary novel.

6. A first look at French literature from the 17th to the 19th century suggests that most of its narrative genres have a similar 30-year span: pastoral and heroic novels, the *nouvelle historique* [short historical novel], *romans galants* [courtly novels] and *contes philosophiques* [philosophical tales], sentimental novels, the *Bildungsroman*, the *roman gai* [coarse comic fiction], the two main phases (‘heroic’ and ‘sentimental’) of the *roman-feuilleton* [serialized fiction] . . . On the other hand, Sandra Guardini Vasconcelos and other Brazilian literary historians have pointed out that when a country *imports* most of its novels, the regular turnover of the Anglo-French generations

In this figure, the most striking exception are the eighty years of Katherine Sobba Green's periodization for 'courtship novels'. However, for most historians (and in part for Green herself) this genre goes through two quite distinct phases: the first from 1740 to 1780, dominated by the transcendent principle of chastity, and the second from 1780 (or better, 1782, when Burney, in *Cecilia*, abandons the epistolary form) to 1820, dominated by the fundamentally immanent notion of manners. If one accepts this distinction, the anomaly disappears.

For sources, see 'A Note on the Taxonomy of the Forms' on page 2285.

Figure 10. British novelistic genres, 1740–1915 (duration in years)

because of politics again: Jacobin, anti-Jacobin, evangelical novels around the turn of the century, Chartist and religious narratives in the 1840s, New Woman novels in the 1890s . . . And as often happens with politics and the novel, the outcome is a string of explicit ideological declarations: Jacobin novels trying to reform their villains by 'discussion and reasoning', as Gary Kelly puts it; Right Reason, adds Marilyn Butler in *Jane Austen and the War of Ideas*:⁷ a 'puzzling' choice, she goes on, the great 'missed opportunity' of the Jacobin novel as a form. Missed opportunity, yes, but puzzling, perhaps not: if a novel wants to engage the political sphere directly, a series of unambiguous statements, however narratively dull, is a perfectly rational choice. And then, ideological exchanges are an easy way to capture Braudel's 'dramatic rush of the event': to turn a book into *A tale of the times*, *A tale of the day*, *The philosophy of the day*, to quote some typical 1790s subtitles. But the conjunction of course works both ways: if what most attracts readers is the drama of the day, then, once the day is over, so is the novel . . .

VIII

Why did most British genres last 25–30 years, then, but some of them only ten? Because these 'political' forms subordinated narrative logic to the tempo of the short span, I have conjectured, and thus they also disappeared with the short span; and I hope the answer sounds plausible. But the real point, here, is less the specific answer, than the total *heterogeneity of problem and solution*: to make sense of quantitative data, I had to abandon the quantitative universe, and turn to morphology: evoke form, in order to explain figures. Here, the figures of the literary market. But when I studied the international impact of American films, I encountered exactly the same problematic: in the sample decade (1986–95), comedies amounted to 20% of the top box office hits within the United States, whereas elsewhere, as figure 11 shows, they were a lot less successful (especially in Asia and in the Mediterranean).⁸ The figures were crystal clear. But if one then wondered *why* this was so—why, in other words, comedies were so much harder to export than, say, action films—percentages offered no help, and the explanation had to be sought once again in the realm of form: as contemporary comedies make large use of jokes, which are often lost in translation, American comedies are quite simply a lot less funny in Japanese or Egyptian or Spanish than in English. (Not for nothing, the great international age of comic films—Chaplin, Keaton, Lloyd, Laurel and Hardy⁹—coincided with silent cinema.)¹

is replaced by a much more accelerated and possibly uneven tempo. If they are right—and I think they are—then the Western European case would once more be the exception rather than the rule of world literature [Moretti's note].

7. Published in 1975. Gary Kelly, *The English Jacobin Novel, 1780–1805* (1976).

8. Franco Moretti, 'Planet Hollywood', *New Left Review* 9, May–June 2001, pp. 90–101 [Moretti's note]. Moretti has published extensively in *New Left Review*, a U.K. leftist political journal also known as *NLR*.

9. American comedy team, the British-born Stan Laurel (Arthur Stanley Jefferson, 1890–1965) and Oliver Hardy (1892–1957). Charlie Chaplin (1889–1977), English director and film star. Joseph Frank

"Buster" Keaton (1895–1966), American writer, director, and star of silent film. Harold Clayton Lloyd (1893–1971), American film actor and producer, best known for silent comedies.

1. See here how a quantitative history of literature is also a profoundly formalist one—especially at the beginning and at the end of the research process. At the end, because it must account for the data; and at the beginning, because a formal concept is usually what makes quantification possible in the first place: since a series must be composed of homogeneous objects, a morphological category is needed—'novel', 'anti-Jacobin novel', 'comedy', etc.—to establish such homogeneity [Moretti's note].

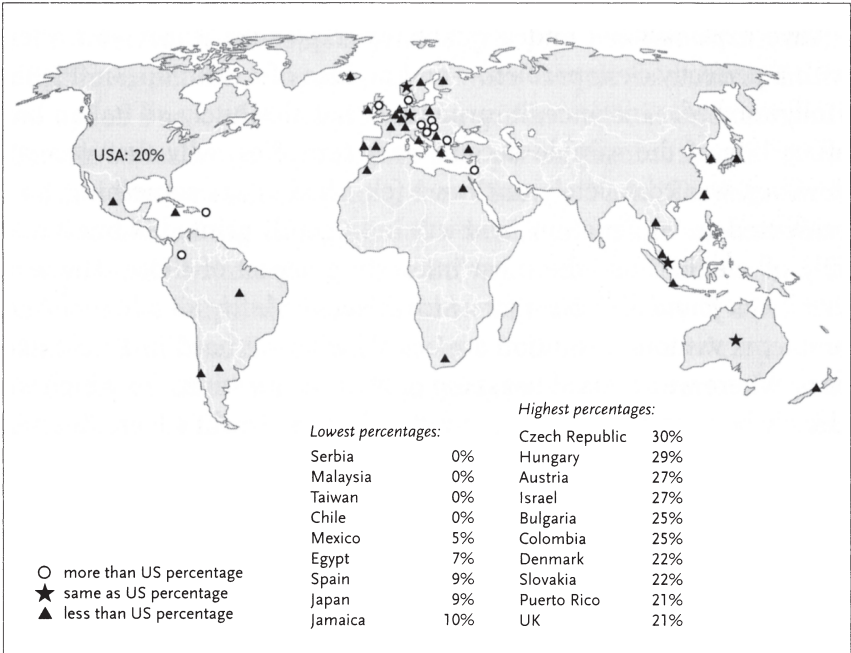

Figure 11. US comedies as a percentage of top five box office hits, 1986–95

Quantification poses the problem, then, and form offers the solution. But let me add: if you are lucky. Because the asymmetry of a quantitative *explanandum* and a qualitative *explanans*² leaves you often with a perfectly clear problem—and no idea of a solution. In ‘Planet Hollywood’, for instance, it turned out that absolutely *all* Italian box office hits of the sample decade were comedies; why that was so, however, was completely unclear. I felt I had to say something, so I presented an ‘explanation’, and NLR indulgently printed it; but it was silly of me, because the most interesting aspect of those data was that *I had found a problem for which I had absolutely no solution*. And problems without a solution are exactly what we need in a field like ours, where we are used to asking only those questions for which we already have an answer. ‘I have noticed,’ says Brecht’s Herr Keuner,³ ‘that we put many people off our teaching because we have an answer to everything. Could we not, in the interest of propaganda, draw up a list of the questions that appear to us completely unsolved?’

IX

Two brief theoretical conclusions. The first is again on the cycle as the hidden thread of literary history. ‘For the elevation of the novel to occur’, writes William Warner in *Licensing Entertainment*, ‘the novel of amorous intrigue must . . . disappear’; it is ‘the Great Gender Shift’ of the mid-eighteenth

2. Explaining element (Latin). *Explanandum*: that which must be explained (Latin).
3. A character in *Stories of Mr. Keuner* (1965), a collection of short stories, aphorisms, and parables that the German Marxist playwright and theater director Bertolt Brecht (1898–1956) began publishing in 1930.

century, adds April Alliston: the disappearance of earlier fiction by women writers, with the related increase in the number of male novelists. And it's all true, except for the article: *the shift*? The third quarter of the nineteenth century, write Tuchman and Fortin in *Edging Women Out*, was 'the period of invasion' of the novelistic field by male authors, who eventually 'edge out' their female competitors.⁴

But, clearly, a mid-Victorian 'invasion' presupposes a reversal of the gender shift of the 1740s. And, in fact, this is what the historical record shows: if between 1750 and 1780, as a result of the initial shift, men publish indeed twice as many novels as women, in the late 1780s a second shift reverses the gender ratio, as one can see in Garside's breakdown for a slightly later period (figure 12),⁵ in which women novelists (among them Burney, Radcliffe, Edgeworth,⁶ Austen) remain the majority until a third shift occurs, around 1820, towards male writers (Scott; then Bulwer, Dickens, Thackeray⁷), to be followed by a fourth shift back to women in mid-century (the Brontës, Gaskell, Braddon, Eliot⁸), and then by a fifth one—the 'edging out'—in the 1870s. Similar data are beginning to emerge for France, Spain, the US, and it's fascinating to see how researchers are convinced that they are all describing something unique (*the* gender shift, *the* elevation of the novel, *the* gentrification, *the* invention of high and low, *the* feminization, *the* sentimental education, *the* invasion . . .), whereas in all likelihood they are all observing the same comet that keeps crossing and recrossing the sky: the same *literary cycle*, where gender and genre are probably in synchrony with each other—a generation of military novels, nautical tales, and historical novels *à la* Scott attracting male writers, one of domestic, provincial and sensation novels attracting women writers, and so on.

Now, let me be clear, saying that these studies describe the return of the same literary cycle is not an objection: quite the opposite, my thesis *depends* on their findings, and it even corroborates them somehow, by finding the common mechanism which is at work in all those instances. But it's also true that if one reframes individual instances as moments of a cycle, then the nature of the questions changes: 'Events don't interest Lucien Febvre for what in them is unique', writes Pomian, but 'as units in a series, which reveal the conjunctural variations in . . . a conflict that remains constant throughout the period.'⁹

Variations in a conflict that remains constant: this is what emerges at the level of the cycle—and if the conflict remains constant, then the point is not who prevails in this or that skirmish, but exactly the opposite: no victory is ever definitive, neither men nor women writers 'occupy' the British

Warner, *Licensing Entertainment: The Elevation of Novel Reading in Britain, 1685–1750*, Berkeley 1998, p. 44; April Alliston, 'Love in Excess', in *Il romanzo*, vol. 1, *La cultura del romanzo*, Torino 2001, p. 650; Gaye Tuchman and Nina Fortin, *Edging Women Out*, New Haven 1989, pp. 7–8 [Moretti's note].

5. Note to figure 12: Austen (1775–1817) published 6 novels between 1813 and 1817.

6. Maria Edgeworth (1767–1849), best known today for novels of Irish life. Ann Radcliffe (1764–1823), pioneer of the Gothic novel.

7. All popular novelists: Edward Bulwer-Lytton

(1803–1873), politician and author of historical and romantic novels; Charles Dickens (1812–1870), most popular English novelist of the 19th century; and William Makepeace Thackeray (1811–1863), best known for his satirical writings.

8. Prominent names in 19th-century British fiction: the three Brontë sisters, Charlotte (1816–1855), Emily (1818–1848), and Anne (1820–1849); Elizabeth Gaskell (1810–1865); Mary Elizabeth Braddon (1837–1915); and George Eliot (pen name of Marian Evans, 1819–1880).

9. Pomian, 'L'histoire des structures', p. 117 [Moretti's note].

The 1810s show an even clearer pattern of female dominance, with women novelists out-producing their male counterparts in every year, and accounting for over 50 per cent of titles in six out of the eight years between 1810 and 1817. . . . As these figures indicate, the publication of Jane Austen's novels was achieved not against the grain but during a period of female ascendancy. It is noticeable that Scott's earliest historical novels were launched when male authorship of fiction was at a lower than usual ebb.

novel once and for all, and the form keeps oscillating back and forth between the two groups. And if this sounds like nothing is happening, no, what is happening is *the oscillation*, which allows the novel to use a double pool of talents and of forms, thereby boosting its productivity, and giving it an edge over its many competitors. But this process can only be glimpsed *at the level of the cycle*: individual episodes tend, if anything, to conceal it, and only the abstract pattern reveals the true nature of the historical process.¹

X

Do cycles and genres explain everything, in the history of the novel? Of course not. But they bring to light its hidden tempo, and suggest some questions on what we could call its internal shape. For most literary historians, I mean, there is a categorical difference between 'the novel' and the various 'novelistic (sub)genres': the novel is, so to speak, the substance of the form, and deserves a full general theory; subgenres are more like accidents, and their study, however interesting, remains local in character, without real theoretical consequences. The forty-four genres of figure 9, however, suggest a different historical picture, where the novel does not develop as a single entity—where is 'the' novel, there?—but by periodically generating a whole set of genres, and then another, and another . . . Both synchronically and diachronically, in other words, the novel is *the system of its genres*: the whole diagram, not one privileged part of it. Some genres are morphologically more significant, of course, or more popular, or both—and we must account for this: but not by pretending that they are the only ones that exist. And instead, all great theories of the novel have precisely reduced the novel to one basic form only (realism, the dialogic, romance, meta-novels . . .); and if the reduction has given them their elegance and power, it has also erased nine tenths of literary history. Too much.

I began this chapter by saying that quantitative data are useful because they are independent of interpretation; then, that they are challenging because they often demand an interpretation that transcends the quantitative realm; now, most radically, we see them *falsify* existing theoretical explanations, and ask for a theory, not so much of 'the' novel, but of *a whole family of novelistic forms*. A theory—of diversity. What this may mean, will be the topic of my third chapter.

A Note on The Taxonomy of The Forms

The genres of figures 9 and 10 are listed below in the following way: current definition (in capitals); dates of beginning and end; and critical study from which I have drawn the chosen (and not always explicit) periodization. Since both figures are meant as a first panorama of a very large territory,

1. A comparable oscillation is probably at work between High and Low forms, whose simultaneous existence is a well-known, if often ignored, fact of novelistic history: from the Hellenistic beginnings (divided between 'subliterary' and 'idealized' genres) through the Middle Ages, the 17th century (the *Bibliothèque Bleue*, and aristocratic novels), 18th (Warner's pair of 'entertainment' and 'elevation'), 19th (*feuilletons*, railway novels—and 'serious realism'), and 20th century (pulp fiction—

modernist experiments). Here, too, the strength of the novel is not to be found in *one* of the two positions, but in its rhythmical oscillation between them: the novel is not hegemonic because it makes it into High Culture (it does, yes, but it's so desperately professorial to be awed by this fact), but for the opposite reason: it is never *only* in High Culture, and it can keep playing on two tables, preserving its double nature, where vulgar and refined are almost inextricable [Moretti's note].

soon to be improved by further work, a few words of caution are in order. First, except for the (rare) cases in which quantitative data or full bibliographies are available, the initial date refers to the genre's first recognizable example rather than to its genuine take-off, which occurs usually several years later; as our knowledge improves, therefore, it is likely that the chronological span of novelistic genres will turn out to be significantly shorter than the one given here. On the other hand, a few genres experience brief but intense revivals decades after their original peak, like the oriental tale in 1819–25, or the gothic after 1885, or the historical novel (more than once). How to account for these Draculaesque² reawakenings is a fascinating topic, which however will have to wait for another occasion. Finally, the chart shows neither detective fiction nor science fiction; although both genres achieve their modern form around 1890 (Doyle and Wells³), and undergo a major change in the 1920s, in step with the overall pattern, their peculiar long duration seems to require a different approach.

2003, 2005

EVE KOSOFKY SEDGWICK

1950–2009

In the 1992 preface to the second edition of *Between Men: English Literature and Male Homosocial Desire* (1985), Eve Sedgwick writes about the emergence in the late 1980s and early 1990s of queer theory, a new paradigm of literary theory that owes its productivity to the "gorgeous generativity, the speculative generosity and daring, the permeability, and the activism that have long been lodged in the multiple histories of queer reading." In the aftermath of the famous Stonewall riots, when gay men and lesbians fought back against a police raid on a gay bar in New York City in the summer of 1969, and often under the umbrella of feminist and then gender studies, an

increasingly vocal gay and lesbian liberation movements took shape. In the 1970s, the work of literary theorists such as ADRIENNE RICH, Bonnie Zimmerman, Barbara Smith, GLORIA ANZALDÚA, Louie Crew, and Rictor Norton had begun to define gay and lesbian studies in the academy based on the identity politics that had well served both feminists and civil rights activists. The 1980s, however, saw a reappraisal of political strategies and the emergence of a “highly productive queer community whose explicit basis [was] the criss-crossing of the lines of identification and desire among genders, races and sexual definitions.” By the early 1990s, it was possible to talk about queer theory as a vital new area of literary theory, built on the pioneering work of theorists such as MICHEL FOUCAULT, GAYLE RUBIN, JUDITH BUTLER, MONIQUE WITTIG, and Sedgwick herself; its aim was to expose incoherencies in the supposedly stable definitions of male and female sexuality, to include not only gay and lesbian but also transgender subjects, and to explore topics such as cross-dressing, gender ambiguity, transsexuality, and deviance.

Born in Dayton, Ohio, Sedgwick received her B.A. from Cornell University and went on to earn an M.Phil. and in 1975 a Ph.D. from Yale University. She taught at a number of colleges and universities and held major fellowships from the Mellon Foundation (1976–78), the Bunting Institute at Radcliffe College (1983–84), the Guggenheim Foundation (1987–88), and the National Humanities Center (1991–92). From 1998 until her death in 2009, she was a Distinguished Professor of English at the Graduate Center at the City University of New York.

In *Between Men* Sedgwick explores the phenomenon of *homosociality*, a term she applied to the social bonds formed between persons of the same sex. While these bonds can be distinguished from homosexuality—sexual desire between persons of the same sex—they exist on a continuum with it. The structures of male and female homosocial bonds are, Sedgwick argues, quite distinct. The continuum between male homosocial and homosexual desire is disrupted by the often intense homophobia (fear of homosexuality) that marks rituals of male bonding in our culture. But the opposition between homosocial and homosexual is much less pronounced, much less dichotomous, observes Sedgwick, for women than it is for men (see, for instance, Adrienne Rich’s famous notion of a “lesbian continuum” in “Compulsory Heterosexuality and Lesbian Existence,” above). *Between Men* examines how male homosociality gets constructed and reflected in European literary texts from 1600 to 1850. In particular, Sedgwick is interested in the ways in which homosocial desire is constituted in Western literature between men whose bonding is forged through their rivalry over a woman who mediates their relationship and deflects any taint of homoeroticism. A popular example of this phenomenon might be the triangle formed between Arthur, Guinevere, and Lancelot in Arthurian literature.

In *Epistemology of the Closet* (1990), Sedgwick points out that the versions of modern lesbian and gay history recounted by gay liberation movements following Stonewall were all based on a metaphor of “the closet,” which created what she calls the regime of the “open secret” that has dominated lesbian and gay life for more than a century. She suggests that this regime, with its contradictory and constraining rules about privacy and disclosure, public and private, awareness and ignorance, has shaped the way in which many questions of value and epistemology (knowledge) have been conceived and addressed not only in gay subculture but in modern Western society as a whole. In her book’s introduction, which she titles “Axiomatic,” Sedgwick explores this problem through seven “axioms.” The second axiom, included in our selection below, argues that while sexuality and gender may be implicated in one another, they constitute conceptually distinct realms (on the relationship between sex and gender, see also Gayle Rubin). To treat sexuality as a part of gender perpetuates heterosexist assumptions about sexuality, foreclosing other as yet unarticulated ways of understanding. For Sedgwick, it follows that while lesbian, gay, and antihomophobic scholarship have much to learn from feminism, one cannot assume that the interests of the various actors coincide. Any alliances among movements to end oppression are strategic and political, not natural.

Sedgwick's criticism exhibits the strong influence of feminist, Foucauldian, and deconstructive (see JACQUES DERRIDA) modes of analysis and, like many poststructuralist critics, she writes in a philosophical prose that is often challenging. Yet while some critics have voiced the familiar complaint about the impenetrability of post-structuralist prose, others have been more concerned with the political stakes involved in her argument. Some fear that queer theory seeks to dissolve familiar identity categories such as gay and lesbian, creating an apolitical movement that ignores the real material conditions of gay life. Others suspect that queer theory will once more render women and lesbians invisible under the guise of a gender-neutral politics. These vexing political issues aside, Sedgwick's groundbreaking theoretical work raises important questions about the limits of identity politics, as it reshapes our understanding of the relationships between literature and sexuality.

From Between Men: English Literature and Male Homosocial Desire

From Introduction

1. HOMOSOCIAL DESIRE

The subject of this book is a relatively short, recent, and accessible passage of English culture, chiefly as embodied in the mid-eighteenth- to mid-nineteenth-century novel. The attraction of the period to theorists of many disciplines is obvious: condensed, self-reflective, and widely influential change in economic, ideological, and gender arrangements. I will be arguing that concomitant changes in the structure of the continuum of male "homosocial desire" were tightly, often causally bound up with the other more visible changes; that the emerging pattern of male friendship, mentorship, entitlement, rivalry, and hetero- and homosexuality was in an intimate and shifting relation to class; and that no element of that pattern can be understood outside of its relation to women and the gender system as a whole.

"Male homosocial desire": the phrase in the title of this study is intended to mark both discriminations and paradoxes. "Homosocial desire," to begin with, is a kind of oxymoron. "Homosocial" is a word occasionally used in history and the social sciences, where it describes social bonds between persons of the same sex; it is a neologism, obviously formed by analogy with "homosexual," and just as obviously meant to be distinguished from "homosexual." In fact, it is applied to such activities as "male bonding," which may, as in our society, be characterized by intense homophobia, fear and hatred of homosexuality.¹ To draw the "homosocial" back into the orbit of "desire," of the

1. The notion of "homophobia" is itself fraught with difficulties. To begin with, the word is etymologically nonsensical. A more serious problem is that the linking of fear and hatred in the "-phobia" suffix, and in the word's usage, does tend to pre-judge the question of the cause of homosexual oppression: it is attributed to fear, as opposed to

(for example) a desire for power, privilege, or material goods. An alternative term that is more suggestive of collective, structurally inscribed, perhaps materially based oppression is "heterosexism." This study will, however, continue to use "homophobia," for three reasons. First, it will be an important concern here to question, rather

potentially erotic, then, is to hypothesize the potential unbrokenness of a continuum between homosocial and homosexual—a continuum whose visibility, for men, in our society, is radically disrupted. It will become clear, in the course of my argument, that my hypothesis of the unbrokenness of this continuum is not a *genetic* one—I do not mean to discuss genital homosexual desire as “at the root of” other forms of male homosociality—but rather a strategy for making generalizations about, and marking historical differences in, the *structure* of men’s relations with other men. “Male homosocial desire” is the name this book will give to the entire continuum.

I have chosen the word “desire” rather than “love” to mark the erotic emphasis because, in literary critical and related discourse, “love” is more easily used to name a particular emotion, and “desire” to name a structure; in this study, a series of arguments about the structural permutations of social impulses fuels the critical dialectic. For the most part, I will be using “desire” in a way analogous to the psychoanalytic use of “libido”²—not for a particular affective state or emotion, but for the affective or social force, the glue, even when its manifestation is hostility or hatred or something less emotively charged, that shapes an important relationship. How far this force is properly sexual (what, historically, it means for something to be “sexual”) will be an active question.

The title is specific about *male* homosocial desire partly in order to acknowledge from the beginning (and stress the seriousness of) a limitation of my subject; but there is a more positive and substantial reason, as well. It is one of the main projects of this study to explore the ways in which the shapes of sexuality, and what *counts* as sexuality, both depend on and affect historical power relationships.³ A corollary is that in a society where men and women differ in their access to power, there will be important gender differences, as well, in the structure and constitution of sexuality.

For instance, the diacritical⁴ opposition between the “homosocial” and the “homosexual” seems to be much less thorough and dichotomous for women, in our society, than for men. At this particular historical moment, an intelligible continuum of aims, emotions, and valuations links lesbianism with the other forms of women’s attention to women: the bond of mother and daughter, for instance, the bond of sister and sister, women’s friendship, “networking,” and the active struggles of feminism.⁵ The continuum is crisscrossed with deep discontinuities—with much homophobia, with conflicts of race and class—but its intelligibility seems now a matter of simple common sense.

than to reinforce, the presumptively symmetrical opposition between homo- and heterosexuality, which seems to be implicit in the term “heterosexism.” Second, the etiology of individual people’s attitudes toward male homosexuality will not be a focus of discussion. And third, the ideological and thematic treatments of male homosexuality to be discussed from the late eighteenth century onward do combine fear and hatred in a way that is appropriately called phobic. For a good summary of social science research on the concept of homophobia, see Stephen M. Morin and Ellen M. Garfinkle, “Male Homophobia,” in *Gayspeak: Gay Male and Lesbian Communication*, ed. James W. Chesebro (New York: Pilgrim Press, 1981), pp. 117–29 [except as indicated, all notes are Sedg-

wick’s].

2. Psychic drive or energy associated with the sexual instinct but also inherent in other mental desires and drives [editor’s note].

3. For a good survey of the background to this assertion, see Jeffrey Weeks, *Sex, Politics, and Society: The Regulation of Sexuality Since 1800* (London: Longman, 1981), pp. 1–18.

4. Distinctive; serving as a distinguishing feature [editor’s note].

5. Adrienne Rich describes these bonds as forming a “lesbian continuum,” in her essay “Compulsory Heterosexuality and Lesbian Existence,” *Signs* 5 (1980): 631–60. [Rich (1929–2012), American feminist poet and essayist; for this essay, see above—editor’s note.]

However agonistic the politics, however conflicted the feelings, it seems at this moment to make an obvious kind of sense to say that women in our society who love women, women who teach, study, nurture, suckle, write about, march for, vote for, give jobs to, or otherwise promote the interests of other women, are pursuing congruent and closely related activities. Thus the adjective "homosocial" as applied to women's bonds (by, for example, historian Carroll Smith-Rosenberg)⁶ need not be pointedly dichotomized as against "homosexual"; it can intelligibly denominate the entire continuum.

The apparent simplicity—the unity—of the continuum between "women loving women" and "women promoting the interests of women," extending over the erotic, social, familial, economic, and political realms, would not be so striking if it were not in strong contrast to the arrangement among males. When Ronald Reagan and Jesse Helms⁷ get down to serious logrolling on "family policy," they are men promoting men's interests. (In fact, they embody Heidi Hartmann's definition of patriarchy: "relations between men, which have a material base, and which, though hierarchical, establish or create interdependence and solidarity among men that enable them to dominate women.")⁸ Is their bond in any way congruent with the bond of a loving gay male couple? Reagan and Helms would say no—disgustedly. Most gay couples would say no—disgustedly. But why not? Doesn't the continuum between "men-loving-men" and "men-promoting-the-interests-of-men" have the same intuitive force that it has for women?

Quite the contrary: much of the most useful recent writing about patriarchal structures suggests that "obligatory heterosexuality" is built into male-dominated kinship systems, or that homophobia is a *necessary* consequence of such patriarchal institutions as heterosexual marriage.⁹ Clearly, however convenient it might be to group together all the bonds that link males to males, and by which males enhance the status of males—usefully symmetrical as it would be, that grouping meets with a prohibitive structural obstacle. From the vantage point of our own society, at any rate, it has apparently been impossible to imagine a form of patriarchy that was not homophobic. Gayle Rubin writes, for instance, "The suppression of the homosexual component of human sexuality, and by corollary, the oppression of homosexuals, is . . . a product of the same system whose rules and relations oppress women."¹

The historical manifestations of this patriarchal oppression of homosexuals have been savage and nearly endless. Louis Crompton makes a detailed case for describing the history as genocidal.² Our own society is brutally

9. See, for example, Gayle Rubin, "The Traffic in Women: Notes toward a 'Political Economy' of Sex," in *Toward an Anthropology of Women*, ed. Rayna Reiter (New York: Monthly Review Press, 1975), pp. 182–83. [RUBIN (b. 1949), American anthropologist and queer theorist—editor's note.]

1. Rubin, "Traffic," p. 180.

2. Louis Crompton, "Gay Genocide: From Leviticus to Hitler," in *The Gay Academic*, ed. Louie Crew (Palm Springs, Calif.: ETC Publications, 1978), pp. 67–91; but see chapter 5 [of *Between Men*] for a discussion of the limitations of "genocide" as an understanding of the fate of homosexual men.

homophobic; and the homophobia directed against both males and females is not arbitrary or gratuitous, but tightly knit into the texture of family, gender, age, class, and race relations. Our society could not cease to be homophobic and have its economic and political structures remain unchanged.

Nevertheless, it has yet to be demonstrated that, because most patriarchies structurally include homophobia, therefore patriarchy structurally *requires* homophobia. K. J. Dover's recent study, *Greek Homosexuality*, seems to give a strong counterexample in classical Greece. Male homosexuality, according to Dover's evidence, was a widespread, licit, and very influential part of the culture. Highly structured along lines of class, and within the citizen class along lines of age, the pursuit of the adolescent boy by the older man was described by stereotypes that we associate with romantic heterosexual love (conquest, surrender, the "cruel fair," the absence of desire in the love object), with the passive part going to the boy. At the same time, however, because the boy was destined in turn to grow into manhood, the assignment of roles was not permanent.³ Thus the love relationship, while temporarily oppressive to the object, had a strongly educational function; Dover quotes Pausanias in Plato's *Symposium* as saying "that it would be right for him [the boy] to perform any service for one who improves him in mind and character."⁴ Along with its erotic component, then, this was a bond of mentorship; the boys were apprentices in the ways and virtues of Athenian citizenship, whose privileges they inherited. These privileges included the power to command the labor of slaves of both sexes, and of women of any class including their own. "Women and slaves belonged and lived together," Hannah Arendt writes. The system of sharp class and gender subordination was a necessary part of what the male culture valued most in itself: "Contempt for laboring originally [arose] out of a passionate striving for freedom from necessity and a no less passionate impatience with every effort that left no trace, no monument, no great work worthy to remembrance";⁵ so the contemptible labor was left to women and slaves.

The example of the Greeks demonstrates, I think, that while heterosexuality is necessary for the maintenance of any patriarchy, homophobia, against males at any rate, is not. In fact, for the Greeks, the continuum between "men loving men" and "men promoting the interests of men" appears to have been quite seamless. It is as if, in our terms, there were no perceived discontinuity between the male bonds at the Continental Baths and the male bonds at the Bohemian Grove⁶ or in the board room or Senate cloakroom.

It is clear, then, that there is an asymmetry in our present society between, on the one hand, the relatively continuous relation of female homosocial and

3. On this, see Jean Baker Miller, *Toward a New Psychology of Women* (Boston: Beacon Press, 1976), chap. 1.

editor's note.]

6. On the Bohemian Grove, an all-male summer camp for American ruling-class men, see G. William Domhoff, *The Bohemian Grove and Other Retreats: A Study in Ruling-Class Cohesiveness* (New York: Harper and Row, 1974); and a more vivid, although homophobic, account, John van der Zee, *The Greatest Men's Party on Earth: Inside the Bohemian Grove* (New York: Harcourt Brace Jovanovich, 1974). [The Continental Baths: a gay bathhouse/club, very popular in the 1970s, located on Manhattan's Upper West Side—editor's note.]

homosexual bonds, and, on the other hand, the radically discontinuous relation of male homosocial and homosexual bonds. The example of the Greeks (and of other, tribal cultures, such as the New Guinea "Sambia" studied by G. H. Herdt⁷) shows, in addition, that the structure of homosocial continuums is culturally contingent, not an innate feature of either "maleness" or "femaleness." Indeed, closely tied though it obviously is to questions of male vs. female power, the explanation will require a more exact mode of historical categorization than "patriarchy," as well, since patriarchal power structures (in Hartmann's sense) characterize both Athenian and American societies. Nevertheless, we may take as an explicit axiom that the historically differential shapes of male and female homosociality—much as they themselves may vary over time—will always be articulations and mechanisms of the enduring inequality of power between women and men.

Why should the different shapes of the homosocial continuum be an interesting question? Why should it be a *literary* question? Its importance for the practical politics of the gay movement as a minority rights movement is already obvious from the recent history of strategic and philosophical differences between lesbians and gay men. In addition, it is theoretically interesting partly as a way of approaching a larger question of "sexual politics": What does it mean—what difference does it make—when a social or political relationship is sexualized? If the relation of homosocial to homosexual bonds is so shifty, then what theoretical framework do we have for drawing any links between sexual and power relationships?

From Epistemology of the Closet

From Introduction: Axiomatic

AXIOM 2: THE STUDY OF SEXUALITY IS NOT COEXTENSIVE WITH THE STUDY OF GENDER; CORRESPONDINGLY, ANTIHOMOPHOBIC INQUIRY IS NOT COEXTENSIVE WITH FEMINIST INQUIRY. BUT WE CAN'T KNOW IN ADVANCE HOW THEY WILL BE DIFFERENT.

Sex, gender, sexuality: three terms whose usage relations and analytical relations are almost irremediably slippery. The charting of a space between something called "sex" and something called "gender" has been one of the most influential and successful undertakings of feminist thought. For the purposes of that undertaking, "sex" has had the meaning of a certain group of irreducible, biological differentiations between members of the species *Homo sapiens* who have XX and those who have XY chromosomes. These include (or are ordinarily thought to include) more or less marked dimorphisms of genital formation, hair growth (in populations that have body hair), fat distribution, hormonal function, and reproductive capacity. "Sex" in this sense—what I'll demarcate as "chromosomal sex"—is seen as the relatively minimal raw material on which is then based the social construction of

7. American anthropologist (b. 1949), author of *Guardians of the Flute: Idioms of Masculinity* (1981) [editor's note].

gender. Gender, then, is the far more elaborated, more fully and rigidly dichotomized social production and reproduction of male and female identities and behaviors—of male and female *persons*—in a cultural system for which “male/female” functions as a primary and perhaps model binarism affecting the structure and meaning of many, many other binarisms whose apparent connection to chromosomal sex will often be exiguous or nonexistent. Compared to chromosomal sex, which is seen (by these definitions) as tending to be immutable, immanent in the individual, and biologically based, the meaning of gender is seen as culturally mutable and variable, highly relational (in the sense that each of the binarized genders is defined primarily by its relation to the other), and inextricable from a history of power differentials between genders. This feminist charting of what Gayle Rubin refers to as a “sex/gender system,”¹ the system by which chromosomal sex is turned into, and processed as, cultural gender, has tended to minimize the attribution of people’s various behaviors and identities to chromosomal sex and to maximize their attribution to socialized gender constructs. The purpose of that strategy has been to gain analytic and critical leverage on the female-disadvantaging social arrangements that prevail at a given time in a given society, by throwing into question their legitimative ideological grounding in biologically based narratives of the “natural.”

“Sex” is, however, a term that extends indefinitely beyond chromosomal sex. That its history of usage often overlaps with what might, now, more properly be called “gender” is only one problem. (“I can only love someone of my own sex.” Shouldn’t “sex” be “gender” in such a sentence? “M. saw that the person who approached was of the opposite sex.” Genders—insofar as there are two and they are defined in contradistinction to one another—may be said to be opposite; but in what sense is XX the opposite of XY?) Beyond chromosomes, however, the association of “sex,” precisely through the physical body, with reproduction and with genital activity and sensation keeps offering new challenges to the conceptual clarity or even possibility of sex/gender differentiation. There is a powerful argument to be made that a primary (or *the* primary) issue in gender differentiation and gender struggle is the question of who is to have control of women’s (biologically) distinctive reproductive capability. Indeed, the intimacy of the association between several of the most signal forms of gender oppression and “the facts” of women’s bodies and women’s reproductive activity has led some radical feminists to question, more or less explicitly, the usefulness of insisting on a sex/gender distinction. For these reasons, even usages involving the “sex/gender system” within feminist theory are able to use “sex/gender” only to delineate a problematical *space* rather than a crisp distinction. My own loose usage in this book will be to denominate that problematized space of the sex/gender system, the whole package of physical and cultural distinctions between women and men, more simply under the rubric “gender.” I do this in order to reduce the likelihood of confusion between “sex” in the sense of “the space of differences between male and female” (what I’ll be grouping under “gender”) and “sex” in the sense of sexuality.

[RUBIN (b. 1949), American anthropologist and queer theorist—editor’s note.]

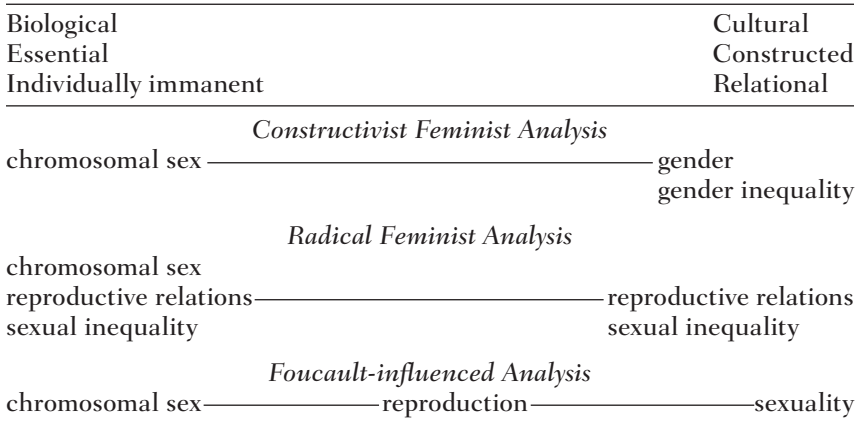

Figure 1. Some Mappings of Sex, Gender, and Sexuality

For meanwhile the whole realm of what modern culture refers to as “sexuality” and *also* calls “sex”—the array of acts, expectations, narratives, pleasures, identity-formations, and knowledges, in both women and men, that tends to cluster most densely around certain genital sensations but is not adequately defined by them—that realm is virtually impossible to situate on a map delimited by the feminist-defined sex/gender distinction. To the degree that it has a center or starting point in certain physical sites, acts, and rhythms associated (however contingently) with procreation or the potential for it, “sexuality” in this sense may seem to be of a piece with “chromosomal sex”: biologically necessary to species survival, tending toward the individually immanent, the socially immutable, the given. But to the extent that, as Freud argued and Foucault² assumed, the distinctively sexual nature of human sexuality has to do precisely with its excess over or potential difference from the bare choreographies of procreation, “sexuality” might be the very opposite of what we originally referred to as (chromosomal-based) sex: it could occupy, instead, even more than “gender” the polar position of the relational, the social/symbolic, the constructed, the variable, the representational (see Figure 1). To note that, according to these different findings, *something* legitimately called sex or sexuality is all over the experiential and conceptual map is to record a problem less resolvable than a necessary choice of analytic paradigms or a determinate slippage of semantic meaning; it is rather, I would say, true to quite a range of contemporary worldviews and intuitions to find that sex/sexuality *does* tend to represent the full spectrum of positions between the most intimate and the most social, the most predetermined and the most aleatory, the most physically rooted and the most symbolically infused, the most innate and the most learned, the most autonomous and the most relational traits of being.

If all this is true of the definitional nexus between sex and sexuality, how much less simple, even, must be that between sexuality and gender. It will

2. MICHEL FOUCAULT (1926–1984), French philosopher and historian of ideas. SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis [editor’s note].

be an assumption of this study that there is always at least the potential for an analytic distance between gender and sexuality, even if particular manifestations or features of particular sexualities are among the things that plunge women and men most ineluctably into the discursive, institutional, and bodily enmeshments of gender definition, gender relation, and gender inequality. This, too, has been posed by Gayle Rubin:

I want to challenge the assumption that feminism is or should be the privileged site of a theory of sexuality. Feminism is the theory of gender oppression. . . . Gender affects the operation of the sexual system, and the sexual system has had gender-specific manifestations. But although sex and gender are related, they are not the same thing.³

This book will hypothesize, with Rubin, that the question of gender and the question of sexuality, inextricable from one another though they are in that each can be expressed only in the terms of the other, are nonetheless not the same question, that in twentieth-century Western culture gender and sexuality represent two analytic axes that may productively be imagined as being as distinct from one another as, say, gender and class, or class and race. Distinct, that is to say, no more than minimally, but nonetheless usefully.

Under this hypothesis, then, just as one has learned to assume that every issue of racial meaning must be embodied through the specificity of a particular class position—and every issue of class, for instance, through the specificity of a particular gender position—so every issue of gender would necessarily be embodied through the specificity of a particular sexuality, and vice versa; but nonetheless there could be use in keeping the analytic axes distinct.

An objection to this analogy might be that gender is *definitionally* built into determinations of sexuality, in a way that neither of them is definitionally intertwined with, for instance, determinations of class or race. It is certainly true that without a concept of gender there could be, quite simply, no concept of homo- or heterosexuality. But many other dimensions of sexual choice (auto- or alloerotic,⁴ within or between generations, species, etc.) have no such distinctive, explicit definitional connection with gender; indeed, some dimensions of sexuality might be tied, not to gender, but *instead* to differences or similarities of race or class. The definitional narrowing-down in this century of sexuality as a whole to a binarized calculus of *homo-* or *hetero-*sexuality is a weighty fact but an entirely historical one. To use that fact as a reason for analytically conflating sexuality per se with gender would obscure the degree to which the fact itself requires explanation. It would also, I think, risk obscuring yet again the extreme intimacy with which all these available analytic axes do after all mutually constitute one another: to assume the distinctiveness of the *intimacy* between sexuality and gender might well risk assuming too much about the definitional *separability* of either of them from determinations of, say, class or race.

above—editor's note.]

4. Based in eroticism focused on the other. "Autoerotic": based in eroticism focused on the self [editor's note].

It may be, as well, that a damaging bias toward heterosocial⁵ or heterosexual assumptions inheres unavoidably in the very concept of gender. This bias would be built into any gender-based analytic perspective to the extent that gender definition and gender identity are necessarily relational between genders—to the extent, that is, that in any gender system, female identity or definition is constructed by analogy, supplementarity, or contrast to male, or vice versa. Although many gender-based forms of analysis do involve accounts, sometimes fairly rich ones, of intragender behaviors and relations, the ultimate definitional appeal in many gender-based analysis must necessarily be to the diacritical⁶ frontier between different genders. This gives heterosocial and heterosexual relations a conceptual privilege of incalculable consequence. Undeniably, residues, markers, tracks, signs referring to that diacritical frontier between genders are everywhere, as well, internal to and determinative of the experience of each gender and its intragender relations; gender-based analysis can never be dispensed with in even the most purely intragender context. Nevertheless it seems predictable that the analytic bite of a purely gender-based account will grow less incisive and direct as the distance of its subject from a social interface between different genders increases. It is unrealistic to expect a close, textured analysis of same-sex relations through an optic calibrated in the first place to the coarser stigmata of gender difference.⁷ The development of an alternative analytic axis—call it sexuality—might well be, therefore, a particularly urgent project for gay/lesbian and antihomophobic inquiry.

It would be a natural corollary to Axiom 2 to hypothesize, then, that gay/lesbian and antihomophobic inquiry still has a lot to learn from asking questions that feminist inquiry has learned to ask—but only so long as we don't demand to receive the same answers in both interlocutions. In a comparison of feminist and gay theory as they currently stand, the newness and consequent relative underdevelopment of gay theory are seen most clearly in two manifestations. First, we are by now very used to asking as feminists what we aren't yet used to asking as antihomophobic readers: how a variety of forms of oppression intertwine systemically with each other; and especially how the person who is disabled through one set of oppressions may by *the same positioning* be enabled through others. For instance, the understated demeanor of educated women in our society tends to mark both their deference to educated men and their expectation of deference from women and men of lower class. Again, a woman's use of a married name makes graphic at the same time her subordination as a woman and her privilege as a presumptive heterosexual. Or, again, the distinctive vulnerability to rape of women of all races has become in this country a powerful tool for the racist enforcement by which white people, including women, are privileged at the expense of Black people of both genders. That one is *either* oppressed or an oppressor, or that if one happens to be both, the two are not likely to

5. A term used to describe social bonds between persons of different genders, by analogy with *homosocial*, the notion Sedgwick explores in *Between Men* (1985; see above) [editor's note].

6. Distinctive; serving as a distinguishing feature [editor's note].

7. For valuable related discussions, see Katie King, "The Situation of Lesbianism as Feminism's Magi-

cal Sign: Contests for Meaning and the US Women's Movement, 1968–1972," *Communication* 9 (1986): 65–91, special issue, "Feminist Critiques of Popular Culture," ed. Paula A. Treichler and Ellen Wartella; and Teresa de Lauretis, "Sexual Indifference and Lesbian Representation," *Theatre Journal* 40 (May 1988): 155–77.

have much to do with each other, still seems to be a common assumption, however, in at any rate male gay writing and activism,⁸ as it hasn't for a long time been in careful feminist work.

Indeed, it was the long, painful realization, *not* that all oppressions are congruent, but that they are *differently* structured and so must intersect in complex embodiments that was the first great heuristic⁹ breakthrough of socialist-feminist thought and of the thought of women of color.¹ This realization has as its corollary that the comparison of different axes of oppression is a crucial task, not for any purpose of ranking oppressions, but to the contrary because each oppression is likely to be in a uniquely indicative relation to certain distinctive nodes of cultural organization. The *special* centrality of homophobic oppression in the twentieth century, I will be arguing, has resulted from its inextricability from the question of knowledge and the processes of knowing in modern Western culture at large.

The second and perhaps even greater heuristic leap of feminism has been the recognition that categories of gender and, hence, oppressions of gender can have a structuring force for nodes of thought, for axes of cultural discrimination, whose thematic subject isn't explicitly gendered at all. Through a series of developments structured by the deconstructive understandings and procedures sketched above, we have now learned as feminist readers that dichotomies in a given text of culture as opposed to nature, public as opposed to private, mind as opposed to body, activity as opposed to passivity, etc. etc., are, under particular pressures of culture and history, likely places to look for implicit allegories of the relations of men to women; more, that to fail to analyze such nominally ungendered constructs in gender terms can itself be a gravely tendentious move in the gender politics of reading. This has given us ways to ask the question of gender about texts even where the culturally "marked" gender (female) is not present as either author or thematic.

8. Gay male-centered work that uses more complex models to investigate the intersection of different oppressions includes Gay Left Collective, eds., *Homosexuality: Power and Politics* (London: Allison & Busby, 1980); Paul Hoch, *White Hero Black Beast: Racism, Sexism, and the Mask of Masculinity* (London: Pluto, 1979); Guy Hocquenghem, *Homosexual Desire*, trans. Daniella Dangoor (London: Allison & Busby, 1978); Mario Mieli, *Homosexuality and Liberation: Elements of a Gay Critique*, trans. David Fernbach (London: Gay Men's Press, 1980); D. A. Miller, *The Novel and the Police* (Berkeley: University of California Press, 1988); Michael Moon, "The Gentle Boy from the Dangerous Classes: Pederasty, Domesticity, and Capitalism in Horatio Alger," *Representations*, no. 19 (summer 1987): 87–110; Michael Moon, *Disseminating Whitman* (Cambridge: Harvard University Press, 1990); and Jeffrey Weeks, *Sexuality and Its Discontents: Meanings, Myths, and Modern Sexualities* (London: Longman, 1980).

9. Explanatory, serving as an aid to problem solving [editor's note].

1. The influential socialist-feminist investigations have included Michèle Barrett, *Women's Oppression Today: Problems in Marxist Feminist Analysis* (London: Verso, 1980); Zillah Eisenstein, ed., *Capitalist Patriarchy and the Case for Socialist Feminism* (New York: Monthly Review Press, 1979); and Juliet Mitchell, *Women's Estate* (New

York: Vintage, 1973). On the intersections of racial with gender and sexual oppressions, see, for example, Elly Bulkin, Barbara Smith, and Minnie Bruce Pratt, *Yours in Struggle: Three Feminist Perspectives on Anti-Semitism and Racism* (New York: Long Haul Press, 1984); BELL HOOKS [Gloria Watkins], *Feminist Theory: From Margin to Center* (Boston: South End Press, 1984); Katie King, "Audre Lorde's Lacquered Layerings: The Lesbian Bar as a Site of Literary Production," *Cultural Studies* 2, no. 3 (1988): 321–42; Audre Lorde, *Sister Outsider: Essays and Speeches* (Trumansburg, N.Y.: Crossing Press, 1984); Cherríe Moraga, *Loving in the War Years: Lo que nunca paso por sus labios* (Boston: South End Press, 1938); Cherríe Moraga and GLORIA ANZALDÚA, eds., *This Bridge Called My Back: Writings by Radical Women of Color* (Watertown: Persephone, 1981; rpt. ed., New York: Kitchen Table, Women of Color Press, 1983); and Barbara Smith, ed., *Home Girls: A Black Feminist Anthology* (New York: Kitchen Table, Women of Color Press, 1983). Good overviews of several of these intersections as they relate to women and in particular to lesbians, can be found in Ann Snitow, Christine Stansell, and Sharon Thompson, eds., *The Powers of Desire: The Politics of Sexuality* (New York: Monthly Review/New Feminist Library, 1983); Vance, *Pleasure and Danger*; and de Lauretis, "Sexual Indifference."

The dichotomy heterosexual/homosexual, as it has emerged through the last century of Western discourse, would seem to lend itself peculiarly neatly to a set of analytic moves learned from this deconstructive moment in feminist theory. In fact, the dichotomy heterosexual/homosexual fits the deconstructive template much more neatly than male/female itself does, and hence, importantly differently. The most dramatic difference between gender and sexual orientation—that virtually all people are publicly and unalterably assigned to one or the other gender, and from birth—seems if anything to mean that it is, rather, sexual orientation, with its far greater potential for rearrangement, ambiguity, and representational doubleness, that would offer the apter deconstructive object. An essentialism of sexual object-choice is far less easy to maintain, far more visibly incoherent, more visibly stressed and challenged at every point in the culture than any essentialism of gender. This is not an argument for any epistemological or ontological privileging of an axis of sexuality over an axis of gender; but it is a powerful argument for their potential distinctness one from the other.

Even given the imperative of constructing an account of sexuality irreducible to gender, however, it should already be clear that there are certain distortions necessarily built into the relation of gay/lesbian and antihomophobic theory to a larger project of conceiving a theory of sexuality as a whole. The two can after all scarcely be coextensive. And this is true not because “gay/lesbian and antihomophobic theory” would fail to cover heterosexual as well as same-sex object-choice (any more than “feminist theory” would fail to cover men as well as women), but rather because, as we have noted, sexuality extends along so many dimensions that aren’t well described in terms of the gender of object-choice at all. Some of these dimensions are habitually condensed under the rubrics of object-choice, so that certain discriminations of (for instance) *act* or of (for another instance) *erotic localization* come into play, however implicitly and however incoherently, when categories of object-choice are mobilized. One used, for instance, to hear a lot about a high developmental stage called “heterosexual genitality,” as though cross-gender object-choice automatically erased desires attaching to mouth, anus, breasts, feet, etc.; a certain anal-erotic salience of male homosexuality is if anything increasingly strong under the glare of heterosexist AIDS-phobia; and several different historical influences have led to the de-genitalization and bodily diffusion of many popular, and indeed many lesbian, understandings of lesbian sexuality. Other dimensions of sexuality, however, distinguish object-choice quite differently (e.g., human/animal, adult/child, singular/plural, autoerotic/alloerotic) or are not even about object choice (e.g., orgasmic/nonorgasmic, noncommercial/commercial, using bodies only/using manufactured objects, in private/in public, spontaneous/scripted).² Some of these other dimensions of sexuality have had high diacritical importance in different historical contexts (e.g., human/animal, autoerotic/alloerotic). Others, like adult/child object choice, visibly do have such importance today, but without being very fully subsumed under the hetero/homosexual binarism. Still others, including a host of them I haven’t mentioned or couldn’t think of, subsist in this culture as nondiacritical differences, differences that seem to make little difference beyond themselves—except that the hyperintensive structuring of sexuality in our culture sets several of them, for instance, at

2. This list owes something to Rubin, “Thinking Sex,” esp. pp. 281–82.

the exact border between legal and illegal. What I mean at any rate to emphasize is that the implicit condensation of “sexual theory” into “gay/lesbian and antihomophobic theory,” which corresponds roughly to our by now unquestioned reading of the phrase “sexual orientation” to mean “gender of object-choice,” is at the very least damagingly skewed by the specificity of its historical placement.

1990

HAMID DABASHI

b. 1951

Hamid Dabashi is a literary historian and cultural critic who both criticizes and reconfigures contemporary postcolonial theory. He does so by focusing on the changing geographical and historical fortunes of Persian literature over a tumultuous fourteen-century span during which empires and forms of imperialism rose and fell while borders expanded and contracted. From its earliest days, Persian literature was—and remains—transnational, multiethnic, cosmopolitan, and resistant. Viewed historically, the human subject position of the Persian-language writer is characterized not by ethnic or national sovereignty but by fluidity, which leads to a distinctive and supple literary humanism. The comparatively recent arrivals in central Asia of modern European imperialism, Orientalism, and nationalism at present distort the contours of Persian culture. Dabashi argues, “Because it emerged and thrived in multiple and multinational empires, Persian literary humanism does not exclusively belong to any single, contemporary, postcolonial nation-state. Afghanistan, India, Iran, Pakistan, Tajikistan, and any number of other central Asian states have identical claim on its long and meandering history—and rightly so.”

Dabashi was born in Ahvaz, a city in southwest Iran in the oil-rich province of Khuzestan. After graduating from college in Tehran, he moved to the United States to complete his graduate studies, and in 1984 he received a dual doctoral degree in sociology of culture and Islamic studies from the University of Pennsylvania. His dissertation, which he completed under the guidance of the Freudian cultural critic Philip Rieff, examined Max Weber’s theory of charismatic authority. Today Dabashi is the Hagop Kevorkian Professor of Iranian Studies and Comparative Literature at Columbia University, and his interests and expertise span areas as diverse as Islamism, politics, cinema, the performing arts, and literature. As a social activist, he has supported progressive and reform movements in the Middle East and has written extensive commentaries on them.

Dabashi has published two dozen books on a variety of subjects, including religion, history, cinema, and social criticism. Our selection comes from his book *The World of Persian Literary Humanism* (2012), in which he recasts the classical Persian tradition known as *adab*, a word that combines literature and etiquette, as Persian literary humanism. According to Dabashi, this humanism was “a normative and moral *space* consistently cultivated within an imperial imaginary rather than a mere ethnic uprising replicating Arab tribalism.” By explicitly avoiding the usual Persian/Arabic dualism, this formulation enables us to observe a literature facing numerous challenges over time, independent of any cultural confinements such as Arab domination. Dabashi traces the epochs of Persian literature as it transforms

over time from tribal ethnos (*nezhad*) to logos (*sokhan*) in the earliest period, when the Persian language was a shared tongue through most of the Islamic world, to a later period, after the Mongol invasion, when a universalizing ethos (*hanjar*) supported linguistic autonomy and self-reference. The huge resulting body of work that also included other forms of arts eventually resulted in “chaos” (*ashub*) when artists encountered Europe in the modern period and when the crumbling royal courts and religious institutions no longer sponsored creativity—which, once emancipated, flourished in the new public sphere.

The World of Persian Literary Humanism begins by asking about the meaning of “being human.” It then contends that the question has been approached mostly from a Western perspective. To pose it from a non-European point of view, Dabashi examines the 1,400-year Persian literary tradition, conceptualized as the subversive subconscious of Islamic civilization. When the Islamic conquests began in the seventh century, the Arab invaders disparaged Persian culture for effeminate frailty and sexual wrongdoing, among other things. Consequently, Persian literary humanism has long spoken from a hidden and defiant viewpoint, encapsulating a subversive protean subjectivity and creativity. The subversive humanistic views expressed by the poets Sa’di (ca. 1213–1292) and Ferdowsi (ca. 935–ca. 1020), for example, stand in contrast to the transcendental Islamic scholasticism of the medieval period. Dabashi criticizes Eurocentric and Orientalist scholars for ignoring these aspects of history, an oversight he sees as shared by today’s departments of comparative literature and English. In discussing matters related to Persian literary humanism, he therefore engages throughout the book with European and American cultural critics such as THEODOR ADORNO, FREDRIC JAMESON, and EDWARD W. SAID.

Dabashi is critical of reigning concepts not only of world literature and third world literature but also of nationalism and globalization. Imposed on Persian literature, these modern Eurocentric formulations distort its long distinctive history. In addition, he is critical of the racialization of multiracial Persian literature currently associated with the Islamic Republic of Iran (established in 1979). Along the way Dabashi finds fault for similar reasons with previous histories of Persian literature, singling out E. G. Browne’s *A Literary History of Persia*, vol. 1 (1902), and Zabihullah Safa’s five-volume *Tarikh-e Adabiyat dar Iran* (1959–89, *History of Literature in Iran*).

Dabashi himself is open to criticism on various counts, including a failure to take into account the earliest Persian writers. The literature produced in the Persian Empire (whose boundaries stretched beyond those of contemporary Iran in all directions) is often conveniently divided by scholars into three periods: ancient or pre-Islamic (before 651 C.E.), medieval or classical (tenth century to the end of the nineteenth century), and contemporary or modern. Dabashi avoids the error of ignoring the vast body of works produced by Persian speakers after their conquest by Arab Muslims (in 651) that were written in Arabic, the language of the victor. Yet he does not examine works produced before the medieval period in earlier forms of the Persian language, Old Persian and Pahlavi (Middle Persian). That body of pre-Islamic work had an affinity with Zoroastrianism and other Iranian ancient religions. The roots of the “resistance” or the subconscious component subverting “Arab imperialism” that Dabashi sees in medieval Persian humanism can also be sought in pre-Islamic culture and civilization, which to this day continue to inform some important social formulations, including Dabashi’s own dichotomy of humanism and scholasticism. A scrutiny in *The World of Persian Literary Humanism* of ancient texts, added to its examination of Iranians’ works in Arabic, would have strengthened its findings.

Nevertheless, Dabashi’s formulation helps us see Persian literary criticism in a new light. When Abd al-Qaher Jorjani (d. 1078) attempted to write a theory of literary criticism in *Mysteries of Eloquence*, Persian poetry had begun to flourish in

areas where the local Persians had managed to establish rule independent of the central Islamic caliphate. Classical poetry, often associated at the time with the court (in Dabashi's formulation, the pre-chaotic ethos stage), sees itself as autonomous and self-aware, a vibrant arena for debates regarding concrete forms of literary criticism. A number of poets, including Farrukhi Sistani (d. 1037), Unsuri Balkhi (d. 1039), and Ferdowsi, commented on and at times criticized the works of their rivals and predecessors, participating in criticism and theory within the genre of poetry itself. Many of these classical literary men viewed criticism as the act of distinguishing between the desirable and undesirable, the good and the bad, structure and disorder, poetry and prose—distinctions all in some way informed by ancient but still vital pre-Islamic Zoroastrian dichotomies.

Such debates continue into modern and contemporary times. Contemporary Persian literature, including its schools of literary criticism, has often engaged, both in support and in opposition, with the dominant ideology of its time. Here, what Dabashi calls "Persian literary humanism" has itself become part of an ideological school, displaying a sort of modern scholasticism. In the decades prior to the 1979 Iranian Revolution, for example, literary criticism—like the production of literature itself—was highly influenced by Marxist literary theory. Since the end of the nineteenth century, nationalism, Islam, and feminism have also significantly affected the critical approaches to Persian literary humanism. Such movements contributed heavily to the formation of leftist discourse and to the social turmoil that led to popular uprisings in the late 1970s and ended the rule of the shah, Mohammad Reza (which was immediately replaced by conservative clerical rule). As Dabashi and others have noted, the Persian word for literature, *adabiyat*, comes from the word *adab*, meaning "culture," "proper behavior," "politeness," and "pleasant demeanor": Persian literature remains intricately tied to Persian ethics, politics, and history.

The World of Persian Literary Humanism Keywords: Globalization, Literary History, Modernity, Nationhood, Postcolonial Theory, Vernacular Language

From The World of Persian Literary Humanism

From Conclusion: Literary Humanism as an Alternative Theory to Modernity

* * *

A COSMOPOLITAN WORLDLINESS

How do people become "human"—and what does that exactly mean? I have thought this question through a literary humanism that expands over 1,400 years, extends over vast global empires that culminate in the Mongol conquest of the vastest imperial territory in human history, and finally divides into three magnificent Muslim empires of the Mughals, the Safavids, and the Ottomans,¹ before it faces the catalytic effects of the mighty European imperialism. My central thesis in this book is predicated on a systematic

1. The Mughals (1526–1759), of Turkic-Mongol origin, ruled most of northern India; the Safavids (1501–1736) ruled Iran, establishing Shiite Islam as the state religion; and the Ottoman Empire (1299–1922), also of Turkic-Mongol origins, was created in Asia Minor (modern Turkey) but at its height, under the rule of Suleiman the Magnifi-

cent (1494–1566), controlled land on several continents. Under Genghis Khan (1162–1227) and his sons and grandsons, the Mongols, a people of central Asia, stretched west to Europe and east to China; their empire reached its greatest extent in 1368.

articulation of a theory of subjection (how do people become human?) embedded in the heart of Persian literary humanism—a theory that proposes a *metamorphic sublation*² of a succession of defining tropes that lead it from one phase to another, from its initial *ethnos/nezhad* when it was formed in opposition to Arab imperialism of the seventh century, to its definitive *logos/sokhan* when an expansive number of transnational empires took over the region, to its transformative *ethos/hanjar* when the fragile knowing subject at the heart of Persian poetic imagination became self-evident, and ultimately to its defiant *chaos/ashub* when it exited its habitual habitat at royal courts under the duress of its fateful encounter with European imperialism and perforce crafted for itself a *public space* it called *vatan* (homeland, nation). The self-transformative disposition of this fragile subject has been at the heart of Persian literary humanism and its cosmopolitan worldliness. My principal objection to the present state of literary studies is that the current location of this panoramic development under the self-designated “Western” hegemony has hitherto preempted the theoretical assessment of its metamorphic history. I have sought to expose and overcome this blind spot.

I propose this *metamorphic transformation* of the central tropes of Persian literary humanism to be a far more thematically accurate register of normative subjection and moral agency than a generic, Eurocentric, or even anticolonial mode of subject formation, which is the most recent globalized context in which Persian literary humanism has found itself, performing in the shadow of European imperialism. This imperialism should not be privileged over all the preceding forms of imperialism—from the Achamanids and the Sassanids³ in the pre-Islamic period to the Arabs in the seventh century to the Mongols in the thirteenth century or the Mughals or the Ottomans in the sixteenth century. I have sought to give historical depth and geographical range to our understanding of literary humanism as the modus operandi of subjection. When the transnational empires of the Ghaznavids and Seljuqids took over from the early Iranian dynasties of the Saffarids and the Samanids,⁴ they forced the early transformation of *ethnos* into *logos* because *sokhan*⁵ was now the paramount factor of Persian literary humanism and not the presumed ethnicity of the poet or the literati. When the global empire of the Mongols took over, the *logos* of Persian literary humanism was at the center of its self-universalizing literary cosmopolitanism and pushed the *logos* toward the formation of an *ethos* as the matrix of the multiple measures of being human. From the Timurid period⁶ forward, the eventual formation of a *paralingual semiosis*⁷ at the juncture of Persian poetry and painting extended the potential transmutation of *ethos* into *chaos* in the context of the four adjacent empires of the Mughals, the Safavids, the Otto-

2. Explained by Dabashi as a transformative negation of dominant historical realities and associated tropes, which affected *ethnos* (Persian ethnic identity), *logos* (Persian language), *ethos* (Persian mind-set/character), and “chaos” (the rise of modern Persian nationalism and the public sphere).

3. The last pre-Islamic Persian empire (224–651). The Achamanids, or Achaemenians (559–330 B.C.E.), were an ancient Persian dynasty.

4. The Saffarids (861–900) ruled a large area in what is now eastern Iran, and the Samanids (819–999) were based in eastern Iran and Uzbekistan. The Ghaznavids (977–1186), of Turkic ori-

gin, ruled northeastern Iran, Afghanistan, and northern India, while the empire of the Seljuqids or Seljuqs (1016–1157) included Mesopotamia, Syria, Palestine, and most of Iran.

5. Proper and beautiful speech: *sokhan* became the dominant discourse (*logos*) of the people (*ethnos*).

6. That is, 1370–1507; the Timurid dynasty encompassed modern-day Iran, Iraq, and most of Syria and Afghanistan and was heavily influenced by Persian culture.

7. That is, the full geographical, linguistic, and cultural richness of its historical discourse including pitch, rhythm, and body language.

mans, and the Russians, where the tropic transfusion was exacerbated in the context of encounter with a fifth, aterritorial, constellation of empires, approaching from Europe. This latest encounter finally forced Persian literary humanism out of its habitat inside the royal court, while disallowing it entrance into the new imperial formation, which was decidedly against any privileging of the Persian language and literature—as best evident in the Macaulay Act (English Education Act) of 1835.⁸ This fortuitous development finally resolved the historical paradox of Persian literary humanism and forced it to craft and cultivate a tertiary space—between its own courts that it had abandoned and the European courts that did not welcome it—which became the public space it now termed *nation* and *nationalism*, in which Persian literary humanism effectively set up its own edifice, finally in its new home, where it belonged.

This whole process has resulted in a manner of literary subjection as a self-conscious worlding of the world that European Orientalism and American literary criticism alike have silenced by their respective narrative urges to flatten out the world against the presumed centrality of the allegory of “the West” that they habitually take for real by way of allegorizing the rest of the world. The literary nationalism of the postcolonial world has unknowingly corroborated this episteme⁹ by competing in producing ethnic nationalist historiographies of their own. Contrary to the very grain of this train of thinking about literary history and theory, the locus classicus¹ of the first three phases of Persian literary humanism—from *ethnos* to *logos* to *ethos*—has been the royal courts of vast empires, while the location of the very last phase, *chaos*, is the public space that Persian literary imagination has termed *vatan* (homeland, nation) and *vatanparasti* (nationalism) and carved in between the courts it exited and the courts into which it had no entry. Both European Orientalism and American literary criticism have misread this notion of *vatan* (homeland, nation)—one by *ethnicizing* Persian literary humanism in its entirety and the other by colonizing it as “Third World literature,” or even worse “world literature,” and thus declaring “all Third World texts . . . are national allegories.”² This collusion of false readings is an expression of nothing more innocent/sinister than simply being embedded in one imperial imaginary—the one that calls itself “the West”—that has imperially overcome and glossed over the historical fact and continued resonance of other worldly empires—and is now casting its extended shadow over the long history that has preceded it.

The final phase of Persian literary humanism in its encounter with European imperialism was in fact a liberating and emancipatory moment in its long and adventurous history. Persian literary humanism was formed and coagulated in an initial encounter with Arab imperialism in *ethnic* terms (Persian vs. Arab). It went through multiple transformative phases and was finally delivered to a renewed cosmopolitan worldliness in its encounter

8. An act of the (British) Council of India that required English, rather than native tongues (Sanskrit and Persian), to be the language of instruction in British-funded schools.

9. The underlying structure of knowledge and beliefs during a historical period (an important term in the writings of the French philosopher and historian of ideas MICHEL FOUCAULT); literally, “knowledge” (Greek).

1. Usually “classic example,” but here *locus* has its more literal Latin meaning of “place.”

2. FREDRIC JAMESON, “Third World Literature in an Age of Multinational Capitalism,” *Social Text* 15 (Autumn 1986): 69 [Dabashi’s note]. Third World: the “under developed” countries, many of them former colonies, now dominated by highly industrialized “First World” (largely Western) nations in a global economy.

with European imperialism—though this time around it was not confined within the royal courts but acted from the assured centrality of a public space it had in fact envisioned, imagined, articulated, and inhabited. The success of the Constitutional Revolution of 1906–1911 was interrupted by a corrupt monarchy (the Pahlavis) and an even more tyrannical theocracy (the Islamic Republic)³—a historical development that was nevertheless necessary to get rid of two overriding illusions that the monarchy and the theocracy had any claim over that public space, which was not theirs. The royal courts and the juridical scholasticism had been identically overcome and run over by that public space. Successive revolutionary uprisings in Iran from the mid-nineteenth century forward effectively claimed that public space for the democratic aspirations that had initiated it in the first place and filled it with poets, musicians, dramatists, filmmakers, journalists, scholars, each in his or her own way articulating the specifics of that public sphere.

The cosmopolitan worldliness embedded in Persian literary humanism enters a renewed pact with its history in this final phase. By *chaos/ashub* in this phase I mean a morphological transmutation of the *ethos/hanjar* of Persian literary humanism into multiple registers, thematically and formally alternating and unstable in its multiple formations, positing a dissipative mood of creativity that dismantles any regime of *knowledge/power* production and its presumed subject.⁴ *Chaos* is a condition of dissolute creativity whereby the positivist epistemes of *systematicity*, *longevity*, *endurance*, or even *coherence* finally yield to the open-ended expanse of a dissipative alterity. Poetry, fiction, drama, journalism, photography, music, and film keep producing, exhausting, and overcoming one another's capacities. Creative turbulence and formal disequilibria become the markers of a *mood* in the literary act that breaks any appearance of symmetry or systematicity and becomes negatively stochastic, formally disruptive—as perhaps best evident in Nima's poetic revolution, Hedayat's subversive fiction, or Kiarostami's⁵ fusion of fact and fantasy in his cinema. The creative mood remains constant in its synergy but keeps changing from prose to poetry, from complicated to simplified verse, from metric prosody to Nimaic revolt, from poetry to painting, from fiction to film, from painting to photography, from scholarship to journalism, etc. The more unstable these systems become, the more tyrannical and solid do appear the ruling regimes—which are farthest removed from the destabilizing fact of these alternating subsystems. In its varied and evasive forms, literary humanism keeps dodging power and metamorphosizing itself, from one genre to another, so that no *ruling regime* ever would be able to lay any claim to it. The transmutation of *ethos* into *chaos* is the last and most creatively dissipative disposition of Persian liter-

3. The Pahlavi dynasty began in 1925 with Reza Shah (1878–1944), who had led a military coup; his son Mohammad Reza was driven out of the country by the 1978–79 uprising that ended in the founding of the Islamic Republic of Iran, led by a Shiite cleric.

4. This notion of *chaos*, which I detect as the last mode of subjection in Persian literary humanism, is very much akin to what [Barbara] Riebling theorizes in her "Remodeling Truth, Power, and Society: Implications of Chaos Theory, Nonequi-

librium Dynamics, and Systems Science for the Study of Politics and Literature," in *After Poststructuralism: Interdisciplinarity and Literary Theory*, ed. Nancy Easterlin and Riebling (Evanston, Ill.: Northwestern University Press, 1993), pp. 177–201 [Dabashi's note].

5. Abbas Kiarostami (1940–2016), a prominent Iranian filmmaker. Nima Yushij (1895–1960), father of modern Persian poetry. Sadeq Hedayat (1903–1951), Persian novelist.

ary humanism—a creative effervescence corresponding to the globality of the public space that it has crafted and that it commands.

* * *

AN ALTERNATIVE THEORY TO MODERNITY

As both a philosophical predicament and a social phenomenon, “modernity” was and remains a principally European problem—while grappling with it in either hermeneutic or postmodern directions provides comparative clues as to how the question of the subject is to be understood or overcome on the colonial domains of that globally presumptuous “modernity.” To the degree that it became a global issue, whether by the colonized imagination of those who wanted “to modernize,” or else the modernity of the means of colonial conquest and domination,⁶ it has cast a European imperial map on the mind, body, soul, and history of the people thus dominated, “modernized,” and ruled. Even in the moments of their defiance, colonized people under the normative and imaginative spell of “the modern West” have reversely corroborated the European condition of “modernity” as their problem too.

What I have offered in this book on Persian literary humanism (*Adab*)⁷ is not in opposition to the European project of modernity—which remains a perfectly valid and thriving issue in its immediate European context (however falsely globalized). What I have outlined in some historical and textual detail is an alternative vision of subjection, whereby humans become human, in the very last stages of which, when the literary manner of subjection moved from the centrality of *ethnos*, to *logos*, to *ethos*, to *chaos* it was in fact eventually located and articulated within the European imperial context—carrying (obviously) the stamp of its previous imperial framings into newer encounters. In doing so, I have altogether discarded the “tradition *versus* modernity” binary—itself a manufactured opposition superimposed on Persian literary humanism to further universalize the European project of modernity. The far more accurate, grounded, and nuanced morphological succession of *ethnos*, *logos*, *ethos*, and *chaos* within successive imperial contexts includes, but does not privilege, the encounter of this humanism with European empires. It does not deny the historic significance of European imperialism—but it does not privilege it with deciding the entire history of the human race. What I have offered here, as a result, is not a theory of alternative modernity—but an alternative theory *to* modernity, the vision of an inner dynamic to the logic and rhetoric, poetic and aesthetic of Persian literary humanism, of its manner of subjection, of how was it that it made humans all too human.

Though I have narrated my story within the vast imperial context of Persian literary humanism, it would still be an exercise in futility and entirely self-delusional to purpose any idea of “humanism” a decade into the twenty-first century and not to confront the traumatizing matter of European philosophical antihumanism or pretend that it did not exist, or otherwise

6. The best example of how “modernizing” was “colonizing” for the non-European world is in Timothy Mitchell’s classical study, *Colonizing Egypt* (Berkeley: University of California Press,

1991) [Dabashi’s note].

7. Literature, excellent literature; also, good manners (Persian).

introduce and treat the masterpieces of a rich literary tradition like relics of bygone ages gathered in a museum. My intention has been to produce an account of Persian literary humanism that will speak directly to the challenging traumas of our time and not turn a magnificent literary heritage into an object of Orientalist curiosity, fetishized items of a nationalized literary history, or else the exclusive and privileged scholarly preoccupation of academically secluded "Persianists." I have offered a theory of Persian literary humanism as the *modus operandi* of a sustained historical mode of subjection as an alternative theory of European modernity, and I have defended the case of a literary humanism based on the particular, contingent, and unstable mode of subjection integral to this humanism. At the receiving end of European imperialism and perforce its philosophical predicaments, the normative hegemony of European humanism and antihumanism requires a sustained argument from within the context of historical experiences silenced precisely by that hegemony.

In making my case, I have also suggested that the literary act creates its own autonomous and even sovereign truth claims, so that through a Bakhtinian act of *heteroglossia*⁸ it becomes self-propelling, a kind of detranscendentalized alterity, its signs meaning nothing outside their signature in the text they signal, whereby everything that is said is said through an always already decentered and mislaid knowing subject that denies itself evident agency precisely at the moment that it authors itself. The mortal fragility of *Adami* (human) that keeps historicism at bay but incorporates history into the literary is such that the literary become self-revelatory, positing an evident historicity to the literary act. The autonomous fragility of *Adami* at the heart of Persian literary humanism joins the parabolic prose and poetry that Sa'di⁹ had made proverbial to stage the indeterminacy of the knowing subject and the effective dissolution of the narrator to present it as not just autonomous of the scholastic but in fact defiant of its own sovereignty over the fate of successive empires it served and subverted at one and the same time.

The problem of antihumanism is internal to the European philosophical crisis, globalized by virtue of the power of philosophical narratives that have subsumed the non-European philosophical domains to their self-assured dominance. Positing literary humanism by way of overcoming the problem of the subject points to the evident fact that the self-revelatory disposition of Persian *Adab* has no false self-systematizing subject to authorize or deauthorize it. Edward Said could not resolve the problem of humanism because he remained very much limited within Aristotelian (Western) mimesis¹ and never worked seriously through any other literary tradition than English—Arabic or otherwise. So theoretically he opted for a *quantitative* resolution of the problem of the subject by asking that more "world literature" be added to the repository of English and comparative literature project. This does not resolve the issue—it in fact exacerbates it if it ends up assimilating other wordly literatures into what the English and comparative literature programs call "world literature." English and comparative literature in fact

8. In the theory of the Russian literary theorist MIKHAIL M. BAKHTIN (1895–1975), the complex stratification of a language into different social dialects, class dialects, generational dialects, professional jargons, and so on.

9. Persian poet (ca. 1213–1292), a major figure in classical Persian literature.

1. See the *Poetics* of ARISTOTLE (384–322 B.C.E.), above. SAID (1935–2003), Palestinian-born American literary and cultural critic and social activist.

digests and absorbs anything that comes its way—whether through Franco Moretti's "distant reading,"² Gayatri Spivak's "close reading,"³ David Damrosch's "world literature,"⁴ or Edward Said's "critical humanism"⁵—all housed and launched in and from the English and comparative literature departments. The sovereign subject (falsely self-conscious) continues to gobble up all you feed it into something the (European) knowing subject can grasp and thus devour. The whole idea of "world literature" is an English and comparative literature department menu of exotic appetizers to wet the dulled appetites of their professors (there is only so much Dickens and Austen⁶ that one can have)—and scarce has anything to do with worldly literatures they thus carve up and serve to one another. Said's idea of including more "world literature" in the arsenal of "Western humanism" not only does not cure that gluttonous appetite for exotic food—it positively fattens the self-totalizing subject to disfigured proportions.

Working the problem through Persian literature (or the writing idiomaticity⁷ and reading protocols of any other non-European literature) reveals a variety of ways in which the sovereign subject is never formed to falsely organize any knowledge to begin with, for it to be in need of an antihumanism to dismantle it, for the "human" at the heart of (Persian) literary humanism is no knowing subject you can corner and name. The self-signifying literary act is always cognizant of its idiomaticity and as such has no false systematizing subject at its center to decenter, for its shifting, lyrical "heart" cannot hold, for its mimetic acts are always already momentary and indivisible into subject and object, and ipso facto self-destruct, for that "self" is always already somewhere else.

LITERATURE AND TRANSNATIONAL EMPIRES

To come to terms with the cosmopolitan worldliness of Persian literary humanism and the enduring significance of the manner in which it has posited the very fragile notion of *human*, it is imperative not to reduce it to a "national literature" and at this stage in fact to reverse the combined distortions of the Orientalist and nationalist readings of it back to its imperial history, and thus come to terms with its transnational, and even more accurately non-national, origins and disposition. The idea will be unsettling to ethnic nationalists of all sorts—Iranians, Afghans, Tajiks, Indians, Turks, Arabs,⁸ and so on—but the transnational and imperial context of this literary humanism is written into the very textual and contextual facts of its history, the very global disposition of its idiomaticities.

Because it emerged and thrived in multiple and multinational empires, Persian literary humanism does not exclusively belong to any single, contemporary, postcolonial nation-state. Afghanistan, India, Iran, Pakistan,

6. Two English novelists who are staples of the canon, Charles Dickens (1812–1870) and Jane Austen (1775–1817).

7. Idiomatic quality.

8. All peoples who were at different times part of Persian imperial formations.

Tajikistan, and any number of other central Asian states have identical claim on its long and meandering history—and rightly so. Ferdowsi, Nezami, Rumi, Sa'di, Hafez,⁹ and so on—these are the master practitioners of Persian poetry performed within multiple imperial contexts, having emerged on a continuum that has thrived on the primacy of *logos* and not *ethnos*—so that by “Persian” we mean, and we can only mean, a *language* and not any false pretense to a *race* or *ethnicity*, which in this case is entirely meaningless. There are no people, no nation, no race, and no ethnicity called “Persian.” Any such assumption is entirely fictitious. There is only a language called *Farsi*, or *Dari*, or *Tajik* in Iran, Afghanistan, or Tajikistan, respectively—for all of which there is only one word in English: Persian.

It is thus fundamentally flawed to call Ferdowsi's *Shahnameh*,¹ for example, an “Iranian national epic.” It is not. It is as much Afghanistan or Tajikistan's “national epic” as it is Iran's—if we are to commit the fallacy of attributing a product of an *imperial* age to a postcolonial nation-state. Ferdowsi's *Shahnameh* is not a *national* epic of Iran or any other postcolonial nation-state. It is an *imperial* epic, like all other epics, as indeed all epics are products of imperial imaginations—empires that by nature are transnational—in this case Iranians, Turks, Mongols, Indians, and so on. The contemporary Iran, Afghanistan, Tajikistan, Pakistan, India, and so on, have been integral to multiple empires over the last 1,400 years and beyond. It is that historic fact that must inform our reading of their literary products, and not the postcolonial nation-states that are, without a single exception, the product of the encounter of the last of those empires with European imperialism. Ferdowsi's *Shahnameh* belongs to Persian literary humanism so far as “Persian” is the linguistic designation of a *literary* tradition and not the *racial* register of any postcolonial nation and its anxiety of longevity and authenticity. Today when we say “English literature” it will have to include anything from Shakespeare to Hemingway, to Salman Rushdie, to Nadine Gordimer, to V. S. Naipaul²—meaning various literary expressions in English and within the real or imaginative contours of the British Empire, and thus “English” here means a language and not a race, an ethnicity, or a breed. The same is true for French or Spanish literature. Spanish literature includes anything from Cervantes to Juan Goytisolo, to Gabriel García Márquez, to Mario Vargas Llosa.³ It is a literary allusion predicated on a language that was made imperially global, and certainly not on a race. The same is true for “Persian literature”—it can only mean the language, for there are no people called “Persians.” Today, there are Iranians, Indians, Pakistanis, Afghans, Tajiks, and so on, as the nationals of various postcolonial nation-states—and they all have identical claims on various stages of Persian literature. Understood in its own terms, Ferdowsi's *Shahnameh* was and remains an imperial epic, produced in the context of

9. Classical Persian poets: Ferdowsi (ca. 935–ca. 1020), Nezami or Nizami (ca. 1141–1209), Rumi (1207–1273), and Hafez or Hafiz (1325/26–1390).

1. *The Book of Kings* (977–1010), a long epic poem that presents a history of the kings of Persia and is the most beloved of classical Persian works, celebrated not just in Iran but throughout the region influenced by Persian culture.

2. All writers in the English language, though only William Shakespeare (1564–1616) was born

in England: Ernest Hemingway (1899–1961) is American; Rushdie (b. 1947), born in India; Nadine Gordimer (1923–2014), South African; and Naipaul (b. 1932), born in Trinidad.

3. Peruvian writer (b. 1936). Miguel de Cervantes (1547–1616), Spanish novelist. Goytisolo (1931–2017), Spanish writer who lived in self-imposed exile in France and Morocco. García Márquez (1927–2014), Colombian novelist.

two successive and transnational empires, about another forgone imperial age—half-legendary and half-historical. This is not to rob Iranians, Afghans, and so on, of their “national epic”—it is to give it back to them with a far more global imaginary in which they should read their epic.

Ferdowsi’s *Shahnameh* was and has remained an imperial epic, transnational, multinational, cross-national, and thus nonnational, for the simple reason that the current postcolonial national boundaries have been drawn over and against multiple imperial mappings from the Samanids to the Safavids down to the Qajars.⁴ *Shahnameh* is the product and the manifestation of an imperial imagination. The problem becomes particularly jarring when contemporary Iranian scholars, staunch and fanatical nationalists against the very grain of historical facts, call *Shahnameh* “their” national epic, and then if the Turks or the Afghans call Rumi “their” poet or the Azerbaijanis call Nezami “their” poet, the nationalists get very angry. Ferdowsi’s birth and death place of Tus is much closer to Herat and Samarqand than it is to Tehran or Shiraz or Ahvaz.⁵ By what authority or reason can an Isfahani or a Tabrizi or an Ahvazi⁶ have a claim to the *Shahnameh* that a resident of Herat or Samarqand or Dushanbe⁷ does not? If the fact that Ferdowsi’s birthplace is within the current borders of Iran were to be the measure, then Iranians will instantly lose Rumi who was born in Balkh in Afghanistan and died in Konya in Turkey. And if they were to cite the fact that Rumi wrote much of his poetry in Persian, they would then instantly lose Avicenna and al-Ghazali and al-Tabari⁸ who wrote most of their significant work in Arabic—and thus Iraqis, Egyptians, Kuwaitis, Bahrainis, and Qataris have more right to them than would the people of Hamadhan, Tabarestan,⁹ or Tus.

All of these false problems arise when we juxtapose the colonially calibrated postcolonial map of the world—a gift of European colonialism that keeps giving—on the historical mapping of the world in which these poets and by extension Persian literary humanism wrote and was produced. The historical experience of Persian literary humanism is predicated on the fact that it began as the ethnic assumption of Iranians in juxtaposition to a racialized Arab sense of superiority in the late Umayyad and early Abbasid¹ dynasties. But as soon as the Saffarids and Samanid dynasties yielded power to the Turkic empires of the Ghaznavids and the Seljuqids, that *ethnos* as the trope of Persian literary humanism had moved to become a *logos* and “Persian” meant language, not race or ethnicity, for it was, in discourse and disposition, the imperial language and culture of vastly transnational—if we were to use the term *national* ahistorically here—empires. But even that *logos* did not stand still, and because of developments internal to Persian literary humanism and external to its varied imperial contexts, it transmuted

4. A Turkmen dynasty (1785–1925) that ruled over Persia, but defeats in 19th-century wars with Russia reduced its territory to Iran’s present-day limits.

5. Tehran, Shiraz, and Ahvaz are in present-day Iran, as is Tus, while Herat is in Afghanistan and Samarqand is in Uzbekistan.

6. A resident of Ahvaz. Isfahan is a city in west-central Iran; Tabriz is a city in extreme northwestern Iran.

7. Capital of Tajikistan.

8. All major Muslim intellectual figures born in Iran. Avicenna (the Latin name of Ibn Sina, 980–

1037) was a philosopher, scientist, and physician; al-Ghazali (1058–1111), a theologian and mystic; and al-Tabari (ca. 839–923), the author of a foundational commentary on the Qur’an.

9. Region of northern Iran. Hamadhan: region of western Iran.

1. The second Muslim dynasty (750–1258), which traced its lineage back to an uncle of the Prophet Muhammad; it overthrew the first, the Umayyad (661–750), which was descended from a clan of the Quraysh tribe and established itself after a fierce struggle following the death of Muhammad.

to *ethos* during the Timurid period—a development that was exacerbated during the Mughal, Safavid, Ottoman, and Russian² empires. But even that *ethos*, put into full practice in the crucible of its encounter with European imperialism, initially in India but later in the rest of the Persianate world, eventually transmuted into *chaos/ashub* as the productive trope of Persian literary humanism in the age of its active interface with colonial domination in the age of European imperialism. Precisely at the moment of its highest self-transcendence, European Orientalism recast it in *ethnic* terms and, in the work of E. G. Browne³ in particular, drew it toward *ethnos*. In this flawed and misbegotten (even catastrophic) development, European Orientalists like Browne were still infinitely superior to American postmodernist (even Marxist) literary theorists like Fredric Jameson—for if the ethnicizing of Persian literary humanism by the Orientalists was predicated on deep knowledge but poor theory, the postmodernists misapplied European theories that were, and have remained, constitutionally blind to alternative imperial maps of the world before their empire took over and shaped their critical imagination.

The problem with nationalist literary history is not just historical. It is also categorical. It creates much confusion and anarchy for the literary historian who insists on forcefully nationalizing a transnational history. Here is the late Zabihollah Safa, the preeminent Iranian literary historian, trying to explain what he is doing in tracing that history in India:

A point that needs to be explained is that in this chapter more than in others the domain of my discussions will cross the boundaries of Iran and extend to all those lands/sarzamins that Persian poetry and Adab has reached. I will go after Persian speaking/Farsi-guy poets, writers, and their patrons and those who have served Persian Adab anywhere in Asia Minor/Rum, India, and Transoxiana,⁴ that is necessary. I will discuss the life and work of any master Persian-speaker that I find in these lands, whether Iranian, Indian, or from Asia Minor/Rum. Every patron of Persian poets and prose stylists in these discussions is like a brother to me, who has arisen from my Kuy-o-Barzan/ neighborhood and has lived with me—be he a Turk, a Tajik, someone from Asia Minor, or an Indian. I very much hope that this task, which is diluted by no political intentions, will not become an excuse for [scurilous] interpretations of the sort we have known and recognize—and that no dust of gloom is caused by the steps taken by my thoughts.⁵

This anxiety is caused when the literary historian crosses the current borders of Iran and moves to India to complete his historical narrative. But that anxiety becomes entirely misplaced when we remember that Persian literature produced in the Mughal court or in south Asia had a perfectly natural habitat within an empire adjacent to the Safavid and Ottoman empires, long

2. The empire lasted from 1721 to 1917.

3. British scholar of the Middle East and Orientalist professor of Eastern languages (1862–1926); he traveled much in Persia and wrote numerous books, most notably *A Literary History of Persia* (4 vols., 1902–24).

4. Literally, the region beyond the Oxus River (the Amu Darya, in central and west Asia); it corre-

sponds roughly to modern Uzbekistan and parts of Turkmenistan, Tajikistan, and Kazakhstan. It was part of the Achaemenid Persian empire.

5. See Zabihollah Safa, *Tarikh-e Adabiyat dar Iran (History of Literature in Iran)* (Tehran: Tehran University [and other] Press, 1959–89), 5: 1:420 [Dabashi's note].

before the European empires eventually took them over and redrew the map of the world, within which Zabihollah Safa found himself when writing his history. Literary historians must be able freely to navigate from the Timurids to the Mughals back to the Qajars and so on without the slightest sense of anxiety if they cross over the political boundaries of the map that European empires have imposed on them and their world. Without that crossing over something constitutional, something definitive to Persian literary cosmopolitanism will be lost to the historian.

Another effect of this forced nationalization of literature is the racialization of literary taste, as is evident in the expression *Sabk-e Hendi*,⁶ propagated at the height of Reza Shah's ultra-nativist nationalism by the Iranian literary critic Mohammad Taqi Bahar,⁷ who in a poem said:

Their thoughts were weak and their imagination weird;
Poetry was filled with themes but non-attractive—
Devoid of elegance.
Every poet was carrying the burden of meaning;
Much painfully—
For which reason Sabk-e Hendi was so garish.⁸

Upon this racialized characterization and dismissal of a literary taste in the Mughal court, yet another literary historian, Yahya Aryanpour, further adds his own gloss and in fact endorses it by saying that at this point "poetry [had] left the royal court and degenerated in the hands of the masses (*beh dast-e ammeht oftad*)."⁹

The same racialization of literary taste is also evident in the thinking of Orientalist scholar Jan Marek about Persian literature in India: "It might indeed be difficult to point out a comparable example in the history of the world literature of a language being adopted, and to find another country having mastered a foreign language to such a degree as was the case with Persian in India. The Indians have contributed very really to the rise of Persian literature, and to them we owe many of its most brilliant pages."¹ Persian was not "adopted" in the Mughal court, nor was it a "foreign language" to its domain. Indians have as much contributed to Persian, Hindi, or English literature as to Bengali, Gujarati, or Marathi—and they are all "their own languages." Here is the perfect example of how Orientalist ethnic nationalization of Persian literature completely distorts the imperial (transnational) context of Persian language and alienates people from their own language and literature.

Against the grain of these false categories, and placing Persian literary humanism in its proper context of successive empires, I have suggested in the unfolding of Persian literary humanism as a historic event the successive formation of four nodal tropes—*ethnos*, *logos*, *ethos*, and *chaos*. If I were to give a comparative example of this idea it would be Hayden White's *Meta-history*, in which he suggests the historical unfolding of four major tropes

6. Persian language poets in India.

7. Noteworthy professor, poet, journalist, historian, and politician (1884–1951), whose works exhibit Iranian nationalistic fervor. For Reza Shah Pahlavi, see p. 2305, n. 3.

8. See Yahya Aryanpour, *Az Saba ta Nima* (From

Saba to Nima) (Tehran: Zavvar, 1972–95), 1:9 [Dabashi's note].

9. *Ibid.*, 1:8 [Dabashi's note].

1. See Jan Rypka, ed., *History of Iranian Literature* (Dordrecht, Holland: D. Reidel, 1968), 732–33 [Dabashi's note].

(from *metaphor* to *metonymy*, to *synecdoche*, and finally *irony*).² White offers these tropes by way of alerting historians to the use of linguistic devices in the writing of history. I offer these four morphological tropes by way of an historical unfolding of the *modus operandi* of literary production, moving from one imperial setting to another, and thus repositing the un/known subject at the heart of the literary act. This succession of the tropics of subjection in Persian literary imagination is to me a far more accurate and rooted grounding of historical agency than the European project of modernity. If we follow this train of thought and course of development internal to the logic and rhetoric of Persian literary humanism in multiple imperial contexts over a period of 1,400 years, the question is no longer the possibility of an alternative modernity, but the fact that this course of development is an entirely indifferent, autonomous matrix of subjection to the European philosophical problem of modernity and its contingent crisis of the subject. The imperial and discursive force of European modernity and particularly its gestation as “colonial modernity” have forced themselves on our reading of the non-European worlding in those imported and super/imposed terms. The question here is not to disregard, bypass, or ignore the historical fact of European imperialism, but not to privilege it over all the other previous imperial settings in which Persian literary humanism has been acted out. The Seljuqid, Mongol, Timurid, Mughal, and Safavid empires each had their own distinct impact on Persian literary humanism. Against the grain and texture of this history, the “nationalization” of Persian literature has been instrumental in deworlding it—unplugging it from its historical habitat and casting it into a postcolonial context that assigns it a “Third World” status and glosses over its historic worldliness. My insistence in this book on restoring its historicity and denationalizing its imperial context is to retrieve its cosmopolitan worldliness and its multiple manner of subjection that includes *ethnos* but is not limited to it.

FAREWELL TO OUR ORIENTALISTS

The enduring impact of Orientalism, ethnic nationalism, and area studies on the study of Persian (and all other non-European) literary humanism has been quite dire. Up until now, the study of Persian literature, both classical and modern, has suffered from a depth of theoretical poverty that it has inherited from Orientalism and extended into nativist nationalism—an aversion to theory that mirrors a tired and belabored face-off between the two overlapping narratives of Orientalism and ethnic nationalism. This poverty of insight is a closed-circuit system that has now degenerated into an Islamic Republic giving lip service to “the glorious Iranian culture” by way of covering up its atrocious abuses of a world religion. Exceedingly competent textual criticism has of course created reliable and heavily glossed texts—from Ferdowsi’s *Shahnameh* to Mehdi Akhavan Sales’s³ poetry—but the reading

2. See HAYDEN WHITE, *Metahistory: The Historical Imagination in Nineteenth-Century Europe* (Baltimore: Johns Hopkins University Press, 1975) [Dabashi’s note]. The four figures of speech are not usually viewed as forming a historical progression. *Metaphor* implies comparison between two unlike entities; in *metonymy*, one word is

used to mean another to which it is connected by any way other than similarity; *synecdoche*, a form of metonymy, is a naming of a part of something for its whole, or vice versa; and in *irony*, the real meaning is hidden or contradicted by the literal meaning of the words.

3. A pioneer in Persian free verse (1929–1990).

of those texts very much suffers from an analytical positivism that has very little beyond a nativist-nationalist, analytical regurgitation of old-fashioned Orientalism. Outside Iran the scene is not any better with a bizarre combination of watered-down Orientalism and literary comparatist cross-breeding in the impoverished field of "Iranian Studies." The answer to all of this is not an "application" of high theory to "Third World literature"—an even more paralyzing cliché. What is needed is theorization of the history of this literature from within itself, predicated on a detailed textual hermeneutics⁴ that is informed by larger theoretical concerns in an organic (not mechanical) way—and always in conversation with other literary settings but not beholden to them.

As Orientalism alienated and othered Persian literature to its own authorship and readership, Iranian literary nativism allegorized it for a nationalist politics, both concealing the worldliness of Persian literary humanism—which in the twentieth century ran away from strictly literary terms and manifested itself in cinema, art, music, drama, and so on. The driving forces of Persian literary humanism became runaway metaphors—decentering it into multiple subject formation. While Orientalist and ethnic nationalist narratives assimilated Persian literary humanism into the colonial and postcolonial world, in parallel terms, English and comparative literature de-worlded it altogether by considering it part of "the Third World Literature." What I have sought to do in this book is to retrieve its historic worldliness, a worldly cosmopolitanism that extends from India through Iran to the Mediterranean basin. That world is now lost to the overextended narratives of Orientalism and ethnic nationalism competing, complementing, and even cross-metaphorizing each other.

The European Orientalist writing on Persian literary history, best exemplified by E. G. Browne and continued to this day with full force and through multivolume projects, has categorically glossed over the inner dynamics of its emotive universes and assimilated downward toward the colonial context of its reception. Browne and other European Orientalists cast Persian literary humanism in ethnic nationalist terms precisely at a moment when for more than 1,000 years after the successful transmutation of its *ethnos* into *logos* and then to *ethos*, it had finally reached a momentous point of self-transmutation into *chaos*—bringing the paralingual semiosis it had achieved during the Timurid and Safavid eras to full literary production within the European imperial context and the creative formation of a public space. Entirely blinded to this tropic development, E. G. Browne and other Orientalists, deeply learned as they were, wasted their vast knowledge of Persian literature on a theoretically flat-footed narration of Persian literary humanism in an *ethnos* tone from beginning to end.

Recasting the masterpieces and thereby the history of Persian literature into a decidedly different narrative than the one canonized by Orientalists and exacerbated by the nativist nationalists, I have offered literary humanism as a key concept in comparative literary studies. I use and locate the concept of "literary humanism" somewhere between its articulation by the detailed textual hermeneutics of George Makdisi⁵ and its later compara-

4. Theory of interpretation.

5. Prominent American scholar of Islamic studies (1920–2002).

tive theorization by Edward Said and then extend it into a specifically Persian literary context. Persian literature has historically been cast into the shadow of Arabic literary humanism, which in turn prevented George Makdisi from seeing and realizing that humanism was a reality *sui generis* and should not be framed in the shadow of “Western” literary humanism or Islamic scholasticism. The domain of Persian (or Arabic, Turkish, Urdu) literary humanism was the vast arena of worldly literatures (in the plurality of worlds they have occupied) and most certainly not as “world literature,” a historical fact that Edward Said never seriously studied during his lifelong preoccupation with humanism, with a mode of knowledge production that did not implicate an all-knowing, imperial, subject position. My objective has been to posit literary humanism as a reality *sui generis*, autonomous of any alterity to “Western humanism,” and adjacent to Islamic scholasticism (my conversation with George Makdisi), and to predicate it on an autonormative constellation of subject positions that posits humanism without implicating an all-knowing subject in the making of a cosmopolitan worldliness (my conversation with Edward Said). Thus, in conversation with two monumental figures in the study of literary humanism, I have sought to make my case.

2012

DICK HEBDIGE

b. 1951

In his sharp yet sympathetic examinations of youth subcultures, Dick Hebdige displays the theoretical and political commitments of cultural studies. His work—along with that of STUART HALL—exemplifies cultural studies in its contemporary British incarnation. Hebdige combines semiotic analysis with questions of political resistance and effectiveness in his famous study of marginalized subcultures like punk. The result is a cultural studies approach resembling but distinct both from sociological investigations of deviance and from mainstream literary criticism of printed texts.

Born into a London working-class family, Hebdige received an M.A. from the celebrated University of Birmingham Centre for Contemporary Cultural Studies during its 1970s heyday. He taught at Goldsmith's College of the University of London from 1984 to 1992 before moving to the United States to become dean of Critical Studies at the California Institute of the Arts; he subsequently taught in the Film and Media Studies Department at the University of California at Santa Barbara.

Our selection from *Subculture: The Meaning of Style* (1979) illustrates cultural studies' effort to engage analytically and politically with popular culture. How can the cultural critic, either from the outside or as a participant-observer, honor the expressive products of a subculture while also realistically assessing the relation of those expressed values, beliefs, and feelings to mainstream culture? The last thing that Hebdige wants is to repeat the condescending conclusion often found in radical Marxist analyses, which reflexively fault various marginalized groups for diverting their attention from the “real” site of political struggle to invest their energy in

sideshows and trivialities. The rebellious attitudes of punk and other youth subcultures—expressed through music, dance, dress, and slang—should be taken seriously in their own right and not viewed as allegories or displaced symptoms of class struggle. Instead, repeating a strategy akin to that adopted by the Dada movement after World War I, Hebdige characterizes much subcultural expression as “noise.” Post–World War II British youth subcultures deliberately and provocatively eschew meaning, and even try to destroy it. All attempts at explanation—whether by Marxists focused on class struggle, or by sociologists with their talk of juvenile delinquency, or by psychologists preoccupied with dysfunctional families—that seek to clarify a subculture’s behavior and expressive forms represent efforts to co-opt, incorporate, or tame what aspires to stand as radically disruptive, as irreducibly alien. An almost inevitable dialectic is set in motion. The more the experts (speaking in the newspapers or from positions in academia or the government) try to explain the outsiders, the more outrageous the outsiders are pushed to become in their desire to transcend all explanation.

Besides mobilizing the connections between punk and the historical avant-gardes of Dada and surrealism, Hebdige also appropriates the concept of “moral panic” from the sociologist Stan Cohen to explain anxious and hysterical societal responses to radical disruptions of normal meanings. The heightened rhetorics of denunciation that characterize moral panics serve to consolidate approved models of behavior and justify the punitive actions taken against deviants. Not surprisingly, queer theorists such as EVE KOSOFSKY SEDGWICK have also considered the dynamics of moral panics. Hebdige shows that initial attempts to mark the deviant Other as beyond the pale are almost always accompanied by follow-up efforts to domesticate those same deviants. He points to newspaper articles about punks and their mothers that situate the deviant within the family structure and consumer society.

Hebdige’s sympathy with the anarchistic urge to disrupt established signification, to produce “noise,” stands in tension with the general semiotic basis of his own analysis. The main claim of semiotics is that every object, practice, and relation within human societies is enmeshed in a systemic web of codes and conventions that constitute the specific item’s meaning and value. Like Stuart Hall, Hebdige understands “culture” to designate the semiotic processes and practices through which people, actions, and things acquire significance. Against MATTHEW ARNOLD’s view of culture as the best that has been said and known, cultural studies considers culture to include the whole way of life of a people or a subset of that people. In RAYMOND WILLIAMS’s phrase, “culture is ordinary.” In this understanding of culture, that a woman has blond hair is a fact; but the meaning of being “a blonde” is culturally produced and varies in different cultures or in different subcultures. Thus, to be “a blonde” could be an advantage in Hollywood and a disadvantage at Harvard. Different societies vary not just in what they do but in how they understand and value what they do. Influenced by semiotics, cultural studies attends both to the significance attached to various objects and activities in a particular society *and* to the linguistic and symbolic processes through which significance is produced. It sets code breaking and deviance against preexisting cultural conventions and norms.

Two further consequences of cultural studies’ semiotic approach should be noted. Literary texts, like other artworks, are neither more nor less important than any other cultural artifact or practice. Keeping the emphasis on how cultural meanings are produced, circulated, and consumed, the investigator will focus on art or literature insofar as such works connect with broader social factors, not because they possess some intrinsic interest or special aesthetic value. The subsumption of literature into the broader cultural field explains the widespread perception that cultural studies poses a threat to literary criticism.

In addition, the turn to semiotics connects British cultural studies to structuralism and poststructuralism, especially in elevating social codes to a position of importance over individual speakers. The production of significance is not simply a subjective or

individual process; it is communal. Meanings are assigned within language, not by selves but within systems, and things come to us already laden with meanings. Even when semioticians view this process as dynamic, with meanings being constantly created and reconfigured, the conflicts that generate change are not between selves but between larger social forces. Hebdige reads punk as a social symptom, not as an isolated outbreak or as the production of a few geniuses or rebels.

Many of the British cultural studies writers, however, retain a leftist populism that wants to celebrate the creative and resistant political agency of ordinary men and women. As a result, Hebdige, like Hall, is less ready than are some French theorists to jettison all faith in small-scale action and choice. This reluctance explains his focus on "subcultural style," which can be defined as the creative and often oppositional variations that come into existence as marginal groups reshape the meanings made available by preexisting dominant codes. In the terms of FERDINAND DE SAUSSURE's influential linguistic theory, style is *parole*, the utterances of actual speakers: they use the words and grammatical structures of the already-existing *langue* (language system), but they still have considerable latitude in how they combine its elements at any particular moment.

Yet the semiotic and structuralist framework makes it impossible to step outside of signifying practices altogether. It is therefore unclear how the anarchist (or Dadaist or punk musician) could avoid signifying and actually produce pure noise. The radical's gestures still acquire meaning through their relationship (a hostile one in this case) to prevailing modes of meaning. Thus, it is not surprising that Hebdige, in our selection, turns quickly from the notion of "noise" to the mechanics of "incorporation." The discussion thereby shifts from a battle between meaning and nonmeaning to a struggle over how the punk musician's antics will be understood. What meanings will punk acquire in the cultural processes of meaning making, and whose understanding of punk will come to dominate? At this point in his argument, Hebdige appears quite pessimistic. The strategies by which the mainstream and dominant culture can incorporate and thus tame the challenging subcultures appear destined to win.

The reasons for this pessimism are complex—and probably better understood as marking the site of a troubled theoretical and political nexus than as supporting any kind of definitive judgment. In many ways, Hebdige is tackling the same questions that take center stage in JUDITH BUTLER's feminist work. What room is available for selves to maneuver within the signifying systems that constitute them and the conditions within which they live and act? "Commodities," Hebdige writes, "can be symbolically 'repossessed' in everyday life, and endowed with implicitly oppositional meanings." The famous punk safety pin stuck through an eyebrow would be an example. A focus on the creative "resignification" of received commodities, practices, institutions, and values recurs throughout the work of cultural studies scholars, and opposition and resistance preoccupy their research. Against any and all images of passive consumers or silent majorities, they note that contemporary populations regularly work within constrained circumstances to turn what society offers them into something that, to at least some extent, serves their own needs and purposes. Hebdige is considering the extent to which resignification simultaneously occurs within the prevailing systems of signification, using the materials available within those systems, *and* is capable of transforming received materials and even prevailing systems by expressing things "differently." Thus, for example, while he worries that punk is always already working in the dominant commodity form of consumer capitalism, he also wants to avoid claiming that punk therefore cannot be transformative in any way.

We might say that the underlying problem in Hebdige's own work is how to provide a convincing portrait of social transformation once the notion of revolution is tacitly abandoned. Changes will be incremental (it seems), will always involve some steps sideways for every step forward, and will be difficult to assess at any particular social

site. So the process of conflict “invariably ends with the simultaneous diffusion and defusion of the subcultural style.” That result is simultaneously progressive (more people are now party to this radical critique) and regressive (the critique itself is less radical than it was at first). For cultural studies, media and market play a big role in disseminating and blunting the forces of social opposition.

Hebdige’s—and cultural studies’—residual Marxism is apparent when he turns to the concept of “ideology” at the end of our selection. He accepts the French post-structuralists’ critique of the orthodox Marxist definition of ideology as the inevitable dominance in a given society of the ideas, beliefs, and values of the ruling class. From ROLAND BARTHES, Hebdige takes the idea that ideology “naturalizes.” In other words, ideology obscures the class orientation of dominant beliefs, habits, practices, and social structures by presenting all of these things as inevitable, as just the way (the only possible way) things are, as “natural.” But he uses Barthes’s theory of ideology to make a traditional Marxist observation, pointing out that the dominant ideology rewrites the punk subculture to obscure its origins in and protest against a set of “real historical contradictions” manifest in “unemployment . . . and narrow options.” In the ideological rewriting carried out by the media and through the official discourses of experts and government bureaucrats, a collective protest against those economic contradictions is turned into the expressive talents displayed by individual musicians who have no connection to the neighborhoods, social class, and subcultures from which they emerge. The success of the few who become “stars” serves as proof of an “open society” that rewards hard work and merit. Ideology renders thinking of achievement in individualistic terms “natural,” and thereby obscures the social conditions that largely determine the chances for “success.”

Hebdige’s use of the concept of ideology indicates that he is no simple celebrant of youth culture. Symbolic repossessions are not, in themselves, effective acts of political resistance. Though “implicitly” oppositional, they are not direct challenges to the powers that be. In particular, the challenges offered by contemporary youth subcultures, notably punks, are “expressed obliquely, in style”—particularly in visual styles suited to a society in which television, advertising, and film foster spectacle. Because these gestures are oblique, an analyst like Hebdige is needed to interpret and translate them into political statements. At minimum, he implies that the disenchanted young can become effective political agents only if they attain some self-understanding of the larger social field, if they are not blinded by ideological obfuscations.

Hebdige here touches by implication on one of the most conflicted topics in cultural studies. Some practitioners of cultural studies worry that presenting the activities of subcultures as either inchoate or misplaced resistance, which require an intellectual to transform them into something truly political, is elitist. Conversely, to simply celebrate a marginal group’s creativity and spectacular acts of resistance leaves everything as it is, within a contemporary scene that hardly appears to be transformed by various acts of “symbolic repossession.” Yet we should also wonder just how and when we would be able to detect social transformation. What yardstick would differentiate “real” or “substantial” from “superficial” changes? There are no easy answers to these questions. In part, the relation of the aesthetic to the political is at issue. A concern with style is, after all, a traditional aesthetic concern. To what extent can style—or any kind of artistic expression today—be an articulation of a socially critical position or, more dramatically, a potentially transformative political act?

Subculture: The Meaning of Style Keywords: Cultural Studies, Ideology, Institutional Studies, Marxism, Media, Popular Culture, Semiotics

From Subculture: The Meaning of Style

From Chapter 6

SUBCULTURE: THE UNNATURAL BREAK

I felt unclean for about 48 hours.

—G.L.C. councillor after seeing a concert by the Sex Pistols¹
(reported *New Musical Express*, 18 July 1977)

[Language is] of all social institutions, the least amenable to initiative. It blends with the life of society, and the latter, inert by nature, is a prime conservative force.

—Saussure,² *Course in General Linguistics* (1974)

Subcultures represent 'noise' (as opposed to sound): interference in the orderly sequence which leads from real events and phenomena to their representation in the media. We should therefore not underestimate the signifying power of the spectacular subculture not only as a metaphor for potential anarchy 'out there' but as an actual mechanism of semantic disorder: a kind of temporary blockage in the system of representation. As John Mepham has written:

Distinctions and identities may be so deeply embedded in our discourse and thought about the world whether this be because of their role in our practical lives, or because they are cognitively powerful and are an important aspect of the way in which we appear to make sense of our experience, that the theoretical challenge to them can be quite startling.³

Any elision, truncation or convergence of prevailing linguistic and ideological categories can have profoundly disorienting effects. These deviations briefly expose the arbitrary nature of the codes which underlie and shape all forms of discourse. As Stuart Hall has written (here in the context of explicitly political deviance):

New . . . developments which are both dramatic and 'meaningless' within the consensually validated norms, pose a challenge to the normative world. They render problematic not only how the . . . world is defined, but how it ought to be. They 'breach our expectancies'. . .⁴

Notions concerning the sanctity of language are intimately bound up with ideas of social order. The limits of acceptable linguistic expression are prescribed by a number of apparently universal taboos. These taboos guarantee the continuing 'transparency' (the taken-for-grantedness) of meaning.

Predictably then, violations of the authorized codes through which the social world is organized and experienced have considerable power to provoke and disturb. They are generally condemned, in Mary Douglas' words, as 'contrary to holiness' and Lévi-Strauss has noted how, in certain primitive myths,

1. Rock band (1975–78), fronted by Sid Vicious and Johnny Rotten, that epitomized punk music: aggressive, antiestablishment, and nihilistic. G.L.C.: the Greater London Council, which governed the city of London.

2. FERDINAND DE SAUSSURE (1857–1913), Swiss linguist; for his *Course in General Linguistics*, originally published in 1915, see above.

3. John Mepham, "The Theory of Ideology in

Capital," *Working Papers in Cultural Studies* 6 (1974), University of Birmingham [Hebdige's note].

4. Stuart Hall, "Deviancy, Politics and Media," in P. Rock and M. McIntosh (eds.), *Deviance and Social Control* (Tavistock, 1974) [Hebdige's note]. HALL (1932–2014), Jamaican-born British cultural critic.

the mispronunciation of words and the misuse of language are classified along with incest as horrendous aberrations capable of 'unleashing storm and tempest'.⁵ Similarly, spectacular subcultures express forbidden contents (consciousness of class, consciousness of difference) in forbidden forms (transgressions of sartorial and behavioural codes, law breaking, etc.). They are profane articulations, and they are often and significantly defined as 'unnatural'. The terms used in the tabloid press to describe those youngsters who, in their conduct or clothing, proclaim subcultural membership ('freaks', 'animals . . . who find courage, like rats, in hunting in packs'⁶) would seem to suggest that the most primitive anxieties concerning the sacred distinction between nature and culture can be summoned up by the emergence of such a group. No doubt, the breaking of rules is confused with the 'absence of rules' which, according to Lévi-Strauss, 'seems to provide the surest criteria for distinguishing a natural from a cultural process'.⁷ Certainly, the official reaction to the punk subculture, particularly to the Sex Pistols' use of 'foul language' on television⁸ and record,⁹ and to the vomiting and spitting incidents at Heathrow Airport¹ would seem to indicate that these basic taboos are no less deeply sedimented in contemporary British society.

TWO FORMS OF INCORPORATION

Has not this society, glutted with aestheticism, already integrated former romanticisms, surrealism, existentialism and even Marxism to a point? It has, indeed, through trade, in the form of commodities. That which yesterday was reviled today becomes cultural consumer-goods, consumption thus engulfs what was intended to give meaning and direction.²

5. Mary Douglas, *Purity and Danger* (Penguin, 1967), and Claude Lévi-Strauss, *The Elementary Structures of Kinship* ([1949; trans.]). Eyre and Spottiswoode, 1969) [Hebdige's note]. Douglas (1921–2007), British cultural anthropologist. LÉVI-STRAUSS (1908–2009), French structuralist anthropologist.

6. This was part of a speech made by Dr. George Simpson, a Margate magistrate, after the mod–rocker clashes of Whitsun, 1964. For sociologists of deviance, this speech has become the classic example of rhetorical overkill and deserves quoting in full: "These long-haired, mentally unstable, petty little hoodlums, these sawdust Caesars who can only find courage like rats, in hunting in packs" (quoted in P. Cohen, "Sub-cultural Conflict and Working Class Community," *Working Papers in Cultural Studies* 2 [1972], University of Birmingham) [Hebdige's note]. "Mod–rocker clashes": fights between 2 subcultures, the clean-cut and motor scooter-riding "mods" and the leather-clad, motorcycle-riding "rockers," that broke out in Margate and other beach resorts in southern England in May 1964 over a holiday weekend (in observance of Whitsunday, or Pentacost, the 7th Sunday after Easter).

7. Lévi-Strauss, *The Elementary Structures of Kinship* [Hebdige's note].

8. On 1 December 1976 the Sex Pistols appeared on the Thames twilight programme *Today*. During the course of the interview with Bill Grundy they used the words 'sod,' 'bastard' and 'fuck.'

The papers carried stories of jammed switchboards, shocked parents etc. and there were some unusual refinements. The *Daily Mirror* (2 December) contained a story about a lorry driver who had been so incensed by the Sex Pistols' performance that he had kicked in the screen of his colour television: "I can swear as well as anyone, but I don't want this sort of muck coming into my home at teatime" [Hebdige's note]. Thames: formerly an independent television network (1968–92), based in London.

9. The police brought an unsuccessful action for obscenity against the Sex Pistols after their first LP *Never Mind the Bollocks* was released in 1977 [Hebdige's note]. "Bollocks": vulgar British slang equivalent to the American "balls" (i.e., testicles).

1. On 4 January 1977 the Sex Pistols caused an incident at Heathrow Airport by spitting and vomiting in front of airline staff. The *Evening News* quoted a check-in desk girl as saying: "The group are the most revolting people I have ever seen in my life. They were disgusting, sick and obscene." Two days after this incident was reported in the newspapers, EMI terminated the group's contract [Hebdige's note]. EMI: British music company, one of the largest record companies and the largest music publisher in the world.

2. Henri Lefebvre, *Everyday Life in the Modern World* ([1968; trans.] Allen Lane, 1971) [Hebdige's note]. Lefebvre (1901–1991), French sociologist.

We have seen how subcultures 'breach our expectancies', how they represent symbolic challenges to a symbolic order. But can subcultures always be effectively incorporated and if so, how? The emergence of a spectacular subculture is invariably accompanied by a wave of hysteria in the press. This hysteria is typically ambivalent: it fluctuates between dread and fascination, outrage and amusement. Shock and horror headlines dominate the front page (e.g. 'Rotten Razored', *Daily Mirror*, 28 June 1977) while, inside, the editorials positively bristle with 'serious' commentary³ and the centrespreads or supplements contain delirious accounts of the latest fads and rituals (see, for example, *Observer* colour supplements 30 January, 10 July 1977, 12 February 1978). Style in particular provokes a double response: it is alternately celebrated (in the fashion page) and ridiculed or reviled (in those articles which define subcultures as social problems).

In most cases, it is the subculture's stylistic innovations which first attract the media's attention. Subsequently deviant or 'anti-social' acts—vandalism, swearing, fighting, 'animal behaviour'—are 'discovered' by the police, the judiciary, the press; and these acts are used to 'explain' the subculture's original transgression of sartorial codes. In fact, either deviant behaviour or the identification of a distinctive uniform (or more typically a combination of the two) can provide the catalyst for a moral panic. In the case of the punks, the media's sighting of punk style virtually coincided with the discovery or invention of punk deviance. The *Daily Mirror* ran its first series of alarmist centrespreads on the subculture, concentrating on the bizarre clothing and jewellery during the week (29 Nov–3 Dec 1977) in which the Sex Pistols exploded into the public eye on the Thames *Today* programme. On the other hand, the mods, perhaps because of the muted character of their style, were not identified as a group until the Bank Holiday⁴ clashes of 1964, although the subculture was, by then, fully developed, at least in London. Whichever item opens the amplifying sequence, it invariably ends with the simultaneous diffusion and defusion of the subcultural style.

As the subculture begins to strike its own eminently marketable pose, as its vocabulary (both visual and verbal) becomes more and more familiar, so the referential context to which it can be most conveniently assigned is made increasingly apparent. Eventually, the mods, the punks, the glitter rockers can be incorporated, brought back into line, located on the preferred 'map of problematic social reality' at the point where boys in lipstick are 'just kids dressing up', where girls in rubber dresses are 'daughters just like yours'.⁵ The media, as Stuart Hall has argued, not only record resistance,

3. The 1 August 1977 edition of the *Daily Mirror* contained just such an example of dubious editorial concern. Giving 'serious' consideration to the problem of ted-punk violence along the King's Road, the writer makes the obvious comparison with the seaside disturbances of the previous decade: "[The clashes] must not be allowed to grow into the pitched battles like the mods and rockers confrontations at several seaside towns a few years back." Moral panics can be recycled; even the same events can be recalled in the same prophetic terms to mobilize the same sense of outrage [Hebdige's note]. The teds, or teddy boys, were British youth who embraced American black rhythm and blues and wore smart clothing,

including Edwardian-style jackets. The British punks, associated with punk rock, aggressively staged themselves as alienated outcasts, wearing rough clothes and favoring body piercings, dyed hair, and tattoos. The King's Road: a major street in West London that in the 1970s became a center of the punk movement.

4. In England, one of a number of legal holidays on which banks are closed (in this case, the Monday after Whitsunday).

5. Clifford Geertz, "Ideology as Cultural System," in D. E. Apter (ed.), *Ideology and Discontent* (Free Press, 1964); see pp. 98–99, 158–59 n. 8 [Hebdige's note].

they 'situate it within the dominant framework of meanings' and those young people who choose to inhabit a spectacular youth culture are simultaneously *returned*, as they are represented on TV and in the newspapers, to the place where common sense would have them fit (as 'animals' certainly, but also 'in the family', 'out of work', 'up to date', etc.).⁶ It is through this continual process of recuperation that the fractured order is repaired and the subculture incorporated as a diverting spectacle within the dominant mythology from which it in part emanates: as 'folk devil', as Other, as Enemy. The process of recuperation takes two characteristic forms:

- (1) The conversion of subcultural signs (dress, music, etc.) into mass-produced objects (i.e. the commodity form);
- (2) The 'labelling' and re-definition of deviant behaviour by dominant groups—the police, the media, the judiciary (i.e. the ideological form).

The Commodity Form

The first has been comprehensively handled by both journalists and academics. The relationship between the spectacular subculture and the various industries which service and exploit it is notoriously ambiguous. After all, such a subculture is concerned first and foremost with consumption. It operates exclusively in the leisure sphere ('I wouldn't wear my punk outfit for work—there's a time and a place for everything'). It communicates through commodities even if the meanings attached to those commodities are purposefully distorted or overthrown. It is therefore difficult in this case to maintain any absolute distinction between commercial exploitation on the one hand and creativity/originality on the other, even though these categories are emphatically opposed in the value systems of most subcultures. Indeed, the creation and diffusion of new styles is inextricably bound up with the process of production, publicity and packaging which must inevitably lead to the defusion of the subculture's subversive power—both mod and punk innovations fed back directly into high fashion and mainstream fashion. Each new subculture establishes new trends, generates new looks and sounds which feed back into the appropriate industries. As John Clarke has observed:

The diffusion of youth styles from the subcultures to the fashion market is not simply a 'cultural process', but a real network or infrastructure of new kinds of commercial and economic institutions. The small-scale record shops, recording companies, the boutiques and one- or two-woman manufacturing companies—these versions of artisan capitalism, rather than more generalised and unspecific phenomena, situate the dialectic of commercial 'manipulation'.⁷

However, it would be mistaken to insist on the absolute autonomy of 'cultural' and commercial processes. As Lefebvre puts it: 'Trade is . . . both a

6. Stuart Hall, "Culture, the Media and the 'Ideological Effect,'" in J. Curran et al. (eds.), *Mass Communication and Society* (Arnold, 1977) [Hebdige's note].

7. John Clarke, "Style," in Stuart Hall et al. (eds.), *Resistance through Rituals* (Hutchinson, 1976) [Hebdige's note].

social and an intellectual phenomenon',⁸ and commodities arrive at the market-place already laden with significance. They are, in Marx's words, 'social hieroglyphs'⁹ and their meanings are inflected by conventional usage.

Thus, as soon as the original innovations which signify 'subculture' are translated into commodities and made generally available, they become 'frozen'. Once removed from their private contexts by the small entrepreneurs and big fashion interests who produce them on a mass scale, they become codified, made comprehensible, rendered at once public property and profitable merchandise. In this way, the two forms of incorporation (the semantic/ideological and the 'real'/commercial) can be said to converge on the commodity form. Youth cultural styles may begin by issuing symbolic challenges, but they must inevitably end by establishing new sets of conventions; by creating new commodities, new industries or rejuvenating old ones (think of the boost punk must have given haberdashery!). This occurs irrespective of the subculture's political orientation: the macrobiotic restaurants, craft shops and 'antique markets' of the hippie era were easily converted into punk boutiques and record shops. It also happens irrespective of the startling content of the style: punk clothing and insignia could be bought mail-order by the summer of 1977, and in September of that year *Cosmopolitan* ran a review of Zandra Rhodes'¹ latest collection of couture follies which consisted entirely of variations on the punk theme. Models smouldered beneath mountains of safety pins and plastic (the pins were jewelled, the 'plastic' wet-look satin) and the accompanying article ended with an aphorism—"To shock is chic"—which presaged the subculture's imminent demise.

The Ideological Form

The second form of incorporation—the ideological—has been most adequately treated by those sociologists who operate a transactional model of deviant behaviour. For example, Stan Cohen has described in detail how one particular moral panic (surrounding the mod–rocker conflict of the mid-60s) was launched and sustained.² Although this type of analysis can often provide

8. Lefebvre, *Everyday Life in the Modern World* [Hebdige's note].

9. "The characters that stamp products as commodities, and whose establishment is a necessary preliminary to the circulation of commodities, have already acquired the stability of natural, self-understood forms of social life before man seeks to decipher, not their historical character, for in his eyes they are immutable, but their meaning." KARL MARX AND FRIEDRICH ENGELS, *The German Ideology* ([written 1845–46; trans.] Lawrence and Wishart, 1970) [Hebdige's note].

1. British fashion designer (b. 1940), who came to prominence in the 1970s.

2. The definitive study of a moral panic is Stan Cohen's *Folk Devils and Moral Panics* (MacGibbon and Kee, 1972). The mods and rockers were just two of the "folk devils"—"the gallery of types that society erects to show its members which roles should be avoided"—which periodically become the centre of a "moral panic." "Societies appear to be subject, every now and then, to periods of moral panic. A condition, episode, person or group of persons emerges to become defined as a threat to societal values and interests; its nature

is presented in a stylized and stereotypical fashion by the mass media; the moral barricades are manned by editors, bishops, politicians and other right-thinking people, socially accredited experts pronounce their diagnoses and solutions; ways of coping are evolved or (more often) resorted to; the condition then disappears, submerges or deteriorates and becomes more visible" (Cohen). Official reaction to the punk subculture betrayed all the classic symptoms of a moral panic. Concerts were cancelled; clergymen, politicians and pundits unanimously denounced the degeneracy of youth. Among the choicer reactions, Marcus Lipton, the late MP for Lambeth North, declared: "If pop music is going to be used to destroy our established institutions, then it ought to be destroyed first." Bernard Brook-Partridge, MP for Havering Romford, stormed, "I think the Sex Pistols are absolutely bloody revolting. I think their whole attitude is calculated to incite people to misbehavior. . . . It is a deliberate incitement to anti-social behavior and conduct" (quoted in *New Musical Express*, 15 July 1977) [Hebdige's note]. Cohen (1942–2013), South African-born British sociologist. MP: member of Parliament.

an extremely sophisticated explanation of why spectacular subcultures consistently provoke such hysterical outbursts, it tends to overlook the subtler mechanisms through which potentially threatening phenomena are handled and contained. As the use of the term 'folk devil' suggests, rather too much weight tends to be given to the sensational excesses of the tabloid press at the expense of the ambiguous reactions which are, after all, more typical. As we have seen, the way in which subcultures are represented in the media makes them both more *and less* exotic than they actually are. They are seen to contain both dangerous aliens and boisterous kids, wild animals and wayward pets. Roland Barthes furnishes a key to this paradox in his description of 'identification'—one of the seven rhetorical figures which, according to Barthes, distinguish the meta-language of bourgeois mythology. He characterizes the petit-bourgeois as a person '... unable to imagine the Other ... the Other is a scandal which threatens his existence'.³

Two basic strategies have been evolved for dealing with this threat. First, the Other can be trivialized, naturalized, domesticated. Here, the difference is simply denied ('Otherness is reduced to sameness'). Alternatively, the Other can be transformed into meaningless exotica, a 'pure object, a spectacle, a clown'.⁴ In this case, the difference is consigned to a place beyond analysis. Spectacular subcultures are continually being defined in precisely these terms. Soccer hooligans, for example, are typically placed beyond 'the bounds of common decency' and are classified as 'animals'. ('These people aren't human beings', football club manager quoted on the *News at Ten*, Sunday, 12 March 1977).⁵ On the other hand, the punks tended to be resituated by the press in the family, perhaps because members of the subculture deliberately obscured their origins, refused the family and willingly played the part of folk devil, presenting themselves as pure objects, as villainous clowns. Certainly, like every other youth culture, punk was perceived as a threat to the family. Occasionally this threat was represented in literal terms. For example, the *Daily Mirror* (1 August 1977) carried a photograph of a child lying in the road after a punk—ted confrontation under the headline 'VICTIM OF THE PUNK ROCK PUNCH-UP: THE BOY WHO FELL FOUL OF THE MOB'. In this case, punk's threat to the family was made 'real' (that could be my child!) through the ideological framing of photographic evidence which is popularly regarded as unproblematic.

None the less, on other occasions, the opposite line was taken. For whatever reason, the inevitable glut of articles gleefully denouncing the latest punk outrage was counterbalanced by an equal number of items devoted to the small details of punk family life. For instance, the 15 October 1977 issue of *Woman's Own* carried an article entitled 'Punks and Mothers' which stressed the classless, fancy dress aspects of punk.⁶ Photographs depicting

5. See Stuart Hall's treatment of the press coverage of football hooligans in Roger Ingham, ed., *Football Hooliganism* (Inter-action Imprint, 1978) [Hebdige's note].

6. See also "Punks Have Mothers Too: They tell us a few home truths" in *Woman's Own* (15 April 1978) and

"Punks and Mothers" in *Woman's Own* (15 October 1977). These articles draw editorial comment (a sign of recognition of the staff of the need to reassure the challenged expectations of the reader?). The following anecdote appeared beneath a photograph of two dancing teddy boys: "The other day I overheard two elderly ladies, cringing as a gang of alarming looking punks passed them, say in tones of horror, 'Just imagine what their children will be like.' I'm sure a lot of people must have said exactly the same thing

punks with smiling mothers, reclining next to the family pool, playing with the family dog, were placed above a text which dwelt on the ordinariness of individual punks: 'It's not as rocky horror as it appears' . . . 'punk can be a family affair' . . . 'punks as it happens are non-political', and, most insidiously, albeit accurately, 'Johnny Rotten is as big a household name as Hughie Green'.⁷ Throughout the summer of 1977, the *People* and the *News of the World*⁸ ran items on punk babies, punk brothers, and punk-ted weddings. All these articles served to minimize the Otherness so stridently proclaimed in punk style, and defined the subculture in precisely those terms which it sought most vehemently to resist and deny.

Once again, we should avoid making any absolute distinction between the ideological and commercial 'manipulations' of subculture. The symbolic restoration of daughters to the family, of deviants to the fold, was undertaken at a time when the widespread 'capitulation' of punk musicians to market forces was being used throughout the media to illustrate the fact that punks were 'only human after all'. The music papers were filled with the familiar success stories describing the route from rags to rags and riches—of punk musicians flying to America, of bank clerks become magazine editors or record producers, of harrassed seamstresses turned overnight into successful business women. Of course, these success stories had ambiguous implications. As with every other 'youth revolution' (e.g. the beat boom,⁹ the mod explosion and the Swinging Sixties) the relative success of a few individuals created an impression of energy, expansion and limitless upward mobility. This ultimately reinforced the image of the open society which the very presence of the punk subculture—with its rhetorical emphasis on unemployment, high-rise living and narrow options—had originally contradicted. As Barthes has written: 'myth can always, as a last resort, signify the resistance which is brought to bear against it'¹ and it does so typically by imposing its own ideological terms, by substituting in this case 'the fairy tale of the artist's creativity'² for an art form 'within the compass of every consciousness',³ a 'music' to be judged, dismissed or marketed for 'noise'—a logically consistent, self-constituted chaos. It does so finally by replacing a subculture engendered by history, a product of real historical contradictions, with a handful of brilliant

about the Teddy Boys, like the ones pictured . . . and Mods and Rockers. That made me wonder what had happened to them when the phase passed. I reckon they put away their drape suits or scooters and settled down to respectable, quiet lives, bringing up kids and desperately hoping they won't get involved in any of these terrible Punk goings-on" [Hebdige's note].

7. British television game and talent show host (1920–1997).

2. "The fairy-tale of the artist's creativity is western culture's last superstition. One of Surrealism's revolutionary acts was to attack this myth . . ." (Max Ernst, "What Is Surrealism," in *Surrealists on Art* (Spectrum, 1970), edited by L. Lippard) [Hebdige's note].

3. "Surrealism is within the compass of every consciousness" (surrealist tract quoted in Lip-

pard). See also Paul Eluard, *Food for Vision* (Editions Galliard, 1933): "We have passed the period of individual exercises." The solemn and extremely reverential exhibition of Surrealism mounted at London's Hayward Gallery in 1978 ironically sought to establish the reputation of individual surrealists as artists and was designed to win public recognition of their "genius." For a comparison of punk and surrealism, see below the sections entitled "Style as Bricolage" and "Revolutionary Style" [in chapter 7 of *Subculture*]. It is fitting that punk should be absorbed into high fashion at the same time as the first major exhibition of Dada and surrealism in Britain was being launched [Hebdige's note]. Surrealism: an experimental literary and artistic movement founded in France in 1924; inspired in part by SIGMUND FREUD, surrealists sought to express subconscious thought and feeling. Dadaism, a precursor to surrealism, is an artistic movement that protested the insanity of World War I by demolishing the tenets of art, philosophy, and logic.

nonconformists, satanic geniuses who, to use the words of Sir John Read, Chairman of EMI 'become in the fullness of time, wholly acceptable and can contribute greatly to the development of modern music'.⁴

1979

4. On 7 December, one month before EMI terminated its contract with the Sex Pistols, Sir John Read, the record company's Chairman, made the following statement at the annual general meeting:

Throughout its history as a recording company, EMI has always sought to behave within contemporary limits of decency and good taste—taking into account not only the traditional rigid conventions of one section of society, but also the increasingly liberal attitudes of other (perhaps larger) sections . . . at any given time . . . What is decent or in good taste compared to the attitudes of, say, 20 or even 10 years ago?

It is against this present-day social background that EMI has to make value judgments about the content of records . . . Sex Pistols is a pop group devoted to a new form of music known as "punk rock." It was contracted for recording purposes by EMI . . . in October, 1976 . . . In this context, it must be remembered that the recording industry has signed many pop groups, initially controversial, who have in the fullness of time become wholly acceptable and contributed greatly to the development of modern music . . . EMI should not set itself up as a public censor, but it does seek to encourage restraint. (quoted in F. Vermorel, *The Sex Pistols*, 1978)

Despite the eventual loss of face (and some £40,000 paid out to the Pistols when the contract was terminated) EMI and the other record com-

panies tended to shrug off the apparent contradictions involved in signing up groups who openly admitted to a lack of professionalism, musician-ship, and commitment to the profit motive. During the Clash's famous performance of "White Riot" at the Rainbow in 1977 when seats were ripped out and thrown at the stage, the last two rows of the theatre (left, of course, intact) were occupied almost exclusively by record executives and talent scouts: CBS paid for the damage without complaint. There could be no clearer demonstration of the fact that symbolic assaults leave real institutions intact. Nonetheless, the record companies did not have everything their own way. The Sex Pistols received five-figure sums in compensation from both A&M and EMI and when their LP (recorded at last by Virgin) finally did reach the shops, it contained a scathing attack on EMI delivered in Rotten's venomous nasal whine:

You thought that we were faking
That we were all just money-making
You don't believe that we're for real
Or you would lose your cheap appeal.
Who?
EMI—EMI

Blind acceptance is a sign
Of stupid fools who stand in line
Like EMI—EMI ("EMI," Virgin, 1977)
[Hebdige's note].

The Clash: punk rock group (1976–86), known for its leftist political ideology.

BELL HOOKS

b. Gloria Jean Watkins, 1952

bell hooks first emerged in the 1980s as a trenchant critical voice among African American intellectuals. Her wide-ranging essays about U.S. culture offer critiques on issues ranging from the academy to the environmental crisis, from the media to masculinity, from racism to sexism, while exploring the unique problems and perspectives of black women and the underprivileged. Within feminism, much of her writing has been devoted to articulating the intersections of race, class, and gender oppression. In *Feminist Theory: From Margin to Center* (1984) she writes, "Feminism is the struggle to end sexist oppression. Its aim is not to benefit solely any specific group of women, any particular race or class of women. It does not privilege women over men. It has the power to transform in a meaningful way all our lives."

Born into a rural black working-class family in Hopkinsville, Kentucky, Gloria Jean Watkins suffered a turbulent childhood but found inspiration in books and solace in imagination. When, as an adult, she took the name "bell hooks," it was to honor her outspoken great-grandmother and the legacy of her past. hooks received

a B.A. from Stanford University in 1973, an M.A. from the University of Wisconsin in 1976, and a Ph.D. from the University of California at Santa Cruz in 1983. She taught African American studies and English at Yale University in the 1980s, English and women's studies at Oberlin College from 1988 until 1993, and English at the City University of New York Graduate Center from 1993 until 2004. Since 2004, she has been a distinguished professor in residence at Berea College in Kentucky.

hooks gained prominence as a social critic with the publication of her first book, *Ain't I a Woman: Black Women and Feminism* (1981), begun when she was only nineteen and published while she was still a graduate student. An extremely prolific writer, she has published several dozen books since then on topics as varied as feminist theory, racism, film, black masculinity, spirituality, teaching, and cultural studies. With the publication of *Bone Black: Memories of Girlhood* (1996) and *Wounds of Passion: A Writing Life* (1997), she turned to the genre of autobiography to explore more fully her interest in capturing "the authority of experience" that she examines in our selection, "Postmodern Blackness." Like Cornel West, with whom she collaborated on *Breaking Bread: Insurgent Black Intellectual Life* (1991), hooks has sought a niche as a public intellectual on the left, attempting to reach a wider audience outside of academia for her cultural criticism while remaining connected to her underclass black community. As an essayist, she follows in the rich tradition of twentieth-century black intellectuals such as W. E. B. Du Bois, C. L. R. James, and Zora Neale Hurston, although doubtless hooks would also include in any list of intellectual forebears earlier black women such as Anna Cooper (the nineteenth-century author of *A Voice from the South by a Black Woman of the South*) and Sojourner Truth.

In "Postmodern Blackness," which appears in her *Yearning: Race, Gender, and Cultural Politics* (1990), hooks asks why African Americans should have any interest in "postmodern theory." She applies this label to the philosophic critique of modernity that celebrates difference and otherness, that advocates radical liberation and political equality, that finds fault with rigid concepts of identity, and that criticizes so-called master narratives (for example, those about the inevitable progress of human reason, the eventual triumph of the proletariat, or the ending of the world on Judgment Day). For hooks and other cultural critics, postmodernity also evokes late twentieth-century postindustrial society with its job restructuring, ubiquitous media and popular culture, and new social movements and protest groups. Like the African American feminist critic Barbara Christian, hooks believes that the abstract philosophical discourse of postmodernism—as defined by French theorists such as Jacques Derrida, Jean-François Lyotard, and Jean Baudrillard—is dominated by white male intellectuals. These academic elites speak to one another, oblivious to the concerns of black people. Despite its invocation of "difference," she argues, postmodernism is exclusionary: while using the concepts of difference and marginality to legitimate itself in the face of accusations of irrelevance, it seems unwilling to engage the experiences or writings of the truly marginalized—black women, for example. In its celebration of indeterminacy and free play in language and in its focus on deconstructing identity, postmodernism fails to offer useful analyses of the power relations that shape discourse. Without "adequate concrete knowledge" of and contact with oppressed and marginalized groups, white theorists risk impeding rather than supporting "radical liberation struggle."

Because she discerns in those silenced by the "master narratives" of Western culture a "yearning"—what she describes as a "longing for critical voice"—hooks, unlike Christian and some other minority intellectuals, is not willing to abandon postmodernism to the intellectual elites. She identifies the intersection of "identity politics" and the postmodern critique of human essence as a particularly significant site of struggle for African Americans, who, she argues, need to resist outmoded notions of essential blackness in much the same way as feminist critics have contested the idea

of the essentially female (see JUDITH BUTLER, MONIQUE WITTIG, and JULIA KRISTEVA). hooks is critical of the concept of essential blackness whether imposed from without as racist stereotype or from within as prescription for an “authentic black identity,” an identity that refuses to recognize the multiplicities of black experiences that ground “diverse cultural productions.” At the same time, hooks argues, the postmodern critique of essence ought not to be used to dismiss black and feminist identity politics. hooks worries about the potential within postmodernist discourse to deny a critical voice to those who have been “subjected to” colonization or domination. She is suspicious that the postmodern call to dismantle identity comes at a historical moment when subjugated peoples are beginning to assert their own identity and to act collectively in its name. hooks’s solution is to embrace the postmodern critique of essentialism while emphasizing the traditional humanistic “authority of experience.”

The dangers hooks exposes in the discourse of postmodernism are real, though it is worth noting that hooks here treats “postmodernism” not as a historical period but as a single set of monologic discourses that mean the same thing to everyone. Postmodern theory is a wide-ranging and diverse set of practices, texts, and discourses no more easily reducible to one set of essential meanings than is “blackness.” Both terms in hooks’s title must be seen as equally under interrogation, and much work remains to be done to understand the relations between them. Greater precision about the complex meanings within postmodern discourse of such terms as *identity*, *subjectivity*, and *experience* might break the impasse she describes between a desire to reclaim a common black history, culture, and experience and the need to avoid imposing restrictive and damaging stereotypes on diverse experiences. hooks is in agreement with the best “oppositional practices” of postmodernism, however, when she suggests that it is in the gaps, ruptures, and contradictions of Western master narratives that the struggles for liberation and for coalition politics will discover effective forms of resistance and new forms of community.

“Postmodern Blackness” Keywords: Cultural Studies, Feminist Theory, Identity, Postmodernity, Race and Ethnicity Studies, Subjectivity

Postmodern Blackness

Postmodernist discourses are often exclusionary even as they call attention to, appropriate even, the experience of “difference” and “Otherness” to provide oppositional political meaning, legitimacy, and immediacy when they are accused of lacking concrete relevance. Very few African-American intellectuals have talked or written about postmodernism. At a dinner party I talked about trying to grapple with the significance of postmodernism for contemporary black experience. It was one of those social gatherings where only one other black person was present. The setting quickly became a field of contestation. I was told by the other black person that I was wasting my time, that “this stuff does not relate in any way to what’s happening with black people.” Speaking in the presence of a group of white onlookers, staring at us as though this encounter were staged for their benefit, we engaged in a passionate discussion about black experience. Apparently, no one sympathized with my insistence that racism is perpetuated when blackness is associated solely with concrete gut level experience conceived as either opposing or having no connection to abstract thinking and the production of critical theory. The idea that there is no meaningful connection between

black experience and critical thinking about aesthetics or culture must be continually interrogated.

My defense of postmodernism and its relevance to black folks sounded good, but I worried that I lacked conviction, largely because I approach the subject cautiously and with suspicion.

Disturbed not so much by the "sense" of postmodernism but by the conventional language used when it is written or talked about and by those who speak it, I find myself on the outside of the discourse looking in. As a discursive practice it is dominated primarily by the voices of white male intellectuals and/or academic elites who speak to and about one another with coded familiarity. Reading and studying their writing to understand postmodernism in its multiple manifestations, I appreciate it but feel little inclination to ally myself with the academic hierarchy and exclusivity pervasive in the movement today.

Critical of most writing on postmodernism, I perhaps am more conscious of the way in which the focus on "Otherness and difference" that is often alluded to in these works seems to have little concrete impact as an analysis or standpoint that might change the nature and direction of postmodernist theory. Since much of this theory has been constructed in reaction to and against high modernism, there is seldom any mention of black experience or writings by black people in this work, specifically black women (though in more recent work one may see a reference to Cornel West, the black male scholar who has most engaged postmodernist discourse). Even if an aspect of black culture is the subject of postmodern critical writing, the works cited will usually be those of black men. A work that comes immediately to mind is Andrew Ross's chapter "Hip, and the Long Front of Color" in *No Respect: Intellectuals and Popular Culture*,¹ while it is an interesting reading, it constructs black culture as though black women have had no role in black cultural production. At the end of Meaghan Morris' discussion of postmodernism in her collection of essays *The Pirate's Fiancée: Feminism, Reading, Postmodernism*, she provides a bibliography of works by women, identifying them as important contributions to a discourse on postmodernism that offer new insight as well as challenging male theoretical hegemony.² Even though many of the works do not directly address postmodernism, they address similar concerns. There are no references to works by black women.

The failure to recognize a critical black presence in the culture and in most scholarship and writing on postmodernism compels a black reader, particularly a black female reader, to interrogate her interest in a subject where those who discuss and write about it seem not to know black women exist or even to consider the possibility that we might be somewhere writing or saying something that should be listened to, or producing art that should be seen, heard, approached with intellectual seriousness. This is especially the case with works that go on and on about the way in which postmodernist discourse has opened up a theoretical terrain where "difference and Otherness" can be considered legitimate issues in the academy. Confronting both the absence of recognition of black female presence that much

ism, Reading, Postmodernism (London: Verso, 1988).

postmodernist theory re-inscribes and the resistance on the part of most black folks to hearing about real connection between postmodernism and black experience, I enter a discourse, a practice, where there may be no ready audience for my words, no clear listener, uncertain then, that my voice can or will be heard.

During the sixties, the black power movement was influenced by perspectives that could easily be labeled modernist. Certainly many of the ways black folks addressed issues of identity conformed to a modernist universalizing agenda. There was little critique of patriarchy as a master narrative among black militants. Despite the fact that black power ideology reflected a modernist sensibility, these elements were soon rendered irrelevant as militant protest was stifled by a powerful, repressive postmodern state. The period directly after the black power movement was a time when major news magazines carried articles with cocky headlines like "Whatever Happened to Black America?" This response was an ironic reply to the aggressive, unmet demand by decentered, marginalized black subjects who had at least momentarily successfully demanded a hearing, who had made it possible for black liberation to be on the national political agenda. In the wake of the black power movement, after so many rebels were slaughtered and lost, many of these voices were silenced by a repressive state; others became inarticulate. It has become necessary to find new avenues to transmit the messages of black liberation struggle, new ways to talk about racism and other politics of domination. Radical postmodernist practice, most powerfully conceptualized as a "politics of difference," should incorporate the voices of displaced, marginalized, exploited, and oppressed black people. It is sadly ironic that the contemporary discourse which talks the most about heterogeneity, the decentered subject, declaring breakthroughs that allow recognition of Otherness, still directs its critical voice primarily to a specialized audience that shares a common language rooted in the very master narratives it claims to challenge. If radical postmodernist thinking is to have a transformative impact, then a critical break with the notion of "authority" as "mastery over" must not simply be a rhetorical device. It must be reflected in habits of being, including styles of writing as well as chosen subject matter. Third world nationals, elites, and white critics who passively absorb white supremacist thinking, and therefore never notice or look at black people on the streets or at their jobs, who render us invisible with their gaze in all areas of daily life, are not likely to produce liberatory theory that will challenge racist domination, or promote a breakdown in traditional ways of seeing and thinking about reality, ways of constructing aesthetic theory and practice. From a different standpoint, Robert Storr makes a similar critique in the global issue of *Art in America* when he asserts:

To be sure, much postmodernist critical inquiry has centered precisely on the issues of "difference" and "Otherness." On the purely theoretical plane the exploration of these concepts has produced some important results, but in the absence of any sustained research into what artists of color and others outside the mainstream might be up to, such discussions become rootless instead of radical. Endless second guessing about the latent imperialism of intruding upon other cultures only compounded matters, preventing or excusing these theorists from

investigating what black, Hispanic, Asian and Native American artists were actually doing.³

Without adequate concrete knowledge of and contact with the non-white "Other," white theorists may move in discursive theoretical directions that are threatening and potentially disruptive of that critical practice which would support radical liberation struggle.

The postmodern critique of "identity," though relevant for renewed black liberation struggle, is often posed in ways that are problematic. Given a pervasive politic of white supremacy which seeks to prevent the formation of radical black subjectivity, we cannot cavalierly dismiss a concern with identity politics. Any critic exploring the radical potential of postmodernism as it relates to racial difference and racial domination would need to consider the implications of a critique of identity for oppressed groups. Many of us are struggling to find new strategies of resistance. We must engage decolonization as a critical practice if we are to have meaningful chances of survival even as we must simultaneously cope with the loss of political grounding which made radical activism more possible. I am thinking here about the postmodernist critique of essentialism as it pertains to the construction of "identity" as one example.

Postmodern theory that is not seeking to simply appropriate the experience of "Otherness" to enhance the discourse or to be radically chic should not separate the "politics of difference" from the politics of racism. To take racism seriously one must consider the plight of underclass people of color, a vast majority of whom are black. For African-Americans our collective condition prior to the advent of postmodernism and perhaps more tragically expressed under current postmodern conditions has been and is characterized by continued displacement, profound alienation, and despair. Writing about blacks and postmodernism, Cornel West describes our collective plight:

There is increasing class division and differentiation, creating on the one hand a significant black middle-class, highly anxiety-ridden, insecure, willing to be co-opted and incorporated into the powers that be, concerned with racism to the degree that it poses constraints on upward social mobility; and, on the other, a vast and growing black underclass, an underclass that embodies a kind of walking nihilism of pervasive drug addiction, pervasive alcoholism, pervasive homicide, and an exponential rise in suicide. Now because of the deindustrialization, we also have a devastated black industrial working class. We are talking here about tremendous hopelessness.⁴

This hopelessness creates longing for insight and strategies for change that can renew spirits and reconstruct grounds for collective black liberation struggle. The overall impact of postmodernism is that many other groups now share with black folks a sense of deep alienation, despair, uncertainty, loss of a sense of grounding even if it is not informed by shared circumstance. Radical postmodernism calls attention to those shared sensibilities which cross the bound-

aries of class, gender, race, etc., that could be fertile ground for the construction of empathy—ties that would promote recognition of common commitments, and serve as a base for solidarity and coalition.

Yearning is the word that best describes a common psychological state shared by many of us, cutting across boundaries of race, class, gender, and sexual practice. Specifically, in relation to the post-modernist deconstruction of “master” narratives, the yearning that wells in the hearts and minds of those whom such narratives have silenced is the longing for critical voice. It is no accident that “rap” has usurped the primary position of rhythm and blues music among young black folks as the most desired sound or that it began as a form of “testimony” for the underclass. It has enabled underclass black youth to develop a critical voice, as a group of young black men told me, a “common literacy.” Rap projects a critical voice, explaining, demanding, urging. Working with this insight in his essay “Putting the Pop Back into Postmodernism,” Lawrence Grossberg comments:

The postmodern sensibility appropriates practices as boasts that announce their own—and consequently our own—existence, like a rap song boasting of the imaginary (or real—it makes no difference) accomplishments of the rapper. They offer forms of empowerment not only in the face of nihilism but precisely through the forms of nihilism itself: an empowering nihilism, a moment of positivity through the production and structuring of affective relations.⁵

Considering that it is as subject one comes to voice, then the postmodernist focus on the critique of identity appears at first glance to threaten and close down the possibility that this discourse and practice will allow those who have suffered the crippling effects of colonization and domination to gain or regain a hearing. Even if this sense of threat and the fear it evokes are based on a misunderstanding of the postmodernist political project, they nevertheless shape responses. It never surprises me when black folks respond to the critique of essentialism, especially when it denies the validity of identity politics by saying, “Yeah, it’s easy to give up identity, when you got one.” Should we not be suspicious of postmodern critiques of the “subject” when they surface at a historical moment when many subjugated people feel themselves coming to voice for the first time? Though an apt and oftentimes appropriate comeback, it does not really intervene in the discourse in a way that alters and transforms.

Criticisms of directions in postmodern thinking should not obscure insights it may offer that open up our understanding of African-American experience. The critique of essentialism encouraged by postmodernist thought is useful for African-Americans concerned with reformulating outmoded notions of identity. We have too long had imposed upon us from both the outside and the inside a narrow, constricting notion of blackness. Postmodern critiques of essentialism which challenge notions of universality and static over-determined identity within mass culture and mass consciousness can open up new possibilities for the construction of self and the assertion of agency.

5. Lawrence Grossberg, “Putting the Pop Back into Postmodernism,” in *Universal Abandon: The Politics of Postmodernism*, ed. Andrew Ross (Minneapolis: University of Minnesota Press, 1988), p. 181.

Employing a critique of essentialism allows African-Americans to acknowledge the way in which class mobility has altered collective black experience so that racism does not necessarily have the same impact on our lives. Such a critique allows us to affirm multiple black identities, varied black experience. It also challenges colonial imperialist paradigms of black identity which represent blackness one-dimensionally in ways that reinforce and sustain white supremacy. This discourse created the idea of the "primitive" and promoted the notion of an "authentic" experience, seeing as "natural" those expressions of black life which conformed to a pre-existing pattern or stereotype. Abandoning essentialist notions would be a serious challenge to racism. Contemporary African-American resistance struggle must be rooted in a process of decolonization that continually opposes re-inscribing notions of "authentic" black identity. This critique should not be made synonymous with a dismissal of the struggle of oppressed and exploited peoples to make ourselves subjects. Nor should it deny that in certain circumstances this experience affords us a privileged critical location from which to speak. This is not a re-inscription of modernist master narratives of authority which privilege some voices by denying voice to others. Part of our struggle for radical black subjectivity is the quest to find ways to construct self and identity that are oppositional and liberatory. The unwillingness to critique essentialism on the part of many African-Americans is rooted in the fear that it will cause folks to lose sight of the specific history and experience of African-Americans and the unique sensibilities and culture that arise from that experience. An adequate response to this concern is to critique essentialism while emphasizing the significance of "the authority of experience."⁶ There is a radical difference between a repudiation of the idea that there is a black "essence" and recognition of the way black identity has been specifically constituted in the experience of exile and struggle.

When black folks critique essentialism, we are empowered to recognize multiple experiences of black identity that are the lived conditions which make diverse cultural productions possible. When this diversity is ignored, it is easy to see black folks as falling into two categories: nationalist or assimilationist, black-identified or white-identified. Coming to terms with the impact of postmodernism for black experience, particularly as it changes our sense of identity, means that we must and can rearticulate the basis for collective bonding. Given the various crises facing African-Americans (economic, spiritual, escalating racial violence, etc.), we are compelled by circumstance to reassess our relationship to popular culture and resistance struggle. Many of us are as reluctant to face this task as many non-black postmodern thinkers who focus theoretically on the issue of "difference" are to confront the issue of race and racism.

Music is the cultural product created by African-Americans that has most attracted postmodern theorists. It is rarely acknowledged that there is far greater censorship and restriction of other forms of cultural production by black folks—literary, critical writing, etc. Attempts on the part of editors and publishing houses to control and manipulate the representation of black culture, as well as the desire to promote the creation of products that will attract

6. The title of a 1977 collection of essays of feminist criticism, edited by Arlyn Diamond and Lee R. Edwards.

the widest audience, limit in a crippling and stifling way the kind of work many black folks feel we can do and still receive recognition. Using myself as an example, that creative writing I do which I consider to be most reflective of a postmodern oppositional sensibility, work that is abstract, fragmented, non-linear narrative, is constantly rejected by editors and publishers. It does not conform to the type of writing they think black women should be doing or the type of writing they believe will sell. Certainly I do not think I am the only black person engaged in forms of cultural production, especially experimental ones, who is constrained by the lack of an audience for certain kinds of work. It is important for postmodern thinkers and theorists to constitute themselves as an audience for such work. To do this they must assert power and privilege within the space of critical writing to open up the field so that it will be more inclusive. To change the exclusionary practice of postmodern critical discourse is to enact a postmodernism of resistance. Part of this intervention entails black intellectual participation in the discourse.

In his essay "Postmodernism and Black America," Cornel West suggests that black intellectuals "are marginal—usually languishing at the interface of Black and white cultures or thoroughly ensconced in Euro-American settings." He cannot see this group as potential producers of radical postmodernist thought. While I generally agree with this assessment, black intellectuals must proceed with the understanding that we are not condemned to the margins. The way we work and what we do can determine whether or not what we produce will be meaningful to a wider audience, one that includes all classes of black people. West suggests that black intellectuals lack "any organic link with most of Black life" and that this "diminishes their value to Black resistance." This statement bears traces of essentialism. Perhaps we need to focus more on those black intellectuals, however rare our presence, who do not feel this lack and whose work is primarily directed towards the enhancement of black critical consciousness and the strengthening of our collective capacity to engage in meaningful resistance struggle. Theoretical ideas and critical thinking need not be transmitted solely in written work or solely in the academy. While I work in a predominantly white institution, I remain intimately and passionately engaged with black community. It's not like I'm going to talk about writing and thinking about postmodernism with other academics and/or intellectuals and not discuss these ideas with underclass non-academic black folks who are family, friends, and comrades. Since I have not broken the ties that bind me to underclass poor black community, I have seen that knowledge, especially that which enhances daily life and strengthens our capacity to survive, can be shared. It means that critics, writers, and academics have to give the same critical attention to nurturing and cultivating our ties to black community that we give to writing articles, teaching, and lecturing. Here again I am really talking about cultivating habits of being that reinforce awareness that knowledge can be disseminated and shared on a number of fronts. The extent to which knowledge is made available, accessible, etc. depends on the nature of one's political commitments.

Postmodern culture with its decentered subject can be the space where ties are severed or it can provide the occasion for new and varied forms of bonding. To some extent, ruptures, surfaces, contextuality, and a host of other happenings create gaps that make space for oppositional practices

which no longer require intellectuals to be confined by narrow separate spheres with no meaningful connection to the world of the everyday. Much postmodern engagement with culture emerges from the yearning to do intellectual work that connects with habits of being, forms of artistic expression, and aesthetics that inform the daily life of writers and scholars as well as a mass population. On the terrain of culture, one can participate in critical dialogue with the uneducated poor, the black underclass who are thinking about aesthetics. One can talk about what we are seeing, thinking, or listening to; a space is there for critical exchange. It's exciting to think, write, talk about, and create art that reflects passionate engagement with popular culture, because this may very well be "the" central future location of resistance struggle, a meeting place where new and radical happenings can occur.

1990

ROSI BRAIDOTTI

b. 1954

Rosi Braidotti opens *The Posthuman* (2013) by declaring, "Not all of us can say, with any degree of certainty, that we have always been human, or that we are only that." Her words define the central premise of the posthuman turn in literary and cultural theory. The word *posthuman* emerged in the mid-1990s in philosophy, cultural criticism, and literary theory, becoming an umbrella term for a variety of movements and schools of thought responding to technological and scientific developments, as well as to philosophic critiques of the traditional humanist subject, that call for a redefinition of what it means to be human. Its roots, as Braidotti declares, are in post-1968 antihumanism and arguably even further back in cybernetics, systems theory, and the environmental movement, which together began a process of decentering the human from its privileged position as chief arbiter of meaning and as the classical "measure of all things." Braidotti sees this reappraisal of both humanism and the human not simply as another in a long line of theoretical "posts" but as a "qualitative shift in our thinking about . . . the basic unit of common reference for our species, our polity and our relationship to the other inhabitants of the planet." Acknowledging that a number of terms have marked the limits of the human, including "the non-human, the inhuman, the anti-human, [and] the inhumane," she follows other posthumanist theorists (such as Cary Wolfe) in distinguishing posthumanism from "transhumanism"—a belief in human enhancement through technoscience that dreams of transcending embodiment. By contrast, the starting point for the posthuman is "the vital, self-organizing and yet non-naturalistic structure of living matter itself." Moving away from beliefs that the human marks a privileged position in the world, posthumanism seeks to demonstrate humans' continuity with both the biological and the technological domains.

Born in Italy in 1954, and raised in Australia, Braidotti received a first-class honors degree in 1977 from the Australian National University in Canberra. She did graduate work at the Sorbonne in Paris, receiving a Ph.D. in philosophy in 1981. In 1988 she was appointed the first professor in women's studies at the University of Utrecht in the Netherlands. Between 1995 and 2005, she was the director of the Netherlands Research School of Women's Studies (now Gender Studies). Braidotti

has been a pioneer in linking women's studies programs and feminist projects throughout Europe through the Thematic Network for Women's Studies. She has held several distinguished visiting positions, including Fellow in the School of Social Science at Princeton's Institute for Advanced Study (1994), Jean Monnet Professor at the European University Institute in Florence (2002–03), Leverhulme Trust Visiting Professor at London's Birkbeck College (2005–06), and Matteo Ricci Visiting Professorship, Faculty of the Humanities, University of Macerata (Italy, 2016). She is currently Distinguished University Professor at Utrecht University, where she is founding director of the Centre for the Humanities. Braidotti has received many honors, including a Royal Knighthood from Queen Beatrix of the Netherlands in 2005, the University Medal from the University of Lodz in Poland in 2006, and honorary degrees from Helsinki University in 2007 and Linköping University, Sweden, in 2013. In 2009, she was elected an Honorary Fellow of the Australian Academy of the Humanities.

Braidotti has published in Italian, French, and English. Her written work—which demonstrates an interdisciplinary engagement with political theory, feminist theory, ethnic studies, animal studies, and technoscience—falls within the tradition of Continental (i.e., European) philosophy and draws on a variety of theoretical approaches: phenomenology, structuralism, poststructuralism, French feminism, psychoanalysis, and Marxism. Braidotti defines her own philosophical project as an attempt to think positively about difference (including gender, race, and ethnicity), freeing it from the dualism that marks it as the negative of sameness. Her first book, *Patterns of Dissonance: A Study of Women in Contemporary Philosophy* (1991), explores the ways in which male philosophers such as JACQUES DERRIDA and MICHEL FOUCAULT use the concept of the feminine to critique classical philosophic thought, as well as the efforts of contemporary feminist philosophers like Luce Irigaray to articulate the significance of women for philosophy.

Over the next decade, Braidotti would develop the theoretical concept for which she is best known, the nomadic subject, through a trilogy of books that explore alternative views of subjectivity and difference. Extending the concept of the nomad developed by GILLES DELEUZE and FÉLIX GUATTARI in *A Thousand Plateaus* (1980; see above), Braidotti's second book, *Nomadic Subjects: Embodiment and Sexual Difference in Contemporary Feminist Theory* (1994; 2d ed., 2011), argues for a female and feminist subjectivity that opposes the falsely universalizing subject of modern liberal individualism, with its dualistic oppositions—between self and other, male and female, citizen and alien—that create an “illusion of unity, mastery, and self-transparency” through violence and exclusion. The postmodern nomadic subject is a performative subject, always in flux, always in the process of becoming, aware of both the creative and the destructive possibilities of power relations. Braidotti's interest in nomadism is unsurprising, given her own biography as a “polyglot nomadic intellectual” who speaks and writes several languages and calls no one country her home. With *Metamorphoses: Towards a Materialist Theory of Becoming* (2002), Braidotti extends her work on sexual difference to include other differences: the racial and ethnic differences that increasingly inflect European politics, and also, like DONNA HARAWAY, the boundaries between the human and animal, the human and monstrous, the human and machine. *Transpositions: On Nomadic Ethics* (2006) investigates the ethical consequences that follow from the nomadic subject.

In *The Posthuman*, Braidotti resituates her feminist critique of the subject within current work on the posthuman, without abandoning her commitments to a politically engaged feminist philosophy. In the opening chapter, she outlines the intellectual and historical genealogies of posthumanism, locating it first in the critique of reason and universalism developed in the 1960s and '70s by feminist thinkers, who questioned the norm of “man” as the epitome of the human and developed theoretical models for situated knowledge rooted in analyses of power, and then in

the antihumanism articulated by the generation of philosophers who came of age as intellectuals in the wake of failed 1968 student and worker uprisings in France. Unlike earlier philosophers of inequality such as Jean-Paul Sartre, SIMONE DE BEAUVOIR, and the anticolonialist FRANTZ FANON, who sought to conserve the humanist discourse of reason as they criticized sexism or colonialism, the so-called poststructuralist generation—which includes Foucault, Derrida, Deleuze and Guattari, JACQUES LACAN, and LOUIS ALTHUSSER, as well as the French feminists Irigaray, HÉLÈNE CIXOUS, and JULIA KRISTEVA—rejected notions of the human inherited from humanism and the Enlightenment, particularly the autonomy and unity of the human subject. A third intellectual influence on posthumanism comes from postcolonial thinkers such as EDWARD W. SAID, GAYATRI CHAKRAVORTY SPIVAK, and HOMI K. BHABHA, who have challenged the Eurocentric bias of Enlightenment humanism.

Our selection focuses primarily on the critique of humanism. Braidotti channels this critique through Vitruvian Man, Leonardo da Vinci's famous sketch showing the proportions of the human (that is, male) body—an iconic image of human perfectibility. Vitruvian Man provides an emblem for a set of discourses and representations that create a very particular view of what it means to be human: that is, to exercise rationality in the service of a "teleologically ordained" progress. European Renaissance humanism and the Enlightenment installed the autonomous, self-regulating, unified subject as the measure of all things. This eventually becomes the secular subject of the liberal individualism that accompanied the emergence of constitutional democracies in the age of revolutions and that pitched its claims toward a universal "citizen," specifically embodied as male and European. By the nineteenth century, she argues, reason, individualism, and progress had become synonymous with Europe, setting it apart from the rest of the world, while difference from what is a white European male norm resulted in exclusion, inferiority, and "otherness." While Braidotti recognizes that humanism has promoted important values such as emancipation, human dignity, and social justice, which have fueled the projects of those "othered" by humanism (women as well as racial and nonhuman others), she maintains that these virtues cannot be entirely disentangled from the epistemic violence it has legitimated. The abstract conception of "rational man," so central to Western humanism, becomes, in the end, a "systematized standard of recognition," a regulatory regime that often consigns sexualized, racialized, and naturalized "others" to what the Italian philosopher GIORGIO AGAMBEN calls "bare life"; they become disposable bodies. The posthuman critique of humanism posits that the universal ideal of reason is neither universal nor natural law, but instead "a historical construct and as such contingent as to values and locations." "Individualism is not an intrinsic part of 'human nature,' but rather a historically and culturally specific discursive formation" that is becoming increasingly difficult to sustain. To highlight her argument, Braidotti intersperses throughout the book a series of images that playfully upend the icon of Vitruvian Man, calling attention to humanism's exclusions: Vitruvian woman, Vitruvian rat, Vitruvian dog, Vitruvian robot.

Posthumanism is a response both to the exclusions created in the name of humanism and to challenges to the human posed by technoscientific advances that undercut age-old distinctions between human and nonhuman. Braidotti maps out three responses to these challenges, three strands of posthumanism, remarking that all share the view that science and technology have profoundly altered "the very fibre and structure of the living." At the same time, however, she is critical of the initial two strands. The first is best represented by the moral philosophy of MARTHA NUSSBAUM, who, rejecting the antihumanist critique, argues that the cure for the ills created by technology and globalization is a revitalized humanism. Nussbaum embraces the universal values, rationality, and individualism that are the hallmark of classic liberalism. The second strand, "analytic posthumanism,"

emerges from the interdisciplinary fields of science and technology studies. As the interface between human subjects and technological artifacts becomes increasingly porous, as complex webs of interdependence between human and nonhuman entities emerge, the basic building blocks of humanism—secularism, universalism, the unitary subject, and rationality—become increasingly untenable. Analytic posthumanism looks not nostalgically back to humanist values, as Nussbaum does, but forward to speculation about “the morality of things.” Ethicists have begun to imagine nonhuman forms of moral consciousness: for instance, robots that could make life-and-death decisions. Braidotti criticizes both strands of posthumanism for, among other things, failing to offer an adequate account of the subject of posthumanism.

Braidotti calls the third strand (her own version) “critical posthumanism.” Because it is sensitive to issues of power and privilege, giving voice to the “others” silenced by Eurocentrism, masculinism, and anthropocentrism, critical posthumanism is in conversation with postcolonial and race theorists, including Said, Bhabha, and PAUL GILROY, as well as feminists and environmental theorists such as Maria Mies and Vandana Shiva. It engages with the work of other posthumanist theorists, such as Wolfe, Haraway, and N. KATHERINE HAYLES. Braidotti’s most significant contribution to posthumanism is her call to replace the unitary subject of humanism with the “nomadic subject,” a “more complex and relational subject framed by embodiment, sexuality, affectivity, empathy and desire.” This subject would be fully embodied but also relationally embedded in networks or, following BRUNO LATOUR, in assemblages of human and nonhuman actors. It would be both internally differentiated and able to work across difference. It would be accountable, but part of a community. From these new subjectivities, critical posthumanism must develop a new affirmative ethics and politics capable of imagining a sustainable future. To do so, she argues, requires the displacement of the human/nonhuman distinction that props up the unity of the subject. To effect this displacement and to debunk the age-old philosophic argument for human exceptionalism (the belief that human life is set apart from other forms of life), she rehabilitates Agamben’s *zoe* (bare life) as the vital and self-organizing power of life (including nonhuman life).

Braidotti is one of the pioneers of the “new materialism”—a theory that, critical of the “linguistic turn” in poststructuralism because it privileges language and culture over matter and nature, gives special attention to matter, which its proponents believe has been neglected by a long philosophical tradition of dualism that devalues the material. But some find troublesome the new materialists’ mischaracterization of the linguistic turn. Like many of the new materialists (LATOUR, JANE BENNETT, IAN BOGOST), Braidotti attributes to poststructuralism a categorical distinction—privileging culture over nature and language over matter—that its adherents actually sought to deconstruct. Other critics find her antihumanism troubling: while she admits ambivalence about humanism, noting that it is “complicitous with genocides and crimes on the one hand, supportive of enormous hopes and aspirations to freedom on the other,” she dismisses the possibility that humanism could be rehabilitated to serve liberatory ends. For both groups, Braidotti appears to risk throwing out the methodological tools that the humanities might best bring to bear on technoscience, global capitalism, and neoliberalism. Can the humanities exist without humans and humanism? In dismissing the “linguistic frame of reference,” do those of us in the humanities sacrifice the ability to contribute to these debates by unpacking the work done by representation, symbolic meaning, and discourse in sustaining and contesting systems of oppression?

Such criticisms notwithstanding, Braidotti’s posthumanism brings a crucial feminist lens to bear on contemporary debates about the human and about the shifts in subjectivity and ethics posed by technoscience and globalization.

The Posthuman Keywords: The Body, Cultural Studies, Deconstruction, Feminist Theory, Postcolonial Theory, Postmodernity, Poststructuralism, Religion, Subjectivity

From The Posthuman

From *Introduction*

Not all of us can say, with any degree of certainty, that we have always been human, or that we are only that. Some of us are not even considered fully human now, let alone at previous moments of Western social, political and scientific history. Not if by 'human' we mean that creature familiar to us from the Enlightenment and its legacy: 'The Cartesian subject of the cogito, the Kantian "community of reasonable beings", or, in more sociological terms, the subject as citizen, rights-holder, property-owner, and so on'.¹ And yet the term enjoys widespread consensus and it maintains the re-assuring familiarity of common sense. We assert our attachment to the species as if it were a matter of fact, a given. So much so that we construct a fundamental notion of Rights around the Human. But is it so?

While conservative, religious social forces today often labour to re-inscribe the human within a paradigm of natural law, the concept of the human has exploded under the double pressure of contemporary scientific advances and global economic concerns. After the postmodern, the post-colonial, the post-industrial, the post-communist and even the much contested post-feminist conditions, we seem to have entered the post-human predicament. Far from being the *n*th variation in a sequence of prefixes that may appear both endless and somehow arbitrary, the posthuman condition introduces a qualitative shift in our thinking about what exactly is the basic unit of common reference for our species, our polity and our relationship to the other inhabitants of this planet. This issue raises serious questions as to the very structures of our shared identity—as humans—amidst the complexity of contemporary science, politics and international relations. Discourses and representations of the non-human, the inhuman, the anti-human, the inhumane and the posthuman proliferate and overlap in our globalized, technologically mediated societies.

The debates in mainstream culture range from hard-nosed business discussions of robotics, prosthetic technologies, neuroscience and bio-genetic capital to fuzzier new age visions of trans-humanism and techno-transcendence.² Human enhancement is at the core of these debates. In academic culture, on the other hand, the posthuman is alternatively celebrated as the next frontier in critical and cultural theory or shunned as the latest in a series of annoying 'post' fads. The posthuman provokes elation but also anxiety³ about the possibility of a serious de-centring of 'Man', the former measure of all things. There is widespread concern about the loss of relevance and mastery suffered by the dominant vision of the human subject and by the field of scholarship centred on it, namely the Humanities.

1. Cary Wolfe, "Posthumanities," 2010; available at: http://www.carywolfe.com/post_about.html (accessed 2 January 2012) [except as indicated, all notes are Braidotti's]. ["Cogito": I think (Latin), the starting point of the metaphysics of the French philosopher and mathematician René Descartes (1596–1650)—the occurrence of thought guarantees the existence of the thinker. "Community of reasonable beings": the German philosopher

IMMANUEL KANT (1724–1804) limited direct ethical obligations to reasonable beings, implicitly excluding the nonhuman—editor's note.]

2. A belief that, in some future, human and machine will be indistinguishable, as humanity is utterly transformed by technology [editor's note].

3. JÜRGEN HABERMAS, *The Future of Human Nature* (Cambridge: Polity Press, 2003).

In my view, the common denominator for the posthuman condition is an assumption about the vital, self-organizing and yet non-naturalistic structure of living matter itself. This nature–culture continuum is the shared starting point for my take on posthuman theory. Whether this post-naturalistic assumption subsequently results in playful experimentations with the boundaries of perfectibility of the body, in moral panic about the disruption of centuries-old beliefs about human ‘nature’ or in exploitative and profit-minded pursuit of genetic and neural capital, remains however to be seen. In this book I will try to examine these approaches and engage critically with them, while arguing my case for posthuman subjectivity.

What does this nature–culture continuum amount to? It marks a scientific paradigm that takes its distance from the social constructivist approach, which has enjoyed widespread consensus. This approach posits a categorical distinction between the given (nature) and the constructed (culture). The distinction allows for a sharper focus in social analysis and it provides robust foundations to study and critique the social mechanisms that support the construction of key identities, institutions and practices. In progressive politics, social constructivist methods sustain the efforts to de-naturalize social differences and thus show their man-made and historically contingent structure. Just think of the world-changing effect of Simone de Beauvoir’s statement that ‘one is not born, one becomes a woman’.⁴ This insight into the socially bound and therefore historically variable nature of social inequalities paves the road to their resolution by human intervention through social policy and activism.

My point is that this approach, which rests on the binary opposition between the given and the constructed, is currently being replaced by a non-dualistic understanding of nature–culture interaction. In my view the latter is associated to and supported by a monistic philosophy,⁵ which rejects dualism, especially the opposition nature–culture and stresses instead the self-organizing (or auto-poietic) force of living matter. The boundaries between the categories of the natural and the cultural have been displaced and to a large extent blurred by the effects of scientific and technological advances. This book starts from the assumption that social theory needs to take stock of the transformation of concepts, methods and political practices brought about by this change of paradigm. Conversely, the question of what kind of political analysis and which progressive politics is supported by the approach based on the nature–culture continuum is central to the agenda of the posthuman predicament.

5. The view that reality can be reduced to one substance [editor’s note].

6. A key term in the work of the French philoso-

pher MICHEL FOUCAULT (1926–1984): this method of historical and critical analysis is designed to demonstrate that a given institution or system of thought resulted from contingencies of history (rather than being inevitable) [editor’s note].

posthuman is circulating as a dominant term in our globally linked and technologically mediated societies. More specifically, posthuman theory is a generative tool to help us re-think the basic unit of reference for the human in the bio-genetic age known as 'anthropocene', the historical moment when the Human has become a geological force capable of affecting all life on this planet. By extension, it can also help us re-think the basic tenets of our interaction with both human and non-human agents on a planetary scale.

* * *

From Chapter 1. Post-Humanism: Life beyond the Self

At the start of it all there is He: the classical ideal of 'Man', formulated first by Protagoras as 'the measure of all things', later renewed in the Italian Renaissance as a universal model and represented in Leonardo da Vinci's Vitruvian Man.⁷ An ideal of bodily perfection which, in keeping with the classical dictum *mens sana in corpore sano*,⁸ doubles up as a set of mental, discursive and spiritual values. Together they uphold a specific view of what is 'human' about humanity. Moreover, they assert with unshakable certainty the almost boundless capacity of humans to pursue their individual and collective perfectibility. That iconic image is the emblem of Humanism as a doctrine that combines the biological, discursive and moral expansion of human capabilities into an idea of teleologically ordained, rational progress. Faith in the unique, self-regulating and intrinsically moral powers of human reason forms an integral part of this high-humanistic creed, which was essentially predicated on eighteenth- and nineteenth-century renditions of classical Antiquity and Italian Renaissance ideals.

This model sets standards not only for individuals, but also for their cultures. Humanism historically developed into a civilizational model, which shaped a certain idea of Europe as coinciding with the universalizing powers of self-reflexive reason. The mutation of the Humanistic ideal into a hegemonic cultural model was canonized by Hegel's⁹ philosophy of history. This self-aggrandizing vision assumes that Europe is not just a geo-political location, but rather a universal attribute of the human mind that can lend its quality to any suitable object. This is the view espoused by Edmund Husserl in his celebrated essay 'The crisis of European sciences',¹ which is a passionate defence of the universal powers of reason against the intellectual and moral decline symbolized by the rising threat of European fascism in the 1930s. In Husserl's view, Europe announces itself as the site of origin of critical reason and self-reflexivity, both qualities resting on the Humanistic norm. Equal only to itself, Europe as universal consciousness transcends its specificity, or, rather, posits the power of transcendence as its distinctive

characteristic and humanistic universalism as its particularity. This makes Eurocentrism into more than just a contingent matter of attitude: it is a structural element of our cultural practice, which is also embedded in both theory and institutional and pedagogical practices. As a civilizational ideal, Humanism fuelled 'the imperial destinies of nineteenth-century Germany, France and, supremely, Great Britain'.²

This Eurocentric paradigm implies the dialectics of self and other, and the binary logic of identity and otherness as respectively the motor for and the cultural logic of universal Humanism. Central to this universalistic posture and its binary logic is the notion of 'difference' as pejoration. Subjectivity is equated with consciousness, universal rationality, and self-regulating ethical behaviour, whereas Otherness is defined as its negative and specular counterpart. In so far as difference spells inferiority, it acquires both essentialist and lethal connotations for people who get branded as 'others'. These are the sexualized, racialized, and naturalized others, who are reduced to the less than human status of disposable bodies. We are all humans, but some of us are just more mortal than others. Because their history in Europe and elsewhere has been one of lethal exclusions and fatal disqualifications, these 'others' raise issues of power and exclusion. We need more ethical accountability in dealing with the legacy of Humanism. Tony Davies puts it lucidly: 'All Humanisms, until now, have been imperial. They speak of the human in the accents and the interests of a class, a sex, a race, a genome. Their embrace suffocates those whom it does not ignore. [. . .] It is almost impossible to think of a crime that has not been committed in the name of humanity'.³ * * *

Humanism's restricted notion of what counts as the human is one of the keys to understand how we got to a post-human turn at all. The itinerary is far from simple or predictable. Edward Said, for instance, complicates the picture by introducing a post-colonial angle: 'Humanism as protective or even defensive nationalism is [. . .] a mixed blessing for its [. . .] ideological ferocity and triumphalism, although it is sometimes inevitable. In a colonial setting for example, a revival of the suppressed languages and cultures, the attempts at national assertion through cultural tradition and glorious ancestors [. . .] are explainable and understandable'.⁴ This qualification is crucial in pointing out the importance of where one is actually speaking from. Differences of location between centres and margins matter greatly, especially in relation to the legacy of something as complex and multi-faceted as Humanism. Complicitous with genocides and crimes on the one hand, supportive of enormous hopes and aspirations to freedom on the other, Humanism somehow defeats linear criticism. This protean quality is partly responsible for its longevity.

ANTI-HUMANISM

Let me put my cards on the table at this early stage of the argument: I am none too fond of Humanism or of the idea of the human which it implicitly upholds. Anti-humanism is so much part of my intellectual and personal

genealogy, as well as family background, that for me the crisis of Humanism is almost a banality. Why?

Politics and philosophy are the main reasons for the glee with which I have always greeted the notion of the historical decline of Humanism, with its Eurocentric core and imperial tendencies. Of course, the historical context has a lot to do with it. I came of age intellectually and politically in the turbulent years after the Second World War, when the Humanist ideal came to be questioned quite radically. Throughout the 1960s and 1970s an activist brand of anti-Humanism was developed by the new social movements and the youth cultures of the day: feminism, de-colonization and anti-racism, anti-nuclear and pacifist movements. Chronologically linked to the social and cultural politics of the generation known as the baby-boomers, these social movements produced radical political, social theories and new epistemologies. They challenged the platitudes of Cold War rhetoric, with its emphasis on Western democracy, liberal individualism and the freedom they allegedly ensured for all.

* * *

Up until the 1960s, philosophical reason had escaped relatively unscathed from the question of its responsibilities in perpetuating historical models of domination and exclusion. Both Sartre⁵ and de Beauvoir, influenced by Marxist theories of alienation and ideology, did connect the triumph of reason with the might of dominant powers, thus disclosing the complicity between philosophical ratio⁶ and real-life social practices of injustice. They continued, however, to defend a universalist idea of reason and to rely on a dialectical model for the resolution of these contradictions. This methodological approach, while being critical of hegemonic models of violent appropriation and consumption of the 'others', also defined the task of philosophy as a privileged and culturally hegemonic tool of political analysis. With Sartre and de Beauvoir, the image of the philosopher-king⁷ is built into the general picture, albeit in a critical mode. As a critic of ideology and the conscience of the oppressed, the philosopher is a thinking human being who continues to pursue grand theoretical systems and overarching truths. Sartre and de Beauvoir consider humanistic universalism as the distinctive trait of Western culture, i.e. its specific form of particularism. They use the conceptual tools provided by Humanism to precipitate a confrontation of philosophy with its own historical responsibilities and conceptual power-brokering.

This humanistic universalism, coupled with the social constructivist emphasis on the man-made and historically variable nature of social inequalities, lays the grounds for a robust political ontology. For instance, de Beauvoir's emancipatory feminism builds on the Humanist principle that 'Woman is the measure of all things female'⁸ and that to account for herself, the feminist philosopher needs to take into account the situation of all women. This creates on the theoretical level a productive synthesis of self and others. Politically, the Vitruvian female forged a bond of solidarity between one and

the many, which in the hands of the second feminist wave in the 1960s⁹ was to grow into the principle of political sisterhood. This posits a common grounding among women, taking being-women-in-the-world as the starting point for all critical reflection and jointly articulated political praxis.

Humanist feminism introduced a new brand of materialism, of the embodied and embedded kind.¹ The cornerstone of this theoretical innovation is a specific brand of situated epistemology,² which evolved from the practice of 'the politics of locations'³ and infused standpoint feminist theory and the subsequent debates with postmodernist feminism throughout the 1990s.⁴ The theoretical premise of humanist feminism is a materialist notion of embodiment that spells the premises of new and more accurate analyses of power. These are based on the radical critique of masculinist universalism, but are still dependent on a form of activist and equality-minded Humanism.

Feminist theory and practice worked faster and more efficiently than most social movements of the 1970s. It developed original tools and methods of analysis that allowed for more incisive accounts of how power works. Feminists also explicitly targeted the masculinism and the sexist habits of the allegedly 'revolutionary' Left and denounced them as contradictory with their ideology, as well as intrinsically offensive.

Within the mainstream Left, however, a new generation of post-war thinkers had other priorities. They rebelled against the high moral status of post-war European Communist parties in Western Europe, as well as in the Soviet empire. This had resulted in an authoritarian hold over the interpretation of Marxist texts and their key philosophical concepts. The new forms of philosophical radicalism developed in France and throughout Europe in the late 1960s expressed a vocal critique of the dogmatic structure of Communist thought and practice. They included a critique of the political alliance between philosophers like Sartre and de Beauvoir and the Communist Left,⁵ which lasted at least until the Hungarian insurrection of 1956.⁶ In response to the dogma and the violence of Communism, the generation of 1968⁷ appealed directly to the subversive potential of the texts of Marx, so as to recover their anti-institutional roots. Their radicalism was expressed in terms of a critique of the humanistic implications and the political conservatism of the institutions that embodied Marxist dogma.

Anti-humanism emerged as the rallying cry of this generation of radical thinkers who later were to become world-famous as the 'post-structuralist generation'. In fact, they were post-communists *avant la lettre*.⁸ They stepped

out of the dialectical oppositional thinking and developed a third way to deal with changing understandings of human subjectivity. By the time Michel Foucault published his ground-breaking critique of Humanism in *The Order of Things* (1970),⁹ the question of what, if anything, was the idea of 'the human' was circulating in the radical discourses of the time and had set the anti-humanist agenda for an array of political groups. The 'death of Man', announced by Foucault formalizes an epistemological and moral crisis that goes beyond binary oppositions and cuts across the different poles of the political spectrum. What is targeted is the implicit Humanism of Marxism, more specifically the humanistic arrogance of continuing to place Man at the centre of world history. Even Marxism, under the cover of a master theory of historical materialism, continued to define the subject of European thought as unitary and hegemonic and to assign him (the gender is no coincidence) a royal place as the motor of human history. Anti-humanism consists in de-linking the human agent from this universalistic posture, calling him to task, so to speak, on the concrete actions he is enacting. Different and sharper power relations emerge, once this formerly dominant subject is freed from his delusions of grandeur and is no longer allegedly in charge of historical progress.

The radical thinkers of the post-1968 generation rejected Humanism both in its classical and its socialist versions. The Vitruvian ideal of Man as the standard of both perfection and perfectibility was literally pulled down from his pedestal and deconstructed. This humanistic ideal constituted, in fact, the core of a liberal individualistic view of the subject, which defined perfectibility in terms of autonomy and self-determination. These are precisely the qualifications the post-structuralists objected to.

It turned out that this Man, far from being the canon of perfect proportions, spelling out a universalistic ideal that by now had reached the status of a natural law, was in fact a historical construct and as such contingent as to values and locations. Individualism is not an intrinsic part of 'human nature', as liberal thinkers are prone to believe, but rather a historically and culturally specific discursive formation, one which, moreover, is becoming increasingly problematic. The deconstructive brand of social constructivism introduced by post-structuralist thinkers like Jacques Derrida¹ also contributed to a radical revision of the Humanist tenets. An entire philosophical generation called for insubordination from received Humanist ideas of 'human nature'.

Feminists like Luce Irigaray² pointed out that the allegedly abstract ideal of Man as a symbol of classical Humanity is very much a male of the species: it is a he. Moreover, he is white, European, handsome and able-bodied; of his sexuality nothing much can be guessed, though plenty of speculation surrounds that of its painter, Leonardo da Vinci. What this ideal model may

have in common with the statistical average of most members of the species and the civilization he is supposed to represent is a very good question indeed. Feminist critiques of patriarchal posturing through abstract masculinity³ and triumphant whiteness⁴ argued that this Humanist universalism is objectionable not only on epistemological, but also on ethical and political grounds.

Anti-colonial thinkers adopted a similar critical stance by questioning the primacy of whiteness in the Vitruvian ideal as the aesthetic canon of beauty. Re-grounding such lofty claims onto the history of colonialism, anti-racist and post-colonial thinkers explicitly questioned the relevance of the Humanistic ideal, in view of the obvious contradictions imposed by its Eurocentric assumptions, but at the same time they did not entirely cast it aside. They held the Europeans accountable for the uses and abuses of this ideal by looking at colonial history and the violent domination of other cultures, but still upheld its basic premises. Frantz Fanon,⁵ for instance, wanted to rescue Humanism from its European perpetrators arguing that we have betrayed and misused the humanist ideal. As Sartre put it in his preface to Fanon's *The Wretched of the Earth*: the yellow and black voices still spoke of our Humanism, but only to reproach us with our inhumanity'.⁶ Post-colonial thought asserts that if Humanism has a future at all, it has to come from outside the Western world and by-pass the limitations of Eurocentrism. By extension, the claim to universality by scientific rationality is challenged on both epistemological and political grounds,⁷ all knowledge claims being expressions of Western culture and of its drive to mastery.

French post-structuralist philosophers pursued the same post-colonial aim through different routes and means.⁸ They argued that in the aftermath of colonialism, Auschwitz, Hiroshima and the Gulag⁹—to mention but a few of the horrors of modern history—we Europeans need to develop a critique of Europe's delusion of grandeur in positing ourselves as the moral guardian of the world and as the motor of human evolution. Thus, the philosophical generation of the 1970s, that proclaimed the 'death of Man' was anti-fascist, post-communist, post-colonial and post-humanist, in a variety of different combinations of the terms. They led to the rejection of the classical definition of European identity in terms of Humanism, rationality and

the universal. The feminist philosophies of sexual difference,¹ through the spectrum of the critique of dominant masculinity, also stressed the ethno-centric nature of European claims to universalism. They advocated the need to open it up to the 'others within'² in such a way as to re-locate diversity and multiple belongings to a central position as a structural component of European subjectivity.

Anti-humanism is consequently an important source for posthuman thought. It is by no means the only one, nor is the connection between anti-humanism and the posthuman logically necessary or historically inevitable. And yet it turned out to be so for my own work, although this story is still unfinished and in some ways, as I will argue in the next section, my relation to Humanism remains unresolved.

THE DEATH OF MAN, THE DECONSTRUCTION OF WOMAN

As indicated in the genealogical itinerary I have just sketched, anti-humanism is one of the historical and theoretical paths that can lead to the posthuman. I owe my anti-humanism to my beloved post-1968 teachers, some of whom were amazing philosophers whose legacy I continue to respect and admire: Foucault, Irigaray and Deleuze especially. The human of Humanism is neither an ideal nor an objective statistical average or middle ground. It rather spells out a systematized standard of recognizability—of Same-ness—by which all others can be assessed, regulated and allotted to a designated social location. The human is a normative convention, which does not make it inherently negative, just highly regulatory and hence instrumental to practices of exclusion and discrimination. The human norm stands for normality, normalcy and normativity. It functions by transposing a specific mode of being human into a generalized standard, which acquires transcendent values as *the* human: from male to masculine and onto human as the universalized format of humanity. This standard is posited as categorically and qualitatively distinct from the sexualized, racialized, naturalized others and also in opposition to the technological artefact. The human is a historical construct that became a social convention about 'human nature'.

My anti-humanism leads me to object to the unitary subject of Humanism, including its socialist variables, and to replace it with a more complex and relational subject framed by embodiment, sexuality, affectivity, empathy and desire as core qualities. Equally central to this approach is the insight I learned from Foucault on power as both a restrictive (*potestas*) and productive (*potentia*) force. This means that power formations not only function at the material level but are also expressed in systems of theoretical and cultural representation, political and normative narratives and social modes of identification. These are neither coherent, nor rational and their make-shift nature is instrumental to their hegemonic force. The awareness of the instability and the lack of coherence of the narratives that compose the social structures and relations, far from resulting in a suspension of political and moral action, become the starting point to elaborate new forms of resistance

2. Julia Kristeva, *Strangers to Ourselves* [trans. Leon S. Roudiez] (New York: Columbia University Press, 1991).

suited to the polycentric and dynamic structure of contemporary power.³ This engenders a pragmatic form of micro-politics that reflects the complex and nomadic nature of contemporary social systems and of the subjects that inhabit them. If power is complex, scattered and productive, so must be our resistance to it. Once this deconstructive move is activated, both the standard notion of Man and his second sex, Woman, are challenged in terms of their internal complexities.

This clearly affects the task and the methods status of theory. Discourse, as Michel Foucault argues in *Discipline and Punish* (1977), is about the political currency that is attributed to certain meanings, or systems of meaning, in such a way as to invest them with scientific legitimacy; there is nothing neutral or given about it. Thus, a critical, materialist link is established between scientific truth, discursive currency and power relations. This approach of discourse analysis primarily aims at dislodging the belief in the 'natural' foundations of socially coded and enforced 'differences' and of the systems of scientific validity, ethical values and representation which they support.⁴

Feminist anti-Humanism, also known as postmodernist feminism, rejected the unitary identities indexed on that Eurocentric and normative humanist ideal of 'Man'.⁵ It went further, however, and argued that it is impossible to speak in one unified voice about women, natives and other marginal subjects. The emphasis falls instead on issues of diversity and differences among them and on the internal fractures of each category. In this respect, anti-humanism rejects the dialectical scheme of thought, where difference or otherness played a constitutive role, marking off the sexualized other (woman), the racialized other (the native) and the naturalized other (animals, the environment or earth). These others were constitutive in that they fulfilled a mirror function that confirmed the Same in His superior position.⁶ This political economy of difference resulted in passing off entire categories of human beings as devalued and therefore disposable others: to be 'different from' came to mean to be 'less than'. The dominant norm of the subject was positioned at the pinnacle of a hierarchical scale that rewarded the ideal of zero-degree of difference.⁷ This is the former 'Man' of classical Humanism.

Materialist Theory of Becoming (Cambridge: Polity Press, 2002).

6. Rosi Braidotti, *Transpositions: On Nomadic Ethics* (Cambridge: Polity Press, 2006).

7. Deleuze calls it "the Majority subject" or the Molar centre of being (Gilles Deleuze and FÉLIX GUATTARI, *A Thousand Plateaus: Capitalism and Schizophrenia* (Minneapolis: University of Minnesota Press, 1987). Irigaray calls it "the Same," or the hyper-inflated, falsely universal "He" (Irigaray, *This Sex Which Is Not One* and *An Ethics of Sexual Difference*), whereas Hill Collins calls to account the white and Eurocentric bias of this particular subject of humanistic knowledge (Patricia Hill Collins, *Black Feminist Thought: Knowledge, Consciousness and the Politics of Empowerment* [New York: Routledge, 1991]).

Having practically grown up with theories about the death of God (Nietzsche), the end of Man (Foucault) and the decline of ideologies (Fukuyama),⁸ it took me a while to realize that, actually, one touches humanism at one's own risk and peril. The anti-humanist position is certainly not free of contradictions. As Badmington wisely reminds us: 'Apocalyptic accounts of the end of "man" [. . .] ignore Humanism's capacity for regeneration and, quite literally, recapitulation'.⁹ The Vitruvian Man rises over and over again from his ashes, continues to uphold universal standards and to exercise a fatal attraction.

The thought did occur to me, as I was listening to Diamanda Galas' 'Plague Mass' (1991)¹ for the victims of AIDS: it is one thing to loudly announce an anti-humanist stance, quite another to act accordingly, with a modicum of consistency. Anti-humanism is a position fraught with such contradictions that the more one tries to overcome them, the more slippery it gets. Not only do anti-humanists often end up espousing humanist ideals—freedom being my favourite one—but also, in some ways, the work of critical thought is supported by intrinsic humanist discursive values.² Somehow, neither humanism nor anti-humanism is adequate to the task.

The best example of the intrinsic contradictions generated by the anti-humanist stance is emancipation and progressive politics in general, which I consider one of the most valuable aspects of the humanistic tradition and its most enduring legacy. Across the political spectrum, Humanism has supported on the liberal side individualism, autonomy, responsibility and self-determination.³ On the more radical front, it has promoted solidarity, community-bonding, social justice and principles of equality. Profoundly secular in orientation, Humanism promotes respect for science and culture, against the authority of holy texts and religious dogma. It also contains an adventurous element, a curiosity-driven yearning for discovery and a project-oriented approach that is extremely valuable in its pragmatism. These principles are so deeply entrenched in our habits of thought that it is difficult to leave them behind altogether.

And why should we? Anti-humanism criticizes the implicit assumptions about the human subject that are upheld by the humanist image of Man, but this does not amount to a complete rejection.

For me it is impossible, both intellectually and ethically, to disengage the positive elements of Humanism from their problematic counterparts: individualism breeds egotism and self-centredness; self-determination can turn to arrogance and domination; and science is not free from its own dogmatic tendencies. The difficulties inherent in trying to overcome Humanism as an intellectual tradition, a normative frame and an institutionalized practice,

lie at the core of the deconstructive approach to the posthuman. Derrida opened this discussion by pointing out the violence implicit in the assignation of meaning.⁴ His followers pressed the case further: 'the assertion that Humanism can be decisively left behind ironically subscribes to a basic humanist assumption with regard to volition and agency, as if the "end" of Humanism might be subjected to human control, as if we bear the capacity to erase the traces of Humanism from either the present or an imagined future'.⁵ The emphasis falls therefore on the difficulty of erasing the trace of the epistemic violence by which a non-humanist position might be carved out of the institutions of Humanism. The acknowledgment of epistemic violence goes hand in hand with the recognition of the real-life violence which was and still is practised against non-human animals and the dehumanized social and political 'others' of the humanist norm. In this deconstructive tradition, Cary Wolfe⁶ is especially interesting, as he attempts to strike a new position that combines sensitivity to epistemic and word-historical violence with a distinctly trans-humanist faith⁷ in the potential of the post-human condition as conducive to human enhancement.

I have great respect for deconstruction, but also some impatience with the limitations of its linguistic frame of reference. I prefer to take a more materialist route to deal with the complexities of the posthuman as a key feature of our historicity. That road, too, is fraught with perils, as we shall see in the next section.

THE POSTSECULAR TURN

As a progressive political creed, Humanism bears a privileged relation to two other interlocked ideas: human emancipation in the pursuit of equality, and secularism through rational governance. These two premises emerge from the concept of Humanism just like the classical goddess Athena is raised from Zeus' head, fully clad and armed for battle.⁸ As John Gray argued: 'Humanism is the transformation of the Christian doctrine of salvation into a project of universal human emancipation. The idea of progress is a secular version of the Christian belief in providence. That is why among the ancient pagans it was unknown'.⁹ It is not surprising, therefore, that one of the side-effects of the decline of Humanism is the rise of the post-secular condition.¹

If the death of Man proved to be a bit of a hasty statement, that of God turned out to be positively delusional. The first cracks in the edifice of self-assured secularity appeared at the end of the 1970s. As the revolutionary zeal cooled off and social movements started to dissipate, conform or mutate, former militant agnostics joined a wave of conversions to a variety of conventional monotheistic or imported Eastern religions. This turn of events

raised serious doubts as to the future of secularity. The doubt crept into the collective and individual mind: how secular are 'we'—feminists, anti-racists, post-colonialists, environmentalists, etc.—really?

The doubt was even sharper for intellectual activists. Science is intrinsically secular, secularity being a key tenet of Humanism, alongside universalism, the unitary subject and the primacy of rationality. Science itself, however, in spite of its secular foundations, is far from immune from its own forms of dogmatism. Freud² was one of the first critical thinkers to warn us against the fanatical atheism of the supporters of scientific reason. In *The Future of an Illusion* (1928), Freud compares different forms of rigid dogmatism, classifying rationalist scientism alongside religion as a source of superstitious belief, a position best illustrated today by the extremism with which Richard Dawkins defends his atheist faith.³ Moreover, the much-celebrated objectivity of science has also been shown to be quite flawed. The uses and abuses of scientific experimentation under Fascism and in the colonial era prove that science is not immunized against nationalist, racist and hegemonic discourses and practices. Any claim to scientific purity, objectivity and autonomy needs therefore to be firmly resisted. Where does that leave Humanism and its anti-humanist critics?

Secularity is one of the pillars of Western Humanism, thus an instinctive form of aversion to religion and to the church is historically an integral aspect of emancipatory politics. The socialist humanist tradition, which was so central to the European Left and the women's movements in Europe since the eighteenth century, is justified in claiming to be secular in the narrow sense of the term: to be agnostic if not atheist and to descend from the Enlightenment critique of religious dogma and clerical authority. Like other emancipatory philosophies and political practices, the feminist struggle for women's rights in Europe has historically built on secular foundations. The lasting influence exercised by existentialist feminism,⁴ and Marxist or socialist feminisms⁵ on the second feminist wave, may also account for the perpetuation of this position. As the secular and rebellious daughters of the Enlightenment, European feminists were raised in rational argumentation and detached self-irony. The feminist belief-system is accordingly civic, not theistic and viscerally opposed to authoritarianism and orthodoxy. Feminist politics is also and at the same time a double-edged vision⁶ that combines rational arguments with political passions and creates alternative social blueprints and value systems.

However proud twentieth-century feminism may be of its secular roots, it is nonetheless the case that it has historically produced various alternative spiritual practices alongside and often in antagonism to the mainstream

political secularist line. Major writers in the radical feminist tradition of the second American wave, notably Audre Lorde, Alice Walker, and Adrienne Rich,⁷ acknowledged the importance of the spiritual dimension of women's struggle for equality and symbolic recognition. The work of Mary Daly, Schussler Fiorenza, and Luce Irigaray,⁸ to name but a few, highlights a specific feminist tradition of non-male-centred spiritual and religious practices. Feminist theology in the Christian, Muslim, and Judaic traditions⁹ produced well-established communities of both critical resistance and affirmation of creative alternatives. The call for new rituals and ceremonies makes the fortune of the witches' movement, currently best exemplified by Starhawk and reclaimed among others by the epistemologist Stengers.¹ Neo-pagan elements have also emerged in technologically mediated cyber-culture, producing various brands of posthuman techno-asceticism.²

Black and post-colonial theories have never been loudly secular. In the very religious context of the USA, African-American women's literature is filled with references to Christianity, as bell hooks and Cornel West demonstrate.³

* * *

Let me approach the limits of the feminist secular position from another angle. My monistic philosophy of becomings rests on the idea that matter, including the specific slice of matter that is human embodiment, is intelligent and self-organizing. This means that matter is not dialectically opposed to culture, nor to technological mediation, but continuous with them. This produces a different scheme of emancipation and a non-dialectical politics of human liberation. This position has another important corollary, namely that political agency need not be critical in the negative sense of oppositional and thus may not be aimed solely or primarily at the production of counter-subjectivities. Subjectivity is rather a process of auto-poiesis or self-styling, which involves complex and continuous negotiations with dominant norms and values and hence also multiple forms of accountability.⁴ This process-oriented political ontology can accommodate a post-secular turn, a position that is also defended within feminism by a variety of thinkers, such as Harding and Mahmood.⁵ The double challenge of linking political subjectivity to religious agency and of disengaging both from oppositional consciousness,

and from critique defined as negativity, is one of the main issues raised by the posthumanist condition.

Things around Humanism, however, are always more complex than one expects them to be. The return of religion in the public sphere and the strident tone reached by the global public debate on the 'clash of civilizations',⁶ not to speak of the permanent state of war on terror that ensued from this context, took many anti-humanists by surprise. To speak of a 'return' of religion is inappropriate, as it suggests a regressive movement. What we are experiencing at present is a more complicated situation. The crisis of secularism, defined as the essentialist belief in the axioms of secularity, is a phenomenon that takes place within the social and political horizon of late globalized post-modernity, not in pre-modern times. It is of the here and now. Moreover, it spreads across all religions, amidst both second and third generation descendants of Muslim immigrants; and amidst born-again fundamentalist Christians and by Hindi, Hebrew and others.

This is the paradoxical and violent global context where the posture of Western 'exceptionalism' has taken the form of self-aggrandizing praise of the Enlightenment Humanist legacy. This claim to an exceptional cultural status foregrounds the emancipation of women, gays and lesbians as the defining feature of the West, coupled with extensive geo-political armed interventions against the rest. Humanism has once again become enlisted in a civilizational crusade. Simultaneously over-estimated in its emancipatory historical role and manipulated for xenophobic purposes by populist politicians across Europe, Humanism may need to be rescued from these oversimplifications and violent abuses. I wonder, therefore, whether nowadays one can continue to uphold a simple anti-humanist position. Is a residual form of Humanism inevitable, intellectually, politically and methodologically, after all? If the new belligerent discourses about the alleged superiority of the West are expressed in terms of the legacy of secular Humanism, while the most vehement opposition to them takes the form of post-secular practices of politicized religion, where can an anti-humanist position rest? To be simply secular would be complicitous with neo-colonial Western supremacist positions, while rejecting the Enlightenment legacy would be inherently contradictory for any critical project. The vicious circle is stifling.

It is out of contradictions of this magnitude that the seemingly endless polemic between Humanism and anti-humanism reaches a dead-end. This position is not only unproductive; it also actively prevents an adequate reading of our immediate context. Leaving behind the tensions that surround Humanism and its self-contradictory refutation is now a priority. Another option becomes increasingly desirable and necessary: posthumanism as a move beyond these lethal binaries. Let us turn to it next.

THE POSTHUMAN CHALLENGE

Posthumanism is the historical moment that marks the end of the opposition between Humanism and anti-humanism and traces a different discursive

6. The title (with a question mark) of a controversial essay (*Foreign Affairs* 72.3 [1993]) by the American political scientist Samuel P. Huntington, who argues (partly in response to his student Francis Fukuyama) that in the aftermath of the

fall of the Soviet Union, Islam would become the greatest obstacle to the West's hegemony; he extended his argument in a book, *The Clash of Civilizations and the Remaking of World Order* (1996) [editor's note].

sive framework, looking more affirmatively towards new alternatives. The starting point for me is the anti-humanist death of Wo/Man which marks the decline of some of the fundamental premises of the Enlightenment, namely the progress of mankind through a self-regulatory and teleological ordained use of reason and of secular scientific rationality allegedly aimed at the perfectibility of 'Man'. The posthumanist perspective rests on the assumption of the historical decline of Humanism but goes further in exploring alternatives, without sinking into the rhetoric of the crisis of Man. It works instead towards elaborating alternative ways of conceptualizing the human subject. I will emphasize the priority of the issue of posthuman subjectivity throughout this book.

The crisis of Humanism means that the structural others of the modern humanistic subject re-emerge with a vengeance in postmodernity.⁷ It is a historical fact that the great emancipatory movements of postmodernity are driven and fuelled by the resurgent 'others': the women's rights movement; the anti-racism and de-colonization movements; the anti-nuclear and pro-environment movements are the voices of the structural Others of modernity. They inevitably mark the crisis of the former humanist 'centre' or dominant subject-position and are not merely anti-humanist, but move beyond it to an altogether novel, posthuman project. These social and political movements are simultaneously the symptom of the crisis of the subject, and for conservatives even its 'cause', and also the expression of positive, proactive alternatives. In the language of my nomadic theory,⁸ they express both the crisis of the majority and the patterns of becoming of the minorities. The challenge for critical theory consists in being able to tell the difference between these different flows of mutation.

In other words, the posthumanist position I am defending builds on the anti-humanist legacy, more specifically on the epistemological and political foundations of the post-structuralist generation, and moves further. The alternative views about the human and the new formations of subjectivity that have emerged from the radical epistemologies of Continental philosophy in the last thirty years do not merely oppose Humanism but create other visions of the self. Sexualized, racialized and naturalized differences, far from being the categorical boundary-keepers of the subject of Humanism, have evolved into fully fledged alternative models of the human subject. * * * I want to emphasize this shift away from anti-Humanism towards an affirmative posthuman position and examine critically some of its components.

I see three major strands in contemporary posthuman thought: the first comes from moral philosophy and develops a reactive form of the posthuman; the second, from science and technology studies, enforces an analytic form of the posthuman; and the third, from my own tradition of anti-humanist philosophies of subjectivity, proposes a critical post-humanism. Let us look at each of these in turn.

7. Braidotti, *Metamorphoses*.

8. Rosi Braidotti, *Nomadic Subjects: Embodiment and Sexual Difference in Contemporary Feminist Theory*, 2d ed. (New York: Columbia University

Press, 2011), and *Nomadic Theory: The Portable Rosi Braidotti* (New York: Columbia University Press, 2011).

The reactive approach to the posthuman is defended, both conceptually and politically, by contemporary liberal thinkers like Martha Nussbaum.⁹ She develops a thorough contemporary defence of Humanism as the guarantee of democracy, freedom and the respect for human dignity, and rejects the very idea of a crisis of European Humanism, let alone the possibility of its historical decline. Nussbaum does acknowledge the challenges presented by contemporary, technology-driven global economies, but responds to them by reasserting classical humanist ideals and progressive liberal politics. She defends the need for universal humanistic values as a remedy for the fragmentation and the relativistic drift of our times, which is the result of globalization itself. Humanistic cosmopolitan universalism is also presented as an antidote against nationalism and ethnocentrism, which plague the contemporary world, and to the prevailing American attitude of ignorance of the rest of the world.

Central to the reactive or negative post-humanism of Nussbaum is the idea that one of the effects of globalization is a sort of re-contextualization induced by the market economy. This produces a new sense of inter-connection which in turn calls for a neo-humanist ethics. For Nussbaum, abstract universalism is the only stance that is capable of providing solid foundations for moral values such as compassion and respect for others, which she firmly attaches to the tradition of American liberal individualism. I am very happy that Nussbaum stresses the importance of subjectivity, but less happy about the fact that she re-attaches it to a universalistic belief in individualism, fixed identities, steady locations and moral ties that bind.

In other words, Nussbaum rejects the insights of the radical anti-humanist philosophies of the last thirty years. Notably, she embraces universalism over and against the feminist and post-colonial insights about the importance of the politics of location and careful grounding in geo-political terms. By embracing dis-embedded universalism, Nussbaum ends up being paradoxically parochial in her vision of what counts as the human.¹ There is no room for experimenting with new models of the self; for Nussbaum the posthuman condition can be solved by restoring a humanist vision of the subject. As we shall see in the next section, whereas Nussbaum fills the ethical vacuum of the globalized world with classical Humanistic norms, critical post-humanists take the experimental path. They attempt to devise renewed claims to community and belonging by singular subjects who have taken critical distance from humanist individualism.

A second significant posthuman development comes from science and technology studies. This contemporary interdisciplinary field raises crucial ethical and conceptual questions about the status of the human, but is generally reluctant to undertake a full study of their implications for a theory of subjectivity. The influence of Bruno Latour's² anti-epistemology and anti-subjectivity position accounts partly for this reluctance. Concretely, it results in parallel and non-communicating lines of posthuman enquiry.

2. French anthropologist and sociologist of science (b. 1947; see above) [editor's note].

A new segregation of knowledge is produced, along the dividing lines of the 'two cultures',³ the Humanities and the Sciences. * * *

For now, let me stress that there is a posthuman agreement that contemporary science and biotechnologies affect the very fibre and structure of the living and have altered dramatically our understanding of what counts as the basic frame of reference for the human today. Technological intervention upon all living matter creates a negative unity and mutual dependence among humans and other species. The Human Genome Project,⁴ for instance, unifies all the human species on the basis of a thorough grasp of our genetic structure. This point of consensus, however, generates diverging paths of enquiry. The Humanities continue to ask the question of the epistemological and political implications of the posthuman predicament for our understanding of the human subject. They also raise deep anxieties both about the moral status of the human and express the political desire to resist commercially owned and profit-minded abuses of the new genetic know-how.

Contemporary science and technology studies, on the other hand, adopt a different agenda. They have developed an analytic form of posthuman theory. For instance, Franklin, Lury and Stacey, working within a socio-cultural frame of reference, refer to the technologically mediated world of today as 'panhumanity'.⁵ This indicates a global sense of inter-connection among all humans, but also between the human and the non-human environment, including the urban, social and political, which creates a web of intricate inter-dependences. This new pan-humanity is paradoxical in two ways: firstly, because a great deal of its inter-connections are negative and based on a shared sense of vulnerability and fear of imminent catastrophes and, secondly, because this new global proximity does not always breed tolerance and peaceful co-existence; on the contrary, forms of xenophobic rejection of otherness and increasing armed violence are key features of our times. * * *

* * *

Another significant case for analytic post-humanism is advocated by Peter-Paul Verbeek.⁶ Starting from the recognition of the intimate and productive association between human subjects and technological artefacts, as well as the theoretical impossibility of keeping them apart, Verbeek hints at the need for a post-anthropological turn that links humans to non-humans, but he is also very careful not to trespass certain limits. His analytic form of post-humanism is immediately qualified by a profoundly humanist and thus normative approach to technology itself. Verbeek's main argument is that 'technologies contribute actively to how humans do ethics';⁷ a revised and updated form of humanist ethics gets superimposed on post-humanist technologies.

In order to defend the humanist principle at the heart of contemporary technologies, Verbeek emphasizes the moral nature of technological tools

3. "The Two Cultures" (1956) was an article by the English scientist and novelist C. P. Snow, later expanded and published as *The Two Cultures and the Scientific Revolution* (1959) [editor's note].

7. *Ibid.*, 5.

as agents that can guide human decision making on normative issues. He also introduces multiple forms of machinic intentionality, all of them indexed on non-human forms of moral consciousness. Only by taking seriously the morality of things, argues Verbeek, can we hope to integrate our technology into the wider social community and bring a posthuman brand of Humanism into the twenty-first century. This results in shifting the location of traditional moral intentionality from autonomous transcendental consciousness to the technological artefacts themselves.

The analytic post-humanism of science and technology studies is one of the most important elements of the contemporary posthuman landscape. In terms of critical theories of the subject, which is the focus of my position, however, this position falls wide of the mark, because it introduces selected segments of humanistic values without addressing the contradictions engendered by such a grafting exercise.

The pride in technological achievements and in the wealth that comes with them must not prevent us from seeing the great contradictions and the forms of social and moral inequality engendered by our advanced technologies. Not addressing them, in the name of either scientific neutrality or of a hastily reconstructed sense of the pan-human bond induced by globalization, simply begs the question.

In my eyes, what is striking about the science and technology studies approach, whether it relies theoretically on moral philosophy or on socio-cultural theory, is the high degree of political neutrality it expresses about the posthuman predicament. Both Rose and Franklin et al.,⁸ for instance, make it clear that the focus of their research is analytic and aims to achieve a better, more thorough and in some ways intimate ethnographic understanding of how these new technologies actually function. Science and technology studies tend to dismiss the implications of their positions for a revised vision of the subject. Subjectivity is out of the picture and, with it, a sustained political analysis of the posthuman condition. In my view, a focus on subjectivity is necessary because this notion enables us to string together issues that are currently scattered across a number of domains. For instance, issues such as norms and values, forms of community bonding and social belonging as well as questions of political governance both assume and require a notion of the subject. Critical posthuman thought wants to re-assemble a discursive community out of the different, fragmented contemporary strands of posthumanism.

* * *

There is another fundamental problem with the residual humanism of the analytically posthuman attempts to moralize technology and sideline experiments with new forms of subjectivity, namely their over-confidence about the moral intentionality of the technology itself. More specifically, they neglect the current state of autonomy reached by the machines. The complexity of our smart technologies lies at the core of the post-anthropocentric turn. * * * Let us consider just one aspect of our technological smartness.

8. Nicholas Rose, *The Politics of Life Itself: Biomedicine, Power and Subjectivity in the Twenty-First Century* (Princeton, N.J.: Princeton

University Press, 2007); Franklin, Lury, and Stacey, *Global Nature, Global Culture*.

A recent issue of the weekly magazine *The Economist* (2 June 2012) on 'Morals and the machine' raises some pertinent issues about the degree of autonomy reached by robots and calls for society to develop new rules to manage them. The analysis is significant: in contrast to the modernist idea of the robot as subservient to the human, as exemplified by Isaac Asimov's 'three laws of robotics' formulated in 1942,⁹ we are now confronted by a new situation, which makes human intervention rather peripheral if not completely irrelevant. *The Economist* argues:

As robots become more autonomous, the notion of computer-controlled machines facing ethical decisions is moving out of the realm of science fiction and into the real world.¹

Most of these new robots are military in purpose * * * but many others are used for perfectly reasonable civilian purposes. All of them share a crucial feature: they have made it technologically feasible to by-pass human decision making at both the operational and the moral levels. According to this report, humans will increasingly operate not 'in the loop' but 'on the loop', monitoring armed and working robots rather than fully controlling them. Only ethical and legal issues remain to be solved to grant responsibility to autonomous machines' decision making, while the cognitive capacities are already in place.

As they become smarter and more widespread, autonomous machines are bound to make life-or-death decisions and thus assume agency. Whether this high degree of autonomy, however, results in moral decision making is at best an open question. Against claims to the in-built moral intentionality of the technology, I would claim that it is normatively neutral. Take some burning issues, such as: should an unmanned flying vehicle, also known as a drone, fire on a house where a target is known to be hiding, which also shelters civilians? Should robots involved in disaster relief tell people the truth about their conditions, thus causing panic and pain? Such questions lead to the field of 'machine ethics', which aims to give machines the ability to make such choices appropriately, in other words, to tell right from wrong. And who is to decide?

According to *The Economist*, a new ethical approach needs to be developed by active experiments. They should focus on three areas especially: firstly, the rule of Laws to determine whether the designer, the programmer, the manufacturer, or the operator is at fault if a machine goes wrong. To allocate responsibility, a detailed logs system is needed so that it can explain the reasoning behind the decision-making process. This has implications for design, with a preference for systems that obey pre-defined rules rather than decision-making systems. Secondly, when ethical systems are embedded in robots, the judgements they make need to be ones that seem right to most

9. These three laws are: (1) A robot may not injure a human being or, through inaction, allow a human being to come to harm. (2) A robot must obey the orders given to it by human beings, except where such orders would conflict with the First Law. (3) A robot must protect its own existence as long as such protection does not conflict with the First or Second Laws. These rules were set up by Isaac Asimov in a short story in 1942 and then re-printed in the world best-seller: *I,*

Robot, in 1950. They became foundational notions in cyber-studies. Later, Asimov added a fourth law which precedes all others: (0) A robot may not harm humanity, or, by inaction, allow humanity to come to harm. [Asimov (1920–1992), American biochemist and author, best known for his science fiction—editor's note.]

1. "Morals and the Machine," *The Economist*, June 2, 2012, p. 11.

people. The techniques of experimental philosophy, which studies how people respond to ethical dilemmas, should be able to help. Thirdly, new interdisciplinary collaboration is required between engineers, ethicists, lawyers and policy-makers, all of whom would draw up very different rules if left to their own devices. They all stand to gain by working with each other.

What is posthuman about the situation outlined in *The Economist* is that it does not assume a human, individualized self as the deciding factor of main subject. It rather envisages what I would call a transversal interconnection or an 'assemblage' of human and non-human actors, not unlike Latour's Actor Network Theory.² It is significant that a rather cautious and conservative journal like *The Economist*, faced with the challenge of the posthuman powers of the technologies we have developed, does not call for a return to humanist values, but for pragmatic experimentation. This prompts three comments on my part: firstly, that I could not agree more that this is no time for nostalgic longings for the humanist past, but for forward-looking experiments with new forms of subjectivity. Secondly, I want to emphasize the normatively neutral structure of contemporary technologies: they are not endowed with intrinsic humanistic agency. Thirdly, I note that the advocates of advanced capitalism seem to be faster in grasping the creative potential of the posthuman than some of the well-meaning and progressive neo-humanist opponents of this system. * * *

CRITICAL POSTHUMANISM

The third strand of posthuman thought, my own variation, shows no conceptual or normative ambivalence towards posthumanism. I want to move beyond analytic posthumanism and develop affirmative perspectives on the posthuman subject. My inspiration for taking the jump into critical posthumanism comes from my anti-humanist roots, of course. More specifically, the current of thought that has gone further in unfolding the productive potential of the posthuman predicament can be genealogically traced back to the poststructuralists, the anti-universalism of feminism and the anti-colonial phenomenology of Frantz Fanon and of his teacher Aimé Césaire.³ What they have in common is a sustained commitment to work out the implications of posthumanism for our shared understandings of the human subject and of humanity as a whole.

The work of post-colonial and race theorists displays a situated cosmopolitan posthumanism that is supported as much by the European tradition as by non-Western sources of moral and intellectual inspiration. The examples are manifold and deserve more in-depth analysis than I can grant them here; for now, let me pick out the main gist of it.⁴

2. John Law and John Hassard, eds., *Actor Network Theory and After* (Oxford: Blackwell, 1999). [Actor Network Theory: a theoretical approach to understanding technoscience that follows "actors" (either human or nonhuman) to understand the "networks" or assemblages that they create, which can coalesce into scientific facts. This methodology yields more complex accounts of scientific discovery than those that feature a "hero"—editor's note.]

3. Frantz Fanon, *Black Skin, White Masks* (New York: Grove Press, 1967); Aimé Césaire, *Discours*

sur le colonialisme [*Discourse on Colonialism*] (Paris: Presence Africain, 1955). [Césaire (1913–2008), Martinican politician and author, one of the founders of the *négritude* movement in Francophone literature that asserted black and African pride—editor's note.]

4. Significant examples are: Avtar Brah's diasporic ethics in *Cartographies of Diaspora: Contesting Identities* (New York: Routledge, 1996) echoes Vandana Shiva's anti-global neo-Humanism in *Biopiracy: The Plunder of Nature and Knowledge* (Boston: South End Press, 1997).

Edward Said⁵ was among the first to alert critical theorists in the West to the need to develop a reasoned scholarly account of Enlightenment-based secular Humanism, which would take into account the colonial experience, its violent abuses and structural injustice, as well as post-colonial existence. Post-colonial theory developed this insight into the notion that ideals of reason, secular tolerance, equality under the Law and democratic rule, need not be, and indeed historically have not been, mutually exclusive with European practices of violent domination, exclusion and systematic and instrumental use of terror. Acknowledging that reason and barbarism are not self-contradictory, nor are Enlightenment and horror, need not result in either cultural relativism, or in moral nihilism, but rather in a radical critique of the notion of Humanism and its link with both democratic criticism and secularism. Edward Said defends the idea that:

It is possible to be critical of Humanism in the name of Humanism and that, schooled in its abuses by the experience of Eurocentrism and empire, one could fashion a different kind of Humanism that was cosmopolitan and text-and-language bound in ways that absorbed the great lessons of the past [. . .] and still remain attuned to the emergent voices and currents of the present, many of them exilic, extraterritorial, and unhoused.⁶

Fighting for such subaltern secular spaces is a priority for a posthuman quest for what is known in some quarters as a 'global ethic for global politics and economics'.⁷

Paul Gilroy's planetary cosmopolitanism⁸ also proposes a productive form of contemporary critical posthumanism. Gilroy holds Europe and the Europeans accountable for our collective failure in implementing the ideals of the humanist Enlightenment. Like the feminists, race theorists are suspicious of deconstructing a subject-position, which historically they never gained the right to. Gilroy considers colonialism and fascism as a betrayal of the European ideal of the Enlightenment, which he is determined to defend, holding Europeans accountable for their ethical and political failings. Racism splits common humanity and disengages whites from any ethical sensibility, reducing them to an inhuman moral status. It also reduces non-whites to a subhuman ontological status that exposes them to murderous violence. Taking a strong stand against the return of fundamentalist appeals to ethnic differences by a variety of white, black, Serbian, Rwandan, Texan and other nationalists, Gilroy denounces what Deleuze calls 'micro-fascisms'⁹ as the epidemics of our globalized times. He locates the site of the ethical transformation in the critique of each nationalistic cate-

African Humanism or Ubuntu is receiving more attention, from Patricia Hill Collins (*Black Feminist Thought*) to Drucilla Cornell in *The Ubuntu Project with Stellenbosch University*, www.fehe.org/index.php?id=281 (2002) (accessed 2 January 2007). In a more nomadic vein, Edouard Glissant's politics of relations in *Poetics of Relation* [trans. Betsy Wing] (Ann Arbor: University of Michigan Press, 1997) inscribed multi-lingual hybridity at the heart of the contemporary post-human condition. Homi Bhabha's "subaltern secularism" in *The Location of Culture* (London: Routledge, 1994) builds on the huge legacy of

Edward Said.

gory, not in the assertion of a new dominant one. He sets diasporic mobility and the transcultural interconnections up against the forces of nationalism. This is a theory of mixture, hybridity and cosmopolitanism that is resolutely non-racial. Against the enduring power of nation states, Gilroy posits instead the affirmative politics of transversal movements, such as anti-slavery, feminism, *Médécins sans frontières*¹ and the like.

An altogether different and powerful source of inspiration for contemporary re-configurations of critical posthumanism is ecology and environmentalism. They rest on an enlarged sense of inter-connection between self and others, including the non-human or 'earth' others. This practice of relating to others requires and is enhanced by the rejection of self-centred individualism. It produces a new way of combining self-interests with the well-being of an enlarged community, based on environmental inter-connections.

Environmental theory stresses the link between the humanistic emphasis on Man as the measure of all things and the domination and exploitation of nature and condemns the abuses of science and technology. Both of them involve epistemic and physical violence over the structural 'others' and are related to the European Enlightenment ideal of 'reason'. The worldview which equated Mastery with rational scientific control over 'others' also militated against the respect for the diversity of living matters and of human cultures.² The environmental alternative is a new holistic approach that combines cosmology with anthropology and post-secular, mostly feminist spirituality, to assert the need for loving respect for diversity in both its human and non-human forms. Significantly, Shiva and Mies stress the importance of life-sustaining spirituality in this struggle for new concrete forms of universality: a reverence for the sacredness of life, of deeply seated respect for all that lives. This attitude is opposed to Western Humanism and to the West's investment in rationality and secularity as the pre-condition for development through science and technology. In a holistic perspective, they call for the 're-enchantment of the world'³ or for healing the Earth and that which has been so cruelly disconnected. Instead of the emphasis on emancipation from the realm of natural necessity, Shiva pleads for a form of emancipation that occurs within that realm and in harmony with it. From this shift of perspective there follows a critique of the ideal of equality as the emulation of masculine modes of behaviour and also the rejection of the model of development that is built upon this ideal and is compatible with world-wide forms of market domination.

Although ecological posthumanists like Shiva take great care to distance themselves from anything that is even remotely related to 'post'-modernism, post-colonialism, or post-feminism, paradoxically, they share in the epistemic premises of posthuman critiques. For instance, they agree with the post-structuralist generation on the critique of the homogenization of cultures under the effects of globalized advanced capitalism. They propose as an alternative a robust type of environmentalism, based on non-Western neo-humanism. What matters for Mies and Shiva is the reassertion of the need for new universal values in the sense of interconnectedness among humans,

3. *Ibid.*, 18.

on a worldwide scale. Thus, universal needs are amalgamated to universal rights and they cover as much basic and concrete necessities, such as food, shelter, health, safety, as higher cultural needs, like education, identity, dignity, knowledge, affection, joy and care. These constitute the material grounding of the situated claims to new ethical values.

A new ecological posthumanism thus raises issues of power and entitlement in the age of globalization and calls for self-reflexivity on the part of the subjects who occupy the former humanist centre, but also those who dwell in one of the many scattered centres of power of advanced post-modernity.⁴

In my own work, I define the critical posthuman subject within an eco-philosophy of multiple belongings, as a relational subject constituted in and by multiplicity, that is to say a subject that works across differences and is also internally differentiated, but still grounded and accountable. Posthuman subjectivity expresses an embodied and embedded and hence partial form of accountability, based on a strong sense of collectivity, relationality and hence community building.

My position is in favour of complexity and promotes radical posthuman subjectivity, resting on the ethics of becoming. * * * The focus is shifted accordingly from unitary to nomadic subjectivity, thus running against the grain of high humanism and its contemporary variations. This view rejects individualism, but also asserts an equally strong distance from relativism or nihilistic defeatism. It promotes an ethical bond of an altogether different sort from the self-interests of an individual subject, as defined along the canonical lines of classical Humanism. A posthuman ethics for a non-unitary subject proposes an enlarged sense of inter-connection between self and others, including the non-human or 'earth' others, by removing the obstacle of self-centred individualism. As we saw earlier, contemporary bio-genetic capitalism generates a global form of reactive mutual inter-dependence of all living organisms, including non-humans. This sort of unity tends to be of the negative kind, as a shared form of vulnerability, that is to say a global sense of inter-connection between the human and the non-human environment in the face of common threats. The posthuman recomposition of human interaction that I propose is not the same as the reactive bond of vulnerability, but is an affirmative bond that locates the subject in the flow of relations with multiple others.

* * * For me there is a necessary link between critical posthumanism and the move beyond anthropocentrism. I refer to this move as expanding the notion of Life towards the non-human or *zoe*.⁵ This results in radical posthumanism as a position that transposes hybridity, nomadism, diasporas and creolization processes into means of re-grounding claims to subjectivity, connections and community among subjects of the human and the non-human kind. * * *

ROB NIXON

b. 1954

Rob Nixon is a public intellectual whose work in ecological criticism and postcolonial literature has established him as a leading figure in the interdisciplinary field of environmental humanities. By precept and by example, he urges that scholarly and public writing be married to concrete struggles for justice.

Nixon was born in South Africa, where he earned a B.A. from Rhodes University (1978). Rejecting South Africa's then-dominant apartheid regime, Nixon expatriated and earned an M.A. in English from the University of Iowa (1982) followed by an M.Phil. and Ph.D. in English from Columbia University (1984, 1989). While in graduate school, Nixon began publishing journalistic essays in magazines such as the *Nation*, *Borderlines*, and the *Village Voice* in addition to scholarly articles in journals such as *Critical Arts* and *English in Africa*. After receiving his Ph.D., Nixon taught at Columbia University and the University of Wisconsin–Madison. In 2015, he became Currie C. and Thomas A. Barron Family Professor in the Humanities and the Environment at Princeton University. Throughout his career, Nixon has pursued both public and scholarly writing; that breadth has enabled him to make the ideas of ecological and postcolonial theory accessible to wide audiences, as he has frequently published in outlets such as the *New York Times*, the *Atlantic*, and the *London Review of Books*. His books similarly range from academic cultural criticism to creative nonfiction.

Our first selection is from the introduction to Nixon's book *Slow Violence and the Environmentalism of the Poor* (2011). The book highlights forms of environmental violence that are easily ignored because they occur over long periods of time and are spatially dispersed. As an example of such "slow violence," Nixon describes how in the 1980s mothers in the Marshall Islands were still giving birth to "headless, eyeless, limbless human infants who would live just a few hours" because of the long-term effects of radiation contamination from atmospheric nuclear tests conducted there from 1948 to 1958. The decades-long delay between an action (nuclear tests) and its violent effects (malformed infants) could easily function to obscure the public perception of the causal relationship between the two. This problem is made more acute by what Nixon calls "the flickering attention spans" of people living in wealthy twenty-first-century capitalist nations. The combination of spectacle-driven ephemeral corporate media, time-saving domestic technologies, and the habit of expecting instant gratification of consumer desires has made it difficult for such individuals to attend to atrocities that are committed gradually. To people accustomed to the spectacles of war and sudden natural disasters, violence that is inflicted over the course of decades seems unreal. At the same time, industrial technologies have made it possible for humans to affect local and global ecologies more dramatically than ever before, as is demonstrated by numerous instances of slow violence, including toxic drift, deforestation, ocean acidification, and climate change. The consequent risk of widespread suffering due to adverse ecological effects makes attending to slow violence a matter of grave importance.

The urgent task of drawing public and political attention to the problem of slow violence leads Nixon to promote the work of activist writers who tell stories and create images that are capable of shining a spotlight on acts of violence that are not easily reduced to media spectacles. In particular, he highlights the work of environmentalist writers who give "scientific and imaginative testimony" to ecological injustices in a way that captures public attention, stirs emotion, and inspires concrete political action. In Nixon's view, the social importance of such public intellectuals often requires them to cross the traditional boundaries between academic

disciplines as well as the boundaries between academic and journalistic writing. Along these lines, Nixon is particularly invested in the “environmental humanities,” an interdisciplinary field in which historians and literary critics with a concern for ecological justice are joining scholars in the hard and social sciences to “testify on issues of world urgency.” Nixon’s work seeks to forge such alliances for the purpose of creative communication that can raise consciousness and stir action regarding ecological issues of great consequence on a global scale.

That scale leads to the major theme suggested in the second half of Nixon’s book title: the environmentalism of the poor. Nixon asserts that the people most threatened by slow violence are those who lack resources, especially the impoverished peoples of the global South. In previous generations, environmental activism was dominated by the inhabitants of rich nations for whom environmentalism was often a “planetary abstraction” disconnected from the concrete struggles of the poor; consequently, their activism was viewed with suspicion by poor non-Westerners. However, Nixon argues that the intensification of ecological exploitation due to globalization and neoliberal capitalism has provoked an intensification of resistance from the poor. Many impoverished people and groups who have long depended on local resources that are being exploited by global capitalists are now becoming “resource rebels” who “experience environmental threat not as a planetary abstraction but as a set of inhabited risks.” Nixon argues that the future of the biosphere depends in large part on the relations among environmentalists, writer-activists, and the resource rebels of the global poor whose voices desperately need to be heard.

Our second selection from Nixon, “The Anthropocene: The Promise and Pitfalls of an Epochal Idea” (2014), considers a concept in environmental studies that seeks to highlight the massive impact that humans in the modern era are having on the present and future of the planet. The term *Anthropocene*, which was popularized in 2000 by the atmospheric chemist Paul Crutzen and the ecologist Eugene Stoermer, refers to a proposed new geological epoch that began in the late eighteenth century and is defined by massive human impacts on the earth’s geophysical and biophysical systems. Though the concept is useful, Nixon points out its potential problems, such as the danger of ignoring the massive inequities between the world’s rich and poor in a reductive master narrative about how “humanity” has changed the planet. He also expresses concern about “Anthropocene optimists” who tell a hubristic story about humans emerging as demigods who will increasingly excel at bending the planet to their collective will. Against these tendencies, Nixon advocates learning to tell two different kinds of narratives held in tension. The first describes humanity’s increasing impact on a planet that nonetheless remains outside of humanity’s control, and the second focuses on the many frictions and diversities characterizing humans’ ways of relating to the planet in an age of “the uber-rich and the ultra-poor.” Nixon again calls for academics, public intellectuals, and other creative communicators to develop stories and images that can help a growing number of people see, feel, and respond appropriately to the reality of massive ecological changes that humans have slowly brought about over the course of centuries.

Nixon’s arguments are open to criticism from several angles. Some have suggested that his concept of slow violence inadvertently obscures the rapid impact of the environmental degradations he describes, and that the term *violence* oversimplifies matters by implying conscious, malevolent intent on the part of persons responsible for these degradations. Furthermore, those who are more critical than Nixon of the notion of the Anthropocene might argue that it betrays “presentist” or anthropocentric biases by exaggerating the role of modern humans in shaping the earth. Despite such criticisms, Nixon’s work has won wide praise for its insightful synthesis of eco-criticism with postcolonial theory. Nixon’s insistence on viewing slow violence from the perspective of people in postimperial situations illuminates the connections between environmental activists and theorists such as EDWARD W. SAID, whom Nixon cites as a major inspiration. Moreover, the arguments of ecological theorists such as

TIMOTHY MORTON, who emphasizes the profound interconnectedness of all life, can be further developed by Nixon's stress on the spatially and temporally dispersed connections that exist between people in different generations and on different continents. Nixon's exploration of the intersections between environmental and postcolonial theory demonstrates that the two fields have much to offer one another.

From Slow Violence and the Environmentalism of the Poor

From Introduction

I think of globalization like a light which shines brighter and brighter on a few people and the rest are in darkness, wiped out. They simply can't be seen. Once you get used to not seeing something, then, slowly, it's no longer possible to see it.

—Arundhati Roy¹

I think the economic logic behind dumping a load of toxic waste in the lowest wage country is impeccable and we should face up to that. . . . I've always thought that countries in Africa are vastly under polluted; their air quality is probably vastly inefficiently low compared to Los Angeles. . . . Just between you and me, shouldn't the World Bank be encouraging more migration of the dirty industries to the Least Developed Countries?

—Lawrence Summers, confidential World Bank memo, December 12, 1991

When Lawrence Summers, then president of the World Bank, advocated that the bank develop a scheme to export rich nation garbage, toxic waste, and heavily polluting industries to Africa, he did so in the calm voice of global managerial reasoning.² Such a scheme, Summers elaborated, would help correct an inefficient global imbalance in toxicity. Underlying his plan is an overlooked but crucial subsidiary benefit that he outlined: offloading rich-nation toxins onto the world's poorest continent would help ease the growing pressure from rich-nation environmentalists who were campaigning against garbage dumps and industrial effluent that they condemned as health threats and found aesthetically offensive. Summers thus rationalized his poison-redistribution ethic as offering a double gain: it would benefit the United States and Europe economically, while helping appease the rising

discontent of rich-nation environmentalists. Summers' arguments assumed a direct link between aesthetically unsightly waste and Africa as an out-of-sight continent, a place remote from green activists' terrain of concern. In Summers' win-win scenario for the global North, the African recipients of his plan were triply discounted: discounted as political agents, discounted as long-term casualties of what I call in this book "slow violence," and discounted as cultures possessing environmental practices and concerns of their own. I begin with Summers' extraordinary proposal because it captures the strategic and representational challenges posed by slow violence as it impacts the environments—and the environmentalism—of the poor.

Three primary concerns animate this book, chief among them my conviction that we urgently need to rethink—politically, imaginatively, and theoretically—what I call "slow violence." By slow violence I mean a violence that occurs gradually and out of sight, a violence of delayed destruction that is dispersed across time and space, an attritional violence that is typically not viewed as violence at all. Violence is customarily conceived as an event or action that is immediate in time, explosive and spectacular in space, and as erupting into instant sensational visibility. We need, I believe, to engage a different kind of violence, a violence that is neither spectacular nor instantaneous, but rather incremental and accretive, its calamitous repercussions playing out across a range of temporal scales. In so doing, we also need to engage the representational, narrative, and strategic challenges posed by the relative invisibility of slow violence. Climate change, the thawing cryosphere, toxic drift, biomagnification,³ deforestation, the radioactive aftermaths of wars, acidifying oceans, and a host of other slowly unfolding environmental catastrophes present formidable representational obstacles that can hinder our efforts to mobilize and act decisively. The long dyings—the staggered and staggeringly discounted casualties, both human and ecological that result from war's toxic aftermaths or climate change—are underrepresented in strategic planning as well as in human memory.

Had Summers advocated invading Africa with weapons of mass destruction, his proposal would have fallen under conventional definitions of violence and been perceived as a military or even an imperial invasion. Advocating invading countries with mass forms of slow-motion toxicity, however, requires rethinking our accepted assumptions of violence to include slow violence. Such a rethinking requires that we complicate conventional assumptions about violence as a highly visible act that is newsworthy because it is event focused, time bound, and body bound. We need to account for how the temporal dispersion of slow violence affects the way we perceive and respond to a variety of social afflictions—from domestic abuse to post-traumatic stress and, in particular, environmental calamities. A major challenge is representational: how to devise arresting stories, images, and symbols adequate to the pervasive but elusive violence of delayed effects. Crucially, slow violence is often not just attritional but also exponential, operating as a major threat multiplier; it can fuel long-term, proliferating conflicts in situations where the conditions for sustaining life become increasingly but gradually degraded.

3. The process by which a compound becomes more concentrated in the tissues of organisms as it travels up the food chain. "Cryosphere": that

part of the earth's surface that is permanently frozen [editor's note].

Politically and emotionally, different kinds of disaster possess unequal heft. Falling bodies, burning towers, exploding heads, avalanches, volcanoes, and tsunamis have a visceral, eye-catching and page-turning power that tales of slow violence, unfolding over years, decades, even centuries, cannot match. Stories of toxic buildup, massing greenhouse gases, and accelerated species loss due to ravaged habitats are all cataclysmic, but they are scientifically convoluted cataclysms in which casualties are postponed, often for generations. In an age when the media venerate the spectacular, when public policy is shaped primarily around perceived immediate need, a central question is strategic and representational: how can we convert into image and narrative the disasters that are slow moving and long in the making, disasters that are anonymous and that star nobody, disasters that are attritional and of indifferent interest to the sensation-driven technologies of our image-world? How can we turn the long emergencies of slow violence into stories dramatic enough to rouse public sentiment and warrant political intervention, these emergencies whose repercussions have given rise to some of the most critical challenges of our time?

This book's second, related focus concerns the environmentalism of the poor, for it is those people lacking resources who are the principal casualties of slow violence. Their unseen poverty is compounded by the invisibility of the slow violence that permeates so many of their lives. Our media bias toward spectacular violence exacerbates the vulnerability of ecosystems treated as disposable by turbo-capitalism while simultaneously exacerbating the vulnerability of those whom Kevin Bales, in another context, has called "disposable people."⁴ It is against such conjoined ecological and human disposability that we have witnessed a resurgent environmentalism of the poor, particularly (though not exclusively) across the so-called global South. So a central issue that emerges is strategic: if the neoliberal era⁵ has intensified assaults on resources, it has also intensified resistance, whether through isolated site-specific struggles or through activism that has reached across national boundaries in an effort to build translocal alliances.

"The poor" is a compendious category subject to almost infinite local variation as well as to fracture along fault lines of ethnicity, gender, race, class, region, religion, and generation. Confronted with the militarization of both commerce and development, impoverished communities are often assailed by coercion and bribery that test their cohesive resilience. How much control will, say, a poor hardwood forest community have over the mix of subsistence and market strategies it deploys in attempts at adaptive survival? How will that community negotiate competing definitions of its own poverty and long-term wealth when the guns, the bulldozers, and the money-men arrive? Such communities typically have to patch together threadbare improvised alliances against vastly superior military, corporate, and media forces. As such, impoverished resource rebels can seldom afford to be single-issue activists: their green commitments are seamed through with other economic and cultural causes as they experience environmental threat not

4. Kevin Bales, *Disposable People: New Slavery in the Global Economy* (Berkeley: University of California Press, 2004). [Bales (b. 1952), American activist and scholar whose focus is modern slavery—editor's note.]

5. The late twentieth-century global resurgence of laissez-faire economic liberalism. The term is used mainly by critics of this economic system; its proponents emphasize deregulation, privatization, and free trade [editor's note].

as a planetary abstraction but as a set of inhabited risks, some imminent, others obscurely long term.

The status of environmental activism among the poor in the global South has shifted significantly in recent years. Where green or environmental discourses were once frequently regarded with skepticism as neocolonial, Western impositions inimical to the resource priorities of the poor in the global South, such attitudes have been tempered by the gathering visibility and credibility of environmental justice movements that have pushed back against an antihuman environmentalism that too often sought (under the banner of universalism) to impose green agendas dominated by rich nations and Western NGOs. Among those who inhabit the frontlines of the global resource wars, suspicions that environmentalism is another guise of what Andrew Ross calls “planetary management” have not, of course, been wholly allayed.⁶ But those suspicions have eased somewhat as the spectrum of what counts as environmentalism has broadened. Western activists are now more prone to recognize, engage, and learn from resource insurrections among the global poor that might previously have been discounted as not properly environmental.⁷ Indeed, I believe that the fate of environmentalism—and more decisively, the character of the biosphere itself—will be shaped significantly in decades to come by the tension between what Ramachandra Guha and Joan Martinez-Alier have called “full-stomach” and “empty-belly” environmentalism.⁸

The challenge of visibility that links slow violence to the environmentalism of the poor connects directly to this book’s third circulating concern—the complex, often vexed figure of the environmental writer-activist. In the chapters that follow I address not just literary but more broadly rhetorical and visual challenges posed by slow violence; however, I place particular emphasis on combative writers who have deployed their imaginative agility and worldly ardor to help amplify the media-marginalized causes of the environmentally dispossessed. I have sought to stress those places where writers and social movements, often in complicated tandem, have strategized against attritional disasters that afflict embattled communities. The writers I engage are geographically wide ranging—from various parts of the African continent, from the Middle East, India, the Caribbean, the United States, and Britain—and work across a variety of forms. Figures like Wangari Maathai, Arundhati Roy, Indra Sinha, Ken Saro-Wiwa, Abdulrahman Munif, Njabulo Ndebele, Nadine Gordimer, Jamaica Kincaid, Rachel Carson, and June Jordan⁹ are alive to the inhabited impact of corrosive trans-

6. Andrew Ross, *Strange Weather: Culture, Science, and Technology in the Age of Limits* (New York: Verso, 1991), 207–12. [ross (b. 1956), Scottish-born social critic, academic, and activist—editor’s note.]

7. The term “West” is inevitably shorthand. The environmentalism of the poor within North American and Europe, although not the focus of this book, helped goad affluent environmentalists in the global North to diversify their vision of what counts as environmentalism and to recognize—in the present and retrospectively—third-world-generated activism as a vital force and potential ally in the global resource wars. That said, as I indicate in my penultimate chapter on the ecological threats posed by so-called precision warfare, it is often very difficult to articulate as a single narrative of risk the threat slow

violence poses to the health of troops conscripted from the rich-nation poor and the threat to the even more impoverished people who inhabit war zones long term, war zones that are overwhelmingly located in the global South. The very difficulty of integrating such conjoined (if unequal) threats is symptomatic of the layered invisibility that defines slow violence. The poor, of course, are hardly restricted to the global South, but they are dramatically, disproportionately concentrated there.

8. Ramachandra Guha and Joan Martinez-Alier, *Varieties of Environmentalism: Essays North and South* (London: Earthscan, 1997), 12.

9. Renowned activists and authors from around the world. Maathai (1940–2011), a Kenyan, founded the Green Belt Movement and advocated for environmental conservation and women’s

national forces, including petro-imperialism, the megadam industry, outsourced toxicity, neocolonial tourism, antihuman conservation practices, corporate and environmental deregulation, and the militarization of commerce forces that disproportionately jeopardize the livelihoods, prospects, and memory banks of the global poor. Among the writers I consider, some have testified in relative isolation, some have helped instigate movements for environmental justice, and yet others, in aligning themselves with pre-existing movements, have given imaginative definition to the issues at stake while enhancing the public visibility of the cause.

Relations between movements and writers are often fraught and frictional, not least because such movements themselves are susceptible to fracture from both external and internal pressures.¹ That said, the writers I consider are enraged by injustices they wish to see redressed, injustices they believe they can help expose, silences they can help dismantle through testimonial protest, rhetorical inventiveness, and counterhistories in the face of formidable odds. Most are restless, versatile writers ready to pit their energies against what Edward Said called “the normalized quiet of unseen power.”² This normalized quiet is of particular pertinence to the hushed havoc and injurious invisibility that trail slow violence.

SLOW VIOLENCE

In this book, I have sought to address our inattention to calamities that are slow and long lasting, calamities that patiently dispense their devastation while remaining outside our flickering attention spans—and outside the purview of a spectacle-driven corporate media. The insidious workings of slow violence derive largely from the unequal attention given to spectacular and unspectacular time. In an age that venerates instant spectacle, slow violence is deficient in the recognizable special effects that fill movie theaters and boost ratings on TV. Chemical and radiological violence, for example, is driven inward, somatized into cellular dramas of mutation that—particularly

rights; she was awarded the 2004 Nobel Peace Prize. Sinha (b. 1950), a British author of Indian and English descent, has focused public attention on those harmed by the 1984 chemical leak in Bhopal, India. Saro-Wiwa (1941–1995), a Nigerian novelist and journalist, supported environmentalism and minority ethnic rights. Abdul Rahman Munif (1933–2004), a Saudi, was a political novelist. Ndebele (b. 1948), a South African, is a novelist, cultural critic, and academic; he is currently chancellor of the University of Johannesburg. Gordimer (1923–2014), a South African, was a writer of fiction and anti-apartheid activist; she was awarded the 1991 Nobel Prize in Literature. Kincaid (b. 1949), an Antiguan-born American, often explores themes related to colonialism and postcolonialism in her fiction. Carson (1907–1964), an American, was a marine biologist whose writing on environmental pollution helped spur the global conservation movement. Jordan (1936–2002), an American born of West Indian immigrants, was a poet, journalist, activist, and feminist theorist [editor's note].

1. Arundhati Roy has expressed some unease toward the very notion of the writer-activist. Yet her concerns—that the term makes activist writers sound exceptional, that it risks institutionalizing them as experts, and risks narrowing our

perception of both writers and activists—need to be taken with a grain of salt, as an exercise in self-protectiveness and false modesty, given her ineluctably institutionalized role in the media as professional (albeit dissident professional) go-between. The fact is only a tiny minority of writers assume an overtly activist public role and that minority—especially when they shuttle between the novel or poetry on the one hand and engaged nonfiction on the other—are routinely skittish, insisting on their imaginative autonomy from ideological obligation while also declaring their political commitments. Such balancing acts between avowal and disavowal surface in the writings of Albert Camus, Jean-Paul Sartre, James Baldwin, Langston Hughes, Wole Soyinka, Derek Walcott, Gabriel Garcia Marquez, Carolyn Forché, Joseph Brodsky, Paul Muldoon, Mahmoud Darwish, and Nadine Gordimer to name but a few. For Roy's take on writer-activism, see *The Algebra of Infinite Justice* (London: HarperCollins, 2002), 186–87.

2. Edward Said, “The Public Role of Writers and Intellectuals,” *The Nation*, September 17, 2001, 10. [SAID (1935–2003), Palestinian-born American literary and cultural critic and social activist—editor's note.]

in the bodies of the poor—remain largely unobserved, undiagnosed, and untreated. From a narrative perspective, such invisible, mutagenic theater is slow paced and open ended, eluding the tidy closure, the containment, imposed by the visual orthodoxies of victory and defeat.

Let me ground this point by referring, in conjunction, to Rachel Carson's *Silent Spring* and Frantz Fanon's *The Wretched of the Earth*.³ In 1962 *Silent Spring* jolted a broad international public into an awareness of the protracted, cryptic, and indiscriminate casualties inflicted by dichlorodiphenyltrichloroethane (DDT).⁴ Yet, just one year earlier, Fanon, in the opening pages of *Wretched of the Earth*, had comfortably invoked DDT as an affirmative metaphor for anticolonial violence: he called for a DDT-filled spray gun to be wielded as a weapon against the “parasites” spread by the colonials’ Christian church.⁵ Fanon’s drama of decolonization is, of course, studded with the overt weaponry whereby subjugation is maintained (“by dint of a great array of bayonets and cannons”) or overthrown (“by the searing bullets and bloodstained knives”) after “a murderous and decisive struggle between the two protagonists.”⁶ Yet his temporal vision of violence—and of what Aimé Césaire⁷ called “the rendezvous of victory”—was uncomplicated by the concerns that an as-yet inchoate environmental justice movement (catalyzed in part by *Silent Spring*) would raise about lopsided risks that permeate the land long term, blurring the clean lines between defeat and victory, between colonial dispossession and official national self-determination.⁸ We can certainly read Fanon, in his concern with land as property and as fount of native dignity, retrospectively with an environmental eye. But our theories of violence today must be informed by a science unavailable to Fanon, a science that addresses environmentally embedded violence that is often difficult to source, oppose, and once set in motion, to reverse.

Attritional catastrophes that overspill clear boundaries in time and space are marked above all by displacements—temporal, geographical, rhetorical, and technological displacements that simplify violence and underestimate, in advance and in retrospect, the human and environmental costs. Such displacements smooth the way for amnesia, as places are rendered irretrievable to those who once inhabited them, places that ordinarily pass unmourned in the corporate media. Places like the Marshall Islands, subjected between 1948 and 1958 to sixty-seven American atmospheric nuclear “tests,” the largest of them equal in force to 1,000 Hiroshima-sized bombs. In 1956 the Atomic Energy Commission declared the Marshall Islands “by far the most

3. Published in 1963 (see above); FANON (1925–1961), born in Martinique, was a psychiatrist, political theorist, and advocate for Algerian independence [editor’s note].

4. A pesticide that came into widespread use in the mid-20th century; because of its toxicity to wildlife, its agricultural use was banned in the United States in 1972 and worldwide in 2004 [editor’s note].

6. *Ibid.*, 36–37.

7. Martinican politician and author (1913–2008), one of the founders of the *négritude* movement in Francophone literature that asserted black and African pride; he was also an early mentor of

Fanon. The quotation, which refers to the revolutionary struggle for liberation—“There is a place for all at the rendezvous of victory”—is from his book-length poem *Cahier d’un retour au pays natal* (1939, *Notebook of a Return to My Native Land*) [editor’s note].

8. If historically Fanon was in no position to write about the slow violence of inequitably distributed environmental threats, he was, of course, alive to the psychological seepage of colonial values that could sustain neocolonialism. Furthermore, in “Colonial War and Mental Disorders” he is attuned to the slow violence that results from colonial “pacification,” the psychological effects far outlasting specific acts of discernible violence. See *The Wretched of the Earth*, 249–316.

contaminated place in the world," a condition that would compromise independence in the long term, despite the islands' formal ascent in 1979 into the ranks of self-governing nations.⁹ The island republic was still in part governed by an irradiated past: well into the 1980s its history of nuclear colonialism, long forgotten by the colonizers, was still delivering into the world "jellyfish babies"—headless, eyeless, limbless human infants who would live for just a few hours.¹

If as Said notes, struggles over geography are never reducible to armed struggle but have a profound symbolic and narrative component as well, and if, as Michael Watts insists, we must attend to the "violent geographies of fast capitalism," we need to supplement both these injunctions with a deeper understanding of the slow violence of delayed effects that structures so many of our most consequential forgettings.² Violence, above all environmental violence, needs to be seen—and deeply considered—as a contest not only over space, or bodies, or labor, or resources, but also over time. We need to bear in mind Faulkner's dictum that "the past is never dead. It's not even past."³ His words resonate with particular force across landscapes permeated by slow violence, landscapes of temporal overspill that elude rhetorical cleanup operations with their sanitary beginnings and endings.

Kwame Anthony Appiah famously asked, "Is the 'Post-' in 'Postcolonial' the 'Post-' in 'Postmodern'?"⁴ As environmentalists we might ask similarly searching questions of the "post" in postindustrial, post-Cold War, and post-conflict.⁵ For if the past of slow violence is never past, so too the post is never fully post: industrial particulates and effluents live on in the environmental elements we inhabit and in our very bodies, which epidemiologically and ecologically are never our simple contemporaries.⁶ Something similar applies to so-called postconflict societies whose leaders may annually commemorate, as marked on the calendar, the official cessation of hostilities, while ongoing intergenerational slow violence (inflicted by, say, unexploded landmines or carcinogens from an arms dump) may continue hostilities by other means.

Ours is an age of onrushing turbo-capitalism, wherein the present feels more abbreviated than it used to—at least for the world's privileged classes who live surrounded by technological time-savers that often compound the

sensation of not having enough time. Consequently, one of the most pressing challenges of our age is how to adjust our rapidly eroding attention spans to the slow erosions of environmental justice. If, under neoliberalism, the gulf between enclaved rich and outcast poor has become ever more pronounced, ours is also an era of enclaved time wherein for many speed has become a self-justifying, propulsive ethic that renders “uneventful” violence (to those who live remote from its attritional lethality) a weak claimant on our time. The attosecond pace of our age, with its restless technologies of infinite promise and infinite disappointment, prompts us to keep flicking and clicking distractedly in an insatiable—and often insensate—quest for quicker sensation.

The oxymoronic notion of slow violence poses a number of challenges: scientific, legal, political, and representational. In the long arc between the emergence of slow violence and its delayed effects, both the causes and the memory of catastrophe readily fade from view as the casualties incurred typically pass untallied and unremembered. Such discounting in turn makes it far more difficult to secure effective legal measures for prevention, restitution, and redress. Casualties from slow violence are, moreover, out of sync not only with our narrative and media expectations but also with the swift seasons of electoral change. Politicians routinely adopt a “last in, first out” stance toward environmental issues, admitting them when times are flush, dumping them as soon as times get tight. Because preventative or remedial environmental legislation typically targets slow violence, it cannot deliver dependable electoral cycle results, even though those results may ultimately be life saving. Relative to bankable pocketbook actions—there’ll be a tax rebate check in the mail next August—environmental payouts seem to lurk on a distant horizon. Many politicians—and indeed many voters—routinely treat environmental action as critical yet not urgent. And so generation after generation of two- or four-year cycle politicians add to the pileup of deferrable actions deferred. With rare exceptions, in the domain of slow violence “yes, but not now, not yet” becomes the *modus operandi*.

How can leaders be goaded to avert catastrophe when the political rewards of their actions will not accrue to them but will be reaped on someone else’s watch decades, even centuries, from now? How can environmental activists and storytellers work to counter the potent political, corporate, and even scientific forces invested in immediate self-interest, procrastination, and dissembling? We see such dissembling at work, for instance, in the afterword to Michael Crichton’s 2004 environmental conspiracy novel, *State of Fear*, wherein he argued that we needed twenty more years of data gathering on climate change before any policy decisions could be ventured.⁷ Although the National Academy of Sciences had assured former president George W. Bush that humans were indeed causing the earth to warm, Bush shopped around for views that accorded with his own skepticism and found them in a private meeting with Crichton, whom he described as “an expert scientist.”

To address the challenges of slow violence is to confront the dilemma Rachel Carson faced almost half a century ago as she sought to dramatize

7. Michael Crichton, *State of Fear* (New York: Avon, 2004), 626. [Crichton (1942–2008), American physician and author of popular novels (especially science fiction thrillers)—editor’s note.]

what she eloquently called “death by indirection.”⁸ Carson’s subjects were biomagnification and toxic drift, forms of oblique, slow-acting violence that, like climate change, pose formidable imaginative difficulties for writers and activists alike. In struggling to give shape to amorphous menace, both Carson and reviewers of *Silent Spring* resorted to a narrative vocabulary: one reviewer portrayed the book as exposing “the new, unplotted and mysterious dangers we insist upon creating all around us,”⁹ while Carson herself wrote of “a shadow that is no less ominous because it is formless and obscure.”¹ To confront slow violence requires, then, that we plot and give figurative shape to formless threats whose fatal repercussions are dispersed across space and time. The representational challenges are acute, requiring creative ways of drawing public attention to catastrophic acts that are low in instant spectacle but high in long-term effects. To intervene representationally entails devising iconic symbols that embody amorphous calamities as well as narrative forms that infuse those symbols with dramatic urgency.

SLOW VIOLENCE AND STRUCTURAL VIOLENCE

Seven years after Rachel Carson turned our attention to the lethal mechanisms of “death by indirection,” Johan Galtung, the influential Norwegian mathematician and sociologist, coined the term “indirect or structural violence.”² Galtung’s theory of structural violence is pertinent here because some of his concerns overlap with the concerns that animate this book, while others help throw into relief the rather different features I have sought to highlight by introducing the term “slow violence.” Structural violence, for Galtung, stands in opposition to the more familiar personal violence that dominates our conceptions of what counts as violence per se.³ Galtung was concerned, as I am, with widening the field of what constitutes violence. He sought to foreground the vast structures that can give rise to acts of personal violence and constitute forms of violence in and of themselves. Such structural violence may range from the unequal morbidity that results from a commodified health care system, to racism itself. What I share with Galtung’s line of thought is a concern with social justice, hidden agency, and certain forms of violence that are imperceptible.

In these terms, for example, we can recognize that the structural violence embodied by a neoliberal order of austerity measures, structural adjustment, rampant deregulation, corporate megamergers, and a widening gulf between rich and poor is a form of covert violence in its own right that is often a catalyst for more recognizably overt violence. For an expressly environmental example of structural violence, one might cite Wangari Maathai’s insistence that the systemic burdens of national debt to the IMF and World Bank borne by many so-called developing nations constitute a major impediment to environmental sustainability.⁴ So, too, feminist earth

scientist Jill Schneiderman, one of our finest thinkers about environmental time, has written about the way in which environmental degradation may “masquerade as inevitable.”⁵

For all the continuing pertinence of the theory of structural violence and for all the modifications the theory has undergone, the notion bears the impress of its genesis during the high era of structuralist thinking that tended toward a static determinism. We see this, for example, in Galtung’s insistence that “structural violence is silent, it does not show—it is essentially static, it is the tranquil waters.”⁶ In contrast to the static connotations of structural violence, I have sought, through the notion of slow violence, to foreground questions of time, movement, and change, however gradual. The explicitly temporal emphasis of slow violence allows us to keep front and center the representational challenges and imaginative dilemmas posed not just by imperceptible violence but by imperceptible change whereby violence is decoupled from its original causes by the workings of time. Time becomes an actor in complicated ways, not least because the temporal templates of our spectacle-driven, 24/7 media life have shifted massively since Galtung first advanced his theory of structural violence some forty years ago. To talk about slow violence, then, is to engage directly with our contemporary politics of speed.

Simply put, structural violence is a theory that entails rethinking different notions of causation and agency with respect to violent effects. Slow violence, by contrast, might well include forms of structural violence, but has a wider descriptive range in calling attention, not simply to questions of agency, but to broader, more complex descriptive categories of violence enacted slowly over time. The shift in the relationship between human agency and time is most dramatically evident in our enhanced understanding of the accelerated changes occurring at two scalar extremes—in the life-sustaining circuits of planetary biophysics and in the wired brain’s neural circuitry. The idea of structural violence predated both sophisticated contemporary ice-core sampling methods and the emergence of cyber technology. My concept of slow violence thus seeks to respond both to recent, radical changes in our geological perception and our changing technological experiences of time.

Let me address the geological aspect first. In 2000, Paul Crutzen, the Nobel Prize–winning atmospheric chemist, introduced the term “the Anthropocene Age” (which he dated to James Watt’s⁷ invention of the steam engine). Through the notion of “the Anthropocene Age,” Crutzen sought to theorize an unprecedented epochal effect: the massive impact by the human species, from the industrial era onward, on our planet’s life systems, an impact that, as his term suggests, is geomorphic, equal in force and in long-term implications to a major geological event.⁸ Crutzen’s attempt to capture

helped make possible the Industrial Revolution [editor’s note].

8. In an indicative convergence of the tectonic shifts in geological thinking about speed and media technologies of speed, one notes that Crutzen first advanced his idea of the Anthropocene Age on his blog rather than going through the slower medium of a peer-reviewed academic journal.

the epochal scale of human activity's impact on the planet was followed by Will Steffen's elaboration, in conjunction with Crutzen and John McNeill,⁹ of what they dubbed the Great Acceleration, a second stage of the Anthropocene Age that they dated to the mid-twentieth century. Writing in 2007, Steffen et al. noted how "nearly three-quarters of the anthropogenically driven rise in CO₂ concentration has occurred since 1950 (from about 310 to 380 ppm), and about half of the total rise (48 ppm) has occurred in just the last 30 years."¹ The Australian environmental historian Libby Robin has put the case succinctly: "We have recently entered a new geological epoch, the Anthropocene. There is now considerable evidence that humanity has altered the biophysical systems of Earth, not just the carbon cycle . . . but also the nitrogen cycle and ultimately the atmosphere and climate of the whole globe."² What, then, are the consequences for our experience of time of this newfound recognition that we have inadvertently, through our unprecedented biophysical species power, inaugurated an Anthropocene Age and are now engaged in (and subject to) the hurtling changes of the Great Acceleration?

Over the past two decades, this high-speed planetary modification has been accompanied (at least for those increasing billions who have access to the Internet) by rapid modifications to the human cortex. It is difficult, but necessary, to consider simultaneously a geologically-paced plasticity, however relatively rapid, and the plasticity of brain circuits reprogrammed by a digital world that threatens to "info-whelm" us into a state of perpetual distraction. If an awareness of the Great Acceleration is (to put it mildly) unevenly distributed, the experience of accelerated connectivity (and the paradoxical disconnects that can accompany it) is increasingly widespread. In an age of degraded attention spans it becomes doubly difficult yet increasingly urgent that we focus on the toll exacted, over time, by the slow violence of ecological degradation. We live, writes Cory Doctorow, in an era when the electronic screen has become an "ecosystem of interruption technologies."³ Or as former Microsoft executive Linda Stone puts it, we now live in an age of "continuous partial attention."⁴ Fast is faster than it used to be, and story units have become concomitantly shorter. In this cultural milieu of digitally speeded up time, and foreshortened narrative, the intergenerational aftermath becomes a harder sell. So to render slow violence visible entails, among other things, redefining speed: we see such efforts in talk of accelerated species loss, rapid climate change, and in attempts to recast "glacial"—once a dead metaphor for "slow"—as a rousing, iconic image of unacceptably fast loss.

Efforts to make forms of slow violence more urgently visible suffered a setback in the United States in the aftermath of 9/11, which reinforced a spectacular, immediately sensational, and instantly hyper-visible image of what constitutes a violent threat. The fiery spectacle of the collapsing towers was burned into the national psyche as *the* definitive image of violence,

setting back by years attempts to rally public sentiment against climate change, a threat that is incremental, exponential, and far less sensorially visible. Condoleezza Rice's⁵ strategic fantasy of a mushroom cloud looming over America if the United States failed to invade Iraq gave further visual definition to cataclysmic violence as something explosive and instantaneous, a recognizably cinematic, immediately sensational, pyrotechnic event.

The representational bias against slow violence has, furthermore, a critically dangerous impact on what counts as a casualty in the first place. Casualties of slow violence—human and environmental—are the casualties most likely not to be seen, not to be counted. Casualties of slow violence become light-weight, disposable casualties, with dire consequences for the ways wars are remembered, which in turn has dire consequences for the projected casualties from future wars. We can observe this bias at work in the way wars, whose lethal repercussions spread across space and time, are tidily bookended in the historical record. Thus, for instance, a 2003 *New York Times* editorial on Vietnam declared that “during our dozen years there, the U.S. killed and helped kill at least 15 million people.”⁶ But that simple phrase “during our dozen years there” shrinks the toll, foreshortening the ongoing slow-motion slaughter: hundreds of thousands survived the official war years, only to slowly lose their lives later to Agent Orange.⁷ In a 2002 study, the environmental scientist Arnold Schecter recorded dioxin levels in the bloodstreams of Bien Hoa residents at 135 times the levels of Hanoi's inhabitants, who lived far north of the spraying.⁸ The afflicted include thousands of children born decades after the war's end. More than thirty years after the last spray run, Agent Orange continues to wreak havoc as, through biomagnification, dioxins build up in the fatty tissues of pivotal foods such as duck and fish and pass from the natural world into the cooking pot and from there to ensuing human generations. An Institute of Medicine committee has by now linked seventeen medical conditions to Agent Orange; indeed, as recently as 2009 it uncovered fresh evidence that exposure to the chemical increases the likelihood of developing Parkinson's disease and ischemic heart disease.⁹ Under such circumstances, wherein long-term risks continue to emerge, to bookend a war's casualties with the phrase “during our dozen years there” is misleading: that small, seemingly innocent phrase is a powerful reminder of how our rhetorical conventions for bracketing violence routinely ignore ongoing, belated casualties.

SLOW VIOLENCE AND STRATEGIES OF REPRESENTATION: WRITER-ACTIVISM

How do we bring home—and bring emotionally to life—threats that take time to wreak their havoc, threats that never materialize in one spectacu-

lar, explosive, cinematic scene? *Apprehension* is a critical word here, a cross-over term that draws together the domains of perception, emotion, and action. To engage slow violence is to confront layered predicaments of apprehension: to apprehend—to arrest, or at least mitigate—often imperceptible threats requires rendering them apprehensible to the senses through the work of scientific and imaginative testimony. An influential lineage of environmental thought gives primacy to immediate sensory apprehension, to sight above all, as foundational for any environmental ethics of place. George Perkins Marsh, the mid-nineteenth-century environmental pioneer, argued in *Man and Nature* that “the power most important to cultivate, and, at the same time, hardest to acquire, is that of seeing what is before him.”¹ Aldo Leopold similarly insisted that “we can be ethical only toward what we can see.”² But what happens when we are unsighted, when what extends before us—in the space and time that we most deeply inhabit—remains invisible? How, indeed, are we to act ethically toward human and biotic communities that lie beyond our sensory ken? What then, in the fullest sense of the phrase, is the place of seeing in the world that we now inhabit? What, moreover, is the place of the other senses? How do we both make slow violence visible yet also challenge the privileging of the visible?

Such questions have profound consequences for the apprehension of slow violence, whether on a cellular or a transnational scale. Planetary consciousness (a notion that has undergone a host of theoretical formulations) becomes pertinent here, perhaps most usefully in the sense in which Mary Louise Pratt³ elaborates it, linking questions of power and perspective, keeping front and center the often latent, often invisible violence in the view. Who gets to see, and from where? When and how does such empowered seeing become normative? And what perspectives—not least those of the poor or women or the colonized—do hegemonic sight conventions of visibility obscure? Pratt’s formulation of planetary consciousness remains invaluable because it allows us to connect forms of apprehension to forms of imperial violence.⁴

Against this backdrop, I want to introduce the third central concern of this book. Alongside slow violence and the environmentalism of the poor, the chapters that follow are critically concerned with the political, imaginative, and strategic role of environmental writer-activists. Writer-activists can help us apprehend threats imaginatively that remain imperceptible to the senses, either because they are geographically remote, too vast or too minute in scale, or are played out across a time span that exceeds the instance of observation or even the physiological life of the human observer. In a world permeated by insidious, yet unseen or imperceptible violence, imaginative writing can help make the unapparent appear, making it accessible and tangible by humanizing drawn-out threats inaccessible to the immediate

2. Leopold’s address at the June 1934 dedication of the University of Wisconsin Arboretum, quoted in Scott Russell Sanders, “Speaking for the Land: Aldo Leopold as a Writer” [2009], author’s personal website, www.scottrussellsanders.com/SRS%20entries/SRS_on_Leopold.htm. Leopold was inconsistent on this point, sometimes emphasizing an ethics of immediacy grounded in local

knowledge and sometimes emphasizing an inter-generational ethics less rooted in the moment or in a visible locale. [Leopold (1887–1948), American environmentalist and founder of the Wilderness Society—editor’s note.]

3. Prominent scholar of Spanish and Portuguese literature (b. 1948) [editor’s note].

4. Mary Louise Pratt, *Imperial Eyes: Travel Writing and Transculturation* (New York: Routledge, 1992), 15–37.

senses. Writing can challenge perceptual habits that downplay the damage slow violence inflicts and bring into imaginative focus apprehensions that elude sensory corroboration. The narrative imaginings of writer-activists may thus offer us a different kind of witnessing: of sights unseen.

To allay states of apprehension—trepidations, forebodings, shadows cast by the invisible—entails facing the challenge, at once imaginative and scientific, of giving the unapparent a materiality upon which we can act. Yet poor communities, often disproportionately exposed to the force fields of slow violence—be they military residues or imported e-waste or the rising tides of climate change—are the communities least likely to attract sustained scientific inquiry into causes, effects, and potential redress. Such poor communities are abandoned to sporadic science at best and usually no science at all; they are also disproportionately subjected to involuntary pharmaceutical experiments. Indeed, when such communities raise concerns, they often become targets of well-funded antisience by forces that have a legal or commercial interest in manufacturing and disseminating doubt.⁵ Such embattled communities, beset by officially unacknowledged hazards, must find ways to broadcast their inhabited fears, their lived sense of a corroded environment, within the broader global struggles over apprehension. It is here that writers, filmmakers, and digital activists may play a mediating role in helping counter the layered invisibility that results from insidious threats, from temporal protractedness, and from the fact that the afflicted are people whose quality of life—and often whose very existence—is of indifferent interest to the corporate media.

To address violence discounted by dominant structures of apprehension is necessarily to engage the culturally variable issue of *who counts as a witness*. Contests over what counts as violence are intimately entangled with conflicts over who bears the social authority of witness, which entails much more than simply seeing or not seeing. The entangled politics of spectacle and witnessing have implications that stretch well beyond environmental slow violence. In domestic abuse, for instance, violence may be life threatening but slow, bloodless, and brutal in ways that are not always immediately fatal: a broken nose constitutes a different order of evidence from food or access to medical treatment or human company withheld over an extended period. A locked door can be a weapon. Doors for women are often long-term, nonlethal weapons that leave no telltale bloody trail; doors don't bear witness to a single, decisive blow. In many cultures, moreover, rape isn't defined as rape if it is inflicted by a husband. And in some societies, a rape isn't rape unless three adult men are present to witness it. As the journalistic chestnut has it, "if it bleeds, it leads." And as a corollary, if it's bloodless, slow-motion violence, the story is more likely to be buried, particularly if it's relayed by people whose witnessing authority is culturally discounted.

The Anthropocene: The Promise and Pitfalls of an Epochal Idea

What would it mean to imagine *Homo sapiens*¹ as not merely a historical but a geological actor, a force of such magnitude that our impacts are being written into the fossil record? What would it mean to acknowledge that, for the first time in Earth's history, a sentient species, our own, has shaken Earth's life systems with a profundity that paleontologist Anthony Barnosky has likened to an asteroid strike?² How might that perceptual shift disturb widespread assumptions about human history, ethics, power, and responsibility?

Such consequential questions follow from the turn to the Anthropocene, a hypothesis advanced by Nobel Prize-winning atmospheric chemist Paul Crutzen and ecologist Eugene Stoermer in 2000.³ They argued that the Holocene⁴ was history: the Earth had entered a new, unprecedented geological epoch, triggered by human actions.

Crutzen and Stoermer dated this rupture to the late eighteenth century beginnings of the industrial revolution. So according to the dominant Anthropocene script, over the past two-and-a-quarter centuries we have been laying down in stone a durable archive of human impacts to Earth's geophysical and biophysical systems. Those long-term impacts have become particularly acute since 1950 during the so-called Great Acceleration.

We have decisively altered the carbon cycle, the nitrogen cycle and the rate of extinction. We have created unprecedented atomic isotopes and fossilized plastics. We have erected megacities that will leave an enduring footprint long after they have ceased to function as cities. We have changed the pH of the oceans and have shunted so many life forms around the globe—inadvertently and intentionally—that we are creating novel ecosystems everywhere. Of vertebrate terrestrial life, humans and our domesticated animals now constitute over 90% by weight, with less than 10% comprised by wild creatures.

When Crutzen and Stoermer advanced their hypothesis, they couldn't possibly have imagined what an immense, omnivorous idea it would become. It took a while, but by the millennium's second decade those enthralled and appalled by the Anthropocene were being sucked, in their interdisciplinary masses, into its cavernous maw. Enthusiasts and skeptics poured in from paleobotany and postcolonial studies, from nanotechnology and bioethics, from Egyptology, evolutionary robotics, feminist psychology, geophysics, agronomy, post-humanism⁵ and druidic studies. The classicists arrived alongside the futurists, where they mingled with students of everything from plastiglomerates⁶ to romantic prosody, from ruins to rewilding.

4. The postglacial geological epoch of the past 10

to 12 thousand years.

5. A branch of cultural theory that is critical of both the philosophical presuppositions and the legacy of humanism.

6. Artificial "stones," formed of melted plastic, beach sediment, basaltic lava fragments, and organic debris; the term was coined in Patricia L. Corcoran, Charles J. Moore, and Kelly Jazva, "An Anthropogenic Marker Horizon in the Future Rock Record," *GSA Today* 24.6 (2014), which proposed that the material could mark the beginning of human pollution in the geological record.

This has arguably been the most generative feature of the Anthropocene turn: the myriad exchanges it has stimulated across the earth and life sciences, the social sciences, the humanities and the arts, bringing into conversation scholars who have been lured out of their specialist bubbles to engage energetically with unfamiliar interlocutors. The humanities and arts have become vital to this conversational mix, which is as it should be. For the Anthropocene hypothesis shakes the very idea of what it means to be human. If, collectively, we're a hurtling hunk of rock that feels, what does that mean for the stories we tell about our species and our place in life on Earth? What does it mean for the ethics of human actions? What are the imaginative and emotional pressures of opening up the human to geological time scales? We're simply not accustomed—maybe even equipped—to conceive of human consequences across such a vastly expanded temporal stage. How can we begin to internalize our role as Anthropocene actors, to inhabit that role feelingly?

To such imaginative questions we must add political ones. The Anthropocene—often for good reason—has proven hugely controversial. Let's focus on a few crucial disagreements. First, what is lost and gained by adopting the Anthropocene's grand species perspective on the human? Does this epic vantage point risk suppressing—historically and in the present—unequal human impacts, unequal human agency, and unequal human vulnerabilities? Does lumping together under the sign of the human the average twenty-first century Liberian and the average American as agents of planetary change risk concealing more than it reveals?

So a crucial challenge facing us is this: how do we tell two large stories that can often seem in tension with each other, a convergent story and a divergent one? First, a collective story about humanity's impacts that will be legible in the earth's geophysical systems for millennia to come. Second, a much more fractured narrative. For the species-centered Anthropocene meme has arisen in the twenty-first century, a period in which most human societies have experienced a deepening schism between the uber-rich and the ultra-poor. In terms of the history of ideas, what does it mean that the Anthropocene as a grand explanatory species story has taken hold during a plutocratic age? And from an imaginative perspective, how can we counter the centripetal force of the dominant Anthropocene species story with centrifugal stories that acknowledge immense inequalities in planet-altering powers? (Not to speak of inequalities in access to resources and exposures to risk in a time of deepening disparities.) We may all be in the Anthropocene but we're not all in it in the same way.

A second controversy separates those who might be called command-and-control Anthropocene optimists and those who are skeptical of such a mindset. In the former camp stands geographer Erle Ellis, who believes "we must not see the Anthropocene as a crisis, but as the beginning of a new geological epoch ripe with human-directed opportunity."⁷ Ranked alongside him are science journalists Mark Lynas (author of *The God Species*) and Ronald Bailey, who insists that "over time, we will only get better at being

7. Erle Ellis, "The Planet of No Return: Human Resilience on an Artificial Earth," *The Breakthrough*, no. 2 (2011), at <https://thebreakthrough.org/journal> [Nixon's note].

the guardian gods of the earth.”⁸ As their mantra, these Anthropocene optimists cite Stewart Brand’s exhortation: “we are as gods and must get good at it.”⁹

But for others, talk of *Homo sapiens* as god species, as Earth’s surrogate divinity, is positively chilling. Hasn’t a hubristic mindset of earth mastery, of dominion over nature, gotten us into this mess as unwitting geological actors? Earth mastery, moreover, conjures up disturbing associations with the race, gender and class hierarchies of the selective enlightenment. For the climatologist Mike Hulme, there is a direct line between such megalomaniacal thinking and the reckless adventurism of a small, powerful set of geo-engineers and their billionaire backers who harbor ambitions to “reset the global thermostat.” To which I’d add this: we should not equate human planetary impact with human planetary control, as either a possibility or an ideal. Moreover, humility before the incalculable complexities of a rapidly changing Earth is not the same as quietism.

Science writer Elizabeth Kolbert has tweeted: “two words that probably should not be used in sequence: ‘good’ & ‘anthropocene.’” Environmental philosopher Kathleen Dean Moore goes further, suggesting that the Anthropocene would have been better named the Unforgivable-crimescene.¹

Concern over hubristic responses to the Anthropocene leads us to a third controversy. Does the very notion of an Age of Humans risk encouraging species narcissism? It’s one thing to recognize that *Homo sapiens* has accrued massive bio- and geomorphic powers. But it’s another thing altogether to fixate on human agency to a degree that downplays the imperfectly understood, infinitely elaborate webs of non-human agency, from the microbiome to the movement of tectonic plates, that continue to shape Earth’s life systems. To be sure, humans—especially the wealthiest of us—possess planet-altering powers, but we do not exercise those powers in isolation from other forces.

“Geologically, the Anthropocene is a remarkable episode in the history of the planet,” says paleontologist Jan Zalasiewicz.² But what began as a data-driven scientific debate over how to measure and project the human fingerprint in the fossil record has spread to almost every imaginable scholarly field. The power of the Anthropocene—by turns illuminating, exasperating, alarming—is not reducible to metrics. As environmental historian Libby Robert observes, “the question is how people can take responsibility for and respond to their changed world. And the answer is not simply scientific and technological, but also social, cultural, political and ecological.”

To that end, we are witnessing the Anthropocene’s transition from a robustly disputed interdisciplinary idea to one that is permeating the public sphere. We see this in special Anthropocene issues of *The Economist*, *Nature*,

8. Ronald Bailey, “Better to Be Potent Than Not,” *New York Times*, May 23, 2011 [Nixon’s note].

9. Note: Stewart Brand originally said, “We are as gods and might as well get good at it” (1968), which he changed to: “We are as gods and must get good at it” (2009). Quoted by Diane Ackerman, *The Age of Humans [The Human Age: The World Shaped by Us]* (New York: W. W. Norton, 2014), p. 152 [Nixon’s note]. Brand (b. 1938), American author and pioneering environmentalist; in *Whole Earth Discipline: An Ecopragmatist*

Manifesto (2009) he argues that technology can be green.

2. Quoted in “The Dawn of a New Epoch?” Press release, University of Leicester, March 26, 2010, www.le.ac.uk/ebulletin-archive/ebulletin/news/press-releases/2010-2019/2010/03/nparticle.2010-03-26.html [Nixon’s note].

and *The Smithsonian*. We see it in the way bloggers, filmmakers, public intellectuals, and curators are trying to reimagine, through the prism of the Anthropocene, what geographer Doreen Massey calls “the ancient manoeuvrings of life and rock.”

To give the Anthropocene a public resonance involves choosing objects, images, and stories that will make visceral those tumultuous geologic processes that now happen on human time scales. With this in mind, the Anthropocene Cabinet of Curiosities Slam³ has assembled a lively array of object-driven stories. The work on display here seeks to give immense biomorphic and geomorphic changes a granular intimacy. Collectively, these Anthropocene stories have the power to disturb and to surprise, hopefully goading us toward new ways of thinking and feeling about the planet we have inherited and the planet we will bequeath.

for Culture, History and Environment at the University of Wisconsin–Madison on November 8–10, 2014.

JUDITH BUTLER

b. 1956

Judith Butler's *Gender Trouble: Feminism and the Subversion of Identity* (1990), arguably the most influential theoretical text of the 1990s, is a founding document of queer theory and a key statement of “performative” accounts of cultural meaning. Butler's work distills forty years of French theory—from the pioneer feminist SIMONE DE BEAUVOIR to JULIA KRISTEVA, and from JACQUES LACAN and LOUIS ALTHUSSER to JACQUES DERRIDA and MICHEL FOUCAULT—to explore how gendered identity is socially produced through repetitions of ordinary daily activities. Her goal is to uncover the assumptions that “restrict the meaning of gender to received notions of masculinity and femininity.” In opening up “the field of possibility for gender,” Butler aims for a feminism that avoids “exclusionary gender norms” and fixed identities in favor of a more fluid and dynamic understanding of desires and selves.

Trained in philosophy, Judith Butler received her undergraduate and graduate degrees at Yale University. She has taught in interdisciplinary programs her whole career, first at Johns Hopkins University and then at the University of California at Berkeley. While continuing her affiliation with Berkeley, she has also taught frequently at Columbia University. *Gender Trouble* made Butler something between a celebrity and a cult figure, especially in gay and lesbian subcultures, and she has responded by jealously guarding her personal life from public scrutiny. Her longtime partner, Wendy Brown, is a prominent political theorist, and she and Butler have collaborated on a number of projects. Butler's work since 9/11 has often been directly political; she has written extensively on the U.S. wars in Afghanistan and Iraq, and on the troubled relations between the state of Israel and the Palestinian people.

In *Gender Trouble*, Butler insists that nothing is natural, including sexual identity and sexual desire. Feminists have sometimes distinguished between “sex” as the

anatomical difference between male and female bodies and “gender” as the meanings and conventions attached to those bodily differences in various cultures. Butler argues that even anatomical differences can be experienced only through the categories and expectations set out by the culture’s signifying order. Moreover, anatomical differences are mapped to expectations about sexual desire, specifically to society’s “compulsory heterosexuality” (a term Butler borrows from ADRIENNE RICH), which posits that there are two sexes and that desire runs from one sex to the other. Modern Western culture’s understanding of sexuality is ill-equipped, therefore, to recognize bodies that confound the strict binary division between male and female, or desires that cross, combine, or otherwise fail to conform to a fairly narrow understanding of sex as genital intercourse between two people, one “naturally” female, the other “naturally” male.

Following Foucault’s work in *The History of Sexuality* (1976; see above), Butler stresses that modern culture sees sexuality as a fundamental constituent of identity. Our sex and our sexual desires and activities are understood as profound indices of who we are. And, like Foucault, Butler hopes to disrupt that linkage. The norms of both acceptable sexual desires and of identity construction and maintenance are oppressive, forcing the polymorphous perversity described by SIGMUND FREUD into the straitjacket of the prevailing heterosexual categories. The established and conventional connections between anatomy and desire, and between sexual activities and ascriptions of identity, are not inevitable; they have been different in other cultures and in other historical eras, and they are open to revision or, to use one of Butler’s favorite words, “resignification.” The meanings and categories by which we understand and live our daily existence can be altered.

Such alteration does not come easily, however. “Those naturalized and reified notions of gender that support masculine hegemony and heterosexist power” are written into our very psyches as well as into the dominant institutions of political and social life. Butler follows the accounts of subject formation found in Foucault and Lacan. For Foucault, discourse (the articulated categories of thought) orders knowledge along lines that produce subjects open to power’s control. Such power, he stresses, works at the level of daily routine. For Lacan, individuals achieve an identity, a recognized place in the social order, by passing into the Law (the culture’s signifying order)—at the cost of creating the unconscious and establishing a permanent split, an alienation of self from desire, within the subject.

To Foucault’s account of power’s “micro-physics” and Lacan’s description of subject formation, Butler adds Derrida’s understanding of “performative speech acts.” She believes “the performative” offers her a model of action within theories that often seem to allow subjects no room for resistance to power. Derrida develops his notion of the performative in an essay on J. L. AUSTIN, the twentieth-century Oxford philosopher who invented the term, and in a later debate with the American philosopher John Searle. Austin comes from an Anglo-American tradition (dating back to John Locke) that sees the meaning of language as grounded in the way that words refer to already existing objects. I speak of a certain blue chair, and my words are meaningful and true insofar as they conform to the facts of the matter. But Austin realized that some utterances are creative: they make something come into existence, rather than referring to something that already exists. Anyone who makes a promise, or a judge who sentences someone to prison, creates a fact (the promise, the sentence) through the act of speaking. Such speech acts are performatives.

Surprisingly, as Austin pursues this notion he finds it increasingly difficult to distinguish performatives from referential speech acts. Derrida picks up on this difficulty and adds the concepts of “citation” and “repetition” to the analysis. Every speech act, Derrida argues, succeeds in meaning anything at all only by virtue of its “citing” previous uses of the term it now employs. In other words, language works because the speakers of that language have a prior knowledge of its terms and its prevailing usages (both syntactic and semantic). Every new speech act is a repetition,

using old words and structures in this new instance. There are thus fairly strict limits on novelty. An utterance that departs too far from received understandings will be incomprehensible. But exact repetition does not occur very often either. After all, we are using the old words in new contexts. Each separate use of a word tweaks it in this or that direction in relation to a variety of pressures: the context, the audience, conscious or unconscious purposes. Thus, each speech act has a performative dimension; while repeating or referring to preexisting meanings in its "citation" of a previously used word, it also alters, if always within limits, the meaning of that word. Languages are reproduced, are kept alive and functioning, through innumerable acts of use; but those acts also constantly change the language. Most changes are inadvertent by-products of use, but some may be conscious, such as contemporary efforts to abandon "man" as the generic word referring to all human beings.

Butler proposes that we understand "sex" and "gender" as citational repetitions. Various cultural discourses converge in a prevailing (although never fully homogeneous or monolithic) understanding of what "boy" and "girl," "man" and "woman" signify. Individual actions then "cite" these meanings, playing off them in various ways. Power functions pervasively through these meanings. The little boy learns that his crying is not masculine; he must grow into his masculinity by imitating the behavior designated as "male" to the point that such behavior becomes "second nature." The little girl learns that some ways of acting make her a tomboy, and she is encouraged to dress the part of "femininity." In Butler's view, we feel our way into these roles, slowly establishing (under the watchful eyes of powerful social forces) the way we will occupy them. Given our prevailing categories, we experience this process as discovering our identity. Butler believes identity is a trap, a hardening into rigid, binarized categories of much more fluid and heterogeneous possibilities. She calls for actions that will "resignify" our received meanings—actions that will lead to a "proliferation" of the "constitutive categories" into which all selves are now constrained to fit.

The costs of identity's straitjacket, Butler believes, are high—both for those who fit the categories comfortably and those who don't. "Deviants" (such as homosexuals, bisexuals, hermaphrodites, or other less recognizable nonidentities) are inevitable, according to Butler, although her reasons for this claim are not completely clear. For her, discursive power is never fully effective. It cannot create all individuals in its preferred image, in part because any social field is traversed by various discourses, none of which ever achieves full domination. In any case, compulsory heterosexuality cannot erase all nonheterosexual desires or acts. But the price paid by those labeled deviant for such desires and acts—in internalized guilt and external sanctions—is exorbitant. On the side of "normality," heterosexual identity can be achieved only through the forceful exclusion or "disavowal" of all nonheterosexual desires, in keeping with commonplace obsessional notions of identity as consistent in all places and at all times. Socially, this disavowal is expressed through homophobia and other discourses of "abjection" (Kristeva's famous term) that single out deviants as worthy targets of aggression and punishment.

Butler calls for a loosening of the categories, a relaxation of our fixation on identity. Power uses identity to latch on to us, and normative identity calls for a homogeneity too difficult to live. Butler believes that feminism has been hurt by its attempt to find an identity that would designate something common to everyone in the movement. She calls instead for a coalitional politics that avoids the fights over purity (of identity, of doctrine, of commitment) that often tear apart movements dependent on complete agreement among members over long periods of time. Thus, while Butler's work grows out of feminism, she is against any "identity politics" that sees political groupings and beliefs as grounded in a shared identity, whether ethnic, racial, sexual, national, or economic. All forms of identity politics, she believes, are prone to aggressions used to enforce rigid consistencies.

How do we begin to loosen the hold of identity, especially at a time when the passions attached to identity and its preservation are fervent and pervasive? An initial step, Butler says, is to make evident identity's construction; it is not inevitable (even if social power hardly leaves us much freedom to choose our ways of being in the world). Identity is not something planted in us to be discovered, but something that is performatively produced by acts that "effectively constitute the identity they are said to express or reveal." At the end of *Gender Trouble*, Butler advocates parody in general and drag performances in particular because such "subversive" performances "destabilize the naturalized categories of identity and desire." It is here that queer theory makes its appearance. Such theory is interested in any and all acts, images, and ideas that "trouble," violate, cross, mix, or otherwise confound established boundaries between male and female, normal and abnormal, self and other. In a limited sense, the goal is to create more space for and recognition of the various actions performed daily in a social landscape blinded and hostile to variety. But the broader goal is a general troubling, an attempted unfixing, of the links between acts, categories, representations, desires, and identities.

The main objections to Butler's position echo the objections often made to post-structuralist work. Key questions focus on agency, power, and ethics, while her difficult style and specialized terminology seem to guarantee a small audience for work that aims to have political consequences. To what extent does Butler believe that conscious, purposive action is possible if she posits an all-encompassing discursive power that shapes us at such a deep, unconscious level? How are we to understand "compulsory heterosexuality," "masculine hegemony," "phallogocentrism" (Derrida's term for the masculine power at the origin of the Law), and other terms by which she designates power? Have there been societies in which these forms of power have not been dominant? Is the formation of subjectivity entirely a matter of the self's relation to power, or do intersubjective relationships have any important role to play? What enables the critical enterprise itself, the ability to describe the processes of subject formation? Within ongoing debates over the details, however, a new interest in violations of received categories and the performative reproduction and transformation of culture attests to Butler's impact on literary studies.

From Gender Trouble

From *Preface*

Contemporary feminist debates over the meanings of gender lead time and again to a certain sense of trouble, as if the indeterminacy of gender might eventually culminate in the failure of feminism. Perhaps trouble need not carry such a negative valence. To make trouble was, within the reigning discourse of my childhood, something one should never do precisely because that would get one *in* trouble. The rebellion and its reprimand seemed to be caught up in the same terms, a phenomenon that gave rise to my first critical insight into the subtle ruse of power: the prevailing law threatened one with trouble, even put one in trouble, all to keep one out of trouble. Hence, I concluded that trouble is inevitable and the task, how best to make it, what best way to be in it. As time went by, further ambiguities arrived on the critical scene. I noted that trouble sometimes euphemized some fundamentally mysterious problem usually related to the alleged mystery of all things feminine.

I read Beauvoir¹ who explained that to be a woman within the terms of a masculinist culture is to be a source of mystery and unknowability for men, and this seemed confirmed somehow when I read Sartre² for whom all desire, problematically presumed as heterosexual and masculine, was defined as *trouble*. For that masculine subject of desire, trouble became a scandal with the sudden intrusion, the unanticipated agency, of a female “object” who inexplicably returns the glance, reverses the gaze, and contests the place and authority of the masculine position. The radical dependency of the masculine subject on the female “Other” suddenly exposes his autonomy as illusory. That particular dialectical reversal of power, however, couldn’t quite hold my attention—although others surely did. Power seemed to be more than an exchange between subjects or a relation of constant inversion between a subject and an Other; indeed, power appeared to operate in the production of that very binary frame for thinking about gender. I asked, what configuration of power constructs the subject and the Other, that binary relation between “men” and “women,” and the internal stability of those terms? What restriction is here at work? Are those terms untroubling only to the extent that they conform to a heterosexual matrix for conceptualizing gender and desire? What happens to the subject and to the stability of gender categories when the epistemic regime of presumptive heterosexuality is unmasked as that which produces and reifies these ostensible categories of ontology?

But how can an epistemic/ontological regime be brought into question? What best way to trouble the gender categories that support gender hierarchy and compulsory heterosexuality? Consider the fate of “female trouble,” that historical configuration of a nameless female indisposition, which thinly veiled the notion that being female is a natural indisposition. Serious as the medicalization of women’s bodies is, the term is also laughable, and laughter in the face of serious categories is indispensable for feminism. Without a doubt, feminism continues to require its own forms of serious play. *Female Trouble* is also the title of the John Waters film that features Divine, the hero/heroine of *Hairspray*³ as well, whose impersonation of women implicitly suggests that gender is a kind of persistent impersonation that passes as the real. Her/his performance destabilizes the very distinctions between the natural and the artificial, depth and surface, inner and outer through which discourse about genders almost always operates. Is drag the imitation of gender, or does it dramatize the signifying gestures through which gender itself is established? Does being female constitute a “natural fact” or a cultural performance, or is “naturalness” constituted through discursively constrained performative acts that produce the body through and within the categories of sex? Divine notwithstanding, gender practices within gay and lesbian cultures often thematize “the natural” in parodic contexts that bring into relief the performative construction of an original and true sex. What other foundational categories of identity—the binary of sex, gender, and the body—can be shown as productions that create the effect of the natural, the original, and the inevitable?

1. SIMONE DE BEAUVOIR (1908–1986), French existentialist philosopher and feminist writer.

2. Jean-Paul Sartre (1905–1980), French existentialist philosopher.

3. *Hairspray* (1988) and *Female Trouble* (1974),

films by the independent producer/director/screenwriter John Waters (b. 1946). Divine (born Harris Glenn Milstead, 1945–1988), a 300-pound cross-dresser who starred in many of Waters’s films.

To expose the foundational categories of sex, gender, and desire as effects of a specific formation of power requires a form of critical inquiry that Foucault, reformulating Nietzsche,⁴ designates as “genealogy.” A genealogical critique refuses to search for the origins of gender, the inner truth of female desire, a genuine or authentic sexual identity that repression has kept from view; rather, genealogy investigates the political stakes in designating as an *origin* and *cause* those identity categories that are in fact the *effects* of institutions, practices, discourses with multiple and diffuse points of origin. The task of this inquiry is to center on—and decenter—such defining institutions: phallogocentrism and compulsory heterosexuality.⁵

Precisely because “female” no longer appears to be a stable notion, its meaning is as troubled and unfixed as “women,” and because both terms gain their troubled significations only as relational terms, this inquiry takes as its focus gender and the relational analysis it suggests. Further, it is no longer clear that feminist theory ought to try to settle the questions of primary identity in order to get on with the task of politics. Instead, we ought to ask, what political possibilities are the consequence of a radical critique of the categories of identity. What new shape of politics emerges when identity as a common ground no longer constrains the discourse on feminist politics? And to what extent does the effort to locate a common identity as the foundation for a feminist politics preclude a radical inquiry into the political construction and regulation of identity itself?

From Chapter 3. *Subversive Bodily Acts*

* * *

BODILY INSCRIPTIONS, PERFORMATIVE SUBVERSIONS

Garbo “got in drag” whenever she took some heavy glamour part, whenever she melted in or out of a man’s arms, whenever she simply let that heavenly-flexed neck . . . bear the weight of her thrown-back head. . . . How resplendent seems the art of acting! It is all *impersonation*, whether the sex underneath is true or not.

—Parker Tyler, “The Garbo Image,”
quoted in Esther Newton, *Mother Camp*⁶

Categories of true sex, discrete gender, and specific sexuality have constituted the stable point of reference for a great deal of feminist theory and politics. These constructs of identity serve as the points of epistemic departure from which theory emerges and politics itself is shaped. In the case of

4. FRIEDRICH NIETZSCHE (1844–1900), German philosopher. MICHEL FOUCAULT (1926–1984), French philosopher and historian of ideas.

5. A term coined by the American feminist poet ADRIENNE RICH (1929–2012) to indicate society’s injunction against all homosexual desires and acts. “Phallogocentrism”: a term coined by the

French philosopher JACQUES DERRIDA (1930–2004) for the patriarchal dominance of sexuality and the legal system.

6. *Mother Camp: Female Impersonators in America* (Chicago: University of Chicago Press, 1972). Greta Garbo (1905–1990), Swedish-born American film star.

feminism, politics is ostensibly shaped to express the interests, the perspectives, of "women." But is there a political shape to "women," as it were, that precedes and prefigures the political elaboration of their interests and epistemic point of view? How is that identity shaped, and is it a political shaping that takes the very morphology and boundary of the sexed body as the ground, surface, or site of cultural inscription? What circumscribes that site as "the female body"? Is "the body" or "the sexed body" the firm foundation on which gender and systems of compulsory sexuality operate? Or is "the body" itself shaped by political forces with strategic interests in keeping that body bounded and constituted by the markers of sex?

The sex/gender distinction and the category of sex itself appear to presuppose a generalization of "the body" that preexists the acquisition of its sexed significance. This "body" often appears to be a passive medium that is signified by an inscription from a cultural source figured as "external" to that body. Any theory of the culturally constructed body, however, ought to question "the body" as a construct of suspect generality when it is figured as passive and prior to discourse. There are Christian and Cartesian precedents⁷ to such views which, prior to the emergence of vitalistic biologies in the nineteenth century, understand "the body" as so much inert matter, signifying nothing or, more specifically, signifying a profane void, the fallen state: deception, sin, the premonitional metaphors of hell and the eternal feminine. There are many occasions in both Sartre's and Beauvoir's work where "the body" is figured as a mute facticity, anticipating some meaning that can be attributed only by a transcendent consciousness, understood in Cartesian terms as radically immaterial. But what establishes this dualism for us? What separates off "the body" as indifferent to signification, and signification itself as the act of a radically disembodied consciousness or, rather, the act that radically disembodies that consciousness? To what extent is that Cartesian dualism presupposed in phenomenology⁸ adapted to the structuralist frame in which mind/body is redescribed as culture/nature? With respect to gender discourse, to what extent do these problematic dualisms still operate within the very descriptions that are supposed to lead us out of that binarism and its implicit hierarchy? How are the contours of the body clearly marked as the taken-for-granted ground or surface upon which gender significations are inscribed, a mere facticity devoid of value, prior to significance?

Wittig⁹ suggests that a culturally specific epistemic *a priori* establishes the naturalness of "sex." But by what enigmatic means has "the body" been accepted as a *prima facie* given that admits of no genealogy? Even within Foucault's essay on the very theme of genealogy, the body is figured as a surface and the scene of a cultural inscription: "the body is the inscribed surface of events."¹ The task of genealogy, he claims, is "to expose a body totally imprinted by history." His sentence continues, however, by referring

7. In the dualistic system of the French philosopher René Descartes (1596–1650), spirit and matter are mutually exclusive.

8. A philosophical method restricted to analyzing the intellectual processes of which we are introspectively aware (while ignoring external objects, the question of whose existence is "bracketed").

9. MONIQUE WITTIG (1935–2003), French feminist

theorist and novelist.

1. Michel Foucault, "Nietzsche, Genealogy, History," in *Language, Counter-Memory, Practice*, ed. Donald F. Bouchard, trans. Donald F. Bouchard and Sherry Simon (Ithaca: Cornell University Press, 1977), p. 148 [Butler's note]. Some of the author's notes are edited, and some omitted.

to the goal of "history"—here clearly understood on the model of Freud's "civilization"—as the "destruction of the body" (148). Forces and impulses with multiple directionalities are precisely that which history both destroys and preserves through the *entstehung* (historical event) of inscription. As "a volume in perpetual disintegration" (148), the body is always under siege, suffering destruction by the very terms of history. And history is the creation of values and meanings by a signifying practice that requires the subjection of the body. This corporeal destruction is necessary to produce the speaking subject and its significations. This is a body, described through the language of surface and force, weakened through a "single drama" of domination, inscription, and creation (150). This is not the *modus vivendi* of one kind of history rather than another, but is, for Foucault, "history" (148) in its essential and repressive gesture.

Although Foucault writes, "Nothing in man [*sic*]²—not even his body—is sufficiently stable to serve as the basis for self-recognition or for understanding other men [*sic*]" (153), he nevertheless points to the constancy of cultural inscription as a "single drama" that acts on the body. If the creation of values, that historical mode of signification, requires the destruction of the body, much as the instrument of torture in Kafka's *In the Penal Colony*² destroys the body on which it writes, then there must be a body prior to that inscription, stable and self-identical, subject to that sacrificial destruction. In a sense, for Foucault, as for Nietzsche, cultural values emerge as the result of an inscription on the body, understood as a medium, indeed, a blank page; in order for this inscription to signify, however, that medium must itself be destroyed—that is, fully transvaluated into a sublimated domain of values. Within the metaphors of this notion of cultural values is the figure of history as a relentless writing instrument, and the body as the medium which must be destroyed and transfigured in order for "culture" to emerge.

By maintaining a body prior to its cultural inscription, Foucault appears to assume a materiality prior to signification and form. Because this distinction operates as essential to the task of genealogy as he defines it, the distinction itself is precluded as an object of genealogical investigation. Occasionally in his analysis of Herculine,³ Foucault subscribes to a prediscursive multiplicity of bodily forces that break through the surface of the body to disrupt the regulating practices of cultural coherence imposed upon that body by a power regime, understood as a vicissitude of "history." If the presumption of some kind of precategorical source of disruption is refused, is it still possible to give a genealogical account of the demarcation of the body as such as a signifying practice? This demarcation is not initiated by a reified history or by a subject. This marking is the result of a diffuse and active structuring of the social field. This signifying practice effects a social space for and of the body within certain regulatory grids of intelligibility.

Mary Douglas' *Purity and Danger* suggests that the very contours of "the body" are established through markings that seek to establish specific codes of cultural coherence. Any discourse that establishes the boundaries of the body serves the purpose of instating and naturalizing certain taboos regard-

2. A 1919 story by Franz Kafka (1883–1924), Austrian writer who was born and lived most of his life in Prague.

maphrodite whose memoirs were published in 1978 with an introduction by Foucault (discussed by Butler earlier in this chapter).

ing the appropriate limits, postures, and modes of exchange that define what it is that constitutes bodies:

ideas about separating, purifying, demarcating and punishing transgressions have as their main function to impose system on an inherently untidy experience. It is only by exaggerating the difference between within and without, above and below, male and female, with and against, that a semblance of order is created.⁴

Although Douglas clearly subscribes to a structuralist distinction between an inherently unruly nature and an order imposed by cultural means, the “untidiness” to which she refers can be redescribed as a region of *cultural* unruliness and disorder. Assuming the inevitably binary structure of the nature/culture distinction, Douglas cannot point toward an alternative configuration of culture in which such distinctions become malleable or proliferate beyond the binary frame. Her analysis, however, provides a possible point of departure for understanding the relationship by which social taboos institute and maintain the boundaries of the body as such. Her analysis suggests that what constitutes the limit of the body is never merely material, but that the surface, the skin, is systemically signified by taboos and anticipated transgressions; indeed, the boundaries of the body become, within her analysis, the limits of the social *per se*. A poststructuralist appropriation of her view might well understand the boundaries of the body as the limits of the socially *hegemonic*. In a variety of cultures, she maintains, there are

pollution powers which inhere in the structure of ideas itself and which punish a symbolic breaking of that which should be joined or joining of that which should be separate. It follows from this that pollution is a type of danger which is not likely to occur except where the lines of structure, cosmic or social, are clearly defined.

A polluting person is always in the wrong. He [*sic*] has developed some wrong condition or simply crossed over some line which should not have been crossed and this displacement unleashes danger for someone.⁵

In a sense, Simon Watney has identified the contemporary construction of “the polluting person” as the person with AIDS in his *Policing Desire: AIDS, Pornography, and the Media*.⁶ Not only is the illness figured as the “gay disease,” but throughout the media’s hysterical and homophobic response to the illness there is a tactical construction of a continuity between the polluted status of the homosexual by virtue of the boundary-trespass that is homosexuality and the disease as a specific modality of homosexual pollution. That the disease is transmitted through the exchange of bodily fluids suggests within the sensationalist graphics of homophobic signifying systems the dangers that permeable bodily boundaries present to the social order as such. Douglas remarks that “the body is a model that can stand for any bounded system. Its boundaries can represent any boundaries which are threatened or precarious.”⁷ And she asks a question which one might have

expected to read in Foucault: "Why should bodily margins be thought to be specifically invested with power and danger?"⁸

Douglas suggests that all social systems are vulnerable at their margins, and that all margins are accordingly considered dangerous. If the body is synecdochal for the social system *per se* or a site in which open systems converge, then any kind of unregulated permeability constitutes a site of pollution and endangerment. Since anal and oral sex among men clearly establishes certain kinds of bodily permeabilities unsanctioned by the hegemonic order, male homosexuality would, within such a hegemonic point of view, constitute a site of danger and pollution, prior to and regardless of the cultural presence of AIDS. Similarly, the "polluted" status of lesbians, regardless of their low-risk status with respect to AIDS, brings into relief the dangers of their bodily exchanges. Significantly, being "outside" the hegemonic order does not signify being "in" a state of filthy and untidy nature. Paradoxically, homosexuality is almost always conceived within the homophobic signifying economy as *both* uncivilized and unnatural.

The construction of stable bodily contours relies upon fixed sites of corporeal permeability and impermeability. Those sexual practices in both homosexual and heterosexual contexts that open surfaces and orifices to erotic signification or close down others effectively reinscribe the boundaries of the body along new cultural lines. Anal sex among men is an example, as is the radical re-membering of the body in Wittig's *The Lesbian Body*.⁹ Douglas alludes to "a kind of sex pollution which expresses a desire to keep the body (physical and social) intact,"¹ suggesting that the naturalized notion of "the" body is itself a consequence of taboos that render that body discrete by virtue of its stable boundaries. Further, the rites of passage that govern various bodily orifices presuppose a heterosexual construction of gendered exchange, positions, and erotic possibilities. The deregulation of such exchanges accordingly disrupts the very boundaries that determine what it is to be a body at all. Indeed, the critical inquiry that traces the regulatory practices within which bodily contours are constructed constitutes precisely the genealogy of "the body" in its discreteness that might further radicalize Foucault's theory.²

Significantly, Kristeva's discussion of abjection in *The Powers of Horror* begins to suggest the uses of this structuralist notion of a boundary-constituting taboo for the purposes of constructing a discrete subject through exclusion.³ The "abject" designates that which has been expelled from the body, discharged as excrement, literally rendered "Other." This appears as an expulsion of alien elements, but the alien is effectively established through

2. Foucault's essay "A Preface to Transgression" (in *Language, Counter-Memory, Practice*) does provide an interesting juxtaposition with Douglas's notion of body boundaries constituted by incest taboos. Originally written in honor of Georges Bataille, this essay explores in part the metaphorical "dirt" of transgressive pleasures and the association of the forbidden orifice with the dirt-covered tomb. See pp. 46–48 [Butler's note]. Bataille (1897–1962), French novelist and philosopher.

3. Kristeva discusses Mary Douglas's work in a short section of *The Powers of Horror: An Essay on Abjection*, trans. Leon Roudiez (New York: Columbia University Press, 1982), originally published as *Pouvoirs de l'horreur* (1980). Assimilating Douglas's insights to her own reformulation of Lacan, Kristeva writes, "Defilement is what is jettisoned from the *symbolic system*. It is what escapes that social rationality, that logical order on which a social aggregate is based, which then becomes differentiated from a temporary agglomeration of individuals and, in short, constitutes a *classification system or a structure*" (p. 65) [Butler's note]. JULIA KRISTEVA (b. 1941), French feminist literary critic and psychoanalyst.

this expulsion. The construction of the “not-me” as the abject establishes the boundaries of the body which are also the first contours of the subject. Kristeva writes:

nausea makes me balk at that milk cream, separates me from the mother and father who proffer it. “I” want none of that element, sign of their desire; “I” do not want to listen, “I” do not assimilate it, “I” expel it. But since the food is not an “other” for “me,” who am only in their desire, I expel *myself*, I spit *myself* out, I abject *myself* within the same motion through which “I” claim to establish myself.⁴

The boundary of the body as well as the distinction between internal and external is established through the ejection and transvaluation of something originally part of identity into a defiling otherness. As Iris Young has suggested in her use of Kristeva to understand sexism, homophobia, and racism, the repudiation of bodies for their sex, sexuality, and/or color is an “expulsion” followed by a “repulsion” that founds and consolidates culturally hegemonic identities along sex/race/sexuality axes of differentiation.⁵ Young’s appropriation of Kristeva shows how the operation of repulsion can consolidate “identities” founded on the instituting of the “Other” or a set of Others through exclusion and domination. What constitutes through division the “inner” and “outer” worlds of the subject is a border and boundary tenuously maintained for the purposes of social regulation and control. The boundary between the inner and outer is confounded by those excremental passages in which the inner effectively becomes outer, and this excreting function becomes, as it were, the model by which other forms of identity-differentiation are accomplished. In effect, this is the mode by which Others become shit. For inner and outer worlds to remain utterly distinct, the entire surface of the body would have to achieve an impossible impermeability. This sealing of its surfaces would constitute the seamless boundary of the subject; but this enclosure would invariably be exploded by precisely that excremental filth that it fears.

Regardless of the compelling metaphors of the spatial distinctions of inner and outer, they remain linguistic terms that facilitate and articulate a set of fantasies, feared and desired. “Inner” and “outer” make sense only with reference to a mediating boundary that strives for stability. And this stability, this coherence, is determined in large part by cultural orders that sanction the subject and compel its differentiation from the abject. Hence, “inner” and “outer” constitute a binary distinction that stabilizes and consolidates the coherent subject. When that subject is challenged, the meaning and necessity of the terms are subject to displacement. If the “inner world” no longer designates a topos,⁶ then the internal fixity of the self and, indeed, the internal locale of gender identity, become similarly suspect. The critical question is not *how* did that identity become *internalized*? as if internalization were a process or a mechanism that might be descriptively reconstructed. Rather,

the question is: From what strategic position in public discourse and for what reasons has the trope of interiority and the disjunctive binary of inner/outer taken hold? In what language is "inner space" figured? What kind of figuration is it, and through what figure of the body is it signified? How does a body figure on its surface the very invisibility of its hidden depth?

From Interiority to Gender Performatives

In *Discipline and Punish* Foucault challenges the language of internalization as it operates in the service of the disciplinary regime of the subjection and subjectivation of criminals. Although Foucault objected to what he understood to be the psychoanalytic belief in the "inner" truth of sex in *The History of Sexuality*, he turns to a criticism of the doctrine of internalization for separate purposes in the context of his history of criminology. In a sense, *Discipline and Punish* can be read as Foucault's effort to rewrite Nietzsche's doctrine of internalization in *On the Genealogy of Morals* on the model of *inscription*. In the context of prisoners, Foucault writes, the strategy has been not to enforce a repression of their desires, but to compel their bodies to signify the prohibitive law as their very essence, style, and necessity. That law is not literally internalized, but incorporated, with the consequence that bodies are produced which signify that law on and through the body; there the law is manifest as the essence of their selves, the meaning of their soul, their conscience, the law of their desire. In effect, the law is at once fully manifest and fully latent, for it never appears as external to the bodies it subjects and subjectivates. Foucault writes:

It would be wrong to say that the soul is an illusion, or an ideological effect. On the contrary, it exists, it has a reality, it is produced permanently *around, on, within*, the body by the functioning of a power that is exercised on those that are punished [my emphasis].⁷

The figure of the interior soul understood as "within" the body is signified through its inscription *on* the body, even though its primary mode of signification is through its very absence, its potent invisibility. The effect of a structuring inner space is produced through the signification of a body as a vital and sacred enclosure. The soul is precisely what the body lacks; hence, the body presents itself as a signifying lack. That lack which is the body signifies the soul as that which cannot show. In this sense, then, the soul is a surface signification that contests and displaces the inner/outer distinction itself, a figure of interior psychic space inscribed *on* the body as a social signification that perpetually renounces itself as such. In Foucault's terms, the soul is not imprisoned by or within the body, as some Christian imagery would suggest, but "the soul is the prison of the body."⁸

The redescription of intrapsychic processes in terms of the surface politics of the body implies a corollary redescription of gender as the disciplinary production of the figures of fantasy through the play of presence and absence on the body's surface, the construction of the gendered body through a series of exclusions and denials, signifying absences. But what

determines the manifest and latent text of the body politic? What is the prohibitive law that generates the corporeal stylization of gender, the fantasized and fantastic figuration of the body? We have already considered the incest taboo and the prior taboo against homosexuality as the generative moments of gender identity,⁹ the prohibitions that produce identity along the culturally intelligible grids of an idealized and compulsory heterosexuality. That disciplinary production of gender effects a false stabilization of gender in the interests of the heterosexual construction and regulation of sexuality within the reproductive domain. The construction of coherence conceals the gender discontinuities that run rampant within heterosexual, bisexual, and gay and lesbian contexts in which gender does not necessarily follow from sex, and desire, or sexuality generally, does not seem to follow from gender—indeed, where none of these dimensions of significant corporeality express or reflect one another. When the disorganization and disaggregation of the field of bodies disrupt the regulatory fiction of heterosexual coherence, it seems that the expressive model loses its descriptive force. That regulatory ideal is then exposed as a norm and a fiction that disguises itself as a developmental law regulating the sexual field that it purports to describe.

According to the understanding of identification as an enacted fantasy or incorporation, however, it is clear that coherence is desired, wished for, idealized, and that this idealization is an effect of a corporeal signification. In other words, acts, gestures, and desire produce the effect of an internal core or substance, but produce this *on the surface* of the body, through the play of signifying absences that suggest, but never reveal, the organizing principle of identity as a cause. Such acts, gestures, enactments, generally construed, are *performative* in the sense that the essence or identity that they otherwise purport to express are *fabrications* manufactured and sustained through corporeal signs and other discursive means. That the gendered body is performative suggests that it has no ontological status apart from the various acts which constitute its reality. This also suggests that if that reality is fabricated as an interior essence, that very interiority is an effect and function of a decidedly public and social discourse, the public regulation of fantasy through the surface politics of the body, the gender border control that differentiates inner from outer, and so institutes the “integrity” of the subject. In other words, acts and gestures, articulated and enacted desires create the illusion of an interior and organizing gender core, an illusion discursively maintained for the purposes of the regulation of sexuality within the obligatory frame of reproductive heterosexuality. If the “cause” of desire, gesture, and act can be localized within the “self” of the actor, then the political regulations and disciplinary practices which produce that ostensibly coherent gender are effectively displaced from view. The displacement of a political and discursive origin of gender identity onto a psychological “core” precludes an analysis of the political constitution of the gendered subject and its fabricated notions about the ineffable interiority of its sex or of its true identity.

If the inner truth of gender is a fabrication and if a true gender is a fantasy instituted and inscribed on the surface of bodies, then it seems that genders can be neither true nor false, but are only produced as the truth effects of a discourse of primary and stable identity. In *Mother Camp: Female Impersonators in America*, anthropologist Esther Newton suggests that the structure

9. In chapter 2 of *Gender Trouble*.

of impersonation reveals one of the key fabricating mechanisms through which the social construction of gender takes place. I would suggest as well that drag fully subverts the distinction between inner and outer psychic space and effectively mocks both the expressive model of gender and the notion of a true gender identity. Newton writes:

At its most complex, [drag] is a double inversion that says, "appearance is an illusion." Drag says [Newton's curious personification] "my 'outside' appearance is feminine, but my essence 'inside' [the body] is masculine." At the same time it symbolizes the opposite inversion; "my appearance 'outside' [my body, my gender] is masculine but my essence 'inside' [myself] is feminine."¹

Both claims to truth contradict one another and so displace the entire enactment of gender significations from the discourse of truth and falsity.

The notion of an original or primary gender identity is often parodied within the cultural practices of drag, cross-dressing, and the sexual stylization of butch/femme identities. Within feminist theory, such parodic identities have been understood to be either degrading to women, in the case of drag and cross-dressing, or an uncritical appropriation of sex-role stereotyping from within the practice of heterosexuality, especially in the case of butch/femme lesbian identities. But the relation between the "imitation" and the "original" is, I think, more complicated than that critique generally allows. Moreover, it gives us a clue to the way in which the relationship between primary identification—that is, the original meanings accorded to gender—and subsequent gender experience might be reframed. The performance of drag plays upon the distinction between the anatomy of the performer and the gender that is being performed. But we are actually in the presence of three contingent dimensions of significant corporeality: anatomical sex, gender identity, and gender performance. If the anatomy of the performer is already distinct from the gender of the performer, and both of those are distinct from the gender of the performance, then the performance suggests a dissonance not only between sex and performance, but sex and gender, and gender and performance. As much as drag creates a unified picture of "woman" (what its critics often oppose), it also reveals the distinctness of those aspects of gendered experience which are falsely naturalized as a unity through the regulatory fiction of heterosexual coherence. *In imitating gender, drag implicitly reveals the imitative structure of gender itself—as well as its contingency.* Indeed, part of the pleasure, the giddiness of the performance is in the recognition of a radical contingency in the relation between sex and gender in the face of cultural configurations of causal unities that are regularly assumed to be natural and necessary. In the place of the law of heterosexual coherence, we see sex and gender denaturalized by means of a performance which avows their distinctness and dramatizes the cultural mechanism of their fabricated unity.

The notion of gender parody defended here does not assume that there is an original which such parodic identities imitate. Indeed, the parody is *of* the very notion of an original; just as the psychoanalytic notion of gender identification is constituted by a fantasy of a fantasy, the transfiguration of an Other who is always already a "figure" in that double sense, so gender

1. Newton, *Mother Camp*, p. 103 [Butler's note].

parody reveals that the original identity after which gender fashions itself is an imitation without an origin. To be more precise, it is a production which, in effect—that is, in its effect—postures as an imitation. This perpetual displacement constitutes a fluidity of identities that suggests an openness to resignification and recontextualization; parodic proliferation deprives hegemonic culture and its critics of the claim to naturalized or essentialist gender identities. Although the gender meanings taken up in these parodic styles are clearly part of hegemonic, misogynist culture, they are nevertheless denaturalized and mobilized through their parodic recontextualization. As imitations which effectively displace the meaning of the original, they imitate the myth of originality itself. In the place of an original identification which serves as a determining cause, gender identity might be reconceived as a personal/cultural history of received meanings subject to a set of imitative practices which refer laterally to other imitations and which, jointly, construct the illusion of a primary and interior gendered self or parody the mechanism of that construction.

According to Fredric Jameson's "Postmodernism and Consumer Society," the imitation that mocks the notion of an original is characteristic of pastiche rather than parody:

Pastiche is, like parody, the imitation of a peculiar or unique style, the wearing of a stylistic mask, speech in a dead language: but it is a neutral practice of mimicry, without parody's ulterior motive, without the satirical impulse, without laughter, without that still latent feeling that there exists something *normal* compared to which what is being imitated is rather comic. Pastiche is blank parody, parody that has lost its humor.²

The loss of the sense of "the normal," however, can be its own occasion for laughter, especially when "the normal," "the original" is revealed to be a copy, and an inevitably failed one, an ideal that no one *can* embody. In this sense, laughter emerges in the realization that all along the original was derived.

Parody by itself is not subversive, and there must be a way to understand what makes certain kinds of parodic repetitions effectively disruptive, truly troubling, and which repetitions become domesticated and recirculated as instruments of cultural hegemony.³ A typology of actions would clearly not suffice, for parodic displacement, indeed, parodic laughter, depends on a context and reception in which subversive confusions can be fostered. What performance where will invert the inner/outer distinction and compel a radical rethinking of the psychological presuppositions of gender identity and sexuality? What performance where will compel a reconsideration of the *place* and stability of the masculine and the feminine? And what kind of gender performance will enact and reveal the performativity of gender itself in a way that destabilizes the naturalized categories of identity and desire.

If the body is not a "being," but a variable boundary, a surface whose permeability is politically regulated, a signifying practice within a cultural field of

2. Fredric Jameson, "Postmodernism and Consumer Society," in *The Anti-Aesthetic: Essays on Postmodern Culture*, ed. Hal Foster (Port Townsend, Wash.: Bay Press, 1983), p. 114 [Butler's note]. JAMESON (b. 1934), American Marxist liter-

ary critic.

3. The manufactured consent that legitimates a dominant group and unifies a society, as theorized by the Italian Marxist ANTONIO GRAMSCI (1891–1937).

gender hierarchy and compulsory heterosexuality, then what language is left for understanding this corporeal enactment, gender, that constitutes its "interior" signification on its surface? Sartre would perhaps have called this act "a style of being," Foucault, "a stylistics of existence." And in my earlier reading of Beauvoir,⁴ I suggest that gendered bodies are so many "styles of the flesh." These styles are never fully self-styled, for styles have a history, and those histories condition and limit the possibilities. Consider gender, for instance, as *a corporeal style*, an "act," as it were, which is both intentional and performative, where "*performative*" suggests a dramatic and contingent construction of meaning.

Wittig understands gender as the workings of "sex," where "sex" is an obligatory injunction for the body to become a cultural sign, to materialize itself in obedience to a historically delimited possibility, and to do this, not once or twice, but as a sustained and repeated corporeal project. The notion of a "project," however, suggests the originating force of a radical will, and because gender is a project which has cultural survival as its end, the term *strategy* better suggests the situation of duress under which gender performance always and variously occurs. Hence, as a strategy of survival within compulsory systems, gender is a performance with clearly punitive consequences. Discrete genders are part of what "humanizes" individuals within contemporary culture; indeed, we regularly punish those who fail to do their gender right. Because there is neither an "essence" that gender expresses or externalizes nor an objective ideal to which gender aspires, and because gender is not a fact, the various acts of gender create the idea of gender, and without those acts, there would be no gender at all. Gender is, thus, a construction that regularly conceals its genesis; the tacit collective agreement to perform, produce, and sustain discrete and polar genders as cultural fictions is obscured by the credibility of those productions—and the punishments that attend not agreeing to believe in them; the construction "compels" our belief in its necessity and naturalness. The historical possibilities materialized through various corporeal styles are nothing other than those punitively regulated cultural fictions alternately embodied and deflected under duress.

Consider that a sedimentation of gender norms produces the peculiar phenomenon of a "natural sex" or a "real woman" or any number of prevalent and compelling social fictions, and that this is a sedimentation that over time has produced a set of corporeal styles which, in reified form, appear as the natural configuration of bodies into sexes existing in a binary relation to one another. If these styles are enacted, and if they produce the coherent gendered subjects who pose as their originators, what kind of performance might reveal this ostensible "cause" to be an "effect"?

In what senses, then, is gender an act? As in other ritual social dramas, the action of gender requires a performance that is *repeated*. This repetition is at once a reenactment and reexperiencing of a set of meanings already socially established; and it is the mundane and ritualized form of their legitimation.⁵ Although there are individual bodies that enact these significations by becoming stylized into gendered modes, this "action" is a public action. There are temporal and collective dimensions to these actions, and

4. In chapter 1 of *Gender Trouble*.

5. See Victor Turner, *Dramas, Fields, and Metaphors* (Ithaca: Cornell University Press, 1974). See also Clifford Geertz, "Blurred Genres: The

Refiguration of Thought," in *Local Knowledge: Further Essays in Interpretive Anthropology* (New York: Basic Books, 1983) [Butler's note].

their public character is not inconsequential; indeed, the performance is effected with the strategic aim of maintaining gender within its binary frame—an aim that cannot be attributed to a subject, but, rather, must be understood to found and consolidate the subject.

Gender ought not to be construed as a stable identity or locus of agency from which various acts follow; rather, gender is an identity tenuously constituted in time, instituted in an exterior space through a *stylized repetition of acts*. The effect of gender is produced through the stylization of the body and, hence, must be understood as the mundane way in which bodily gestures, movements, and styles of various kinds constitute the illusion of an abiding gendered self. This formulation moves the conception of gender off the ground of a substantial model of identity to one that requires a conception of gender as a constituted *social temporality*. Significantly, if gender is instituted through acts which are internally discontinuous, then the *appearance of substance* is precisely that, a constructed identity, a performative accomplishment which the mundane social audience, including the actors themselves, come to believe and to perform in the mode of belief. Gender is also a norm that can never be fully internalized; “the internal” is a surface signification, and gender norms are finally phantasmatic, impossible to embody. If the ground of gender identity is the stylized repetition of acts through time and not a seemingly seamless identity, then the spatial metaphor of a “ground” will be displaced and revealed as a stylized configuration, indeed, a gendered corporealization of time. The abiding gendered self will then be shown to be structured by repeated acts that seek to approximate the ideal of a substantial ground of identity, but which, in their occasional *discontinuity*, reveal the temporal and contingent groundlessness of this “ground.” The possibilities of gender transformation are to be found precisely in the arbitrary relation between such acts, in the possibility of a failure to repeat, a de-formity, or a parodic repetition that exposes the phantasmatic effect of abiding identity as a politically tenuous construction.

If gender attributes, however, are not expressive but performative, then these attributes effectively constitute the identity they are said to express or reveal. The distinction between expression and performativeness is crucial. If gender attributes and acts, the various ways in which a body shows or produces its cultural signification, are performative, then there is no preexisting identity by which an act or attribute might be measured; there would be no true or false, real or distorted acts of gender, and the postulation of a true gender identity would be revealed as a regulatory fiction. That gender reality is created through sustained social performances means that the very notions of an essential sex and a true or abiding masculinity or femininity are also constituted as part of the strategy that conceals gender’s performative character and the performative possibilities for proliferating gender configurations outside the restricting frames of masculinist domination and compulsory heterosexuality.

Genders can be neither true nor false, neither real nor apparent, neither original nor derived. As credible bearers of those attributes, however, genders can also be rendered thoroughly and radically *incredible*.

PAUL GILROY

b. 1956

Paul Gilroy's provocative work on race, transnationalism, and culture has strongly influenced contemporary cultural studies and postcolonial theory. A sociologist by training, Gilroy is a leading scholar of cultural studies whose multidisciplinary approach blends historicism, Marxism, and critical race studies; he uses literature, art, and music as lenses for examining black Atlantic diasporic culture in the Western hemisphere. While he did not coin the term "Black Atlantic," he has brought the concept into common usage. In defining the Black Atlantic, Gilroy posits that "there is a culture that is not specifically African, American, Caribbean, or British, but all of these at once; a black Atlantic culture whose themes and techniques transcend ethnicity and nationality to produce something new and, until now, unremarked." For Gilroy, nationalism and ethnocentrism in the academy and in popular culture are dangerous constructs for which the Black Atlantic is a corrective. Together with such scholars as W. E. B. DU BOIS, STUART HALL, C. L. R. James, and HENRY LOUIS GATES JR., Gilroy draws attention to the transnational character of modern black culture. Ultimately, he advocates that we banish race and nation as organizing structures for identity and culture.

Paul Gilroy was born in London; his father is British and his mother is the award-winning Guyanese author Beryl Gilroy. Gilroy earned a B.A. from Sussex University in 1978 and a Ph.D. from the pioneering Centre for Contemporary Cultural Studies (CCCS) at Birmingham University in 1986. Following his graduation, he held positions at South Bank University and Essex University. In 1991 he began teaching at Goldsmiths College and became a professor of Sociology and Cultural Studies in 1995. Gilroy then taught at Yale University as the Charlotte Marion Saden Professor of Sociology and African American Studies, serving as the chair of the Department of African American Studies. Between 2005 and 2012 he served on the faculty at the London School of Economics, where he was the inaugural Anthony Giddens Professor in Social Theory. Since 2012 he has been at King's College London's Department of English. His career has been varied and interdisciplinary. He has worked for the Greater London Council and been a guest curator for the Tate Gallery and for the House of World Cultures in Berlin. Gilroy is a prolific speaker, delivering talks on both sides of the Atlantic, and he has also been a music DJ.

According to Gilroy, while working within postmodernism, we must not wholly reject the concept of modernity in and of itself. To begin with, we should recognize slavery and diaspora as previously unacknowledged cornerstones of modernity. Because modernity is necessarily tied to inhumanity and violence, the modern concepts of freedom and reason are paradoxically but inescapably juxtaposed to coercion and terror. The connections are particularly clear, he asserts, when we acknowledge that fascism was a major political occurrence within the past century—and the one with the furthest-reaching effects. Gilroy claims that fascism is alive and well in our current cultural experiences: it emerges when cultural groups and individuals make "spectacles" of their differences, including national and racial differences. For good and ill, modern legacies live on in our postmodern world.

Following World War II, waves of people of color came to England from British colonies in Africa, Asia, and the Caribbean. These Britons, often referred to collectively as "black Britons," created their own syncretic culture and affected the mainstream. Among them was the Jamaican-born Stuart Hall, a leading figure of the British New Left during the 1950s, major figure at the CCCS in Birmingham from 1964 to 1979, and mentor to Paul Gilroy. Not surprisingly, Gilroy positions himself in our selection and elsewhere as a second-generation cultural studies scholar and

black Briton as well as an outsider. He is critical not only of the European Enlightenment (Marxism included) and its racist aesthetics and canon, but also of contemporary British cultural studies and its continuation of modern ethnonationalism. As a self-conscious postnational countercultural agent, Gilroy deplores ethnic and nationalist absolutisms and champions transnational hybridities, particularly their forgotten histories, many of which are in need of scholarly recovery. The full history of the black diaspora and its impact on culture, notes Gilroy, remains to be written. With this conclusion Gilroy follows a long line of black intellectuals—Du Bois, LANGSTON HUGHES, and the Martinican journalist Paulette Nardal among them.

In his best-known book, the highly influential *The Black Atlantic: Modernity and Double Consciousness* (1993), Gilroy builds on the concept of the Black Atlantic, first developed by Robert Farris Thompson, an American historian of African Atlantic art and music. Gilroy argues that this transatlantic culture transcends ethnicity and national heritage, and that its participation in the Master-Slave dialectic described by G. F. W. HEGEL makes it part of modernity. Ultimately, he questions the uses of historical periodization as well as racial purity. In our selection, from the first chapter, Gilroy sets the terms of his analysis by taking up the hybrid identity or “double consciousness”—a term borrowed from Du Bois’s *The Souls of Black Folk* (1903)—involved in “striving to be both European and black.” Though there are continuities between these two categories, he notes that they are frequently viewed as mutually exclusive and thus the attempt to combine them is read as politically defiant. He attempts to bridge the divide between Europeanness and blackness by examining the transmutations, contemporary and historical, that occur within hybrid identities. Gilroy begins by criticizing first English and then African American cultural studies, as well as leftist politics and its Enlightenment legacies, for their emphasis on nationalism and national purity, which are antithetical to the long-standing transcultural makeup of the Black Atlantic. Throughout the selection, he employs the metaphor of ships in motion, which travel across the spaces between Europe, the Americas, Africa, and the Caribbean; circulate ideas and artifacts in ways that link those regions together; and break down divisions that position race and nationality as separate, potentially oppositional categories.

Gilroy’s book has received extensive commentary, and it has been criticized on a number of grounds. Some point out that it focuses solely on the modern age and ignores the number and complexity of hybrid black identities and cultures both across the Black Atlantic and around the globe. For example, it fails to address interactions of black and Islamic or Indian or indigenous societies. Because he ignores Africa, observe his critics, Gilroy invariably treats black communities as oppressed minorities. Moreover, his emphasis on the transnational leads him to slight the local. His criticisms of African American cultural studies as nationalist, ethnocentric, and hegemonic have drawn particular fire, as has his appropriation of Du Bois’s idea of “double consciousness,” which overlooks other key features of identity—most obviously gender and sexuality. Nevertheless, *Black Atlantic* is a distinctive contribution to the field of transatlantic studies, which succeeds in helping to make black studies more global.

From The Black Atlantic: Modernity and Double Consciousness

From Chapter 1. The Black Atlantic as a Counterculture of Modernity

We who are homeless,—Among Europeans today there is no lack of those who are entitled to call themselves homeless in a distinctive and honourable sense . . . We children of the future, how could we be at home in this today? We feel disfavour for all ideals that might lead one to feel at home even in this fragile, broken time of transition; as for “realities,” we do not believe that they will last. The ice that still supports people today has become very thin; the wind that brings the thaw is blowing; we ourselves who are homeless constitute a force that breaks open ice and other all too thin “realities.”

—Nietzsche¹

On the notion of modernity. It is a vexed question. Is not every era “modern” in relation to the preceding one? It seems that at least one of the components of “our” modernity is the spread of the awareness we have of it. The awareness of our awareness (the double, the second degree) is our source of strength and our torment.

—Edouard Glissant²

Striving to be both European and black requires some specific forms of double consciousness.³ By saying this I do not mean to suggest that taking on either or both of these unfinished identities necessarily exhausts the subjective resources of any particular individual. However, where racist, nationalist, or ethnically absolutist discourses orchestrate political relationships so that these identities appear to be mutually exclusive, occupying the space between them or trying to demonstrate their continuity has been viewed as a provocative and even oppositional act of political insubordination.

The contemporary black English, like the Anglo-Africans of earlier generations and perhaps, like all blacks in the West, stand between (at least) two great cultural assemblages, both of which have mutated through the course of the modern world that formed them and assumed new configurations. At present, they remain locked symbiotically in an antagonistic relationship marked out by the symbolism of colours which adds to the conspicuous cultural power of their central Manichean⁴ dynamic—black and white. These colours support a special rhetoric that has grown to be associated with a language of nationality and national belonging as well as the languages of “race” and ethnic identity.

Though largely ignored by recent debates over modernity and its discontents, these ideas about nationality, ethnicity, authenticity, and cultural integrity are characteristically modern phenomena that have profound implications for cultural criticism and cultural history. They crystallised

1. FRIEDRICH NIETZSCHE (1844–1900), German philosopher; quoted from *The Gay Science*, translated by Walter Kaufman (New York: Vintage, 1974), Book V, sec. 377.

2. Martinican poet, novelist, and theorist (1928–2011); translated from the novel *Malemort* (Paris: Seuil, 1981).

3. A term borrowed from W. E. B. DU BOIS, who wrote in *The Souls of Black Folk* (1903) of the “twoness” that results (“an American, a Negro”) when one constantly looks at oneself through others’ eyes.

4. That is, dualistic.

with the revolutionary transformations of the West at the end of the eighteenth and the beginning of the nineteenth centuries and involved novel typologies and modes of identification. Any shift towards a postmodern condition should not, however, mean that the conspicuous power of these modern subjectivities and the movements they articulated has been left behind. Their power has, if anything, grown, and their ubiquity as a means to make political sense of the world is currently unparalleled by the languages of class and socialism by which they once appeared to have been surpassed. My concern here is less with explaining their longevity and enduring appeal than with exploring some of the special political problems that arise from the fatal junction of the concept of nationality with the concept of culture and the affinities and affiliations which link the blacks of the West to one of their adoptive, parental cultures: the intellectual heritage of the West since the Enlightenment. I have become fascinated with how successive generations of black intellectuals have understood this connection and how they have projected it in their writing and speaking in pursuit of freedom, citizenship, and social and political autonomy.

If this appears to be little more than a roundabout way of saying that the reflexive cultures and consciousness of the European settlers and those of the Africans they enslaved, the "Indians" they slaughtered, and the Asians they indentured were not, even in situations of the most extreme brutality, sealed off hermetically from each other, then so be it. This seems as though it ought to be an obvious and self-evident observation, but its stark character has been systematically obscured by commentators from all sides of political opinion. Regardless of their affiliation to the right, left, or centre, groups have fallen back on the idea of cultural nationalism, on the overintegrated conceptions of culture which present immutable, ethnic differences as an absolute break in the histories and experiences of "black" and "white" people. Against this choice stands another, more difficult option: the theorisation of creolisation, *métissage*, *mestizaje*,⁵ and hybridity. From the viewpoint of ethnic absolutism, this would be a litany of pollution and impurity. These terms are rather unsatisfactory ways of naming the processes of cultural mutation and restless (dis)continuity that exceed racial discourse and avoid capture by its agents.

This book addresses one small area in the grand consequence of this historical conjunction—the stereophonic, bilingual, or bifocal cultural forms originated by, but no longer the exclusive property of, blacks dispersed within the structures of feeling, producing, communicating, and remembering that I have heuristically called the black Atlantic world. This chapter is therefore rooted in and routed through the special stress that grows with the effort involved in trying to face (at least) two ways at once.

My concerns at this stage are primarily conceptual: I have tried to address the continuing lure of ethnic absolutisms in cultural criticism produced both by blacks and by whites. In particular, this chapter seeks to explore the special relationships between "race," culture, nationality, and ethnicity which have a bearing on the histories and political cultures of Britain's black citizens. I have argued elsewhere that the cultures of this group have been produced in a syncretic pattern in which the styles and forms of the Caribbean,

5. Mixture (Spanish); specifically, the fusion of European, African, African American, and indigenous peoples in Central and South America. "*Métissage*": cross-breeding, racial mixing (French).

the United States, and Africa have been reworked and reinscribed in the novel context of modern Britain's own untidy ensemble of regional and class-oriented conflicts.⁶ Rather than make the invigorating flux of those mongrel cultural forms my focal concern here, I want instead to look at broader questions of ethnic identity that have contributed to the scholarship and the political strategies that Britain's black settlers have generated and to the underlying sense of England as a cohesive cultural community against which their self-conception has so often been defined. Here the ideas of nation, nationality, national belonging, and nationalism are paramount. They are extensively supported by a clutch of rhetorical strategies that can be named "cultural insiderism."⁷ The essential trademark of cultural insiderism which also supplies the key to its popularity is an absolute sense of ethnic difference. This is maximised so that it distinguishes people from one another and at the same time acquires an incontestable priority over all other dimensions of their social and historical experience, cultures, and identities. Characteristically, these claims are associated with the idea of national belonging or the aspiration to nationality and other more local but equivalent forms of cultural kinship. The range and complexity of these ideas in English cultural life defies simple summary or exposition. However, the forms of cultural insiderism they sanction typically construct the nation as an ethnically homogeneous object and invoke ethnicity a second time in the hermeneutic procedures deployed to make sense of its distinctive cultural content.

The intellectual seam in which English cultural studies has positioned itself—through innovative work in the fields of social history and literary criticism—can be indicted here. The statist modalities of Marxist analysis⁸ that view modes of material production and political domination as exclusively *national* entities are only one source of this problem. Another factor, more evasive but nonetheless potent for its intangible ubiquity, is a quiet cultural nationalism which pervades the work of some radical thinkers. This crypto-nationalism means that they are often disinclined to consider the cross catalytic or transverse dynamics of racial politics as a significant element in the formation and reproduction of English national identities. These formations are treated as if they spring, fully formed, from their own special viscera.⁹

My search for resources with which to comprehend the doubleness and cultural intermixture that distinguish the experience of black Britons in contemporary Europe required me to seek inspiration from other sources and, in effect, to make an intellectual journey across the Atlantic. In black America's histories of cultural and political debate and organisation I found another, second perspective with which to orient my own position. Here too the lure of ethnic particularism and nationalism has provided an ever-present danger. But that narrowness of vision which is content with the merely national has also been challenged from within that black community by thinkers who were prepared to renounce the easy claims of African-American exceptionalism in

9. An allusion to the story in Greek mythology of the birth of Athena, goddess of wisdom, who sprang fully formed from the head of her father, Zeus.

favour of a global, coalitional politics in which anti-imperialism and anti-racism might be seen to interact if not to fuse. The work of some of those thinkers will be examined in subsequent chapters.

This chapter also proposes some new chronotopes¹ that might fit with a theory that was less intimidated by and respectful of the boundaries and integrity of modern nation states than either English or African-American cultural studies have so far been. I have settled on the image of ships in motion across the spaces between Europe, America, Africa, and the Caribbean as a central organising symbol for this enterprise and as my starting point. The image of the ship—a living, micro-cultural, micro-political system in motion—is especially important for historical and theoretical reasons that I hope will become clearer below. Ships immediately focus attention on the middle passage,² on the various projects for redemptive return to an African homeland, on the circulation of ideas and activists as well as the movement of key cultural and political artefacts: tracts, books, gramophone records, and choirs.

The rest of this chapter falls into three sections. The first part addresses some conceptual problems common to English and African-American versions of cultural studies which, I argue, share a nationalistic focus that is antithetical to the rhizomorphic,³ fractal structure of the transcultural, international formation I call the black Atlantic. The second section uses the life and writings of Martin Robison Delany,⁴ an early architect of black nationalism whose influence still registers in contemporary political movements, to bring the black Atlantic to life and to extend the general arguments by introducing a number of key themes that will be used to map the responses to modernity's promises and failures produced by later thinkers. The final section explores the specific counterculture of modernity produced by black intellectuals and makes some preliminary points about the internality of blacks to the West. It initiates a polemic which runs through the rest of the book against the ethnic absolutism that currently dominates black political culture.

CULTURAL STUDIES IN BLACK AND WHITE

Any satisfaction to be experienced from the recent spectacular growth of cultural studies as an academic project should not obscure its conspicuous problems with ethnocentrism and nationalism. Understanding these difficulties might commence with a critical evaluation of the ways in which notions of ethnicity have been mobilised, often by default rather than design, as part of the distinctive hermeneutics of cultural studies or with the unthinking assumption that cultures always flow into patterns congruent with the borders of essentially homogeneous nation states. The marketing and inevitable reification of cultural studies as a discrete academic

3. In the form of a fungus, with multiple connections—the antihierarchical perspective (as opposed to the traditional structural model, the rooted tree) championed by GILLES DELEUZE and FÉLIX GUATTARI; see the introduction to *A Thousand Plateaus: Capitalism and Schizophrenia* (1980; see above).

4. African American abolitionist and novelist (1812–1885), an early proponent of African unity and the elimination of colonialism.

subject also has what might be called a secondary ethnic aspect. The project of cultural studies is a more or less attractive candidate for institutionalisation according to the ethnic garb in which it appears. The question of whose cultures are being studied is therefore an important one, as is the issue of where the instruments which will make that study possible are going to come from. In these circumstances it is hard not to wonder how much of the recent international enthusiasm for cultural studies is generated by its profound associations with England and ideas of Englishness. This possibility can be used as a point of entry into consideration of the ethno-historical specificity of the discourse of cultural studies itself.

Looking at cultural studies from an ethnohistorical perspective requires more than just noting its association with English literature, history, and New Left⁵ politics. It necessitates constructing an account of the borrowings made by these English initiatives from wider, modern, European traditions of thinking about culture, and at every stage examining the place which these cultural perspectives provide for the images of their racialised⁶ others as objects of knowledge, power, and cultural criticism. It is imperative, though very hard, to combine thinking about these issues with consideration of the pressing need to get black cultural expressions, analyses, and histories taken seriously in academic circles rather than assigned via the idea of “race relations” to sociology and thence abandoned to the elephants’ graveyard to which intractable policy issues go to await their expiry. These two important conversations pull in different directions and sometimes threaten to cancel each other out, but it is the struggle to have blacks perceived as agents, as people with cognitive capacities and even with an intellectual history—attributes denied by modern racism—that is for me the primary reason for writing this book. It provides a valuable warrant for questioning some of the ways in which ethnicity is appealed to in the English idioms of cultural theory and history, and in the scholarly productions of black America. Understanding the political culture of blacks in Britain demands close attention to both these traditions. This book is situated on their cusp.

Histories of cultural studies seldom acknowledge how the politically radical and openly interventionist aspirations found in the best of its scholarship are already articulated to black cultural history and theory. These links are rarely seen or accorded any significance. In England, the work of figures like C. L. R. James and Stuart Hall⁷ offers a wealth of both symbols and concrete evidence for the practical links between these critical political projects. In the United States the work of interventionist scholars like bell hooks and Cornel West as well as that of more orthodox academics like Henry Louis Gates, Jr., Houston A. Baker, Jr., Anthony Appiah, and Hazel Carby,⁸ points to similar convergences. The position of these thinkers in the contested “con-

tact zones"⁹ between cultures and histories is not, however, as exceptional as it might appear at first. We shall see below that successive generations of black intellectuals (especially those whose lives, like James's, crisscrossed the Atlantic Ocean) noted this intercultural positionality and accorded it a special significance before launching their distinct modes of cultural and political critique. They were often urged on in their labour by the brutal absurdity of racial classification that derives from and also celebrates racially exclusive conceptions of national identity from which blacks were excluded as either non-humans or non-citizens. I shall try to show that their marginal endeavours point to some new analytic possibilities with a general significance far beyond the well-policed borders of black particularity. For example, this body of work offers intermediate concepts, lodged between the local and the global, which have a wider applicability in cultural history and politics precisely because they offer an alternative to the nationalist focus which dominates cultural criticism. These intermediate concepts, especially the undertheorised idea of diaspora examined in Chapter 6, are exemplary precisely because they break the dogmatic focus on discrete *national* dynamics which has characterised so much modern Euro-American cultural thought.

Getting beyond these national and nationalistic perspectives has become essential for two additional reasons. The first arises from the urgent obligation to reevaluate the significance of the modern nation state as a political, economic, and cultural unit. Neither political nor economic structures of domination are still simply co-extensive with national borders. This has a special significance in contemporary Europe, where new political and economic relations are being created seemingly day by day, but it is a world-wide phenomenon with significant consequences for the relationship between the politics of information and the practices of capital accumulation. Its effects underpin more recognisably political changes like the growing centrality of transnational ecological movements which, through their insistence on the association of sustainability and justice, do so much to shift the moral and scientific precepts on which the modern separation of politics and ethics was built. The second reason relates to the tragic popularity of ideas about the integrity and purity of cultures. In particular, it concerns the relationship between nationality and ethnicity. This too currently has a special force in Europe, but it is also reflected directly in the post-colonial histories and complex, transcultural, political trajectories of Britain's black settlers.

What might be called the peculiarity of the black English requires attention to the intermixture of a variety of distinct cultural forms. Previously separated political and intellectual traditions converged and, in their coming together, overdetermined the process of black Britain's social and historical formation. This blending is misunderstood if it is conceived in simple ethnic terms, but right and left, racist and anti-racist, black and white tacitly share a view of it as little more than a collision between fully formed and mutually exclusive cultural communities. This has become the dominant view where black history and culture are perceived, like black settlers themselves, as an illegitimate intrusion into a vision of authentic British national life that, prior to their arrival, was as stable and as peaceful as it was ethnically undifferentiated. Considering this history points to issues of power and knowledge that

9. Mary Louise Pratt, *Imperial Eyes* (London and New York: Routledge, 1992) [Gilroy's note].

are beyond the scope of this book. However, though it arises from present rather than past conditions, contemporary British racism bears the imprint of the past in many ways. The especially crude and reductive notions of culture that form the substance of racial politics today are clearly associated with an older discourse of racial and ethnic difference which is everywhere entangled in the history of the idea of culture in the modern West. This history has itself become hotly contested since debates about multiculturalism, cultural pluralism, and the responses to them that are sometimes dismissively called "political correctness" arrived to query the ease and speed with which European particularisms are still being translated into absolute, universal standards for human achievement, norms, and aspirations.

It is significant that prior to the consolidation of scientific racism in the nineteenth century,¹ the term "race" was used very much in the way that the word "culture" is used today. But in the attempts to differentiate the true, the good, and the beautiful which characterise the junction point of capitalism, industrialisation, and political democracy and give substance to the discourse of western modernity, it is important to appreciate that scientists did not monopolise either the image of the black or the emergent concept of biologically based racial difference. As far as the future of cultural studies is concerned, it should be equally important that both were centrally employed in those European attempts to think through beauty, taste, and aesthetic judgement that are the precursors of contemporary cultural criticism.

Tracing the racial signs from which the discourse of cultural value was constructed and their conditions of existence in relation to European aesthetics and philosophy as well as European science can contribute much to an ethnohistorical reading of the aspirations of western modernity as a whole and to the critique of Enlightenment assumptions in particular. It is certainly the case that ideas about "race," ethnicity, and nationality form an important seam of continuity linking English cultural studies with one of its sources of inspiration—the doctrines of modern European aesthetics that are consistently configured by the appeal to national and often racial particularity.²

This is not the place to go deeply into the broader dimensions of this intellectual inheritance. Valuable work has already been done by Sander Gilman,³ Henry Louis Gates, Jr.,⁴ and others on the history and role of the image of the black in the discussions which found modern cultural axiology. Gilman points out usefully that the figure of the black appears in different forms in the aesthetics of Hegel, Schopenhauer,⁵ and Nietzsche (among others) as a marker for moments of cultural relativism and to support the production of aesthetic judgements of a supposedly universal character to

differentiate, for example, between authentic music and, as Hegel puts it, "the most detestable noise."⁶ Gates emphasises a complex genealogy in which ambiguities in Montesquieu's discussion of slavery prompt responses in Hume⁷ that can be related, in turn, to philosophical debates over the nature of beauty and sublimity found in the work of Burke and Kant.⁸ Critical evaluation of these representations of blackness might also be connected to the controversies over the place of racism and anti-Semitism in the work of Enlightenment figures like Kant and Voltaire.⁹ These issues deserve an extended treatment that cannot be provided here. What is essential for the purposes of this opening chapter is that debates of this sort should not be brought to an end simply by denouncing those who raise awkward or embarrassing issues as totalitarian forces working to legitimate their own political line. Nor should important enquiries into the contiguity of racialised reason and unreasonable racism be dismissed as trivial matters. These issues go to the heart of contemporary debates about what constitutes the canon of western civilisation and how this precious legacy should be taught.

In these embattled circumstances, it is regrettable that questions of "race" and representation have been so regularly banished from orthodox histories of western aesthetic judgement, taste, and cultural value.¹ There is a plea here that further enquiries should be made into precisely how discussions of "race," beauty, ethnicity, and culture have contributed to the critical thinking that eventually gave rise to cultural studies. The use of the concept of fetishism in Marxism and psychoanalytic studies is one obvious means to open up this problem.² The emphatically national character ascribed to the concept of modes of production³ (cultural and otherwise) is another fundamental question which demonstrates the ethnohistorical specificity of dominant approaches to cultural politics, social movements, and oppositional consciousnesses.

6. G. W. F. Hegel, *Aesthetics: Lectures on Fine Art*, trans. T. M. Knox (New York: Oxford University Press, 1998), vol. 1, ch. 6, sec. iii, p. 43.

7. DAVID HUME (1711–1776), Scottish philosopher and historian; in the second edition of "Of National Characters" (1753), he suggests that "negroes" are naturally "inferior" to whites, though he does not accept the argument of the French political thinker Charles-Louis de Secondat, baron de La Brède et de Montesquieu (1689–1755), in *The Spirit of the Laws* (1748)—a work that advocates against slavery—that a region's climate affects the nature of its inhabitants.

8. IMMANUEL KANT (1724–1804), German philosopher; his major work of aesthetics is *Critique of Judgment* (1790; see above). EDMUND BURKE (1729–1797), British statesman and author of *A Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful* (1757; see above).

9. Leon Poliakov, *The Aryan Myth* (London: Sussex University Press, 1974), ch. 8, and "Racism from the Enlightenment to the Age of Imperialism," in Robert Ross, ed., *Racism and Colonialism: Essays on Ideology and Social Structure* (The Hague: Martinus Nijhoff, 1982); Richard Popkin, "The Philosophical Basis of Eighteenth Century Racism," in *Studies in Eighteenth Century Culture*, vol. 3: *Racism in the Eighteenth Century* (Cleveland and London: Case Western Reserve

University Press, 1973); Harry Bracken, "Philosophy and Racism," *Philosophia* 8, nos. 2–3, November 1978. In some respects this pioneering work foreshadows the debates about HEIDEGGER's fascism [Gilroy's note]. Voltaire (pen name of François-Marie Arouet, 1694–1778), French Enlightenment philosopher; see his *Essay on the Manners and Spirit of Nations* (1756).

1. Hugh Honour's contribution to the DeMenil Foundation Project, *The Representation of the Black in Western Art* (London and Cambridge, Mass.: Harvard University Press, 1989), is a welcome exception to this amnesia [Gilroy's note].

2. W. Pietz, "The Problem of the Fetish, I," *Res* 9 (Spring 1985) [Gilroy's note]. Marx connected fetishism with commodities viewed as independent beings: "This I call the Fetishism which attaches itself to the products of labour, so soon as they are produced as commodities" (chap. 1, sec. 4 of *Capital*, vol. 1, 1867; see above). In psychoanalytic theory, as SIGMUND FREUD explains in "Fetishism" (1927; see above), the fetish is an object, perceived as a substitute for the "missing" penis of the mother, that becomes the focus of sexual interest.

3. According to Marx, a society's economic mode of production (feudalism, capitalism, etc.) determines its social, political, and intellectual life, and all modes are associated with distinctive epochs.

These general issues appear in a specific form in the distinctive English idioms of cultural reflection. Here too, the moral and political problem of slavery loomed large not least because it was once recognised as *internal* to the structure of western civilisation and appeared as a central political and philosophical concept in the emergent discourse of modern English cultural uniqueness.⁴ Notions of the primitive and the civilised which had been integral to pre-modern understanding of “ethnic” differences became fundamental cognitive and aesthetic markers in the processes which generated a constellation of subject positions in which Englishness, Christianity, and other ethnic and racialised attributes would finally give way to the dislocating dazzle of “whiteness.”⁵ A small but telling insight into this can be found in Edmund Burke’s discussion of the sublime, which has achieved a certain currency lately. He makes elaborate use of the association of darkness with blackness, linking them to the skin of a real, live black woman. Seeing her produces a sublime feeling of terror in a boy whose sight has been restored to him by a surgical operation.

Perhaps it may appear on enquiry, that blackness and darkness are in some degree painful by their natural operation, independent of any associations whatever. I must observe that the ideas of blackness and darkness are much the same; and they differ only in this, that blackness is a more confined idea.

Mr Cheselden has given us a very curious story of a boy who had been born blind, and continued so until he was thirteen or fourteen years old; he was then couched for a cataract, by which operation he received his sight . . . Cheselden tells us that the first time the boy saw a black object, it gave him great uneasiness; and that some time after, upon accidentally seeing a negro woman, he was struck with great horror at the sight.⁶

Burke, who opposed slavery and argued for its gradual abolition, stands at the doorway of the tradition of enquiry mapped by Raymond Williams⁷ which is also the infrastructure on which much of English cultural studies came to be founded. This origin is part of the explanation of how some of the contemporary manifestations of this tradition lapse into what can only be called a morbid celebration of England and Englishness. These modes of subjectivity and identification acquire a renewed political charge in the post-imperial history that saw black settlers from Britain’s colonies take up their citizenship rights as subjects in the United Kingdom. The entry of blacks into national life was itself a powerful factor contributing to the circumstances in which the formation of both cultural studies and New Left politics became possible. It indexes the profound transformations of British social and cultural life in the 1950s and stands, again usually unacknowledged, at the heart of laments for a more human scale of social living that seemed no longer practicable after the 1939–45 war.

The convoluted history of black settlement need not be recapitulated here. One recent fragment from it, the struggle over Salman Rushdie's book *The Satanic Verses*,⁸ is sufficient to demonstrate that racialised conflict over the meaning of English culture is still very much alive and to show that these antagonisms have become enmeshed in a second series of struggles in which Enlightenment assumptions about culture, cultural value, and aesthetics go on being tested by those who do not accept them as universal moral standards. These conflicts are, in a sense, the outcome of a distinct historical period in which a new, ethnically absolute and culturalist racism was produced. It would explain the burning of books on English streets as manifestations of irreducible cultural differences that signposted the path to domestic racial catastrophe. This new racism was generated in part by the move towards a political discourse which aligned "race" closely with the idea of national belonging and which stressed complex cultural difference rather than simple biological hierarchy. These strange conflicts emerged in circumstances where blackness and Englishness appeared suddenly to be mutually exclusive attributes and where the conspicuous antagonism between them proceeded on the terrain of culture, not that of politics. Whatever view of Rushdie one holds, his fate offers another small, but significant, omen of the extent to which the almost metaphysical values of England and Englishness are currently being contested through their connection to "race" and ethnicity. His experiences are also a reminder of the difficulties involved in attempts to construct a more pluralistic, post-colonial sense of British culture and national identity. In this context, locating and answering the nationalism if not the racism and ethnocentrism of English cultural studies has itself become a directly political issue.

Returning to the imperial figures who supplied Raymond Williams with the raw material for his own brilliant critical reconstruction of English intellectual life is instructive. Apart from Burke, Thomas Carlyle, John Ruskin, Charles Kingsley,⁹ and the rest of Williams's cast of worthy characters can become valuable not simply in attempts to purge cultural studies of its doggedly ethnocentric focus but in the more ambitious and more useful task of actively reshaping contemporary England by reinterpreting the cultural core of its supposedly authentic national life. In the work of reinterpretation and reconstruction, reinscription and relocation required to transform England and Englishness, discussion of the cleavage in the Victorian intelligentsia around the response to Governor Eyre's handling of the Morant Bay Rebellion in Jamaica in 1865 is likely to be prominent.¹ Like the English responses to the 1857 uprising in India examined by Jenny Sharpe,² it may well turn

8. A 1988 novel by the Indian-born British novelist Rushdie (b. 1947); its allegedly blasphemous references to the Prophet Muhammad led to violent protests, book burnings, and a religious decree (fatwa) calling for Muslims to kill Rushdie and others involved in publishing the book. Rushdie spent more than 5 years in hiding.

9. Three major British social critics: Carlyle (1795–1881), Scottish essayist and historian; Ruskin (1819–1900), English art critic; and Kingsley (1819–1875), English clergyman and novelist, a founder of Christian Socialism.

1. Catherine Hall, *White, Male, and Middle-Class* (Cambridge: Polity Press, 1992) [Gilroy's note]. After unrest spread following a violent confrontation in Morant Bay, the capital of an

eastern parish of Jamaica, between militia and blacks (freed by the British Emancipation Act of 1834), Edward John Eyre (1815–1901) responded by declaring martial law; hundreds died as the rebellion was forcefully put down, and his main political opponent was hanged despite the lack of evidence of any complicity.

2. Jenny Sharpe, "The Unspeakable Limits of Rape: Colonial Violence and Counter-Insurgency," *Genders*, no. 10 (Spring 1999): 25–46, and "Figures of Colonial Resistance," *Modern Fiction Studies* 35:1 (Spring 1989) [Gilroy's note]. The widespread uprising by Indian soldiers (1857–58) against the British rule of the East India Company led to the direct governance of India by the British government.

out to be a much more formative moment than has so far been appreciated. Morant Bay is doubly significant because it represents an instance of metropolitan,³ internal conflict that emanates directly from an external colonial experience. These crises in imperial power demonstrate their continuity. It is part of my argument that this inside/outside relationship should be recognised as a more powerful, more complex, and more contested element in the historical, social, and cultural memory of our glorious nation than has previously been supposed.

I am suggesting that even the laudable, radical varieties of English cultural sensibility examined by Williams and celebrated by Edward Thompson⁴ and others were not produced spontaneously from their own internal and intrinsic dynamics. The fact that some of the most potent conceptions of Englishness have been constructed by alien outsiders like Carlyle, Swift, Scott, or Eliot⁵ should augment the note of caution sounded here. The most heroic, subaltern⁶ English nationalisms and countercultural patriotisms are perhaps better understood as having been generated in a complex pattern of antagonistic relationships with the supra-national and imperial world for which the ideas of "race," nationality, and national culture provide the primary (though not the only) indices. This approach would obviously bring William Blake's⁷ work into a rather different focus from that supplied by orthodox cultural history, and, as Peter Linebaugh has suggested, this overdue reassessment can be readily complemented by charting the long-neglected involvement of black slaves and their descendants in the radical history of our country in general and its working-class movements in particular.⁸ Olaudah Equiano,⁹ whose involvement in the beginnings of organised working-class politics is now being widely recognised; the anarchist, Jacobin, ultra-radical, and Methodist heretic Robert Wedderburn;¹ William Davidson, son of Jamaica's attorney general, hanged for his role in the Cato Street conspiracy to blow up the British cabinet in 1819;² and the Chartist William Cuffay³ are only the most urgent, obvious candidates for rehabilitation. Their lives offer invaluable means of seeing how thinking with and through the discourses and the imagery of "race" appears in the core rather than at the fringes of English political life. Davidson's speech from the scaffold before being subject to the last public decapitation in England is, for example, one moving appropriation of the rights of dissident freeborn Englishmen that is not widely read today.

3. Of or pertaining to the "mother country," as distinguished from its colony.

4. E. P. Thompson (1924–1993), English historian and influential member of the British New Left.

5. T. S. ELIOT (1888–1965), American-born poet and critic who lived most of his life in London. Carlyle was Scottish, as was the poet and novelist Sir Walter Scott (1771–1832); the cleric and satirist Jonathan Swift (1667–1745) was born in Ireland.

6. A term from the Italian Marxist critic and theorist ANTONIO GRAMSCI (1891–1937), referring to those subordinated by the hegemonic power structure (and, since the 1980s, especially to colonized peoples).

7. English poet, artist, and radical (1757–1827).

8. Peter Linebaugh, "All the Atlantic Mountains Shook," *Labour/Le Travailleur* 10 (Autumn

1982): 87–121 [Gilroy's note].

9. African (ca. 1745–1797), also known as Gustavus Vassa; enslaved as a child, he bought his freedom, wrote his autobiography, and became an abolitionist.

1. British abolitionist (1762–ca. 1835).

2. Peter Fryer, *Staying Power* (London: Pluto Press, 1980), p. 219 [Gilroy's note]. Davidson (1781–1820), also the son of an unnamed black woman. Cato Street: location of the building in London where the conspirators were captured.

3. Trade unionist (1788–1870), a founder of the Metropolitan Tailors' Charter Association (1839); his grandfather was an African slave. Chartism was a British working-class movement (1838–48) that took its name from a petition, the People's Charter, calling for such reforms as universal male suffrage.

Of this infamous trio, Wedderburn is perhaps the best known, thanks to the efforts of Peter Linebaugh and Iain McCalman.⁴ The child of a slave dealer, James Wedderburn, and a slave woman, Robert was brought up by a Kingston conjure woman who acted as an agent for smugglers. He migrated to London at the age of seventeen in 1778. There, having published a number of disreputable ultra-radical tracts as part of his subversive political labours, he presented himself as a living embodiment of the horrors of slavery in a debating chapel in Hopkins Street near the Haymarket, where he preached a version of chiliastic anarchism based on the teachings of Thomas Spence⁵ and infused with deliberate blasphemy. In one of the debates held in his "ruinous hayloft with 200 persons of the lowest description," Wedderburn defended the inherent rights of the Caribbean slave to slay his master, promising to write home and "tell them to murder their masters as soon as they please." After this occasion he was tried and acquitted on a charge of blasphemy after persuading the jury that he had not been uttering sedition but merely practising the "true and infallible genius of prophetic skill."⁶

It is particularly significant for the direction of my overall argument that both Wedderburn and his sometime associate Davidson had been sailors, moving to and fro between nations, crossing borders in modern machines that were themselves micro-systems of linguistic and political hybridity. Their relationship to the sea may turn out to be especially important for both the early politics and poetics of the black Atlantic world that I wish to counterpose against the narrow nationalism of so much English historiography. Wedderburn served in the Royal Navy and as a privateer, while Davidson, who ran away to sea instead of studying law, was pressed into naval service on two subsequent occasions. Davidson inhabited the same ultra-radical subculture as Wedderburn and was an active participant in the Marylebone Reading Society, a radical body formed in 1819 after the Peterloo massacre.⁷ He is known to have acted as the custodian of their black flag, which significantly bore a skull and crossbones with the legend "Let us die like men and not be sold as slaves," at an open air meeting in Smithfield later that year.⁸ The precise details of how radical ideologies articulated the culture of the London poor before the institution of the factory system to the insubordinate maritime culture of pirates and other pre-industrial workers of the world will have to await the innovative labours of Peter Linebaugh and Marcus Rediker.⁹ However, it has been estimated that at the end of the eighteenth century a quarter of the British navy was composed of Africans for whom the experience of slavery was a powerful orientation to the ideologies of liberty and justice. Looking for similar patterns on the other side of the Atlantic network

4. *The Horrors of Slavery and Other Writings by Robert Wedderburn*, ed. Iain McCalman (Edinburgh: Edinburgh University Press, 1992) [Gilroy's note].

5. Bookseller and radical (1750–1814), advocate of the common ownership of land.

6. Iain McCalman, "Anti-Slavery and Ultra Radicalism in Early Nineteenth-Century England: The Case of Robert Wedderburn," *Slavery and Abolition* 7 (1986) [Gilroy's note].

7. The cavalry charge against 60,000 men, women, and children assembled in St. Peter's Field, Manchester, on August 16, 1819, to petition for parliamentary reform and the repeal of grain

tariffs; 11 were killed and hundreds injured. The name plays on Waterloo, a great victory by the British and their allies in Belgium that marked the final defeat of Napoléon Bonaparte in 1815.

8. Fryer, *Staying Power*, p. 219; Public Records Office, London: PRO Ho 44/5/202, PRO Ho 42/199 [Gilroy's note]. Smithfield: site of a livestock market in central London, a large open space often used for public gatherings.

9. Their article "The Many Headed Hydra," *Journal of Historical Sociology* 3, no. 3 (September 1990): 225–53, gives a foretaste of these arguments [Gilroy's note].

we can locate Crispus Attucks¹ at the head of his "motley rabble of saucy boys, negroes, mulattoes, Irish teagues and outlandish jack tars"² and can track Denmark Vesey³ sailing the Caribbean and picking up inspirational stories of the Haitian revolution (one of his co-conspirators testified that he had said they would "not spare one white skin alive for this was the plan they pursued in San Domingo").⁴ There is also the shining example of Frederick Douglass,⁵ whose autobiographies reveal that he learnt of freedom in the North from Irish sailors while working as a ship's caulker in Baltimore. He had less to say about the embarrassing fact that the vessels he readied for the ocean—Baltimore Clippers—were slavers, the fastest ships in the world and the only craft capable of outrunning the British blockade. Douglass, who played a neglected role in English anti-slavery activity, escaped from bondage disguised as a sailor and put this success down to his ability to "talk sailor like an old salt."⁶ These are only a few of the nineteenth-century examples. The involvement of Marcus Garvey, George Padmore, Claude McKay, and Langston Hughes⁷ with ships and sailors lends additional support to Linebaugh's prescient suggestion that "the ship remained perhaps the most important conduit of Pan-African communication before the appearance of the long-playing record."⁸

Ships and other maritime scenes have a special place in the work of J. M. W. Turner,⁹ an artist whose pictures represent, in the view of many contemporary critics, the pinnacle of achievement in the English school in painting. Any visitor to London will testify to the importance of the Clore Gallery¹ as a national institution and of the place of Turner's art as an enduring expression of the very essence of English civilisation. Turner was secured on the summit of critical appreciation by John Ruskin, who, as we have seen, occupies a special place in Williams's constellation of great Englishmen. Turner's celebrated

1. Perhaps the son of an African and a Native American (ca. 1723–1770), thought to be the first man killed by British soldiers on March 5, 1770, in what became known as the Boston Massacre. Some believe he had served as a sailor.

2. John Adams quoted by Linebaugh in "Atlantic Mountains," p. 112 [Gilroy's note]. Adams (1735–1826; 2d U.S. president, 1797–1801), a Boston lawyer who was a central figure in the American Revolution, successfully defended the British soldiers against murder charges.

3. Leader of a foiled slave rebellion in Charleston, South Carolina (ca. 1767–1822), born in Africa and enslaved.

4. Alfred N. Hunt, *Haiti's Influence on Antebellum America* (Baton Rouge and London: Louisiana State University Press, 1988), p. 119 [Gilroy's note]. After a series of slave and mulatto rebellions, Haiti won its independence from France in 1804; Santo Domingo was invaded and its slaves freed in 1801.

5. African American abolitionist (ca. 1818–1895), who escaped from slavery in 1835 and became a prominent publisher and orator; he published *Narrative of the Life of Frederick Douglass* in 1845.

6. Douglass's own account of this is best set out in Frederick Douglass, *Life and Times of Frederick Douglass* (New York: Macmillan, 1962), p. 199. See also Philip M. Hamer, "Great Britain, the United States and the Negro Seamen's Acts" and "British Consuls and the Negro Seamen's Acts, 1850–1860," *Journal of Southern History* 1

(1935): 3–28, 138–68. Introduced after Denmark Vesey's rebellion, these interesting pieces of legislation required free black sailors to be jailed while their ships were in dock as a way of minimizing the political contagion their presence in the ports was bound to transmit [Gilroy's note].

7. All blacks who were prominent figures in the United States in the 20th century: Garvey (1887–1940), Jamaican black nationalist who founded an organization to encourage racial pride, the Universal Negro Improvement Organization, and promoted a back-to-Africa movement and Pan-Africanism (the union of all black peoples), a combination that became known as "Garveyism"; Padmore (professional name of Malcolm Ivan Meredith Nurse, 1902–1959), Trinidadian political activist and Pan-Africanist; McKay (1889–1948), Jamaican-born poet and novelist who played a major role in the Harlem Renaissance, a vibrant African American movement in the literary, visual, and performing arts centered in New York City in the 1920s and early 1930s; and HUGHES (1902–1967), American poet, playwright, and author of fiction who was the most famous writer associated with the Harlem Renaissance.

8. Linebaugh, "Atlantic Mountains," p. 119 [Gilroy's note].

9. Joseph Mallord William Turner (1775–1851), foremost English landscape painter of his time.

1. The 1987 annex to the Tate Gallery, in London, which was built to house the Turner collection.

picture of a slave ship² throwing overboard its dead and dying as a storm comes on was exhibited at the Royal Academy to coincide with the world anti-slavery convention held in London in 1840. The picture, owned by Ruskin for some twenty-eight years, was rather more than an answer to the absentee Caribbean landlords who had commissioned its creator to record the tainted splendour of their country houses, which, as Patrick Wright has eloquently demonstrated, became an important signifier of the contemporary, ruralist distillate of national life.³ It offered a powerful protest against the direction and moral tone of English politics. This was made explicit in an epigraph Turner took from his own poetry and which has itself retained a political inflection: "Hope, hope, fallacious hope where is thy market now?"⁴ Three years after his extensive involvement in the campaign to defend Governor Eyre,⁵ Ruskin put the slave ship painting up for sale at Christie's. It is said that he had begun to find it too painful to live with. No buyer was found at that time, and he sold the picture to an American three years later. The painting has remained in the United States ever since. Its exile in Boston is yet another pointer towards the shape of the Atlantic as a system of cultural exchanges. It is more important, though, to draw attention to Ruskin's inability to discuss the picture except in terms of what it revealed about the aesthetics of painting water. He relegated the information that the vessel was a slave ship to a footnote in the first volume of *Modern Painters*.⁶

In spite of lapses like this, the New Left heirs to the aesthetic and cultural tradition in which Turner and Ruskin stand compounded and reproduced its nationalism and its ethnocentrism by denying imaginary, invented Englishness any external referents whatsoever. England ceaselessly gives birth to itself, seemingly from Britannia's⁷ head. The political affiliations and cultural preferences of this New Left group amplified these problems. They are most visible and most intense in the radical historiography that supplied a counterpart to Williams's subtle literary reflections. For all their enthusiasm for the work of C. L. R. James, the influential British Communist Party's historians' group⁸ is culpable here. Their predilections for the image of the freeborn Englishman and the dream of socialism in one country that framed their work are both to be found wanting when it comes to nationalism. This uncomfortable pairing can be traced through the work of Edward Thompson and Eric Hobsbawm,⁹ visionary writers who contributed so much to the strong foundations of English cultural studies and who share a non-reductive Marxian approach to economic, social, and cultural history in which the nation—understood as a stable receptacle for counter-

2. Paul Gilroy, "Art of Darkness, Black Art, and the Problem of Belonging to England," *Third Text* 10 (1990). A very different interpretation of Turner's painting is given in Albert Boime's *The Art of Exclusion: Representing Blacks in the Nineteenth Century* (London: Thames and Hudson, 1990) [Gilroy's note]. The painting is *Slavers Throwing Overboard the Dead and Dying—Typhoon Coming On* (1840), also called *Slave Ship*.

9. A British Marxist historian of revolution and the working classes (1917–2012).

hegemonic class struggle—is the primary focus. These problems within English cultural studies form at its junction point with practical politics and instantiate wider difficulties with nationalism and with the discursive slippage or connotative resonance between “race,” ethnicity, and nation.

Similar problems appear in rather different form in African-American letters where an equally volkish¹ popular cultural nationalism is featured in the work of several generations of radical scholars and an equal number of not so radical ones. We will see below that absolutist conceptions of cultural difference allied to a culturalist understanding of “race” and ethnicity can be found in this location too.

In opposition to both of these nationalist or ethnically absolute approaches, I want to develop the suggestion that cultural historians could take the Atlantic as one single, complex unit of analysis in their discussions of the modern world and use it to produce an explicitly transnational and intercultural perspective.² Apart from the confrontation with English historiography and literary history this entails a challenge to the ways in which black American cultural and political histories have so far been conceived. I want to suggest that much of the precious intellectual legacy claimed by African-American intellectuals as the substance of their particularity is in fact only partly their absolute ethnic property. No less than in the case of the English New Left, the idea of the black Atlantic can be used to show that there are other claims to it which can be based on the structure of the African diaspora into the western hemisphere. A concern with the Atlantic as a cultural and political system has been forced on black historiography and intellectual history by the economic and historical matrix in which plantation slavery—“capitalism with its clothes off”³—was one special moment. The fractal patterns of cultural and political exchange and transformation that we try and specify through manifestly inadequate theoretical terms like creolisation and syncretism indicate how both ethnicities and political cultures have been made anew in ways that are significant not simply for the peoples of the Caribbean but for Europe, for Africa, especially Liberia and Sierra Leone,⁴ and of course, for black America.

It bears repetition that Britain’s black settler communities have forged a compound culture from disparate sources. Elements of political sensibility and cultural expression transmitted from black America over a long period of time have been reaccentuated in Britain. They are central, though no longer dominant, within the increasingly novel configurations that characterise another newer black vernacular culture. This is not content to be either dependent upon or simply imitative of the African diaspora cultures of America and the Caribbean. The rise and rise of Jazze B and Soul II Soul⁵ at the turn of the last decade constituted one valuable sign of this new assertive mood. North London’s Funki Dreds, whose name itself projects a newly hybridised identity, have projected the distinct culture and rhythm of life of

1. That is, rooted in the idea of a *Volk*, or people (German), a term that has racial connotations and is associated with ethnic nationalism.

2. Linebaugh, “Atlantic Mountains.” This is also the strategy pursued by Marcus Rediker in his brilliant book *Between the Devil and the Deep Blue Sea* (Cambridge: Cambridge University Press, 1987) [Gilroy’s note].

3. H. Orlando Patterson, “Slavery in Human History,” *New Left Review*, no. 117 (Nov.–Dec.

1979): 51.

4. In the 19th century, thousands of freed blacks from the United States settled in both Liberia and Sierra Leone.

5. British music group—also known as the Funki Dreds, from their clothing and hairstyle—named in 1982 by one of its founding members, the black Briton Jazze B (Trevor Beresford Romeo, b. 1963); one of its hit singles was “Keep on Movin’” (1989).

black Britain outwards into the world. Their song "Keep On Moving" was notable for having been produced in England by the children of Caribbean settlers and then re-mixed in a (Jamaican) dub format in the United States by Teddy Riley, an African-American. It included segments or samples of music taken from American and Jamaican records by the JBs and Mikey Dread respectively. This formal unity of diverse cultural elements was more than just a powerful symbol. It encapsulated the playful diasporic intimacy that has been a marked feature of transnational black Atlantic creativity. The record and its extraordinary popularity enacted the ties of affiliation and affect which articulated the discontinuous histories of black settlers in the new world. The fundamental injunction to "Keep On Moving" also expressed the restlessness of spirit which makes that diaspora culture vital. The contemporary black arts movement in film, visual arts, and theatre as well as music, which provided the background to the musical release, have created a new topography of loyalty and identity in which the structures and presuppositions of the nation state have been left behind because they are seen to be outmoded. It is important to remember that these recent black Atlantic phenomena may not be as novel as their digital encoding via the transnational force of north London's Soul II Soul suggests. Columbus's⁶ pilot, Pedro Nino, was also an African. The history of the black Atlantic since then, continually crisscrossed by the movements of black people—not only as commodities but engaged in various struggles towards emancipation, autonomy, and citizenship—provides a means to reexamine the problems of nationality, location, identity, and historical memory. They all emerge from it with special clarity if we contrast the national, nationalistic, and ethnically absolute paradigms of cultural criticism to be found in England and America with those hidden expressions, both residual and emergent, that attempt to be global or outer-national in nature. These traditions have supported countercultures of modernity that touched the workers' movement but are not reducible to it. They supplied important foundations on which it could build.

Turner's extraordinary painting of the slave ship remains a useful image not only for its self-conscious moral power and the striking way that it aims directly for the sublime in its invocation of racial terror, commerce, and England's ethico-political degeneration. It should be emphasised that ships were the living means by which the points within that Atlantic world were joined. They were mobile elements that stood for the shifting spaces in between the fixed places that they connected.⁷ Accordingly they need to be thought of as cultural and political units rather than abstract embodiments of the triangular trade. They were something more—a means to conduct political dissent and possibly a distinct mode of cultural production. The ship provides a chance to explore the articulations between the discontinuous histories of England's ports, its interfaces with the wider world.⁸ Ships also

6. The Genoese explorer Christopher Columbus (1451–1506).

7. "A space exists when one takes into consideration vectors of direction, velocities, and time variables. Thus space is composed of intersections of mobile elements. It is in a sense articulated by the ensemble of movements deployed within it." Michel de Certeau, *The Practice of*

Everyday Life (Berkeley and London: University of California Press, 1984), p. 117 [Gilroy's note].

8. See Michael Cohn and Michael K. Platzer, *Black Men of the Sea* (New York: Dodd, Mead, 1978). I have been heavily reliant on George Francis Dow's anthology *Slave Ships and Slaving*, publication no. 15 of the Marine Research Society (1927; rpt. Cambridge, Md.: Cornell Maritime

refer us back to the middle passage, to the half-remembered micro-politics of the slave trade and its relationship to both industrialisation and modernisation. As it were, getting on board promises a means to reconceptualise the orthodox relationship between modernity and what passes for its prehistory. It provides a different sense of where modernity might itself be thought to begin in the constitutive relationships with outsiders that both found and temper a self-conscious sense of western civilisation.⁹ For all these reasons, the ship is the first of the novel chronotopes presupposed by my attempts to rethink modernity via the history of the black Atlantic and the African diaspora into the western hemisphere.

In the venturesome spirit proposed by James Clifford in his influential work on travelling culture,¹ I want to consider the impact that this outernational, transcultural reconceptualisation might have on the political and cultural history of black Americans and that of blacks in Europe. In recent history, this will certainly mean reevaluating Garvey and Garveyism, pan-Africanism, and Black Power as hemispheric if not global phenomena. In periodising modern black politics it will require fresh thinking about the importance of Haiti and its revolution for the development of African-American political thought and movements of resistance. From the European side, it will no doubt be necessary to reconsider Frederick Douglass's relationship to English and Scottish radicalisms and to meditate on the significance of William Wells Brown's five years in Europe as a fugitive slave, on Alexander Crummell's² living and studying in Cambridge, and upon Martin Delany's experiences at the London congress of the International Statistical Congress in 1860.³ It will require comprehension of such difficult and complex questions as W. E. B. Du Bois's childhood interest in Bismarck, his investment in modelling his dress and moustache on that of Kaiser Wilhelm II, his likely thoughts while sitting in Heinrich Von Treitschke's seminars,⁴ and the use his tragic heroes make of European culture.

Press, 1968), which includes extracts from valuable 18th- and 19th-century material. On England, I have found the anonymously published study *Liverpool and Slavery* (Liverpool: A. Bowker and Sons, 1884) to be very valuable. Memoirs produced by black sea captains also point to a number of new intercultural and trans-cultural research problems. Captain Harry Dean's *The Pedro Gorino: Adventures of a Negro Sea Captain in Africa and on the Seven Seas in His Attempts to Found an Ethiopian Empire* (Boston and New York: Houghton Mifflin, 1929) contains interesting material on the practical politics of Pan-Africanism that go unrecorded elsewhere. Captain Hugh Malzac's autobiography, *A Star to Steer By* (New York: International Publishers, 1963), includes valuable observations on the role of ships in the Garvey movement. Some pointers towards what a black Atlantic rereading of the history of Rastafari might involve are to be found in Robert A. Hill's important essay which accentuates the complex post-slavery relations between Jamaica and Africa: "Dread History: Leonard P. Howell and Millenarian Visions in Early Rastafari Religions in Jamaica," *Epoché: Journal of the History of Religions at UCLA* 9 (1981): 30–71 [Gilroy's note]. Among the tenets of Rastafarianism, a cultural and religious movement that began in Jamaica in the 1930s, is the eventual return of blacks to Africa.

2. African American abolitionist, minister, educator, and black nationalist (1819–1898). Brown (1814–1884), African American abolitionist, novelist, and playwright.

3. *Manchester Weekly Advertiser*, July 21, 1860; *Punch*, July 28, 1860; *The Morning Star*, July 18, 1860; and F. A. Rollin, *Life and Public Services of Martin R. Delany* (Lee and Shepard: Boston, 1868), p. 102 [Gilroy's note].

4. Peter Winzen, "Treitschke's Influence on the Rise of Imperialist and Anti-British Nationalism in Germany," in P. Kennedy and A. Nicholls, eds., *Nationalist and Racialist Movements in Britain and Germany Before 1914* (Basingstoke: Macmillan, 1981) [Gilroy's note]. Otto von Bismarck (1815–1898), Prussian statesman and advocate of German unification. Kaiser Wilhelm II (1859–1941; reigned 1888–1918), the last emperor of Germany and king of Prussia. Treitschke (1834–1896), German historian who advocated authoritarianism and colonial expansion.

Notable black American travellers, from the poet Phyllis Wheatley⁵ onwards, went to Europe and had their perceptions of America and racial domination shifted as a result of their experiences there. This had important consequences for their understanding of racial identities. The radical journalist and political organiser Ida B. Wells is typical, describing her productive times in England as like “being born again in a new condition.”⁶ Lucy Parsons is a more problematic figure in the political history of black America,⁷ but how might her encounters with William Morris, Annie Besant, and Peter Kropotkin⁸ impact upon a rewriting of the history of English radicalism? What of Nella Larsen’s⁹ relationship to Denmark, where George Padmore was held in jail during the early 1930s and which was also the home base of his banned paper the *Negro Worker*, circulated across the world by its supporters in the Colonial Seamen’s Association?¹ What of Sarah Parker Remond’s work as a medical practitioner in Italy and the life of Edmonia Lewis,² the sculptor, who made her home in Rome? What effects did living in Paris have upon Anna Cooper, Jessie Fauset, Gwendolyn Bennett,³ and Lois Maillou Jones?⁴

It would appear that there are large questions raised about the direction and character of black culture and art if we take the powerful effects of even temporary experiences of exile, relocation, and displacement into account. How, for example, was the course of the black vernacular art of jazz changed by what happened to Quincy Jones in Sweden and Donald Byrd⁵ in Paris? This is especially interesting because both men played powerful roles in the remaking of jazz as a popular form in the early 1970s. Byrd describes his sense of Europe’s appeal as something that grew out of the view of Canada he developed as a young man growing up in Detroit:

That’s why Europe was so important to me. Living across the river from Canada as a kid, I used to go down and sit and look at Windsor, Ontario. Windsor represented Europe to me. That was the rest of the world that was foreign to me. So I always had a feeling for the foreign, the Euro-

Fauset (ca. 1882–1961), novelist and editor, who earned an M.A. in French and studied at the Sorbonne for 6 months. Bennett (1902–1981), Harlem Renaissance writer and artist, who studied art in Paris.

4. Painter and longtime professor of design and watercolor painting at Howard University (1905–1998), who spent many summers in Paris.

5. Jazz and rhythm-and-blues trumpeter (1932–2013). Jones (b. 1933), jazz trumpeter, composer, and music producer.

pean thing, because Canada was right there. We used to go to Canada. For black people, you see, Canada was a place that treated you better than America, the North. For my father Detroit was better than the South, to me born in the North, Canada was better. At least that was what I thought. Later on I found out otherwise, but anyway, Canada represented for me something foreign, exotic, that was not the United States.⁶

Richard Wright's life in exile, which has been written off as a betrayal of his authenticity and as a process of seduction by philosophical traditions supposedly outside his narrow ethnic compass,⁷ will be explored below as an exemplary instance of how the politics of location and the politics of identity get inscribed in analyses of black culture. Many of the figures listed here will be dealt with in later chapters. They are all potential candidates for inclusion in the latest African-American cultural canon, a canon that is conditional on and possibly required by the academic packaging of black cultural studies.⁸ Chapter 4 will discuss what version of the politics and philosophy of W. E. B. Du Bois will be constructed for that canon from the rich transnational textures of his long and nomadic life. Du Bois's travel experiences raise in the sharpest possible form a question common to the lives of almost all these figures who begin as African-Americans or Caribbean people and are then changed into something else which evades those specific labels and with them all fixed notions of nationality and national identity. Whether their experience of exile is enforced or chosen, temporary or permanent, these intellectuals and activists, writers, speakers, poets, and artists repeatedly articulate a desire to escape the restrictive bonds of ethnicity, national identification, and sometimes even "race" itself. Some speak, like Wells and Wright, in terms of the rebirth that Europe offered them. Whether they dissolved their African-American sensibility into an explicitly pan-Africanist discourse or political commitment, their relationship to the land of their birth and their ethnic political constituency was absolutely transformed. The specificity of the modern political and cultural formation I want to call the black Atlantic can be defined, on one level, through this desire to transcend both the structures of the nation state and the constraints of ethnicity and national particularity.

ANDREW ROSS

b. 1956

To many, Andrew Ross personifies cultural studies in the United States. One reason is that he examines popular as well as high culture and does not hesitate to cross disciplinary boundaries, writing on topics ranging from modernist poetry to Madonna, the New York Intellectuals to Disney, and the university to the Weather Channel. In addition, he has attained a great deal of visibility; he has published trade as well as academic books, written articles for magazines such as the *Nation* and *Artforum*, and been the subject of profiles in major media, notably the *New York Times Magazine*. However, his writing does not simply embrace popular culture but investigates the politics inherent in cultural aspects of science, technology, and labor. His essay "The Mental Labor Problem" (2004), from which we take our selection, is an original analysis of the way in which labor has been refashioned in recent years, as knowledge workers adopt the work profile of musicians and other artists—a cultural construal that results in less pay and security than are offered by traditional white-collar jobs. The essay also criticizes the infusion of corporate practices into academe, and calls for unionization to protect academic labor and to ensure humane workplaces.

Born in Scotland, Ross was educated at Aberdeen University (M.A., 1978) and the University of Kent (Ph.D., 1984). He first came to the United States in 1980, teaching at Illinois State University and elsewhere until 1985, when he took an appointment at Princeton University. In 1993 he moved to New York University, where he helped found the Department of Social and Cultural Analysis, which conjoins American, race, gender, sexuality, and ethnicity studies.

Much criticism through the 1970s and 1980s was absorbed in debates over "theory," especially over language, social structures, and psychoanalytic concepts like the subject. Trained in literature during that time, Ross began as a theoretically oriented critic, taking a psychoanalytic approach to modern poetry. In the late 1980s, however, he turned to an examination of technology, ecology, popular culture, and intellectual history, becoming a pacesetter for a rising generation of critics. As he remarks in an essay, "I took the opportunity to liberate myself, professionally, from the teaching of literature, and self-apprenticed in the kinds of social and cultural analysis" familiar in influential British cultural studies figures like STUART HALL. Sometimes cultural studies is seen as simply applying the tools of literary studies to other media and popular culture, but Ross has stressed that he was particularly interested in "researching the traditions of cultural citizenship," as he decided to remain in the United States.

Ross's method also differs from that of influential theorists like PAUL DE MAN, who espoused deconstruction and was perhaps the representative figure of literary theory in the United States during the late 1970s and early 1980s. Rather than focusing on the interpretation of literary and philosophical texts, as de Man does, Ross developed an ethnographic approach, or what he calls "scholarly reporting." In books addressed to nonacademic audiences, such as *No-Collar: The Humane Workplace and Its Hidden Costs* (2003), he has reported on the work conditions of contemporary capitalism in the developed world. His method combines detailed interviews and observations, undertaken at a deeper level than most journalism, with scholarly research (for instance, into labor history) to expose features of employment in our world. To do this, he notes that he had to retrain himself from being a reader of texts to a listener (he remarks that his literary training had made him "not a very good listener"), and from being an "armchair theorist" to an empirically oriented observer.

"The Mental Labor Problem" offers an eye-opening account of the reconfiguration of labor, from blue-collar and white-collar—that is, physical labor and mental

labor—to devalued “no-collar” jobs. In the first half of our selection, Ross investigates how jobs requiring mental labor now often adopt the cultural ethos of the bohemian artist, which had typically been seen as antithetical to a proper work attitude. Artists presumably do their work because they love it, rather than for pay, of which most receive notoriously little; Ross designates this “the cultural discount.” Many current jobs, notably in high-tech firms, have been imbued with this ethos, but this “freedom” is actually designed to encourage workers to produce more labor for less pay. One might add to the examples that Ross names the unpaid or minimally paid internships held by many university students.

Ross also looks at what economists have called “the cost disease.” To increase their profits, businesses expect productivity to rise and costs to decrease over time, relying on such advances as improved technology on a production line. But mental labor seems immune from this kind of speedup. Faster computers do not necessarily translate into faster, better, or more profitable ideas. Thus for those who manage businesses, the answer again is to discount and encourage free mental labor.

At its core, Ross’s argument is a defense of fair and just work conditions. In an interview, he remarked that one of his chief influences is Marxist theory, and his analysis subtly shows how contemporary neoliberal capitalism extracts more time from workers. But Ross also notes that another of his influences is anarchism; a key value for him is human liberation. “The Mental Labor Problem” points to the bitter irony that current labor practices not only constrain workers but do so while claiming to liberate them to do what they love. One of Ross’s more trenchant charges is that many current jobs return to the conditions of the sweatshop, mobilizing cultural ideas of enjoyable work to extract long hours for low pay.

In the latter half of our selection, Ross shifts from analyzing the projection of the artistic ethos onto white-collar jobs to describing the imposition of corporate labor structures on academic jobs. Rather than being an ivory tower, the contemporary university participates in corporate practices like sweatshop labor to reduce its costs, particularly in its use of poorly paid “adjuncts,” the part-time laborers who, according to current statistics, teach more than half the courses in universities in the United States. This practice draws on the ethos of the medieval monk as well as the Romantic artist; since university teachers presumably love and are prepared to make sacrifices for their fields, they will accept low pay. It also draws on the modernist disdain for the marketplace, often adopted by academics who therefore see bread-and-butter issues like wages as irrelevant or unworthy of their attention. To counter the devaluation of teaching, Ross advocates campaigning for fair wages and benefits as well as embracing the traditional tool of labor, unionization.

In this essay and much of his work since the late 1990s, Ross shines light on the often-confusing effects of the postindustrial economy. Times have not been good for most workers. Beginning in the 1970s, many jobs have disappeared through “outsourcing,” while others have been “casualized” or made temporary; health and retirement benefits have been pared away; and many protections, notably those afforded by union membership, have been lost. Many remaining jobs have been “deskilled” and therefore command less pay, and workers are increasingly subject to underemployment or overwork. Ross shows how professional jobs, which formerly conferred more benefits, have become subject to the same pressures as blue-collar jobs: “brainwork,” particularly in academic or creative jobs, no longer is accorded a special status. Those with creative jobs are encouraged to conceive of themselves as individual contractors, seeking short-term employment in less definable roles than before—hence “no-collar” rather than blue- or white-collar work. Such jobs presumably grant individuals more freedom, but also create more insecurity and more pressure for overwork. In short, Ross demonstrates how recent shifts in the socioeconomic landscape operate not for the social good but to produce more exploitation, inequality, and social insecurity.

Ross’s style is a distinctive one. He often makes pithy remarks to put ordinary practices in a new perspective. For instance, to emphasize that the American

research university is not an altruistic enclave, he notes that after World War II it served "as a money-launderer for the Department of Defense's permanent war economy," receiving large amounts of funding for military research. To those who view the current conditions of academic labor as a function of "supply and demand," he points out that there is "no shortage of work, only a shortage of decent jobs." He also takes on the conventional wisdom that philanthropists have provided the most support to the arts, arguing that artists themselves have given the largest donation, in the form of their unpaid labor.

Probably because of his high profile as well as his fearlessness in addressing topics outside the discipline of literature, Ross has been subject to public criticism to a degree experienced by few academics; in one instance, he was attacked in the fashion magazine *GQ* as a member of "Hackademia." In particular, Ross's forays into science have proved quite controversial, and he has been accused of being a postmodern relativist who would deny basic scientific principles like gravity. Ross, however, makes arguments not about scientific knowledge but about the cultural position and social use of science. He does not comment on, say, the physics or engineering of fighter planes; rather, he notes that their funding and development rely on social institutions, public policy, and political decisions. As he retorts in a 1996 essay, "Cultural Studies and the Challenge of Science," "If you are a nonprofessional, of course you will never know enough to satisfy your scientist interlocutors. . . . But how much do you need to know about nuclear fission to know that nuclear reactors are an insane idea?" While this claim is debatable, his fundamental point is that the goals and uses of science, rather than the methods of scientific knowledge, deserve public discussion in a democratic society. This stance is similar to that of EDWARD W. SAID, who argues in his book *Representations of the Intellectual* (1994) that a chief impediment to criticism is the cult of expertise, which allows only Orientalists to comment on Middle Eastern politics, or scientists to comment on the social uses of science.

Within the liberal-left camp, Ross has been criticized for his concentration on culture. In a prominent attack, the pragmatist philosopher Richard Rorty charged that Ross's focus on "cultural politics" has deflected attention from "real politics" and concrete political issues like health care. Ross replies that society, and inequality in it, "reproduces itself culturally as well as economically," through such institutions as education and media, and through social rituals and values. Though he left behind "armchair theory," in his focus on the formative effects of culture he joins a distinguished line of thinkers who examine the relation of culture to the underlying material structure of society and to social relations, notably ANTONIO GRAMSCI and RAYMOND WILLIAMS. In "The Mental Labor Problem," Ross shows how culture creates the conditions for jobs. Ross has been one of the strongest voices in contemporary criticism urging that attention be paid to the culture of work and that action be taken to ensure more humane and equitable working conditions in late capitalism.

"The Mental Labor Problem" Keywords: Cultural Studies, Ideology, Institutional Studies, Marxism, Popular Culture

From The Mental Labor Problem

* * *

The great divide between the high arts and popular culture has, of course, been discussed to death (including by this author) as a measure of changes in the aesthetic life and mass social organization of modern times. The corresponding change in the nature of cultural labor has received much less attention. Even within the literature that could be grouped together under the

heading of cultural policy, the lion's share is given over to the "funding problem" of the arts, such as changes in the sources and traditions of patronage and institutional money supply. By contrast, there is relatively little focus on the "labor problem" of the arts.¹ Among the exceptions to this rule I have chosen to briefly outline two quite different, but not untypical, approaches to this topic of cultural labor—the cultural discount and the cost disease.

The Cultural Discount

In the first approach, the cultural labor problem figures primarily as the challenge of maintaining a steady supply of workers willing to discount the price of their labor for love of their craft. This might be characterized as the culture vulture's version of "how difficult it is to find good help these days." The most incisive version of this thesis can be found in San Francisco Foundation executive John Kreidler's useful account of the rise and decline of the nonprofit arts foundation. Central to Kreidler's analysis is the principle of the *cultural discount*, by which artists and other arts workers accept nonmonetary rewards—the gratification of producing art—as compensation for their work, thereby discounting the cash price of their labor.²

In the nineteenth century, Kreidler points out that it was the model of individual proprietorship that characterized most theaters, orchestras, opera companies, performing arts impresarios, and many museums. The separation between high and low, or elite and popular, as Lawrence Levine and others have shown, was much less distinct in this period.³ While these for-profit proprietorships had to meet the test of the marketplace to survive, they were still heavily subsidized and sustained by the willingness of cultural workers to accept deeply discounted compensation for their labor. Indeed, it is fair to say that the largest subsidy to the arts has always come from workers themselves. To this day, all such workers, even those employed on market-driven contracts, tend to earn compensation well below that commensurate with their skills and levels of educational attainment. The rough justice of the marketplace does not seem to deter the chronically discounted. Indeed, and largely because of artists' traditions of sacrifice, it often appears to spur them on in ways that would be regarded as self-destructive in any other economic sector.

Kreidler observes that, lately, arts organizations have begun to worry about the depletion of this discount labor supply. Today's youth, he suggests, are less attracted to the ethos of public service or service to the arts that equates to personal sacrifice, an ethos that was more appealing to relatively affluent,

white baby boomers in the post-Kennedy period⁴ at the height of nonprofit funding of the arts. As that funding pipeline has sharply reduced its flow, and as leisure time has declined radically for most people in the U.S. in the last two decades, the arts economy faces an uncertain future. The older proprietary models have mostly been subsumed by the commercial culture industries, and the traditional dependence on volunteer, discounted labor to support the arts can no longer be taken for granted. Subtle improvements in the money supply, he concludes, are not likely to offset the long-term impact of labor attrition.

Since Kreidler assumes that the status and levels of comparative compensation enjoyed by artists have not changed significantly since the entrepreneurial heyday of the nineteenth-century arts proprietor, the root of the current arts crisis must therefore lie in the “selfish gene”⁵ pool of the boomer parent. Although he does not identify the problem in quite this candid way, it is not unfair to see his conclusion as akin to parental indictments of Gen X⁶ apathy. The labor crisis of the arts can thus be laid at the door of youngsters who will not commit to an ideal higher than their own self-absorbed, material interests. Presumably the moral calling of the arts is not well-served by a generation distinguished by its cultivation of types like the world-class slacker or the IPO-seeking dotcommer.⁷ If we flesh out this line of argument, we can almost hear the grouchy tones of the parental scold, chiding the listless offspring with mawkish tales about his own hardships of yore, nobly borne in cold-water apartments and fixtureless lofts. Kreidler’s description of the cultural discount is a very useful contribution, but his belief that sacrificial labor is morally sustaining for youth is little short of a recipe for exploitation. Reasoning that appeals to the moral fiber of generational temperament may be consoling, especially to those above the boomer waterline, but it will not provide a cogent assessment of the state of cultural labor. Not when the percentage of employees identified as artists, in national labor statistics, is higher than ever. Not when the principle of the cultural discount, as I will shortly show, is more and more utilized on a semi-industrial scale in sectors of the knowledge industries.

The Cost Disease

A second kind of explanation of the labor crisis, with proven historical impact on arts funding, has been advanced by arts economists. Professionally challenged by evidence of productive activity that does not observe the all-powerful laws of market supply and demand, liberal economists have been drawn to offer a structural explanation for the “income gap” between the arts and other professions. One influential example was offered by William Baumol in a 1966 study of the performing arts co-authored with fellow

4. That is, the period after the presidency of John F. Kennedy (1917–1963; 35th U.S. president, 1961–63). “Baby boomers”: Americans born during the marked rise in birthrate after World War II (usually dated 1946–64).

5. An allusion to *The Selfish Gene* (1976), Richard Dawkins’s best seller that presented a theory of cultural transmission grounded in sociobio-

logical evolution.

6. Generation X, the generation that followed the baby boomers (born 1964–ca. 1979).

7. The owner of a company that markets its products or services on the Internet (such as those that characterized the “dot-com bubble” of the 1990s) who seeks investment capital through an initial public offering (IPO) of stock.

Princeton economist William Bowen.⁸ With the help of their faculty spouses, who did much of the empirical research, Baumol and Bowen set out to reveal how and why the performing arts have failed to keep up with the impressive productivity gains, measured in outputs per man hour, that have been recorded by other sectors of American industry in the course of the century.

For their purposes, they propose to assess the labor cost per unit of the arts as if the arts functioned like any other service-sector industry: "It is helpful to treat the arts, not as an intangible manifestation of the human spirit, but as a productive activity which provides services to the community: one which, in this respect, does not differ from the manufacture of electricity or the supply of transportation or house-cleaning services."⁹ Viewed from this angle, Baumol and Bowen find that the performing arts do not behave at all like other sectors of the service economy, primarily because they cannot, by their nature, exploit the productivity gains that come with advances in technology. In terms of its technological conditions of production, a contemporary performance of *Macbeth*¹ is not substantially different from its Elizabethan equivalent. "It will be seen," Baumol and Bowen write, "that the tendency for costs to rise and for prices to lag behind is neither a matter of bad luck nor mismanagement. Rather, it is an inescapable result of the technology of live performance, which will continue to contribute to the widening of the income gaps of the performing organizations."

While the costs of performing will continue to rise without an increase in productivity, Baumol and Bowen conclude, more auspiciously, that productivity in other sectors of economy will provide workers with more leisure time to consume and participate in the arts, and thereby alleviate some of the economic pressure. This cheerful rider, so indicative of the mid-1960s American climate of chipper expectations, would have a much more consequential echo in Bowen's infamous report on a different service profession, twenty-three years later. His 1989 study of graduate education forecast widespread tenure-track job openings in the professoriat by the middle of the 1990s and may have bootlessly lured thousands into doctoral programs with its misconceived assurances of a buoyant future in college teaching.²

Baumol and Bowen's 1966 arts forecast founded almost as quickly as the education one offered by Bowen in 1989. A decline in the leisure time available to the general U.S. workforce set in from the early 1970s and has not been stemmed, not even by the boom economy of the 1990s, which only triggered even higher levels of performance anxiety. Overwork, as opposed to joblessness, became the most chronic feature of the labor landscape. Nonetheless, the impact of the 1966 study helped to fuel the clamor for

1. A 1606 play by William Shakespeare.

2. William Bowen and Julie Ann Sosa, *Prospects for Faculty in the Arts and Sciences: A Study of Factors Affecting Supply and Demand, 1987 to*

2012 (Princeton: Princeton University Press, 1989); and the later study, William Bowen and Neil Rudenstine, *In Pursuit of the Ph.D.* (Princeton: Princeton University Press, 1992). It has been argued that Bowen's forecast of abundant jobs would have been realized if universities had not embarked, in the 1990s, on a full-scale program of casualizing its faculty workforce. If colleges were still hiring full-time tenure-track professors, instead of part-timers and adjuncts, today's labor supply would more closely approximate employer demand [Ross's note].

increased state funding for the arts, revived that same year, after a hiatus of almost three decades, with the creation of the National Endowment for the Arts. Baumol's "cost disease" model, as it came to be known (the cost disease condemns the cost per live performance to rise at a rate persistently faster than that of a typically manufactured good), provided empirical support for state intervention in the arts, and subsequently became a staple principle of welfare economics.

But his cost disease does not apply solely to the arts. It is shared, he points out, by other "stagnant sectors" like health and education, whose capacity to provide services is impaired by increasing relative costs.³ Handicapped from the outset by the cost disease, the arts, in Baumol's opinion, can either join the productive sector—by emulating the culture industries in their adaptation of advanced technologies—or hew more and more to the model of social services, like health or education (or national defense for that matter), which produce a subsidized public good under the heavy hand of bureaucratic supervision.

In some respects, both of these outcomes have come to pass. The institutional divide between the high and low arts has continued to blur, and more and more live performance has come to serve a merely promotional function for cultural product available to remote consumers in some other technologically mediated format. So too, as George Yudice⁴ has analyzed, the new profile of the artist as a glorified social service worker has supplanted the autonomous avant-garde innovator as a fundable type, increasingly sponsored through local arts agencies. The all-purpose artist-citizen, whose work can help to preserve rural and inner-city communities at risk and stimulate efforts to revive their economies, is increasingly viewed as a means to create jobs through cultural tourism, to promote urban renewal through the competitive siting of museums and arts centers, to save teenagers from substance abuse, or generally to enhance public education through an infusion of communicative skills.⁵

New Model Workers

* * *

The "mentality" of artists' work is more and more in demand, and is steadily being relocated from its traditional position at the social margins of the productive economy into roles closer to the economic centers of production. Indeed, the traditional profile of the artist as unattached and adaptable to circumstance is surely now coming into its own as the ideal definition of the postindustrial knowledge worker. What is the profile of this new kind of worker who behaves and thinks like an artist? Someone who is comfortable in an ever-changing environment that often demands creative shifts in communication with different kinds of employers, clients, and colleagues; who is attitudinally geared toward work that requires long, and often unsocial, hours; who dedicates their time and energy to distinct projects, rather

3. Ruth Towse, ed., *Baumol's Cost Disease: The Arts and Other Victims* (Northampton, MA: Edward Elgar, 1997) [Ross's note].

4. American cultural critic (b. 1948).

than to a steady flow of production; who exercises self-management, if not self-employment, in the execution of their work; and who is accustomed to a contingent and casual work environment, without overt supervision or judgment from above.

The best example of these employment patterns could be found in the New Economy companies that emerged in urban downtown centers from the mid-1990s. Borne along by the boom in Internet services, these new media start-ups capitalized on a surplus of creative labor and depressed real estate prices to recruit and nurture a neo-bohemian workforce that satisfied the profile of the “fast company” in a creative ferment, throwing off innovative ideas from a nonconformist mold. In *No-Collar*, my ethnographic study of two of these companies, I observed the efforts, on the part of company managers, to develop templates that could standardize the fitful rhythms of creative labor.⁶ This involved the attempt to fashion a business that imitated all of the attributes of artists—their habitats, lifestyles, clothing, work patterns, and custom individuality—and incorporate them into a tempo and a work temperament that could be recognized by clients as a reliable industrial process. The disposition of artists to undertake sacrificial labor was a blessing to a start-up economy that demanded of its workforce a legendary outlay of time and energy on the promise of deferred bounties: most employees in the new media industries invested a massive share of “sweat equity” in the mostly futile hope that their stock options would pay off. More important, even, than this apprenticeship in sacrifice was the flexibility of artists’ work patterns to a corporate economy that had placed flexibility at the heart of its restructuring efforts the last two decades.

In the workplaces I observed, employee concentration on the job was variable, often erratic. It was a style of work (which the casual observers could easily misconstrue as goofing off) where stints of inspired self-application alternated with vivid socializing, and with those intervals of undirected play and dreamy indolence that Henry James⁷ once called the “unstrenuous brooding sort of attention” that is required to produce art. Employees were not producing anything that Henry James would have cared to acknowledge as art, but they were doing their work in a way that he might have recognized. Company managers were faced with the formidable task of trying to accommodate these spasmodic rhythms. Play and recreation were encouraged in the workplace because they were perceived to add value to the work product. Employees were encouraged to work as and when the spirit took them, on the premise that ideas and creativity were as likely to surface at home or in other locations. In return for ceding freedom of movement to employees along with control over their work schedule, a no-collar company exercised the right to collect returns from areas of their lives that lay far beyond the physical workplace. A traditional industrial model derives value from workers where and when the company can control their labor. In the realm of no-collar work, the goal is to extract value from any waking moment of an employee’s day. In this way, the most free of all impulses—the most unmoored of all thoughts—could become snared in the work process.

6. Andrew Ross, *No-Collar: The Humane Workplace and Its Hidden Costs* (New York: Basic Books, 2003) [Ross’s note].

7. American novelist and critic (1843–1916; see above).

In these knowledge companies, the ethos of creative autonomy was lavishly supported by the principle of self-management. While this precept released employees from the indignity of constant supervision and other work rituals of subordination, it also required them to shoulder the full brunt of risks and responsibilities that are ordinarily borne by middle managers. Self-directed employees were newly vulnerable, experiencing the kind of raw exposure to the market that would ordinarily have been mediated by organizational higher-ups. The result of this liberalization of the workplace was not unlike the liberalization of the economy. It had been accompanied by a stripping away, or shredding, of layers of protection and social insurance against risk and insecurity. In the absence of safeguards and protections, the ultra-humane workplace could easily turn into a medium of self-exploitation—with bottomless seventy-hour-plus workweeks, and a dissolution of all boundaries between company and personal time.

The Internet industries of the New Economy hosted a fusion of work traditions drawn from the technology industries, on the one hand, and urban bohemia, on the other. They offered an advanced profile of the neoliberal world of work, where the worker, like the traditional artist, is a freelance thinker, operating in a deregulated environment that has banished stifling bureaucracy. In return for the opportunity to pursue personally gratifying work, the liberated individual takes over, from state institutions or company organizations, all responsibility for his or her economic survival and welfare. The creative entrepreneur is no longer alienated; there are no structures to be alienated from.⁸

Artists Cannot Afford to Be Rewarded Well?

Capitalist history is full of vicious little time warps, where archaic or long foresworn practices and conceptions of work are reinvented in a fresh context to suit some new economic arrangement. The “sweating” system of putting out work to competing contractors in the nineteenth-century garment industry was disdained as a preindustrial relic by the apostles of scientific management, yet this form of subcontracting is now a basic principle of almost every sector of the postindustrial economy and has emerged as the number-one weapon in capital’s arsenal of labor cost-cutting and union-busting. So too the ethos of the autonomous artist, once so fiercely removed from industry’s dark satanic mills⁹ and from the soiled hand of commerce, has been recouped and revamped as a convenient, even alluring, esprit de corps for contingent work in today’s de-structured knowledge industries. Indeed, the “voluntary poverty” of the déclassé bohemian artist—an ex-bourgeois descendant, more often than not, of the self-exiled Romantic poet—may turn out to be an inadvertent forerunner of the discounted labor of the new industrial landscape.

How does the legacy of these nineteenth-century traditions enter into the analyses of the cultural economists? In their 1966 study, Baumol and Bowen

8. Building on her studies of petty entrepreneurs in the British fashion industry, Angela McRobbie offers an analysis of the creative work as the new entrepreneurial model in “Clubs to Companies: Notes on the Decline of Political Culture in Speeded Up Creative Worlds,” *Cultural Studies* 16:4 (2002), 516–31; and “Everyone Is Creative:

Artists as Pioneers of the New Economy” (August 30, 2001), www.opendemocracy.net/themes/article-7-652.jsp [Ross’s note].

9. That is, the early factories of the industrial revolution; “dark Satanic Mills” is a phrase from William Blake’s poem (ca. 1804–10) that later became a hymn titled “Jerusalem.”

have little to say about the impact of Romantic artist mythology, except to note that the parlous condition of artist compensation “seems only to elicit apathy from a public whose responses have been dulled by the stereotyped and somewhat romantic notion of the engarreted and starving artist.”¹ In considering arguments against government support of the arts, they also refer to the

antediluvian manifestation that poverty is good for the arts and stimulates creativity. “We want to develop a hungry theater” said one witness at the [1962] House Hearings on economic conditions in the performing arts, who went on to assert that only a hungry man feels compelled to say “what’s in him.”²

Antediluvian this may well be, yet popular wisdom is full of gimcrack rationales for paying people less than they deserve. Many are distorted hand-me-down versions of formerly principled positions about the worth of labor and the dignity of expression. Others are more candid judgments about the expendability of workers. When they circulate as common sense, they do have some real impact on net income levels, but not in a way that the empirical economist can safely measure. These nuggets of ideology are often at their most antediluvian when viewed from the perspective of the rational science of neoclassical economics, which cannot break down their influence on labor markets into hard numbers. Who could compute the impact of popular prejudices about race and gender on the kind of heavily segmented work that women or immigrants are expected to take on, at depressed wage levels? Yet market supply and demand cannot explain alone those features of labor segmentation that consign women and immigrants to specialized locations in the secondary labor market.

It may be worth taking the time, briefly, to review some of the history of what Baumol and Bowen refer to as the “antediluvian manifestation” of the starving artist. Ever since the name of the artist was attached to artworks, patrons have been extracting personal prestige and profit from their own association with the labor of art. In part, to maintain and inflate this prestige, artistic labor was elevated to a rank above and beyond the mere workmanship of craft and trade. It was the royal, papal, and noble patrons of the Renaissance who, for their own gain, invented the concept of the artist-genius in emulation of alchemists who, through their craft, might turn the dross of mere custom into the gold of lavish repute. Traces of this precapitalist prestige survive in those successive phases of patronage characterized by the bourgeois public, the mass market, and the state subsidy (nation-states can claim status on the global landscape on the basis of the great artists they have produced). As for the work of art itself, Marx’s distinction between the value of labor and labor power³—the value added to a product, in this case, primarily the artist’s name—is extremely consequential. The autonomous artist, who emerges in the nineteenth century as a solo entrepreneur working for a largely anonymous public audience, can benefit, in principle, from the surplus value that the name adds to his or her labor. But the name’s value

1. Baumol and Bowen, 99 [Ross’s note].

2. *Ibid.*, 371 [Ross’s note].

3. That is, between the actual value of the laborer’s activity (the value of the goods or services produced) and his or her capacity to work, sold as a

commodity; the difference between them, according to the German political philosopher and economist KARL MARX (1818–1883), is surplus value (the capitalist’s profit).

tends to increase with the formal estrangement of the artistic soul from the bargaining and haggling of the marketplace. Any taint of mercenary involvement with market supply and demand can diminish the worth of that name.

For the most part, then, this surplus value accrues in reality to the publisher, dealer, promoter, producer, or owner-manager. To say the least, it is in their own pecuniary interest to endorse their clients' remove from matters of commerce. The personal agent emerges as the artist's best shot at recouping some of this value. When literary agents first sought to strengthen writers' bargaining power in the literary marketplace of the late nineteenth century, publishers complained that this "philistine" intervention disrupted the sacred bond between writer and publisher.⁴ Yet these agents were realizing their clients' labor power in much the same way as fledgling trade unionists. (In bargaining for hours and wages, the unionists were also accused of "intruding" on the benevolent capitalist's relationship with his workers.) Did the result amount to the cheapening or commercialization of culture, as publishers had warned? To some degree, yes, but nowhere nearly as much as the behavior of publishers themselves, already covetous of the popular market, and well-primed to pattern the book trade in the mold of the mass media industries that would dominate the twentieth century.

The noble ethos of the unattached artist was conceived in the struggle to break free from aristocratic patronage and was clearly compromised by the simultaneous birth of a mass commercial audience from the womb of the bourgeois public. Most fatefully, from the perspective of the artist wage, this ethos was soaked in the full torrent of Romantic thought about the separation of art and culture from the commodity production of industrialization. As the industrial division of labor everywhere sought to convert artisans into machine operatives, artists recoiled from being treated like any other trade producer. At the very least, the artist would be an independent skilled worker producing a marginal commodity of taste, but the higher calling of the Romantic imagination demanded something more. The artist was called on to represent, if not wholly embody, those imaginative qualities, skills, and virtues that industrial civilization was systematically destroying. Ironically, then, the artistic sensibility that was so opposed to utility could not afford to be directly rewarded by trade, yet the commodity value of the artwork rose in direct relation to the artist's remoteness from trade. In time, the highest value could be attached to the work of those—Van Gogh⁵ is the quintessential example—who were most detached, reclusive, ignored, or pauperized by bourgeois society. To some degree, this value could appreciate in inverse proportion to the depression of their labor value while alive. As the moving legacy of Romantic ideas collided and meshed with the evolving arts economy, a curious, and perhaps unique, condition of labor emerged. *The artist cannot afford to be rewarded well*. High-caliber compensation proves fatal to the peer appraisal of an artist's achievement; pecuniary neglect, by that same token, translates into cultural credit.

Also James Hepburn, *The Author's Empty Purse and the Rise of the Literary Agent* (London: Oxford University Press, 1968) [Ross's note].

"Philistine": that is, characteristic of the materialist middle classes—a term used by MATTHEW ARNOLD in "The Function of Criticism at the Present Time" (1865; see above).

5. Vincent van Gogh (1853–1890), Dutch painter whose works are now among the most valuable in the world, though in his lifetime he sold only one painting and was extremely poor.

With the subsequent development of urban, bohemian quarters in low-income districts, this formula would have a geographical basis in the rent economy of the industrializing city and would endure through several decades of suburban flight and urban renewal until the waves of gentrification finally washed over its center-city habitat. The special condition of artistic labor, however, persists in all sorts of vestigial ways. Aside from its increasing use as a rationale for flexible labor in the new postindustrial workplace, in its traditional form it may well serve a general function in a capitalist society as an alleviator of liberal guilt for living in an exchange economy that puts a market price on everything. This social sanctioning of discounted arts labor is quite distinct from the pro bono work built into the pricing system of other, more highly paid, professions like the law. Alpha professionals, like lawyers, occasionally work for free because they can afford to do so, or because their complicity with structural injustice would otherwise be too conspicuous. This is no less the case for the highest-paid arts workers in the commercial sector, like pop musicians, whose continued regard often depends on high-profile appearances at benefit concerts where their fees are seen to be waived for a higher cause. But artists in general are expected, and are therefore inclined, to put in time gratis for love of their art in contexts that would require overtime pay for most other workers.

To compound matters, there persists an ingrained prejudice on the left against being well-paid occupationally, whether in the arts or in the academy. According to this reasoning, an underpaid intelligentsia can identify more readily with those living in low-wage conditions or abject poverty. Material self-denial and voluntary poverty are the monkish markers of conscience and left-wing integrity in a reward economy. Compassion and commitment may well flow from this posture, but they are hardly dependent on it. Ultimately, there is something quite patronizing about this ascetic credo, redolent, as it is, of middle-class fantasies about the lives and aspirations of working people. Nothing could be further from the raw thrust of ameliorative laborism, typified by Wobbly chieftain Big Bill Haywood's⁶ pronouncement (when asked about the fat cigars he smoked) that "nothing's too good for the proletariat."

For a modern version of Haywood's bravura, consider the priority placed on "getting paid in full," which has been a constant strain in hip-hop, and never more so than in the quixotic materialism of today's alpha rapper scene. The champagne-and-Bentley fantasy of the high life may be a crass nouveau riche version of American success, but it cannot be divorced entirely from the claim for reparations for almost a full century in which black artists had been robbed blind of their rights and royalties by the music industry. Golden-age rappers from the late 1980s were perhaps more articulate about the reparations claim than today's gilded celebrities, but the industrial streamlining of rap's genres in the intervening years has only made the choices more limited. Sustainable careers in hip-hop are ever harder to come by. Top-billers tend to be commercial champions for only a short period of time before they fall to fresh contenders (which rapper can honestly envisage a career in the mold of B.B. King,⁷ earning a livelihood from performing at a ripe old age?). Rappers who enjoy the limelight temporarily are obliged to be conspicuous consumers; their flaunting of wealth is a kind of potlatch, and

6. William Dudley Haywood (1869–1928), founding member and leader of the Industrial Workers of the World (IWW, or Wobblies), a revolutionary

7. Blues musician (1925–2015), whose career spanned 8 decades.

they lose their status if they cannot spend flamboyantly, even if the habit threatens to drive them prematurely into poverty. Even as they fill the swaggering role of cartoon figments of the casino capitalist imagination, they must remind us that the choice between “selling out” and preserving one’s artistic purity has never been an equal option for black performers, and was only really adopted as a litmus test of integrity by advocates for a white rock fraternity who elevated it to an unlikely, and mostly impractical criterion of faith for most working musicians, let alone African American ones. Yet the search for music untouched by the taint of lucre goes on, rather like the search for undeveloped beaches. Deprived, since the “discovery” of the Delta bluesmen,⁸ of a supply of domestic primitives, well-meaning liberal rockists (Paul Simon, Sting, David Byrne⁹) have patronized Third World¹ musicians hitherto remote from any direct contact with the dollar economy. Ry Cooder’s *Buena Vista Social Club*² of Cuba’s aging, “forgotten” legends is the most recent, and perhaps the best, example of this search for purity of performance unsullied by high exchange rates.

The bohemian option has always been much less meaningful for artists of color. In communities with a history of being starved of any kind of resources, voluntary poverty is not generally regarded as a virtue, and least of all as a heroic, or romantic act of self-invention. Whenever a black bohemia has emerged, as in the case of the bebop jazz enclave, it was almost instantly converted into super-bohemian capital by white emulators like the Beats, hep-cats,³ and street-corner juveniles of the 1950s. By contrast, material success for black artists has been much more closely tied to status for those few who can rise above the competition. The often blunt focus on compensation—it’s all about the Benjamins⁴—contrasts with the predominantly cultural prestige that the white indie artist is trained to extract from the thin wages of bohemia. That is why getting paid in full has had to mean as much to the rapper as the stage conventions of “keeping it real.” That is why the militant “rebel without a pause”⁵ of late 1980s hip-hop, who came the closest to meeting the romantic profile of the rock rebel, was still expected to be up-front in expressing opinions about the terms and conditions of his recording contracts. No surprise, then, that it was Chuck D, the paragon of the rebel without a pause, who was one of the first recording artists, a decade later, to make a preemptive strike against the industry by seizing on MP3 as a way of outfoxing the majors by bypassing traditional distribution routes.⁶

The Service Ideal

* * *

When the American labor market took its flexible turn in the early 1980s, and union organizing eroded as a fundamental right, blue-collar unions took a direct hit, but white-collar and professional organizing was still on the rise. The new knowledge industries, either comprising the higher-education sector or in corporate parks built around a university research complex, provided a natural union base for salaried employees with less and less control over their own workplace. In the 1990s, the corporatization of higher education set in for real, and casualization began to take a heavy toll on institutions nominally built on tenure, academic freedom, and faculty governance. The tenure-track appointment, hitherto a staple contract in the profession, would soon become a highly privileged exception to the rule. Professional academics, long accustomed to regarding their workplace as a non-worldly realm, beholden to different rules and standards from those observed in more “secular” employment sectors, had a rude awakening. In no time at all, it seemed, higher education had become one of the more advanced examples, among the professions, of the adjunct contract workplace, where a large percentage of its part-time labor force was soon struggling to earn any kind of living wage.

A Volunteer Low-Wage Army?

The rapidity with which the low-wage revolution swept through higher education was clearly hastened along by conditions amenable to discounting mental labor. For one thing, the willingness of adjuncts (whether as graduate students or postdoctoral employees) to accept a discounted wage out of “love for their subject” has helped not only to sustain the cheap labor supply but also to magnify its strength and volume. Like artists and performers, academics are inclined by training to sacrifice earnings for the opportunity to exercise the teaching craft. While other traditional professional industries, like law or medicine, depend to some degree on intern labor, none rely economically on the self-sacrifice of their accredited members to anything like the same degree.

Employers have long relied on the existence of a reserve army of unemployed to keep wages down in any labor market. Institutions of higher education have now entered this business with a vengeance. In addition—and this is the significant element—their managers increasingly draw on a *volunteer low-wage army*. By this I do not mean to suggest that adjunct and part-timer educators actually invite their underpayment and lack of benefits or job security. These conditions are, first and foremost, a direct result of managerial policy. Nor are they inactive in protesting and organizing for their interests. Like the jazz musicians at the New School, they are forming unions and bargaining units (my own institution now boasts the largest adjunct union of any

artists’ rights and the current state of the music industry” [Ross’s note]. Chuck D (Carlton Ridenhour, b. 1960), African American writer, producer, and leading figure in rap music, a founding member of the politically conscious rap

private university).⁷ Rather, I choose the phrase to describe the structural eventuality of being trained in the habit of embracing nonmonetary rewards—job gratification is self-actualizing—as compensation. As a result of this training, low compensation for a high workload can become a rationalized feature of the job. In the most perverse extension of this logic, underpayment can even be interpreted as proof of the worth of the academic vocation—as the ultimate gauge of the selfless teacher and/or the disinterested seeker of knowledge.

Vestiges of the amateur ideal of the scholar are a contributing element. Indeed, one of the uncommon privileges traditionally enjoyed by academic scholars was the right to pursue their work in full ignorance of its economic underpinnings. Money matters were considered too vulgar and trivial to be understood, let alone handled, by faculty. Such pecuniary concerns befouled the noble quest for knowledge and truth. No doubt, this customary feature of the profession has made it easy for power to shift inexorably to managers and administrators, whose ready grasp of fiscal affairs renders their decisions unassailable by faculty members. Ultimately, the comfort offered by job security in the form of tenure was a recipe for complacency on the part of those who might have resisted the casualization measures, much earlier and more vigorously. Submission to the selfless, disinterested devotions of the scholar's calling almost inevitably led to the sacrifice of younger "apprentices" on the altar of an anachronistic faith.⁸

In the restructured economy of the American higher education system, the net result of this professional ethos has been rapid deprofessionalization, not the revival of Veblen's virtuous ideal of Idle Curiosity.⁹ It has contributed, directly or otherwise, to policies of casualization pursued in the name of belt-tightening and aimed at redistributing academic work out of the realm of regular tenure-track lines. Two generations of scholars now form a semipermanent cadre of independent contractors, with little or no prospect of advancement into regular, full-time employment. For most graduate students, as Marc Bousquet points out, the attainment of a degree is not the beginning, but the end of their teaching career; they are not a product, but a by-product, of graduate education; their degree holding is not a credential to practice, but rather it "represents a disqualification from practice."¹ As for regular faculty, their salaries have stagnated against the average wage, and

7. Since 1993 Ross has taught at New York University, where in 2002 the adjunct faculty unionized. In the beginning of this essay (not included here), Ross discusses the successful unionization of part-time jazz faculty at New York's New School and its significance.

8. For analysis in general of these developments see Cary Nelson, ed., *Will Teach for Food: Academic Labor in Crisis* (Minneapolis: University of Minnesota Press, 1997); Randy Martin, ed., *Chalk Lines: The Politics of Work in the Managed University* (Durham, NC: Duke University Press, 1998); Cary Nelson and Stephen Watt, *Academic Keywords: A Devil's Dictionary for Higher Education* (New York: Routledge, 1999); Stanley Aronowitz, *The Knowledge Factory: Dismantling the Corporate University and Creating True Higher Learning* (Boston: Beacon, 2000); Benjamin Johnson, Patrick Kavanagh, and Kevin Mattson, eds., *Steal This University: The Rise of the Corporate University and the Academic Labor Movement* (New York: Routledge, 2003); Sheila Slaughter

and Larry Leslie, *Academic Capitalism: Politics, Policies, and the Entrepreneurial University* (Baltimore: Johns Hopkins University Press, 1997); Gary Rhoades, *Managed Professionals: Unionized Faculty and Restructuring Academic Labor* (Albany: SUNY Press, 1998); all of the issues of *Workplace: A Journal for Academic Labor*, and the special issue of *Social Text* 20:1 (Spring 2002) [Ross's note].

9. In an earlier passage not included here, Ross discusses *The Higher Learning in America: A Memorandum on the Conduct of University by Business Men* (1919), by the American economist and social critic Thorstein Veblen (1857–1929), who argues that ideally universities should pursue "Idle Curiosity."

1. Marc Bousquet, "The Waste Product of Graduate Education: Toward a Dictatorship of the Flexible," *Social Text* 20:1 (Spring 2002), 81–104 [Ross's note]. BOUSQUET (b. 1963), American critic of higher education; for this essay, see below.

they retain control over a profession that can no longer ensure, or control, its means of reproduction. Increasingly, their job security serves as window dressing for a system designed to ensure a continuous flow of cheap, easily replaceable labor.

What forms of self-rationalization motivate adjuncts to contribute so selflessly to a workplace where they are regarded as untouchables? Comparing their organizing efforts to a process of recovery from codependency, Mickie McGee describes how she and her fellow “teachaholics” and “ad-junk-ties” diagnosed the early symptoms of their “high-functioning addiction” as a way of understanding their need to unionize. They came to realize that their self-sacrificing love of teaching, combined with the intoxicating fantasy of universities as cachet-rich havens from the marketplace, had led them into a spiral of addiction and self-exploitation.

McGee recalls “the damage that adjuncting did to my life”:

Somehow, in spite of my adjuncting habit, I’d managed to become pregnant. My partner and I were thrilled. At that point, my teaching habit was so all-consuming that we’d all but given up hopes of ever starting a family. I was expecting and I was delighted. But still I wouldn’t give up my teaching habit. Even in the final months of the pregnancy, when my doctor urged me to remain in bed to control pregnancy hypertension, I couldn’t do it. Fearful that I’d lose my classes, or seem “unprofessional,” I was in the classroom, dizzy with high blood pressure, the week before my daughter was born, not surprisingly by emergency C-section. This was insanity. This was an addict’s insanity.²

In some respect, the peripatetic life of the part-timer, offering her skills hither and thither (a large majority are female), on one freeway exit after another, is germane to the eccentric work schedule of the traditional academic, who commonly observes no clear boundaries between being on and off the job, and for whom there is often little distinction between paid work and free labor. For the professionally active full-timer, this habitual schedule means that she can take on a range of tasks and obligations that will easily fill out a sixty-hour workweek.³ For the part-timer, desperate to savor the prestige of being a college teacher at an institution with brand-name cachet, the identity of being a switched-on, round-the-clock thinker, eager to impart knowledge, and in a position to freely extend her mental labor, feeds directly into the psychology of casualized work and underpayment. The industrial worker, by comparison, is not beset by such occupational hazards.

What we see here is the fabrication of a model “flexible employee” out of the cloth of the profession’s nonconcentric habits and beliefs, a worker whose customary training in the service ideals and irregular routines of mental labor can be roundly exploited by cost-cutting managers. In this way, we can see how and why fundamentally characteristic features of the academic work style, like those of artists, whom I earlier depicted, conform to the demands of a contingent labor profile. Most fateful of all, perhaps, is

2. Mickie McGee, “Hooked on Higher Education and Other Tales from Adjunct Faculty Organizing,” *Social Text* 20:1 (Spring 2002), 61–80 [Ross’s note].

3. A recent study of full-time faculty at sixteen

midsized colleges and universities found faculty members worked an average of 53.6 hours per week. “Nota bene,” *Academe*, July–August 1999, 11 [Ross’s note]. “Nota bene”: note well (Latin).

the elective ingredient of this recipe for exploitation. Again, I do not mean to suggest that individuals are drawn toward this predicament, nor indeed that they are directly responsible for their own exploitation. For the most part, the patterns of casualization chosen by academic managers have more or less emulated the policy behavior of corporate managers. (Partly, as a result, graduate students have been able to win legal recognition for their perception that they hold the status of an employee.) Nonetheless, I am proposing that academic labor has been casualized in ways that directly complement the habits and compulsions of the academic work mentality, and this has made it all the easier to accomplish. It is in this respect that we can speak, structurally, of a volunteer army of underemployed, low-wage contract labor. As part of its ceaseless search for ways to induct workers in their own exploitation, capital, it might be said, has found the makings of a *self-justifying*, low-wage workforce, at the very heart of the knowledge industries so crucial to its growth and development.

It is no small irony that artists and academics, who would have been borderline, even oddball, features of an older labor landscape, are now more like exemplary figures, occupying frontline positions on the leading edge of neoliberal penetration.⁴ With the relocation overseas of core manufacturing, value-adding sectors have become key to First World economies. Artists and academics are value-adding paragons. In the past, their work traditions and privileges have been marked by an impermeability to the mainstream rhythms of industrial process. Now, their customary work life increasingly lies at the center of industrial attention. Indeed, it may come to serve soon as a core industrial personality of the early twenty-first century.

In this respect, it is hardly surprising that higher education has become a battleground for labor. Too many bullish forces in the corporate sector see higher education as a huge, untapped market for selling goods and services on the basis of the prestigious brand names of universities. At the primary and secondary levels, the spoils of the public school system have long been coveted by "education entrepreneurs," touting the "discipline" of the marketplace over the "inefficiency" of the public realm, and normalizing the rhetoric of corporate management—the public as customer, education as competitive product, learning as efficiency tool. Remember Lamar Alexander's declaration, shortly before becoming George Bush's secretary of education, that Burger King and Federal Express should set up schools to show how the private sector would run things.⁵ School-business partnerships opened the door not just to total quality management⁶ but to every corporate huckster looking for ways to promote and build brand loyalty in the "K–12 marketplace." Tax-supported school vouchers and union-free charter schools⁷ were introduced, respectively, as the fast and the slow track toward privatization.

4. Neoliberalism, a revival of the classical liberal economic thought of the 18th and 19th centuries, became dominant in Britain and the United States in the 1980s; it stresses the virtues of the free market.

5. Alex Molnar, *Giving Kids the Business: The Commercialization of America's Schools* (Boulder, CO: Westview Press, 1996), 3 [Ross's note]. Alexander (b. 1940), elected U.S. senator from Tennessee in 2002, served as education secretary (1991–93) under George H. W. Bush (b. 1924;

41st U.S. president, 1989–93).

6. A management strategy that became a corporate buzz phrase in the 1980s.

7. Tax-supported schools that, once the relevant authority grants them a charter to achieve specified goals, are allowed to operate free of many of the regulations that apply to other public schools. "Vouchers": government-issued certificates that can be used to pay for children's education at the schools of their choice.

If your local high school hasn't yet been bought out by McDonald's, many educators there probably already use teaching aids and packets of materials, "donated" by companies, that are crammed with industry propaganda designed to instill product awareness among young consumers: lessons about the history of the potato chip, sponsored by the Snack Food Association, or literacy programs that reward students who reach monthly reading goals with Pizza Hut slices.⁸

In addition to serving as magnets for corporate sponsorship, the economy of scale and the fiscal autonomy enjoyed by many institutions of higher education allow them to function like corporations in their own right. On the labor front, they have adopted many of the same tactics of union-busting, downsizing, and outsourcing, and they hire the same antiunion law firms. In their respective campaigns against graduate-student organizing, NYU, Yale, and Columbia all retained the notorious legal firm Proskauer, Rose, which openly advertises its antiunion services on the company Web site—"With respect to union relationships, we counsel clients how to avoid, and where appropriate, resist union organization among employees"). In addition, the modern, neo-corporate research university is no longer simply a vehicle, as it was in the Cold War period, for socializing the costs of training, research, and technological development on behalf of capital.⁹ Far from serving as a money-launderer for the Department of Defense's permanent war economy, the research university has now become a site of capital accumulation in its own right, where the profitability of research and teaching programs and the marketability of learning products is fast coming to the fore as the primary driving force behind academic policy at many institutions. Corporate sponsorship increasingly buys faculty and entire research programs, while the patenting and selling of online courses promises a bonanza of low-cost yields.

In many cases, cost-cutting employment policies are also instruments for establishing administrative control over curricular content. Recently digitized programs of distance learning, for example, were eagerly championed by administrators and state legislators itching to switch their fixed investment in temperamental bodies and impetuous minds over to the sleek machinery of digital pipes with mega bandwidth. In a milieu where education is viewed as a product to be delivered without risk, it is easy to see how the most compelling corporate vision would be that of the wired, tenureless university, where contract hands prepare or administer online courses pumped out to a remote, disaggregated student body. Faculty attempts to establish control over online instruction are not simply struggles to stave off the automation of jobs, they are also frontline battles in the culture wars over the right to determine and influence curriculum.¹

While the economic payoffs of digitized instruction appear to be self-evident, these technology-assisted programs have less to do with increased efficiency or cost-effectiveness than with control over the workforce and, potentially, the curriculum. The elimination of the social and cultural services ministered by full-time, flesh-and-blood faculty inevitably results in a

sharp drop in the quality of education. Any cost-benefit analysis of online instruction should have to assess the challenge of delivering a product of comparable quality. Based on this criterion, no one has ever been able to identify clear gains in productivity or cost-effectiveness from the computerization of work. I am referring here to the phenomenon of the productivity paradox, an IT update of the technology trap first identified by business economists in the fledgling years of automation forty years ago. As economist Robert Solow² put it, in a famous throwaway line, "You can see the computer age everywhere except in the productivity statistics." "Downstream benefits" have not exactly flowed from the habit of throwing "upstream" money into IT systems, applications, upgrades, management, and maintenance that do not serve the practical needs of businesses or other employee organizations. Promotional hype, technological obsolescence, communication overload, and widespread downtime outages caused by worker sabotage are only some of the factors that inhibit productivity.³ The economic failure of many online programs (NYU threw away \$25 million on its version) was not simply a casualty of the downturn in the Internet economy. It also stemmed from a miscalculation of the economic benefits to be won over and against the high, and therefore unproductive, cost of widespread faculty resistance to the idea of virtual education.

Second Thoughts

With or without its virtual arm, how efficient will the newly restructured academic sectors prove to be in servicing the labor markets of industrialized knowledge? Higher education is in a pivotal position in this regard. Not only is it now a massive anchorage for discounted labor among its own workforce, it is also a training site, responsible for reproducing the discounted labor force among the next generation of knowledge workers. Are educators contributing involuntarily to the problem when they urge students, in pursuing their career goals, to place principles of selflessness (public interest or collective political agency or creative expression) well above the pursuit of material security? In an economy so heavily under the sway of neoliberal business models, is it fair to say that this service ideal invites, if it does not vindicate, the manipulation of inexpensive labor?

Fifteen years ago, this suggestion would have seemed ludicrous. Labor freely offered in the service of some common benefit or mental ideal has always been the informal economic backbone that supports political, cultural, and educational activities in the nonprofit or public-interest sectors. Selfless labor of this sort is also a source of great pleasure. The world that we value most—the world that is not in thrall to market dictates—would not exist without this kind of donated effort. But what happens when some version of this disinterested labor moves, as I have suggested here, from the social margins to core sectors of capital accumulation? When the opportunity to pursue mentally gratifying work becomes a rationale for discounted

labor at the heart of the key knowledge industries, is it not time to rethink some of our bedrock pedagogical values? Does the new landscape of mental labor demand more than the usual call for modernizing the politics of labor? What is to be done with the anxiety generated by such questions?

First and foremost, we must remember that the problem lies not in how people choose to operate within an economy, but rather in how that economy is structured to limit their choices. As ever, the educational system is playing its role in creating and rationalizing the gulf between those in the de-skilled lower tiers, destined for low-wage service sector jobs, and those in the skilled strata, who are tracked into credentialed fractions of the mental labor economy. Currently, managers of national and global economies tell us that education is the only passport to economic mobility or security in a knowledge society. And yet people with advanced degrees are waiting tables, driving taxicabs, or functioning as Microserf⁴ temps, while most service jobs in the secondary labor market (with absolutely no prospect of advancement) require little more than basic literacy accompanied by a modest facility in pleasing customers. In the academy, just as in the neoliberal economy as a whole, there is no shortage of work, only a shortage of decent jobs. The accumulation of real skills means little in a system that underproduces real jobs. In the Fordist era⁵ of the two-tier labor system, it was the simple presence of trade union power, and not gaps in skills, that separated the decent high-wage jobs in the primary labor markets from those in the low-wage secondary labor markets.

The education system (both at the high school and collegiate levels) is overdeveloped in relation to the needs of an economy that will only provide so many meaningful jobs that pay a living wage. Accordingly, there exists a cruel disconnect between the managerial promises and the opportunities on the ground. While this disparity generates its share of social discontent, the expectations raised by these promises play a crucial role in regulating labor markets. In the sectors of mental work I have looked at here, the prospect of meaningful work provides a rationale for de-professionalizing while helping to maintain a degraded labor market that disciplines and sets the wage floors of those precariously positioned in the core segments immediately above. In addition, and at a time (quite distinct from the Fordist era) when creative gratification is more and more touted as an obligatory feature of the realm of no-collar work, the collective educational capital that once stimulated and supported consumption and leisure time is more and more invested in gray areas of unwaged work that the new cultural economy is creating. For example, Tiziana Terranova has outlined the role that free labor played in creating the Web site infrastructure of digital capitalism and in contributing directly to its development, as in the Open Source model of software improvement, where corporations now take advantage of amateur users to locate bugs and suggest refinements and upgrades.⁶ All in all, the creation of the World Wide Web has been the most massive, uncoordinated effort in the history of unwaged work. Education is not, then, wasted, as it appears at

first sight. Rather, it is being unsystematically converted into un- or under-compensated labor in ways that remain to be adequately charted (just as the hidden costs of unwaged domestic labor of women have sustained the economy for so much longer).

Insofar as we participate in the knowledge economy as scholars, writers, and artists, there now exists an explicit responsibility to recognize the cost of our traditionally cherished beliefs in aesthetic or educational ideals. These ideals come at a price, and managers of the new economy are taking full advantage of our disregard of that price. When the outcome is discounted labor on an industrial scale, our traditions of studied indifference to the world of trade and waged labor can no longer only be savored as expressions of faith in some purer life of the mind, or as charming eccentricities to be deemed objects of tourist interest in bohemia or the ivory tower. Those days are over.

Historically, we have found it too challenging, and professionally limiting, to see ourselves as workers. Academics have often viewed their daily teaching and service obligations as an obligatory, even menial, chore that permits them to pursue the true life of the mind in their research—their “real” work—on sabbatical or in summer breaks. Artists contracted by federal or local government programs such as the Comprehensive Employment and Training Act (CETA—in the 1970s, the biggest public commitment to arts-employment subsidies since the WPA) routinely have made a distinction between what they do for a living in the realm of public and community arts, and their own after-hours work as expressive individuals.⁷ Even in the WPA years, many artists who qualified for poor relief refused federal assistance through the artists programs because they were averse to being classed as laborers (while others saw the program as a conspiracy to shut them up by offering full-time work). Writers of all stripes continue to regard part-time commercial work as a vile meal ticket that expedites their true calling.

There are, of course, sound reasons for abiding by such distinctions. Unpopular forms of intellectual, artistic, and political expression cannot and will not thrive unless they are independent of commercial or bureaucratic dictates. But these conditions of independence can no longer be defended stubbornly and solely as a matter of humanistic principle, or as a freestanding right within a civilized society. When capital-intensive industry is concentrated around vast culture trading sectors (copyright is now the U.S.’s single largest export), when media Goliaths feed off their control of intellectual property, and when the new Vested Interests⁸ routinely barter discount wages for creative satisfaction on the job, the expressive traditions of mental labor are no longer “ours” simply to claim, not when informal versions of them are daily being bought off and refined into high-octane fuel for the next generation of knowledge factories.

The new labor landscape is now hosting efforts to organize sectors where professional identity has been based, in part, on a sharp indifference to being organized. Campaigns can and should build on the recognition that both artists and educators draw on an intimate and shared experience of the tradi-

tions of sacrificial labor.⁹ The outcome will help to modernize labor politics in the age of mental labor (the age of the Yale Corporation, the Microserf, and the consolidated push of Time Warner-Bertelsmann-Disney-CNN-Hachette-Paramount-NewsCorp), and it will depend on recognizing the special conditions that apply to pricing wages for thought. We have always known that aesthetics comes at a price, especially for those who do not benefit from the prestige it confers. Now we must learn to recognize that aesthetics is part of a price system, to use a pet phrase of Thorstein Veblen's. No one has really thought this out properly. If we don't, then others, with less to lose and a world of lucrative copyrights to gain, will do it for us.

JANE BENNETT

b. 1957

An early proponent of the new materialism, Jane Bennett is one of a group of cultural theorists and philosophers who, repudiating the linguistic turn of much twentieth-century philosophy and literary theory, have since 2000 taken up the study of objects or "things" as autonomous and independent of human manipulation. Various referred to as object-oriented ontology or as speculative realism, the new materialism champions a realist philosophy based on objects untethered from discourse and the anthropocentrism of human projects. "I believe it is wrong to deny vitality to nonhuman bodies, forces, and forms," writes Bennett, "and that a careful course of anthropomorphization can help reveal that vitality, even though it resists full translation and exceeds my comprehensive grasp. I believe that encounters with lively matter can chasten my fantasies of human mastery, highlight the common materiality of all that is, expose a wider distribution of agency, and reshape the self and its interests." A political theorist, Bennett has written extensively on the relations between the environment and politics, striving in her published work to counter the disenchantment of modern life by opening up a space for wonder and enchantment, affects that tend to get lost in the rationality that has been the hallmark of literary criticism since the 1980s.

Bennett received a B.A. from Siena College in 1979 and a Ph.D. in political science from the University of Massachusetts in 1986. From 1988 until 2004 she taught at Goucher College. Since 2004 Bennett has been a professor of political science at Johns Hopkins University, and in 2013 she served as director of the School for Criticism and Theory at Cornell University. She has been a fellow of Keble College Oxford (2011), Birkbeck Institute for the Humanities, University of London (2010), University of Nottingham (2007), Australian National University (2000), and the Humanities Research Center, Australian National University (1997). She was a visiting professor at the University of Exeter in 2003. One of the founders of the journal *Theory and Event*, she is currently the editor of *Political Theory: An International Journal of Political Philosophy*.

Bennett is the author of four books. *Unthinking Faith and Enlightenment: Nature and the State in a Post-Hegelian Era* (1987) engages with contemporary debates over the environment and the state. *Thoreau's Nature: Ethics, Politics, and the Wild* (1994) stages a series of dialogues between Thoreau and contemporary theorists to explore his concept of "the Wild," which she defines as an openness to the foreignness of things. *The Enchantment of Modern Life: Attachments, Crossings, and Ethics* (2001) continues this investigation of wonder, attempting to rehabilitate enchantment for a disenchanted modern world. In *Vibrant Matter: A Political Ecology of Things* (2010), from which our selection is drawn, Bennett shifts her attention from the human experience of the world to things themselves. This focus is characteristic of the "new materialism," a phrase that describes the work of a number of philosophers and theorists writing after the turn of the century, including Graham Harman, BRUNO LATOUR, TIMOTHY MORTON, and IAN BOGOST, who share a desire to bring "things-in-themselves" back into philosophical debate to counter the dominance of poststructuralist theories of language and discourse in the last decades of the twentieth century. These theorists share with posthumanists such as DONNA HARAWAY, N. KATHERINE HAYLES, ROSI BRAIDOTTI, and Elizabeth Grosz a desire to decenter the human, and with ecocritics such as Cary Wolfe and ROB NIXON the desire to create more sustainable accounts of the earth to counter environmental depredation.

To understand what is new about the new materialism, it helps to differentiate it from older forms of materialism. KARL MARX posited a material basis for reality, arguing that human consciousness and culture develop out of that material base (the means of production). The materialism of British cultural studies (as championed by RAYMOND WILLIAMS and STUART HALL, for instance) questioned the Marxist claim that the economic base precedes and determines the cultural superstructure, casting the cultural and material as co-constitutive. The new materialists criticize both forms of materialism as "correlationist," a term coined by the philosopher Quentin Meillassoux to refer to systems of thought in which objects have meaning only in relation to human activity and perception.

While all new materialists put objects at the center of their work, they are a diverse lot. Most would agree with Bennett on the "recalcitrance of things" as well as on their "positive, productive power." Rather than understanding objects as "conglomerates of human designs and practices (discourses)," practitioners "highlight the active role of nonhuman materials in public life." Bennett calls these first principles "thing-power." While these tenets are easy enough to articulate, the philosophical debates they engage about the vexed relationships of language to objects, concepts to things, culture to nature, humans to nonhumans, and animate to inanimate have very long and complicated philosophical histories. Bennett revisits discredited forms of vitalism, from the atomism of the Roman poet Lucretius (ca. 94–55 B.C.E.) to the *conatus* that the philosopher BARUCH SPINOZA describes in the seventeenth century as an "active impulsion" or tendency of things to persist to Henry David Thoreau's nineteenth-century concept of the Wild as the "uncanny presence that met him in the Concord woods and atop Mount Ktaadn." She departs from more Heideggerian object-oriented ontologists like Graham Harman, who argues that objects "withdraw," not only from humans but from each other. In such a view, things-in-themselves can be thought but not known, and causation occurs only indirectly. Bennett argues that this way of thinking about objects threatens to "overstate the . . . fixed stability of materiality." She is less interested in objects in and of themselves than in the assemblages they form with other human and nonhuman actants, a distributed form of agency she takes from Latour, as well as from the work of GILLES DELEUZE and FÉLIX GUATTARI. Things act not alone but in assemblages with other things, both human and nonhuman.

In our selection, "The Force of Things," the first chapter of *Vibrant Matter: A Political Ecology of Things*, Bennett lays out her philosophy of "thing-power." Although her primary interest is in relations rather than objects, this essay begins with things as a way to think the "outside" of human experience, "to raise the

volume on the vitality of materiality per se." Thing-power, or "vital materialism," attests to the "strange ability" of ordinary things—a collection of debris glimpsed in a storm drain, a strange and strangely animated toy from a Kafka short story, and a legal "thing," a gunpowder residue sampler—"to act as quasi-agents or forces with trajectories, propensities, or tendencies of their own." Objects have the capacity to "animate, to produce effects dramatic and subtle." We are used to thinking that things get done when agents or actors (usually people) act. Bennett takes the concepts of "actant" from Latour and of "operator" from Deleuze: both terms describe any "thing" that modifies something else through its actions. Neither term implies any necessary intention or teleology; both merely describe action. Bennett uses these terms to introduce a concept of distributive agency that does away with clear distinctions between subject and object, actor and acted upon. Actants can be either human or nonhuman; in any given assemblage, more likely than not they are both. Here Bennett is describing what the new materialists call *flat ontology*: all objects equally exist. Those who embrace flat ontology do not claim that there are no differences between humans and nonhuman objects. The point, which Bennett shares with most new materialists, is instead to move away from a perspective "that places humans at the ontological center or hierarchical apex." While she acknowledges critics who argue that decentering the human could have the deleterious effect of objectifying some humans, she maintains that extending the political sphere beyond the human creates the potential to generate new forms of political action and so encourage a less exploitative stance toward the nonhuman world.

But Bennett's argument is not merely ontological; it is epistemological as well. Like other new materialists, she questions whether humans can ever have direct knowledge of things-in-themselves. Concepts are not objects, and "objects do not go into their concepts without leaving a remainder." THEODOR ADORNO's *Negative Dialectics* (1966) offers Bennett a method for imagining this "nonidentity" (what we cannot know of things-in-themselves). It suggests practices that might "cultivate a more careful attentiveness to the out-side" of human experience. For Bennett, however, Adorno falls short of vital materialism, because for him "objects are always 'entwined' with human subjectivity." Bennett recommends revisiting philosophies such as animism, vitalism, and anthropomorphism. "How," she asks, "would political responses to public problems change were we to take seriously the vitality of (non-human) bodies?" To counter the "mechanism" of most accounts of the natural world, she advocates a "strategic anthropomorphism"—which she defines as the idea that human agency has some echoes in nonhuman nature—as a means to counter the "narcissism" of human domination of the natural world.

While it is possible to see the political stakes of Bennett's argument—once myths about human dominance are exploded, we might have a less exploitative attitude toward the natural world—nothing seems further from literature, with its emphasis on language and artistic (i.e., human) intention. What would a literary criticism based on objects look like? Bennett's analysis of Kafka's "The Cares of a Family Man" (1919) gestures toward a literary criticism based in things. Her reading of the protagonist, an old spool of thread, requires a capacious definition of "object" to respond to the criticism that what the story presents is only a representation of an old spool of thread, a linguistic construct. In a flat ontology, however, objects might be corporeal (e.g., bread, beds, and the moon), incorporeal (e.g., dream visions and unicorns), real (e.g., bubbles, hotels, and dolphins), or imaginary (e.g., vampires, grails, and ghosts). Objects in literary texts, then, would have the same existence as objects in the world. But the most promising approach to an object-oriented literary theory begins by replacing a focus on the *meaning* of the text with attention to the *materiality* of the text. In this view, texts are objects that circulate and interact with other objects, including human objects. As such, they create assemblages that act in the world. Here object-oriented literary theory would intersect with the concepts of thinkers such as Marshall McLuhan and

Friedrich Kittler, whose theoretical work begins with the assumption that the physical medium is the message.

Critics of the new materialism point to a troublesome mischaracterization of the “linguistic turn” in literary theory, a tendency to attribute to poststructuralism a categorical distinction privileging culture over nature and language over matter that its adherents—particularly JACQUES DERRIDA—sought to deconstruct. Furthermore, object-oriented ontologies run the risk of treating language, and indeed representation, as if it were transparent, allowing unmediated access to objects. Such an approach ignores not only the materiality of linguistic signs but also the enmeshment of material objects in signification. Another criticism is that the new materialism replaces critique with enchantment, falling into a kind of anthropomorphism that is simply another way of projecting human meaning onto the physical world. Since objects cannot speak for themselves, object-oriented ontologists will speak for them. Finally, although the decentering of the human may focus more attention on the human exploitation of nonhuman entities, the move to a larger geological scale may obscure the injustices that result from humans oppressing other humans, and perhaps even offer an escape from thinking about those intractable forms of inequality based in gender, race, class, or sexuality. Despite these criticisms, *Vibrant Matter* contributes to several important strands in contemporary theory, including discussions of post-humanism, the reconsideration of social constructivism, and the desire to engage in an ecocriticism that ethically challenges our relation to the nonhuman world.

***Vibrant Matter: A Political Ecology of Things* Keywords:** Aesthetics, Ethics, Phenomenology, Realism, Subjectivity

From Vibrant Matter: A Political Ecology of Things

Chapter 1. The Force of Things

In the wake of Michel Foucault’s death in 1984, there was an explosion of scholarship on the body and its social construction, on the operations of biopower.¹ These genealogical (in the Nietzschean sense) studies exposed the various micropolitical and macropolitical techniques² through which the human body was disciplined, normalized, sped up and slowed down, gendered, sexed, nationalized, globalized, rendered disposable, or otherwise composed. The initial insight was to reveal how cultural practices produce what is experienced as the “natural,” but many theorists also insisted on the *material recalcitrance* of such cultural productions.³ Though gender, for example, was a congealed bodily effect of historical norms and repetitions, its status as artifact does *not* imply an easy susceptibility to

1. Techniques for achieving the subjugations of bodies and the control of populations described by FOUCAULT (1926–1984), French poststructuralist philosopher and historian of ideas [editor’s note—except as indicated, all notes are Bennett’s].

2. The macropolitical pertains to large-scale political structures and forces; the micropolitical, smaller-scale interventions at the level of individuals and groups. Foucault is indebted to the idea of genealogy as a method of analysis developed by the German philosopher FRIEDRICH NIETZSCHE (1844–1900) [editor’s note].

3. There is too much good work in feminist theory, queer studies, and cultural studies to cite here. The three volumes of Michael Feher, Ramona Naddaff, and Nadia Tazi, eds., *Fragments for a*

History of the Human Body, 3 vols. (New York: Zone, 1989), offer one map of the terrain. See also Momin Rahman and Anne Witz, “What Really Matters? The Elusive Quality of the Material in Feminist Thought,” *Feminist Theory* 4.3 (2003): 243–61; JUDITH BUTLER, *Bodies That Matter: On the Discursive Limits of “Sex”* (New York: Routledge, 1993); Judith Butler, “Merely Cultural,” *New Left Review*, no. 227 (1998): 33–44; Wendy Brown, *States of Injury: Power and Freedom in Late Modernity* (Princeton: Princeton University Press, 1995); Kathy E. Ferguson, *Man Question: Visions of Subjectivity in Feminist Theory* (Berkeley: University of California Press, 1993); and Moira Gatens, *Imaginary Bodies: Ethics, Power, and Corporeality* (New York: Routledge, 1996).

human understanding, reform, or control. The point was that cultural forms are themselves powerful, material assemblages with *resistant force*.

In what follows, I, too, will feature the negative power or recalcitrance of things. But I will also seek to highlight a positive, productive power of their own. And, instead of focusing on collectives conceived primarily as conglomerates of *human* designs and practices ("discourse"), I will highlight the active role of *nonhuman* materials in public life. In short, I will try to give voice to a thing-power. As W. J. T. Mitchell notes, "objects are the way things appear to a subject—that is, with a name, an identity, a gestalt or stereotypical template. . . . Things, on the other hand, . . . [signal] the moment when the object becomes the Other, when the sardine can looks back, when the mute idol speaks, when the subject experiences the object as uncanny and feels the need for what Foucault calls 'a metaphysics of the object, or, more exactly, a metaphysics of that never objectifiable depth from which objects rise up toward our superficial knowledge.'"⁴

THING-POWER, OR THE OUT-SIDE

Spinoza ascribes to bodies a peculiar vitality: "Each thing [*res*], as far as it can by its own power, strives [*conatur*] to persevere in its own being."⁵ *Conatus* names an "active impulsion" or trending tendency to persist.⁶ Although Spinoza distinguishes the human body from other bodies by noting that its "virtue" consists in "nothing other than to live by the guidance of reason,"⁷ every nonhuman body shares with every human body a conative nature (and thus a "virtue" appropriate to its material configuration). *Conatus* names a power present in *every* body: "Any thing whatsoever, whether it be more perfect or less perfect, will always be able to persist in existing with that same force whereby it begins to exist, so that in this respect all things are equal."⁸ Even a falling stone, writes Spinoza, "is endeavoring, as far as in it lies, to continue in its motion."⁹ As Nancy Levene notes, "Spinoza continually stresses this continuity between human and other beings," for "not only do human beings not form a separate imperium unto themselves; they do not even command the imperium, nature, of which they are a part."¹

6. Freya Mathews, *For Love of Matter: A Contemporary Panpsychism* (Albany: State University of New York, 2003), 48.

7. Spinoza, *Ethics*, pt. 4, proposition 37, scholium 1.

8. *Ibid.*, 4, preface.

9. Spinoza links, in this famous letter, his theory of *conatus* to a critique of the notion of human free will: "Now this stone, since it is conscious only of its endeavor [*conatus*] and is not at all indifferent, will surely think that it is completely free, and that it continues in motion for no other reason than it so wishes. This, then, is that human freedom which all men boast of possessing, and which consists solely in this, that men are conscious of their desire and unaware of the causes by

which they are determined" (Spinoza, *The Letters*, trans. Samuel Shirley [Indianapolis: Hackett, 1995], epistle 58). Hasana Sharp argues that the analogy between humans and stones "is not as hyperbolic as it seems at first glance. For Spinoza, all beings, including stones, . . . include a power of thinking that corresponds exactly to the power of their bodies to be disposed in different ways, to act and be acted upon. . . . Likewise every being, to the extent that it preserves its integrity amidst infinitely many other beings, as a stone surely does, is endowed with . . . a desire to . . . preserve and enhance its life to the extent that its nature allows" (Hasana Sharp, "The Force of Ideas in Spinoza," *Political Theory* 35, no. 6 [2007], 740).

1. Nancy K. Levene, *Spinoza's Revelation: Religion, Democracy, and Reason* (Cambridge: Cambridge University Press, 2004), 3. Yitzhak Melamed goes further to say that "since the doctrine of the *conatus* . . . provide[s] the foundations for Spinoza's moral theory, it seems likely that we could even construct a moral theory for hippopotamuses and rocks" (Yitzhak Melamed, "Spinoza's Anti-Humanism," *The Rationalists*, ed. C. Fraenkel, D. Perinetti, and J. Smith [New York: Kluwer, 2011], 161 n59).

The idea of thing-power bears a family resemblance to Spinoza's conatus, as well as to what Henry David Thoreau called the Wild or that uncanny presence that met him in the Concord woods and atop Mount Katahdin² and also resided in/as that monster called the railroad and that alien called his Genius. Wildness was a not-quite-human force that addled and altered human and other bodies. It named an irreducibly strange dimension of matter, an *out-side*. Thing-power is also kin to what Hent de Vries, in the context of political theology, called "the absolute" or that "intangible and imponderable" recalcitrance.³ Though the absolute is often equated with God, especially in theologies emphasizing divine omnipotence or radical alterity, de Vries defines it more open-endedly as "that which tends to loosen its ties to existing contexts."⁴ This definition makes sense when we look at the etymology of *absolute*: *ab* (off) + *solver* (to loosen). The absolute is that which is *loosened off* and on the loose. When, for example, a Catholic priest performs the act of ab-solution, he is the vehicle of a divine agency that loosens sins from their attachment to a particular soul: sins now stand apart, displaced foreigners living a strange, impersonal life of their own. When de Vries speaks of the absolute, he thus tries to point to what no speaker could possibly see, that is, a some-thing that is not an object of knowledge, that is detached or radically free from representation, and thus no-thing at all. Nothing but the force or effectivity of the detachment, that is.

De Vries's notion of the absolute, like the thing-power I will seek to express, seeks to acknowledge that which refuses to dissolve completely into the milieu of human knowledge. But there is also a difference in emphasis. De Vries conceives this exteriority, this out-side, primarily as an epistemological limit: in the presence of the absolute, we cannot *know*. It is from human thinking that the absolute has detached; the absolute names the limits of *intelligibility*. De Vries's formulations thus give priority to humans as knowing bodies, while tending to overlook things and what *they* can do. The notion of thing-power aims instead to attend to the it as actant; I will try, impossibly, to name the moment of independence (from subjectivity) possessed by things, a moment that must be there, since things do in fact affect other bodies, enhancing or weakening their power. I will shift from the language of epistemology to that of ontology, from a focus on an elusive recalcitrance hovering between immanence and transcendence (the absolute) to an active, earthy, not-quite-human capaciousness (vibrant matter). I will try to give voice to a vitality intrinsic to materiality, in the process absolving matter from its long history of attachment to automatism or mechanism.⁵

The strangely vital things that will rise up to meet us in this chapter—a dead rat, a plastic cap, a spool of thread—are characters in a speculative

2. Katahdin, the highest mountain in Maine. The American poet and essayist Thoreau (1817–1862) climbed it in 1840, recording his ascent in "Katahdin and the Maine Woods" (1848; revised and expanded in *The Maine Woods*, 1864). Concord woods: where Thoreau lived for two years by the shore of Walden Pond, as he describes in *Walden, or Life in the Woods* (1854) [editor's note].

3. Hent de Vries, introduction to *Political Theologies: Public Religions in a Post-secular World*, ed. Hent de Vries and Lawrence Sullivan, 1–88 (New York: Fordham University Press, 2006), 42. [De Vries (b. 1958), Dutch philosopher—editor's

note.]

4. *Ibid.*, 6.

5. De Vries seems to affirm this association when he wonders whether Baruch Spinoza's picture of interacting, conatus-driven *bodies* could possibly account for the creative emergence of the new: "It would seem that excess, gift, the event . . . have no place here" (de Vries, introduction to *Political Theologies*, 22). Why? Because the only plausible locus of creativity is, for de Vries, one that is "quasi-spiritual," hence Spinoza's second attribute of God/Nature, that is, *thought* or ideas. But what if materiality itself harbors creative vitality?

onto-story.⁶ The tale hazards an account of materiality, even though it is both too alien and too close to see clearly and even though linguistic means prove inadequate to the task. The story will highlight the extent to which human being and thinghood overlap, the extent to which the us and the it slip-slide into each other. One moral of the story is that we are also nonhuman and that things, too, are vital players in the world. The hope is that the story will enhance receptivity to the impersonal life that surrounds and infuses us, will generate a more subtle awareness of the complicated web of dissonant connections between bodies, and will enable wiser interventions into that ecology.

THING-POWER I: DEBRIS

On a sunny Tuesday morning on 4 June in the grate over the storm drain to the Chesapeake Bay in front of Sam's Bagels on Cold Spring Lane in Baltimore, there was:

one large men's black plastic work glove
 one dense mat of oak pollen
 one unblemished dead rat
 one white plastic bottle cap
 one smooth stick of wood

Glove, pollen, rat, cap, stick. As I encountered these items, they shimmied back and forth between debris and thing—between, on the one hand, stuff to ignore, except insofar as it betokened human activity (the workman's efforts, the litterer's toss, the rat-poisoner's success), and, on the other hand, stuff that commanded attention in its own right, as existents in excess of their association with human meanings, habits, or projects. In the second moment, stuff exhibited its thing-power: it issued a call, even if I did not quite understand what it was saying. At the very least, it provoked affects in me: I was repelled by the dead (or was it merely sleeping?) rat and dismayed by the litter, but I also felt something else: a nameless awareness of the impossible singularity of *that* rat, *that* configuration of pollen, *that* otherwise utterly banal, mass-produced plastic water-bottle cap.

I was struck by what Stephen Jay Gould called the "excruciating complexity and intractability" of nonhuman bodies,⁷ but, in being *struck*, I realized that the capacity of these bodies was not restricted to a passive "intractability" but also included the ability to make things happen, to produce effects. When the materiality of the glove, the rat, the pollen, the bottle cap, and the stick started to shimmer and spark, it was in part because of the contingent tableau that they formed with each other, with the street, with the weather that morning, with me. For had the sun not glinted on the black glove, I might not have seen the rat; had the rat not been there, I might not have noted the bottle cap, and so on. But they *were* all there just as they were, and so I caught a glimpse of an energetic vitality inside each of these things, things that I generally conceived as inert. In this assemblage, *objects*

6. That is, a story of ontology, the branch of philosophy concerned with the nature of being [editor's note].

7. Stephen J. Gould, *Structure of Evolutionary*

Theory (Cambridge: Harvard University Press, 2002), 1338. [Gould (1941–2002), American evolutionary biologist and science writer—editor's note.]

appeared as *things*, that is, as vivid entities not entirely reducible to the contexts in which (human) subjects set them, never entirely exhausted by their semiotics. In my encounter with the gutter on Cold Spring Lane, I glimpsed a culture of things irreducible to the culture of objects.⁸ I achieved, for a moment, what Thoreau had made his life's goal: to be able, as Thomas Dumm puts it, "to be surprised by what we see."⁹

This window onto an eccentric out-side was made possible by the fortuity of that particular assemblage, but also by a certain anticipatory readiness on my in-side, by a perceptual style open to the appearance of thing-power. For I came on the glove-pollen-rat-cap-stick with Thoreau in my head, who had encouraged me to practice "the discipline of looking always at what is to be seen"; with Spinoza's claim that all things are "animate, albeit in different degrees"; and with Maurice Merleau-Ponty, whose *Phenomenology of Perception* had disclosed for me "an immanent or incipient significance in the living body [which] extends, . . . to the whole sensible world" and which had shown me how "our gaze, prompted by the experience of our own body, will discover in all other 'objects' the miracle of expression."¹

As I have already noted, the items on the ground that day were vibratory— at one moment disclosing themselves as dead stuff and at the next as live presence: junk, then claimant; inert matter, then live wire. It hit me then in a visceral way how American materialism, which requires buying ever-increasing numbers of products purchased in ever-shorter cycles, is *antimateriality*.² The sheer volume of commodities, and the hyperconsumptive necessity of junking them to make room for new ones, conceals the vitality of matter. In *The Meadowlands*, a late twentieth-century, Thoreauian travelogue of the New Jersey garbage hills outside Manhattan, Robert Sullivan describes the vitality that persists even in trash:

The . . . garbage hills are alive. . . . there are billions of microscopic organisms thriving underground in dark, oxygen-free communities. . . . After having ingested the tiniest portion of leftover New Jersey or New York, these cells then exhale huge underground plumes of carbon dioxide and of warm moist methane, giant stillborn tropical winds that seep through the ground to feed the Meadowlands' fires, or creep up into the atmosphere, where they eat away at the . . . ozone. . . . One afternoon I . . . walked along the edge of a garbage hill, a forty-foot drumlin of compacted trash that owed its topography to the waste of

8. On the effectivity of trash, see the fascinating Tim Edensor, "Waste Matter: The Debris of Industrial Ruins and the Disordering of the Material World," *Journal of Material Culture* 10, no. 3 (2005): 311–32; and Gay Hawkins, *The Ethics of Waste: How We Relate to Rubbish* (Sydney: University of New South Wales Press, 2006).

9. See Thomas L. Dumm, *Politics of the Ordinary* (New York: New York University Press, 1999), 7, for a subtle reckoning with the "obscure power of the ordinary." My attempt to speak on behalf of "things" is a companion project to Dumm's attempt to mine the ordinary as a potential site of resistance to conventional and normalizing practices.

1. Thoreau, *The Writings of Henry David Thoreau*, ed. J. Lyndon Shanley (Princeton: Princeton University Press, 1973), 111 (Thoreau trained his

gaze on things with the faith that "the perception of surfaces will always have the effect of miracle to a sane sense" [Thoreau, *The Journal of Henry David Thoreau*, vol. 2, ed. Bradford Torrey and Francis H. Allen (New York: Houghton Mifflin, 1949), 313]; Spinoza, *Ethics*, pt. 2, proposition 13, scholium 72; Maurice Merleau-Ponty, *The Phenomenology of Perception*, trans. Colin Smith (New York: Routledge and Kegan Paul, 1981), 197. [Merleau-Ponty (1908–1961), French philosopher of phenomenology, whose work focused primarily on the body as a site of knowledge— editor's note.]

the city of Newark. . . . There had been rain the night before, so it wasn't long before I found a little leachate seep, a black ooze trickling down the slope of the hill, an espresso of refuse. In a few hours, this stream would find its way down into the . . . groundwater of the Meadowlands; it would mingle with toxic streams. . . . But in this moment, here at its birth, . . . this little seep was pure pollution, a pristine stew of oil and grease, of cyanide and arsenic, of cadmium, chromium, copper, lead, nickel, silver, mercury, and zinc. I touched this fluid—my fingertip was a bluish caramel color—and it was warm and fresh. A few yards away, where the stream collected into a benzene-scented pool, a mallard swam alone.³

Sullivan reminds us that a vital materiality can never really be thrown “away,” for it continues its activities even as a discarded or unwanted commodity. For Sullivan that day, as for me on that June morning, thing-power rose from a pile of trash. Not Flower Power, or Black Power, or Girl Power,⁴ but *Thing-Power*: the curious ability of inanimate things to animate, to act, to produce effects dramatic and subtle.

THING-POWER II: ODRADEK'S NONORGANIC LIFE

A dead rat, some oak pollen, and a stick of wood stopped me in my tracks. But so did the plastic glove and the bottle cap: thing-power arises from bodies inorganic as well as organic. In support of this contention, Manuel De Landa notes how even inorganic matter can “self-organize”:

Inorganic matter-energy has a wider range of alternatives for the generation of structure than just simple phase transitions. . . . In other words, even the humblest forms of matter and energy have the potential for *self-organization* beyond the relatively simple type involved in the creation of crystals. There are, for instance, those coherent waves called solitons which form in many different types of materials, ranging from ocean waters (where they are called tsunamis) to lasers. Then there are . . . stable states (or attractors), which can sustain coherent cyclic activity. . . . Finally, and unlike the previous examples of nonlinear self-organization where true innovation cannot occur, there [are] . . . the different combinations into which entities derived from the previous processes (crystals, coherent pulses, cyclic patterns) may enter. When put together, these forms of spontaneous structural generation suggest that inorganic matter is much more variable and creative than we ever imagined. And this insight into matter's inherent creativity needs to be fully incorporated into our new materialist philosophies.⁵

I will in chapter 4 try to wrestle philosophically with the idea of impersonal or nonorganic life, but here I would like to draw attention to a literary

4. Slogans of different U.S. groups: “Flower Power” was associated with nonviolent protesters against the Vietnam War and with the counter-culture in the mid- and late 1960s; “Black Power” emphasized racial pride and self-determination

among African Americans in the late 1960s and early 1970s; and “Girl Power,” celebrating female empowerment, began in punk culture in the early 1990s and spread to wider popular culture over the next decade [editor's note].

5. Manuel De Landa, *A Thousand Years of Non-linear History* (New York: Zone, 1997), 16.

dramatization of this idea: to Odradek, the protagonist of Franz Kafka's⁶ short story "Cares of a Family Man." Odradek is a spool of thread who/that can run and laugh; this animate wood exercises an impersonal form of vitality. De Landa speaks of a "spontaneous structural generation" that happens, for example, when chemical systems at far-from-equilibrium states inexplicably choose one path of development rather than another. Like these systems, the material configuration that is Odradek straddles the line between inert matter and vital life.

For this reason Kafka's narrator has trouble assigning Odradek to an ontological category. Is Odradek a cultural artifact, a tool of some sort? Perhaps, but if so, its purpose is obscure: "It looks like a flat star-shaped spool of thread, and indeed it does seem to have thread wound upon it; to be sure, these are only old, broken-off bits of thread, knotted and tangled together, of the most varied sorts and colors. . . . One is tempted to believe that the creature once had some sort of intelligible shape and is now only a broken-down remnant. Yet this does not seem to be the case; . . . nowhere is there an unfinished or unbroken surface to suggest anything of the kind: the whole thing looks senseless enough, but in its own way perfectly finished."⁷

Or perhaps Odradek is more a subject than an object—an organic creature, a little person? But if so, his/her/its embodiment seems rather unnatural: from the center of Odradek's star protrudes a small wooden crossbar, and "by means of this latter rod . . . and one of the points of the star . . . , the whole thing can stand upright as if on two legs."⁸

On the one hand, like an active organism, Odradek appears to move deliberately (he is "extraordinarily nimble") and to speak intelligibly: "He lurks by turns in the garret, the stairway, the lobbies, the entrance hall. Often for months on end he is not to be seen; then he has presumably moved into other houses; but he always comes faithfully back to our house again. Many a time when you go out of the door and he happens just to be leaning directly beneath you against the banisters you feel inclined to speak to him. Of course, you put no difficult questions to him, you treat him—he is so diminutive that you cannot help it—rather like a child. 'Well, what's your name?' you ask him. 'Odradek,' he says. 'And where do you live?' 'No fixed abode,' he says and laughs." And yet, on the other hand, like an inanimate object, Odradek produced a so-called laughter that "has no lungs behind it" and "sounds rather like the rustling of fallen leaves. And that is usually the end of the conversation. Even these answers are not always forthcoming; often he stays mute for a long time, as wooden as his appearance."⁹

Wooden yet lively, verbal yet vegetal, alive yet inert, Odradek is ontologically multiple.¹ He/it is a vital materiality and exhibits what Gilles Deleuze has described as the persistent "hint of the animate in plants, and of the vegetable in animals."² The late-nineteenth-century Russian scientist Vladimir Ivanovich Vernadsky, who also refused any sharp distinction

6. Austrian writer who lived most of his life in Prague and wrote in German (1883–1924); "Cares of a Family Man" was written between 1914 and 1917 and first published in 1919 [editor's note].

between life and matter, defined organisms as “special, distributed forms of the common mineral, water. . . . Emphasizing the continuity of watery life and rocks, such as that evident in coal or fossil limestone reefs, Vernadsky noted how these apparently inert strata are ‘traces of bygone biospheres.’”³ Odradek exposes this continuity of watery life and rocks; he/it brings to the fore the becoming of things.

THING-POWER III: LEGAL ACTANTS

I may have met a relative of Odradek while serving on a jury, again in Baltimore, for a man on trial for attempted homicide. It was a small glass vial with an adhesive-covered metal lid: the Gunpowder Residue Sampler. This object/witness had been dabbed on the accused’s hand hours after the shooting and now offered to the jury its microscopic evidence that the hand had either fired a gun or been within three feet of a gun firing. Expert witnesses showed the sampler to the jury several times, and with each appearance it exercised more force, until it became vital to the verdict. This composite of glass, skin cells, glue, words, laws, metals, and human emotions had become an actant. *Actant*, recall, is Bruno Latour’s term for a source of action; an actant can be human or not, or, most likely, a combination of both. Latour defines it as “something that acts or to which activity is granted by others. It implies no special motivation of human individual actors, nor of humans in general.”⁴ An actant is neither an object nor a subject but an “intervener,”⁵ akin to the Deleuzian “quasi-causal operator.”⁶ An operator is that which, by virtue of its particular location in an assemblage and the fortuity of being in the right place at the right time, makes the difference, makes things happen, becomes the decisive force catalyzing an event.

Actant and *operator* are substitute words for what in a more subject-centered vocabulary are called agents. Agentic capacity is now seen as differentially distributed across a wider range of ontological types. This idea is also expressed in the notion of “deodand,” a figure of English law from about 1200 until it was abolished in 1846. In cases of accidental death or injury to a human, the nonhuman actant, for example, the carving knife that fell into human flesh or the carriage that trampled the leg of a pedestrian—became deodand (literally, “that which must be given to God”). In recognition of its peculiar efficacy (a power that is less masterful than agency but more active than recalcitrance), the deodand, a materiality “suspended between human and thing,”⁷ was surrendered to the crown to be used (or sold) to compensate for the harm done. According to William Pietz, “any culture must establish some procedure of compensation, expiation, or

7. Daniel Tiffany, “Lyric Substance: On Riddles,

Materialism, and Poetic Obscurity,” *Critical Inquiry* 28, no. 1 (2001): 74. Tiffany draws an analogy between riddles and materiality per se: both are suspended between subject and object and engage in “transubstantiations” from the organic to the inorganic and from the earthly to the divine. In developing his materialism out of an analysis of literary forms, Tiffany challenges the long-standing norm that regards science as “the sole arbiter in the determination of matter” (75). He wants to pick “the lock that currently bars the literary critic from addressing the problem of material substance” (77).

punishment to settle the debt created by unintended human deaths whose direct cause is not a morally accountable person, but a nonhuman material object. This was the issue thematized in public discourse by . . . the law of deodand.”⁸

There are of course differences between the knife that impales and the man impaled, between the technician who dabs the sampler and the sampler, between the array of items in the gutter of Cold Spring Lane and me, the narrator of their vitality. But I agree with John Frow that these differences need “to be flattened, read horizontally as a juxtaposition rather than vertically as a hierarchy of being. It’s a feature of our world that we can and do distinguish . . . things from persons. But the sort of world we live in makes it constantly possible for these two sets of kinds to exchange properties.”⁹ And to note this fact explicitly, which is also to begin to *experience* the relationship between persons and other materialities more horizontally, is to take a step toward a more ecological sensibility.

THING-POWER IV: WALKING, TALKING MINERALS

Odradek, a gunpowder residue sampler, and some junk on the street can be fascinating to people and can thus seem to come alive. But is this evanescence a property of the stuff or of people? Was the thing-power of the debris I encountered but a function of the subjective and intersubjective connotations, memories, and affects that had accumulated around my ideas of these items? Was the real agent of my temporary immobilization on the street that day *humanity*, that is, the cultural meanings of “rat,” “plastic,” and “wood” in conjunction with my own idiosyncratic biography? It could be. But what if the swarming activity inside my head was *itself* an instance of the vital materiality that also constituted the trash?

I have been trying to raise the volume on the vitality of materiality per se, pursuing this task so far by focusing on nonhuman bodies, by, that is, depicting them as actants rather than as objects. But the case for matter as active needs also to readjust the status of human actants: not by denying humanity’s awesome, awful powers, but by presenting these powers as evidence of our own constitution as vital materiality. In other words, human power is itself a kind of thing-power. At one level this claim is uncontroversial: it is easy to acknowledge that humans are composed of various material parts (the minerality of our bones, or the metal of our blood, or the electricity of our neurons). But it is more challenging to conceive of these materials as lively and self-organizing,¹ rather than as passive or mechanical means under the direction of something nonmaterial, that is, an active soul or mind.

Perhaps the claim to a vitality intrinsic to matter itself becomes more plausible if one takes a long view of time. If one adopts the perspective of evolutionary rather than biographical time, for example, a mineral efficacy becomes visible. Here is De Landa’s account of the emergence of our bones: “Soft tissue (gels and aerosols, muscle and nerve) reigned supreme until

8. William Pietz, “Death of the Deodand: Accursed Objects and the Money Value of Human Life,” “The Abject,” ed. Francesco Pellizzi, special issue, *Res*, no. 31 (1997): 97–108.

no. 1 (2001): 283.

1. Creating order in a disorganized system out of the interactions of smaller component parts, as in crystallization or as in animals’ swarming (a term from the sciences) [editor’s note].

5000 million years ago. At that point, some of the conglomerations of fleshy matter-energy that made up life underwent a sudden *mineralization*, and a new material for constructing living creatures emerged: bone. It is almost as if the mineral world that had served as a substratum for the emergence of biological creatures was reasserting itself.”² Mineralization names the creative agency by which bone was produced, and bones then “made new forms of movement control possible among animals, freeing them from many constraints and literally setting them into motion to conquer every available niche in the air, in water, and on land.”³ In the long and slow time of evolution, then, mineral material appears as the mover and shaker, the active power, and the human beings, with their much-lauded capacity for self-directed action, appear as *its* product.⁴ Vernadsky seconds this view in his description of humankind as a particularly potent mix of minerals: “What struck [Vernadsky] most was that the material of Earth’s crust has been packaged into myriad moving beings whose reproduction and growth build and break down matter on a global scale. People, for example, redistribute and concentrate oxygen . . . and other elements of Earth’s crust into two-legged, upright forms that have an amazing propensity to wander across, dig into and in countless other ways alter Earth’s surface. *We are walking, talking minerals.*”⁵

Kafka, De Landa, and Vernadsky suggest that human individuals are themselves composed of vital materials, that our powers are thing-power. These vital materialists do not claim that there are no differences between humans and bones, only that there is no necessity to describe these differences in a way that places humans at the ontological center or hierarchical apex. Humanity can be distinguished, instead, as Jean-François Lyotard suggests, as a *particularly rich and complex* collection of materials: “Humankind is taken for a complex material system; consciousness, for an effect of language; and language for a highly complex material system.”⁶ Richard Rorty similarly defines humans as very complex animals, rather than as animals “with an extra added ingredient called ‘intellect’ or ‘the rational soul.’”⁷

The fear is that in failing to affirm human uniqueness, such views authorize the treatment of people as mere things; in other words, that a strong distinction between subjects and objects is needed to prevent the instrumentalization of humans. Yes, such critics continue, objects possess a certain power of action (as when bacteria or pharmaceuticals enact hostile or symbiotic projects inside the human body), and yes, some subject-on-subject objectifications are permissible (as when persons consent to use and be used as a means to sexual pleasure), but the *ontological* divide between persons and things must remain lest one have no *moral* grounds for privileging man over germ or for condemning pernicious forms of human-on-human instrumentalization (as when powerful humans exploit illegal, poor, young, or otherwise weaker humans).

2. De Landa, *A Thousand Years of Nonlinear History*, 26; my emphasis.

3. *Ibid.*, 26–27.

4. Although, as I will argue in chapter 2, it is more accurate to say that this efficacy belongs less to minerals alone than to the combined activities of a variety of bodies and forces acting as an agentic assemblage.

5. Margulis and Sagan, *What Is Life?*, 49; my emphasis.

6. Jean-François Lyotard, *Postmodern Fables*, trans. Georges van den Abbeele (Minneapolis: University of Minnesota Press, 1997), 98. [LYOTARD (1924–1998), French postmodernist philosopher—editor’s note.]

7. Richard Rorty, *Rorty and Pragmatism: The Philosopher Responds to His Critics*, ed. Herman J. Saatkamp Jr. (Nashville, Tenn.: Vanderbilt University Press, 1995), 199. [Rorty (1931–2007), American pragmatist philosopher—editor’s note.]

How can the vital materialist respond to this important concern? First, by acknowledging that the framework of subject versus object has indeed at times worked to prevent or ameliorate human suffering and to promote human happiness or well-being. Second, by noting that its successes come at the price of an instrumentalization of nonhuman nature that can itself be unethical and can itself undermine long-term human interests. Third, by pointing out that the Kantian imperative to treat humanity always as an end-in-itself and never merely as a means⁸ does not have a stellar record of success in preventing human suffering or promoting human well-being; it is important to raise the question of its actual, historical efficacy in order to open up space for forms of ethical practice that do not rely upon the image of an intrinsically *hierarchical* order of things. Here the materialist speaks of promoting healthy and enabling instrumentalizations, rather than of treating people as ends-in-themselves, because to face up to the compound nature of the human self is to find it difficult even to make sense of the notion of a single end-in-itself. What instead appears is a swarm of competing ends being pursued simultaneously in each individual, some of which are healthy to the whole, some of which are not. Here the vital materialist, taking a cue from Nietzsche's and Spinoza's ethics, favors physiological over moral descriptors because she fears that moralism can itself become a source of unnecessary human suffering.⁹

We are now in a better position to name that other way to promote human health and happiness: *to raise the status of the materiality of which we are composed*. Each human is a heterogeneous compound of wonderfully vibrant, dangerously vibrant, matter. If matter itself is lively, then not only is the difference between subjects and objects minimized, but the status of the shared materiality of all things is elevated. All bodies become more than mere objects, as the thing-powers of resistance and protean agency are brought into sharper relief. Vital materialism would thus set up a kind of safety net for those humans who are now, in a world where Kantian morality is the standard, routinely made to suffer because they do not conform to a particular (Euro-American, bourgeois, theocentric, or other) model of personhood. The ethical aim becomes to distribute value more generously, to bodies as such. Such a newfound attentiveness to matter and its powers will not solve the problem of human exploitation or oppression, but it can inspire a greater sense of the extent to which all bodies are kin in the sense of inextricably enmeshed in a dense network of relations. And in a knotted world of vibrant matter, to harm one section of the web may very well be to harm oneself. Such an enlightened or expanded notion of self-interest is *good for humans*. As I will argue further in chapter 8, a vital materialism does not reject self-interest as a motivation for ethical behavior, though it does seek to cultivate a broader definition of self and of interest.

8. In his *Groundwork of the Metaphysics of Morals* (1785), the German philosopher IMMANUEL KANT (1724–1804) declared as a fundamental moral principle that humanity, whether in one's own person or in any other, must never be treated simply as a means to an end [editor's note].

9. I will also argue, at the end of chapter 2, that

the efficacy of moralism in addressing social problems is overrated. The antimoralism that is one of the implications of a vital materialism is a dangerous game to play, and not one I wish to play out to its logical extreme. I aim not to eliminate the practice of moral judgment but to increase the friction against the moralistic reflex.

THING-POWER V: THING-POWER AND ADORNO'S NONIDENTITY

But perhaps the very idea of thing-power or vibrant matter claims too much: to know more than it is possible to know. Or, to put the criticism in Theodor Adorno's¹ terms, does it exemplify the violent hubris of Western philosophy, a tradition that has consistently failed to mind the gap between concept and reality, object and thing? For Adorno this gap is ineradicable, and the most that can be said with confidence about the thing is that it eludes capture by the concept, that there is always a "nonidentity" between it and any representation. And yet, as I shall argue, even Adorno continues to seek a way to access—however darkly, crudely, or fleetingly—this out-side. One can detect a trace of this longing in the following quotation from *Negative Dialectics*: "What we may call the thing itself is not positively and immediately at hand. He who wants to know it must think more, not less."² Adorno clearly rejects the possibility of any direct, sensuous apprehension ("the thing itself is not positively and immediately at hand"), but he does not reject all modes of encounter, for there is one mode, "thinking more, not less," that holds promise. In this section I will explore some of the affinities between Adorno's nonidentity and my thing-power and, more generally, between his "specific materialism" (ND, 203) and a vital materialism.

Nonidentity is the name Adorno gives to that which is not subject to knowledge but is instead "heterogeneous" to all concepts. This elusive force is not, however, wholly outside human experience, for Adorno describes nonidentity as a presence that acts upon us: we knowers are haunted, he says, by a painful, nagging feeling that something's being forgotten or left out. This discomfiting sense of the inadequacy of representation remains no matter how refined or analytically precise one's concepts become. "Negative dialectics" is the method Adorno designs to teach us how to *accentuate* this discomforting experience and how to give it a meaning. When practiced correctly, negative dialectics will render the static buzz of nonidentity into a powerful reminder that "objects do not go into their concepts without leaving a remainder" and thus that life will always exceed our knowledge and control. The ethical project par excellence, as Adorno sees it, is to keep remembering this and to learn how to accept it. Only then can we stop raging against a world that refuses to offer us the "reconciliation" that we, according to Adorno, crave (ND, 5).³

For the vital materialist, however, the starting point of ethics is less the acceptance of the impossibility of "reconciliation" and more the recognition of human participation in a shared, vital materiality. We *are* vital materiality and we are surrounded by it, though we do not always see it that way. The ethical task at hand here is to cultivate the ability to discern nonhuman vitality, to become perceptually open to it. In a parallel manner, Adorno's "specific materialism" also recommends a set of practical techniques for

1. German philosopher and cultural critic (1903–1969); see above [editor's note].

2. Theodor Adorno, *Negative Dialectics*, trans. E. B. Ashton (New York: Continuum, 1973), 189. Further references to this title will be made in the running text as ND.

3. Romand Coles offers a sustained interpretation of Adorno as an ethical theorist: negative dialectics is a "morality of thinking" that can foster gen-

erosity toward others and toward the nonidentical in oneself. Coles argues that Adorno seeks a way to acknowledge and thereby mitigate the violence done by conceptualization and the suffering imposed by the quest to know and control all things. Romand Coles, *Rethinking Generosity: Critical Theory and the Politics of Caritas* (Ithaca: Cornell University Press, 1997), chap. 2.

training oneself to better detect and accept nonidentity. Negative dialectics is, in other words, the pedagogy inside Adorno's materialism.

This pedagogy includes intellectual as well as aesthetic exercises. The intellectual practice consists in the attempt to make the very process of conceptualization an explicit object of thought. The goal here is to become more cognizant that conceptualization automatically obscures the inadequacy of its concepts. Adorno believes that critical reflection can expose this cloaking mechanism and that the exposure will intensify the felt presence of nonidentity. The treatment is homeopathic:⁴ we must develop a *concept* of nonidentity to cure the hubris of conceptualization. The treatment can work because, however distorting, concepts still "refer to nonconceptualities." This is "because concepts on their part are moments of the reality that requires their formation" (ND, 12). Concepts can never provide a clear view of things in themselves, but the "discriminating man," who "in the matter and its concept can distinguish even the infinitesimal, that which escapes the concept" (ND, 45), can do a better job of gesturing toward them. Note that the discriminating man (adept at negative dialectics) both subjects his conceptualizations to second-order reflection and pays close *aesthetic* attention to the object's "qualitative moments" (ND, 43), for these open a window onto nonidentity.

A second technique of the pedagogy is to exercise one's utopian imagination. The negative dialectician should imaginatively re-create what has been obscured by the distortion of conceptualization: "The means employed in negative dialectics for the penetration of its hardened objects is possibility—the possibility of which their reality has cheated the objects and which is nonetheless visible in each one" (ND, 52). Nonidentity resides in those denied possibilities, in the invisible field that surrounds and infuses the world of objects.

A third technique is to admit a "playful element" into one's thinking and to be willing to play the fool. The negative dialectician "knows how far he remains from" knowing nonidentity, "and yet he must always talk as if he had it entirely. This brings him to the point of clowning. He must not deny his clownish traits, least of all since they alone can give him hope for what is denied him" (ND, 14).

The self-criticism of conceptualization, a sensory attentiveness to the qualitative singularities of the object, the exercise of an unrealistic imagination, and the courage of a clown: by means of such practices one might replace the "rage" against nonidentity with a respect for it, a respect that chastens our will to mastery. That rage is for Adorno the driving force behind interhuman acts of cruelty and violence. Adorno goes even further to suggest that negative dialectics can transmute the anguish of nonidentity into a will to ameliorative political action: the thing thwarts our desire for conceptual and practical mastery and this refusal angers us; but it also offers us an ethical injunction, according to which "suffering ought not to be, . . . things should be different. Woe speaks: 'Go.' Hence the convergence of specific materialism with criticism, with social change in practice" (ND, 202–3).⁵

4. That is, like the treatment of illnesses that uses a highly diluted dose of the substance that causes particular symptoms to cure those symptoms [editor's note].

5. Adorno also describes this pain as the "guilt of a life which purely as a fact will strangle other life" (ND, 364). Coles calls it the "ongoing discomfort that solicits our critical efforts" (Coles,

Rethinking Generosity, 89). Adorno does not elaborate or defend his claim that the pain of conceptual failure can provoke or motivate an ethical will to redress the pain of social injustice. But surely some defense is needed, for history has shown that even if the pangs of nonidentity engender in the self the idea that "things should be different," this moral awakening does not

Adorno founds his ethics on an intellectual and aesthetic attentiveness that, though it will always fail to see its object clearly, nevertheless has salutary effects on the bodies straining to see. Adorno willingly plays the fool by questioning after what I would call thing-power, but which he calls “the preponderance of the object” (ND, 183). Humans encounter a world in which nonhuman materialities have power, a power that the “bourgeois I,” with its pretensions to autonomy, denies.⁶ It is at this point that Adorno identifies negative dialectics as a materialism: it is only “by passing to the object’s preponderance that dialectics is rendered materialistic” (ND, 192).

Adorno dares to affirm something like thing-power, but he does not want to play the fool for *too* long. He is quick—too quick from the point of view of the vital materialist—to remind the reader that objects are always “entwined” with human subjectivity and that he has no desire “to place the object on the orphaned royal throne once occupied by the subject. On that throne the object would be nothing but an idol” (ND, 181). Adorno is reluctant to say too much about nonhuman vitality, for the more said, the more it recedes from view. Nevertheless, Adorno does try to attend somehow to this reclusive reality, by means of a negative dialectics. Negative dialectics has an affinity with negative theology: negative dialectics honors nonidentity as one would honor an unknowable god; Adorno’s “specific materialism” includes the possibility that there is divinity behind or within the reality that withdraws. Adorno rejects any naive picture of transcendence, such as that of a loving God who designed the world (“metaphysics cannot rise again” [ND, 404] after Auschwitz⁷), but the desire for transcendence cannot, he believes, be eliminated: “Nothing could be experienced as truly alive if something that transcends life were not promised also. . . . The transcendent is, and it is not” (ND, 375).⁸ Adorno honors nonidentity as an *absent* absolute, as a messianic promise.⁹

always result in “social change in practice.” In other words, there seems to be a second gap, alongside the one between concept and thing, that needs to be addressed: the gap between recognizing the suffering of others and engaging in ameliorative action. Elsewhere I have argued that one source of the energy required is a love of the world or an enchantment with a world of vital materiality; Adorno sees more ethical potential in suffering and a sense of loss. He “disdained the passage to affirmation,” contending that the experience of the “fullness of life” is “inseparable from . . . a desire in which violence and subjugation are inherent. . . . There is no fullness without biceps-flexing” (ND 385, 378). Nonidentity is dark and brooding, and it makes itself known with the least distortion in the form of an unarticulated feeling of resistance, suffering, or pain. From the perspective of the vital materialist, Adorno teeters on the edge of what Thomas Dumm has described as “the overwhelming sense of loss that could swamp us when we approach [the thing’s] unknowable vastness” (Dumm, *Politics of the Ordinary*, 169). On enchantment with the world, see [Bennett’s] *The Enchantment of Modern Life: Attachments, Crossings, and Ethics* (2001), see especially p. 10.

6. “Preponderance of the object is a thought of which any pretentious philosophy will be suspicious. . . . [Such] protestations . . . seek to drown out the festering suspicion that heteronomy might

be mightier than the autonomy of which Kant . . . taught. . . . Such philosophical subjectivism is the ideological accompaniment of the . . . bourgeois I” (ND, 189).

7. The largest Nazi concentration camp of World War II, located in Poland; Adorno famously wrote in “Cultural Criticism and Society” (1951) that “to write poetry after Auschwitz is barbaric” [editor’s note].

8. The gap between concept and thing can never be closed, and, according to Albrecht Wellmer, Adorno believes that this lack of conciliation can be withstood only “in the *name* of an absolute, which, although it is veiled in black, is not nothing. Between the being and the non-being of the absolute there remains an infinitely narrow crack through which a glimmer of light falls upon the world, the light of an absolute which is yet to come into being” (Albrecht Wellmer, *Endgames: The Irreconcilable Nature of Modernity*, trans. David Midgley [Cambridge: MIT Press, 1998], 171; my emphasis).

9. Thanks to Lars Tønder for alerting me to the messianic dimension of Adorno’s thinking. One can here note Adorno’s admiration for Kant, who Adorno read as having found a way to assign transcendence an important role while making it inaccessible in principle: “What finite beings say about transcendence is the semblance of transcendence; but as Kant well knew, it is a necessary semblance. Hence the incomparable

Adorno struggles to describe a force that is *material* in its resistance to human concepts but *spiritual* insofar as it might be a dark promise of an absolute-to-come. A vital materialism is more thoroughly nontheistic in presentation: the out-side has no messianic promise.¹ But a philosophy of non-identity and a vital materialism nevertheless share an urge to cultivate a more careful attentiveness to the out-side.

THE NAIVE AMBITION OF VITAL MATERIALISM

Adorno reminds us that humans can experience the out-side only indirectly, only through vague, aporetic,² or unstable images and impressions. But when he says that even distorting concepts still “refer to nonconceptualities, because concepts on their part are moments of the reality that requires their formation” (ND, 12), Adorno also acknowledges that human experience nevertheless includes encounters with an out-side that is active, forceful, and (quasi)independent. This out-side can operate at a distance from our bodies or it can operate as a foreign power internal to them, as when we feel the discomfort of nonidentity, hear the naysaying voice of Socrates’s demon, or are moved by what Lucretius described as that “something in our breast” capable of fighting and resisting.³ There is a strong tendency among modern, secular, well-educated humans to refer such signs back to a human agency conceived as its ultimate source. This impulse toward cultural, linguistic, or historical constructivism, which interprets any expression of thing-power as an effect of culture and the play of human powers, politicizes moralistic and oppressive appeals to “nature.” And that is a good thing. But the constructivist response to the world also tends to obscure from view whatever thing-power there may be. There is thus something to be said for moments of methodological naiveté, for the postponement of a genealogical critique of objects.⁴ This delay might render manifest a subsistent world of

metaphysical relevance of the rescue of semblance, the object of esthetics” (ND, 393). For Adorno, “the idea of truth is supreme among the metaphysical ideas, and this is why . . . one who believes in God cannot believe in God, why the possibility represented by the divine name is maintained, rather, by him who does not believe” (ND, 401–2). According to Coles, it does not matter to Adorno whether the transcendent realm actually exists; what matters is the “demand . . . placed on thought” by its promise (Coles, *Rethinking Generosity*, 114).

1. There is, of course, no definitive way to prove either ontological imaginary. Morton Schoolman argues that Adorno’s approach, which explicitly leaves open the possibility of a divine power of transcendence, is thus preferable to a materialism that seems to close the question. See Morton Schoolman, *Reason and Horror: Critical Theory, Democracy, and Aesthetic Individuality* (New York: Routledge, 2001).

2. Undecidable [editor’s note].

3. Lucretius, “On the Nature of the Universe,” in *The Epicurean Philosophers*, trans. C. Bailey, R. D. Dicks, and J. C. A. Gaskin, ed. John Gaskin (London: J. M. Dent, 1995), 128. [Lucretius (ca. 94–55 B.C.E.), Roman poet whose only extant work, *De rerum natura* (*On the Nature of Things*), is an epic on Epicurean philosophy; the Greek philosopher Epicurus (341–270 B.C.E.) held that

the gods had nothing to do with human affairs. “Socrates’ demon”: in the account of his trial for impiety written by his pupil PLATO, the Greek philosopher Socrates (469–399 B.C.E.) explains that since childhood, a kind of voice has come to him, “something godlike and spiritual” (*theion ti kai daimonion*), that holds him back from action but never urges him forward (*Apology* 31c–d)—editor’s note.]

4. In response to Foucault’s claim that “perhaps one day, this century will be known as Deleuzian,” Deleuze described his own work as “naive”: “[Foucault] may perhaps have meant that I was the most naive philosopher of our generation. In all of us you find themes like multiplicity, difference, repetition. But I put forward almost raw concepts of these, while others work with more mediations. I’ve never worried about going beyond metaphysics. . . . I’ve never renounced a kind of empiricism. . . . Maybe that’s what Foucault meant: I wasn’t better than the others, but more naive, producing a kind of *art brut*, so to speak, not the most profound but the most innocent” (Gilles Deleuze, *Negotiations*, trans. Martin Joughin [New York: Columbia University Press, 1995]), 88–89. My thanks to Paul Patton for this reference. [*Art brut*: rough or raw art (French): art created outside the academic or official tradition—editor’s note.]

nonhuman vitality. To “render manifest” is both to receive and to participate in the shape given to that which is received. What is manifest arrives through humans but not entirely because of them.

Vital materialists will thus try to linger in those moments during which they find themselves fascinated by objects, taking them as clues to the material vitality that they share with them. This sense of a strange and incomplete commonality with the out-side may induce vital materialists to treat nonhumans—animals, plants, earth, even artifacts and commodities—more carefully, more strategically, more ecologically. But how to develop this capacity for naïveté? One tactic might be to revisit and become temporarily infected by discredited philosophies of nature, risking “the taint of superstition, animism, vitalism, anthropomorphism, and other premodern attitudes.”⁵ I will venture into vitalism in chapters 5 and 6, but let me here make a brief stop at the ancient atomism of Lucretius, the Roman devotee of Epicurus.

Lucretius tells of bodies falling in a void, bodies that are not lifeless stuff but matter on the go, entering and leaving assemblages, swerving into each other: “*At times quite undetermined and at undetermined spots they push a little from their path*: yet only just so much as you could call a change of trend. [For if they did not] . . . swerve, all things would fall downwards through the deep void like drops of rain, nor could collision come to be, nor a blow brought to pass for the primordia: so nature would never have brought anything into existence.”⁶ Louis Althusser described this as a “materialism of the encounter,” according to which political events are born from chance meetings of atoms.⁷ A primordial swerve says that the world is not determined, that an element of chanciness resides at the heart of things, but it also affirms that so-called inanimate things have a life, that deep within is an inexplicable vitality or energy, a moment of independence from and resistance to us and other bodies: a kind of thing-power.

The rhetoric of *De Rerum Natura* is realist, speaking in an authoritative voice, claiming to describe a nature that preexists and outlives us: here are the smallest constituent parts of being (“primordia”) and here are the principles of association governing them.⁸ It is easy to criticize this realism: Lucretius quests for the thing itself, but there is no there there—or, at least, no way for us to grasp or know it, for the thing is always already humanized; its object status arises at the very instant something comes into our awareness. Adorno levels this charge explicitly against Martin Heidegger’s phenomenology, which Adorno interprets as a “realism” that “seeks to breach the walls which thought has built around itself, to pierce the interjected layer of

5. Mitchell, *What Do Pictures Want?*, 149. [“Animism”: the belief that nonhuman entities—animals, plants, and inanimate object—possess a spirit or soul; “vitalism”: the theory that life processes arise from or contain a nonmaterial vital force and cannot be explained entirely as physical and chemical phenomena—editor’s note.]

6. Lucretius, “On the Nature of the Universe,” 126. There are no supernatural bodies or forces for Lucretius, and if we sometimes seem to have spiritual experiences, that is only because some kinds and collections of bodies exist below the threshold of human sense perception.

7. Louis Althusser, “Underground Current of the Materialism of the Encounter,” in *Philosophy of*

the Encounter: Later Writings, 1978–87, trans. G. M. Goshgarian, ed. François Matheron (New York: Verso, 2006), 169. “Without swerve and encounter, [primordia] would be nothing but abstract elements. . . . So much so that we can say that [prior to] . . . the swerve and the encounter . . . they led only a phantom existence” (ibid.). [ALTHUSSER (1918–1990), French philosopher—editor’s note.]

8. Lucretian physics is the basis for his rejection of religion, his presentation of death as a reconfiguration of primordia made necessary by the essential motility of matter, and his ethical advice on how to live well while existing in one’s current material configuration.

subjective positions that have become a second nature.” Heidegger’s aim “to philosophize formlessly, so to speak, purely on the ground of things” (ND, 78)⁹ is for Adorno futile, and it is productive of a violent “rage” against nonidentity.¹

But Lucretius’s poem—like Kafka’s stories, Sullivan’s travelogue, Vernadsky’s speculations, and my account of the gutter of Cold Spring Lane—does offer this potential benefit: it can direct sensory, linguistic, and imaginative attention toward a material vitality. The advantage of such tales, with their ambitious naiveté, is that though they “disavow . . . the tropological work, the psychological work, and the phenomenological work entailed in the human production of materiality,” they do so “in the name of *avowing* the force of questions that have been too readily foreclosed by more familiar fetishizations: the fetishization of the subject, the image, the word.”²

2010

9. For Adorno, Heidegger, “weary of the subjective jail of cognition,” became “convinced that what is transcendent to subjectivity is immediate for subjectivity, without being conceptually stained by subjectivity” (ND, 78). But it does not seem to me that Heidegger makes a claim to immediacy. See Heidegger, *What Is a Thing?*, trans. W. B. Barton Jr. and Vera Deutsch (South Bend, Ill.: Gateway, 1967). [HEIDEGGER (1889–1976), major 20th-century German philosopher—editor’s note.]

1. For Marx, too, naive realism was the philoso-

phy to overcome. He wrote his doctoral dissertation on the “metaphysical materialism” of Democritus, and it was against that naive objectivism that Marx would eventually define his own “historical materialism.” Historical materialism would not focus on matter but on human power-laden socioeconomic structures. [KARL MARX (1818–1883), German philosopher, political economist, and revolutionary—editor’s note.]

2. This is Bill Brown’s account of Arjun Appadurai’s *The Social Life of Things*, in “Thing Theory,” *Critical Inquiry* 28, no. 1 (2001): 6–7.

LAUREN BERLANT

b. 1957

MICHAEL WARNER

b. 1958

“Heteronormativity is a fundamental motor of social organization,” assert Lauren Berlant and Michael Warner, and it produces “unequal and exploitative relations throughout even straight society.” With their essay “Sex in Public” (1998), our selection, Berlant and Warner elaborate a new category of analysis—heteronormativity—that works, alongside race, class, and gender, to create the social distinctions that structure American culture. Focusing on the public associations attached to sexuality as well as the possibilities of “counterpublics,” the essay has become a manifesto of queer theory.

Berlant and Warner are leading figures in the generation of American critics and theorists that came to prominence in the 1990s. Berlant grew up in the Philadelphia area, but a formative time for her, she notes in an interview, was her teenage participation in the Twin Oaks commune in Virginia. She went on to Oberlin College, receiving her B.A. in 1979, and to Cornell University, earning her Ph.D. in 1985. Since 1984 she has taught at the University of Chicago, where she is the George M. Pullman Professor of English. Michael Warner, as he recounts in a brief memoir, was brought up in a Pentecostal family and attended Oral Roberts University as an undergraduate (B.A., 1980). From there he went to the University of Wisconsin (M.A., 1981) and Johns Hopkins University, from which he received his Ph.D. in 1985. He has taught at Northwestern and Rutgers Universities, and since 2007 at Yale University, where he is Seymour H. Knox Professor of English.

Having undergone graduate training during the heyday of debates over literary theory, notably deconstruction, both Berlant and Warner are versed in its terms and concerns, but they direct it, like many of their generation, toward investigating public culture and contemporary politics as well as literary texts. Warner, extending JÜRGEN HABERMAS's conception of the public sphere, has done pathbreaking work on early American institutions of publishing in the eighteenth century. For her part, Berlant has produced significant work on nineteenth-century literature and sentimentalism, focusing on citizenship and how contemporary American political discourse interweaves the public and private. Both Berlant and Warner examine how presumably intimate things like sex are public issues, and how political issues are privatized and reduced to personal feeling. In "Sex in Public," their conception of queer theory points out the ways in which not only do standard sexual categories deconstruct into contradictions but also those contradictions affect American society, with real and often pernicious consequences for people.

The term *heteronormativity* was first coined by Warner in the early 1990s. As he and Berlant develop it here, heteronormativity prescribes both certain sex acts and "many practices that are not sex," such as what constitutes a family, romance, legal rights of partners, citizenship, property ownership and zoning, and national character. They are responding to the coercive ways in which heterosexual norms isolate and demonize people in U.S. society. Part of the hegemonic order, heteronormativity projects a "monoculture" that dominates all alternative sexual cultures or groups. Sexuality is not just a personal choice or lifestyle, but is as determinative of one's place in American social life as are racial designations. The authors take the lesson of MICHEL FOUCAULT, whose *History of Sexuality* (1976; see above) exposes the discursive regime clustered around sex in the Victorian era, and show its applicability to contemporary American culture.

Berlant and Warner are also responding to trends in gender theory, especially gay and lesbian theory. Through the 1970s and 1980s scholars employed gender as a central concept to designate identity, with the aim of establishing status for minority identities. Queer theory, notably in the work of GAYLE RUBIN, EVE KOSOFSKY SEDGWICK, and JUDITH BUTLER, developed from this project, but it has not simply expanded the pool of identities. Rather, it has deconstructed such identities as gay or straight, showing how they are not unitary or fixed. As Berlant and Warner point out, any such identity "consolidates . . . widely differing practices." Among those who claim a heterosexual identity there is enormous variation; for instance, some have sex often, some rarely; some use the missionary position, some practice sado-masochism; some consider oral sex sodomy, some not. This is why Berlant and Warner choose the word "queer," for a heterosexual couple such as the one they mention in "Sex in Public" might not fit the narrow image of heteronormativity.

"Sex in Public" concludes with a startling depiction of a performance at a leather bar (serving a subculture usually associated with S and M), where one man induces another, at a climactic moment, to vomit. While such a scene might disturb or offend some, Berlant and Warner's point is to illustrate the value of counterpublic spaces, as well as to underscore the range of acts that people practice. Though the essay is largely in the mode of critique, it also suggests the democratic role if not utopian possibilities of counterpublics. The idea of counterpublics stems from amendments to Habermas's seemingly monolithic notion of the public sphere, here replaced with the idea of numerous public spheres, some of which are alternative, minor, or antagonistic to the mainstream. Berlant and Warner emphasize the way in which many cities foster counterpublic spaces for nonnormative culture—for instance, New York's Greenwich Village for gay culture. Their point is not only that these counterpublics must be tolerated but also that they are necessary to break through the constraints of normative strictures.

Berlant and Warner have had a great deal of influence on the way that contemporary critics conceive of the public sphere, citizenship, and sexuality in the United

States. They have spearheaded thinking about what it means “to queer” theory as well as practice. Predictably, though unusually for most in academe, they have been attacked in mainstream media for encouraging homosexuality, and Warner has been labeled a “dangerous professor” by a right-wing pundit. Within academic circles, they have been criticized for targeting normativity. Some, like MARTHA NUSSBAUM, argue that one has to have a tacit sense of the normative to judge whether violence, for instance, is wrong. Berlant and Warner head off this charge in “Sex in Public,” declaring that “To be against heteronormativity is not to be against norms.” Although they don’t explicitly declare the norms they hold, they implicitly value a full sense of democracy, which fosters various counterpublics and which, conversely, such counterpublics make possible. Within queer theory, they take a radical rather than liberal position. For instance, they are unlikely to embrace gay marriage as an ultimate goal, because its apparent conferral of equal rights in fact merely apes heteronormative forms. Rather, they suggest more far-reaching change for all who live under normative strictures. Debates within political theory usually set reform against revolution, but the aim of Berlant and Warner might be better understood as utopian: removing the obstacles to liberated forms of human world making.

Sex in Public

There Is Nothing More Public Than Privacy

An essay titled “Sex in Public” teases with the obscurity of its object and the twisted aim of its narrative. In this essay, we talk not about the sex people already have clarity about, or identities and acts,¹ or a wildness in need of derepression;² rather, we talk about sex as it is mediated by publics. Some of these publics have an obvious relation to sex: pornographic cinema, phone sex, “adult” markets for print, lap dancing. Others are organized around sex but not necessarily sex *acts* in the usual sense: queer zones and other worlds estranged from heterosexual culture, but also more tacit scenes of sexuality like official national culture, which depends on a notion of privacy to cloak its sexualization of national membership.

The aim of this essay is to describe what we want to promote as the radical aspirations of queer culture building: not just a safe zone for queer sex, but the changed possibilities of identity, intelligibility, publics, culture, and sex that appear when the heterosexual couple is no longer the referent or privileged example of sexual culture. Queer social practices like sex and theory

1. On “public sex” in the standard sense, see Pat Califia, *Public Sex: The Culture of Radical Sex* (Pittsburgh, PA: Cleis Press, 1994). On “identities and acts,” see Janet Halley, “The Status/Conduct Distinction in the 1993 Revisions to Military Antigay Policy: A Legal Archaeology,” *GLQ* 3 (1996), pp. 159–252 [except as indicated, all notes are Berlant and Warner’s].

2. The classic political argument for sexual derepression as a condition of freedom is put forth in Herbert Marcuse, *Eros and Civilization: A Philosophical Inquiry into Freud* (Boston: Beacon Press, 1966). In contemporary pro-sex thought inspired by Michel Foucault’s *History of Sexual-*

ity, vol. 1, trans. Robert Hurley (New York: Vintage, 1978), the denunciation of “erotic injustice and sexual oppression” is situated less in the freedom of individuals than in analyses of the normative and coercive relations between specific “populations” and the institutions created to manage them (Gayle Rubin, “Thinking Sex,” in *Pleasure and Danger: Exploring Female Sexuality* [Boston: Pandora Press, 1984], p. 275). [For *The History of Sexuality* (1976), by the French philosopher and historian of ideas FOUCAULT (1926–1984), and for “Thinking Sex,” by the American anthropologist and queer theorist RUBIN (b. 1949), see above—editor’s note.]

try to unsettle the garbled but powerful norms supporting that privilege—including the project of normalization that has made heterosexuality hegemonic—as well as those material practices that, though not explicitly sexual, are implicated in the hierarchies of property and propriety that we will describe as heteronormative.³ We open with two scenes of sex in public.

SCENE ONE

In 1993, *Time* magazine published a special issue about immigration called “The New Face of America.”⁴ The cover girl of this issue was morphed via computer from head shots representing a range of U.S. immigrant groups: an amalgam of “Middle Eastern,” “Italian,” “African,” “Vietnamese,” “Anglo-Saxon,” “Chinese,” and “Hispanic” faces. The new face of America is supposed to represent what the model citizen will look like when, in the year 2004, there will no longer be a white statistical majority in the United States. Naked, smiling, and just off-white, *Time*’s divine Frankenstein⁵ aims to organize hegemonic optimism about citizenship and the national future. *Time*’s theory is that by the twenty-first century interracial reproductive sex will have taken place in the United States on such a mass scale that racial difference itself will be finally replaced by a kind of family feeling based on blood relations. In the twenty-first century, *Time* imagines, hundreds of millions of hybrid faces will erase American racism altogether: the nation will become a happy racial monoculture made up of “one mixed blood.”⁶

The publication of this special issue caused a brief flurry of interest but had no important effects; its very banality calls us to understand the technologies that produce its ordinariness. The fantasy banalized by the image is one that reverberates in the law and the most intimate crevices of everyday life. Its explicit aim is to help its public process the threat to “normal” or “core” national culture currently phrased as “the problem of immigration.”⁷ But this crisis image of immigrants is also a *racial mirage* generated by a white-dominated society, supplying a concrete phobia to organize its public so that a more substantial discussion of exploitation in the United States can

3. By heteronormativity we mean the institutions, structures of understanding, and practical orientations that make heterosexuality seem not only coherent—that is, organized as a sexuality—but also privileged. Its coherence is always provisional, and its privilege can take several (sometimes contradictory) forms: unmarked as the basic idiom of the personal and the social; or marked as a natural state; or projected as an ideal or moral accomplishment. It consists less of norms that could be summarized as a body of doctrine than of a sense of rightness produced in contradictory manifestations—often unconscious, immanent to practice or to institutions. Contexts that have little visible relation to sex practice, such as life narrative and generational identity, can be heteronormative in this sense, while in other contexts forms of sex between men and women might *not* be heteronormative. Heteronormativity is thus a concept distinct from heterosexuality. One of the most conspicuous differences is that it has no parallel, the way heterosexuality organizes homosexuality as its opposite. Because homosexuality can never have the invisible, tacit, society-founding rightness that

heterosexuality has, it would not be possible to speak of “homonormativity” in the same sense. See Michael Warner, “Fear of a Queer Planet,” *Social Text*, no. 29 (1991), pp. 3–17.

4. *Time*, special issue, 142.21 (Fall 1993). This analysis reworks materials in Lauren Berlant, *The Queen of America Goes to Washington City: Essays on Sex and Citizenship* (Durham, NC: Duke University Press, 1997), pp. 200–208.

5. That is, a construct created out of pieces, like the unnamed monster in Mary Shelley’s novel *Frankenstein* (1818) [editor’s note].

6. For a treatment of the centrality of “blood” to U.S. nationalist discourse, see Bonnie Honig, *No Place Like Home: Democracy and the Politics of Foreignness* (Princeton, NJ: Princeton University Press, 1998).

7. See, for example, William Bennett, *The De-Valuing of America: The Fight for Our Culture and Our Children* (New York: Simon and Schuster, 1992); Peter Brimelow, *Alien Nation: Common Sense about America’s Immigration Disaster* (New York: Random House, 1995); and William A. Henry III, *In Defense of Elitism* (New York: Doubleday, 1994).

be avoided and then remaindered to the part of collective memory sanctified not by nostalgia but by mass aversion. Let's call this the amnesia archive. The motto above the door is: "Memory is the amnesia you like."

But more than exploitation and racism are forgotten in this whirl of projection and suppression. Central to the transfiguration of the immigrant as a nostalgic image to shore up core national culture and allay white fears of minoritization is something that cannot speak its name,⁸ though its signature is everywhere: national heterosexuality. National heterosexuality is the mechanism by which a core national culture can be imagined as a sanitized space of sentimental feeling and immaculate behavior, a space of pure citizenship. A familial model of society displaces recognition of structural racism and other systemic inequalities. This is not entirely new: the family form has functioned as a mediator and metaphor of national existence in the United States since the eighteenth century.⁹ We are arguing that its contemporary deployment increasingly supports the governmentality of the welfare state by separating the aspirations of national belonging from the critical culture of the public sphere and from political citizenship.¹ Immigration crises have also previously produced feminine icons that function as prostheses for the state—most famously, the Statue of Liberty, which symbolized seamless immigrant assimilation to the metaculture of the United States. In *Time's* face, it is not symbolic femininity but practical heterosexuality that guarantees the monocultural nation.

The nostalgic family-values covenant of contemporary American politics stipulates a privatization of citizenship and sex in a number of ways. In law and political ideology, for example, the fetus and the child have been spectacularly elevated to the place of sanctified nationality. The state now sponsors stings and laws to purify the Internet on behalf of children. New welfare and tax "reforms" passed under the cooperation between the Contract with America and Clintonian familialism² seek to increase the legal and economic privileges of married couples and parents. Vouchers and privatization rezone education as the domain of parents rather than of citizens. Meanwhile, senators such as Ted Kennedy and Jesse Helms³ support amendments that refuse federal funds to organizations that "promote, disseminate, or produce materials that are obscene or that depict or describe, in a patently

8. An allusion to "the Love that dare not speak its name" (i.e., love between men)—a phrase that ends "Two Loves," a poem by Lord Alfred Douglas that entered into the 1895 libel trial of his lover, OSCAR WILDE [editor's note].

9. On the family form in national rhetoric, see Jay Fliegelman, *Prodigals and Pilgrims: The American Revolution against Patriarchal Authority, 1750–1800* (Cambridge, UK: Cambridge University Press, 1982); and Shirley Samuels, *Romances of the Republic: Women, the Family, and Violence in the Literature of the Early American Nation* (New York: Oxford University Press, 1996). On fantasies of genetic assimilation, see Robert S. Tilton, *Pocahontas: The Evolution of an American Narrative* (Cambridge, UK: Cambridge University Press, 1994), pp. 9–33; and Elise Lemire, "Making Miscegenation" (Ph.D. diss., Rutgers University, 1996).

1. The concept of welfare-state governmentality has a growing literature. For a concise statement, see Jürgen Habermas, "The New Obscurity: The

Crisis of the Welfare State and the Exhaustion of the Utopian Energies," *The New Conservatism: Cultural Criticism and the Historians' Debate*, trans. Shierry Nicholsen (Cambridge, MA: MIT Press, 1990), pp. 48–70. Michael Warner has discussed the relation between this analysis and queer culture in his "Something Queer about the Nation-State," chapter 6, *Publics and Counterpublics* (New York: Zone Books, 2002). [HABERMAS (b. 1929), German philosopher—editor's note.]

2. The policies of the administration of Bill Clinton (b. 1946; 42nd U.S. president, 1993–2001), a Democrat. "Contract with America": the principles set forth by the Republicans, led by Speaker of the House Newt Gingrich, in the 1994 mid-term campaign [editor's note].

3. That is, both the most liberal, such as the Democrat Edward Kennedy of Massachusetts (1932–2009; U.S. senator, 1962–2009), and the most conservative, such as the Republican Helms of North Carolina (1921–2008; U.S. senator, 1973–2003) [editor's note].

offensive way, sexual or excretory activities or organs, including but not limited to obscene depictions of sadomasochism, homo-eroticism, the sexual exploitation of children, or any individuals engaged in sexual intercourse."⁴ These developments, though distinct, are linked in the way they organize a hegemonic national public around sex. But because this sex public officially claims to act only in order to protect the zone of heterosexual privacy, the institutions of economic privilege and social reproduction informing its practices and organizing its ideal world are protected by the spectacular demonization of any represented sex.

SCENE TWO

In October 1995, the New York City Council passed a new zoning law by a forty-one-to-nine vote. The Zoning Text Amendment covers adult book and video stores, eating and drinking establishments, theaters, and other businesses. It allows these businesses only in certain nonresidential zoning areas, most of which turn out to be on the waterfront. Within the new reserved districts, adult businesses are disallowed within five hundred feet of another adult establishment or within five hundred feet of a house of worship, school, or day-care center. They are limited to one per lot and limited in size to ten thousand square feet. Signs are limited in size, placement, and illumination. All other adult businesses are required to close within a year. Of the estimated 177 adult businesses in the city, all but 28 may have to close under this law. Enforcement of the bill is entrusted to building inspectors.

The court challenge to the bill was brought by a coalition that also fought it in the political process: anticensorship groups such as the New York Civil Liberties Union, Feminists for Free Expression, People for the American Way, and the National Coalition Against Censorship, as well as gay and lesbian organizations such as the Lambda Legal Defense and Education Fund, the Empire State Pride Agenda, and the AIDS Prevention Action League. (An appeal was still pending as of July 1997.)⁵ These latter groups joined the anti-censorship groups for a simple reason: the impact of rezoning on businesses catering to queers, especially to gay men, will be devastating. All five of the adult businesses on Christopher Street⁶ will be shut down, along with the principal venues where men meet men for sex. None of these businesses has been a target of local complaints. Gay men have come to take for granted the availability of explicit sexual materials, theaters, and clubs. That is how they have learned to find each other, to map a commonly accessible world, to construct the architecture of queer space in a homophobic environment, and, for the last fifteen years, to cultivate a collective ethos of safer sex. All of that is about to change. Now gay men who want sexual materials, or who want to meet men for sex, will have two choices: they can cathect the privatized virtual public of phone sex and the Internet; or they can travel to small, inaccessible, little-trafficked, badly lit areas, remote from public transportation and from any residences, mostly on the waterfront, where heterosexual porn

4. *Congressional Record*, 1st sess., 1989, vol. 135, no. 134, S12967.

5. The Court of Appeals upheld the zoning law, but it also upheld a legal loophole that allows sex shops to remain open if no more than 40 percent of their floor space is devoted to sexual material

or activity [editor's note].

6. A street in the West Village that has long been the focus of gay life in New York City (it is the location of the Stonewall Inn, the site of the 1969 riots often seen as marking the beginning of the modern gay rights movement) [editor's note].

users will also be relocated and where risk of violence will consequently be higher.⁷ In either case, the result will be a sense of isolation and diminished expectations for queer life, as well as an attenuated capacity for political community. The nascent lesbian sexual culture, including the Clit Club and the only video-rental club catering to lesbians, will also disappear. The impact of the sexual purification of New York will fall unequally on those who already have the fewest publicly accessible resources.

Normativity and Sexual Culture

Heterosexuality is not a thing. We speak of heterosexual culture rather than heterosexuality because that culture never has more than a provisional unity.⁸ It is neither a single Symbolic nor a single ideology nor a unified set of shared beliefs.⁹ The conflicts between these strands are seldom more than dimly perceived in practice, where the givenness of male-female sexual relations is part of the ordinary rightness of the world, its fragility masked in shows of solemn rectitude. Such conflicts have also gone unrecognized in theory, partly because of the metacultural work of the very category of heterosexuality, which consolidates as *a sexuality* widely differing practices, norms, and institutions, and partly because the sciences of social knowledge are themselves so deeply anchored in the process of normalization to which Foucault attributes so much of modern sexuality.¹ Thus when we say that the

7. Political geography in this way produces systematic effects of violence. Queers are forced to find each other in untrafficked areas because of the combined pressures of propriety, stigma, the closet, and state regulation such as laws against public lewdness. The same areas are known to gay bashers and other criminals. And they are disregarded by police. The effect is to make both violence and police neglect seem natural hazards, voluntarily courted by queers. As the 1997 documentary film *Licensed to Kill* [dir. Arthur Dong] illustrates, antigay violence has been difficult to combat by legal means; victims are reluctant to come forward in any public and prosecutorial framework, while bashers can appeal to the geographic circumstances to implicate the victims themselves. The legal means has helped to produce the violence it is called upon to remedy.

8. EVE KOSOFSKY SEDGWICK, *The Epistemology of the Closet* (Berkeley: University of California Press, 1992). [For *Epistemology of the Closet*, see above—editor's note.]

9. Gay and lesbian theory, especially in the humanities, frequently emphasizes psychoanalytic or psychoanalytic-style models of subject formation, the differences among which are significant and yet all of which tend to block out the difference between the categories male/female and the process and project of heteronormativity. Three propositional paradigms are relevant here: those that propose that human identity itself is fundamentally organized by gender identifications that are hardwired into infants; those that equate the clarities of gender identity with the domination of a relatively coherent and vertically stable "straight" ideology; and those that focus on a phallogocentric Symbolic order that produces gendered subjects who live out the destiny of their positioning in it. The psychoanalytic and philosophical insights and limits of these models (which, we

feel, underdescribe the practices, institutions, and incongruities of heteronormativity) require further engagement. For the time being, these works stand in as the most challenging relevant archive: JUDITH BUTLER, *Bodies That Matter: On the Discursive Limits of "Sex"* (New York: Routledge, 1993); LUCE IRIGARAY, *Speculum of the Other Woman* (Ithaca, NY: Cornell University Press, 1985) and *The Sex Which Is Not One* (Ithaca, NY: Cornell University Press, 1985); TERESA DE LAURETIS, *The Practice of Love* (Bloomington: Indiana University Press, 1994); KAJA SILVERMAN, *Male Subjectivity at the Margin* (New York: Routledge, 1992); MONIQUE WITTIG, *The Straight Mind and Other Essays* (Boston: Beacon Press, 1992). Psychoanalytic work on sexuality does not always latch acts and inclinations to natural or constructed "identity"; see, for example, LEO BERSANI, *Homos* (Cambridge, MA: Harvard University Press, 1995) and "Is the Rectum a Grave?" in Douglas Crimp, ed., *AIDS: Cultural Analysis, Cultural Activism* (Cambridge, MA: MIT Press, 1988). [The Symbolic: in the theories of the psyche put forward by the French psychoanalyst JACQUES LACAN (1901–1981), the Symbolic is the dimension of language, law, and the father—editor's note.]

1. The notion of metaculture we borrow from Greg Urban; see his *Toward a Discourse-Centered Approach to Culture* (Austin: University of Texas Press, 1991) and *Nounal Community: Myth and Reality in an Amerindian Brazilian Society* (Austin: University of Texas Press, 1996). On normalization, see Michel Foucault, *Discipline and Punish*, trans. Alan Sheridan (New York: Vintage, 1979), pp. 184–85; and *The History of Sexuality*, p. 144. Foucault derives his argument here from the revised version of Georges Canguilhem, *The Normal and the Pathological*, trans. Carolyn R. Fawcett (New York: Zone Books, 1991).

contemporary United States is saturated by the project of constructing national heterosexuality, we do not mean that national heterosexuality is anything like a simple monoculture. Hegemonies are nothing if not elastic alliances, involving dispersed and contradictory strategies for self-maintenance and reproduction.

Heterosexual culture achieves much of its metacultural intelligibility through the ideologies and institutions of intimacy. We want to argue here that although the intimate relations of private personhood appear to be the realm of sexuality itself, allowing "sex in public" to appear like matter out of place, intimacy is itself publicly mediated, in several senses. First, its conventional spaces presuppose a structural differentiation of "personal life" from work, politics, and the public sphere.² Second, the normativity of heterosexual culture links intimacy only to the institutions of personal life, making them the privileged institutions of social reproduction, the accumulation and transfer of capital, and self-development. Third, by making sex seem irrelevant or merely personal, heteronormative conventions of intimacy block the building of nonnormative or explicit public sexual cultures. Finally, those conventions conjure a mirage: a home base of pre-political humanity from which citizens are thought to come into political discourse and to which they are expected to return in the (always imaginary) future after political conflict. Intimate life is the endlessly cited *elsewhere* of political public discourse, a promised haven that distracts citizens from the unequal conditions of their political and economic lives, consoles them for the damaged humanity of mass society, and shames them for any divergence between their lives and the intimate sphere that is alleged to be simple personhood.

Ideologies and institutions of intimacy are increasingly offered as a vision of the good life for the destabilized and struggling citizenry of the United States, the only (fantasy) zone in which a future might be thought and willed, the only (imaginary) place where good citizens might be produced away from the confusing and unsettling distractions and contradictions of capitalism and politics. Indeed, one of the unforeseen paradoxes of national-capitalist privatization has been that citizens have been led through heterosexual culture to identify both themselves and *their politics* with privacy. In the official public, this involves making sex private; re-intensifying *blood* as a psychic base for identification; replacing state mandates for social justice with a privatized ethics of responsibility, charity, atonement, and "values"; and enforcing boundaries between moral persons and economic ones.³

A complex cluster of sexual practices gets confused, in heterosexual culture, with the love plot of intimacy and familialism that signifies belonging to society in a deep and normal way. Community is imagined through scenes of

2. Here we are influenced by Eli Zaretsky, *Capitalism, the Family, and Personal Life*, rev. ed. (New York: Harper and Row, 1986), and Stephanie Coontz, *The Social Origins of Private Life: A History of American Families, 1600–1900* (London: Verso, 1988), though heteronormativity is a problem not often made visible in Coontz's work. 3. On privatization and intimacy politics, see Berlant, *Queen of America*, pp. 1–24, and "Feminism and the Institutions of Intimacy," in E. Ann Kaplan and George Levine, eds., *The Politics of*

Research (New Brunswick, NJ: Rutgers University Press, 1997); Honig, *No Place Like Home*; Rosalind Pollack Petchesky, "The Body as Property," in Faye D. Ginsburg and Rayna Rapp, eds., *Conceiving the New World Order: The Global Politics of Reproduction* (Berkeley: University of California Press, 1995). On privatization and national capitalism, see David Harvey, *The Condition of Postmodernity* (Oxford: Blackwell, 1989); and Mike Davis, *City of Quartz: Excavating the Future in Los Angeles* (New York: Verso, 1992).

intimacy, coupling, and kinship.⁴ And a historical relation to futurity is restricted to generational narrative and reproduction. A whole field of social relations becomes intelligible as heterosexuality, and this privatized sexual culture bestows on its sexual practices a tacit sense of rightness and normalcy. This sense of rightness—embedded in things and not just in sex—is what we call heteronormativity. Heteronormativity is more than ideology, or prejudice, or phobia against gays and lesbians; it is produced in almost every aspect of the forms and arrangements of social life: nationality, the state, and the law; commerce; medicine; education; plus the conventions and affects of narrativity, romance, and other protected spaces of culture. It is hard to see these fields as heteronormative because the sexual culture straight people inhabit is so diffuse, a mix of languages they are just developing with notions of sexuality so ancient that their material conditions feel hardwired into personhood.

But intimacy has not always had the meaning it has for contemporary heteronormative culture. Along with Foucault and other historians, the classicist David Halperin, for example, has shown that in ancient Athens, sex was a transitive act rather than a fundamental dimension of personhood or an expression of intimacy. The verb for having sex appears on a late antique list of things that are not done in regard to or through others: “namely, speaking, singing, dancing, fist-fighting, competing, hanging oneself, dying, being crucified, diving, finding a treasure, having sex, vomiting, moving one’s bowels, sleeping, laughing, crying, talking to the gods, and the like.”⁵ Halperin points out that the inclusion of fucking on this list shows that sex is not here “knit up in a web of mutuality.” In contrast, modern heterosexuality is supposed to refer to relations of intimacy and identification with other persons, and sex acts are supposed to be the most intimate communication of them all.⁶ The sex act protected in the zone of privacy is the affectional nimbus that

4. This language for community is a problem for gay historiography. In otherwise fine and important studies such as Esther Newton’s *Cherry Grove, Fire Island: Sixty Years in America’s First Gay and Lesbian Town* (Boston: Beacon Press, 1993), or Elizabeth Lapovsky Kennedy and Madeline D. Davis’s *Boots of Leather, Slippers of Gold: The History of a Lesbian Community* (New York: Routledge, 1993), or even George Chauncey’s *Gay New York: Gender, Urban Culture, and the Making of the Gay Male World, 1890–1940* (New York: Basic Books, 1994), community is imagined as whole-person, face-to-face relations—local, experiential, proximate, and saturating. But queer worlds seldom manifest themselves in such forms. Cherry Grove—a seasonal resort depending heavily on weekend visits by New Yorkers—may be typical less of a “gay and lesbian town” than of the way queer sites are specialized spaces in which transits can project alternative worlds. John D’Emilio’s *Sexual Politics, Sexual Communities: The Making of a Homosexual Minority in the United States, 1940–1970* (Chicago: University of Chicago Press, 1983) is an especially interesting example of the imaginative power of the idealization of local community for queers. The book charts the separate tracks of political organizing and local scenes such as bar life, showing that when the “movement” and the “subculture” began to converge in San Francisco, the result was a new formation with a new utopian appeal: “A ‘community,’” D’Emilio writes, “was in fact forming

around a shared sexual orientation” (p. 195). D’Emilio (wisely) keeps quotation marks around “community” in the very sentence declaring it to exist in fact.

5. David M. Halperin, “Sex before Sexuality: Pederasty, Politics, and Power in Classical Athens,” in Martin Bauml Duberman, Martha Vicinus, and George Chauncey, eds., *Hidden from History: Reclaiming the Gay and Lesbian Past* (New York: New American Library, 1989), p. 49. The list Halperin cites is from Artemidorus, *Oneirocritica* 1.2 (pp. 8.21–9.4 Pack). [Halperin (b. 1952), American classical scholar—editor’s note.]

6. Studies of intimacy that do not assume this “web of mutuality,” either as the self-evident nature of intimacy or as a human value, are rare. ROLAND BARTHES’S *A Lover’s Discourse*, trans. Richard Howard (New York: Farrar, Straus, and Giroux, 1978), and Niklas Luhmann’s *Love as Passion*, trans. Jeremy Gaines and Doris Jones (Cambridge, MA: Harvard University Press, 1986), both try, in very different ways, to describe the production of intimacy analytically. More typical is Anthony Giddens’s attempt to theorize intimacy as “pure relationship” in *The Transformation of Intimacy: Sexuality, Love, and Eroticism in Modern Societies* (Stanford, CA: Stanford University Press, 1992). There, ironically, it is “the gays who are the pioneers” in separating the “pure relationship” of love from extraneous institutions and contexts such as marriage and reproduction.

heterosexual culture protects and from which it abstracts its model of ethics; but this utopia of social belonging is also supported and extended by acts less commonly recognized as part of sexual culture: paying taxes, being disgusted, philandering, bequeathing, celebrating a holiday, investing for the future, teaching, disposing of a corpse, carrying wallet photos, buying economy size, being nepotistic, running for president, divorcing, or owning anything "His" and "Hers."

The elaboration of this list is a project for further study. Meanwhile, to make it, and to laugh at it, is not immediately to label any practice as oppressive, uncool, or definitive. We are describing a constellation of practices that everywhere disperses heterosexual privilege as a tacit but central organizing index of social membership. Exposing it inevitably produces what we have elsewhere called a wrenching sense of recontextualization as its subjects, even its gay and lesbian subjects, begin to piece together how it is that social and economic discourses, institutions, and practices that don't feel especially sexual or familial collaborate to produce as a social norm and ideal an extremely narrow context for living.⁷ Heterosexual culture cannot recognize, validate, sustain, incorporate, or remember much of what people know and experience about the cruelty of normal culture even to the people who identify with it.

But that cruelty does not go unregistered. Intimacy, for example, has a whole public environment of therapeutic genres dedicated to witnessing the constant failure of heterosexual ideologies and institutions. Every day in many countries now, people's failure to sustain or be sustained by institutions of privacy is testified to on talk shows, in scandal journalism, even in the ordinary course of mainstream journalism addressed to middlebrow culture. We can learn a lot from these stories of love plots that have gone astray: about the ways quotidian violence is linked to complex pressures from money, racism, histories of sexual violence, cross-generational tensions. We can learn a lot from listening to the increasing demands on love to deliver the good life it promises. And we can learn a lot from the extremely punitive responses that tend to emerge when people seem not to suffer enough for their transgressions and failures.

Maybe we would learn too much. Recently the proliferation of evidence for homosexuality's failings has produced a backlash against talk-show therapy. It has even brought William Bennett to the podium; but rather than confessing his transgressions or making a complaint about someone else's, he calls for boycotts and suppression of homosexual therapy culture altogether. Recognition of homosexuality's daily failures agitates him as much as queerness. "We've forgotten that civilization depends on keeping some of this stuff under wraps," he said. "This is a tropism toward the toilet."⁸

But does civilization need to cover its ass? Or does heterosexual culture actually secure itself through banalizing intimacy? Does belief that normal life is actually possible *require* amnesia and the ludicrous stereotyping of a bottom-feeding culture apparently inadequate to intimacy? On these shows,

7. See our "What Does Queer Theory Teach Us about X?" *PMLA* 110.3 (May 1995), pp. 343–49.

8. William Bennett, quoted in *New York Times*, Oct. 26, 1995, p. A25. [Bennett (b. 1943), conservative academic who gained national atten-

tion as chair of the National Endowment for the Humanities (1981–85) and secretary of education (1985–89) critical of the academic establishment—editor's note.]

no one ever blames the ideology and institutions of heterosexuality. Every day, even the talk-show hosts are newly astonished to find that people who are committed to hetero intimacy are nevertheless unhappy. After all is said and done, the prospects and promises of heterosexual culture still represent the optimism for optimism, a hope to which people apparently have already pledged their consent—at least in public.

Biddy Martin has written that some queer social theorists have produced a reductive and pseudo-radical antinormativity by actively repudiating the institutions of heterosexuality that have come to oversaturate the social imaginary. She shows that the kinds of arguments that crop up in the writings of people like Andrew Sullivan are not just right-wing fantasies. “In some queer work,” she writes, “the very fact of attachment has been cast as only punitive and constraining because already socially constructed. . . . Radical anti-normativity throws out a lot of babies with a lot of bathwater. . . . An enormous fear of ordinariness or normalcy results in superficial accounts of the complex imbrication of sexuality with other aspects of social and psychic life, and in far too little attention to the dilemmas of the average people that we also are.”⁹

We think our friend Biddy might be referring to us, although in this segment she cites no one in particular. We would like to clarify the argument. To be against heteronormativity is not to be against norms. To be against the processes of normalization is not to be afraid of ordinariness. Nor is it to advocate the “life without limit” she sees as produced by bad Foucauldians. Nor is it to decide that sentimental identifications with family and children are waste or garbage, or make people into waste or garbage. Nor is it to say that any sex called “lovemaking” isn’t lovemaking; whatever the ideological or historical burdens of sexuality have been, they have not excluded, and indeed may have entailed, the ability of sex to count as intimacy and care. What we have been arguing here is that the space of sexual culture has become obnoxiously cramped from doing the work of maintaining a normal metaculture. When Martin calls us to recognize ourselves as “average people,” to relax from an artificially stimulated “fear of . . . normalcy,” the image of average personhood appears to be simply descriptive. But its averageness is also normative, in exactly the sense that Foucault meant by “normalization”: not the imposition of an alien will, but a distribution around a statistically imagined norm. This deceptive appeal of the average remains heteronormative, measuring deviance from the mass. It can also be consoling, an expression of a utopian desire for unconflicted personhood. But this desire cannot be satisfied in the current conditions of privacy. People feel that the price they must pay for social membership and a relation to the future is identification with the heterosexual life narrative; that they are individually responsible for the rages, instabilities, ambivalences, and failures they experience in their intimate lives, while the fractures of the contemporary United States shame and sabotage them everywhere. Heterosexuality involves so many practices that are not sex that a world in which this hegemonic cluster would not be dominant is, at this point, unimaginable. We are trying to bring that world into being.

9. Biddy Martin, “Extraordinary Homosexuals and the Fear of Being Ordinary,” *Differences* 6.2/3 (Summer–Fall 1994), pp. 122–23. [Martin (b. 1951), American lesbian theorist and univer-

sity administrator. Sullivan (b. 1963), British-born American gay conservative journalist and editor—editor’s note.]

Queer Counterpublics

By queer culture we mean a world-making project, where world, like public, differs from community or group because it necessarily includes more people than can be identified, more spaces than can be mapped beyond a few reference points, modes of feeling that can be learned rather than experienced as birthright. The queer world is a space of entrances, exits, unsystematized lines of acquaintance, projected horizons, typifying examples, alternate routes, blockages, incommensurate geographies.¹ World making, as much in the mode of dirty talk as of print-mediated representation, is dispersed through incommensurate registers, by definition *unrealizable* as community or identity. Every cultural form, be it a novel or an after-hours club or an academic lecture, indexes a virtual social world in ways that range from a repertoire of styles and speech genres to referential metaculture. A novel like *Dancer from the Dance*² relies much more heavily on referential metaculture than does an after-hours club that survives on word of mouth and may be a major scene because it is only barely coherent as a scene. Yet for all their differences, both allow for the concretization of a queer counterpublic. We are trying to promote this world-making project, and a first step in doing so is to recognize that queer culture constitutes itself in many ways other than through the official publics of opinion culture and the state or through the privatized forms normally associated with sexuality.

Queer and other insurgents have long striven, often dangerously or scandalously, to cultivate what good folks used to call criminal intimacies. We have developed relations and narratives that are only recognized as intimate in queer culture: girlfriends, gal pals, fuckbuddies, tricks. Queer culture has learned not only how to sexualize these and other relations but also how to use them as a context for witnessing intense and personal affect while elaborating a public world of belonging and transformation. Making a queer world has required the development of kinds of intimacy that bear no necessary relation to domestic space, to kinship, to the couple form, to property, or to the nation. These intimacies *do* bear a necessary relation to a counterpublic—an indefinitely accessible world conscious of its subordinate relation. They are typical both of the inventiveness of queer world making and of the queer world's fragility.

Nonstandard intimacies would seem less criminal and less fleeting if, as used to be the case, normal intimacies included everything from consorts to courtiers, friends, amours, associates, and co-conspirators.³ Along with the

1. In some traditions of social theory, the process of world making as we describe it here is seen as common to all social actors. See, for example, Alfred Schutz's emphasis on the practices of typification and projects of action involved in ordinary knowledge of the social, in *The Phenomenology of the Social World*, trans. George Walsh and Frederick Lehnert (Evanston, IL: Northwestern University Press, 1967). Yet in most contexts, the social world is understood not as constructed by reference to types or projects but as an instantiated whole in a form capable of reproducing itself. The family, the state, a neighborhood, the human species, or institutions such as schools and churches—such images of social being share an appearance of plenitude seldom approached in contexts of queer world making.

However much the latter might resemble the process of world construction in ordinary contexts, queer worlds do not have the power to represent a taken-for-granted social existence.

2. A 1978 novel by Andrew Holleran (pseudonym of Eric Garber) [editor's note].

3. See, for example, Alan Bray, "Homosexuality and the Signs of Male Friendship in Elizabethan England," *History Workshop Journal* 29 (Spring 1990), pp. 1–19; Laurie J. Shannon, "Emilia's Argument: Friendship and 'Human Title' in *The Two Noble Kinsmen*," *ELH* 64.3 (Fall 1997); and Roger Chartier, ed., *Passions of the Renaissance*, trans. Arthur Goldhammer, vol. 3 of *A History of Private Life*, ed. Philippe Ariès and Georges Duby (Cambridge, MA: Harvard University Press, 1989).

sex it legitimates, intimacy has been privatized; the discourse contexts that narrate true personhood have been segregated from those that represent citizens, workers, or professionals.

This transformation in the cultural forms of intimacy is related both to the history of the modern public sphere and to the modern discourse of sexuality as a fundamental human capacity. In *The Structural Transformation of the Public Sphere*, Habermas shows that the institutions and forms of domestic intimacy made private people private, members of the public sphere of private society rather than the market or the state. Intimacy grounded abstract, disembodied citizens in a sense of universal humanity. In *The History of Sexuality*, Foucault describes the personalization of sex from the other direction: confessional and expert discourses of civil society continually posit an inner personal essence, equating this true personhood with sex, and surrounding that sex with dramas of secrecy and disclosure. There is an instructive convergence here in two thinkers who otherwise seem to be describing different planets.⁴ Habermas overlooks the administrative and normalizing dimensions of privatized sex in sciences of social knowledge because he is interested in the norm of a critical relation between state and civil society. Foucault overlooks the critical culture that might enable transformation of sex and other private relations because he wants to show that modern epistemologies of sexual personhood, far from bringing sexual publics into being, are techniques of isolation; they identify persons as normal or perverse for the purpose of medicalizing or otherwise administering them as individuals. Yet both Habermas and Foucault point to the way a hegemonic public has founded itself by a privatization of sex and the sexualization of private personhood. Both identify the conditions in which sexuality seems a property of subjectivity rather than a publicly or counterpublicly accessible culture.

Like most ideologies, normal intimacy may never have been an accurate description of how people actually live. It was from the beginning mediated not only by a structural separation of economic and domestic space but also by opinion culture, correspondence, novels, and romances; Rousseau's *Confessions*⁵ is typical both of the ideology and of its reliance on mediation by print and by new, hybrid forms of life narrative. Habermas notes, "Subjectivity, as the innermost core of the private, was always oriented to an audience," adding that the structure of this intimacy includes a fundamentally contradictory relation to the economy:

To the autonomy of property owners in the market corresponded a self-presentation of human beings in the family. The latter's intimacy, apparently set free from the constraint of society, was the seal on the truth of a private autonomy exercised in competition. Thus it was a private autonomy denying its economic origins . . . that provided the bourgeois family with its consciousness of itself.⁶

This structural relation is no less normative for being imperfect in practice. Its force is to prevent the recognition, memory, elaboration, or institutionaliza-

tion of all the nonstandard intimacies that people have in everyday life. Affective life slops over onto work and political life; people have key self-constitutive relations with strangers and acquaintances; and they have eroticism, if not sex, outside the couple form. These border intimacies give people tremendous pleasure. But when that pleasure is called sexuality, the spillage of eroticism into everyday social life seems transgressive in a way that provokes normal aversion, a hygienic recoil even as contemporary consumer and media cultures increasingly trope toiletward, splattering the matter of intimate life at the highest levels of national culture.

In gay male culture, the principal scenes of criminal intimacy have been tearooms, streets, sex clubs, and parks—a tropism toward the public toilet.⁷ Promiscuity is so heavily stigmatized as nonintimate that it is often called anonymous, whether names are used or not. One of the most commonly forgotten lessons of AIDS is that this promiscuous intimacy turned out to be a lifesaving public resource. Unbidden by experts, gay people invented safer sex; and as Douglas Crimp wrote in 1987:

We were able to invent safe sex because we have always known that sex is not, in an epidemic or not, limited to penetrative sex. Our promiscuity taught us many things, not only about the pleasures of sex, but about the great multiplicity of those pleasures. It is that psychic preparation, that experimentation, that conscious work on our own sexualities that has allowed many of us to change our sexual behaviors—something that brutal “behavioral therapies” tried unsuccessfully for over a century to force us to do—very quickly and very dramatically. . . . All those who contend that gay male promiscuity is merely sexual *compulsion* resulting from fear of intimacy are now faced with very strong evidence against their prejudices. . . . Gay male promiscuity should be seen instead as a positive model of how sexual pleasures might be pursued by and granted to everyone if those pleasures were not confined within the narrow limits of institutionalized sexuality.⁸

AIDS is a special case, and this model of sexual culture has been typically male. But sexual practice is only one kind of counterintimacy. More important is the critical practical knowledge that allows such relations to count as intimate, to be not empty release or transgression but a common language of self-cultivation, shared knowledge, and the exchange of inwardness.

Queer culture has found it necessary to develop this knowledge in mobile sites of drag, youth culture, music, dance, parades, flaunting, and cruising—sites whose mobility makes them possible but also renders them hard to recognize as world making because they are so fragile and ephemeral. They are paradigmatically trivialized as “lifestyle.” But to understand them only as self-expression or as a demand for recognition would be to misrecognize the fundamentally unequal material conditions whereby the institutions of

7. On the centrality of semipublic spaces like tearooms, bathrooms, and bathhouses to gay male life, see Chauncey, *Gay New York*; Lee Edelman, “Tearooms and Sympathy, or, Epistemology of the Water Closet,” in Andrew Parker, Mary Russo, Doris Sommer, and Patricia Yaeger, eds., *Nationalisms and Sexualities* (New York: Routledge, 1992), pp. 263–84. The spaces of both gay

and lesbian semipublic sexual practices are investigated in David Bell and Gill Valentine, eds., *Mapping Desire: Geographies of Sexualities* (New York: Routledge, 1995).

8. Douglas Crimp, “How to Have Promiscuity in an Epidemic,” *October*, no. 43 (Winter 1987), p. 253. [Crimp (b. 1944), American art and cultural critic—editor’s note.]

social reproduction are coupled to the forms of hetero culture.⁹ Contexts of queer world making depend on parasitic and fugitive elaboration through gossip, dance clubs, softball leagues, and the phone-sex ads that increasingly are the commercial support for print-mediated left culture in general.¹ Queer is difficult to entextualize *as* culture.

This is particularly true of intimate culture. Heteronormative forms of intimacy are supported, as we have argued, not only referentially, in overt discourse such as love plots and sentimentality, but materially, in marriage and family law, in the architecture of the domestic, in the zoning of work and politics. Queer culture, by contrast, has almost no institutional matrix for its counterintimacies. In the absence of marriage and the rituals that organize life around matrimony, improvisation is always necessary for the speech act of pledging, or the narrative practice of dating, or for such apparently non-economic economies as joint checking. The heteronormativity in such practices may seem weak and indirect. After all, same-sex couples have sometimes been able to invent versions of such practices. But they have done so only by betrothing the couple form and its language of personal significance, leaving untransformed the material and ideological conditions that divide intimacy from history, politics, and publics. The queer project we imagine is not just to destigmatize those average intimacies, not just to give access to the sentimentality of the couple for persons of the same sex, and definitely not to certify as properly private the personal lives of gays and lesbians.² Rather, it is to support forms of affective, erotic, and personal living that are public in the sense of accessible, available to memory, and sustained through collective activity.

Because the heteronormative culture of intimacy leaves queer culture especially dependent on ephemeral elaborations in urban space and print culture, queer publics are also peculiarly vulnerable to initiatives such as Mayor Rudolph Giuliani's³ zoning law. The law aims to restrict any counter-public sexual culture by regulating its economic conditions; its effects will reach far beyond the adult businesses it explicitly controls. The gay bars on Christopher Street draw customers from people who come there because of its sex trade. The street is cruiser because of the sex shops. The boutiques that sell freedom rings⁴ and Don't Panic T-shirts do more business for the

9. The notion of a demand for recognition has been recently advanced by a number of thinkers as a way of understanding multicultural politics. See, for example, Axel Honneth, *The Struggle for Recognition* (Cambridge, UK: Polity Press, 1995); and Charles Taylor, *Multiculturalism* (Princeton, NJ: Princeton University Press, 1994). We are suggesting that although queer politics does contest the terrain of recognition, it cannot be conceived as a politics of recognition *as opposed to* an issue of distributive justice; this is the distinction proposed in Nancy Fraser's "From Redistribution to Recognition? Dilemmas of Justice in a 'Post-socialist' Age," *New Left Review*, no. 212 (July–Aug. 1995), pp. 68–93, reprinted in her *Justice Interruptus: Critical Reflections on the 'Post-socialist' Condition* (New York: Routledge, 1997).

1. See Sedgwick, *Epistemology of the Closet*, and Yvonne Zipter, *Diamonds Are a Dyke's Best Friend: Reflections, Reminiscences, and Reports from the Field on the Lesbian National Pastime* (Ithaca, NY: Firebrand Books, 1988).

2. Such a politics is increasingly recommended within the gay movement. See, for example, Andrew Sullivan, *Same-Sex Marriage, Pro and Con* (New York: Vintage, 1997); Michelangelo Signorile, *Life Outside* (New York: HarperCollins, 1997); Gabriel Rotello, *Sexual Ecology: AIDS and the Destiny of Gay Men* (New York: Dutton, 1997); William N. Eskridge Jr., *The Case for Same-Sex Marriage: From Sexual Liberty to Civilized Commitment* (New York: Free Press, 1996); Robert M. Baird and Stuart E. Rosenbaum, eds., *Same-Sex Marriage: The Moral and Legal Debate* (Amherst, NY: Prometheus Books, 1996); and Mark Strasser, *Legally Wed: Same-Sex Marriage and the Constitution* (Ithaca, NY: Cornell University Press, 1997).

3. Republican mayor of New York (b. 1944; mayor, 1994–2001) known for his tough approach to crime and for "cleaning up" the city [editor's note].

4. Six metal rings in the colors of the rainbow flag representative of gay pride, first sold in 1991 [editor's note].

same reasons. Not all of the thousands who migrate or make pilgrimages to Christopher Street use the porn shops, but all benefit from the fact that some do. After a certain point, a quantitative change is a qualitative change. A critical mass develops. The street becomes queer. It develops a dense, publicly accessible sexual culture. It therefore becomes a base for nonporn businesses, like the Oscar Wilde Bookshop. And it becomes a political base from which to pressure politicians with a gay voting bloc.

No group is more dependent on this kind of pattern in urban space than queers. If we could not concentrate a publicly accessible culture somewhere, we would always be outnumbered and overwhelmed. And because what brings us together is sexual culture, there are very few places in the world that have assembled much of a queer population without a base in sex commerce; and even those that do exist, such as the lesbian culture in Northampton, Massachusetts, are stronger because of their ties to places like the West Village, Dupont Circle, West Hollywood, and the Castro.⁵ Respectable gays like to think that they owe nothing to the sexual subculture they think of as sleazy. But their success, their way of living, their political rights, and their very identities would never have been possible but for the existence of the public sexual culture they now despise. Extinguish it, and almost all *out* gay or queer culture will wither on the vine. No one knows this connection better than the right. Conservatives would not so flagrantly contradict their stated belief in a market free from government interference if they did not see this kind of hyperregulation as an important victory.

The point here is not that queer politics needs more free-market ideology but that heteronormative forms, so central to the accumulation and reproduction of capital, also depend on heavy interventions in the regulation of capital. One of the most disturbing fantasies in the zoning scheme, for example, is the idea that an urban locale is a community of shared interest based on residence and property. The ideology of the neighborhood is politically unchallengeable in the current debate, which is dominated by a fantasy that sexual subjects only reside, that the space relevant to sexual politics is the neighborhood. But a district like Christopher Street is not just a neighborhood affair. The local character of the neighborhood depends on the daily presence of thousands of nonresidents. Those who actually live in the West Village should not forget their debt to these mostly queer pilgrims. And we should not make the mistake of confusing the class of citizens with the class of property owners. Many of those who hang out on Christopher Street—typically young, queer, and African-American—couldn't possibly afford to live there. Urban space is always a host space. The right to the city extends to those who use the city.⁶ It is not limited to property owners. It is not because of a fluke in the politics of zoning that urban space is so deeply misrecognized; normal sexuality requires such misrecognitions, including their economic and legal enforcement, in order to sustain its illusion of humanity.

5. Predominantly gay areas in New York City; in Washington, D.C.; west of Los Angeles; and in San Francisco, respectively [editor's note].

6. The phrase "the right to the city" is Henri Lefebvre's, from his 1968 *Le Droit à la ville*, trans.

Eleonore Kofman and Elizabeth Lebas, in Henri Lefebvre, *Writings on Cities* (Oxford, UK: Blackwell, 1996). See also Manuel Castells, *The City and the Grassroots* (Berkeley: University of California Press, 1983).

Tweaking and Thwacking

Queer social theory is committed to sexuality as an inescapable category of analysis, agitation, and refunctioning: like class relations, which in this moment are mainly visible in the polarized embodiments of identity forms, heteronormativity is a fundamental motor of social organization in the United States, a founding condition of unequal and exploitative relations throughout even straight society. Any social theory that miscomprehends this participates in their reproduction.

The project of thinking about sex in public does not only engage sex when it is disavowed or suppressed. Even if sex practice is not the object domain of queer studies, sex is everywhere present. But where is the tweaking, thwacking, thumping, sliming, and rubbing you might have expected—or dreaded—in an essay on sex? We close with two scenes that might have happened on the same day in our wanderings around the city. One afternoon, we were riding with a young straight couple we know in their station wagon. Gingerly, after much circumlocution, they brought the conversation around to vibrators. These are people whose reproductivity governs their lives, their aspirations, their relations to money and entailment, mediating their relations to everyone and everything else. But the woman in this couple had recently read an article in a women's magazine about sex toys and other forms of nonreproductive eroticism. She and her husband did some mail-order shopping and became increasingly involved in what from most points of view would count as queer sex practices: their bodies have become disorganized and exciting to them. They said to us: you're the only people we can talk to about this; to all of our straight friends, this would make us perverts. In order not to feel like perverts, they had to make *us* into a kind of sex public.

Later, the question of aversion and perversion came up again. This time, we were in a bar that on most nights is a garden-variety leather bar but that on Wednesday nights hosts a sex-performance event called "Pork." Shows typically include spanking, flagellation, shaving, branding, laceration, bondage, humiliation, wrestling—you know, the usual: amateur, everyday practitioners strutting for everyone else's gratification, not unlike an academic conference. This night, word was circulating that the performance was to be erotic vomiting. This sounded like an appetite spoiler, and the thought of leaving early occurred to us but was overcome by a simple curiosity: What would the foreplay be like? Let's stay until it gets messy. Then we can leave.

A boy, twentyish, very skateboard, comes on the low stage at one end of the bar, wearing Lycra shorts and a dog collar. He sits loosely in a restraining chair. His partner, the vomiting top, comes out and tilts the bottom's head up to the ceiling, stretching out his throat. Behind them is an array of foods. The top begins pouring milk down the boy's throat, then food, then more milk. It spills over, down his chest and onto the floor. A dynamic is established between them in which they carefully keep at the threshold of gagging. The bottom struggles to keep taking in more than he really can. The top is careful to give him just enough to stretch his capacities. From time to time, a baby bottle is offered as a respite, but soon the rhythm intensifies. The boy's stomach is beginning to rise and pulse, almost convulsively.

It is at this point that we realize we cannot leave, cannot even look away. No one can. The crowd is transfixed by the scene of intimacy and display,

control and abandon, ferocity and abjection. People are moaning softly with admiration, then whistling, stomping, screaming encouragements. They have pressed forward in a compact and intimate group. Finally, as the top inserts two, then three fingers in the bottom's throat, insistently offering his own stomach for the repeated climaxes, we realize that we have never seen such a display of trust and violation. We are breathless. But, good academics that we are, we also have some questions to ask. Word has gone around that the boy is straight. We want to know: What does that mean in this context? How did you discover that this is what you want to do? How did you find a male top to do it with? How did you come to do it in a leather bar? Where else do you do this? How do you feel about your new partners, this audience?

We did not get to ask these questions, but we have others that we can pose now about these scenes where sex appears more sublime than narration itself, neither redemptive nor transgressive, moral nor immoral, hetero nor homo, or sutured to any axis of social legitimation. We have been arguing that sex opens a wedge to the transformation of those social norms that require only its static intelligibility or its *deadness* as a source of meaning.⁷ In these cases, though, paths through publicity led to the production of non-heteronormative bodily contexts. They intended nonheteronormative worlds because they refused to pretend that privacy was their ground; because they were forms of sociability that delinked money and family from the scene of the good life; because they made sex the consequence of public mediations and collective self-activity in a way that made for unpredicted pleasures; because, in turn, they attempted to make a context of support for their practices; because their pleasures were not purchased by a redemptive pastoralism of sex or by mandatory amnesia about failure, shame, and aversion.⁸

We are used to thinking about sexuality as a form of intimacy and subjectivity, and we have just demonstrated how limited that representation is. But the heteronormativity of U.S. culture is not something that can easily be rezoned or disavowed by individual acts of will, by a subversiveness imagined only as personal rather than as the basis of public formation, or even by the lyric moments that interrupt the hostile cultural narrative that we have been staging here. Remembering the utopian wish behind normal intimate life, we also want to remember that we aren't married to it.

1998

8. The argument against the redemptive sex pas-

toralism of normative sexual ideology is made in Bersani, "Is the Rectum a Grave?"; on redemptive visions more generally, see his *The Culture of Redemption* (Cambridge, MA: Harvard University Press, 1990).

REY CHOW

b. 1957

FREDRIC JAMESON has remarked that “Rey Chow completely restructures the problem of ethnicity; all future discussions and debates will have to come to terms with [her work].” A comparatist and cultural theorist, Rey Chow draws on and reworks a number of theoretical perspectives, including poststructuralism, feminism, and postcolonialism, as she seeks to illuminate topics such as identity politics, film, gender, and ethics. Her theoretical work challenges conventional Western representations of China as “a mark of absolute difference,” by insisting on “the very instability upon which the dialectic between ‘Chinese’ and ‘Western’ is played.” She reads and writes, as the subtitle of her first book, *Woman and Chinese Modernity*, suggests, “between East and West.” Significantly, her work elucidates a transition in recent decades from a postcolonial feminism that largely examined women from within national frameworks to a transnational feminism savvy about the points of connection between nations in global circuits of exchange.

Born in Hong Kong to Muslim parents, Rey Chow earned a bachelor's degree from the University of Hong Kong (1979), where she received what she describes as a “classical colonial education” that focused on English language and literature. Her interest in poststructuralism led her to graduate work in the United States, where she received an M.A. (1982) and a Ph.D. (1986) from Stanford University. From 1987 until 1992, she taught comparative literature at the University of Minnesota. In 1992, she became a professor in the Department of Comparative Literature at the University of California at Irvine. From 2000 to 2009 she was the Andrew W. Mellon Professor of the Humanities at Brown University, where she held appointments in the Departments of Comparative Literature, English, and Modern Culture and Media. Since 2010, she has been the Anne Firor Scott Professor and Director of the Program in Literature at Duke University. In addition, she has held visiting positions at Smith College, the University of Queensland in Australia, and Princeton University, where in 2008 she was the Class of 1932 Fellow in English. In 1986–87, she was a postdoctoral fellow at the Pembroke Center for Research and Teaching on Women at Brown University. She was awarded a John Simon Guggenheim Memorial Foundation Fellowship in 1992. In 2002 she was a fellow at the Center for Advanced Study in the Behavioral Sciences, and in 2005 she was a research fellow at the Radcliff Institute. She won a Fulbright Scholarship in 2008.

While Chow's interest in English literature and theory grew out of her Hong Kong education, after her graduate work in English literature and theory she gradually returned to a consideration of Chinese literature and culture. She is the author of nine books and the editor of one that focus on the cultural, linguistic, and political interchanges between China and the West. Her first book, *Woman and Chinese Modernity: The Politics of Reading between West and East* (1991), explored gender and sexuality, popular literature, film, and commodity fetishism, focusing on “feminized space” in the West's representations of China, as well as in China's responses to Western modernity. *Writing Diaspora: Tactics of Intervention in Contemporary Cultural Studies* (1993) is a collection of eight essays in which she examines the West's attitude toward China from a “diasporic consciousness”—that is, from the perspective of those Chinese who live outside of China. With *Primitive Passions: Visuality, Sexuality, Ethnography, and Contemporary Chinese Cinema* (1995), awarded the James Russell Lowell Prize by the Modern Language Association, Chow began to bring her postcolonial lens to cinema and contemporary visual technologies. In her next five books, she explored ethnicity, ethics, media, and disciplinary in *Ethics after Idealism: Theory–Culture–Ethnicity–Reading* (1998), the

edited collection *Modern Chinese Literary and Cultural Studies in the Age of Theory: Reimagining a Field* (2000), *The Protestant Ethic and the Spirit of Capitalism* (2002), *The Age of the World Target: Self-Referentiality in War, Theory, and Comparative Work* (2006), and *Entanglements, or Transmedial Thinking about Capture* (2012). *Sentimental Fabulations, Contemporary Chinese Films: Attachment in the Age of Global Visibility* (2007), from which our selection is drawn, examines the sentimental in nine contemporary Chinese directors whose accomplishments have brought Chinese film to the attention of world cinema. In *Not Like a Native Speaker: On Language as a Postcolonial Experience* (2014), Chow investigates the experiences of intellectuals like herself, including FRANZ FANON, JACQUES DERRIDA, CHINUA ACHEBE, and NGUGI WÄ THIONG'O, for whom racialization has followed from the loss of the native tongue and the experience of learning the colonist's language.

As a postcolonial theorist, Chow offers critiques of Orientalism, racism, and sexism that draw on Marxist, deconstructive, and feminist theories. Well-read in the works of Derrida, GILLES DELEUZE, and MICHEL FOUCAULT, she brings poststructural analyses of discourse, alterity, and supplementarity to bear on questions of identity and ethnicity. But hers is not an uncritical poststructuralism; it is marked by critical engagement with feminist theorists such as LAURA MULVEY, GAYATRI CHAKRAVORTY SPIVAK, and Teresa de Lauretis; postcolonial writers such as Fanon, Spivak, EDWARD W. SAID, and PAUL GILROY; and STUART HALL's cultural studies. Turning a poststructuralist lens on her precursors, she deconstructs the investments of postwar French intellectuals such as Derrida, ROLAND BARTHES, LOUIS ALTHUSSER, and JULIA KRISTEVA in romanticized views of China as a political alternative to the West's capitalist ideology. Most important, whatever her subject matter, Chow brings an intersectional analysis to her writing, in which "race and ethnicity are . . . coterminous with sexuality, just as sexuality is implicated in race and ethnicity. . . . [I]t is their categorical enmeshment—their categorical miscegenation, so to speak—that needs to be foregrounded."

Our selection, from the introduction to *Sentimental Fabulations*, illustrates Chow's theoretical writing on film—in particular, on Chinese film. The book explores the work of a group of Chinese filmmakers from mainland China, Taiwan, and Hong Kong—of whom Ang Lee (b. 1954) and Zhang Yimou (b. 1951) are the best known in the West—whose films brought Chinese filmmaking out of the art house and into the multiplex, where they could find a global audience. The legacy of Mao Zedong's China, especially the Cultural Revolution of 1966–76; the opening of China to the West after President Richard Nixon's 1972 visit; the privatization of state industries—including the film industry—that began in the 1980s and continues apace; and the country's emergence as an economic superpower led up to and made possible the so-called Fifth Generation filmmakers of mainland China, the Taiwanese New Wave, and Hong Kong Second Wave filmmakers, all contributors to the growing international popularity of Chinese film after 1980. Chow's introduction theorizes this new wave of Chinese filmmaking within the context of Western cinema both to avoid the tendency of Western scholars to ghettoize non-Western film industries and to counter Orientalisms that posit some authentic version of Asianness that would underwrite the images on the screen. In our selection, Chow describes the relationship of Chinese films not only to the ongoing and dynamic development of Chinese culture but, more significantly, to the complexities of intercultural exchange in an age of global media, where diasporic populations help support international cinemas and Asianness becomes a "commodified and reproducible value . . . sustained by and contributing to the flows of capital."

Chow begins, "Where is the movie about me?" Rather than attempting to answer her question, she uses the query as a springboard to unpack the complexities of ethnic identity formation, illustrating the vexed role of representation—and of film—in this process. Her question condenses with elegant simplicity a paradigm shift within Western film theory that began in the 1970s with the development of

feminist film theory and continued through the 1990s as various groups (defined by nationality, gender, sexual orientation, religion, race, or ethnicity) took up this question and film studies became increasingly concerned with group cultures. The theoretical question Chow poses is how to move beyond classifying group identities to interrogate the role cinema necessarily has in the process of any group's coming into visibility.

An examination of Mulvey's landmark 1975 essay, "Visual Pleasure and Narrative Cinema" (see above), sets the terms of Chow's argument. Mulvey was the first to split the seemingly unified cinematic image, with its transparency and its untroubled referentiality to an objective world, by articulating what remains invisible in it: the apparatus that she called the male gaze. In Hollywood films, the camera and the framing of the *mise-en-scène* tend to promote particular views of "reality"—for Mulvey, patriarchal views—over others. Rooted in a distrust of images as deceptive because constructed to privilege particular (in this case masculine) fantasies, Mulvey's split between image and gaze opened up film to the study of cultural difference and ideological critique. While feminist film theory has continued to interrogate the patriarchal gaze, other cultural groups formed around race, ethnicity, nationality, and sexuality began to use this gap between gaze and image to critique dominant (Western) modes of representation and value.

Building on Gilles Deleuze's argument in his book on Foucault, however, Chow argues that there is more to the "becoming visible" of subordinated groups than simply replacing bad representations with good and presumably authentic ones. She uses the term "visuality" to describe a key epistemic process: a discursive formation—what Foucault would call an apparatus or grid of intelligibility—that becomes "the condition of possibility for what becomes visible." That is, what we can see is largely dependent on what we can know. Attention to this "discursive politics" in the "fraught" context of a globalized media shifts the focus away from an "anthropomorphic realism" that confuses the image of a subordinated cultural group with the group itself toward a deconstruction of the image and its fantasies. Thus, Chow maintains, Western film theorists fascinated with Chinese cinema must abandon the dream of authentic Chineseness, in order to understand the myriad ways in which Chineseness has become a commodity in a transnational market that includes not only movies but also "economic rivalry, exotic cuisine, herbal medicine, spiritual and physical exercise, sex trade, female child adoption, model minority politics, illegal immigration, and so on."

Today Chinese films are produced and distributed by multinational corporations, employ multinational casts and crews, compete internationally for awards, and attract audiences from around the world, activities all abetted by the transnational movements of people, capital, media, and goods across the globe. Yet the new international Chinese cinema does not simply slot itself into the conventional categories of Western film theory. Rather, Chow argues, it challenges long-held values. She points, for example, to the perceived connection between political progressivism and the avant-garde, which she sees promoted by the German dramatist Bertolt Brecht (1898–1956), but which also is found in the Frankfurt School critics, such as THEODOR ADORNO and MAX HORKHEIMER, as well as in Mulvey's essay. Avant-garde art does not necessarily serve progressive political ends, nor are popular genres always politically regressive.

What unites the disparate filmmakers that make up the new international Chinese cinema, Chow contends, is the persistence of the sentimental, a term most frequently dismissed as "affective excess" in the West; in film it is mostly associated with "women's films" and derogated accordingly. She examines the Western genealogy of the term in the moral philosophy and literature of the eighteenth century, specifically in the philosophy of FRIEDRICH VON SCHILLER. She concludes that far from being merely affective excess, in the Euro-American context the sentimental, whether as elegiac lament for lost ideals or, more recently, as a means of focalizing

struggles for social justice, engages the ethics of sociality in literature and art. Sentimentality, in this regard, might be a mechanism of intercultural exchange between West and East. The sentimental, translated into Chinese as *wenqing zhuyi* (warm sentiment-ism), is a recurrent mode in Chinese cinema as well; there, however, it carries with it a sense of moderation (being between hot and cold) that the European term lacks. The sentimental in Chinese films designates “an inclination or a disposition toward making compromises and toward making-do with even—and especially—that which is oppressive and unbearable.” As in the West, it tends to circle around domestic themes: home, the family, and kinship ties. As Chow interrogates the sentimental she refuses to label it as either socially progressive or ideologically suspect. Her dialectical treatment highlights regressive and progressive features of sentimentality in Chinese cinema. She links it on the one hand with a collective nostalgia for ancestral traditions and, on the other, with inevitable life-enhancing escapes from and disruptions of such traditions. Chow argues, moreover, that the traditional anachronistic focus on personal modesty and individual restraint in Chinese cinema now serves positive protective functions in a global era of increasing individual visibility, spectacle, and personal aggrandizement.

Critics interested in the study of Chinese cinema have sometimes dismissed Chow's theoretical apparatus, which draws heavily on Continental theories, as unnecessary to her otherwise excellent readings of the films, while others criticize her dense language, which is characteristic of poststructuralism. In addition, some have found her characterization of the sentimental a bit too broad to hold together the variety of films she examines. There can be little doubt, however, that Chow's is a major voice in contemporary film theory. Through her elegant syntheses of media studies, feminism, and poststructuralism, her work stages powerful interventions into ethnicity, postcolonialism, and Chinese cultural studies, illuminating both the opportunities and the inequalities that mark intercultural exchanges in an increasingly transnational world.

From Sentimental Fabulations, Contemporary Chinese Films: Attachment in the Age of Global Visibility

From Introduction

Where is the movie about me?

In the academic study of cinema, this is one of the most commonly encountered questions in recent years. Versions of it include some of the following: Where in this discipline am I? How come I am not represented? What does it mean for me and my group to be unseen? What does it mean for me and my group to be seen in this manner—what has been left out? These questions of becoming visible pertain, of course, to the prevalence of the politics of identification, to the relation between representational forms and their articulation of subjective histories and locations. It is one reason the study of cinema, like the study of literature and history, has become increasingly caught up in the study of group cultures: every group (be it defined by nationality, class, gender, ethnicity, sexual orientation, religion, or disability), it seems, produces a local variant of the universal that is cinema, requiring critics to engage with the specificities of particular collectivities even as they

talk about the generalities of the filmic apparatus. According to one report, for instance, at the Society of Cinema Studies Annual Conference of 1998, “nearly half the over four hundred papers (read from morning to night in nine rooms) treated the politics of representing ethnicity, gender, and sexuality.”¹ Western film studies, as Christine Gledhill and Linda Williams write, is currently faced with its own “impending dissolution . . . in . . . transnational theorization.”² How did this state of affairs arise? How might we approach it not simply empirically, by way of numerical classifications, but also theoretically, by probing visibility as a problematic, to which film, because of its palpably visual modes of signification, may serve as a privileged point of entry?

Transnational theorization was, in fact, already an acute part of the reflections of non-Western authors on film experiences during the 1900s, 1910s, and 1920s. When contemplating the effects of the filmic spectacle, for instance, Lu Xun and Tanizaki Junichiro,³ writing self-consciously as Chinese and Japanese nationals, readily raised questions of what it meant to be—and to be visible as—Chinese and Japanese in the modern world. The visual immediacy of Chinese and Japanese figures and faces, conveyed on the screen as they had never been before, was experienced by these authors not only as scientific advancement but simultaneously as a type of racially marked signification—specifically, as representations in which their own cultures appeared inferior and disadvantaged vis-à-vis a newly global, mediated gaze.⁴

In light of these early reflections—reflections that are, strictly speaking, part of the history of film but which have hitherto been relegated to the margins of the West—the current preoccupation with group identities in film studies is perhaps only a belated reenactment of a longstanding set of issues pertaining to the fraught relationship between film and cultural identity. * * *

HIGHLIGHTS OF A WESTERN DISCIPLINE

* * *

In her groundbreaking essay of 1975, “Visual Pleasure and Narrative Cinema,” Laura Mulvey turned the question of the cinematic image (and its implications of time) into a story, one that, she revealed, was far from being

1. Dudley Andrew, “The ‘Three Ages’ of Cinema Studies and the Age to Come,” *PMLA* 115.3 (2000): 348. Andrew offers this information as part of a discussion of the history of cinema studies [except as indicated, all notes are Chow’s; some of her notes have been edited and some omitted].

2. Christine Gledhill and Linda Williams, introduction to *Reinventing Film Studies*, ed. Christine Gledhill and Linda Williams (London: Arnold, 2000), 1.

3. Popular Japanese novelist (1886–1965). Lu Xun (pen name of Zhou Shuren, 1881–1936), a major figure in modern Chinese literature [editor’s note].

4. See my discussion of Lu Xun’s famous reactions to a slide show of an execution of a Chinese man (which he happened to watch during 1904–5 in Japan), reactions that led him to abandon medical studies and become a writer, at the beginning of part 1 of *Primitive Passions: Visuality, Sexuality, Ethnography, and Contemporary*

Chinese Cinema (New York: Columbia UP, 1995). Tanizaki, for his part, noted how, in contrast to Western faces, Japanese faces appeared hideous and repulsive on film. For in-depth commentaries on as well as translations of some of Tanizaki’s film essays and stories (written during the 1910s and 1920s), see Thomas LaMarre, *Shadows on the Screen: Tanizaki Junichiro on Cinema and “Oriental” Aesthetics* (Ann Arbor: Center for Japanese Studies, University of Michigan, 2005), in particular chaps. 7 and 8. It should be added, however, that Tanizaki’s emphases were largely aesthetic—indeed, synesthetic, as LaMarre argues—in orientation, whereas Lu Xun’s emphases were motivated by his sense of shock at his countrymen’s apathy as bystanders and geared toward the urgency of national reform. For a major historical study of early East Asian cinema that elaborates the sensorial aspects of cinematic modernity, see Zhang Zhen, *An Amorous History of the Silver Screen: Shanghai Cinema, 1896–1937* (Chicago: U of Chicago P, 2005).

sexually neutral or innocent.⁵ Rather than treating the cinematic image as a single entity, Mulvey approached it in a deconstructive move, in which what seems visually obvious and unified is taken apart by the reintroduction of narrative. The part of the narrative that determines how specific images are looked at while remaining itself hidden and invisible, Mulvey called the gaze. Most critically, Mulvey gave the temporal differential between image and gaze the name of patriarchy, so that, in the case of classical Hollywood melodrama at least, she charged, masculinist scopophilia underwrote the imperative of gazing, while women were cast, as a result, as passive, fetishized objects,⁶ as beautiful images to be looked at. Mulvey was formidably direct about her goal: "It is said that analysing pleasure, or beauty, destroys it. That is the intention of this article."⁷ As Maggie Humm puts it, "Mulvey's essay marked a huge conceptual leap in film theory: a jump from the ungendered and formalistic analyses of semiotics to the understanding that film viewing always involves gendered identities."⁸ By arguing that cinema is irreducibly structured by (hetero) sexual difference, Mulvey succeeded in doing something that her fellow male critics were uninterested in doing—prying the filmic image open and away from its hitherto spontaneous, reified status and reinserting in it the drama of the ongoing cultural struggle between men and women, the drama of narrative coercions and ideological interpellations.⁹

In its justifiable distrust of the cinematic image as deceptive and usurpatory and in its courageous effort to forge a politics that would prevent the woman spectator from completely collapsing, at her own peril, into the cinematic image of femininity produced by men, was feminist film theory, in spite of itself, an unwitting ally to an intellectual tradition that is, to borrow a term from Martin Jay's study of modern French theory, iconophobic?¹ I tend to think so, but it is necessary to add that this iconophobia was a theoretically and institutionally productive one.² (Among other things, it posed a crucial question within the politics of film production: how could

5. Laura Mulvey, "Visual Pleasure and Narrative Cinema," in *Visual and Other Pleasures* (Bloomington: Indiana UP, 1989), 14–26. Mulvey was not alone in her effort to theorize narrativity in relation to film. Among her fellow travelers were Jean-Louis Baudry, Christian Metz, Stephen Heath, and Paul Willemen, who each did substantive work with film narrative during the same period. See Jean-Louis Baudry, "The Apparatus," in *Narrative, Apparatus, Ideology: A Film Theory Reader*, ed. Philip Rosen (New York: Columbia UP, 1986), 299–319; Christian Metz, *Film Language: A Semiotics of the Cinema* (New York: Oxford UP, 1974) and *Language and Cinema*, trans. Donna Jean Umiker-Sebeok (The Hague: Mouton, 1974); Stephen Heath, "Narrative Space," *Screen* 17.3 (1976): 68–112, and *Questions of Cinema* (Bloomington: Indiana UP, 1981); and Paul Willemen, *Looks and Frictions: Essays on Cultural Studies and Film Theory* (Bloomington: Indiana UP, 1994). Mulvey, however, was the one who raised the issue of sexual politics. [MULVEY (b. 1941), feminist film theorist and filmmaker; for the essay cited, see above—editor's note.]

6. Objects invested with magical, religious, or sexual qualities. "Scopophilia": pleasure in looking [editor's note].

7. Mulvey, "Visual Pleasure and Narrative

Cinema," 16.

8. Maggie Humm, *Feminism and Film* (Bloomington: Indiana UP, 1997), 17. Humm's book offers a thoughtful account that places Mulvey's essay in its historical context of the United Kingdom in 1960s and 1970s, when the British intellectual left encountered the burgeoning of feminist theory.

9. *Interpellation* is a term used by the French Marxist philosopher LOUIS ALTHUSSER (1918–1990) to describe the process by which ideology "hails" and incorporates the individual [editor's note].

1. Martin Jay, *Downcast Eyes: The Denigration of Vision in Modern French Thought* (Berkeley: U of California P, 1993). ["Iconophobic": affected by fear or hatred of images—editor's note.]

2. Many criticisms of Mulvey's polemic piece, including feminist criticisms of the 1980s, revolve around her point about destroying pleasure and, as a counterargument, attempt to recuperate the positive value of pleasure, especially for women spectators. My argument is quite different in that it is about the intellectually and institutionally productive—that is, reproducible—nature of Mulvey's original negative move (of deconstructing the image) and how this is thought-provokingly bound up with the iconophobia of our (image-studded) culture at large.

one make a differently narrativized kind of film?) It was precisely its momentum of negativity, manifested in the belief that the cinematic image has somehow repressed something existing beyond it, that became the characteristic force with which the study of film has since then spread—first to English departments, in which film is often accepted as a kind of pop culture; then to foreign language and literature departments, in which film becomes yet another method of learning about other cultures; and finally to the currently fashionable discussions, in social science as well as humanities programs across the university, of so-called global media.

Feminist film theory, in other words, inaugurated the institutional dissemination of cinema studies in the Anglo-American world with something akin to what Michel Foucault, in his work on the history of sexuality in the West, called the repressive hypothesis, whereby the conceptualization of what is repressive—together with its investment in lack and castration—is reinforced simultaneously by the incessant generation and proliferation of discourses about what is supposedly repressed.³ (It was no mere coincidence that the political weapon on which Mulvey relied for attacking phallocentrism was Freudian psychoanalysis.)⁴ But what was unique—and remarkable—in this instance was the articulation of the repressive hypothesis to the visual field, an articulation wherein the visually full (presence and plenitude of the) cinematic image has become itself the very evidence/sign of repression and lack.

IMAGE, TIME, IDENTITY: TRAJECTORIES OF BECOMING VISIBLE

Because it was underwritten with the push of the repressive hypothesis, the paradigm shift within the cinematic visual field toward the study of narrativity and ideology led to consequences that have gone considerably beyond (the Western parameters of) film studies. Such a paradigm shift harked back to the heightened sense of group self-consciousness already felt by non-Western writers such as Lu Xun and Tanizaki about film technology in the early twentieth century and logically made way, in academia, for the study of differences dispersed along multiple lines of inquiry. In the decades since Mulvey's essay was first published,⁵ film and cultural critics have been extending the implications of her work (often in simplified terms) by devoting themselves to problematizing the naturalness of the cinematic image. Rather than being on the image itself, its magic, or its tendency toward monumentalization, the focus in theorizing and analyzing film has increasingly been on identifying and critiquing the multiple narrative and ideological processes that go into the image's production. Bill Nichols sums up this general trend succinctly: "The visual is no longer a means of verifying the certainty of facts pertaining to an objective, external world and truths about

3. See Michel Foucault, *The History of Sexuality*, vol. 1, trans. Robert Hurley (New York: Pantheon, 1978). [FOUCAULT (1926–1984), French philosopher and historian of ideas; for *The History of Sexuality*, see above—editor's note.]

4. Mulvey, "Visual Pleasure and Narrative Cinema," 14. ["Phallocentrism": the psychoanalytic system in which sexual difference is defined as the difference between having and lacking the phallus; the term has come to refer to the patriarchal cultural system as a whole insofar as that

system privileges the phallus as the symbol and source of power, and it is associated with the theories of SIGMUND FREUD (1856–1939), the Austrian founder of psychoanalysis—editor's note.]

5. To her credit, Mulvey herself has, with historical hindsight, critiqued the binarism of her earlier polemical argument and revised her observations. See the chapter "Changes: Thoughts on Myth, Narrative and Historical Experience" (first published in 1985), in *Visual and Other Pleasures*, 159–76.

this world conveyed linguistically. The visual now constitutes the terrain of subjective experience as the locus of knowledge, and power.”⁶ Whereas feminist critics, following Mulvey, elaborate and refine women-centered modes of interrogating patriarchy, other critics, equipped with other types of social queries, would complicate the differential between gaze and image in terms of class, race, ethnicity, nationality, and sexual preference in order to expose the repressive effects of dominant modes of visibility and identification. (Think, for instance, of the numerous critiques in postcolonial studies of orientalist representations.) Concurrently, they also theorize the ambiguities inherent in various forms of spectatorship and, by implication, in various forms of seeing and subjectivity.⁷

In these collective endeavors to destroy the pleasure of the beautiful image, what has happened to the problematic of time? At one level, time is infinitely diversified and relativized: as every group of spectators comes forward with its demands, interrogations, and political agendas, one can no longer speak of the image as such but must become willing to subject the image to processes of re-viewing, reimagining, and reassembling. This is perhaps one reason there are so many publications on filmmaking and film reception in different cultures (Brazilian, Chinese, French, German, Hong Kong, Indian, Iranian, Israeli, Italian, Japanese, Korean, and Spanish, just to name some commonly encountered examples). At the same time, in this culturally pluralized way of theorizing the filmic image, one cannot help feeling that a certain predictability has set in and that, despite their local differences, the theoretical moves made by different cultural groups vis-à-vis the cinematic image often share a similar kind of critical prerogative. Borrowing again from Nichols, we may describe this prerogative in this manner: “The rise of distinct cultures to a condition of visibility accompanies a radical shift away from democratic ideals of universalism (equality under the law for all regardless of gender, color, sexual orientation and so on) toward a particularism that insists on equality precisely in relation to differences of gender, color, sexual orientation and the like.”⁸ “Differences of gender, color, sexual orientation and the like,” it follows, all generate research agendas, competition for institutional space and funding, and self-reproductive mechanisms such as publications and the training and placing of students. The questions of identity politics with which I began this discussion are therefore, arguably, some of the *temporal* outcomes of the proliferating and disseminating mechanisms that characterize the repressive hypothesis as it has been mobilized around the cinematic visual field.

In this light, the ambivalent logics exemplified by feminist film theory from the very beginning may be seen as constitutive, perhaps paradigmatic, of the process of a subordinated group’s rise to visibility. When feminist film theory alerted us to the cinematically fetishized status of women, its apparent

iconophobia shared important affinities with the moral charge that accompanied Western political activism of the 1960s and early 1970s, with their demands for an end to imperialism and military violence and for the granting of civil rights to disenfranchised populations. At the same time, like the mass protests so self-consciously staged during that era, feminist film theory was delivering another message. This was the message that the politics of gender and sexuality (together with the politics of race, class, and ethnicity) was, in fact, none other than the politics of commodified media spectacles, a politics constituted by the demonstrative forces of public display.⁹ Indeed, the determination with which feminist critics sought to subvert the widespread “false” representations of women—by actively competing for the right to transform, possess, and manage the visual field; to fabricate women’s images; to broadcast women’s stories—suggested that the dynamics of late capitalist simulacra¹ was assuming center stage. The mechanically and then electronically produced images; the instantly transmitted, spectacular “reality” shows: these were henceforth going to be the actual, ubiquitous political battleground.

The attempt to anchor one’s identity definitively in what Mulvey called to-be-looked-at-ness (on the screen as well as off) is, in view of this history, a newly fetishistic practice in an exponentially expanding and accelerating virtual field of global visibility. (This is, I believe, one reason that those who traditionally would have concentrated on the study of prose fiction have been migrating steadily toward the study of film and visual cultures.) Moreover, this fetishistic practice and its countless simulacra—in so many varieties of “Look at me! Look at us!”—are no longer confined to the realm of gender politics but also repeated and reproduced widely across the disciplines, in which the morally impassioned rebuke of images always goes hand in hand with the massive production and circulation of more images—be those images about classes, races, nations, or persons of different sexual orientations.

Pursued in close relation to a controversial visual medium, feminist film theory since Mulvey hence reveals (in a handy manner) something crucial about the condition of visibility in general. In the course of feminist critique, the immediately present, visible object—the image of woman in classical Hollywood narrative cinema—is delimited or bracketed in an intervention that, notably, cannot abandon the visible as such but instead moves it into a different frame (women’s world). This move makes it possible to include that which has hitherto remained invisible and thereby to reinvent the very terms of the relation between the visible and the invisible. In this process, however, becoming visible is no longer simply a matter of becoming visible in the visual sense (as an image or object) but also a matter of participating in a discursive politics of (re)configuring the relation between center and margins, a politics in which what is visible may be a key but not the exclusive

9. As Nancy Armstrong writes: “The sixties saw an important shift in the theater of political activism from the plane of physical action and conflicts that we persist in designating as real to the plane of discourse, representation, and performance, where conflicts determine how we imagine our relation to the real” (“Who’s Afraid of the Cultural Turn?” *differences* 12.1 [Spring 2001]: 42). Her essay offers an interesting discussion of

the linkage between the iconophobic legacy of Victorianism and the so-called cultural turn set off by the media-oriented activist events of the 1960s in the United States.

1. Simulations of reality, copies without originals; this term is associated with writings of the French social critic and theorist JEAN BAUDRILLARD (1929–2007) [editor’s note].

determinant. *There is, in other words, a visibility of visibility—a visibility that is the condition of possibility for what becomes visible, that may derive a certain intelligibility from the latter but cannot be simply reduced to it.* It is to this other, epistemic sense of visibility—of visibility as the structuration of knowability—that Gilles Deleuze² alerts us in his fascinating study of Foucault. As Deleuze writes in different passages, “Visibilities are not to be confused with elements that are visible or more generally perceptible, such as qualities, things, objects, compounds of objects. . . . Visibilities are not forms of objects, nor even forms that would show up under light, but rather forms of luminosity which are created by the light itself and allow a thing or object to exist only as a flash, sparkle or shimmer”; “Visibilities are neither the acts of a seeing subject nor the data of a visual meaning”; “Visibilities are not defined by sight but are complexes of actions and passions, actions and reactions, multisensorial complexes, which emerge into the light of day.”³

If we follow Deleuze’s thinking along these lines, the question of anyone’s or any group’s rise to the condition of visibility would turn out to be much more complicated than an attainment of quantifiable image time or even of the empirical status of being represented or seen. Instead, such a question would need to involve a consideration of the less immediately or sensorially detectable elements helping to propel, enhance, or obstruct such visibility in the first place and, even where visibility has occurred, a consideration of the often vacillating relations between the visible and the invisible that may well continue at different levels.

Tied as it is to the problematic of becoming visible (understood in these terms), the fetishization of identity as it is currently found in the study of cinematic images thus tends to proceed with a Janus-faced⁴ logic. There are those who, mistaking simple visual presence for (the entirety of) visibility, will always insist on investing artificial images with an anthropomorphic realism—the very thing that the iconoclasm of film, as its early theorists observed, fundamentally undid—and moreover to equate such images with the lives and histories of “real” cultural groups. (“National allegory” readings are one good example of this.) This line of thinking has its productive moments, to be sure, but it is ultimately limited in what it can offer. Meanwhile, for those who remember that what is on the screen are not real people but images, a suspension of such insistence on literal, positivistic identifications can mean a turn, more interestingly, to the specific materialities of image, affect, and fantasy, on the one hand, and the fraught complexities of globalized visibility, on the other.

With respect to the recent Western European and North American fascination with East Asian cinema,⁵ the first question to ask, then, is this: should we try to direct such fascination back at some authentic, continuous Asian-ness lying beyond the alluring cinematic images, or would it not be more

2. French philosopher (1925–1995); see above [editor’s note].

3. Gilles Deleuze, *Foucault*, trans. Sean Hand, foreword by Paul Bove (Minneapolis: U of Minnesota P, 1988), 52, 58, and 59.

4. That is, looking in opposite directions, like the Roman two-faced god of transitions, time, gates, and doorways [editor’s note].

5. See, for instance, Charles Tesson, “L’Asie

majeure,” *Cahiers du cinema* 553 (January 2001): 5; Dave Kehr, “In Theaters Now: The Asian Alternative,” *New York Times*, January 14, 2001, 2:1, 30. Apart from being featured at film festivals around the world, at which they have been receiving major awards, East Asian films, directors, and actors and actresses have also steadily made their way into mainstream cinematic venues in Western Europe and North America.

pertinent to see Asianness itself as a commodified and reproducible value, made tantalizingly visible and accessible not only by the filmic genres of the action or martial arts comedy, the love story, and the historical saga but also by an entire network of contemporary media discourses—economic rivalry, exotic cuisine, herbal medicine, spiritual and physical exercise, sex trade, female child adoption, model minority politics, illegal immigration, and so on—that are at once sustained by and contributing to the flows of capital? Part of my goal in this study is to argue that Chinese cinema since the 1980s—a cinema that is often characterized by multinational corporate production and distribution, multinational cast and crew collaboration, international award competition activity, and multicultural, multiethnic reception, as well as being accompanied by a steady stream of English-language publications, written (not infrequently by those who do not speak or read Chinese or consult Chinese-language sources) for an English-reading market—is an inherent part of a contemporary global problematic of becoming visible. As much as belonging in the history of Chinese culture, the films involved should also, I contend, be seen as belonging in the history of Western cinema studies, in the same manner that modern Asia, Africa, and Latin America, properly speaking, belong in the history of modern European studies.⁶

DEFINING THE SENTIMENTAL IN RELATION TO CONTEMPORARY CHINESE CINEMA

To the extent that one implicit aim of her criticism of classical Hollywood cinema was to eradicate conventional Western images altogether, Mulvey's early work can be seen as a British rejoinder to the political aspirations of the French nouvelle vague filmmakers (such as Jean-Luc Godard) and the theorists associated with the French journal *Tel quel*, who in the 1960s and 1970s mobilized critiques of Western thinking, often by way of looking east, especially to Mao Zedong's China.⁷ Just as Mao and his cohort, following a native revolutionary tradition that began with the May Fourth Movement of 1919, sought to radicalize Chinese society by attacking its most basic social unit—the Chinese family⁸—so, too, did Anglo-American feminist film the-

6. For an account of the study of Chinese cinema in the West, see the chapter "The Rise of Chinese Film Studies in the West," in Yingjin Zhang, *Screening China: Interventions, Cinematic Reconfigurations, and the Transnational Imaginary in Contemporary Chinese Cinema* (Ann Arbor: U of Michigan P, 2002), 43–113.

7. Notable examples of films include Godard's *La chinoise* (1967) [*The Chinese*; French], *Le vent d'Est* (*Wind from the East* [French]) (1969), and *Tout va bien* [*All's Well*; French] (1972), while Chris Marker's *Sunday in Peking* (1956) was among the first European documentaries to chronicle China under Mao (even though Marker is not considered a representative of the *nouvelle vague*). Among the more well-known publications by members of *Tel quel* on China, see, for instance, JULIA KRISTEVA, *About Chinese Women*, trans. Anita Barrows (New York: Urizen, 1977); and ROLAND BARTHES, *Alors la Chine?* [*Then China?*, French] (Paris: C. Bourgois, 1975). Among other well-known European endeavors to engage with China during this period and not too long afterward, see JACQUES DERRIDA, *Of Grammatol-*

ogy, trans. GAYATRI CHAKRAVORTY SPIVAK (Baltimore: Johns Hopkins UP, 1976); the film *Chung Kuo/Cina*, directed by Michelangelo Antonioni (1972); and the film *The Last Emperor*, directed by Bernardo Bertolucci (1987). [*Tel quel*: literally, "as is" or "as such" (French), an avant-garde literary magazine published in Paris (1960–82) that from 1966 to 1970 represented a Maoist version of Marxism. *Nouveau vague*: New Wave (French), a group of French avant-garde filmmakers of the late 1950s and 1960s, including Godard (b. 1930), known for their documentary realism and spare style. Mao (1893–1976), principal Marxist theorist of China's communist revolution and the leader of the People's Republic of China from its founding in 1949 until his death—editor's note.]

8. It should, however, be noted that although the Chinese Communist Party was always eager to emphasize that loyalty to the party and the state must come before the family (in case of contradiction), efforts were often made to ensure that the patriarchal family system and the party could coexist in harmony. In other words, communism in China did not in actuality supplant or eradicate

ory of the mid-twentieth century leave some of its most pronounced critical marks on melodrama, the film genre that is, arguably, most intimately linked to the middle-class nuclear family and its demands for female self-sacrifice.⁹ But the Chinese connection, if it may be so called, did not stop at the attempt to deconstruct the family, East or West. As the consequences of Chinese communism began to be questioned by organic intellectuals in China—and as the disasters spawned by Mao's political idealism (which reached its frenzied heights during the Cultural Revolution of 1966–76)¹ became a subject of reflective critique by those who had spent their formative youthful years living under the mainland Chinese regime—Chinese cinema became, for the first time, globally visible. In the astonishing films made by mainland Fifth Generation directors such as Chen Kaige, Zhang Yimou, Tian Zhuang-zhuang, and their classmates, as well as by their contemporaries in Hong Kong and Taiwan such as Tsui Hark, Hou Hsiao-Hsien, Ann Hui, Ang Lee, Edward Yang, Stanley Kwan, Clara Law, Wong Kar-wai, and Tsai Ming-liang, Chinese cinema has since the 1980s become an event with which the entire world has to reckon.² Appearing first in international film festivals and art house theaters, then gradually in undergraduate curricula across college campuses in the English-speaking world, and finally in mainstream Hollywood productions, China—in the form of films, directors, actors and actresses, cinematographic techniques, and special effects—has helped to revitalize cinematic discourse in the West and made it necessary, once again, for Western intellectuals to come to terms with aspects of what in so many ways still remains an exotic culture.

loyalty to the patriarchal family. [May Fourth Movement: a student-led protest and reform movement that attacked traditional Confucian values and promoted national independence and Western ideas—editor's note.]

9. See, for instance, some of the essays by Mulvey in *Visual and Other Pleasures*; Tania Modleski, *Loving with a Vengeance: Mass-Produced Fantasies for Women* (Hamden, Conn.: Archon, 1982); Ien Ang, *Watching Dallas: Soap Opera and the Melodramatic Imagination*, trans. Della Couling (London: Methuen, 1985); Mary Ann Doane, *The Desire to Desire: The Woman's Film of the 1940s* (Bloomington: Indiana UP, 1987); Thomas Elsaesser, "Tales of Sound and Fury: Observations on the Family Melodrama," in *Movies and Methods*, ed. Bill Nichols (Berkeley: U of California P, 1985), 2:165–89; Geoffrey Nowell Smith, "Minnelli and Melodrama," in *Movies and Methods*, 2:190–94; and Christine Gledhill, "Genre and Gender: The Case of Soap Opera," in *Representation: Cultural Representations and Signifying Practices*, ed. Stuart Hall (London: Sage in association with the Open University, 2003), 337–85. See also some of the essays in the following collections: *Home Is Where the Heart Is: Studies in Melodrama and the Woman's Film*, ed. Christine Gledhill (London: British Film Institute, 1987); *Melodrama: Stage, Picture, Screen*, ed. Jacky Bratton, Jim Cook, and Christine Gledhill (London: British Film Institute, 1994); and *Feminism and Film*, ed. E. Ann Kaplan (Oxford: Oxford UP, 2000). For an informative account that argues melodrama's close affiliations to genres of action and suspense (in contrast to the standard view that sees it as primarily linked to genres of pas-

sion and femininity), see Steve Neale, *Genre and Hollywood* (London: Routledge, 2000), 179–204.

1. A campaign launched by Mao to rekindle revolutionary fervor by removing counterrevolutionary elements from the Communist Party and from society in general; the repeated purges resulted in factionalism, violence, and chaos [editor's note].

2. Before the 1980s, a large number of Chinese films had been produced during various time periods—for example, the silent films from the late 1890s to the early 1930s; the nation-building patriotic films of the 1930s and beyond; films produced on the mainland during and after the reign of Mao Zedong; films in Cantonese, Chaozhouhua (Chiu Chow), Xiamenhua (Amoy), and Minnanhua (Taiwanese) as well as in Mandarin, produced in Shanghai, Taiwan, Hong Kong, and southeast Asia in the decades of the 1940s to the early 1980s. * * * Before the 1980s, it was not uncommon for Chinese films to be shown at regional (especially Asian) film festivals, but few participated in international film festivals involving European and American audiences. [The "Fifth Generation" Chinese filmmakers—Chen (b. 1952), Zhang (b. 1951), and Tian (b. 1952)—all graduated from the Beijing Film Academy and, beginning in the mid-1980s, increasingly drew international attention to Chinese cinema. Tsui (b. 1950), Hui (b. 1947), Lee (b. 1954), Kwan (b. 1957), Law (b. 1957), and Wong (b. 1958) represent the Hong Kong Second New Wave, while Hou (b. 1947), Yang (b. 1947), and Tsai (b. 1957) are the best known of the Taiwanese New Wave filmmakers—editor's note.]

What does this becoming-visible of contemporary Chinese cinema signify in light of the small history of the discipline of film studies that I eclectically outlined above, including the critical moment of Anglo-American feminist critique? Many things can be said in response to this question,³ but I'd like to foreground something that is central to my readings in some of the chapters to follow. Whereas contemporary cultural theory in the West, including feminist film theory, has thrived on an inextricable linkage (itself a legacy from Bertolt Brecht) between political consciousness raising, on the one hand, and an aesthetic-cum-theoretical avant-gardism,⁴ on the other, the emergence of Chinese cinema renders this particular linkage a historical—and culturally specific—occurrence rather than a universal or absolute necessity. That is to say, although for left-leaning Western intellectuals since the post–Second World War period, “China” has often stood for a set of political aspirations alternative to the right, when China enters the world picture in the form of a contemporary cinema, it does not necessarily comply with such presumptions. Consciousness raising, contemporary Chinese cinema suggests, does not have to take the route of the avant-garde; conversely, aesthetic and theoretical avant-gardism, so valued in certain academic sectors for purposes of intellectual renewal and regeneration, does not necessarily lead to a progressive or democratic politics. In particular, the persistence of a predominant affective mode,⁵ a mode I will describe as the sentimental, indicates that contemporary Chinese cinema, even as its contents fully partake of contemporary film and cultural problematics such as explicit sex, women's lives, gay male relationships, extramarital liaisons, immigrant tragedies and comedies, reproduction, and so forth, simultaneously brings with it fundamental challenges to the cornerstones of Western progressivist theoretical thinking. To engage productively with the global visibility of contemporary Chinese cinema, it is therefore important to work conceptually and speculatively, at a level beyond the (obviously invaluable) documenting and inventorying efforts and the geographical and chronological compartmentalization exercises that currently seem to dominate developments in this fledgling field. To put it bluntly, it is important to aim at goals other than information retrieval and canonization, and other than a monumentalizing of film periods (as tradition) and film directors (as individual talents).

What do I mean, then, by the recurrent sentimental in contemporary Chinese films? It would be helpful to begin with a conventional understanding—namely, of the sentimental as an affective orientation/tendency, one that is often characterized by apparent emotional excess, in the form of exaggerated

3. In the Chinese language, various publications have debated the becoming visible of Chinese cinema in sophisticated terms, though, understandably, these publications tend not to take into consideration the history of film studies in the English-speaking world in which I am locating my inquiry.

4. For an informed reappraisal, based on knowledge of the Chinese language as well as of German and French, of the work of Brecht and the journal *Tel quel* in relation to Chinese art and politics, see Eric Hayot, *Chinese Dreams: Pound, Brecht, Tel Quel* (Ann Arbor: U of Michigan P, 2004), 54–102, 103–75. [Brecht (1898–1956), German poet and playwright, a theorist and prac-

titioner of a provocative and highly political drama that rejected tradition and convention—editor's note.]

5. John Frow, referring to Alastair Fowler's *Kinds of Literature: An Introduction to the Theory of Genres and Modes* (Cambridge: Harvard UP, 1982), has provided a succinct formulation of the term “mode” that I find helpful: “What I would . . . like to suggest is that the term ‘mode’ be reserved for use in . . . the ‘adjectival’ sense . . . , in which modes are understood as the extensions of certain genres beyond specific and time-bound formal structures to a broader specification of ‘tone’” (*Genre* [London: Routledge, 2006], 65).

grief or dejection or a propensity toward shedding tears.⁶ But when examined closely, such emotional excess is only a clue to a much broader range of issues.

In his famous discussion, in 1795–96, of naive and sentimental poetry, the German-speaking philosopher and writer Friedrich Schiller⁷ defined the sentimental as a modern creative attitude marked by a particular self-consciousness of loss. To reiterate Schiller's statements in simple terms: while the poet who writes "naively" is nature, the poet who writes "sentimentally" seeks nature; the latter's "feeling for nature is like the feeling of an invalid for health."⁸ The sentimental relation to nature (the condition of simple and sensuous wholeness that, because it is lost, will henceforth become a moral ideal) is, in other words, no longer spontaneous but reflexive—suffused with feelings of longing and characterized by the imaginative infiniteness of thought. What remains instructive in this classic European account is its attempt to understand the sentimental not only as an instance of affect but also as a relation of time: as an affective state triggered by a sense of loss, sentimentalism was, for Schiller, the symptom of the apprehension of an irreversible temporal differentiation or the passing of time. As well, this symptom was mediated by and accessible through aesthetic and cultural form: it was poetry (or "the poetic mood"), which Schiller considered "an independent whole in which all distinctions and all shortcomings vanish,"⁹ that seemed generically appropriate for conveying the moral rigor pertaining to the naive and sentimental as contrastive but deeply bonded spiritual states.

Although Schiller's writings are typically classified under the rubric of German romanticism—he wrote about the sentimental belatedly, at a time when the term had already become pejorative in connotations; his formulation of the sentimental (as the awareness of the loss of spontaneous feeling) was also quite distinct from the views advanced in previous decades, as for instance in mid-eighteenth century England—his emphasis on the reflexive character of the sentimental—that is, the character whereby the mind does not receive any impressions without simultaneously observing its own activity and reflection—was illustrative of the general tenets of the well-established debates in eighteenth-century European moral philosophy and literature about the sentiments.¹ Conducted in the vocabulary of sensibility, pity, sympathy, compassion, virtue, refined and delicate feeling, and so forth,² some of these debates have also evolved around what in retrospect might be called

6. Sir Leslie Stephen defined the sentimental as "the name of the mood in which we make a luxury of grief" in *English Thought in the Eighteenth Century* (London: Smith, Elder, 1902), 2:436, quoted in Janet Todd, *Sensibility: An Introduction* (London: Methuen, 1986), 7.

1. See RAYMOND WILLIAMS, *Keywords: A Vocabulary of Culture and Society*, rev. ed. (London: Fontana, 1983), 280–83, for a brief account of

the evolution of the word "sensibility," including its important relation to the word "sentimental" in the 18th and 19th centuries. In the English-speaking world, a classic treatise is Adam Smith, *The Theory of Moral Sentiments* (1759), ed. Knud Haakonssen (Cambridge: Cambridge UP, 2002), in which Smith, extending the work of moral-sense philosophers such as Francis Hutcheson [1694–1746] and DAVID HUME [1711–1776], elaborated the notions of sympathy—an imaginative sharing or agreement of feelings that is not simply benevolence—and of the mental construct of an impartial spectator as bases for his theory of conscience and moral judgment.

2. For an informative study of the controversy of sentimentalism in British writings, see Markman Ellis, *The Politics of Sensibility: Race, Commerce and the Sentimental Novel* (Cambridge: Cambridge UP, 1996).

a dialectical relationship between sentimentality and its darker underside, as discourses about the philanthropic function of benevolence were shown to be regularly underpinned by a fascination with monstrosity, cruelty, violence, and the pleasures of inflicting pain on others. For some scholars, this dialectical relationship constitutes a definition of humanity that is ridden with ambiguity and puts the European Enlightenment's presumed (arrival at) rationality into serious question.³

In Anglo-American literary and cinematic studies, this rich historical backdrop of intellectual controversies over the unresolved tensions between compassion and cruelty, between altruism and sadism gave way to a type of articulation about the sentiments that links them explicitly with the dynamics of social power struggles. When studied in relation to modern narrative fiction and film melodrama, in particular, the sentimental, which for many still carries derogative meanings such as effeminacy and sensationalist self-indulgence, often becomes a means to focalize issues about the politics of identity. From the novels of Samuel Richardson and Charlotte Brontë to those of Toni Morrison,⁴ to the woman-centered narrative films of Hollywood, and to the media representations of nonwhite peoples, sentimentalism has, beginning with feminist revisionist scholarship of the 1970s and 1980s, increasingly been analyzed in conjunction with the agency of those (most typically, white middle-class women confined to domesticity) who occupy a marginalized social status and read as an alternative form of power attainment based, ironically, on the emotional cathexes produced by experiences of social deprivation, subordination, and exclusion.⁵ In such reversal of social hierarchy, what used to be considered trivial and weak is accordingly reread as dazzle and strength: the seeming passivity or minoritization of those who are inmates of their environments are thus reconceptualized as possessing a manipulable potentiality that was previously dismissed or ignored. In this manner, sentimentalism, rather than designating the passing of time or the melancholy sensitivity of a lone lyric consciousness, becomes instead a vindicated instrument in (the reinterpretation of) social entanglements, often providing new clues as to who is actually in control.

Although far from being a unitary or unified concept, the sentimental in modern Euro-American humanistic studies clearly occupies a place that has much to do with *the enduringly fraught ethics of human sociality as mediated by art and fiction*, be that ethics conceived negatively, in the form of an individual consciousness's satirical or elegiac longing for an ideal whose attainment is always deferred, or affirmatively, in the form of (collective) identity empowerment and the fight for social justice.⁶ And even where the sentimental reveals

3. For a comparative study that discusses the English, French, and German literary and philosophical contributions to these debates, see James A. Steintrager, *Cruel Delight: Enlightenment Culture and the Inhuman* (Bloomington: Indiana UP, 2004).

4. African American novelist and essayist (b. 1931); see above. Richardson (1689–1761), English novelist credited with writing the earliest sentimental novel, *Pamela* (1740). Brontë (1816–1855), English novelist whose best-known work, *Jane Eyre* (1847), was an enormously influential narrative of a woman triumphing over “social deprivation, subordination, and exclusion”

[editor's note].

5. Ben Singer, *Melodrama and Modernity: Early Sensational Cinema and Its Contexts* (New York: Columbia UP, 2001) (see in particular chap. 2, in which the author elaborates five primary features as characteristic of melodrama—pathos, emotionalism, moral polarization, nonclassical narrative form, and graphic sensationalism).

6. As Ellis puts it in regard to the sentimental novel: “Paradoxically, . . . by addressing an audience that was disenfranchised and lacking power in political life, the sentimental novel effectively created a new political role for literature” (*The Politics of Sensibility*, 3).

itself to be much more intimately entwined with sadism and malevolence than the feeble-minded would prefer, its function in gauging the textures and nuances of a society's moral duplicity seems indisputable. The pertinent question to be derived from these cross-cultural considerations is not exactly how to apply them to Chinese film or how such "Western theory" does not fit "Chinese reality" but rather the question of a particular discursive relation: how can the symptoms of prominent affective tendencies, as detectable in certain films, be theorized in relation to the foundations and practices of social interaction? With this question in the foreground, the sentimental, instead of being equated with the occurrence of affective excess per se, can more fruitfully be rethought as a discursive constellation—one that traverses affect, time, identity, and social mores, and whose contours tend to shift and morph under different cultural circumstances and likely with different genres, forms, and media.⁷ To this extent, this book could perhaps be seen as participating in a larger trend in recent film studies of a (re)turn to the historical relationship between medium and ontology, a (re)turn that has been triggered in part by digitization's radical altering and obsoleting of film's materiality and that has led scholars to rethink the medium-specific and oftentimes somatic, as well as imaginary, effects of cinematic signification itself.

In the Chinese language, as can be expected, more than one term has been used for "sentimentalism," but the term *wenqing zhuyi* (溫情主義)—literally, "warm sentiment-ism"—seems to me to shed light on something unique to the Chinese discursive constellation. "Warm sentiment," of course, does conjure up all the touchy-feely, lachrymose effusiveness that is conventionally associated with the sentimental. At the same time, a rather different connotation is being evoked: being warm, to be exact, is being in the middle between the extremes of hot and cold, bespeaking a kind of moderation that is, interestingly, not quite the affective outpour that is the typical definition of sentimentalism. This alternative emphasis on being moderate, which readily translates into affiliate notions of being mild, tender, tolerant, obliging, and forbearing, was the reason *wenqing zhuyi* used to be targeted for criticism as bourgeois ideology by the Chinese communists. *Wenqing* was suspect because it signals an accepting attitude that is the opposite of a clear-cut determination to reject and expel.⁸

With this crucial sense of moderation in the foreground, the sentimental may thus be specified as *an inclination or a disposition toward making compromises and toward making-do with even—and especially—that which is oppressive and unbearable*. Whereas a Freudian or proto-Freudian approach to the emotions often sees them in hydraulic terms (in what Foucault has

7. For comparative interest, see Singer, *Melodrama and Modernity*, in particular chap. 2. Singer defines melodrama as a "cluster concept"—"a term whose meaning varies from case to case in relation to different configurations of a range of basic features or constitutive factors" (44). * * *

Although I have found the melodramatic and the sentimental to intersect on some occasions, I do not consider them to be identical phenomena.

8. Although it is conceivable to trace the notion of *qing* (alternately translated as inner experience, emotion, sentiment, or personal nature) in Chinese usage all the way back to the ancients,

such a genealogy of ideas is not exactly the point of my discussion, which is to come to grips with the sentimentalism in some contemporary Chinese films as a noticeable affective symptom emerging both from global modernity and from cinematic mediation. My interest, in other words, is not in the elaboration of the nuances of *qing* in the sense of a natural or cultivated form of interiority (or self) but rather in sentimentalism or *wenqing* as a manifestation, in the context of global visibility, of evolving inter- as well as intracultural politics.

called the repressive hypothesis), as an overflow of what has been repressed, the sentimental is rather about what keeps and preserves, what holds things together. For this reason, the sentimental is perhaps best described as a *mood of endurance*, a mode whose contours tend to remain fuzzy rather than sharply delineated and whose effects may more easily be apprehended as (a prevailing) *tone*. From this perspective, it is not at all surprising that the film hailed by contemporary Chinese directors and audiences alike as the sentimental masterpiece *sans pareil* is Fei Mu's⁹ *Xiaocheng zhichun* (*Springtime in a Small Town*, 1948; remake, 2002, by Tian Zhuangzhuang), a story in which disruptive emotional energies, triggered by the entry of an outsider (the wife's former intimate male friend), come into play only to result, finally, in the restoration of the status quo of a familial situation already in ruins. (Fei Mu's remarkably stylized film, now considered a classic, was denounced as decadent and reactionary at the height of communist orthodoxy in the People's Republic.)

Still, why does so much of the drama of the sentimental have to do with domesticity, the household, and the home?

Borrowing from Harry Harootunian's discussion of the twentieth-century Japanese philosopher Watsuji Tetsuro's¹ writings on *fudo* (climate, culture, and history), I believe the interior of the house may help illuminate things at this juncture. As Harootunian writes (in explication of Watsuji), "The house constitutes the spatial container of the most primordial relationships guiding conduct in the everyday. . . . It calls attention to the space of relationality among the members of the household and to a form that derived from the most archaic experience."² As the material structure basic to human existence, the house is lived, we may say, as a boundary differentiating an inside holding the comfortable apart from the uncomfortable, and hence as a home—a refuge from a tyrannical world. Because it functions as a refuge, this inside also tends to take on the import of a timeless, undifferentiated, and infinitely adaptable (interpersonal) time/space whereby conflicts ought to be resolved and opposites ought to be reconciled. The modes of human relationships affectively rooted in this imagined inside—an inside whose depths of feeling tend to become intensified with the perceived aggressive challenges posed by modernity—are what I would argue as sentimental.

The English-language lexicon "accommodation" provides a felicitous encapsulation of the issues involved: as *wenqing* or moderation, the sentimental is ultimately about being accommodating and being accommodated, about the delineation and elaboration of a comfortable/homely interiority, replete with the implications of exclusion that such delineation and elaboration by necessity entail. Accordingly, what is excluded, what is banished to the outside, is believed to be antagonistic, dangerous, and evil. Reformulated in this manner, the affective excess usually attributed to the sentimental should be grasped, more precisely, as a symptom of the emotional demands—alternating between the polarized extremes of forbearance and xenophobia—exacted by the imaginary, and very much lived, relations to

9. Major Chinese filmmaker of the pre-Communist era (1906–1951). *Sans pareil*: without equal (French) [editor's note].

1. Japanese philosopher and intellectual historian (1889–1960); his 1935 book, translated as *A Climate: A Philosophical Study* (or *Climate and Cul-*

ture), argued for an essential relationship between the environment and human culture [editor's note].

such interiority and its outside. The gravest problems arise, of course, when the homely—what is inside—too, is revealed to be oppressive and unbearable—indeed, uninhabitable.* * *

THE SENTIMENTAL IN THE AGE OF GLOBAL VISIBILITY

* * *

In a cinema in which even renegade directors are given their places in a hierarchical filial system (as the names “Fifth Generation,” “Sixth Generation,” and so forth clearly indicate),³ the oft-encountered affective excesses surrounding domestic and familial stories would seem at first to amount to an obvious case of ideological manipulation.* * * The heart-wrenching situations that many films dramatize include poverty, interpersonal and intergenerational conflicts, separation, exile, illness, death, and loneliness—situations in which quotidian living itself can take on the weight of imprisonment or assault, and the most ordinary scenarios (the memory of a pond filled with lotuses in the autumn sun; an illegal immigrant accidentally shot to death by gangsters in a cold foreign land; the glimpse of a proud but aging father dozing off before breakfast in his son’s apartment; a hungry country boy wandering in the streets of the big city, staring at shop windows . . .)⁴ can become imbued with melancholy connotations of helplessness, loss, belatedness, or regret. From the perspective of a stringent ideology critique, such focalizations on physical or material deprivation and psychological destitution can easily be read as ways to (re)affirm the necessity and virtue of the interior, the organic connectedness that is the patriarchal family, clan, village, nation, or ethnic group, whose demands often give rise to a profound sense of entrapment yet whose dispersal and disunity are dreaded as a kind of invasive otherness, to be dispelled at all costs. As tragicomic stories of human fragility unfold with moving effects, what seems perpetuated sentimentally is the myth of the continuous growth, expansion, and reproductive power of an indomitable collective will, above and beyond individual difference and dissent. This is why it is possible to argue that *at the heart of Chinese sentimentalism lies the idealization of filiality*: as a predominant mode of subjectivization, filial piety is not simply a matter of respecting one’s biological or cultural elders but also an age-old moral apparatus for interpellating individuals into the hierarchy-conscious conduct of identifying with—and submitting to—whatever preexists them—from the ancestral family to the ancestral land, the province, the country, and the ethnic community in a foreign nation—as authoritative and thus beyond challenge.

Although such sentimental situations are readily identifiable in the films, however, my objective is not merely to subject sentimentalism to yet another barrage of criticism by simply exposing its ideology-ridden assumptions. Rather than offering a strictly demythifying approach to the sentimental, I am also invested in articulating the ideological assumptions with the fictive

3. For two fairly recent, informative studies of the Fifth Generation directors and their works that place them in historical perspective, see Ni Zhen, *Memoirs of the Beijing Film Academy: The Genesis of China's Fifth Generation*, trans. Chris Berry (Durham, N.C.: Duke UP, 2002), and Paul Clark, *Reinventing China: A Generation and Its*

Films (Hong Kong: Chinese UP, 2005).

4. These four examples are taken respectively from the films *Song of the Exile* [Ann Hui, 1990], *Comrades: Almost a Love Story* [Peter Chan, 1996], *The Wedding Banquet* [Ang Lee, 1993], and *Not One Less* [Zhang Yimou, 1999].

but intense processes of identity negotiation. In other words, much as I am, like many of my fellow academics, suspicious of the maudlin extravagances and containment strategies that are considered a hallmark of the sentimental, my readings of the selected films are really attempts to think through the fantasy structures of accommodation and endurance that develop and multiply around such extravagances and strategies: the economic and moral forms of submission and subjectivization they solicit, the imaginary resolutions they supply to social antagonisms, and, most important, the formal and cognitive ruptures within them that, however tangentially or even unnoticeably, signal possibilities for perversion, subversion, and diversion.

Let me also formulate my interest in the sentimental in closer relation to the preceding parts of this introduction. If contemporary cultures are caught up in what I have been referring to as global visibility—the ongoing, late capitalist phenomenon of mediatized spectacularization in which the endeavor to seek social recognition amounts to an incessant production and consumption of oneself and one's group as images on display, a phenomenon in which subjectivity has become, willy-nilly, object-ivity—how do we come to terms with older—or increasingly estranged—forms of interpellations such as self-restraint, frugality, filial piety, compliance with collective obligations, inconspicuous consumption, modesty about exhibiting and thrusting oneself (including one's body parts and sexual interests) forward as a cause in public, and so forth, wherein the key is not exactly—perhaps exactly not—becoming visible? How might we go about handling the tenacity, in the midst of global visibility—itself a new kind of aggressive, oftentimes oppressive, reality—of residual signifiatory traces of a different kind of social behavioral order? Such traces, often emergent in the form of a vaguely anachronistic affect whose mere survival points to another modality of attachment and identification—and whose noncontemporaneity stands in mute contrast to the glamour of global visibility—are among the things I would like to see encompassed within the conceptual parameters of this study.⁵

Defined in these terms, the sentimental is thought-provoking not exactly because it allows us to rediscover something old. It is rather that the old, now lingering in the enigmatic form of an intensity (in the form of some emotionally guarded and clung-to inside) that seems neither timely nor fully communicable—especially not across cultures—should nonetheless also be acknowledged as an inherent link to the nexus of becoming visible—in the specific sense of visibility that Deleuze argues. In other words, more than simply a matter of excavating historical layers of meaning embedded in cinematic images, what I would like to get at is the process in which this second, epistemic sense of visibility—that is, a trajectory of objectification, recognition, and knowledge that may be made palpable by visual objects such as filmic images but cannot in the end be reduced to them—materializes

5. In using the terms “residual” and “emergent,” I am indebted to Raymond Williams's influential discussion of the categories residual, dominant, and emergent, pertaining to what he has famously called “structures of feeling” in *Marxism and Literature* (Oxford: Oxford UP, 1977). Although both the residual and the emergent contain elements that can be incorporated within the dominant, Williams argues that they also signify experiences and practices that have an alternative or

oppositional relation to the dominant culture. Whereas the residual refers to meanings and values that were formed in the past but are still active in the present cultural process, the emergent “is never only a matter of immediate practice; indeed it depends crucially on finding new forms or adaptations of form” (126). In the context of contemporary Chinese films, I see the residual and the emergent as thoroughly entangled categories.

not only in relation to the visible that is the images but also in the very sentimental interstices—the remains of a collective cultural scaffold—that lend the images their support.

* * *

2007

KENNETH W. WARREN

b. 1957

When Kenneth W. Warren proclaimed that “the collective enterprise we call African-American or black literature . . . has already come to an end,” he set off a firestorm of criticism. Warren, who had previously been comfortably ensconced in the halls of academe, garnering little attention, landed in the pages of the *Los Angeles Review of Books*’ symposium with the publication of *What Was African American Literature?* (2011). After his hair-raising essay summarizing the book’s primary thesis was featured in the *Chronicle of Higher Education*, that journal printed a spirited response by the literary historian Gene Andrew Jarrett and a “Live Chat” between Warren and his critics.

The Fairfax M. Cone Distinguished Service Professor of English Language and Literature at the University of Chicago, where he has been a faculty member since 1991, Kenneth Warren has also served as deputy provost for research and minority issues. His research focuses on African American and American literature from the nineteenth century to the mid-twentieth century, in particular tracking these works against cultural, social, and political change. Born in 1957, Warren had a somewhat itinerant childhood because of his father’s service in the Air Force. He grew up primarily in Colorado and Albuquerque, New Mexico, where he went to high school. At Harvard College he took his first course on the history of literary theory, graduating in 1980. At Stanford University, where he received his Ph.D. in 1988, he studied with the Americanist Jay Fliegelman. From 1987 to 1991, he taught at Northwestern University.

Warren is not an especially theory-driven literary critic, though he is well informed about theory. As a matter of practice, his work has been concerned with giving context to the literary text. History and the archive have been especially critical to this process, and he has occasionally found himself at odds with those who argue that analysis should be primarily restricted to the literary text itself.

Black and White Strangers: Race and American Literary Realism (1993), Warren’s first book, examines late nineteenth-century literary realism by several authors, including HENRY JAMES and William Dean Howells. Here he contends that postbellum racial politics influenced these literary works while simultaneously informing the retrograde segregationist politics and policies of the era. In a second book of literary criticism, *So Black and Blue: Ralph Ellison and the Occasion of Criticism* (2003), Warren explores Ellison’s intellectual life and work. According to Warren, in his masterwork, *Invisible Man* (1952), Ellison was so deeply engaged with responding to Jim Crow, the era that began with the first post-Reconstruction laws enforcing racial segregation in 1877, that when Jim Crow gave way to a new era of social change and civil rights legislation he was unable to complete his highly anticipated second novel. Warren continues tracking the interrelated themes of Jim Crow and African American

literary output in *What Was African American Literature?*, which developed out of the W. E. B. Du Bois Lectures that he delivered at Harvard University in 2007. In addition to his three books and a number of scholarly articles and book chapters that revolve around historicizing African American and American literature, Warren has co-edited two collections. With the political scientist Adolph Reed Jr., Warren published *Renewing Black Intellectual History: The Ideological and Material Foundations of African American Thought* (2010). It reexamines black intellectual history and traditional understandings of race and racism in the context of how the well-meaning have used them, knowingly and unwittingly, in ways that have worked to maintain elite interests and capitalist inequality. *Jim Crow, Literature, and the Legacy of Sutton E. Griggs* (2013), a volume co-edited with Tess Chakkalakal, a literary critic and professor of English, examines the work of the Baptist preacher and author Sutton Elbert Griggs (1872–1933).

Warren's "Does African-American Literature Exist?" (2011), our selection, puts forth what is for many a controversial thesis: African American literature can no longer be written, because it no longer exists. Drawing from ERICH AUERBACH's *Literary Language and Its Public in Late Latin Antiquity and in the Middle Ages* (1958; trans. 1993), Warren posits that African American literature began with the 1896 *Plessy v. Ferguson* ruling that legalized the doctrine of "separate but equal" in the United States and ended with the emergence during the 1950s and 1960s of juridical civil rights for blacks that opened the door to desegregation and recognition of equal rights. African American literature is a historical response to the exigencies and restrictions of Jim Crow America. With the end of de jure Jim Crow and with the conditions that called the literature into existence no longer present, African American literature no longer *needed* to exist. The contemporary black novelists Colson Whitehead, Paul Beatty, Danzy Senna, and Alice Randall, according to Warren, embody this new phase in African American literary production—whatever it may be named.

Like history, literature is not static but ever-changing, responding to and shaping its time. Warren's attempt to periodize African American literature is not without problems, however. We are left wondering when exactly Jim Crow ended, since it was historically coterminous with efforts to usher in black rights. Historicizing African American literature as a discrete historical phenomenon that emerged during the late nineteenth century necessarily ignores literary production before *Plessy*. And while de jure segregation is illegal, what about de facto segregation and its supporting apparatus, which are still at work, though less overtly? Such new conditions should produce a different call and thus a different set of literary responses, but those responses have unfortunately become entangled with the hangovers of an old problem. Warren rightly resists the notion that race is the almost exclusive mediator of contemporary African American life and literature, as it seems to have been during Jim Crow America. Social class now plays a key role. Though his argument does not lead him to embrace the debatable idea of a postracial literature in a postracial America, it does tend to ignore a treasure trove of pre- and post-Jim Crow literary criticism and literature premised on intersectionality, as well as the textured variety of African American literatures produced during the era of de jure racial segregation.

"Does African-American Literature Exist?" Keywords: The Canon/Tradition, Identity, Literary History, Print Culture, Race and Ethnicity Studies

Does African-American Literature Exist?

I'd like to make a claim that runs counter to much of literary scholarship. Historically speaking, the collective enterprise we call African-American or black literature is of recent vintage—in fact, it's just a little more than a

century old. Further, it has already come to an end. And the latter is a fact we should neither regret nor lament.

African-American literature was the literature of a distinct historical period, namely, the era of constitutionally sanctioned segregation known as Jim Crow.¹ Punctuated by state constitutional amendments that disfranchised black Americans throughout much of the South, legitimated by the U.S. Supreme Court in 1896 with the infamous “separate but equal” ruling in *Plessy v. Ferguson*, and stumbling into decline in the 1950s, 60s, and early 70s, Jim Crow and the fight against it gave rise to—and shaped—African-American literary practice as we have come to know it. Like it or not, African-American literature was a Jim Crow phenomenon, which is to say, speaking from the standpoint of a post-Jim Crow world, African-American literature is history. While one can (and students of American literature certainly should) write *about* African-American literature as an object of study, one can no longer *write* African-American literature, any more than one can currently write Elizabethan literature.

That this fact should occasion no lament is because the society that gave us what we know as African-American literature is a society that black Americans did not want then and certainly don’t want now. In consolidating Jim Crow through violence, state statutes, and judicial decisions, Southern states foreclosed on many of the avenues of political and social participation that had opened up for Southern blacks during Reconstruction and had managed to survive various forms of opposition during the two decades after the 1877 Hayes-Tilden compromise² effectively ended Radical Reconstruction. It was in response to the rising tide of disfranchisement and segregation that calls for black Americans to produce a distinct literature began to proliferate and to shape black literary practice.

In light of recent literary criticism, my assertion may seem wrongheaded. Much scholarship has sought to justify taking a longer view of African-American literature: Some work argues that what defines African-American literary texts is the way black authors, consciously or unconsciously, have reworked rhetorical practices, myths, folklore, and traditions deriving from the African continent. Others have defined African-American literature by its prolonged argument with slavery, seeing even contemporary black literature as indelibly marked by the ways that enslaved blacks coped with the brutalities of the Middle Passage.³ To be sure, before the Civil War, abolitionists had cited and encouraged black achievement in literature to refute charges of black inferiority. For the most part, however, they wanted to demonstrate that blacks could produce literature, not that they needed to produce a distinct literature.

By the end of the 19th century, though, that had changed. From an array of writers—including Frances E.W. Harper, Anna Julia Cooper, W.E.B.

1. The name is taken from Thomas “Jim Crow” Rice (1808–1860), a white actor who gained international fame for his performances in blackface.

2. The unwritten agreement that settled the disputed results of the presidential election of 1876; the Democratic candidate, Samuel Tilden (1814–1886), who had won the majority of the popular vote, acceded to the findings of an electoral commission that awarded the electoral votes to the Republican, Rutherford B. Hayes (1822–1893), on the condition that federal troops withdraw

from the South. This withdrawal effectively ended Reconstruction, the period (1865–77) after the Civil War when the federal government sought to reincorporate the Confederate states into the union while protecting and aiding blacks who were dealing with the legacy of slavery. So-called Radical Republicans were committed to the equal treatment and enfranchisement of former slaves.

3. The voyage of newly enslaved Africans across the Atlantic Ocean to the New World.

Du Bois, and Sutton E. Griggs⁴—came exhortations to blacks to write a literature by and for themselves. Not only had literature been enlisted in the fight against Jim Crow as a way to challenge the enforcement and justification of segregation, but with so many black Americans effectively shut out from the political process, literature, and writers themselves, could play an outsized role in what became a seemingly endless round of trying to figure out just what it was that “the Negro” wanted. The question mattered because defenders of the white South were insisting they had created a society that conformed to the natural order of things, while critics of the region’s sociopolitical order were trying to determine how far down the road of equality the nation would need to go to appease its aggrieved black citizens. Both sides solicited black voices for confirmation or denial.

When, in 1944, the University of North Carolina Press brought out an anthology under the title *What the Negro Wants*, featuring essays by 14 black authors and edited by the African-American historian Rayford W. Logan, the press’s publisher, a white man named W.T. Couch,⁵ felt compelled to include an introduction telling the reader: “This book was written at the request of the Press. The idea back of the request was that the country, and particularly the South, ought to know what the Negro wants, and that statements from leading Negroes might throw some light on this important question.” Among the 14 “leading Negroes” were four whose fame rested significantly on their literary productions: Du Bois, George S. Schuyler, Langston Hughes, and Sterling A. Brown.⁶

In sum, what produced African-American literature as we know it was that, in a Jim Crow society, black writers and their works could plausibly be perceived as voices for a largely silenced population.

As a consequence, literary work by black writers came to be discussed in terms of how well it served (or failed to serve) as an instrument in the fight against Jim Crow and in terms of what it showed about the development (or lack thereof) of black literature, the race as a whole, or the nation’s progress in accepting African-Americans as full and equal citizens. Of course, not every black writer accepted or embraced those terms; some objected to the demands being placed on them as writers.

Many critics of black literature also cited such expectations as imposing a considerable liability on black literature. Writing in 1942 in the short-lived journal *Negro Quarterly: A Review of Negro Life and Culture*, edited by Angelo Herndon and Ralph Ellison, for example, the upstart young black critic Edward Bland⁷ lamented the lack of literary accomplishment among Harlem Renaissance⁸ authors in the 1920s: “One of the outstanding features of the Negro novels that appeared during the twenties was their literary incompetence.” Attributing that alleged incompetence to the political burden

4. All African American activists of differing sorts: Harper (1825–1911), abolitionist and advocate for women’s suffrage; Cooper (1858–1964), educator and voice for black women; du Bois (1868–1963), historian and sociologist; and Griggs (1872–1933), Baptist minister.

5. American editor who served as director of the University of North Carolina Press and the University of Chicago Press. Logan (1897–1982), historian, Pan-Africanist, and longtime associate of Du Bois.

6. Poet and literary critic (1901–1989). Schuyler (1895–1977), journalist and cultural critic. HUGHES (1902–1967), poet, playwright, and fiction writer.

7. Composer (1926–2013). Herndon (1913–1997), labor activist until he left the Communist Party in the late 1940s. Ellison (1914–1994), teacher and writer of prose.

8. Vibrant African American movement in the literary, visual, and performing arts centered in New York City in the 1920s and early 1930s.

imposed on black writers by the black middle class, Bland complained that for the black petit-bourgeois reader, "literature was a medium through which the black man could state his case to the world and exhibit those details of Negro life that would redound to the credit and goodwill of the race. Writing became a function of changing the world through what became explicit propaganda; and the primary consideration governing its subject matter and presentation was the welfare of the race."

Bland was far from alone in making that sort of criticism. Many Harlem Renaissance authors had themselves faulted their predecessors in similar terms. And many writers after Bland did so as well. The point here is not to agree or disagree with such withering assessments of black fiction. Rather, it is to recognize that the impulse to offer those assessments reveals how inextricably black literature and the social conditions imposed by Jim Crow were tied together. In every instance, the critique expressed a hope that black literature could shed the very qualities that had previously identified it as black literature. Sometimes the argument was that in doing so, it could finally become what it had striven to be at the outset—truly representative of black people and a true index of the creativity and capacity of the race. Others argued that after Jim Crow, black writers could be freed entirely from the burden of representing a race—writers would at last be free to be themselves.

Despite the differences in the answers they produced, both lines of argument were responses to the same questions. Just what would the status of black literature be when at last the walls of Jim Crow came tumbling down? Would the true contours of black difference finally shine forth? Or would racial difference and the need for a distinct literature prove to have been only a function of a system of imposed inequality?

While one might have expected those issues to have become salient during the late 1940s and early 1950s, as the modern civil-rights movement began to achieve the victories that signaled the coming end of constitutionally sanctioned segregation, the truth is otherwise. From the inception of black literature, at the beginning of the 20th century, Frances Harper, Du Bois, Zora Neale Hurston,⁹ and Ellison were only some of the writers to pose the question explicitly. The tour de force response, and the literary work that truly, and paradoxically, sits at the center of African-American literature, is George S. Schuyler's controversial 1931 satiric novel on racial difference, *Black No More: Being an Account of the Strange and Wonderful Workings of Science in the Land of the Free, A.D. 1933–1940*.

Schuyler conjured up a scientist, the ominously named Dr. Junius Crookman, who invents an effective and inexpensive method to make blacks indistinguishable in appearance from whites. Crookman markets his invention as the solution to the race problem, and in the brave new world of Schuyler's novel, blacks decide en masse to take advantage of the opportunity to be black no more, leaving virtually no visually black people remaining in the United States.

Schuyler, a prickly, prideful individual, and an archconservative, pitched his satire as, in part, an indictment of black self-hatred and racial shame. But as it unfolds, *Black No More* becomes something different. For if race were more than skin deep, a new skin color would prove to be an insufficient

9. Folklorist, anthropologist, and writer of fiction (1891–1960); see above.

disguise; some cultural dissembling would be in order for the trick to play out. As it turns out in Schuyler's story, however, if blacks can't be physically identified as different, then they simply aren't all that different. In the main, blacks in the novel become black no more not because they feel their culture is inferior to that of whites. They make the change because they are tired of being shut out of good jobs, good housing, and decent services solely on the basis of skin color.

Tellingly, it is the elites of both races who speak most fervently in the book on behalf of racial differences. Unable to be demagogues on the basis of skin color, white Southern politicians scramble desperately to reconstruct some basis of racial difference, probing into genealogies in hopes of determining once and for all who is black and who is white. But here they meet with disastrous results because they discover that most American whites turn out to be tarred somewhere on their family tree with the brush of black ancestry. Paralleling the distress of white segregationists is the plight of black leaders, whom Schuyler sends up in a series of scathing caricatures of figures like Marcus Garvey, James Weldon Johnson, Madam C.J. Walker,¹ and Du Bois—caricatures that did not prevent Du Bois and Alain Locke,² a key force in the Harlem Renaissance, from reviewing the book favorably. Despite the fact that he and his ilk were among the novel's targets, Du Bois, for one, felt strongly that the health of Negro literature depended on freeing black authors to write about the race in whatever manner they pleased, even if the results were unflattering. On that score, *Black No More* delivered marvelously.

But it is the novel's delineation of the class commitment to the race line that helps make apparent why it is proper to see African-American literature as having come to an end. Although *Black No More* is unsparing in its negative depiction of all civil-rights and protest organizations, Schuyler's plot device underscores Jim Crow's role in forging a link between the actions and writings of elite blacks and the nation's black population as a whole. The novel shows that, whether for good or for ill, the activities of the group whom Du Bois deemed the Talented Tenth³ could serve to represent all black Americans only in a world in which Jim Crow could be enforced. Because segregation rested informally on claims and beliefs about racial difference and inequality, it lent coherence to the notion of a collective race interest. That also meant that the publication of a work of literature or the success of a particular black individual could call attention to the falsity of racist beliefs and, through argument or demonstration, conceivably affect all blacks regardless of their class status.

The present moment is different. As rendered vividly in a work like Michael Thomas's⁴ 2007 novel, *Man Gone Down*, which was awarded the 2009 International Impac Dublin Literary Award, racism still stings. Tracing the four-day odyssey in post 9/11⁵ New York City of an unnamed black protagonist

1. Entrepreneur and philanthropist (born Sarah Breedlove, 1867–1919). Garvey (1887–1940), Jamaican political leader, publisher, and founder of the pan-African Universal Negro Improvement Association. Johnson (1871–1938), poet, diplomat, and civil rights activist.

2. Influential philosopher and critic (1886–1954).
3. A term popularized by Du Bois (the title of a 1903 essay), referring to the educated class that must be developed to lead African Americans in

the 20th century.

4. African American author and teacher (b. 1967). The Impac Dublin award, administered by the city government of Dublin, Ireland, is for fiction written in any language; works are nominated by public libraries.

5. The 2001 terrorist attacks whose targets included the Twin Towers of New York City's World Trade Center.

and former English Ph.D. student with an ancestry as mixed as Du Bois's, it shows how discrimination remains a problem. It is, for example, infuriating for Thomas's protagonist that white patrons at trendy markets react with surprise upon encountering a black male shopping alongside them as if he belonged there. Yet, as Thomas notes, it is also clear that a society that takes in stride the appearance of blacks in upscale markets, neighborhoods, and schools, or a society that recognizes black literary achievement, can also be a society that tolerates a great deal of poverty and inequality. Again, in itself, that observation is nothing new. Langston Hughes, in his 1940 autobiography *The Big Sea*, mercilessly panned his Harlem Renaissance contemporaries for having believed "the race problem had at last been solved through Art plus Gladys Bentley,"⁶ and that "the New Negro would lead a new life from then on in green pastures of tolerance created by Countee Cullen, Ethel Waters, Claude McKay, Duke Ellington, Bojangles,⁷ and Alain Locke." Hughes then continued, acerbically, if somewhat disingenuously, "I don't know what made any Negroes think that—except that they were mostly intellectuals doing the thinking. The ordinary Negroes hadn't heard of the Harlem Renaissance. And if they had, it hadn't raised their wages any."

Of course it hadn't, and at some level Hughes recognized the injustice of his criticism. The targets of his censure were not as naïve as he made them out to be. But he knew where the knife's edge was keenest. What made work by a select group of blacks African-American literature was the claim and belief that their work had something to do with the welfare of black Americans generally. Sever that connection, and works, however accomplished, would settle into the literary universe according to style, theme, genre, or whatever. Writing in the 1940s, Hughes knew that the connection hadn't been severed yet. American society was still a Jim Crow society, and writing by black Americans was African-American literature.

Under Jim Crow, by helping to draw attention to the wrongs of segregation, the literary artists who gave us African-American literature assisted in establishing a politics based on appealing to a white-power structure, putatively on behalf of the whole race, to proclaim (to quote Du Bois's most well-known text, *The Souls of Black Folk*⁸) that "the problem of the Twentieth Century is the problem of the color line." That politics was limited by being a politics of elite appeal rather than of direct action. In truth, that was because racial discrimination, enforced by violence and by statute, impeded most black Americans in the South from effectively being able to act politically on their own behalf.

At present, however, a literature insisting that the problem of the 21st century remains the problem of the color line paradoxically obscures the economic and political problems facing many black Americans, unless those problems can be attributed to racial discrimination. If the nation's black citizens are suffering largely for the same reasons its white citizens are suffering, then that is a problem about which such politics has nothing to say. In the world we inhabit, discrimination stands out most blatantly as the problem to

6. African American blues singer and pianist (1907–1960).

7. All prominent African American writers and entertainers: Cullen (1903–1946), poet; Waters (1896–1977), blues and jazz singer and actor; McKay (1889–1948), Jamaican-born poet and

novelist; Ellington (born Edward Kennedy Ellington, 1899–1974), jazz composer and pianist; and Bill "Bojangles" Robinson (1878–1949), actor and tap dancer.

8. Published in 1903 (see above); the quotation is found in its first paragraph.

be addressed when you've got a lot of life's other problems whittled down to a manageable size—which is why college professors being snubbed by cab drivers and accosted by police officers in their own homes, or wealthy celebrities being dissed by upscale retailers,⁹ have become iconic figures in demonstrating that race still matters.

A literature highlighting discrimination is a literature of that class stratum. And make no mistake, the late 20th and early 21st centuries have seen the publication of many very fine novels and poems by writers like Thomas, Colson Whitehead, Paul Beatty, Danzy Senna, Andrea Lee, and Carl Phillips,¹ to name a few. By the criteria we use to determine matters of racial identity, all of these authors may indeed be African-American. The works they've written, however, are not.

2011

9. In 2005, the African American entrepreneur and television personality Oprah Winfrey, one of the richest individuals in America, was denied entrance to a Hermes boutique in Paris shortly after it closed (but while customers were still inside). In an even more notorious incident in 2009, HENRY LOUIS GATES JR., an African American literary critic and Harvard professor, was

arrested outside his own house following a confrontation with a police officer who had received a report that a break-in was in progress.

1. Contemporary African American writers: Whitehead (b. 1969), novelist; Beatty (b. 1962), poet and novelist; Senna (b. 1970), novelist; Lee (b. 1953), novelist and memoirist; and Phillips (b. 1959), poet and literary critic.

KELLY OLIVER

b. 1958

An American feminist philosopher, Kelly Oliver engages nineteenth- and twentieth-century Continental and contemporary French philosophy, feminism, and psychoanalysis; in her work she also explores film theory, theories of oppression, and ethical, social, and political philosophy. Building on key Continental figures such as MARTIN HEIDEGGER, Maurice Merleau-Ponty, JACQUES DERRIDA, GIORGIO AGAMBEN, SIGMUND FREUD, JACQUES LACAN, and JULIA KRISTEVA, she investigates connections between language, subjectivity, and responsibility. Her theoretical work has often been informed by, and formed through, engagements with contemporary issues, such as reproductive technologies, affirmative action, stereotypes of absent fathers and earth mothers, U.S. debates around multiculturalism and English-only policies, institutional sexism and racism, war, depression, animal rights, and environmentalism. She is currently the W. Alton Jones Professor of Philosophy at Vanderbilt University, with appointments in African-American Diaspora Studies, Film Studies, and Women's and Gender Studies. Previously, she taught at the State University of New York at Stony Brook and the University of Texas.

Born to working-class parents in Spokane, Washington, Oliver was the first of four children. She spent her childhood in Montana and Idaho, where her paternal grandfather was a logger and her maternal grandfather was a forest ranger. Although her family was not religious, she attended a Jesuit college, Gonzaga University, from which she graduated cum laude in three years with a double major in philosophy and communications.

At age twenty, she began graduate studies in philosophy at Northwestern University, and she earned her Ph.D. in 1987. It was not until late in her graduate

career—more specifically, not until the feminist philosopher Nancy Fraser arrived at Northwestern as an assistant professor—that Oliver encountered a woman professor. Her experience in graduate school with all male professors and mostly male peers pushed her toward feminist studies. She had struggled to write her dissertation under the direction of the phenomenologist David Levin, but after making Fraser her director she wrote a feminist dissertation on language, poetry, and music in FRIEDRICH NIETZSCHE.

Oliver's training at Northwestern was focused on Continental philosophers, primarily GEORG WILHELM FRIEDRICH HEGEL and Edmund Husserl. Already finished with course work by the time Fraser arrived, Oliver audited seminars in which she was introduced to French feminists—Luce Irigaray, HÉLÈNE CIXOUS, and Julia Kristeva—whose work was just being translated into English. Her first book, *Reading Kristeva: Unraveling the Double-bind* (1993), is an outgrowth of those seminars. It examines the relationship between language, ethics, subjectivity, and sexual difference in Kristeva's body of work. In particular, Oliver parses Kristeva's distinctions between the semiotic and symbolic dimensions of language, exploring the liberatory potential for political revolution that lies in poetic language. A substantially revised version of her dissertation was published as *Womanizing Nietzsche: Philosophy's Relation to the "Feminine"* (1995). Her next book, *Family Values: Subjects between Nature and Culture* (1997), explores the ways in which primary family relations affect subjectivity, intersubjectivity, and ethical relations.

In 1991, Oliver obtained her first tenure-track job at the University of Texas at Austin, in a department more sympathetic to Anglo-American analytic philosophy—the tradition dominant in the United States since World War II—than to feminism and Continental philosophy. Although she had already written three books and dozens of articles by the time she came up for tenure in 1997, the department approved her by only a narrow margin.

Undeterred, she followed up her work on family relations with *Subjectivity without Subjects: From Abject Fathers to Desiring Mothers* (1998), which debates the complex relationship between images of maternity, paternity, rhetoric, subjectivity, and ethics. During the subsequent decade she continued publishing on a wide range of topics. Her next book was *Noir Anxiety* (2002), co-authored with her husband, Benigo Trigo, a professor of Spanish and Portuguese at Vanderbilt University. In it they interpret what others have called the free-floating anxiety of film noir as a symptom of concrete anxieties over race, sex, maternity, and national origin that threaten the very possibility of identity by undermining its boundaries. *The Colonization of Psychic Space: A Psychoanalytic Social Theory of Oppression* (2004) engages with works by the political theorists and psychiatrists FRANTZ FANON, Kristeva, and others, while *Women as Weapons of War: Iraq, Sex, and the Media* (2007) analyzes the actual and metaphorical involvement of women in war, specifically in the U.S. campaigns in Afghanistan and Iraq. *Animal Lessons: How They Teach Us to Be Human* (2009) represents Oliver's Derridean turn toward animal studies, as she explores the various ways throughout the history of philosophy that humanity has been defined against animality. *Knock Me Up, Knock Me Down: Images of Pregnancy in Hollywood Films* (2012) continues her interest in film and film theory and the latter's intersection with women's and gender studies.

Oliver was one of the founding members of PhiloSophia, a Continental feminist society established in 2006; she is also one of the founders in 2011 of the Kristeva Circle, and she currently serves as one of its directors.

Our selection, "Witnessing and Testimony" (2004), is a crystallization of Oliver's frequently cited *Witnessing: Beyond Recognition* (2001). Derived from Hegel's analysis of the Master-Slave dialectic, recognition models of identity and subjectivity, she argues, promote false oppositions and hostilities, including the split between subjectivity and agency. Oliver observes that the demand for recognition is a symptom of the pathology of oppression that perpetuates subject-object, same-other, and

master-slave hierarchies. Moreover, though theories of misrecognition challenge us to be vigilant in exposing illusions of familiarity or sameness, most of them still propose an antagonistic subject-object, master-slave relationship. Even contemporary theories of recognition concerned with difference and the other do not move us beyond subject-centered notions of relationships. Rather than talk about “the other”—a discursive move that perpetuates the subject-other hierarchy—Oliver urges us to diagnose othered subjectivity. She proposes developing a theory of subjectivity that takes othered subjectivity as a starting point. As an alternative to theories of recognition, Oliver posits a theory of witnessing subjectivity. Here she postulates that the notion of witnessing, with its double meaning as either being an eyewitness or bearing witness (testimony) to the unseen, offers a promising approach for describing the onset and sustenance of subjectivity. Subjectivity is born out of and sustained by the process of witnessing—the possibility of addressability and response-ability—which puts ethical obligations at its heart.

At the close of her essay, Oliver reveals that it is twenty-first-century U.S. war making that motivates her, as it is steeped in extreme and irresponsible individualism, isolationism, and arrogance. In this context, her argument to recast identity so that it includes both subject position (social standing) and subjectivity (unconscious social sources of agency) highlights not only the heterogeneous social foundations of the self but also the grounds of human interaction, dialogue, and responsibility. Taking a position against contemporary domination, oppression, and torture, Oliver calls in the end for “hyperbolic ethics” of responsibility to and for the self and others.

For all its subtleties and strengths, Oliver’s argument fails to confront the redistribution side of the recognition-redistribution debates of recent decades famously launched by her mentor Nancy Fraser, Axel Honneth, and others. What about economic equality and justice? After projecting “an ethics of responsibility without sovereignty and ownership” in the penultimate paragraph, she falls silent on that note. Nor does she address the vexing ethical roles played today by religion and media. Nevertheless, Kelly Oliver here develops a sophisticated, nuanced, and multifaceted theory of subjectivity suited to our times.

“Witnessing and Testimony” Keywords: Affect, Ethics, Identity, Phenomenology, Poststructuralism, Psychoanalysis, Subjectivity

Witnessing and Testimony

Contemporary debates in social theory around issues of multiculturalism have focused on the demand or struggle for recognition by marginalized or oppressed people, groups, and cultures. The work of Charles Taylor and Axel Honneth, in particular, have crystallized issues of multiculturalism and justice around the notion of recognition.¹ In *Witnessing: Beyond Recognition*, I challenge what has become a fundamental tenet of this trend in debates over multiculturalism, namely, that the social struggles manifest in critical race theory, queer theory, feminist theory, and various social movements are struggles for recognition.² Testimonies from the aftermath of the Holocaust and

1. See Axel Honneth, *The Struggle for Recognition*, trans. Joel Anderson (Boston: MIT Press, 1996) and Charles Taylor, “The Politics of Recognition,” in *Multiculturalism*, ed. Amy Gutman (Princeton, NJ: Princeton University Press, 1994) [except as indicated, all notes are Oliver’s]. [Taylor

2. These insights about the discourse of multiculturalism are indebted to comments by Cynthia Willett.

slavery do not merely articulate a demand to be recognized or to be seen. Rather, they witness to pathos beyond recognition. The victims of oppression, slavery, and torture are not merely seeking visibility and recognition, but they are also seeking witnesses to horrors beyond recognition. The demand for recognition manifest in testimonies from those othered by dominant culture is transformed by the accompanying demands for retribution and compassion.

If, as I suggest, those othered by dominant culture are seeking not only, or even primarily, recognition but also witnessing to something beyond recognition, then our notions of recognition must be reevaluated. Certainly notions of recognition that throw us back into a Hegelian master-slave relationship³ do not help us to overcome domination. If recognition is conceived as being conferred on others by the dominant group, then it merely repeats the dynamic of hierarchies, privilege, and domination. Even if oppressed people are making demands for recognition, insofar as those who are dominant are empowered to confer it, we are thrown back into the hierarchy of domination. This is to say that if the operations of recognition require a recognizer and a recognizee then we have done no more than replicate the master-slave, subject-other/object hierarchy in this new form.

Additionally, the need to demand recognition from the dominant culture or group is a symptom of the pathology of oppression. Oppression creates the need and demand for recognition. It is not just that the injustices of oppression create the need for justice. More than this, the pathology of oppression creates the need in the oppressed to be recognized by their oppressor, the very people most likely not to recognize them. The internalization of stereotypes of inferiority and superiority leave the oppressed with the sense that they are lacking something that only their superior dominators have or can give them. The very notion of recognition as it is deployed in various contemporary theoretical contexts is, then, a symptom of the pathology of oppression itself. Implied in this diagnosis is the conclusion that struggles for recognition and theories that embrace those struggles may indeed presuppose and thereby perpetuate the very hierarchies, domination, and injustice that they attempt to overcome.

The notion of recognition becomes more problematic in models where what is recognized is always only something familiar to the subject.⁴ In this case, the subject and what is known to him and his experience are once again privileged. Any real contact with difference or otherness becomes impossible because recognition requires the assimilation of difference into something familiar. When recognition repeats the master-slave or subject-object hierarchy, then it is also bound to assimilate difference back into sameness. The subject recognizes the other only when he can see something familiar in that other; for example, when he can see that the other is a person too. Only when we begin to think of the recognition of what is beyond recognition can we begin to think of the recognition of difference.

3. In *Phenomenology of Spirit* (1807; see above), by the German philosopher GEORG WILHELM FRIEDRICH HEGEL (1770–1831), the story of two self-consciousnesses that confront each other and fight for mutual recognition: one wins the battle and the other loses, but each gets recognition and thereby identifies him- or herself through the eyes of the other [editor's note].

4. In *Witnessing: Beyond Recognition* (Minneapolis: University of Minnesota Press, 2001) I argue that Charles Taylor and Maria Lugones present such models. [Lugones is an Argentinean feminist philosopher, currently an associate professor of comparative literature and women's studies at Binghamton University, State University of New York—editor's note.]

Some contemporary theorists seem to think that we can begin to move beyond recognition by focusing on misrecognition. But, it makes sense to talk about misrecognition only if recognition is still the ideal.⁵ Misrecognition or the misfire of recognition presuppose an idea of successful recognition. While theories of misrecognition have the advantage of challenging us to be vigilant in exposing the illusion of familiarity or sameness, most of them also propose an antagonistic subject-object/other relationship. Influenced by Lacan's account of misrecognition in the mirror stage, theorists like Julia Kristeva and Judith Butler propose that identity and one's sense of oneself as a subject come from abjecting or excluding otherness.⁶ Otherness and difference are abjected in order to secure the subject's always precarious boundaries against the threat of fragmentation. In this type of scenario, we fortify ourselves on the level of individual subjective identity as well as group and national identity by drawing artificial but strict boundaries between ourselves and others. Whatever characteristics we prefer not to associate with ourselves—those characteristics we deem unacceptable, dirty, or improper—we project onto the others. Others and otherness become threats to our very sense of ourselves as subjects. While this neo-Hegelian model is very effective in *explaining* the existence of war and oppression, if *normalized* it makes it impossible to imagine peaceful compassionate relations with others across or through differences.

In *Witnessing: Beyond Recognition*, I associate the pathos beyond recognition inherent in struggles for recognition and testimony to atrocity with witnessing in its full and double sense. Rather than extolling the virtues of testimony per se, I am developing a theory of subjectivity modeled on witnessing in its double sense of eye-witness and bearing witness to what cannot be seen. Although I use examples of testimony in order to show how the structure of witnessing operates in all subjectivity, I do not reduce subjectivity to testimony. Rather, I develop a model of subjectivity based on the address-response structure of witnessing in its double sense. Moreover, the purpose of my discussion of the therapeutic or transformative effects of witnessing is not to promote public testimonies or the practice of psychoanalysis but rather to demonstrate on the one hand how oppression and victimization undermine subjectivity by attacking the ability for address and response and on the other hand how the structure of address and response is the lynch-pin of subjectivity.

There is a tension inherent in the notion of witnessing in the sense of eye-witness to historical facts or accuracy on the one hand, witnessing in the sense of bearing witness to a truth about humanity and suffering that transcends those facts. It is important to note that witnessing has both the juridical connotations of seeing with one's own eyes and the religious or now political connotations of testifying to that which cannot be seen, or *bearing witness*. It is this double meaning that makes witnessing such a powerful

5. Some examples of theorists of misrecognition with whom I engage in *Witnessing* are Judith Butler, Julia Kristeva, and Jacques Lacan. [BUTLER (b. 1956), American philosopher and gender theorist. alternative to recognition in reconceiving subjectivity and thereby ethical relations. The tension between eyewitness testimony and bearing witness, between historical facts and what we might call psychoanalytic or phenomenological truth, between subject position and subjectivity is the dynamic operator that moves us beyond the melancholic choice between either dead historical facts or traumatic repetition of violence.

Using this double-sided witnessing as a model, I propose that the subject is constituted by virtue of a tension between finite historical contexts that constitute subject position on the one hand and the structure of infinite addressability and response-ability of subjectivity on the other. The tendency on the part of my critics, and perhaps on my own part, to read my notion of subjectivity and identity as reduced to one pole or the other is a symptom of the difficulty in thinking the heterogeneity and otherness inherent in identity and subjectivity. More specifically, the difficulty is how to articulate fluid and mobile relationships within and between subjects and identities in a theoretical language where grammar requires fixing both sameness and difference into discrete units of meaning whose relationships are limited by logical connections 'and', 'or', 'not', etc. . . . The central question is: How can we conceive of the tension between social and historical context with its differential power relations on the one hand and what makes us beings who mean on the other? In *Witnessing* I addressed this question by negotiating between philosophies of liberation—feminism, race theory, holocaust studies—and phenomenologies of subjectivity.⁷ Here, I would like to take up this question by focusing on the pivotal distinction between the two senses of witnessing that I develop and the concomitant distinction between subject position and subjectivity. It will be necessary to further delineate the differences between testimony and witnessing and the differences between the phenomenological subject and the psychoanalytic subject. Whereas testimony is usually a spoken or written account of something seen or experienced, here witnessing refers to the structure of subjectivity itself, the very structure that makes testimony possible. Whereas the phenomenological subject can become conscious of its self-consciousness and its motives, desires and fears, which it owns, the psychoanalytic subject is continually an encounter with the otherness of the unconscious, which cannot completely come to consciousness or be owned up to, let alone owned. These differences bear on the history of subject position and the historicity of subjectivity or the distinction between beings and meaning.

Invoking the double meaning of witnessing, in *Witnessing* I develop a theory of the subject that connects the historically localizable subject position of particular subjects with the infinite response-ability that makes subjectivity possible. By bringing together subject position and the structure of subjectivity as witnessing, I attempt to navigate between the extremes of conceiving of the subject either as the foundation for action apart from social circumstance on the one hand, or as the simple effect of social context on the other. The notion of witnessing brings together the historical context with the witnessing structure that makes subjectivity an infinite open

analyzing the intellectual processes of which we are introspectively aware—editor's note.]

system of response. As we will see, by so doing, it both politicizes the subject à la subject position and insists on a fundamental ethical obligation at the heart of subjectivity itself.

Any theory of subjectivity must also consider subject position. Subjects, subjectivity and agency always exist only in a political and social context that affects them at the foundation of their constitution. One's social position and history profoundly influence one's very sense of oneself as an active agent in the world. Yet, the contradictions and inconsistencies in historical and social circumstances guarantee that we are never completely determined by our subject position. It is possible to develop a sense of agency in spite of, or in resistance to, an oppressive social situation. Subject positions, although mobile, are constituted in our social interactions and our positions within our culture and context. They are determined by history and circumstance. Subject positions are our relations to the finite world of human history—what we might call politics. Subjectivity, on the other hand, is experienced as the sense of agency and response-ability that are constituted in the infinite encounter with otherness, which is fundamentally ethical. And, although subjectivity is logically prior to any possible subject position, in our experience, they are always profoundly interconnected. This is why our experience of our own subjectivity is the result of the productive tension between finite subject position and infinite response-ability of the structure of subjectivity itself.

By *subjectivity* I mean one's sense of oneself as an 'I', as an agent. By *subject position* I mean one's position in society and history as developed through various social relationships. The structure of subjectivity is the structure that makes taking oneself as an agent or a self possible. The structure of subjectivity is what I am calling a witnessing structure that is founded on the possibility of address and response; it is a fundamentally dialogic structure. Subject position, on the other hand, is not the very possibility of one's sense of oneself as an agent or an 'I' per se, but the particular sense of one's kind of agency, so to speak, that comes through one's social position and historical context. While distinct, subject position and subjectivity are also intimately related. For example, if you are a black woman within a racist and sexist culture, then your subject position as oppressed could undermine your subjectivity, your sense of yourself as an agent. If you are a white man within a racist and sexist culture, then your subject position as privileged could shore up your subjectivity and promote your sense of yourself as an agent.

The subject is a dynamic yet stable structure that results from the interaction between two forces, finitude, being and history (which I identify with subject position) at the one pole and infinity, meaning and historicity (which I identify with subjectivity) at the other. As an analogy, consider that architects and engineers have worked with the principle of tension loaded structures that use the tension as support. A classic example is the Brooklyn bridge.⁸ We could say that the subject is a tension loaded structure, but its flexibility makes it more like what architects call a *tensile structure*. Architect Frei Otto's description of the difference between the two structures is suggestive: He says, 'the capacity to transmit forces and moments by tension-loaded materials is found in animate and inanimate nature' while tensile

8. The first steel suspension bridge (opened in 1883), linking two boroughs in New York City, Manhattan and Brooklyn [editor's note].

structures 'are found more frequently in animate nature. . . . Flexible tension-resisting skins and sinews are necessary whenever the supporting system is movable'.⁹ The stability of tensile structures is the result of opposing forces pulling in two directions, through which a membrane's double curvature receives its structure and resistance. Subjectivity is analogous to the structure and resistance that result from a membrane or skin being stretched in two directions and held together by tension. Like Frei Otto's famous architectural design using the tension of two opposing axis of force to support a fabric (which architects refer to as a membrane or a 'flexible stretched skin'¹) the subject too is a kind of tensile structure. The two axis of force whose tension supports the subject are subject position and subjectivity.

An example recounted in Dori Laub's *Testimony: Crises of Witnessing in Literature, Psychoanalysis and History* illustrates the productive tension between subject position and subjectivity, between eye-witness and historical accuracy and another level of truth, a truth beyond recognition, the truth of witnessing to what cannot be seen.² Laub, a psychoanalyst interviewing survivors as part of the Video Archive for Holocaust Testimonies at Yale, remarks on a tension between historians and psychoanalysts involved in the project. He describes a lively debate that began after the group watched the taped testimony of a woman who was an eyewitness to the Auschwitz uprising in which prisoners set fire to the camp. The woman reported four chimneys going up in flames and exploding, but historians insisted that since there was only one chimney blown up, her testimony was incorrect and should be discredited in its entirety because she proved herself an unreliable witness. One historian suggested that her testimony should be discounted because she 'ascribes importance to an attempt that, historically, made no difference'.³ The psychoanalysts responded that the woman was not testifying to the number of chimneys blown up but to something more 'radical' and more 'crucial', namely, the seemingly unimaginable occurrence of Jewish resistance at Auschwitz, that is to say, the historical truth of Jewish resistance at Auschwitz. Laub concludes that what the historians could not hear, listening for empirical facts, was the 'very secret of survival and of resistance to extermination'.⁴ The Auschwitz survivor saw something unfamiliar, Jewish resistance, which gave her the courage to resist. She saw something that in one sense did not happen—four chimneys blowing up—but in another made all the difference to what happened. Seeing the impossible—what did not happen—gave her the strength to make what seemed impossible possible, surviving the Holocaust.

From his work with Holocaust survivors, and being a survivor himself, Dori Laub concludes that psychic survival depends on an addressable other, what he calls an 'inner witness'. The inner witness is produced and sustained by dialogic (and I would add nonlinguistic forms of communicative) interaction with other people. In order to think, talk, act as an agent, the inner witness must be in place. This is to say that we learn to 'talk to ourselves'—to think—by talking to others. Our experience is meaningful for us only if

we can imagine that it is meaningful for others. And, our sense of what is meaningful, our sense of meaning itself, comes through our relationships with others. Creating or finding meaning for oneself is possible only through the internalization of meaning for others.⁵ Over simplifying somewhat, we can say that address and response are possible because the interpersonal dialogue is interiorized.

On my account, subjectivity is the ability to address oneself to others combined with the ability to respond to others. One can only address oneself to oneself, or respond to oneself, if one has first addressed or been addressed by and responded to others. At its core, subjectivity is relational and formed and sustained by addressability (the ability to address others and be addressed by them) and response-ability (the ability to respond to others and oneself). It is the possibility of address that sustains psychic life and the sense of subjective agency. If the possibility of address is undermined or annihilated, then subjectivity is also undermined or annihilated. To conceive of oneself as a subject is to have the ability to address oneself to another, real or imaginary, actual or potential. This address and response structure develops in infancy from birth and sustains psychic and social life. I call this address-response structure witnessing and argue that oppression, domination, enslavement, and torture work to undermine and destroy the ability to respond and thereby undermine and destroy subjectivity. Part of the psychoanalyst's task in treating survivors is reconstructing the addressability that makes witnessing subjectivity possible.

If one's subject position is the socio-historical position in which one finds oneself, and one's subjectivity is the structure of witnessing as infinite response-ability, then the inner witness is where subject position and subjectivity meet. If the inner witness is on the one hand the ability to address oneself or to be self-reflective that is 'learned' through addressing and being addressed by others, and it is also 'learned' in a particular historical and social situation, then it is going to be both a prerequisite for a sense of agency per se and a governing factor in the particularities of and restrictions on that sense of agency. We internalize our relationships with others, which empowers us with a sense of our own agency but can also leave us with a sense of the limitations of our own agency if we are in marginal or oppressed social positions or power relations.

As Laub's example points up, psychoanalysis attends to the address-ability and response-ability pole of witnessing, while history attends to the pole of the eye-witness. The double meaning of witness can help to theorize the Holocaust survivor's testimony and witnessing to the Jewish uprising at Auschwitz. As an *eyewitness*, she testifies (incorrectly) to the events of that particular day when prisoners blew up a chimney. In addition, however, she *bears witness* to something that in itself cannot be seen, the conditions of possibility of Jewish resistance and survival. As an eyewitness she occupies a particular historical position in a concrete context that constitutes her actuality as well as her possibilities. She was a Jew in the midst of deadly anti-Semitism. She was a prisoner in a concentration camp. She was a woman in the mid-Twentieth Century. Her position as a subject is related to the particularities

5. In my book *The Colonization of Psychic Space* ([Minneapolis: University of Minnesota Press,] 2004), I identify this internalization of meaning as a form of sublimation.

of her historical and social circumstance. In order to evaluate her testimony as an eyewitness, it is crucial to consider her socio-historical subject-position and not just the 'accuracy' of her testimony. Indeed, the 'accuracy' of her testimony has everything to do with her subject position. It is, in fact, her subject position that makes historians particularly interested in her testimony as a Holocaust survivor. Her testimony is unique because she was an eyewitness; she was there. But, it is not just because she was there, but why and how she was there that makes her testimony unique. The testimony of another eye-witness to the same event—a Nazi guard at the camp, or someone outside the camp who noticed flames in the air—would have a very different meaning, even if he also claimed to see four chimneys blowing up. Perhaps within the context of the Holocaust Testimonies at Yale, surrounded by mostly male professors, the fact that this witness was a woman makes a difference to how she speaks and how she is heard. Only by considering her subject-position can we learn something about the 'truth' of history even from the 'inaccuracies' of her testimony. In this regard, the facts of history cannot disclose the significance or meaning of historical context. Moreover, insofar as she is also bearing witness to what cannot be seen—agency and resistance—she testifies to the process of witnessing itself.

Consider the recent controversy over the accuracy of Rigoberta Menchú's⁶ testimony to the atrocities of the Guatemalan army's cruelty, which also points to the distinction between historical accuracy and another level of meaning and truth, the truth of suffering that cannot be reduced to historical facts. Although undeniably powerful in their impact, the empirical facts of the Holocaust, or of the atrocities of the civil war in Guatemala, are dead not only to the truth of suffering but also to the response-ability that the process of witnessing presupposes. The process of witnessing, always in tension with eyewitness testimony, complicates the notion of historical truth and moves us beyond any easy dichotomy between history and psychoanalysis. This is not to say that we can or should discount historical accuracy or historical truth, on the contrary. We need both poles of witnessing. But, we need to critically analyze the meaning of history and context. Our inaccuracies and false beliefs also have meaning that can reveal something true about our desires and fears. This truth is not always liberatory, it is not always the truth of suffering, but may be the truth of hatred and discrimination or even what I call in *Witnessing* false witnessing. We need to investigate the conditions of possibility of meaning, whether it is the meaning of historical facts or of subjective testimony, with its inaccuracies and falsehoods.

My insistence on considering subject position and socio-historical context in any discussion of subjectivity is meant as a corrective to both phenomenological and psychoanalytic theories of subjectivity that do not attend to history. While phenomenology and psychoanalytic theory have been instructive in formulating a theory of subjectivity as intersubjectivity, traditionally they have neglected subject position and thereby sacrificed not only social, political and historical relevance but also its truth, not to mention its accuracy. My insistence on subjectivity as response-ability, on the other hand, is meant as

6. Guatemalan indigenous civil rights activist (b. 1959); her widely translated book *I, Rigoberta Menchú* (1983) drew international attention to government abuses of peasants, especially during

Guatemala's civil war (1960–96). She was awarded the Nobel Peace Prize in 1992, but in the late 1990s questions were raised about the truthfulness of her autobiography [editor's note].

a corrective to political theories that begin with a subject essentially either isolated from, or opposed to, objects including other people. My engagement with psychoanalysis in particular is meant to move behind the scenes of the subject-object relation to what makes it possible, which I elaborate as the structure of address and response through which subjectivity and objectivity emerge. In a primary sense, the address-response structure must be formed or at least figured before the subject-object distinction is possible. Subjects distinguish themselves from the world and others by virtue of responsive relations with other people. Recognition too depends on responsivity between infants and their environments and care-takers. For example, recent studies in psychology by Nicholas Meltzoff and Keith Moore show that infants are responsive to facial and manual gestures from birth, prior to recognition of objects.⁷ Following this work, Shaun Gallagher and Meltzoff conclude that 'recent studies of newborn imitation suggest that an experiential connection between self and others exists right from birth' that 'is already an experience of pre-verbal communication in the language of gesture and action'.⁸

At the most fundamental level, this relationality or responsivity is neither intellectual nor perceptual but operates through unconscious processes of transference. This means that in a strict sense, our primary relations are neither subjective nor intersubjective but prior to, and prerequisites for, either. This brings us to an ontological level on which subjectivity is essentially relational and dependent, always formed through a primordial 'we'. From this primordial we, follows an ethics of response-ability that entails an ethical obligation to our founding possibility, which is responsivity. Reformulating Eva Kittay's analysis of relations of dependency, we could say that a subject who 'refuses to support this bond absolves itself from its most fundamental obligation—its obligation to its founding possibility'.⁹ In terms of my analysis, this fundamental obligation is to respond to others in ways that open up rather than close off their response. This Levinasian move gives us an ethics even more radical than Sartre's¹ insistence on our responsibility for our emotions. We are not only responsible for our own feelings and actions but also for others'. As Levinas says 'communication would be impossible if it should have to begin in the ego, a free subject, to whom every other would be only a limitation that invited war, domination, precaution and information. To communicate is indeed to open oneself, but the openness is not complete if it is on the watch for recognition. It is complete not in the opening to the spectacle of or the recognition of the other, but in becoming a responsibility for him'.² With Levinas, we are also responsible for the other's response; which entails at least taking responsibility for the effects of our actions and emotions on others as indicated in their responses. This principle couldn't be more relevant today as we try to understand anti-American sentiment throughout the world. Of course this does not mean that others are not or should not be held responsible for their own actions. Rather, this hyperbolic ethics, as we might call it

following Derrida,³ puts the burden of responsibility primarily on the subject, who is by virtue of her relations to others. And, it is this indebtedness to others and otherness that grounds a hyperbolic ethics of difference.

As I argue elsewhere, however, this Levinasian or Derridian hyperbolic ethics is not radical enough without accounting for the unconscious.⁴ We can articulate an ethics and/or a politics of otherness or difference only by accounting for the unconscious. In order to make responsibility radical enough, which is to say ethical enough, we need a notion of the unconscious, which makes us responsible even for motives, desires and fears unknown to us. The fundamental imperative of hyperbolic ethics is that we should never be content with ourselves. It is an imperative to be self-critical especially with our responses to others, most especially because there are those others whom we may not even recognize. We can never stop interrogating our notions of justice, democracy, and freedom, which means that we can never stop asking ourselves why we do what we do, why we value what we value, why we desire what we desire, why we fear what we fear. Yet, without engaging the unconscious our self-interrogation will never be vigilant enough. Only by postulating the existence of the unconscious will we be humble enough to continue to question our own motives, fears, and desires.

Only the notion of the unconscious gives us an ethics of responsibility without sovereignty and ownership. We are responsible for what we cannot and do not control, for our unconscious fears and desires and their affective representations. In addition, we are responsible for the effects of those fears, desires and affects on others. As Levinas says, we are responsible for the other's response. This means, for example, that if the United States is resented and hated throughout the world, we must ask why and take responsibility for the actions that cause that resentment and hatred. This impossible responsibility entails the imperative to question ourselves and constantly engage in self-critical hermeneutics. And, it is this critical interpretation that also gives meaning to our lives and allows for the sublimation of bodily drives and affects.⁵

Responsible ethics and politics requires that we account for the unconscious. Without doing so we risk self-righteously adhering to deadly principles in the name of freedom and justice. We risk taking the defensive posture of isolationism and individualism that protects itself by attacking others, becoming absolutely unforgiving in its attempts to silence others and cut off their ability to respond. Individualism is based on the denial of the fundamental ethical relationality and response-ability that is subjectivity. It adopts a defensive unforgiving unresponsive posture that denies, even fears the singularity that is the unconscious. It maintains control by denying the existence of the unconscious or unconscious motives, desires and fears. Yet, only by acknowledging our unconscious fears, phobias, and desires, can we hope to be self-reflective enough to contemplate an ethical response to others. Perhaps by acknowledging the death drive⁶ within ourselves, we can begin to prevent killing and find a third way between murder and suicide.

MICHAEL HARDT

b. 1960

ANTONIO NEGRI

b. 1933

The closing decades of the twentieth century brought a sea change in international relations and world economies. The cold war ended with the collapse of the Berlin Wall in 1989 and the dissolution of the Soviet Union in 1991. Starting with the decoupling of the American dollar from the gold standard in 1971 and the first oil crisis of the mid-1970s and continuing with the rise of Japan and then China as economic giants, "globalization" dramatically altered economic and political relations between the West and the rest. All these portentous changes were suggestive of irreversible change, and U.S. President George H. W. Bush, in a speech delivered before Congress in September 1990 on the eve of the first Gulf War, famously predicted the coming of a "new world order." Published a decade later, *Empire* (2000), the collaborative best seller by the American theorist Michael Hardt and the Italian political philosopher and radical activist Antonio Negri, names this world order and articulates its structure, dominant features, and driving forces.

Born in Washington, D.C., Hardt began his academic training in engineering. As an undergraduate at Swarthmore College in Pennsylvania, where he earned his B.S. in 1983, Hardt studied alternative energy development, in the belief that empowering third world nations would be "a way of doing politics that would get out of all [the] campus political posing that [he] hated." Continuing to seek out opportunities for political engagement, Hardt worked on political and humanitarian projects for non-governmental organizations in Central and South America after his graduation. Over the 1980s Hardt studied comparative literature, earning his master's degree in 1986 and his Ph.D. in 1990 from the University of Washington and writing a dissertation on Negri and GILLES DELEUZE. During this time Hardt also translated Negri's *The Savage Anomaly: The Power of Spinoza's Metaphysics and Politics* (1981; trans. 1991). After briefly taking a position at the University of Southern California, Hardt was hired at Duke University in 1993, where he currently teaches literature and Italian.

Like Hardt's, Negri's career has intertwined academic work and political activism. Negri earned his *laurea*, roughly analogous to but somewhat more demanding than a bachelor's degree, at the University of Padua in 1956, the same year that he joined the Italian Communist Party. Also in 1956—at the age of twenty-three—he was appointed to the faculty of jurisprudence at the University of Padua. Two years later Negri earned his *libera docenza*, the Italian equivalent of a Ph.D., in the philosophy of law at the University of Padua. His political activities during the 1960s accompanied his professional advancement. He left the Communist Party in 1963 and helped found the Italian Operaismo (Workerism) movement, was promoted to chair in state doctrine (in Padua's political science department) in 1966, and in 1967 was named director of the University of Padua's Institute of Political Science. His controversial arrest in 1979 ended his tenure as professor at the University of Padua, but it did not stop his academic career or political commitments. From 1983 to 1997 Negri lived in exile in Paris, continuing to teach in the University of Paris system and to publish. It was during this time that Negri met Hardt, who was then working on his translation of Negri's book. Their meeting inaugurated a fruitful partnership that has produced six co-written volumes and a new critical vocabulary for analyzing the dynamics of contemporary global capitalism—a set of economic, legal, political, social, and cultural relations that they term Empire.

Hardt and Negri's concept of Empire arises from the twin contexts of French poststructuralism, especially the theories developed by Deleuze and FÉLIX GUATARI in *A Thousand Plateaus: Capitalism and Schizophrenia* (1980), and the Italian tradition of radical social and political movements—notably the Potere Operaio

(Workers' Power) and *Autonomia Operaio* (Workers' Autonomy) movements of the 1960s and 1970s, in which Negri was deeply involved. Negri's relation to these revolutionary movements has shaped his biography, career, and international reputation. In 1978 the armed faction *Brigate Rosse* (Red Brigades) kidnapped and killed the former Italian prime minister Aldo Moro; on April 7, 1979, Negri and several of his colleagues at the University of Padua's Institute of Political Science were arrested under suspicion of having masterminded the abduction and assassination. Drawing on laws dating from Benito Mussolini's fascist regime that had remained on the books after the 1945 Allied liberation of Italy—the same laws that Mussolini's government used to arrest ANTONIO GRAMSCI in 1926—the state detained Negri for years before finally taking him to trial in 1983. Negri had never been involved with the Red Brigades, and the prosecution's case against him rested on selective quotations from his political pamphlets of the 1970s. The attempt at criminalizing Negri's writings prompted MICHEL FOUCAULT to famously quip: "Isn't he in prison for being an intellectual?"

With his trial finally under way in 1983, Negri gained a reprieve from his confinement when his election as a Radical Party representative in the Chamber of Deputies won him parliamentary immunity from criminal proceedings. However, the chamber voted by a narrow margin (300–293) to revoke Negri's immunity and return him to prison; the day before the vote, Negri fled to France. In 1997 Negri returned to Italy to serve the remainder of his sentence—originally thirty years but reduced on appeal to thirteen—at Rome's Rebibbia Prison; after a year of full imprisonment, two years of work release, and three years of various forms of house arrest, he was granted full parole in 2003.

It was while Negri was an exile in France that he began to collaborate with Hardt, whose dissertation led to the book *Gilles Deleuze: An Apprenticeship in Philosophy* (1993). The influence of Deleuze and Guattari is unmistakable in Hardt and Negri's two key concepts, Empire and multitude, which denote, respectively, the juridical-economic structure of the expanding global capitalist order and the collective oppositional subject poised against global capital. According to Hardt and Negri, globalization involves not only a global expansion of capital, with its saturation of world markets, but also a tendency toward the progressive obsolescence of modern conceptions of nation-state sovereignty. No longer confined to the striated space centered on the metropolises of modern imperialism, Empire functions in smooth space, across ever-more-permeable boundaries, national borders, and cultural divides. Under globalization, Hardt and Negri claim, national sovereignty has been superseded by the supranational sovereignty of Empire, which disperses power horizontally according to the model of a rhizomatic network. In other words, power and authority are to be found not in individual nation-state actors but in contemporary supranational structures such as the World Trade Organization (WTO), the Group of Seven (G7), and the World Bank.

Antagonistic to this supranational sovereignty of Empire is the multitude. Just as the modern capitalism of the nation-state was opposed by the industrial proletariat, so the multitude, according to Hardt and Negri, is the oppositional postmodern subject against Empire. They describe the multitude as a collectivity that both includes and exceeds more limited earlier configurations of oppositional subjectivities such as the proletariat (the industrial working class) and the Communist Party. Rejecting these older configurations' hierarchical chains of command and exclusionary notions of membership, the multitude—in an inverted mirror image of Empire—functions through the networking and coordination of "singularities" that, much like DONNA HARAWAY's coalitions, join in common projects and share affinities but do not subsume those singularities under some unified banner of homogeneous identity. Consider, for example, the famous protests at the 1999 WTO summit in Seattle, which Hardt and Negri discuss at some length in their follow-up book, *Multitude: War and Democracy*

in the *Age of Empire* (2004): the protests were shaped not by a centralized leadership dictating a single agenda to an identifiable, exclusionary group but by the coordinated democratic planning of separate, autonomous interest groups; though each had unique concerns, they shared an opposition to the WTO's unelected, antidemocratic structure. The Seattle protests conjoined such strange bedfellows as labor unionists, environmentalists, anarchists, and church groups, without setting any one of these groups and its goals above others. In the years since the publication of *Empire* and *Multitude*, other oppositional movements, such as Occupy, Black Lives Matter, and the minimum wage activists 15 Now and OUR Walmart, have likewise eschewed the vertically integrated authority of older leftist movements in favor of a horizontal distribution of democratic decision making. Only the coming communism (small "c") of the multitude, Hardt and Negri argue, offers real hope for a global democracy.

Hardt and Negri's first collaboration, *Labor of Dionysus: A Critique of the State-Form* (1994), laid the groundwork for their theorization of Empire and the multitude, but the watershed event for globalization studies was the 2000 publication of *Empire*. The book achieved remarkably high sales for an academic text, appearing briefly on the *Washington Post* best-seller list, and was reviewed extensively in the popular press. (At one point, *Empire* was in such high demand, with so many back orders, that a free digital copy of the text was made available online.) Moreover, *Empire* also widely introduced Negri to a new generation of academics and dramatically enhanced Hardt's visibility and reputation in the American university system.

Empire is not without its critics, however. On the right, most attacks are from conservatives assailing the leftist orientation of university intellectuals; and there are many critiques from the left as well. Academic Marxists such as Malcolm Bull and Giovanni Arrighi object to Hardt and Negri's use of Deleuze and Guattari, arguing that today's late capitalism, far from producing a smooth space that would allow for unimpeded transit across borders, actually imprisons labor in increasingly rigid structures of exploitation, outsourcing, and offshoring. Other leftists criticize Hardt and Negri for being too celebratory of the advent of globalization—just as KARL MARX had earlier viewed nascent capitalism as a step forward for workers from feudalism. Insofar as capitalism produces its own possibilities for resistance and revolution, Hardt and Negri perceive postmodern Empire as a similar improvement over the modern capitalism of the nation-state. Like the factory discipline of industrial capitalism, the global structures of coordination and communication that serve Empire are also the same tools that make possible the global sociality of the multitude. In response, Ellen Meiksins Wood reads *Empire* not as a twenty-first-century *Communist Manifesto*, as the book has been called, but as "a manifesto for global capitalism." Still others, such as Atilio A. Boron, point to the unilateral U.S. invasion and occupation of Iraq, dating from 2003, as evidence that the sovereignty of the traditional nation-state is as hegemonic as ever, despite the claims of *Empire*.

Notwithstanding these and other critiques, Hardt and Negri's influential book remains required reading for students of postmodernity and globalization, particularly for their repositioning and reevaluation of theories of the postmodern. Hardt and Negri follow the lead of Marxists such as Haraway, the geographer DAVID HARVEY, and the cultural critic and theorist FREDRIC JAMESON in viewing contemporary capitalism as a distinctly and thoroughly postmodern phenomenon. What makes globalization postmodern and sets it off from previous capitalist systems of economic organization and exploitation is what Marx called the "real subsumption" of capital, in contradistinction to its "formal subsumption." (Significantly, Negri had first begun his sustained investigation of real subsumption in *Marx beyond Marx: Lessons on the "Grundrisse"* [1979], the outgrowth of a seminar he led at l'École Normale in Paris at the invitation of LOUIS ALTHUSSER.) The formal subsumption of capital, according to Marx, entails capitalism's *extensive* incorporation of processes of production and labor that originated outside its domain, while the real subsumption, which Hardt and Negri identify as a necessary condition for a world market, signifies capital's

intensive transformation of the relations of production and processes of labor themselves. An example of this dynamic would be the transition from peasant agricultural labor based on traditional farming practices, which is incorporated into market exchange (formal subsumption), to contemporary factory farming, in which the very process of agricultural labor is transformed (real subsumption). For Hardt and Negri, postmodernity and real subsumption occupy one and the same historical period. Occasionally, they call the increasing dominance of communicative and intellectual labor the “postmodernization” of labor.

But Hardt and Negri are ambivalent toward the postmodern. Although they situate globalization squarely within the historical period of postmodernity, they are critical of theories collected under the rubric of postmodernism, with the *-ism* here best understood as signifying a form of ideological or political commitment to putatively liberatory projects founded on such celebrated facets of postmodernist theory as mobility, hybridity, and difference. In “Symptoms of Passage,” our selection taken from part 2 of *Empire*, Hardt and Negri argue that postmodernist theory, as identified with the figures of JEAN-FRANÇOIS LYOTARD, JEAN BAUDRILLARD, and JACQUES DERRIDA, loses its efficacy as a form of critique after the advent of real subsumption. Worse still, in its attempts to oppose capital it can actually serve the interests of global capitalism. According to Hardt and Negri, the key problem is postmodernism’s conceptualization of difference. Here and elsewhere, postmodernism is characterized by a celebration and affirmation of difference in the face of the homogenizing and totalitarian discourses, the master narratives, of modernity and the Enlightenment. Followers of the French poststructuralist thinkers named above believe that by opening up hegemonic discourses to the play of difference, they undermine the foundations of the exclusionary, oppressive, binaristic thought characteristic of modern European colonialism, racism, and sexism. For Hardt and Negri, however, difference is already the weave and woof of the market logic of *Empire*, exemplified in today’s niche marketing and diversity management that identify and target highly specific demographics—“one [strategy] for gay Latino males between the ages of eighteen and twenty-two, another for Chinese-American teenage girls, and so forth.” They similarly criticize postcolonial theory, represented here by HOMI K. BHABHA: postcolonial theory privileges conceptions of identity predicated on difference and hybridity, but these are precisely the concepts that undergird the logic of the global capitalist economy. As Hardt and Negri put it, capitalism joins with postmodernism and elitist postcolonial theory in the battle cry “Long live difference! Down with essentialist binaries!”

Yet for all their criticism of postmodernist and postcolonial theory, Hardt and Negri are not wholly dismissive of them. Rather, they view these theories as “symptoms of passage” from modernity to postmodernity, as signs of the current transition from national to global economies and from nationalist sovereignty to *Empire*. In the selection Hardt and Negri identify another symptom of postmodern passage: the contemporary global proliferation of religious fundamentalisms. Fundamentalism, which affirms an apparently “premodern” notion of fixed identity and insists on traditional if not archaic forms of social organization, might at first seem a very unlikely corollary to postmodernist and postcolonial theory, with their strident antiessentialism and egalitarian celebration of difference. But contemporary fundamentalisms, according to Hardt and Negri, are tied to the postmodern globalization that they so strongly reject: what seem to be premodern elements “are really directed in reaction to the present social order.” Thus postmodernism and fundamentalism are two sides of the same coin, one “appeal[ing] primarily to the winners in the processes of globalization,” the other “to the losers.” Both cases are symptomatic of the same historical moment. (Significantly, Hardt and Negri widen their definition of fundamentalisms to include not only religious but also nationalist, racist, and economic fundamentalisms in their later book, *Commonwealth* [2009].)

In making their diagnosis, though, Hardt and Negri’s critique relies on oversimplifications of “postmodernism” and “postcolonialism.” Paradoxically, their use of

Bhabha's treatment of difference and hybridity elides the difference and hybridity that inhere within the field of postcolonial studies itself. Similarly, the selection's discussion of postmodernism reduces an entire corpus of discourse to three prolific figures whose theories, in turn, are represented by what seem to be slogans, with scant attention to how those thinkers actually complicate Hardt and Negri's representation of postmodernist theory. For instance, Hardt and Negri highlight postmodernism's hostility toward Enlightenment thinking as a signal trait, but they neglect to mention Derrida's interrogations of the Enlightenment and his frequent invocations of an "Enlightenment-to-come." Nevertheless, their insistence on the need for theory to scrutinize itself and its reigning paradigms and methodologies is salutary. Insofar as difference and hybridity, free play and simulation remain the privileged gestures of postmodernist theory, such theory will appear to aid and abet the development of global capitalism and its power of cooptation.

From Part 2. *Passages of Sovereignty*

Section 4. Symptoms of Passage

Here then is the man outside our people, outside our humanity. He is continually starving, nothing belongs to him but the instant, the prolonged instant of torture . . . He always has only one thing: his suffering, but there is nothing on the entire face of the earth that could serve as a remedy for him, there is no ground on which to plant his two feet, no support for his two hands to grasp, and thus there is so much less for him than there is for the music-hall trapeze artist who is at least hanging by a thread.

—Franz Kafka¹

The end of colonialism and the declining powers of the nation are indicative of a general passage from the paradigm of modern sovereignty toward the paradigm of imperial sovereignty.² The various postmodernist and postcolonialist theories that have emerged since the 1980s give us a first view of this passage, but the perspective they offer proves to be quite limited. As the prefix "post-" should indicate, postmodernist and postcolonialist theorists never tire of critiquing and seeking liberation from the past forms of rule and their legacies in the present. Postmodernists continually return to the lingering influence of the Enlightenment as the source of domination; postcolonialist theorists combat the remnants of colonialist thinking.

We suspect that postmodernist and postcolonialist theories may end up in a dead end because they fail to recognize adequately the contemporary

1. Jewish Austrian writer (1883–1924), who lived most of his life in Prague and wrote in German, often focusing on the alienation and isolation of the modern individual; the quotation is from *Diaries, 1910–1923* (1951).

2. Throughout *Empire* Hardt and Negri contrast modern and postmodern sovereignty. Whereas modern sovereignty functioned through hierarchical chains of command, centered on localiz-

able national capitals and imperialist metropolises, postmodern sovereignty is articulated in a decentered network structure that disperses power across multiple nodes and operates through the horizontal coordination of interconnected supranational entities and organizations. The adjective *imperial* refers to postmodernity's Empire (to refer to modernity's imperialism, Hardt and Negri use *imperialist*).

object of critique, that is, they mistake today's real enemy. What if the modern form of power these critics (and we ourselves) have taken such pains to describe and contest no longer holds sway in our society? What if these theorists are so intent on combating the remnants of a past form of domination that they fail to recognize the new form that is looming over them in the present? What if the dominating powers that are the intended object of critique have mutated in such a way as to depotentialize any such postmodernist challenge? In short, what if a new paradigm of power, a postmodern sovereignty, has come to replace the modern paradigm and rule through differential hierarchies of the hybrid and fragmentary subjectivities that these theorists celebrate? In this case, modern forms of sovereignty would no longer be at issue, and the postmodernist and postcolonialist strategies that appear to be liberatory would not challenge but in fact coincide with and even unwittingly reinforce the new strategies of rule!

When we begin to consider the ideologies of corporate capital and the world market, it certainly appears that the postmodernist and postcolonialist theorists who advocate a politics of difference, fluidity, and hybridity in order to challenge the binaries and essentialism of modern sovereignty have been outflanked by the strategies of power. Power has evacuated the bastion they are attacking and has circled around to their rear to join them in the assault in the name of difference. These theorists thus find themselves pushing against an open door. We do not mean to suggest that postmodernist and/or postcolonialist theorists are somehow the lackeys of global capital and the world market. Anthony Appiah and Arif Dirlik are ungenerous when they cast these authors in the position of "a comprador intelligentsia" and "the intelligentsia of global capitalism."³ There is no need to doubt the democratic, egalitarian, and even at times anticapitalist desires that motivate large segments of these fields of work, but it is important to investigate the utility of these theories in the context of the new paradigm of power. This new enemy not only is resistant to the old weapons but actually thrives on them, and thus joins its would-be antagonists in applying them to the fullest. Long live difference! Down with essentialist binaries!

To a certain extent postmodernist and postcolonialist theories are important *effects* that reflect or trace the expansion of the world market and the passage of the form of sovereignty. These theories point toward Empire,⁴ but in a vague and confused way, with no awareness of the paradigmatic leap that this passage constitutes. We have to delve deep into this passage, elaborate its terms, and make clear the lineaments that constitute the new Empire. Recognizing the value and limitations of postmodernist and postcolonialist theories is a first step in this project.

Politics of Difference

In order to appreciate fully the critical powers of postmodernist discourses, one must first focus on the modern forms of sovereignty. As we saw in the

3. Arif Dirlik, *The Postcolonial Aura: Third World Criticism in the Age of Global Capitalism* (Boulder: Westview Press, 1997), pp. 52–83; quotation p. 77 [Hardt and Negri's note]. Kwame Anthony Appiah (b. 1954), American theorist, cultural

critic, and political philosopher of British and Ghanaian descent. Dirlik (1940–2017), Turkish-born Marxist historian.

4. Hardt and Negri's term for the global network configuration of postmodern sovereignty.

previous sections, the world of modern sovereignty is a Manichaean world, divided by a series of binary oppositions that define Self and Other, white and black, inside and outside, ruler and ruled. Postmodernist thought challenges precisely this binary logic of modernity and in this respect provides important resources for those who are struggling to challenge modern discourses of patriarchy, colonialism, and racism. In the context of postmodernist theories, the hybridity and ambivalences of our cultures and our senses of belonging seem to challenge the binary logic of Self and Other that stands behind modern colonialist, sexist, and racist constructions. Similarly, the postmodernist insistence on difference and specificity defies the totalitarianism of universalizing discourses and structures of power; the affirmation of fragmented social identities appears as a means of contesting the sovereignty of both the modern subject and the modern nation-state, along with all the hierarchies they imply. This postmodernist critical sensibility is extremely important in this regard because it constitutes the proposition (or the symptom) of a break with respect to the entire development of modern sovereignty.

It is difficult to generalize about the numerous discourses that go under the banner of postmodernism, but most of them draw at least indirectly on Jean-François Lyotard's critique of modernist master narratives, Jean Baudrillard's affirmations of cultural simulacra, or Jacques Derrida's critique of Western metaphysics.⁵ In the most basic and reductive formulation, postmodernist theories are defined by many of their proponents as sharing one single common denominator, a generalized attack on the Enlightenment.⁶ From this perspective the call to action is clear: Enlightenment is the problem and postmodernism is the solution.

We should take care, however, to look more closely at what exactly is intended by "Enlightenment" or "modernity" from this postmodernist perspective.⁷ We argued earlier⁸ that modernity should be understood not as uniform and homogeneous, but rather as constituted by at least two distinct and conflicting traditions. The first tradition is that initiated by the revolution of Renaissance humanism, from Duns Scotus to Spinoza,⁹ with the discovery of the place of immanence and the celebration of singularity and difference. The second tradition, the Thermidor¹ of the Renaissance revolution, seeks to control the utopian forces of the first through the construction and mediation of dualisms, and arrives finally at the concept of modern sovereignty as a provisional solution. When postmodernists propose their opposition to a modernity and an Enlightenment that exalt the universality of reason only to sustain white male European supremacy, it should be clear that they are really attacking the second tradition of our schema (and unfortunately ignoring or eclipsing the first). It would be more accurate, in other words, to pose postmodernist theory as a challenge neither to the Enlightenment nor to modernity in toto

5. LYOTARD (1924–1998), BAUDRILLARD (1929–2007), and DERRIDA (1930–2004) are leading figures in French postmodernist and poststructuralist theory.

6. See, for example, Jane Flax, *Thinking Fragments* (Berkeley: University of California Press, 1990), p. 29 [Hardt and Negri's note].

7. For an explanation of how many postmodernist theorists conflate the varieties of modernist thought under the single rubric of "the Enlightenment," see Kathi Weeks, *Constituting Feminist Subjects* (Ithaca: Cornell University Press,

1998), chap. 2 [Hardt and Negri's note].

8. In section 1 of part 2, "Two Europes, Two Modernities," not included here.

9. BARUCH SPINOZA (1632–1677), Dutch philosopher of Portuguese Jewish descent and an important early rationalist philosopher. John Duns Scotus (ca. 1266–1308), prominent Scottish philosopher and scholastic theologian.

1. That is, a reactionary period after a revolution (literally, the month of the 1794 coup that ended the French Revolution's Reign of Terror with the execution of Maximilien Robespierre).

but specifically to the tradition of modern sovereignty. More precisely still, these various theoretical contestations are brought together most coherently in a challenge to the dialectic² as the central logic of modern domination, exclusion, and command—for both its relegating the multiplicity of difference to binary oppositions and its subsequent subsumption of these differences in a unitary order. If modern power itself is dialectical, the logic goes, then the postmodernist project must be nondialectical.

Once we recognize postmodernist discourses as an attack on the dialectical form of modern sovereignty, then we can see more clearly how they contest systems of domination such as racism and sexism by deconstructing the boundaries that maintain the hierarchies between white and black, masculine and feminine, and so forth. This is how postmodernists can conceive their theoretical practice as heir to an entire spectrum of modern and contemporary liberation struggles. The history of challenges to European political-economic hegemony and its colonial rule, the successes of national liberation movements, women's movements, and antiracist struggles, are all interpreted as the heritage of postmodernist politics because they, too, aim at disrupting the order and the dualisms of modern sovereignty. If the modern is the field of power of the white, the male, and the European, then in perfectly symmetrical fashion the postmodern will be the field of liberation of the non-white, the non-male, and the non-European. As bell hooks says, in its best form radical postmodernist practice, a politics of difference, incorporates the values and voices of the displaced, the marginalized, the exploited, and the oppressed.³ The binaries and dualisms of modern sovereignty are not disrupted only to establish new ones; rather, the very power of binaries is dissolved as "we set differences to play across boundaries."⁴

Postmodernist thinking has been received by a wide range of scholars as a clarion call to a new paradigm of academic and intellectual practice, and as a real opportunity to dislodge the dominant paradigms of scholarship in their own field.⁵ One of the most important examples from our perspective is the postmodernist challenge in the field of international relations.⁶ Here the

2. The central process in the philosophical system developed by G. W. F. HEGEL (1770–1831), in which history unfolds through contradictions between theses and antitheses (cast as neat binaries), resulting in syntheses (unities and totalities), which in turn give rise to their own antitheses, and so forth, in an orderly way.

3. bell hooks, *Yearning: Race, Gender, and Cultural Politics* (Boston: South End Press, 1990), p. 25 [Hardt and Negri's note]. hooks (b. 1952), African American cultural critic and theorist of race, gender, and class.

4. Jane Flax, *Disputed Subjects* (London: Routledge, 1993), p. 91 [Hardt and Negri's note].

5. What is necessary for a postmodernist critique is first to identify what "modernist" means in the field and then to pose a successor paradigm that is in some way consistent with some form of postmodernist thinking. Consider, for example, a field that might at first sight seem an unlikely candidate for such an operation: public administration, that is, the study of bureaucracies. The modernist paradigm of research that dominates the field is defined by a "prescription of neutral public administration ascribed to Wilson (separation of politics from administration), Taylor (scientific management), and Weber (hierarchical com-

mand)." Charles Fox and Hugh Miller, *Postmodern Public Administration: Toward Discourse* (Thousand Oaks, Calif.: Sage, 1995), p. 3. Scholars who are convinced that this paradigm is outdated and leads to undemocratic governmental practice can use postmodernist thinking as a weapon to transform the field. In this case, they propose "non-foundational discourse theory" as a postmodernist model that will create more active public interactions and thus democratize bureaucracy (p. 75) [Hardt and Negri's note]. Woodrow Wilson (1856–1924), 28th U.S. president (1913–21). Frederick Winslow Taylor (1856–1915), American engineer and pioneer of scientific time management. Max Weber (1864–1920), German sociologist regarded as a founder of sociology.

6. See James Der Derian and Michael Shapiro, eds., *International/Intertextual Relations: Postmodern Readings of World Politics* (Lexington, Mass.: Lexington Books, 1989); Jim George, *Discourses of Global Politics: A Critical (Re)Introduction to International Relations* (Boulder: Lynne Rienner Publications, 1994); and Michael Shapiro and Hayward Alker, eds., *Territorial Identities and Global Flows* (Minneapolis: University of Minnesota Press, 1996) [Hardt and Negri's note].

“modernist” paradigm of research is more or less identified with the methods of realism and neorealism, and thus centered on the concept of sovereignty, commonly understood as synonymous with the power of nation-states, the legitimate use of state violence, and territorial integrity. From a postmodernist perspective, this “modernist” international relations, because of its acceptance of and focus on these boundaries, tends to support the dominant power and the sovereignty of nation-states. Authors in this field thus make a clear connection between the critique of the binary dualisms of the “Enlightenment” developed in the context of the philosophical and literary postmodernists and the challenge to the fixed boundaries of modern state sovereignty. Postmodernist international relations theorists strive to challenge the sovereignty of states by deconstructing the boundaries of the ruling powers, highlighting irregular and uncontrolled international movements and flows, and thus fracturing stable unities and oppositions. “Discourse” and “interpretation” are presented as powerful weapons against the institutional rigidities of the modernist perspectives. The resulting postmodernist analyses point toward the possibility of a global politics of difference, a politics of deterritorialized flows across a smooth world, free of the rigid striation of state boundaries.⁷

Although many of the various postmodernist theorists are lucid in their refusal of the logics of modern sovereignty, they are in general extremely confused about the nature of our potential liberation from it—perhaps precisely because they cannot recognize clearly the forms of power that have today come to supplant it. When they present their theories as part of a project of political liberation, in other words, postmodernists are still waging battle against the shadows of old enemies: the Enlightenment, or really modern forms of sovereignty and its binary reductions of difference and multiplicity to a single alternative between Same and Other. The affirmation of hybridities and the free play of differences across boundaries, however, is liberatory only in a context where power poses hierarchy exclusively through essential identities, binary divisions, and stable oppositions. The structures and logics of power in the contemporary world are entirely immune to the “liberatory” weapons of the postmodernist politics of difference. In fact, Empire too is bent on doing away with those modern forms of sovereignty and on setting differences to play across boundaries. Despite the best intentions, then, the postmodernist politics of difference not only is ineffective against but can even coincide with and support the functions and practices of imperial rule. The danger is that postmodernist theories focus their attention so resolutely on the old forms of power they are running from, with their heads turned backwards, that they tumble unwittingly into the welcoming arms of the new power. From this perspective the celebratory affirmations of postmodernists can easily appear naive, when not purely mystificatory.

What we find most important in the various postmodernist currents of thought is the historical phenomenon they represent: they are the symptom

7. Hardt and Negri take the notions of striated and smooth space from GILLES DELEUZE and FÉLIX GUATTARI's *A Thousand Plateaus: Capitalism and Schizophrenia* (1980). According to Hardt and Negri, modern sovereignty operated in the striated—that is, rigidly organized, clearly

demarcated, and territorially limited—space of the nation-state, whereas the postmodern sovereignty of Empire constructs a smooth space that facilitates “deterritorialized flows” of trade, finance, and capital across national borders and throughout the globe.

of a rupture in the tradition of modern sovereignty. There is, of course, a long tradition of “anti-modern” thought that opposes modern sovereignty, including the great thinkers of the Frankfurt School⁸ (along with the entire republican line we have traced back to Renaissance humanism). What is new, however, is that postmodernist theorists point to the *end* of modern sovereignty and demonstrate a new capacity to think outside the framework of modern binaries and modern identities, a thought of plurality and multiplicity. However confusedly or unconsciously, they indicate the passage toward the constitution of Empire.

The Liberation of Hybridities, or Beyond Colonial Binaries

A certain stream of postcolonial studies also proposes a global politics of difference and might be well situated in line with postmodernist theory. Our analysis of modern sovereignty in the preceding sections poses already a strong potential rationale for an accord between postcolonialist and postmodernist theories. Insofar as modern sovereignty was identified with Europe’s tendency toward global domination, and more important, insofar as colonial administration and imperialist practices were central components in the constitution of modern sovereignty, postmodernist and postcolonialist theories do indeed share a common enemy. Postmodernism appears in this light to be fundamentally post-Eurocentric.

Postcolonial studies encompasses a wide and varied group of discourses, but we want to focus here on the work of Homi Bhabha⁹ because it presents the clearest and best-articulated example of the continuity between postmodernist and postcolonialist discourses. One of the primary and constant objects of Bhabha’s attack are *binary divisions*. In fact, the entire postcolonial project as he presents it is defined by its refusal of the binary divisions on which the colonialist worldview is predicated. The world is not divided in two and segmented in opposing camps (center versus periphery, First versus Third World¹), but rather it is and has always been defined by innumerable partial and mobile differences. Bhabha’s refusal to see the world in terms of binary divisions leads him to reject also theories of totality and theories of the identity, homogeneity, and essentialism of social subjects. These various refusals are very closely linked. The binary conception of the world implies the essentialism and homogeneity of the identities on its two halves, and, through the relationship across that central boundary, implies the subsumption of all experience within a coherent social totality. In short, the specter that haunts Bhabha’s analysis and that coherently links together these various opponents is the Hegelian dialectic, that is, the dialectic that subsumes within a coherent totality the essential social identities that face each other in opposition. In this sense one could say that postcolonial theory (or at least this version of it) is, along with postmodernist theories, defined above all by its being nondialectical.

8. A group of Western Marxist cultural critics and theorists associated with the Institute for Social Research at the University of Frankfurt whose projects focused on political economy, sociology, and the work of KARL MARX (1818–1883) and FRIEDRICH ENGELS (1820–1895); they include THEODOR W. ADORNO (1903–1969), WALTER BENJAMIN (1892–1940), JÜRGEN HABERMAS (b. 1929),

and MAX HORKHEIMER (1895–1973).

9. Indian-born postcolonial theorist (b. 1949; see above).

1. The “underdeveloped” countries, many of them former colonies, now dominated by highly industrialized “first world” (largely Western) nations in a global economy.

Bhabha's critique of the dialectic—that is, his attack on binary divisions, essential identities, and totalization—is both a sociological claim about the real nature of societies and a political project aimed at social change. The former is in fact a condition of possibility of the latter. Social identities and nations were never really coherent imagined communities;² the colonized's mimicry of the colonizer's discourse rearticulates the whole notion of identity and alienates it from essence; cultures are always already partial and hybrid formations. This social fact is the basis on which a subversive political project can be conducted to destroy the binary structure of power and identity. In summary form, then, Bhabha's logic of liberation runs like this: Power, or forces of social oppression, function by imposing binary structures and totalizing logics on social subjectivities, repressing their difference. These oppressive structures, however, are never total, and differences are always in some way expressed (through mimicry, ambivalence, hybridization, fractured identities, and so forth). The postcolonial political project, then, is to affirm the multiplicity of differences so as to subvert the power of the ruling binary structures.

The utopia Bhabha points toward after the binary and totalizing structures of power have been fractured and displaced is not an isolated and fragmentary existence but a new form of community, a community of the “unhomely,” a new internationalism,³ a gathering of people in the diaspora. The affirmation of difference and hybridity is itself, according to Bhabha, an affirmation of community: “To live in the unhomely world, to find its ambivalences and ambiguities enacted in the house of fiction, or its sundering and splitting performed in the work of art, is also to affirm a profound desire for social solidarity.”⁴ The seeds of the alternative community, he believes, arise out of close attention to the locality of culture, its hybridity, and its resistance to the binary structuring of social hierarchies.

We should be careful to recognize the form of the dominating power that serves as the enemy (and really the negative foundation) in this postcolonialist framework. Power is assumed to operate exclusively through a dialectical and binary structure. The only form of domination Bhabha recognizes, in other words, is that of modern sovereignty. This is why, for example, he can say “hierarchical or binary” as if the two terms were interchangeable: from his perspective hierarchy as such is necessarily grounded in binary divisions, so that the mere fact of hybridity has the power to destroy hierarchy *tout court*.⁵ Hybridity itself is a realized politics of difference, setting differences to play across boundaries. This is where the postcolonial and the postmodern most powerfully meet: in the united attack on the dialectics of modern sovereignty and the proposition of liberation as a politics of difference.

Like the postmodernist theorists, postcolonial theorists such as Bhabha interest us primarily insofar as they are symptoms of the epochal shift we

2. An allusion to BENEDICT ANDERSON's *Imagined Communities: Reflections on the Origin and Spread of Nationalism* (1983; see above).

3. In his book *Specters of Marx: The State of the Debt, the Work of Mourning, and the New International* (1993; trans. 1994), Derrida provocatively used the term “the new international” to refer to a postcapitalist revolutionary collectivity that, like Hardt and Negri's multitude, preserves

a revolutionary spirit of Marxism without subsuming the identities of its constituents under a unifying banner such as “the party,” “the vanguard,” etc.

4. Homi Bhabha, *The Location of Culture* (London: Routledge, 1994), p. 18 [Hardt and Negri's note].

5. Simply (French).

are undergoing, that is, the passage to Empire. Perhaps the discourses themselves are possible only when the regimes of modern sovereignty are already on the wane. Like postmodernists too, however, postcolonialist theorists in general give a very confused view of this passage because they remain fixated on attacking an old form of power and propose a strategy of liberation that could be effective only on that old terrain. The postcolonialist perspective remains primarily concerned with colonial sovereignty. As Gyan Prakash says, "The postcolonial exists as an aftermath, as an after—after being worked over by colonialism."⁶ This may make postcolonialist theory a very productive tool for rereading history, but it is entirely insufficient for theorizing contemporary global power. Edward Said, certainly one of the most brilliant to go under the label of postcolonial theory, manages to condemn the current global power structures only to the extent that they perpetuate cultural and ideological remnants of European colonialist rule.⁷ He charges that "the tactics of the great empires [that is, the European imperialisms], which were dismantled after the first world war, are being replicated by the U.S."⁸ What is missing here is a recognition of the novelty of the structures and logics of power that order the contemporary world. Empire is not a weak echo of modern imperialisms but a fundamentally new form of rule.

Fundamentalism and/or Postmodernism

Another symptom of the historical passage already in process in the final decades of the twentieth century is the rise of so-called fundamentalisms. Since the collapse of the Soviet Union, the great ideologues of geopolitics and the theoreticians of the end of history⁹ have consistently posed fundamentalisms as the primary danger facing global order and stability. Fundamentalism, however, is a poor and confused category that groups together widely disparate phenomena. In general, one might say that fundamentalisms, diverse though they may be, are linked by their being understood both from within and outside as anti-modernist movements, resurgences of primordial identities and values; they are conceived as a kind of historical backflow, a de-modernization. It is more accurate and more useful, however, to understand the various fundamentalisms not as the re-creation of a premodern world, but rather as a powerful refusal of the contemporary historical passage in course. In this sense, then, like postmodernist and postcolonialist theories, fundamentalisms too are a symptom of the passage to Empire.

Often today in the media the term "fundamentalism" reduces the variety of social formations that go by that name and refers exclusively to Islamic fundamentalism, the complexity of which is in turn reduced to a violent and intolerant religious fanaticism that is above all "anti-Western." Islamic fundamentalism itself, of course, takes various forms and has a long history

9. See especially Francis Fukuyama's *The End of History and the Last Man* (1992), which argues that the end of the cold war, leaving the United States the world's sole superpower, signified the end of the contradictions that had driven the Hegelian dialectic of history.

extending throughout the modern era. Islamic revivalism and reformism were strong at different times in the eighteenth and nineteenth centuries, and the current forms of Islamic radicalism bear distinct similarities to those previous movements. Islamic fundamentalisms are most coherently united, however, in their being *resolutely opposed to modernity and modernization*. Insofar as political and cultural modernization has been a process of secularization, Islamic fundamentalisms oppose it by posing sacred texts at the center of political constitutions and religious leaders, both priests and jurists, in positions of political power. In terms, too, of gender roles, family structures, and cultural forms, an unchanging, traditional religious norm is commonly meant to stand against the progressively changing secular forms of modernity. Counter to modernism's dynamic and secular society, fundamentalism seems to pose a static and religious one. In this light, then, as an anti-modernism, Islamic fundamentalisms seem to be engaged in an effort to reverse the process of social modernization, separate from the global flows of modernity, and re-create a premodern world. The Iranian revolution of 1979,¹ for example, would from this perspective be seen as an anti-revolution, resurrecting an ancient order.

Christian fundamentalisms in the United States also present themselves as movements against social modernization, re-creating what is imagined to be a past social formation based on sacred texts. These movements should certainly be situated in line with the long U.S. tradition of projects to create in America a new Jerusalem, a Christian community separate from both the corruption of Europe and the savagery of the "uncivilized" world.² The most prominent social agenda of the current Christian fundamentalist groups is centered on the (re)creation of the stable and hierarchical nuclear family, which is imagined to have existed in a previous era, and thus they are driven specifically in their crusades against abortion and homosexuality. Christian fundamentalisms in the United States have also continuously been oriented (in different times and different regions more or less overtly) toward a project of white supremacy and racial purity. The new Jerusalem has almost always been imagined as a white and patriarchal Jerusalem.

These common characterizations of fundamentalisms as a return to a premodern or traditional world and its social values, however, obscure more than they illuminate. In fact, fundamentalist visions of a return to the past are generally based on historical illusions. The purity and wholesomeness of the stable, nuclear heterosexual family heralded by Christian fundamentalists, for example, never existed in the United States. The "traditional family" that serves as their ideological foundation is merely a pastiche of values and practices that derives more from television programs than from any real historical experiences within the institution of the family.³ It is a

1. The religion-based uprising that led to the abdication of Iran's shah, Mohammad Reza Shah Pahlavi, and the establishment of an "Islamic republic"; its first "supreme leader" was the Ayatollah Ruhollah Khomeini, a conservative Shiite cleric.

2. Anders Stephanson gives an excellent account of the conceptions of the United States as a "new Jerusalem" in *Manifest Destiny: American Expansionism and the Empire of Right* (New York: Hill and Wang, 1995) [Hardt and Negri's

note].

3. "Like most visions of a 'golden age,' the 'traditional family' . . . evaporates upon close examination. It is an ahistorical amalgam of structures, values, and behaviors that never co-existed in the same time and place." Stephanie Coontz, *The Way We Never Were: American Families and the Nostalgia Trap* (New York: Basic Books, 1992), p. 9 [Hardt and Negri's note]. The idea of postmodern pastiche recalls FREDRIC JAMESON's "Postmodernism and Consumer Society" (1988; see above).

fictional image projected on the past, like Main Street U.S.A. at Disneyland,⁴ constructed retrospectively through the lens of contemporary anxieties and fears. The “return to the traditional family” of the Christian fundamentalists is not backward-looking at all, but rather a new invention that is part of a political project against the contemporary social order.

Similarly, the current forms of Islamic fundamentalism should not be understood as a return to past social forms and values, not even from the perspective of the practitioners. According to Fazlur Rahman: “Actually it is even something of a misnomer to call such phenomena in Islam ‘fundamentalist’ except insofar as they emphasize the basis of Islam as being the two original sources: the Qur’an and the Sunna of the Prophet Muhammed. Otherwise they emphasize *ijtihad*, original thought.”⁵ Contemporary Islamic radicalisms are indeed primarily based on “original thought” and the invention of original values and practices, which perhaps echo those of other periods of revivalism or fundamentalism but are really directed in reaction to the present social order. In both cases, then, the fundamentalist “return to tradition” is really a new invention.⁶

The anti-modern thrust that defines fundamentalisms might be better understood, then, not as a *premodern* but as a *postmodern* project. The postmodernity of fundamentalism has to be recognized primarily in its refusal of modernity as a weapon of Euro-American hegemony—and in this regard Islamic fundamentalism is indeed the paradigmatic case. In the context of Islamic traditions, fundamentalism is postmodern insofar as it rejects the tradition of Islamic modernism for which modernity was always overcoded as assimilation or submission to Euro-American hegemony. “If modern meant the pursuit of Western education, technology and industrialization in the first flush of the post-colonial period,” Akbar Ahmed writes, “postmodern would mean a reversion to traditional Muslim values and a rejection of modernism.”⁷ Considered simply in cultural terms, Islamic fundamentalism is a paradoxical kind of postmodernist theory—postmodern only because it chronologically follows and opposes Islamic modernism. It is more properly postmodernist, however, when considered in geopolitical terms. Rahman writes: “The current postmodernist fundamentalism, in an important way, is novel because its basic *élan* is anti-Western . . . Hence its condemnation of classical modernism as a purely Westernizing force.”⁸ Certainly, powerful segments of Islam have been in some sense “anti-Western” since the religion’s inception. What is novel in the contemporary resurgence of funda-

mentalism is really the refusal of the powers that are emerging in the new imperial order. From this perspective, then, insofar as the Iranian revolution was a powerful rejection of the world market, we might think of it as the first postmodernist revolution.

This marriage between postmodernism and fundamentalism is certainly an odd coupling considering that postmodernist and fundamentalist discourses stand in most respects in polar opposition: hybridity versus purity, difference versus identity, mobility versus stasis. It seems to us that postmodernists and the current wave of fundamentalists have arisen not only at the same time but also in response to the same situation, only at opposite poles of the global hierarchy, according to a striking geographical distribution. Simplifying a great deal, one could argue that postmodernist discourses appeal primarily to the winners in the processes of globalization and fundamentalist discourses to the losers. In other words, the current global tendencies toward increased mobility, indeterminacy, and hybridity are experienced by some as a kind of liberation but by others as an exacerbation of their suffering. Certainly, bands of popular support for fundamentalist projects—from the Front National in France and Christian fundamentalism in the United States to the Islamic Brothers⁹—have spread most widely among those who have been further subordinated and excluded by the recent transformations of the global economy and who are most threatened by the increased mobility of capital. The losers in the processes of globalization might indeed be the ones who give us the strongest indication of the transformation in progress.

The Ideology of The World Market

Many of the concepts dear to postmodernists and postcolonialists find a perfect correspondence in the current ideology of corporate capital and the world market. The ideology of the world market has always been the anti-foundational and anti-essentialist discourse par excellence. Circulation, mobility, diversity, and mixture are its very conditions of possibility. Trade brings differences together and the more the merrier! Differences (of commodities, populations, cultures, and so forth) seem to multiply infinitely in the world market, which attacks nothing more violently than fixed boundaries: it overwhelms any binary division with its infinite multiplicities.

As the world market today is realized ever more completely, it tends to deconstruct the boundaries of the nation-state. In a previous period, nation-states were the primary actors in the modern imperialist organization of global production and exchange, but to the world market they appear increasingly as mere obstacles. Robert Reich, former U.S. secretary of labor, is in an excellent position to recognize and celebrate the overcoming of national boundaries in the world market. He contends that “as almost every factor of production—money, technology, factories, and equipment—moves effortlessly across borders, the very idea of a [national] economy is becoming meaningless.” In the future “there will be no *national* products or technologies, no national corporations, no national industries. There will no

9. The Muslim Brotherhood (founded in Egypt, 1928), a militant international political organization of fundamentalist Sunni Muslims. Front National: the National Front (French), a right-

wing nationalist French political party, founded in 1971, with a platform of social conservatism, economic protectionism, and racial purity.

longer be national economies, as least as we have come to understand that concept."¹ With the decline of national boundaries, the world market is liberated from the kind of binary divisions that nation-states had imposed, and in this new free space a myriad of differences appears. These differences of course do not play freely across a smooth global space, but rather are regimented in global networks of power consisting of highly differentiated and mobile structures. Arjun Appadurai captures the new quality of these structures with the analogy of landscapes, or better, seascapes: in the contemporary world he sees finanscapes, technoscapes, ethnoscapescapes, and so forth.² The suffix "-scape" allows us on the one hand to point to the fluidity and irregularity of these various fields and on the other to indicate formal commonalities among such diverse domains as finance, culture, commodities, and demography. The world market establishes a real politics of difference.

The various -scapes of the world market provide capital with potentials on a scale previously unimaginable. It should be no surprise, then, that postmodernist thinking and its central concepts have flourished in the various fields of practice and theory proper to capital, such as marketing, management organization, and the organization of production. Postmodernism is indeed the logic by which global capital operates. Marketing has perhaps the clearest relation to postmodernist theories, and one could even say that the capitalist marketing strategies have long been postmodernist, *avant la lettre*.³ On the one hand, marketing practices and consumer consumption are prime terrain for developing postmodernist thinking: certain postmodernist theorists, for example, see perpetual shopping and the consumption of commodities and commodified images as the paradigmatic and defining activities of postmodern experience, our collective journeys through hyperreality.⁴ On the other hand, postmodernist thinking—with its emphasis on concepts such as difference and multiplicity, its celebration of fetishism and simulacra, its continual fascination with the new and with fashion—is an excellent description of the ideal capitalist schemes of commodity consumption and thus provides an opportunity to perfect marketing strategies. As a marketing theorist says, there are clear "parallels between contemporary market practices and the precepts of postmodernism."⁵

Marketing itself is a practice based on differences, and the more differences that are given, the more marketing strategies can develop. Ever more hybrid and differentiated populations present a proliferating number of "target markets" that can each be addressed by specific marketing strategies—one for gay Latino males between the ages of eighteen and twenty-two, another for

pp. 3–58 [Hardt and Negri's note]. "Hyperreality": the ability of images and simulacra to displace reality and appear "more real" than reality itself. Eco (1932–2016), Italian literary theorist, novelist, and philosopher.

5. Stephen Brown, *Postmodern Marketing* (London: Routledge, 1995), p. 157. Whereas marketing practice is postmodernist, Brown points out, marketing theory remains stubbornly "modernist" (which here means positivistic). Elizabeth Hirschman and Morris Holbrook also bemoan the resistance of marketing theory and consumer research to postmodernist thinking in *Postmodern Consumer Research: The Study of Consumption as Text* (Newbury Park, Calif.: Sage, 1992) [Hardt and Negri's note].

Chinese-American teenage girls, and so forth. Postmodern marketing recognizes the difference of each commodity and each segment of the population, fashioning its strategies accordingly.⁶ Every difference is an opportunity.

Postmodern marketing practices represent the consumption cycle of contemporary capital, its external face, but we are even more interested in the postmodernist tendencies within the cycle of capitalist production. In the productive sphere, postmodernist thinking has perhaps had the largest direct impact in the field of management and organization theory. Authors in this field argue that large and complex modern organizations, with their rigid boundaries and homogeneous units, are not adequate for doing business in the postmodern world. "The postmodern organization," one theorist writes, "has certain distinctive features—notably, an emphasis on small-to-moderate size and complexity and adoption of flexible structures and modes of interinstitutional cooperation to meet turbulent organizational and environmental conditions."⁷ Postmodern organizations are thus imagined either as located on the boundaries between different systems and cultures or as internally hybrid. What is essential for postmodern management is that organizations be mobile, flexible, and able to deal with difference. Here postmodernist theories pave the way for the transformation of the internal structures of capitalist organizations.

The "culture" within these organizations has also adopted the precepts of postmodernist thinking. The great transnational corporations that straddle national boundaries and link the global system are themselves internally much more diverse and fluid culturally than the parochial modern corporations of previous years. The contemporary gurus of corporate culture who are employed by management as consultants and strategy planners preach the efficiency and profitability of diversity and multiculturalism within corporations.⁸ When one looks closely at U.S. corporate ideology (and, to a lesser but still significant extent, at U.S. corporate practice), it is clear that corporations do not operate simply by excluding the gendered and/or racialized Other. In fact, the old modernist forms of racist and sexist theory are the explicit enemies of this new corporate culture. The corporations seek to include difference within their realm and thus aim to maximize creativity, free play, and diversity in the corporate workplace. People of all different races, sexes, and sexual orientations should potentially be included in the corporation; the daily routine of the workplace should be rejuvenated with unexpected changes and an atmosphere of fun. Break down the old boundaries and let one hundred flowers bloom!⁹ The task of the boss, subsequently, is to organize these energies and differences in the interests of profit. This project is aptly called "diversity management." In this light, the corporations

The slogan was employed by Mao Zedong in a campaign (1956–57) that urged Chinese intellectuals to criticize the state.

appear not only "progressive" but also "postmodernist," as leaders in a very real politics of difference.

The production processes of capital have also taken forms that echo postmodernist projects. We will have ample opportunity to analyze (particularly in Section 3.4¹) how production has come to be organized in flexible and hybrid networks. This is, in our view, the most important respect in which the contemporary transformations of capital and the world market constitute a real process of postmodernization.

We certainly agree with those contemporary theorists, such as David Harvey and Fredric Jameson, who see postmodernity as a new phase of capitalist accumulation and commodification that accompanies the contemporary realization of the world market.² The global politics of difference established by the world market is defined not by free play and equality, but by the imposition of new hierarchies, or really by a constant process of hierarchization. Postmodernist and postcolonialist theories (and fundamentalisms in a very different way) are really sentinels that signal this passage in course, and in this regard are indispensable.

Truth Commissions

It is salutary to remind ourselves that postmodernist and postcolonial discourses are effective only in very specific geographical locations and among a certain class of the population. As a political discourse, postmodernism has a certain currency in Europe, Japan, and Latin America, but its primary site of application is within an elite segment of the U.S. intelligentsia. Similarly, the postcolonial theory that shares certain postmodernist tendencies has been developed primarily among a cosmopolitan set that moves among the metropolises and major universities of Europe and the United States. This specificity does not invalidate the theoretical perspectives, but it should make us pause for a moment to reflect on their political implications and practical effects. Numerous genuinely progressive and liberatory discourses have emerged throughout history among elite groups, and we have no intention here of questioning the vocation of such theorizing *tout court*. More important than the specificity of these theorists are the resonances their concepts stimulate in different geographical and class locations.

Certainly from the standpoint of many around the world, hybridity, mobility, and difference do not immediately appear as liberatory in themselves. Huge populations see mobility as an aspect of their suffering because they are displaced at an increasing speed in dire circumstances. For several decades, as part of the modernization process there have been massive migrations from rural areas to metropolitan centers within each country and across the globe. The international flow of labor has only increased in recent years, not only from south to north, in the form of legal and illegal guest workers or immigrants, but also from south to south, that is, the temporary or semipermanent worker migrations among southern regions, such as that of South Asian workers in the Persian Gulf. Even these massive

Duke University Press, 1991); and David Harvey, *The Condition of Postmodernity* (Oxford: Blackwell, 1989) [Hardt and Negri's note]. HARVEY (b. 1935), British geographer and Marxist theorist.

worker migrations, however, are dwarfed in terms of numbers and misery by those forced from their homes and land by famine and war. Just a cursory glance around the world, from Central America to Central Africa and from the Balkans to Southeast Asia, will reveal the desperate plight of those on whom such mobility has been imposed. For them, mobility across boundaries often amounts to forced migration in poverty and is hardly liberatory. In fact, a stable and defined place in which to live, a certain immobility, can on the contrary appear as the most urgent need.

The postmodernist epistemological challenge to “the Enlightenment”—its attack on master narratives and its critique of truth—also loses its liberatory aura when transposed outside the elite intellectual strata of Europe and North America. Consider, for example, the mandate of the Truth Commission formed at the end of the civil war in El Salvador,³ or the similar institutions that have been established in the post-dictatorial and post-authoritarian regimes of Latin America and South Africa. In the context of state terror and mystification, clinging to the primacy of the concept of truth can be a powerful and necessary form of resistance. Establishing and making public the truth of the recent past—attributing responsibility to state officials for specific acts and in some cases exacting retribution—appears here as the ineluctable precondition for any democratic future. The master narratives of the Enlightenment do not seem particularly repressive here, and the concept of truth is not fluid or unstable—on the contrary! The truth is that this general ordered the torture and assassination of that union leader, and this colonel led the massacre of that village. Making public such truths is an exemplary Enlightenment project of modernist politics, and the critique of it in these contexts could serve only to aid the mystificatory and repressive powers of the regime under attack.

In our present imperial world, the liberatory potential of the postmodernist and postcolonial discourses that we have described only resonates with the situation of an elite population that enjoys certain rights, a certain level of wealth, and a certain position in the global hierarchy. One should not take this recognition, however, as a complete refutation. It is not really a matter of either/or. Difference, hybridity, and mobility are not liberatory in themselves, but neither are truth, purity, and stasis. The real revolutionary practice refers to the level of *production*. Truth will not make us free, but taking control of the production of truth will. Mobility and hybridity are not liberatory, but taking control of the production of mobility and stasis, purities and mixtures is. The real truth commissions of Empire will be constituent assemblies of the multitude, social factories for the production of truth.

3. The civil war in El Salvador followed a military coup in 1979; it lasted until peace accords were signed in January 1992. That treaty established the Commission on the Truth for El Salvador, whose U.N.-appointed commissioners

investigated civil rights abuses by all participants in the conflict (about 85 percent of the acts of violence were attributed to agents of the state).

JUDITH JACK HALBERSTAM

b. 1961

Judith Jack Halberstam combines queer theory, cultural studies, and popular culture to speak to activist as well as academic audiences. Building on the work of such theorists as LOUIS ALTHUSSER, JUDITH BUTLER, and EVE KOSOFSKY SEDGWICK, Halberstam shows that intellectuals can draw on the experience of everyday life to deconstruct narrow binary systems of gender and sexuality and generate new, more expansive understandings. Her work examines texts ranging from Victorian literature to 1980s lesbian pornography to contemporary novels and Hollywood films. "Masculinity" is a category of behaviors, asserts Halberstam, that can be studied and understood apart from individual men. Furthermore, masculinity can be performed by and linked to bodies other than those of white heterosexual males (the dominant model in Western culture). Women can access masculinity as well, and they can do so without surgically altering their bodies. The category of "female masculinity" is Halberstam's major critical contribution. By separating masculinity from the male body, Halberstam restructures popular and frequently negative portrayals of masculine women, particularly so-called butch women. Such work has implications that reach beyond the academy; by using personal and popular culture narratives of sexuality it can, in Halberstam's words, both "rewrite . . . psychoanalytic theories of desire and scientific theories of sexuality" and dispel "homogenizing notions of gay and lesbian desire."

Halberstam earned a B.A. in English from the University of California at Berkeley in 1985 and a Ph.D. in English literature from the University of Minnesota in 1991. The author of six books to date and numerous articles, Halberstam is currently a professor of English, American studies and ethnicity, comparative literature, and gender studies at the University of Southern California, where she has served as the director of the Center for Feminist Research. In addition to lecturing at universities across the United States and Europe, Halberstam has been a visiting professor at Duke University, Harvard University, Yale University, and the University of Basel in Switzerland. Her book *Female Masculinity* (1998) received the Publisher's Triangle Judy Grahn Award for Lesbian Non-Fiction in 1999, and *In a Queer Time and Place* (2005) was nominated for a Lambda Award in 2006.

Drawing on the critical theories of ANTONIO GRAMSCI and MICHEL FOUCAULT, among others, Halberstam not only dissects hegemonic gender systems and their operations but also "theorizes the alternative" (the counterhegemonic). She uses gender, queer, and cultural theory to address the "silly archive"—animated movies, television shows, and other popular culture texts that might seem far removed from theory and socially significant interpretation. Halberstam's method, which engages both scholarly and popular audiences, addresses a frequent criticism of queer theory: that its reliance on complex deconstructive and psychoanalytic terminology obscures meaning and alienates nonacademic readers. In interviews, Halberstam explains that her drive to connect to a broad audience emerges, in part, from a sense that her work represents a community. This sense links her style and approach to that of African American scholars such as HENRY LOUIS GATES JR. and BELL HOOKS.

Halberstam's work—most notably in *Female Masculinity*, whose introduction appears below—resembles that of Gramsci in stressing counterhegemonic groups. At the same time, it embraces the Foucauldian notion that medical and scientific categories attain cultural "realness" when individuals embody them as elements of their identities. Gender is one such category that is taught and performed in the process of socialization. Whereas Butler acknowledges this reality and evinces suspicion toward the taxonomical boundaries of gender (which she links to dominant heteronormative values), Halberstam surprisingly retains the existing taxonomy but

seeks increased complexity within it. Masculinity and femininity, as performative acts and codes that can be associated with numerous kinds of bodies, allow *all* bodies to disrupt gender or to represent queer deviance. We see this especially in Halberstam's discussion of bathroom problems and gender policing for those who do not perform or conform to social expectations of femininity or masculinity. Halberstam's designation "female masculinity" is fluid and complex, identifying a frequently ignored or abjected category of identity. Her "taxonomical impulse" to retain the categories of masculine and feminine leads not to confinement but to the recognition of varied erotic and identity categories, and she focuses especially on cross-identifying females who do not fit into categories of "transgender" or "transsexual": masculine females. She associates them with female sports icons, butch roles, lesbian fatherhood, tomboys, and drag kings. In this regard, Halberstam aligns herself with Eve Sedgwick, whose influential *Epistemology of the Closet* (1990) lists methods of categorizing desire beyond the hetero/homo binary. Rather than completely deconstructing gender, Halberstam makes nameable identities that were previously unacknowledged or disenfranchised.

In arguing for gender variance and gender preference and against mandatory masculine/feminine identity, Halberstam is critical of mainstream dominant masculinity reserved for males. Characteristically coded as white and heroic, it is associated (vis-à-vis femininity) with power, privilege, and legitimacy as well as freedom and mobility. To broaden both the definition and the reach of masculinity, Halberstam advocates a "scavenger methodology" that mixes and matches ethnography, textual studies, and queer historical inquiry with critique of the shortcomings of earlier research and publication on masculinity. Her conclusion: female masculinity exists in multiple forms. At the end of her section on "constructing masculinities," Halberstam pivots in a personal direction and reveals that her "book is an attempt to make my own female masculinity plausible, credible, real."

While Halberstam's work has been widely praised and deployed by queer theorists, it has not been accepted by all critics. Some question the language of Halberstam's gender taxonomies, objecting to her use of the terms "masculine" and "feminine," binaries that are always already hierarchically ranked. A number of critics also point out that not all disruptive gender performances are "queer" in the sense of being counternormative. Others assert that queer theory should work to disavow and deconstruct gender identities rather than freezing them within categories that, though they may seem more fluid, are ultimately just as limiting and rigid as those they are intended to replace.

From Female Masculinity

From Chapter 1. An Introduction to Female Masculinity: Masculinity without Men

What's the use of being a little boy if you are going to grow up to
be a man?

—Gertrude Stein,¹ *Everybody's Autobiography* (1937)

THE REAL THING

What is “masculinity”? This has been probably the most common question that I have faced over the past five years while writing on the topic of female masculinity. If masculinity is not the social and cultural and indeed political expression of maleness, then what is it? I do not claim to have any definitive answer to this question, but I do have a few proposals about why masculinity must not and cannot and should not reduce down to the male body and its effects. I also venture to assert that although we seem to have a difficult time defining masculinity, as a society we have little trouble in recognizing it, and indeed we spend massive amounts of time and money ratifying and supporting the versions of masculinity that we enjoy and trust; many of these “heroic masculinities” depend absolutely on the subordination of alternative masculinities. I claim in this book that far from being an imitation of maleness, female masculinity actually affords us a glimpse of how masculinity is constructed as masculinity. In other words, female masculinities are framed as the rejected scraps of dominant masculinity in order that male masculinity may appear to be the real thing. But what we understand as heroic masculinity has been produced by and across both male and female bodies.

This opening chapter does not simply offer a conventional theoretical introduction to the enterprise of conceptualizing masculinity without men; rather, it attempts to compile the myths and fantasies about masculinity that have ensured that masculinity and maleness are profoundly difficult to pry apart. I then offer, by way of a preliminary attempt to re-imagine masculinity, numerous examples of alternative masculinities in fiction, film, and lived experience. These examples are mostly queer and female, and they show clearly how important it is to recognize alternative masculinities when and where they emerge. Throughout this introduction, I detail the many ways in which female masculinity has been blatantly ignored both in the culture at large and within academic studies of masculinity. This widespread indifference to female masculinity, I suggest, has clearly ideological motivations and has sustained the complex social structures that wed masculinity to maleness and to power and domination. I firmly believe that a sustained examination of female masculinity can make crucial interventions within gender studies, cultural studies, queer studies, and mainstream discussions of gender in general.

Masculinity in this society inevitably conjures up notions of power and legitimacy and privilege; it often symbolically refers to the power of the state

1. Avant-garde American writer (1874–1946), an important figure in modernist and lesbian literature.

and to uneven distributions of wealth. Masculinity seems to extend outward into patriarchy and inward into the family; masculinity represents the power of inheritance, the consequences of the traffic in women, and the promise of social privilege. But, obviously, many other lines of identification traverse the terrain of masculinity, dividing its power into complicated differentials of class, race, sexuality, and gender. If what we call “dominant masculinity” appears to be a naturalized relation between maleness and power, then it makes little sense to examine men for the contours of that masculinity’s social construction. Masculinity, this book will claim, becomes legible as masculinity where and when it leaves the white male middle-class body. Arguments about excessive masculinity tend to focus on black bodies (male and female), latino/a bodies, or working-class bodies, and insufficient masculinity is all too often figured by Asian bodies or upper-class bodies; these stereotypical constructions of variable masculinity mark the process by which masculinity becomes dominant in the sphere of white middle-class maleness. But all too many studies that currently attempt to account for the power of white masculinity recenter this white male body by concentrating all their analytical efforts on detailing the forms and expressions of white male dominance. Numerous studies of Elvis,² white male youth, white male feminism, men and marriage, and domestications of maleness amass information about a subject whom we know intimately and ad nauseam. This study professes a degree of indifference to the whiteness of the male and the masculinity of the white male and the project of naming his power: male masculinity figures in my project as a hermeneutic, and as a counterexample to the kinds of masculinity that seem most informative about gender relations and most generative of social change. This book seeks Elvis only in the female Elvis impersonator Elvis Herselvis; it searches for the political contours of masculine privilege not in men but in the lives of aristocratic European cross-dressing women in the 1920s; it describes the details of masculine difference by comparing not men and women but butch lesbians and female-to-male transsexuals; it examines masculinity’s iconicity not in the male matinee idol but in a history of butches in cinema; it finds, ultimately, that the shapes and forms of modern masculinity are best showcased within female masculinity.

How else to begin a book on female masculinity but by deposing one of the most persistent of male heroes: Bond, James Bond.³ To illustrate my point that modern masculinity is most easily recognized as female masculinity, consider the James Bond action film, in which male masculinity very often appears as only a shadow of a more powerful and convincing alternative masculinity. In *Goldeneye* (1995), for example, Bond battles the usual array of bad guys: Commies, Nazis, mercenaries, and a superaggressive violent femme type. He puts on his usual performance of debonair action adventure hero, and he has his usual supply of gadgetry to aid him—a retractable belt, a bomb disguised as a pen, a laser weapon watch, and so on. But there’s something curiously lacking in *Goldeneye*, namely, credible masculine power. Bond’s boss, M, is a noticeably butch older woman who calls Bond a dinosaur and chastises him for being a misogynist and a sexist. His secretary,

2. Elvis Presley (1935–1977), American singer and actor, a 1950s teen idol, and an enduring cultural icon.

3. Spy hero featured in 12 novels by the English author Ian Fleming (1908–1964), the first in 1953, and 26 films to date.

Miss Money Penny, accuses him of sexual harassment, his male buddy betrays him and calls him a dupe, and ultimately women seem not to go for his charms—bad suits and lots of sexual innuendo—which seem as old and as ineffective as his gadgets.

Masculinity, in this rather actionless film, is primarily prosthetic and, in this and countless other action films, has little if anything to do with biological maleness and signifies more often as a technical special effect. In *Goldeneye* it is M who most convincingly performs masculinity, and she does so partly by exposing the sham of Bond's own performance. It is M who convinces us that sexism and misogyny are not necessarily part and parcel of masculinity, even though historically it has become difficult, if not impossible, to untangle masculinity from the oppression of women. The action adventure hero should embody an extreme version of normative masculinity, but instead we find that excessive masculinity turns into a parody or exposure of the norm. Because masculinity tends to manifest as natural gender itself, the action flick, with its emphases on prosthetic extension, actually undermines the heterosexuality of the hero even as it extends his masculinity. So, in *Goldeneye*, for example, Bond's masculinity is linked not only to a profoundly unnatural form of masculine embodiment but also to gay masculinities. In the scene in which Bond goes to pick up his newest set of gadgets, a campy and almost queenly science nerd gives Bond his brand-new accessories and demonstrates each one with great enthusiasm. It is no accident that the science nerd is called Agent Q. We might read Agent Q as a perfect model of the interpenetration of queer and dominant regimes—Q is precisely an agent, a queer subject who exposes the workings of dominant heterosexual masculinity. The gay masculinity of Agent Q and the female masculinity of M provide a remarkable representation of the absolute dependence of dominant masculinities on minority masculinities.

When you take his toys away, Bond has very little propping up his performance of masculinity. Without the slick suit, the half smile, the cigarette lighter that transforms into a laser gun, our James is a hero without the action or the adventure. The masculinity of the white male, what we might call "epic masculinity," depends absolutely, as any Bond flick demonstrates, on a vast subterranean network of secret government groups, well-funded scientists, the army, and an endless supply of both beautiful bad babes and beautiful good babes, and finally it relies heavily on an immediately recognizable "bad guy." The "bad guy" is a standard generic feature of epic masculinity narratives: think only of *Paradise Lost*⁴ and its eschatological separation between God and Devil; Satan, if you like, is the original bad guy. Which is not to say that the bad guy's masculinity bars him from the rewards of male privilege—on the contrary, bad guys may also look like winners, but they just tend to die more quickly. Indeed, there is currently a line of clothing called Bad Boy that revels in the particular power of the bad guy and reveals how quickly transgression adds up to nothing more than consumerism in the sphere of the white male. Another line of clothing that indulges in the consumer potential of male rebellion is No Fear gear. This label features advertisements with skydiving, surfing, car-racing men who show their manliness by wearing the No Fear logo and practicing death-defying stunts in their

4. John Milton's great epic English poem (1667, 1674).

leisure time. To test how domesticated this label actually is, we have only to imagine what No Fear might mean for women. It might mean learning how to shoot a gun or working out or taking up a martial art, but it would hardly translate into skydiving. Obviously, then, No Fear is a luxury and can in no way be equated with any form of social rebellion.

There is also a long literary and cinematic history that celebrates the rebellion of the male. If James Stewart, Gregory Peck, and Fred Astaire represent a few faces of good-guy appeal, James Dean, Marlon Brando, and Robert De Niro⁵ represent the bad-guy appeal, and really it becomes quite hard to separate one group from the other. Obviously, bad-boy representations in the 1950s captured something of a white working-class rebellion against middle-class society and against particular forms of domestication, but today's rebel without a cause is tomorrow's investment banker, and male rebellion tends toward respectability as the rewards for conformity quickly come to outweigh the rewards for social rebellion. To paraphrase Gertrude Stein, what's the point of being a rebel boy if you are going to grow up to be a man? Obviously, where and when rebellion ceases to be white middle-class male rebellion (individualized and localized within the lone male or even generalized into the boy gang) and becomes class rebellion or race rebellion, a very different threat emerges.

TOMBOYS

What happens when boy rebellion is located not in the testosterone-induced pout of the hooligan but in the sneer of the tomboy? Tomboyism generally describes an extended childhood period of female masculinity. If we are to believe general accounts of childhood behavior, tomboyism is quite common for girls and does not generally give rise to parental fears. Because comparable cross-identification behaviors in boys do often give rise to quite hysterical responses, we tend to believe that female gender deviance is much more tolerated than male gender deviance.⁶ I am not sure that tolerance in such matters can be measured or at any rate that responses to childhood gender behaviors necessarily tell us anything concrete about the permitted parameters of adult male and female gender deviance. Tomboyism tends to be associated with a "natural" desire for the greater freedoms and mobilities enjoyed by boys. Very often it is read as a sign of independence and self-motivation, and tomboyism may even be encouraged to the extent that it remains comfortably linked to a stable sense of a girl identity. Tomboyism is punished, however, when it appears to be the sign of extreme male identification (taking a boy's name or refusing girl clothing of any type) and when it threatens to extend beyond childhood and into adolescence.⁷ Teenage tomboyism presents a problem and tends to be subject to the most severe efforts to reorient. We could say that tomboyism is tolerated as long as the child

5. All American leading men in film: Stewart (1908–1997), Peck (1916–2003), Astaire (1899–1987), Dean (1931–1955), Brando (1924–2004), and De Niro (b. 1943).

6. For an extension of this discussion of tomboys see my article "Oh Bondage Up Yours: Female Masculinity and the Tomboy," in *Sissies and Tomboys: A CLAGS Reader* (New York: New York University Press, 1999) [Halberstam's note].

7. For more on the punishment of tomboys see Phyllis Burke, *Gender Shock: Exploding the Myths of Male and Female* (New York: Anchor Books, 1996). Burke analyzes some recent case histories of so-called GID or Gender Identity Disorder, in which little girls are carefully conditioned out of male behavior and into exceedingly constrictive forms of femininity [Halberstam's note].

remains prepubescent; as soon as puberty begins, however, the full force of gender conformity descends on the girl. Gender conformity is pressed onto all girls, not just tomboys, and this is where it becomes hard to uphold the notion that male femininity presents a greater threat to social and familial stability than female masculinity. Female adolescence represents the crisis of coming of age as a girl in a male-dominated society. If adolescence for boys represents a rite of passage (much celebrated in Western literature in the form of the *bildungsroman*), and an ascension to some version (however attenuated) of social power, for girls, adolescence is a lesson in restraint, punishment, and repression. It is in the context of female adolescence that the tomboy instincts of millions of girls are remodeled into compliant forms of femininity.

That any girls do emerge at the end of adolescence as masculine women is quite amazing. The growing visibility and indeed respectability of lesbian communities to some degree facilitate the emergence of masculine young women. But as even a cursory survey of popular cinema confirms, the image of the tomboy can be tolerated only within a narrative of blossoming womanhood; within such a narrative, tomboyism represents a resistance to adulthood itself rather than to adult femininity. In both the novel and film versions of the classic tomboy narrative *The Member of the Wedding*, by Carson McCullers,⁸ tomboy Frankie Addams fights a losing battle against womanhood, and the text locates womanhood or femininity as a crisis of representation that confronts the heroine with unacceptable life options. As her brother's wedding approaches, Frankie Addams pronounces herself mired in a realm of unbelonging, outside the symbolic partnership of the wedding but also alienated from belonging in almost every category that might describe her. McCullers writes: "It happened that green and crazy summer when Frankie was twelve years old. This was the summer when for a long time she had not been a member. She belonged to no club and was a member of nothing in the world. Frankie was an unjoined person who hung around in doorways, and she was afraid."⁹ McCullers positions Frankie on the verge of adolescence ("when Frankie was twelve years old") and in the midst of an enduring state of being "unjoined": "She belonged to no club and was a member of nothing in the world." While childhood in general may qualify as a period of "unbelonging," for the boyish girl arriving on the doorstep of womanhood, her status as "unjoined" marks her out for all manner of social violence and opprobrium. As she dawdles in the last light of childhood, Frankie Addams has become a tomboy who "hung around in doorways, and she was afraid."

As a genre, the tomboy film, as I show in chapter 6, "Looking Butch," suggests that the categories available to women for racial, gendered, and sexual identification are simply inadequate. In her novel, McCullers shows this inadequacy to be a direct result of the tyranny of language—a structure that fixes people and things in place artificially but securely. Frankie tries to change her identity by changing her name: "Why is it against the law to change your name?" she asks Berenice (107). Berenice answers: "Because things

8. American writer of fiction (1917–1967); the movie version of her *The Member of the Wedding* (1946) was released in 1952.

9. Carson McCullers, *The Member of the Wedding* (1946; reprint, New York: Bantam, 1973), 1 [Halberstam's note].

accumulate around your name,” and she stresses that without names, confusion would reign and “the whole world would go crazy.” But Berenice also acknowledges that the fixity conferred by names also traps people into many different identities, racial as well as gendered: “We all of us somehow caught. . . . And maybe we wants to widen and bust free. But no matter what we do we still caught” (113). Frankie thinks that naming represents the power of definition, and name changing confers the power to reimagine identity, place, relation, and even gender. “I wonder if it is against the law to change your name,” says Frankie, “Or add to it. . . . Well I don’t care. . . . F. Jasmine Addams” (15).

Psychoanalysis posits a crucial relationship between language and desire such that language structures desire and expresses therefore both the fullness and the futility of human desire—full because we always desire, futile because we are never satisfied. Frankie in particular understands desire and sexuality to be the most regimented forms of social conformity—we are supposed to desire only certain people and only in certain ways, but her desire does not work that way, and she finds herself torn between longing and belonging. Because she does not desire in conventional ways, Frankie seeks to avoid desire altogether. Her struggle with language, her attempts to remake herself through naming and remake the world with a new order of being, are ultimately heroic, but unsuccessful. McCullers’s pessimism has to do with a sense of the overwhelming “order of things,” an order that cannot be affected by the individual, and works through things as basic as language, and forces nonmembers into memberships they cannot fulfill.

My book refuses the futility long associated with the tomboy narrative and instead seizes on the opportunity to recognize and ratify differently gendered bodies and subjectivities. Moving from the nineteenth century to the present and examining diaries, court cases, novels, letters, films, performances, events, critical essays, videos, news items, and testimonies, this book argues for the production of new taxonomies, what Eve K. Sedgwick¹ humorously called “nonce taxonomies” in *Epistemology of the Closet*, classifications of desire, physicality, and subjectivity that attempt to intervene in hegemonic processes of naming and defining. Nonce taxonomies are categories that we use daily to make sense of our worlds but that work so well that we actually fail to recognize them. In this book, I attempt to bring some of the nonce taxonomies of female masculinity into view, and I detail the histories of the suppression of these categories. Here, and in the rest of the book, I am using the topic of female masculinity to explore a queer subject position that can successfully challenge hegemonic models of gender conformity. Female masculinity is a particularly fruitful site of investigation because it has been vilified by heterosexist and feminist/womanist programs alike; unlike male femininity, which fulfills a kind of ritual function in male homosocial cultures, female masculinity is generally received by hetero- and homo-normative cultures as a pathological sign of misidentification and maladjustment, as a longing to be and to have a power that is always just out of reach. Within a lesbian context, female masculinity has been situated as the place where patriarchy goes to work on the female psyche and reproduces misogyny

1. American scholar of gender studies and queer theory (1950–2009); *Epistemology of the Closet* (1990) is excerpted above.

within femaleness. There have been to date remarkably few studies or theories about the inevitable effects of a fully articulated female masculinity on a seemingly fortified male masculinity. Sometimes female masculinity coincides with the excesses of male supremacy, and sometimes it codifies a unique form of social rebellion; often female masculinity is the sign of sexual alterity, but occasionally it marks heterosexual variation; sometimes female masculinity marks the place of pathology, and every now and then it represents the healthful alternative to what are considered the histrionics of conventional femininities.

I want to carefully produce a model of female masculinity that remarks on its multiple forms but also calls for new and self-conscious affirmations of different gender taxonomies. Such affirmations begin not by subverting masculine power or taking up a position against masculine power but by turning a blind eye to conventional masculinities and refusing to engage. Frankie Addams, for example, constitutes her rebellion not in opposition to the law but through indifference to the law: she recognizes that it may be against the law to change one's name or add to it, but she also has a simple response to such illegal activity: "Well, I don't care." I am not suggesting in this book that we follow the futile path of what Foucault² calls "saying no to power," but I am asserting that power may inhere within different forms of refusal: "Well, I don't care."

QUEER METHODOLOGIES

This book deploys numerous methodologies in order to pursue the multiple forms of gender variance presented within female masculinity. On account of the interdisciplinary nature of my project, I have had to craft a methodology out of available disciplinary methods. Deploying what I would call a "queer methodology," I have used some combination of textual criticism, ethnography, historical survey, archival research, and the production of taxonomies. I call this methodology "queer" because it attempts to remain supple enough to respond to the various locations of information on female masculinity and betrays a certain disloyalty to conventional disciplinary methods. Obviously, I could have produced methodological consistency by confining myself to literary texts, but the queer methodology used here, then, typifies just one of the forms of refusal that I discussed in my last section.

Although some of the most informative work on alternative sexual communities has come in the form of ethnography, and although autobiographies and narrative histories tend to be the material that we turn to for information on sexual identities, there is nonetheless some disagreement among queer scholars about how we should collect and interpret such information on sexual identity. Indeed, some of the most bitter and long-lasting disagreements within queer studies have been about disciplinarity and methodology. Whereas some cultural studies proponents have argued that social science methods of collecting, collating, and presenting sexual data through surveys and other methods of social research tend to rediscover the sexual systems they already know rather than finding out about those they do not, social science proponents argue that cultural studies scholars do not pay enough

2. MICHEL FOUCAULT (1926–1984), French philosopher and historian of ideas.

attention to the material realities of queer life. And while there has been plenty of discussion in the academy about the need for interdisciplinary work, there has been far less support for such work in the university at large. A project such as this one, therefore, risks drawing criticism from historians for not providing a proper history, from literary critics for not focusing on literary texts, and from social scientists for not deploying the traditional tools of social science research. While I take full responsibility for all the errors I may make in my attempts to produce readings and histories and ethnography, I also recognize that this book exemplifies the problem confronted by queer studies itself: How do we forge queer methodologies while as scholars we reside in traditional departments?

At least one method of sex research that I reject in creating a queer methodology is the traditional social science project of surveying people and expecting to squeeze truth from raw data. In a review essay in the *New York Review of Books* about a series of new sex surveys, R. C. Lewontin comments on the difficulty associated with this social science approach to sexuality: "Given the social circumstances of sexual activity, there seems no way to find out what people do 'in the bedroom' except to ask them. But the answers they give cannot be put to the test of incredulity."³ Lewontin suggests that people tend not to be truthful when it comes to reporting on their own sexual behavior (men exaggerate and women downplay, for example), and there are no ways to make allowances for personal distortion within social science methods. Furthermore, social scientists seem not to be concerned with the high levels of untruth in relation to sexuality but spend all their energy on solving methodological problems. Ultimately, Lewontin claims—and I think he has a point—social science surveys are "demonstrations of what their planners already believed they knew to be true" (25). At a time when the humanities are under severe scrutiny and attack, it is important to point to the reliance of social science methods on strategies such as narrative analysis, interpretation, and speculation. As Lewontin says in his conclusion: "How then can there be a social science? The answer surely is to be less ambitious and stop trying to make sociology into a natural science although it is, indeed, the study of natural objects" (29). This is not to say, however, that traditional social science research methods such as questionnaires are never appropriate. Indeed, there are certain questions that can be answered only by survey methods in the realm of sexuality (i.e., how many lesbians are using dental dams?⁴ What age-groups or social classes do these lesbians belong to?), but all too often surveys are used to try to gather far less factual information, and all subtlety tends to be lost.⁵

There is some irony in the apparent impossibility of applying traditional social science methods to the study of sex because as queer sociologists are

4. Thin sheets of latex used for protection against sexually transmitted diseases during oral sex.

5. Thanks to Esther Newton for making this point and suggesting when and how survey methods are useful. For an example of the kinds of questions used in sex surveys see John Gagnon et al., *Sex in America* (Boston: Little Brown, 1994). This

particular volume is remarkable because the explicit questions it asks about the kinds of sex people were having focus obsessively on the couple, and the study links certain activities definitely to certain identities. So, for example, questions about anal sex are directed only at male/female and male/male couples because anal sex is defined as "when a man's penis is inside his partner's anus or rectum" (260). There are no questions directed specifically at female/female couples and no questions about sex toys or use of dildos or hands in this section [Halberstam's note].

all too quick to point out, many of the theoretical systems that we use to talk about sex, such as social constructionism, come from sociology. In a recent "queer" issue of *Sociological Theory*, a group of sociologists attempted to account for the currently strained relations between sociological theory and queer theory. Steven Epstein pointed out that sociology asserted that sexuality was socially constructed and indeed that "without seeking to minimize the importance of other disciplines, I would suggest that neither queer theory nor lesbian and gay studies in general could be imagined in their present forms without the contributions of sociological theory."⁶ Arlene Stein and Ken Plummer continue Epstein's line of inquiry and add a critique of the present state of queer theory:

Queer theorists . . . appreciate the extent to which the texts of literature and mass culture shape sexuality, but their weakness is that they rarely, if ever, move beyond the text. There is a dangerous tendency for the new queer theorists to ignore "real" queer life as it is materially experienced across the world, while they play with the free-floating signifiers of texts.⁷

In an effort to restore sociology to its proper place within the study of sexuality, Stein and Plummer have reinvested here in a clear and verifiable difference between the real and the textual, and they designate textual analysis as a totally insular activity with no referent, no material consequences, and no intellectual gain. But as Lewontin's review suggested, it is precisely this belief in the real and the material as separate from the represented and the textual that creates the problems of survey analysis. To be fair, Stein and Plummer are clearly not suggesting merely a quantitative approach to the study of sexuality and queer subcultures, but they do, on some level, seem to have re-created some essential divide between the truth of sexual behavior and the fiction of textual analysis.

The answer to the problem of how to study sexuality, I am trying to suggest, must lie to some extent in an interdisciplinary approach that can combine information culled from people with information culled from texts. So, whereas Cindy Patton, for example, in "Tremble Hetero Swine," remarks with dismay on the dominance of "textually based forms of queer theory," we must question whether there is a form of queer theory or sexual theory that is not textually based.⁸ Isn't a sexual ethnographer studying texts? And doesn't a social historian collate evidence from texts? Sometimes the texts are oral histories, sometimes they might be interview material, sometimes they might be fiction or autobiography, but given our basic formulation of sex as "private," something that happens when other people are not around, there is no way to objectively observe "in the bedroom." Conversely, readings of texts also require historical contexts and some relation to the lived experience of subjects. The text-based methodologies err on the side of abstraction, and the sociological studies err on the side of overly rationalizing sexual behavior. Finally, although some have criticized literary or cultural studies approaches to identity construction as apolitical or ahistorical, theories that

tie the history of sexuality unproblematically to economics or the movement of capital tend to produce exactly the linear narratives of rational progress and modernization that sexuality seems to resist.

A queer methodology, in a way, is a scavenger methodology that uses different methods to collect and produce information on subjects who have been deliberately or accidentally excluded from traditional studies of human behavior. The queer methodology attempts to combine methods that are often cast as being at odds with each other, and it refuses the academic compulsion toward disciplinary coherence. Although this book will be immediately recognizable as a work of cultural studies, it will not shy away from the more empirical methods associated with ethnographic research.

CONSTRUCTING MASCULINITIES

Within cultural studies itself, masculinity has recently become a favorite topic. I want to try here to account for the growing popularity of a body of work on masculinity that evinces absolutely no interest in masculinity without men. I first noticed the unprecedented interest in masculinity in April 1994 when the DIA Center for the Performing Arts convened a group of important intellectuals to hold forth on the topic of masculinities. On the opening night of this event, one commentator wondered, "Why masculinity, why now?" Several others, male critics and scholars, gave eloquent papers about their memories of being young boys and about their relationships with their fathers. The one lesbian on the panel, a poet, read a moving poem about rape. At the end of the evening, only one panelist had commented on the limitations of a discussion of masculinity that interpreted "masculinity" as a synonym for men or maleness.⁹ This lonely intervention highlighted the gap between mainstream discussions of masculinity and men and ongoing queer discussions about masculinity, which extend far beyond the male body. Indeed, in answer to the naive question that began the evening, "Why masculinities, why now?" one might state: Because masculinity in the 1990s has finally been recognized as, at least in part, a construction by female- as well as male-born people.¹

The anthology that the conference produced provides more evidence of the thoroughgoing association that the editors have made between masculinity and maleness. The title page features a small photographic illustration of a store sign advertising clothing as "Fixings for Men." This illustration has been placed just below the title, *Constructing Masculinity*, and forces the reader to understand the construction of masculinity as the outfitting of males within culture. The introduction to the volume attempts to diversify this definition of masculinity by using Judith Butler's² and Eve Sedgwick's contributions to suggest that the anthology recognizes the challenges made

9. The conference papers were collected in a volume called *Constructing Masculinity*, ed. Maurice Berger, Brian Wallis, and Simon Watson (New York: Routledge, 1996), and the one intervention on behalf of nonmale masculinities was made by Eve Kosofsky Sedgwick [Halberstam's note]. The conference was held in New York City.

1. I am using the terms "female born" and "male born" to indicate a social practice of assigning one of two genders to babies at birth. My terminology

suggests that these assignments may not hold for the lifetime of the individual, and it suggests from the outset that binary gender continues to dominate our cultural and scientific notions of gender but that individuals inevitably fail to find themselves in only one of two options [Halberstam's note].

2. American philosopher and queer theorist (b. 1956); see above.

by gays, lesbians, and queers to the terms of gender normativity. The editors insist that masculinity is multiple and that "far from just being about men, the idea of masculinity engages, inflects, and shapes everyone."³ The commitment to the representation of masculinity as multiple is certainly borne out in the first essay in the volume, by Eve Sedgwick, in which she proposes that masculinity may have little to do with men, and is somewhat extended by Butler's essay "Melancholy Gender." But Sedgwick also critiques the editors for having proposed a book and a conference on masculinity that remain committed to linking masculinity to maleness. Although the introduction suggests that the editors have heeded Sedgwick's call for gender diversity, the rest of the volume suggests otherwise. There are many fascinating essays in this anthology, but there are no essays specifically on female masculinity. Although gender-queer images by Loren Cameron and Cathy Opie⁴ adorn the pages of the book, the text contains no discussions of these images. The book circles around discussions of male icons such as Clint Eastwood and Steven Seagal;⁵ it addresses the complex relations between fathers and sons; it examines topics such as how science defines men and masculinity and the law. The volume concludes with an essay by Stanley Aronowitz⁶ titled "My Masculinity," an autobiographically inflected consideration of various forms of male power.

None of my analysis here is to say that this is an uninteresting anthology or that the essays are somehow wrong or misguided, but I am trying to point out that the editorial statement at the beginning of the volume is less a prologue to what follows and more of an epilogue that describes what a volume on masculinity *should* do as opposed to what the anthology does do. Even when the need for an analysis of female masculinity has been acknowledged, in other words, it seems remarkably difficult to follow through on. What is it then that, to paraphrase Eve Sedgwick's essay, makes it so difficult *not* to presume an essential relation between masculinity and men?⁷

By beginning with this examination of the *Constructing Masculinity* conference and anthology, I do not want to give the impression that the topic of female masculinities must always be related to some larger topic, some more general set of masculinities that has been, and continues to be, about men. Nor do I want to suggest that gender theory is the true origin of gender knowledges. Rather, this conference and book merely emphasize the lag between community knowledges and practices and academic discourses.⁸ I believe it is both helpful and important to contextualize a discussion of female and lesbian masculinities in direct opposition to a more generalized discussion of masculinity within cultural studies that seems intent on insisting that masculinity remain the property of male bodies. The continued refusal in

4. American fine-art photographer and professor (b. 1961). Cameron (b. 1959), American photographer and transsexual activist.

5. American actor and martial artist (b. 1952). Eastwood (b. 1930), American actor and director.

6. American sociologist and scholar of cultural studies (b. 1933).

7. More and more journals are putting together special issues on masculinity, but I have yet to locate a single special issue with a single essay about female masculinity. The latest journal

announcement that found its way to me was from *The Velvet Light Trap: A Critical Journal of Film and Television*. They announced an issue on "New Masculinities" that featured essays titled "The 'New Masculinity' in *Tootsie*," "On Fathers and Sons, Sex and Death," "Male Melodrama and the Feeling Man," and so forth. This is not to say that such topics are not interesting, only that the "new masculinities" sound remarkably like the old ones. See *The Velvet Light Trap*, "New Masculinities," no. 38 (fall 1996) [Halberstam's note].

8. Berger, Wallis, and Watson, *Constructing Masculinity* [Halberstam's note].

Western society to admit ambiguously gendered bodies into functional social relations (evidenced, for example, by our continued use of either/or bathrooms, either women or men) is, I will claim, sustained by a conservative and protectionist attitude by men in general toward masculinity. Such an attitude has been bolstered by a more general disbelief in female masculinity. I can only describe such disbelief in terms of a failure in a collective imagination: in other words, female-born people have been making convincing and powerful assaults on the coherence of male masculinity for well over a hundred years; what prevents these assaults from taking hold and accomplishing the diminution of the bonds between masculinity and men? Somehow, despite multiple images of strong women (such as bodybuilder Bev Francis or tennis player Martina Navratilova), of cross-identifying women (Radclyffe Hall or Ethel Smyth), of masculine-coded public figures (Janet Reno), of butch superstars (k. d. lang), of muscular and athletic women (Jackie Joyner-Kersey), of female-born transgendered people (Leslie Feinberg),⁹ there is still no general acceptance or even recognition of masculine women and boyish girls. This book addresses itself to this collective failure to imagine and ratify the masculinity produced by, for, and within women.

In case my concerns about the current discussions of masculinity in cultural studies sound too dismissive, I want to look in an extended way at what happens when academic discussions of male masculinity take place to the exclusion of discussions of more wide-ranging masculinities. While it may seem that I am giving an inordinate amount of attention to what is after all just one intervention into current discussions, I am using one book as representative of a whole slew of other studies of masculinity that replicate the intentions and the mistakes of this one. In an anthology called *Boys: Masculinities in Contemporary Culture*, edited by Paul Smith for a Cultural Studies series, Smith suggests that masculinity must always be thought of “in the plural” as masculinities “defined and cut through by differences and contradictions of all sorts.”¹ The plurality of masculinities for Smith encompasses a dominant white masculinity that is crisscrossed by its others, gay, bisexual, black, Asian, and Latino masculinities. Although the recognition of a host of masculinities makes sense, Smith chooses to focus on dominant white masculinity to the exclusion of the other masculinities he has listed. Smith, predictably, warns the reader not to fall into the trap of simply critiquing dominant masculinity or simply celebrating minority masculinities, and then he makes the following foundational statement:

And it may well be the case, as some influential voices often tell us, that masculinity or masculinities are in some real sense not the exclusive “property” of biologically male subjects—it’s true that many female subjects lay claim to masculinity as their property. Yet in terms of cul-

9. A range of figures active in the 20th century: Francis (b. 1955), Australian-born American former professional bodybuilder; Navratilova (b. 1956), Czech-born American former tennis player; Hall (1880–1943), English writer who, like the English composer Smyth (1858–1944), wore male-tailored ties and jackets; Reno (1938–2016), the first woman to serve as U.S. attorney general (1993–2001); Lang (b. 1961),

Canadian singer and songwriter; Joyner-Kersey (b. 1962), American Olympic medalist in track and field; Feinberg (1949–2014), American activist and writer whose novel *Stone Butch Blues* (1993) is later discussed by Halberstam.

1. Paul Smith, ed., *Boys: Masculinities in Contemporary Culture* (Boulder, Colo.: Westview Press, 1996), 3 [Halberstam’s note].

tural and political *power*, it still makes a difference when masculinity coincides with biological maleness. (4)

What is immediately noticeable to me here is the odd attribution of immense power to those “influential voices” who keep telling us that masculinity is not the property of men. There is no naming of these influential voices, and we are left supposing that “influence” has rendered the “female masculinity theorists” so powerful that names are irrelevant: these voices, one might suppose, are hegemonic. Smith goes on to plead with the reader, asking us to admit that the intersection of maleness and masculinity does “still” make a difference. His appeal here to common sense allows him to sound as if he is trying to reassert some kind of rationality to a debate that is spinning off into totally inconsequential discussions. Smith is really arguing that we must turn to dominant masculinity to begin deconstructing masculinity because it is the equation of maleness plus masculinity that adds up to social legitimacy. As I argued earlier in this chapter, however, precisely because white male masculinity has obscured all other masculinities, we have to turn away from its construction to bring other more mobile forms of masculinity to light. Smith’s purpose in his reassertion of the difference that male masculinity makes is to uncover the “cultural and political *power*” of this union in order to direct our attention to the power of patriarchy. The second part of the paragraph makes this all too clear:

Biological men—male-sexed beings—are after all, in varying degrees, the bearers of privilege and power within the systems against which women still struggle. The privilege and power are, of course, different for different men, endlessly diversified through the markers of class, nation, race, sexual preference and so on. But I’d deny that there are any men who are entirely outside of the ambit, let’s say, of power and privilege *in relation to women*. In that sense it has to be useful to our thinking to recall that masculinities are not only a function of dominant notions of masculinity and not constituted solely in resistant notions of “other” masculinities. In fact, masculinities exist inevitably in relation to what feminisms have construed as the system of patriarchy and patriarchal relations.²

The most noticeable feature of this paragraph is the remarkable stability of the terms “women” and “men.” Smith advances here a slightly old-fashioned feminism that understands women as endlessly victimized within systems of male power. Woman, within such a model, is the name for those subjects within patriarchy who have no access to male power and who are regulated and confined by patriarchal structures. But what would Smith say to Monique Wittig’s claim that lesbians are not women because they are not involved in the heterosexual matrix that produces sexual difference as a power relation? What can Smith add to Judith Butler’s influential theory of “gender trouble,” which suggests that “gender is a copy with no original” and that dominant sexualities and genders are in some sense imbued with a pathetic dependence on their others that puts them perpetually at risk? What would Smith say to Jacob Hale’s claim that the genders we use as reference points

2. Paul Smith, introduction to *Boys: Masculinities in Contemporary Culture*, 4–5 [Halberstam’s note].

in gender theory fall far behind community productions of alternative genderings?³ Are butch dykes women? Are male transvestites men? How does gender variance disrupt the flow of powers presumed by patriarchy in relations between men and women? Smith, in other words, cannot take female masculinity into account because he sees it as inconsequential and secondary to much more important questions about male privilege. Again, this sounds more like a plaintive assertion that men *do* still access male power within patriarchy (don't they?), and it conveniently ignores the ways in which gender relations are scrambled where and when gender variance comes into play.

Smith's attempt to shore up male masculinity by dismissing the importance of other masculinities finds further expression in his attempt to take racialized masculinities into consideration. His introductory essay opens with a meditation on the complications of the O.J. Simpson case,⁴ and Smith wonders at the way popular discourse on the O.J. case sidesteps issues of masculinity and male domination in favor of race. When he hears a black male caller to a radio talk show link O.J.'s case to an ongoing conspiracy against black men in this country, Smith ponders: "His spluttering about the attempted genocide of black men reminded me, somehow, that another feature of the O.J. case was the way it had started with the prosecution trying to establish the relevance of O.J.'s record as a wife beater" (Smith, *Boys*, 1). Noting that the callers to the talk show did not have much to say about this leads Smith to wonder whether race can constitute a collective identity but masculinity cannot, and finally he suggests that although "it might be difficult to talk about race in this country, it is even more difficult to talk about masculinity" (1). If you are a white man, it is probably extremely difficult to talk about either race or masculinity let alone both at the same time. But, of course, race and masculinity, especially in the case of O.J., are not separable into tidy categories. Indeed, one might say that the caller's "spluttering" about conspiracies against black men constituted a far more credible race analysis in this case than Smith's articulation of the relations between race and masculinity. For Smith, masculinity in the case of O.J. constitutes a flow of domination that comes up against his blackness as a flow of subordination. There is no discussion here of the injustices of the legal system, the role of class and money in the trial, or the complicated history of relations between black men and white women. Smith uses O.J. as shorthand for a model that is supposed to suggest power and disempowerment in the same location.

I am taking so much time and effort to discount Smith's introduction to *Boys* because there is a casualness to his essay that both indicates his lack of any real investment in the project of alternative masculinities and suggests an unwillingness to think through the messy identifications that make up contemporary power relations around gender, race, and class. The book that Smith introduces also proves to have nothing much to offer to new discussions of masculinity, and we quickly find ourselves, from the opening

essay on, in the familiar territory of men, boys, and their fathers. The first essay, for example, by Fred Pfeil,⁵ "A Buffalo, New York Story," tells a pitiful tale about father-son relations in the 1950s. In one memorable moment from the memoir, he (Fred) and Dad have cozied up on the couch to watch *Bonanza*⁶ while Mom and Sis are doing the dishes in the kitchen. Boy asks Dad "why bad guys were always so stupid," and Dad laughs and explains "because they were bad" (10). The story goes on to detail the innocent young boy's first brushes with his male relatives' racism and his own painful struggle with car sickness. Besides taking apart the dynamics of fathers and sons cozying up together to watch *Bonanza*, there most certainly are a multitude of important things to say about men and masculinity in patriarchy, but Smith and some of his contributors choose not to say them. We could be producing ethnographies on the aggressive and indeed protofascist masculinities produced by male sports fans.⁷ Much work still remains to be done on the socialization (or lack thereof) of young men in high schools, on (particularly rich white male) domestic abusers, on the new sexism embodied by "sensitive men," on the men who participate in the traffic in mail-order brides and sex tourism (including a study of privileged white gay masculinity). But studies in male masculinity are predictably not so interested in taking apart the patriarchal bonds between white maleness and privilege; they are much more concerned to detail the fragilities of male socialization, the pains of manhood, and the fear of female empowerment.⁸

Because I have criticized Smith for his apparent lack of investment in the project of producing alternative masculinities, let me take a moment to make my own investments clear. Although I make my own masculinity the topic of my last chapter, it seems important to state that this book is an attempt to make my own female masculinity plausible, credible, and real. For a large part of my life, I have been stigmatized by a masculinity that marked me as ambiguous and illegible. Like many other tomboys, I was mistaken for a boy throughout my childhood, and like many other tomboy adolescents, I was forced into some semblance of femininity for my teenage years. When gender-ambiguous children are constantly challenged about their gender identity, the chain of misrecognitions can actually produce a new recognition: in other words, to be constantly mistaken for a boy, for many tomboys, can contribute to the production of a masculine identity. It was not until my midtwenties that I finally found a word for my particular gender configuration: butch. In my final chapter, "Raging Bull (Dyke)," I address the ways in which butches manage to affirm their masculinity despite the multiple sites in which that masculinity is challenged, denied, threatened, and violated.

5. American writer, teacher, and political activist (1949–2005).

6. Popular American television series (1959–73), the first western broadcast in color.

7. Indeed, one such ethnography has been carried out, but significantly it took English soccer hooligans as its topic. See Bill Buford's remarkable *Among the Thugs* (New York: Norton, 1992). A similar work on American male fans would be extremely useful [Halberstam's note].

8. For verification of such topics of concern just check out the men's sections that are popping up in your local bookstores. More specifically see the work of Michael Kimmel and Victor Seidler: Michael Kimmel, *Manhood in America: A Cultural History* (New York: Free Press, 1996); Victor J. Seidler, *Unreasonable Men: Masculinity and Social Theory* (New York: Routledge, 1994) [Halberstam's note].

THE BATHROOM PROBLEM

If three decades of feminist theorizing about gender has thoroughly dislodged the notion that anatomy is destiny, that gender is natural, and that male and female are the only options, why do we still operate in a world that assumes that people who are not male are female, and people who are not female are male (and even that people who are not male are not people!). If gender has been so thoroughly defamiliarized, in other words, why do we not have multiple gender options, multiple gender categories, and real-life nonmale and nonfemale options for embodiment and identification? In a way, gender's very flexibility and seeming fluidity is precisely what allows dimorphic gender to hold sway. Because so few people actually match any given community standards for male or female, in other words, gender can be imprecise and therefore multiply relayed through a solidly binary system. At the same time, because the definitional boundaries of male and female are so elastic, there are very few people in any given public space who are completely unreadable in terms of their gender.

Ambiguous gender, when and where it does appear, is inevitably transformed into deviance, thirdness, or a blurred version of either male or female. As an example, in public bathrooms for women, various bathroom users tend to fail to measure up to expectations of femininity, and those of us who present in some ambiguous way are routinely questioned and challenged about our presence in the "wrong" bathroom. For example, recently, on my way to give a talk in Minneapolis, I was making a connection at Chicago's O'Hare airport. I strode purposefully into the women's bathroom. No sooner had I entered the stall than someone was knocking at the door: "Open up, security here!" I understood immediately what had happened. I had, once again, been mistaken for a man or a boy, and some woman had called security. As soon as I spoke, the two guards at the bathroom stall realized their error, mumbled apologies, and took off. On the way home from the same trip, in the Denver airport, the same sequence of events was repeated. Needless to say, the policing of gender within the bathroom is intensified in the space of the airport, where people are literally moving through space and time in ways that cause them to want to stabilize some boundaries (gender) even as they traverse others (national). However, having one's gender challenged in the women's rest room is a frequent occurrence in the lives of many androgynous or masculine women; indeed, it is so frequent that one wonders whether the category "woman," when used to designate public functions, is completely outmoded.⁹

It is no accident, then, that travel hubs become zones of intense scrutiny and observation. But gender policing within airport bathrooms is merely an intensified version of a larger "bathroom problem." For some gender-

9. The continued viability of the category "woman" has been challenged in a variety of academic locations already: Monique Wittig, most notably, argued that "lesbians are not women" in her essay "The Straight Mind," 121. Wittig claims that because lesbians are refusing primary relations to men, they cannot occupy the position "woman." In another philosophical challenge to the category "woman," transgender philosopher Jacob Hale uses Monique Wittig's radical claim to

theorize the possibility of gendered embodiments that exceed male and female (see Hale, "Are Lesbians Women?"). Elsewhere, Cheshire Calhoun suggests that the category "woman" may actually "operate as a lesbian closet" (see Cheshire Calhoun, "The Gender Closet: Lesbian Disappearance under the Sign 'Women,'" *Feminist Studies* 21, no. 1 [spring 1995]: 7–34) [Halberstam's note].

ambiguous women, it is relatively easy to “prove” their right to use the women’s bathroom—they can reveal some decisive gender trait (a high voice, breasts), and the challenger will generally back off. For others (possibly low-voiced or hairy or breastless people), it is quite difficult to justify their presence in the women’s bathroom, and these people may tend to use the men’s bathroom, where scrutiny is far less intense. Obviously, in these bathroom confrontations, the gender-ambiguous person first appears as not-woman (“You are in the wrong bathroom!”), but then the person appears as something actually even more scary, not-man (“No, I am not,” spoken in a voice recognized as not-male). Not-man and not-woman, the gender-ambiguous bathroom user is also not androgynous or in-between; this person is gender deviant.

For many gender deviants, the notion of passing is singularly unhelpful. Passing as a narrative assumes that there is a self that masquerades as another kind of self and does so successfully; at various moments, the successful pass may cohere into something akin to identity. At such a moment, the passer has *become*. What of a biological female who presents as butch, passes as male in some circumstances and reads as butch in others, and considers herself not to be a woman but maintains distance from the category “man”? For such a subject, identity might best be described as process with multiple sites for becoming and being. To understand such a process, we would need to do more than map psychic and physical journeys between male and female and within queer and straight space; we would need, in fact, to think in fractal terms and about gender geometries. Furthermore, I argue in chapter 4, in my discussion of the stone butch, when and where we discuss the sexualities at stake in certain gender definitions, very different identifications between sexuality, gender, and the body emerge. The stone butch, for example, in her self-definition as a non-feminine, sexually untouchable female, complicates the idea that lesbians share female sexual practices or women share female sexual desires or even that masculine women share a sense of what animates their particular masculinities.

I want to focus on what I am calling “the bathroom problem” because I believe it illustrates in remarkably clear ways the flourishing existence of gender binarism despite rumors of its demise. Furthermore, many normatively gendered women have no idea that a bathroom problem even exists and claim to be completely ignorant about the trials and tribulations that face the butch woman who needs to use a public bathroom. But queer literature is littered with references to the bathroom problem, and it would not be an exaggeration to call it a standard feature of the butch narrative. For example, Leslie Feinberg provides clear illustrations of the dimensions of the bathroom problem in *Stone Butch Blues*. In this narrative of the life of the he-she factory worker, Jess Goldberg, Jess recounts many occasions in which she has to make crucial decisions about whether she can afford to use the women’s bathroom. On a shopping outing with some drag queens, Jess tells Peaches: “I gotta use the bathroom. God, I wish I could wait, but I can’t.” Jess takes a deep breath and enters the ladies room:

Two women were freshening their makeup in front of the mirror. One glanced at the other and finished applying her lipstick. “Is that a man or a woman?” She said to her friend as I passed them.

The other woman turned to me. "This is the woman's bathroom," she informed me.

I nodded. "I know."

I locked the stall door behind me. Their laughter cut me to the bone. "You don't really know if that is a man or not," one woman said to the other. "We should call security to make sure."

I flushed the toilet and fumbled with my zipper in fear. Maybe it was just an idle threat. Maybe they really would call security. I hurried out of the bathroom as soon as I heard both women leave.¹

For Jess, the bathroom represents a limit to her ability to move around in the public sphere. Her body, with its needs and physical functions, imposes a limit on her attempts to function normally despite her variant gender presentation. The women in the rest room, furthermore, are depicted as spiteful, rather than fearful. They toy with Jess by calling into question her right to use the rest room and threatening to call the police. As Jess puts it: "They never would have made fun of a guy like that." In other words, if the women were truly anxious for their safety, they would not have toyed with the intruder, and they would not have hesitated to call the police. Their casualness about calling security indicates that they know Jess is a woman but want to punish her for her inappropriate self-presentation.

Another chronicle of butch life, *Throw It to the River*, by Nice Rodriguez, a Filipina-Canadian writer, also tells of the bathroom encounter. In a story called "Every Full Moon," Rodriguez tells a romantic tale about a butch bus conductor called Remedios who falls in love with a former nun called Julianita. Remedios is "muscular around the arms and shoulders," and her "toughness allows her to bully anyone who will not pay the fare."² She aggressively flirts with Julianita until Julianita agrees to go to a movie with Remedios. To prepare for her date, Remedios dresses herself up, carefully flattening out her chest with Band-Aids over the nipples: "She bought a white shirt in Divisoria just for this date. Now she worries that the cloth may be too thin and transparent, and that Julianita will be turned off when her nipples protrude out like dice" (33). With her "well-ironed jeans," her smooth chest, and even a man's manicure, Remedios heads out for her date. However, once out with Julianita, Remedios, now dressed in her butch best, has to be careful about public spaces. After the movie, Julianita rushes off to the washroom, but Remedios waits outside for her:

She has a strange fear of ladies rooms. She wishes there was another washroom somewhere between the mens' and the ladies' for queers like her. Most of the time she holds her pee—sometimes as long as half a day—until she finds a washroom where the users are familiar with her. Strangers take to her unkindly, especially elder women who inspect her from head to toe. (40–41)

Another time, Remedios tells of being chased from a ladies' room and beaten by a bouncer. The bathroom problem for Remedios and for Jess severely limits their ability to circulate in public spaces and actually brings them into

2. Nice Rodriguez, *Throw It to the River* (Toronto, Canada: Women's Press, 1993), 25–26 [Halberstam's note].

contact with physical violence as a result of having violated a cardinal rule of gender: one must be readable at a glance. After Remedios is beaten for having entered a ladies' room, her father tells her to be more careful, and Rodriguez notes: "She realized that being cautious means swaying her hips and parading her boobs when she enters any ladies room" (30).

If we use the paradigm of the bathroom as a limit of gender identification, we can measure the distance between binary gender schema and lived multiple gendered experiences. The accusation "you're in the wrong bathroom" really says two different things. First, it announces that your gender seems at odds with your sex (your apparent masculinity or androgyny is at odds with your supposed femaleness); second, it suggests that single-gender bathrooms are only for those who fit clearly into one category (male) or the other (female). Either we need open-access bathrooms or multigendered bathrooms, or we need wider parameters for gender identification. The bathroom, as we know it, actually represents the crumbling edifice of gender in the twentieth century. The frequency with which gender-deviant "women" are mistaken for men in public bathrooms suggests that a large number of feminine women spend a large amount of time and energy policing masculine women. Something very different happens, of course, in the men's public toilet, where the space is more likely to become a sexual cruising zone than a site for gender repression. Lee Edelman, in an essay about the interpenetration of nationalism and sexuality, argues that "the institutional men's room constitutes a site at which the zones of public and private cross with a distinctive psychic charge."³ The men's room, in other words, constitutes both an architecture of surveillance and an incitement to desire, a space of homosocial interaction and of homoerotic interaction.

So, whereas men's rest rooms tend to operate as a highly charged sexual space in which sexual interactions are both encouraged and punished, women's rest rooms tend to operate as an arena for the enforcement of gender conformity. Sex-segregated bathrooms continue to be necessary to protect women from male predations but also produce and extend a rather outdated notion of a public-private split between male and female society. The bathroom is a domestic space beyond the home that comes to represent domestic order, or a parody of it, out in the world. The women's bathroom accordingly becomes a sanctuary of enhanced femininity, a "little girl's room" to which one retreats to powder one's nose or fix one's hair. The men's bathroom signifies as the extension of the public nature of masculinity—it is precisely not domestic even though the names given to the sexual function of the bathroom—such as cottage or tearoom—suggest it is a parody of the domestic. The codes that dominate within the women's bathroom are primarily gender codes; in the men's room, they are sexual codes. Public sex versus private gender, openly sexual versus discreetly repressive, bathrooms beyond the home take on the proportions of a gender factory.

Marjorie Garber comments on the liminality of the bathroom in *Vested Interests* in a chapter on the perils and privileges of cross-dressing. She discusses the very different modes of passing and cross-dressing for cross-

3. Lee Edelman, "Tearooms and Sympathy, or The Epistemology of the Water Closet," in *Homographesis: Essays in Gay Literary and Cultural Theory*

(New York: Routledge, 1994), 158 [Halberstam's note]. Edelman (b. 1953), American literary critic and queer theorist.

identified genetic males and females, and she observes that the restroom is a “potential Waterloo” for both female-to-male (FTM) and male-to-female (MTF) cross-dressers and transsexuals.⁴ For the FTM, the men’s room represents the most severe test of his ability to pass, and advice frequently circulates within FTM communities about how to go unnoticed in male-only spaces. Garber notes: “The cultural paranoia of being caught in the ultimately wrong place, which may be inseparable from the pleasure of ‘passing’ in that same place, depends in part on the same cultural binarism, the idea that gender categories are sufficiently uncomplicated to permit self-assortment into one of the two ‘rooms’ without deconstructive reading” (47). It is worth pointing out here (if only because Garber does not) that the perils for passing FTMS in the men’s room are very different from the perils of passing MTFs in the women’s room. On the one hand, the FTM in the men’s room is likely to be less scrutinized because men are not quite as vigilant about intruders as women for obvious reasons. On the other hand, if caught, the FTM may face some version of gender panic from the man who discovers him, and it is quite reasonable to expect and fear violence in the wake of such a discovery. The MTF, by comparison, will be more scrutinized in the women’s room but possibly less open to punishment if caught. Because the FTM ventures into male territory with the potential threat of violence hanging over his head, it is crucial to recognize that the bathroom problem is much more than a glitch in the machinery of gender segregation and is better described in terms of the violent enforcement of our current gender system.

Garber’s reading of the perilous use of rest rooms by both FTMS and MTFs develops out of her introductory discussion of what Lacan calls “urinary segregation.” Lacan used the term to describe the relations between identities and signifiers, and he ultimately used the simple diagram of the rest room signs “Ladies” and “Gentlemen” to show that within the production of sexual difference, primacy is granted to the signifier over that which it signifies; in more simple terms, naming confers, rather than reflects, meaning.⁵ In the same way, the system of urinary segregation creates the very functionality of the categories “men” and “women.” Although restroom signs seem to serve and ratify distinctions that already exist, in actual fact these markers produce identifications within these constructed categories. Garber latches on to the notion of “urinary segregation” because it helps her to describe the processes of cultural binarism within the production of gender; for Garber, transvestites and transsexuals challenge this system by resisting the literal translation of the signs “Ladies” and “Gentlemen.” Garber uses the figures of the transvestite and the transsexual to show the obvious flaws and gaps in a binary gender system; the transvestite, as interloper, creates a

4. Marjorie Garber, *Vested Interests: Cross-Dressing and Cultural Anxiety* (New York: Routledge, 1992), 47. Obviously Garber’s use of the term “waterloo” makes a pun out of the drama of bathroom surveillance. Although the pun is clever and even amusing, it is also troubling to see how often Garber turns to punning in her analyses. The constant use of puns throughout the book has the overall effect of making gender crossing sound like a game or at least trivializes the often life-or-death processes involved in cross-identification. This is not to say gender can never be a “laughing matter” and must always be treated

seriously but only to question the use of the pun here as a theoretical method. [Halberstam’s note]. Garber (b. 1944), American scholar of Shakespeare and of cultural studies. Her pun plays on the meanings of “waterloo,” a disastrous defeat (from the village in Belgium where Napoleon was finally defeated in 1815), and of “loo”—British slang for “toilet.”

5. See Jacques Lacan, “The Agency of the Letter in the Unconscious,” in *Écrits: A Selection*, trans. Alan Sheridan (New York: Norton, 1977), 151 [Halberstam’s note]. LACAN (1901–1981), French psychoanalyst; for this essay, see above.

third space of possibility within which all binaries become unstable. Unfortunately, as in all attempts to break a binary by producing a third term, Garber's third space tends to stabilize the other two. In "Tearrooms and Sympathy," Lee Edelman also turns to Lacan's term "urinary segregation," but Edelman uses Lacan's diagram to mark heterosexual anxiety "about the potential inscriptions of homosexual desire and about the possibility of knowing or recognizing whatever might constitute 'homosexual difference'" (160). Whereas for Garber it is the transvestite who marks the instability of the markers "Ladies" and "Gentlemen," for Edelman it is not the passing transvestite but the passing homosexual.

Both Garber and Edelman, interestingly enough, seem to fix on the men's room as the site of these various destabilizing performances. As I am arguing here, however, focusing exclusively on the drama of the men's room avoids the much more complicated theater of the women's room. Garber writes of urinary segregation: "For transvestites and transsexuals, the 'men's room' problem is really a challenge to the way in which such cultural binarism is read" (14). She goes on to list some cinematic examples of the perils of urinary segregation and discusses scenes from *Tootsie* (1982), *Cabaret* (1972), and the *Female Impersonator Pageant* (1975). Garber's examples are odd illustrations of what she calls "the men's room problem" if only because at least one of her examples (*Tootsie*) demonstrates gender policing in the women's room. Also, Garber makes it sound as if vigorous gender policing happens in the men's room while the women's room is more of a benign zone for gender enforcement. She notes: "In fact, the urinal has appeared in a number of fairly recent films as a marker of the ultimate 'difference'—or studied indifference" (14). Obviously, Garber is drawing a parallel here between the conventions of gender attribution within which the penis marks the "ultimate difference"; however, by not moving beyond this remarkably predictable description of gender differentiation, Garber overlooks the main distinction between gender policing in the men's room and in the women's room. Namely, in the women's room, it is not only the MTF but *all* gender-ambiguous females who are scrutinized, whereas in the men's room, biological men are rarely deemed out of place. Garber's insistence that there is "a third space of possibility" occupied by the transvestite has closed down the possibility that there may be a fourth, fifth, sixth, or one hundredth space beyond the binary. The "women's room problem" (as opposed to the "men's room problem") indicates a multiplicity of gender displays even within the supposedly stable category of "woman."

So what gender are the hundreds of female-born people who are consistently not read as female in the women's room? And because so many women clearly fail the women's room test, why have we not begun to count and name the genders that are clearly emerging at this time? One could answer this question in two ways: On the one hand, we do not name and notice new genders because as a society we are committed to maintaining a binary gender system. On the other hand, we could also say that the failure of "male" and "female" to exhaust the field of gender variation actually ensures the continued dominance of these terms. Precisely because virtually nobody fits the definitions of male and female, the categories gain power and currency from their impossibility. In other words, the very flexibility and elasticity of the terms "man" and "woman" ensures their longevity. To test this proposi-

tion, look around any public space and notice how few people present formulaic versions of gender and yet how few are unreadable or totally ambiguous. The “It’s Pat” character on a *Saturday Night Live*⁶ skit dramatized the ways in which people insist on attributing gender in terms of male or female on even the most undecidable characters. The “It’s Pat” character produced laughs by consistently sidestepping gender fixity—Pat’s partner had a neutral name, and everything Pat did or said was designed to be read either way. Of course, the enigma that Pat represented could have been solved very easily; Pat’s coworkers could simply have asked Pat what gender s/he was or preferred. This project on female masculinity is designed to produce more than two answers to that question and even to argue for a concept of “gender preference” as opposed to compulsory gender binarism. The human potential for incredibly precise classifications has been demonstrated in multiple arenas; why then do we settle for a paucity of classifications when it comes to gender? A system of gender preferences would allow for gender neutrality until such a time when the child or young adult announces his or her or its gender. Even if we could not let go of a binary gender system, there are still ways to make gender optional—people could come out as a gender in the way they come out as a sexuality. The point here is that there are many ways to depathologize gender variance and to account for the multiple genders that we already produce and sustain. Finally, as I suggested in relation to Garber’s arguments about transvestism, “thirdness” merely balances the binary system and, furthermore, tends to homogenize many different gender variations under the banner of “other.”

It is remarkably easy in this society not to look like a woman. It is relatively difficult, by comparison, not to look like a man: the threats faced by men who do not gender conform are somewhat different than for women. Unless men are consciously trying to look like women, men are less likely than women to fail to pass in the rest room. So one question posed by the bathroom problem asks, what makes femininity so approximate and masculinity so precise? Or to pose the question with a different spin, why is femininity easily impersonated or performed while masculinity seems resilient to imitation? Of course, this formulation does not easily hold and indeed quickly collapses into the exact opposite: why is it, in the case of the masculine woman in the bathroom, for example, that one finds the limits of femininity so quickly, whereas the limits of masculinity in the men’s room seem fairly expansive?

We might tackle these questions by thinking about the effects, social and cultural, of reversed gender typing. In other words, what are the implications of male femininity and female masculinity? One might imagine that even a hint of femininity sullies or lowers the social value of maleness while all masculine forms of femaleness should result in an elevation of status.⁷ My bathroom example alone proves that this is far from true. Furthermore, if we think of popular examples of approved female masculinity like a buffed Linda Hamilton in *Terminator 2* (1991) or a lean and mean Sigourney Weaver

6. American late night television variety and comedy sketch show; Pat (Julie Sweeney) was featured in episodes between 1990 and 1994.

7. Susan Bordo argues this in “Reading the Male Body,” *Michigan Quarterly Review* 32, no. 4 (fall 1993). She writes: “When masculinity gets ‘undone’

in this culture, the deconstruction nearly always lands us in the territory of the degraded: when femininity gets symbolically undone, the result is an immense elevation of status” (721) [Halberstam’s note].

in *Aliens*,⁸ it is not hard to see that what renders these performances of female masculinity quite tame is their resolute heterosexuality. Indeed, in *Alien Resurrection* (1997), Sigourney Weaver combines her hard body with some light flirtation with co-star Winona Ryder⁹ and her masculinity immediately becomes far more threatening and indeed “alien.” In other words, when and where female masculinity conjoins with possibly queer identities, it is far less likely to meet with approval. Because female masculinity seems to be at its most threatening when coupled with lesbian desire, in this book I concentrate on queer female masculinity almost to the exclusion of heterosexual female masculinity. I have no doubt that heterosexual female masculinity menaces gender conformity in its own way, but all too often it represents an acceptable degree of female masculinity as compared to the excessive masculinity of the dyke. It is important when thinking about gender variations such as male femininity and female masculinity not simply to create another binary in which masculinity always signifies power; in alternative models of gender variation, female masculinity is not simply the opposite of female femininity, nor is it a female version of male masculinity.

DAVID HERMAN

b. 1962

David Herman blends late twentieth-century cognitive psychology and narrative theory, promoting a new field at the outset of the twenty-first century: cognitive narratology. This project is indebted to but self-consciously surpasses the postwar classical narratology of ROLAND BARTHES, TZVETAN TODOROV, and others as well as the first-wave 1950s cognitive theory of Jerome Bruner, Noam Chomsky, and others. Herman describes his work as “postclassical narratology” steeped in the “second cognitive revolution” that commenced in the 1980s.

David Herman earned a B.A. in English and philosophy in 1985 from the University of North Carolina at Greensboro, followed by an M.A. (1988) and a Ph.D. (1992) from the University of Pennsylvania. He has taught at several institutions, including North Carolina State University, Purdue University, and Ohio State University, where he co-founded and served as the inaugural director of the Project Narrative initiative; and more recently at the Institute of Advanced Study at Durham University in the United Kingdom. In addition, he served as founding editor of *Storyworlds: A Journal of Narrative Studies* and *Frontiers of Narrative*, a book series from the University of Nebraska Press. He was co-winner of the Perkins Prize, awarded by the Society for the Study of Narrative Literature to the book making “the most significant contribution to narrative studies,” for his *Story Logic: Problems and Possibilities of Narrative* (2002).

In our selection, "Narrative Theory after the Second Cognitive Revolution," originally published in *Introduction to Cognitive Cultural Studies* (edited by Lisa Zunshine, 2010), Herman employs recent psychological research in order to develop an updated approach to narrative study. Through an analysis of Ernest Hemingway's short story "Hills Like White Elephants" (1927), he explores ways in which recent discursive psychology can add to narrative theory in the broad context of cognitive science-oriented cultural studies. "Focusing on scenes of talk as a point of convergence for narrative theory and discursive psychology," he argues that "Hemingway's and other authors' representations of discourse practices—their staging of 'scenes of talk'—bear importantly on the tradition(s) of research that locate cognitive processes not in the heads of solitary thinkers but rather in sociocommunicative processes unfolding within richly material settings." Not surprisingly, a main objective of "Narrative Theory after the Second Cognitive Revolution" is to develop productive interchanges between strategies used to analyze face-to-face interactions and tools used to study written narrative texts. Among influential forerunners theorizing the discourse of conversation, Herman mentions the Russian psychologist Lev Vygotsky and the Austrian-born British philosopher Ludwig Wittgenstein, and he points to the sociological methods of ethnography and participant observation.

By scrutinizing the storytelling techniques of Hemingway's "Hills Like White Elephants," Herman investigates how narrative literature and discursive psychology can inform one another. His premise is that "cognitive processes can be lodged not just in reports about characters' behaviors, utterances, and experiences but also in modes of narration, types of perspective, and details about the spatial and temporal contexts of narrated situations and events." The Hemingway story centers on discourse between the female character Jig and an unnamed male character who presumably impregnated her. At the heart of this dialogue is the prospect of abortion. The symbolic setting is a train station in hot Spain, "in a valley through which the Ebro River flows." Waiting to take the train to Madrid, the two characters converse and Jig observes that "the hills across the valley look like white elephants." While the story has an uncertain ending, Herman judges the female character to be under stress and the male protagonist to be unsympathetic and cynical. For him it's a matter of subtly conflicting story lines.

To explain what he means by "the second cognitive revolution" of his title, Herman turns to Cartesian dualism as a starting point. The famous argument of René Descartes (1596–1650) about the separation of the mind and the world has long caused problems in the philosophy of mind. This dualism, Herman notes, has shaped much theory that comes after it, for theorists find themselves choosing between an emphasis on the mind and an emphasis on the external world. Regardless of which standpoint they adopt, they maintain the binary opposition, leading to two philosophies. First, introspectionism denotes "*the mind in here*" stance, featured in prominent modern philosophical and psychological discourse and taken by Franz Brentano (1838–1917), among other theorists. Second, behaviorism results from the adoption of "*the world out there*" position. Its advocates, most notably the American psychologists John B. Watson (1878–1958) and B. F. Skinner (1904–1990), argue, in Herman's summary, that "the world out there is the only thing that can be studied and known; the mind in here is epiphenomenal or, at best, an explanatory fiction postulated on the basis of observable, outward behaviors of material bodies."

Herman lays out the difference between the first and the second cognitive revolutions. The first, sometimes referred to simply as cognitivism, shifts "from behaviorism to the study of cognition," construing people's speeches and actions as caused by their "mental processes." It bears witness to a focus both on the mind in here and on the constant interaction between the mind and the surrounding world. The mind is perceived "as an information-processing device." According to the second cognitive revolution, "the mind is *both* in here *and* out there; so is the world." Although the

second cognitive revolution still emphasizes cognitive processes, it views them as “immanent in . . . discourse practices”—that is, a hierarchical relationship between mind and discourse is no longer assumed. Its philosophy, then, is that “the mind does not preexist discourse, but is ongoingly accomplished in and through its production and interpretation.”

From the second cognitive revolution Herman extrapolates five concepts to broaden narrative theory: positioning, embodiment, distributed mind, emotion discourse (emotionology), and qualia. In Hemingway’s “Hills Like White Elephants,” *positioning* happens on two levels: how the characters engage and position one another and how the reader engages and positions the narrative. Analyzing these positioning acts, Herman highlights two conflicting story lines developed by the male and female characters. He suggests that entrenched positions, master narratives, and socially recurrent story lines constitute ideology, and he wonders if narrative means exist to disrupt such ideological positioning. *Embodiment*, in the hands of the second cognitive revolution, means “that the mind is always and inalienably embodied; minds should be viewed as the nexus of brain, body, and environment (or world).” Focusing on Hemingway’s text, Herman singles out subtle symbolic roles played by space, time, and perceptual flows across the storyworld. Settings matter. *Distributed mind* means that minds are not closed off internal entities: they constantly form and grow on the basis of their interactions with discourses, participants, and environments. Thus, in Hemingway’s story Herman tracks the unfolding, often seemingly tangential, movements of judgments, inferences, and memories generated by characters. In discussing *emotion discourse* and *emotionology*, Herman first reviews three main approaches to emotion: naturalist (inherent unvarying emotions across the whole world), constructionist (culturally specific emotions), and a reconciliation of the two. The third approach has led to the useful concept of emotionology, introduced in the 1980s by the social scientists Peter Stearns and Carol Stearns. Herman defines “emotionologies” as culturally specific “systems of emotion terms and concepts deployed by participants in discourse to ascribe emotions to themselves as well as their cohorts.” He shows in Hemingway’s narrative how particular nonverbal actions and pregnant silences perform emotional functions, judging that the female character is an emotional innovator and the masculine character is a stereotypical selfish male. *Qualia*, as defined in a range of disciplines but especially philosophy, designate the subjective properties of conscious experience. In that regard, Herman argues, Hemingway creates “a story about the active, ongoing construction, through the discursive means available to the participants in this scene of talk, of the felt, experienced meaning of events.” As a result and by implication, narrative literature captures moment-by-moment qualia in distinctive and memorable ways.

For all its suggestiveness, David Herman’s work surprisingly omits discussion of economics and social class. As much as he applies psychology, he hesitates to psychologize—that is, to diagnose emotional dysfunctions and psychopathologies of characters. Nor does he show any interest in psychoanalysis; for example, he does not consider the role of the unconscious in character formation and storytelling. He explicitly downplays the dedication of literary criticism to questions of artistic craft and to the dynamics of individual reader responses. By taking such an approach, however, he expands the scope of narrative theory beyond long-standing preoccupations with formal technique, such as plot construction and point of view. In addition, he materializes and puts flesh on thinking and discourse, treating them as equally fundamental and portraying them as agnostic. Last but not least, Herman’s focus on qualia, however tentative, seeks to bring human singularity into more robust forms of literary discourse analysis and cognitive narratology.

Narrative Theory after the Second Cognitive Revolution

In parallel with the other contributors' adoption of ideas from cognitive science for the purposes of textual and more broadly cultural analysis, the present chapter uses social-psychological research to outline one strategy for developing "postclassical" approaches to the study of narrative. At issue are frameworks for narrative research that build on the work of classical, structuralist narratologists but supplement that work with concepts and methods that were unavailable to story analysts such as Roland Barthes, Gerard Genette, A. J. Greimas, and Tzvetan Todorov during the heyday of the structuralist revolution.¹ One such framework, or cluster of frameworks, has begun to take shape under the rubric of "cognitive narratology," and my chapter seeks to contribute to this emergent area of narrative inquiry by focusing on the nexus between narrative and mind.²

The particular strand of social-psychological research on which I draw in order to explore this nexus is sometimes referred to as "discursive psychology." In Derek Edwards and Jonathan Potter's characterization, a basic contrast can be drawn between, on the one hand, "cognitivist approaches to language, where texts, sentences, and descriptions are taken as depictions of an externally given world, or as realizations of underlying cognitive representations of that world,"³ and, on the other hand, the discursive approach:

The focus of discursive psychology is the action orientation of talk and writing. . . . We are concerned with the nature of knowledge, cognition and reality: with how events are described and explained, how factual reports are constructed, how cognitive states are attributed. These are defined as discursive topics, things people topicalize or orientate themselves to, or imply, in their discourse. And rather than seeing such discursive constructions as expressions of speakers' underlying cognitive states, they are examined in the context of their occurrence as situated and occasioned constructions whose precise nature makes sense, to participants and analysts alike, in terms of the social actions those descriptions accomplish.⁴

Theorists working in this tradition, including Molly Andrews, Michael Bamberg, Michael Billig, Jerome Bruner, Derek Edwards, Grant Gillett, Rom Harré, Jonathan Potter, Peter Stearns, and Margaret Wetherell, have collectively sought to make a case for what Harré has termed the "second

cognitive revolution.”⁵ The first cognitive revolution marked a shift away from behaviorism to the study of cognition, postulating that “there are mental processes ‘behind’ what people say and do, that these processes are to be classified as ‘information processing,’ and that the best model for the cognitively active human being is the computer when it is running a program.”⁶ In contrast, although the second cognitive revolution also accepts that there are cognitive processes, it views them as immanent in discourse practices. From this perspective, the mind does not preexist discourse, but is ongoingly accomplished in and through its production and interpretation. Hence the designation “*discursive psychology*.”

My chapter uses an illustrative literary narrative—namely, Ernest Hemingway’s⁷ 1927 story “Hills Like White Elephants”—to test out the productiveness of broadly discursive-psychological research for cognitive cultural studies; one of my goals is to show how ideas geared mainly to the study of intelligent activity in face-to-face interaction can also illuminate analyses of written narrative texts (and vice versa). Sketching a thumbnail history of the developments that have led discursive psychologists to speak of a second cognitive revolution, I outline five key concepts that have emerged from this rethinking of the nature of thinking and use Hemingway’s text as a case study to show how those concepts are relevant for narrative inquiry. I also indicate ways in which the study of literary texts like Hemingway’s can inform discursive-psychological research—research premised on the idea that minds are always already grounded in discourse. Hemingway’s and other authors’ representations of discourse practices—their staging of “scenes of talk”—bear importantly on the tradition(s) of research that locate cognitive processes not in the heads of solitary thinkers but rather in sociocommunicative processes unfolding within richly material settings.⁸

“Hills Like White Elephants”: Key Aspects

Hemingway’s brief story—it has fewer than fifteen hundred words—focuses on a conversation between an unnamed male character and Jig, the woman who has been impregnated by the male character (the reader assumes). The story is set on a hot day at a train station in Spain, in a valley through which the Ebro River flows. As they wait for the train to Madrid, the two characters briefly discuss the appearance of the landscape surrounding them (specifically, Jig mentions that the hills across the valley look like white elephants), then order drinks and engage in a sometimes tense conversational exchange about the possibility of Jig’s having an abortion. When the story ends, with the characters expecting the train to arrive momentarily, it remains unclear what course of action they will pursue—although the closing lines perhaps suggest that Jig has acceded to the male character’s suggestion that she get the abortion or at least decided that any further discussion

of the matter with him would be fruitless. I discuss the story in greater detail below, but some key issues raised by Hemingway's storytelling method can be highlighted at the outset.

Although Hemingway's fiction in general and "Hills Like White Elephants" in particular might be construed as instances of "behaviorist" narrative, presenting only overt, surface behaviors of the characters and omitting narratorial commentary on more or less fugitive internal states (dispositions, thoughts, attitudes, memories, etc.), as the characters' conversation unfolds in the story a rich context of perceptions, inferences, and emotional responses emerges.⁹ Here one might cite Hemingway's statement about his own tip-of-the-iceberg method of composition: "I always try to write on the principle of the iceberg. . . . There is seven-eighths of it underwater for every part that shows."¹ In lieu of this surface-and-depth metaphor, however, the story itself suggests the advantages of a more "lateralized," or distributed, model. Memory, perception, emotion—in short, the mind—do not reside beneath the surface of the characters' verbal and nonverbal actions but are rather spread out as a distributional flow in what they do and say (as well as what they do not do and do not say), the material setting that constitutes part of their interaction, the method of narratorial mediation used to present the characters' verbal and nonverbal activities, and readers' own engagement with all of these representational structures. One of the chief tasks for postclassical narrative theory is to develop tools for studying the mind relevance of all these dimensions of stories and storytelling. The question is how cognitive processes can be lodged not just in reports about characters' behaviors, utterances, and experiences but also in modes of narration, types of perspective, and details about the spatial and temporal contexts of narrated situations and events. I argue in what follows that ideas from the field of discursive psychology can contribute at least some of the tools needed to explore the mind relevance of these aspects of narrative structure, though story analysts will also need to draw on other, complementary, frameworks that study the interrelations among language, mind, and world.²

My next section provides further context for understanding the disciplinary origins and explanatory aims of discursive psychology itself. In other words, to grasp why theorists in this tradition have sought to define mind as discourse, it is necessary to recall part of the recent history of discourse about minds.

Recent Conceptions of Mind: Some Swings of the Post-Cartesian Pendulum

Research concerned with the nature of the mind spans millennia and ranges across multiple fields of inquiry, including neuroscience; cognitive linguistics; the philosophy of mind; cognitive anthropology; artificial intelligence;

9. On problems with the very notion zero-degree "behaviorist narrative"—that is, a mode of narration utterly devoid of clues about characters' dispositions, inferences, attitudes, and so forth—see Alan Palmer, *Fictional Minds* (Lincoln: University of Nebraska Press, 2004), 205–39.

cognitive, social, and evolutionary psychology; and, as the current volume³ attests, humanistic scholarship that is increasingly drawing on concepts from these other areas of study to examine cultural processes and artifacts. Although I cannot hope to do justice to this immense body of work here, several recent accounts converge in identifying key junctures in the study of mind since the time of Descartes.⁴

- *Cartesian dualism*: Descartes' account of the mind as immaterial and unextended, and his opposition between the mind and the extended matter constituting the physical world, codified a dualistic conception that can be traced back to Plato⁵ (e.g., the *Meno*) and that can be abbreviated with a formula: *the mind in here; the world out there*. As Anthony Freeman discusses in his overview of theories of consciousness, this dualistic model leads to a number of paradoxes in the philosophy of mind.⁶ Yet Descartes' bifurcated conception of the mental versus the physical nonetheless set the terms for subsequent debates about the nature of mental phenomena. Specifically, his dichotomization of the mind in here and the world out there created two poles, or end points, of a spectrum between which subsequent theories had to position themselves, even when those theories were anti-Cartesian in spirit, as was the case with behaviorism (see below).⁷
- *Introspectionism* (the pendulum swings toward one end of the Cartesian spectrum, *the mind in here*): Cartesian dualism licensed the introspectionism that characterized philosophical as well as psychological discourse in the late nineteenth and early twentieth centuries (Franz Brentano, Edmund Husserl, Wilhelm Wundt, William James).⁸ If one assumes that the mind is in here, then introspective analysis constitutes a legitimate source of data about the mind's nature and workings. The legacy of introspectionism carries over into the first cognitive revolution, that is, the heyday of cognitive science after it emerged in the mid-twentieth century as a constellation of disciplines that included

computer science, cognitive psychology, linguistics, neurophysiology, and so forth.⁹ As Andy Clark has argued, certain strands of such first-wave cognitive science continued to treat “the mind as a privileged and insulated inner arena” and “body and world as mere bit-players on the cognitive stage.”¹

- *Behaviorism* (the pendulum swings to other end of the Cartesian spectrum, *the world out there*): As a reaction against introspectionism, early twentieth-century behaviorism (John B. Watson, B. F. Skinner)² holds that the world out there is the only thing that can be studied and known; the mind in here is epiphenomenal or, at best, an explanatory fiction postulated on the basis of observable, outward behaviors of material bodies. Chomsky’s theory of transformational generative grammar, which constitutes one of the key developments in the first cognitive revolution, emerged against the backdrop of what Chomsky viewed as the impoverished conception of language available within a behaviorist framework.³
- *The first cognitive revolution* (the pendulum swings back once more to the “mind” end of the spectrum): As a reaction against behaviorism, first-wave cognitive science is sometimes also termed “cognitivism” by its critics.⁴ An inherently interdisciplinary enterprise, the first cognitive revolution marks a return to the mind in here, but now the mind is viewed as an information-processing device—the dominant metaphor being, according to Rom Harré and Grant Gillett, the mind as a software program that runs on the “hardware” of the physical brain.⁵
- *The second cognitive revolution* (the mind is *both* in here *and* out there; so is the world): To reiterate, the basic claim made by discursive psychologists is that cognitive processes exist, but that they are immanent in—that they emerge from—discourse practices. From this vantage point, people acquire the status of psychological beings just by participating in discourse, in normatively accountable ways.⁶ Further, for theorists working in this tradition, discourse itself can be defined in broadly Wittgensteinian terms as the rule-based manipulation of symbols in multiperson episodes that unfold within material settings.⁷

But what developments helped precipitate the shift from first-wave, cognitivist models of mind to the second-wave, discursively oriented models? Research contributing to this second revolution in thinking about thinking,

which began to unfold in the late 1980s, emanated from several sources. One source was Vygotsky's work on the social roots of human intelligence; his hypothesis that, in the development of individuals, intramental thinking derives from shared, or intermental, thinking has led to a broader interest in socially distributed cognition—as I discuss more fully in my next section.⁸ Another source was the approach to discourse analysis (sometimes called "Conversation Analysis") that can be traced back to the ethnomethodological or participant-centered theories of the sociologist Harold Garfinkel. According to this work, participants index their understandings of an ongoing interaction precisely by making particular kinds of contributions to the course of the interaction itself and thereby jointly constructing it as the *kind* of interaction that they understand it to be.⁹ Knowing and doing, cognition and discourse, are thus inextricably interlinked. A similar emphasis on the discourse grounding of cognitive processes can be found in a third important source in this context, namely, the philosophy of the later Wittgenstein. Emphasizing the embeddedness of humans' meaning-making practices in larger "forms of life," Wittgenstein characterized meaning as use; in this account, utterances have meanings by virtue of how they are used in particular communicative situations. He also argued that pain and other mental phenomena should be thought of as anchored not in a private, inner language but rather in rule-oriented displays within normative contexts specifying how and when such displays can be produced and interpreted as such.

What links these research initiatives, as diverse as they are, is a shared attempt to nudge the post-Cartesian pendulum away from the "mind in here" pole but without allowing it to swing all the way back to the "world out there" pole at which the behaviorists sought to arrest it. In turn, the discursive-psychological research that builds on these and other analytic frameworks has major implications for the study of the mind-discourse nexus in general and of the cognitive dimensions of narrative discourse in particular. In the next section, I use Hemingway's story to outline specific strategies by which narrative scholars might harness this tradition of inquiry to reconfigure narrative theory after the second cognitive revolution—and to develop ideas that may also be productive for discursive-psychological inquiry.

Hemingway and the Discursive Mind

Putting Hemingway's story into dialogue with discursive-psychological research highlights five key concepts that can productively inform (and be informed by) narrative theory. The first four concepts have emerged directly from the second cognitive revolution; the fifth concept, although it might

8. Research on distributed cognition that was inspired by Vygotsky includes Agre, *Computation and Human Experience*; David Herman, "Genette Meets Vygotsky: Narrative Embedding and Distributed Intelligence," *Language and Literature* 15.4 (2006): 375–98; Edwin Hutchins, *Cognition in the Wild* (Cambridge, MA: MIT Press, 1995); Jean Lave and Etienne Wenger, *Situated Learning: Legitimate Peripheral Practice* (Cambridge: Cambridge University Press, 1991); and Barbara Rogoff, *Apprenticeship in Thinking: Cognitive Development in Social Context* (New York: Oxford University Press, 1991). [Lev Vygotsky

(1896–1934), Russian psychologist—editor's note.] 9. For foundational work in this tradition, see Paul Drew and John Heritage, ed., *Talk at Work* (Cambridge: Cambridge University Press, 1992); Harold Garfinkel, *Studies in Ethnomethodology* (Englewood Cliffs, NJ: Prentice-Hall, 1967); Harvey Sacks, *Lectures on Conversation*, vols. 1 and 2, ed. Gail Jefferson (Oxford: Blackwell, 1992); and Emanuel A. Schegloff, "Notes on Conversational Practice: Formulating Place," *Studies in Social Interaction*, ed. David Sudnow (New York: Free Press, 1972), 75–119.

seem to be orthogonal or even opposed to discursive-psychological research, nonetheless connects up with it in ways that have not been adequately explored, though narrative analysts have begun to sketch some of the links. The five concepts are: (1) positioning; (2) embodiment; (3) the distributed versus localized nature of mind; (4) emotion discourse and “emotionology”; and (5) qualia, or the idea that conscious experiences have ineliminably subjective properties, a distinctive sense or feeling of what it is like for someone or something to experience them.

POSITIONING THEORY

The first key concept is the notion that we make sense of our own and other minds through *positioning*. In Harré and van Langenhove’s account,¹ one can position oneself or be positioned in discourse as powerful or powerless, admirable or blameworthy, and so forth. In turn, a position can be specified by characterizing how a speaker’s contributions are taken as bearing on these and other “polarities of character” in the context of an overarching storyline—a narrative of self and other(s) being jointly elaborated (or disputed) by participants via self-positioning and other positioning speech acts. Hence positions are selections made by participants in discourse, who use position-assigning speech acts to build “storylines” in terms of which the assignments make sense. Reciprocally, the storylines provide context in terms of which speech acts can be construed as having a position-assigning force.

In “Hills,” positioning is a relevant parameter for analysis on at least two levels: the level of the characters and, given Hemingway’s narrative techniques, the level of the reader’s engagement with the text.² At the first level, the story portrays the unnamed male character and Jig as engaged in both self- and other-positioning acts. At the second level Hemingway’s mode of narration—in particular, his use of what F. K. Stanzel³ would characterize as figural narration (= third-person or heterodiegetic narration in which events are refracted through the vantage point of a particular consciousness or “reflector”)—works to position readers.

Consider this early exchange between the characters regarding the appearance of the hills on the other side of the valley:

“They look like white elephants,” she said.

“I’ve never seen one,” the man drank his beer.

“No, you wouldn’t have.”

“I might have,” the man said. “Just because you say I wouldn’t have doesn’t prove anything.” (211)

Here the male character explicitly rejects the storyline in which Jig seeks to position him. However, given the way the story unfolds and the double entendre embedded in its title, the storyline evoked by Jig’s comment does acquire legitimacy. This is a person who doesn’t have the ability to contextualize, let alone accept, unwanted gifts—or unwanted children.

2. Cf. Michael Bamberg, “Positioning,” *Routledge Encyclopedia of Narrative Theory*, 445–46.

3. Franz Karl Stanzel, *A Theory of Narrative*, trans. Charlotte Goedsche (Cambridge: Cambridge University Press, 1984). [Stanzel (b. 1923), Austrian narratologist—editor’s note.]

Conversely, the male character fails in his own attempt to position Jig within a storyline, one that she questions and exposes as grounded in the male character's self-interest, not in his concern for their shared life and happiness together. The key passage is the following:

"I'll go with you and I'll stay with you all the time. They just let the air in and then it's all perfectly natural."

"Then what will we do afterward?"

"We'll be fine afterward. Just like we were before."

"What makes you think so?"

"That's the only thing that bothers us. It's the only thing that's made us unhappy." (212)

Jig's subsequent remarks, including her ironic comment about the happiness of all women who have abortions, work to invalidate the storyline in which the male character tries to position them—a story in which they were a happy couple for whom everything was going well and would go well again, provided the abortion takes place. In other words, the man tries to other-position Jig as part of an "us" to which Jig does not position herself as belonging. She momentarily adopts the male character's language but then repositions herself and other-positions him within a different kind of storyline, one in which things will not necessarily work out in the way that her interlocutor suggests. Similarly, at the very end of the story, the male character tries to emplot their current interaction as one in which Jig, after going through a brief period of feeling "unwell," recovers her equilibrium. Jig rejects this storyline, which is based on an attempt to position her in terms of the polarity feeling worse/feeling better; but she does not necessarily project a storyline of her own vis-à-vis their recent interaction:

"Do you feel better?" he asked.

"I feel fine," she said. "There's nothing wrong with me. I feel fine."

(214)

Jig thus rejects the presupposition of the male character's question but does not engage in a self-positioning act that might lend a sense of closure to their recent dispute—or to the narrative itself.

At another level Hemingway's mode of narration positions readers vis-à-vis the (inter)action unfolding within the storyworld. Although there are shifts of perspective over the course of the story, the male character functions as the main internal focalizer or reflector figure, whose vantage point provides a window on the action being recounted. Thus, almost all of the nonverbal actions recounted in the story are performed by Jig, confirming that the dominant reflector or perceiver (the one witnessing Jig's actions) is the male character. The use of the male character as the focalizer tends to align the reader with his vantage point: we literally see things through his eyes. Yet, as already discussed, the text ultimately invalidates both the storyline he proposes and his attempt at other-positioning Jig in terms of that storyline. This creates a kind of dissonance in the positioning logic of the story. And whatever Hemingway's conscious stance toward dominant conceptions of gender in the epoch during which he wrote, the technique of positioning readers simultaneously with and against the male character serves to disrupt sexist master narratives in which men are the repositories

of authoritative knowledge and sound judgments while women lack these attributes and are therefore unreliable.⁴

Thus the idea of positioning, although originally developed for the purposes of analyzing everyday communicative interactions, can also throw light on processes of self- and other-identification in literary narratives like Hemingway's. At the same time, concepts and methods originating in literary narratology, such as figural narration and internal focalization, can lead to finer-grained analyses of positioning logic itself. Combining the resources of these research traditions allows us to formulate a number of questions that could not have been posed by classical narrative theory: How do the stories we tell about ourselves and others, as well as written literary narratives, position us, our interlocutors, authors, narrators, characters, and readers in networks of presuppositions and norms? Can a person's mind be described as, in part, a byproduct of how he or she is situated at the intersection of multiple storylines? Conversely, how do storylines emerge over the course of sequences of position assignments? Can ideology in general, and gender ideologies in particular, be redefined as entrenched storylines—master narratives that arise through an iterative process of assigning the same position, repeatedly, to the same kind of agent, until the agent and his or her position appear to be indissolubly linked? And if so, how can we best use the formal tools developed by narratologists to show how literary narratives sometimes work to interrupt or even derail this process—to uncouple positions and types of agents and thereby “unwrite” dominant storylines—no matter what the conscious aims of the texts' authors?

EMBODIMENT

The second key concept emerging from the second cognitive revolution and taken up in discursive-psychological research concerns the mind's embodiment. Second-wave cognitive science resists both the cognitivist hierarchicalization of mind over body and the behaviorist prioritization of body over mind. Instead, it holds that the mind is always and inalienably embodied; minds should be viewed as the nexus of brain, body, and environment (or world).⁵ By putting mind on the same footing as the world in which we think, act, and communicate, second-wave cognitive science avoids making underlying cognitive processes wholly explanatory of overt verbal as well as non-verbal behaviors. Those behaviors, rather, help constitute the cognitive processes themselves, with which they are related in a feedback loop.

In the field of cognitive linguistics, scholars such as George Lakoff, Mark Johnson, Ronald Langacker, and Leonard Talmy have explored ways the structure of language is grounded in (and constitutes a ground for) embodied human experience.⁶ For example, this mind-body-language nexus mani-

and Alan D. Cruse, *Cognitive Linguistics* (Cambridge: Cambridge University Press, 2004). For a critique of some aspects of cognitive-linguistic research from a discursive-psychological perspective, see Derek Edwards, “Categories Are for Talking: On the Cognitive and Discursive Bases of Categorization,” *Theory and Psychology* 1.4 (1991): 515–42, and his *Discourse and Cognition*, 202–62. [See, e.g., George Lakoff, *Women, Fire, and Dangerous Things: What Categories Reveal about the Mind* (1987); Mark Johnson, *The Body*

feats itself in metaphor systems deriving from the experience of navigating the world in, preferably, an upright position. Thus, in English, “up” is generally valorized as positive and “down” as negative (contrast “Today was a real high point for me” with “I’m feeling really low today”). But it is not just that the structures of language can be *correlated with* the physical embodiment of the mind. What is more, as Hemingway’s text suggests, stories help *constitute* characters (and character-narrators) as embodied: the process of narration constructs the experiencing self as inalienably linked to a spatially and temporally oriented body-in-the-world. Thus, in “Hills” the use of internal focalization (that is, the filtering of the action through particularized agents of perception in the storyworld) affords an expressive resource by which the text locates the characters’ experiences in space and time. The opening sentence of the story—“The hills across the valley of the Ebro were long and white” (211)—encodes a particular perceptual position: the spatial preposition *across* indicates that the viewers, the man and Jig, are located on one side of the valley and are looking out from the train station across at the other side. The text enacts the situated nature of all perception, both in the passage just quoted and also more globally, given that the role of focalizer shifts from the man to Jig and back to the man again over the course of the story. Not only does “Hills” suggest that what can be seen, what is known about the world, alters with the spatial coordinates of the embodied self that is doing the looking; more than this, it suggests that a self is in part constituted by what it sees and by when and where it sees it—with narrative being one of the principal means for tracing this perceptual flux.

Note, too, that the story also carefully situates the characters in time, using the train schedule to mark off increments of their unfolding interaction. In addition, in disputing the male character’s attempt to position her as part of a couple that will regain its equanimity and happiness after the operation, Jig indicates her awareness of time’s irreversibility and the constraints such linearity imposes on human decisions and relationships.

MIND AS DISTRIBUTED

In synergy with the concepts of positioning and embodiment, the discursive turn in (social-) psychological research suggests that key properties of mind cannot be grasped without an understanding of the mind as distributed. In other words, minds are spread out among participants in discourse, their speech acts, and the objects in their material environment. From this perspective, cognition should be viewed as a supra- or trans-individual activity distributed across groups functioning in specific contexts rather than as a wholly internal process unfolding within the minds of solitary, autonomous, and desituated cognizers. Hence, instead of being abstract, individualistic, and constant across all contexts, thinking in its

most basic form is grounded in particular situations, socially distributed, and domain specific.⁷

Although they help organize intelligent behavior in a different way than do stories told in face-to-face interaction, literary narratives like Hemingway's not only represent but also enable the distribution of mind across participants, places, and times. For one thing, the title of the story signals how cognitive processes are constituted through discourse; they are grounded in the characters' relation with one another and with their surrounding social and material environment.⁸ Jig's observation that the hills across the valley look like white elephants prompts the exchange in which she positions the man as never having seen a white elephant. This exchange precedes Jig's and the man's conversation about the abortion, but in light of their subsequent remarks Jig's other-positioning utterance can be interpreted as setting into play a chain of metaphorical equations—the hills are like white elephants; white elephants are metaphoric equivalents for unwanted gifts; the baby with which Jig is pregnant is an unwanted gift; hence, the baby is a white elephant—of the sort that the male character has been careful to avoid in the past. In this way, besides *portraying* the distribution of mind across participants, their speech acts, and their larger environment for acting and interacting, the story *vehiculates*⁹ distributed cognition of this sort. The communicative and cognitive processes internal to the storyworld function as models for readers, who are cued to use structures of the narrative text as interpretive affordances, just as Jig and the male character use features of the setting to "triangulate" what is going on and how they understand and feel about their situation.¹

Similarly, when the narrator reports that the male character looks at his and Jig's suitcases and sees "labels on them from all the hotels where they had spent nights" (214), this reference to a feature of the characters' environment suggests how the suitcases do part of the male character's thinking for him, triggering what Erving Goffman² would call a lamination of past and present time frames and at the same time supporting readers' inferences concerning the characters' relationship and the causal sequence leading up to their present situation. The same process of lamination, and the same distribution of mind across time, space, and social interactants, at once structures and emerges from the characters' conversational exchange. Thus, in response to the male character's attempt to minimize the likely emotional impact of the abortion, Jig ironically alludes to the life stories of other women who have had the procedure. Her contribution in turn prompts the male character to reposition both Jig and himself: here the man's use of the discourse marker "Well" signals an effort to manage problems with the recep-

8. For more on the role of "setting" in Hemingway's text, see Johnston, *The Tip of the Iceberg*,

125–34. My analysis, however, questions the traditional division of narrative representations into character and setting, because features of Jig's and the man's material environment factor into the sense-making activities represented in the story.

9. Carries, conveys [editor's note].

1. Cf. Herman, "Genette."

2. Canadian sociologist (1922–1982) who worked mainly in the United States. Goffman's research focused on social interactions; here, see especially his *Frame Analysis: An Essay on the Organization of Experience* (1974) [editor's note].

tion of his previous utterance and also a shift in his tactics for storyline construction, though his overall strategy remains the same:³

"You don't have to be afraid. I've known lots of people that have done it."
 "So have I," said the girl. "And afterward they were all so happy."
 "Well," the man said, "if you don't want to you don't have to. I wouldn't have you do it if you didn't want to. But I know it's perfectly simple."
 (213)

The point is that the characters' construal of their situation is jointly (if oppositionally) accomplished and that it recruits from features of their environment as well as from the experiences of others with whom they have engaged in similarly collaborative cognition.

More generally, discursive-psychological research again suggests the need for narrative theorists to expand the scope of what they consider to be mind-relevant dimensions of stories and storytelling. Study of the judgments, inferences, and memories of characters, narrators, and readers can be folded into a broader investigation of the cognitive properties associated with narrative gestalts, that is, with narratively organized systems for making sense of experience. Expressive resources such as deixis ("I," "this," "here," "now"), shifts in point of view, and the embedding of one story inside another allow narratives to represent the distribution of mind across spaces, times, participants, and objects in the environments in which stories are told, a distribution that they represent in the form of storyworlds. Conversely, the process of storytelling facilitates just this sort of distribution. It involves the coordinated interplay of minds whose distinctive profile emerges from the nature and extent of their participation in such interplay.

Emotion Discourse and Emotionology

In research on emotion, as Stearns points out, there is a basic tension between naturalist and constructionist approaches. Naturalists argue for the existence of innate, biologically grounded emotions that are more or less uniform across cultures and subcultures. By contrast, constructionists argue that emotions are culturally specific—that "context and function determine emotional life and that these vary."⁴ As Ralph Adolphs notes,⁵ however, the naturalist and constructionist positions can be reconciled if emotions are viewed as (1) shaped by evolutionary processes and implemented in the brain but also (2) situated in a complex network of stimuli, behavior, and other cognitive states. Because of (2), the shared stock of emotional responses are mediated by culturally specific learning processes. In turn, to explore the contribution of cultural contexts to humans' emotional life, analysts can study "[e]motion discourse [as] an integral feature of talk about events, mental states, mind and body, personal dispositions, and social relations."⁶

6. Edwards, *Discourse and Cognition*, 170.

This approach gave rise to the concept of “emotionology,” which was proposed by Peter Stearns and Carol Stearns as a way of referring to the collective emotional standards of a culture as opposed to the experience of emotion itself.⁷ The term functions in parallel with recent usages of the term “ontology” to designate a model of the entities, together with their properties and relations, that exist within a particular domain. Possessed by every culture and subculture, emotionologies are systems of emotion terms and concepts deployed by participants in discourse to ascribe emotions to themselves as well as their cohorts. At issue is a framework for conceptualizing emotions, their causes, and how participants in discourse are likely to display them. Further, narratives at once ground themselves in and help build frameworks of this sort, as when ghost stories and romance novels link particular kinds of emotions to recurrent narrative scenarios. Stories’ emotionological profile, like their positioning logic, can thus be investigated both at the level of the characters’ interactions with one another and at the level of readers’ interactions with the text; that is, stories both represent and are interpreted in light of models of emotion. It should be noted further that even narratives that background or suppress emotion terms necessarily orient themselves to an emotionology. Emotionological conclusions can be drawn from the absence of emotion terms and categories in contexts where, in other cultural and communicative settings (and other modes of narration), the terms and categories would generally be deployed.

Gerald Prince cites Hemingway’s “The Killers” as a paradigmatic instance of behaviorist narrative “limited to the conveyance of the characters’ behavior (words and actions but not thought or feelings), their appearance, and the setting against which they come to the fore.”⁸ Although “Hills Like White Elephants” might therefore be expected to engage in a similar systematic suppression of the lexicon of emotion, in fact it grounds itself in an emotionology not just lexically but also structurally through the way it sequences the characters’ speech acts as well as their silences and nonverbal actions. In other words, Hemingway’s story points to the discursive bases of mind by anchoring the characters’ emotional responses in what they say and do not say, as well as in the nonverbal actions they perform, at particular junctures over the course of their interaction. Indeed, readers are able to understand the characters’ *behaviors* as *actions* in part because of the models of emotion on which they rely to interpret the text. An emotionology specifies that when an event X inducing an emotion Y occurs, an agent is likely to engage in Z sorts of actions, where Z constitutes a fuzzy set of more or less prototypical responses. For example, police detectives were recently led to conclude that a mother had played a role in her own children’s death because of her atypically gleeful behavior at their gravesite. Likewise, a discourse

221–49; and Stearns, “Emotion.” For an account of emotion that derives from the tradition of narrative semiotics, see A. J. Greimas and Jacques Fontamille, *The Semiotics of Passions: From States of Affairs to States of Feeling*, trans. Paul Perron and Frank Collins (Minneapolis: University of Minnesota Press, 1993).

8. Gerald Prince, *A Dictionary of Narratology*, 2d ed. (Lincoln: University of Nebraska Press, 2003), 10; cf. Herman, “Cognitive Narratology.” [“The Killers” was published in 1927—editor’s note.]

such as Hemingway's acquires coherence, comes across as more than a set of sentences, by virtue of its relationship to a larger emotionological context. The characters' activities can be construed as more than just a series of individual, unrelated doings because of the assumption, licensed by a model of emotions, that those behaviors constitute a coherent *class*. At stake is a class of actions in which one is more or less likely to engage when motivated by anxiety about committing to a relationship or by resentment over another's manipulative attempts to avoid such commitment, as the case may be.

At the lexical level, "Hills Like White Elephants" represents the characters drawing on a quite extensive vocabulary of emotion to make sense of one another's minds *as* minds. Early in the story, the characters engage in a verbal exchange that begins with an utterance by the male character:

"Well, let's try and have a fine time."
 "All right. I was trying, I said the mountains looked like white elephants.
 Wasn't that bright?"
 "That was bright." (212)

Here Jig overtly thematizes the emotion terms and categories that appear to be holdovers from their previous interactions, thereby drawing attention to how, in the face of the complex issues now facing her and the male character, the terms have become hackneyed, overgeneral descriptors, incapable of helping them make sense of themselves and of what is going on. As the conversation proceeds, Jig continues to press against the limits of the emotionology on which the male character by contrast seems content to fall back, perhaps for cynical, manipulative reasons—namely, so that he can hold the more problematic, self-incriminating aspects of his position at a distance while still trying to convince Jig that he has her interests (and not just his own) at heart. Whereas the male character takes cover in the emotionological status quo, so to speak, Jig tries to find a language with which to express her concerns. At one point she uses a childlike locution that seems designed to strip the situation down to its most basic form, so that she can work toward a clearer understanding of its emotional ramifications: "But if I do it, then it will be nice again if I say things are like white elephants, and you'll like it?" (213). A moment later, referring to the characters' natural surroundings, Jig resorts to strategic vagueness to imply an amorphous, difficult-to-express sense of frustration or defeat: "'And we could have all this,' she said. 'And we could have everything and every day we make it more impossible'" (213). Toward the end of their conversation, after the male character ignores Jig's request that they stop talking, Jig uses verbal repetition to underscore the emotional urgency of her request: "Would you please please please please please please please stop talking?" (214). As these passages reveal, there is no direct mapping from form to function when it comes to emotionology: depending on context, words that do not designate emotional states can nonetheless perform emotionological functions. Indeed, in contrast with those of the male character, Jig's lexical choices are marked by an attempt to exploit this looseness of fit between form and function, perhaps in an effort to engage in emotionological innovation, to find patterns of usage adequate to the complex dynamics of the characters' current interaction.

Furthermore, and as should already be apparent, emotion discourse goes beyond individual words and includes whole utterances as well as the

sequential patterning of multiple utterances. At the most global level, the male character tries unsuccessfully to project a storyline in which the abortion will enable the couple to move from unhappiness to happiness. Jig's non-committal response to the man's question at the end of the story—"Do you feel better?"—signals her rejection of both that storyline and its emotional premises: "I feel fine. . . . There's nothing wrong with me. I feel fine" (214). At a less global level, subsets of interconnected utterances within the overall conversation, as well as places where speech might be expected to occur but does not, suggest the discursive grounding of emotions. Thus, in the three utterances contained in the following exchange, Jig's speech act (ii) construes the man's speech act (i) as a reflection on his dispositions and attitudes and not just as a report about his past experiences, whereas the man's rejoinder (iii) in turn construes Jig's construal as biased and projects an offended (and defensive) emotional posture:

- (i) "I've never seen one [i.e., a white elephant]," the man drank his beer.
- (ii) "No, you wouldn't have."
- (iii) "I might have," the man said. "Just because you say I wouldn't have doesn't prove anything." (211)

The mind-constructing function of each utterance, in other words, depends on its place in the larger sequence of utterances being co-constructed by the characters in incremental fashion. In turn, readers can understand this series of verbal performances as a conversational sequence by virtue of models of emotion that overlap, more or less extensively, with those used by the characters in the storyworld.

Consider, finally, the passage where the male character first broaches the topic of the abortion:

- (i) "It's really an awfully simple operation, Jig," the man said. "It's not really an operation at all."
- (ii) The girl looked at the ground the table legs rested on.
- (iii) "I know you wouldn't mind it, Jig. It's really not anything. It's just to let the air in."
- (iv) The girl did not say anything. (212)

In this case it is the absence of a speech production by Jig in slots (ii) and (iv) and the text's substitution of reports of Jig's act of looking at the ground and of *not* speaking that have implications for emotionology. These empty slots in the characters' discourse suggest not only that Jig is experiencing an emotional disturbance but also that she may be chafing against the limits of the emotion discourse that she and her interlocutor have used hitherto. A task for postclassical narratology is to explore the degree to which gender asymmetry of the kind we see in Hemingway's story—which portrays Jig as an emotionological innovator and the male character as cynically hiding his self-interest behind established emotion categories—structures other narrative discourse as well, in fictional texts as well as everyday interactions. More generally, narrative analysts can investigate the power of stories to (re)shape emotionology itself. Narrative therapy, for example, involves the construction of stories about the self in which the emotional charge habitu-

ally carried by particular actions or routines can be defused or redirected, allowing people to prise apart emotion-action linkages that have become inimical to their psychological well-being.⁹ Similarly, by staging the way behaviors are dovetailed with emotions and thereby interpreted as actions, stories like Hemingway's may promote greater reflexivity and self-awareness about emotionologies circulating in the broader culture.

THE PROBLEM OF QUALIA

As Janet Levin notes, "[t]he terms *quale* and *qualia* (pl.) are most commonly used to characterize the qualitative, experiential, or felt properties of mental states."¹ Or, as Daniel Dennett puts it, "'qualia' is an unfamiliar term for something that could not be more familiar to each of us: *the ways things seem to us*."² In Thomas Nagel's terms, qualia arise from the sense or feeling of *what it is like* to be someone or something having a given experience.³ In the philosophy of mind, the notion of qualia continues to be debated among scholars who have adopted a range of positions on their status. Physicalists argue for the possibility of reducing qualia to brain states.⁴ Antireductionists argue that there is an irreducible explanatory gap between accounts of brain physiology and the phenomenology of conscious experience.⁵ For their part, functionalists argue that qualia are "multiply physically realizable"—they could in principle be emulated on a computer system, for example, and are therefore not specific to an individual brain.⁶ Although the particulars of these philosophical arguments are beyond the scope of the present chapter, the general, underlying issues they tap into are directly relevant to my discussion. The key question is whether the notion of qualia, defined as subjective or "first person" properties of conscious experience, can be reconciled with the conception of mind as constituted in and through discourse.

Here it should be noted that Monika Fludernik has made *experientiality*, or the impact of narrated situations and events on an experiencing consciousness, a core property of narrative itself.⁷ Fludernik's account suggests that unless a text or a discourse registers the pressure of events on an embodied human or at least a humanlike consciousness, then that text or discourse will not be construed by interpreters as a full-fledged narrative but rather (at best) as a report or chronicle. On the one hand, this account makes qualia a necessary condition for narrative, suggesting that stories are irreducibly tied to subjective states of mind. Stories are premised on minds. But on the other hand, the approach also grounds qualia in discourse practices, specifically, in the design and interpretation of narratively organized discourse. Minds are an emergent result of stories. Again we encounter important research questions for narrative theory after the second cognitive revolution:

7. Monika Fludernik, *Towards a "Natural" Narratology* (London: Routledge, 1996).

Can stories not only encapsulate but also provide access to qualia, *pace* Nagel? That is, do stories in fact enable us to know “what it is like” to be someone else, and maybe also ourselves? More radically, could we even have a notion of the felt quality of experience without narrative?⁸

In Hemingway’s story, qualia enter directly into plot: the conflict at the heart of the narrative concerns what an experience will or would be like for the person who must undergo that experience. In other words, “Hills” portrays an interaction in which one of the participants seeks to manage and minimize the felt experience of events from his interlocutor’s vantage point. In the storyline that he seeks to project, the subjectively experienced character of those events is at odds with the character that Jig herself senses they will have; Jig therefore rejects the male character’s other-positioning strategies. She is of another mind. Hemingway’s text is thus a story about the active, ongoing construction, through the discursive means available to the participants in this scene of talk, of the felt, experienced meaning of events. Rather than preceding their interaction, the experiential profile of events emerges from the participants’ use of verbal as well as nonverbal acts, in a richly material setting, to engage in processes of self- and other-positioning in the discursive construction of mind.

Horizons for Cognitive Narratology

Focusing on scenes of talk as a point of convergence for narrative theory and discursive psychology, this chapter has attempted to outline directions for further research—both for cognitive cultural studies in general and for cognitive narratology in particular. But the program for research sketched here constitutes only a beginning. Ideas from discursive psychology will need to be brought to bear on aspects of narrative structure and narrative interpretation besides the ones foregrounded here. In addition, narrative theorists will need to explore the extent to which discursive-psychological concepts can be brought into dialogue with other models for understanding the nexus between narrative and mind. How might discursive psychology contextualize research on the acquisition of narratives by children, for example?⁹ By the same token, is it possible to harmonize quantitative methods for narrative study with the mainly qualitative, case-study-based approach of discursive psychology?¹ How can discursive psychology inform the study of narrative across media and be used to illuminate the mind-relevance of storytelling

8. Significantly, many of the arguments about qualia in the philosophy of mind are couched in the form of stories or storylike thought experiments. Thus Jackson’s “knowledge argument” centers around Mary, the neuroscientist, who encounters a qualitative difference between what she knows through her study of the physiology of brains experiencing color, on the one hand, and the subjective, phenomenological knowledge of color that she herself acquires when she is finally let out of her windowless, colorless laboratory, on the other hand (Jackson, “Epiphenomenal Qualia”). In a similar vein, David Chalmers in *The Conscious Mind: In Search of a Fundamental Theory* (New York: Oxford University Press, 1996) uses an imagined race of zombies (humanoid beings exactly like us except that they have no

conscious experiences) to argue against both strict physicalist and functionalist critiques of the concept of qualia (cf. Robert Kirk, “Zombies,” *The Stanford Encyclopedia of Philosophy* [Fall 2003 ed.], ed. Edward N. Zalta, <https://plato.stanford.edu/archives/fall2003/entries/zombies/>).

processes in semiotic systems other than those associated with written and spoken language? Finally, how might we work toward a rapprochement between (1) discourse-oriented approaches to the mind as a situated interactional achievement and (2) the work in cognitive grammar and cognitive semantics that likewise promises to throw light on the mind relevance of narrative structures but that focuses on discourse productions by individual speakers?² The scope of these questions suggests both the challenges and the opportunities facing narrative theory after the second cognitive revolution.³

MARC BOUSQUET

b. 1963

Marc Bousquet turns the tools of criticism and theory toward the university itself, especially toward academic labor. We customarily think that university students have a special position, seeing undergraduate education as offering wide exposure to different fields of knowledge and personal self-exploration, as well as preparation for a career, and postgraduate education as providing an apprenticeship, particularly in the humanities, for becoming a professor. Bousquet debunks those assumptions, arguing that the category of the student has frequently been used since the 1980s as a way to exploit labor. Our selection, from “The Waste Product of Graduate Education: Toward a Dictatorship of the Flexible” (2002), points out that in teaching-intensive fields like English, doctoral training in most cases functions no longer as a path to a professorial job but as a way to provide cheap labor for higher education. In fact, many are disqualified from teaching after receiving the Ph.D., thereby becoming “waste products,” in Bousquet’s provocative formulation. Since its appearance, “The Waste Product of Graduate Education” has been a lightning rod for graduate student and contingent faculty movements. It has also been a foundational text for contemporary criticism of the corporatization of higher education.

Born in Buffalo, New York, Bousquet studied at Yale University (B.A., 1985), where he took courses with HAROLD BLOOM and other members of the Yale School, a prominent group of critics during the 1970s and 1980s, many espousing deconstruction or other radical views of interpretation. After college Bousquet moved to New York City to write, working part-time as an advertising copywriter and ghostwriter, but in 1991 he returned to academe, studying English at the City University of New York (Ph.D., 1997). While working on a dissertation on nineteenth-century American literature and culture, he was also active in the graduate student union movement there and in the Modern Language Association (MLA). After graduate school, he has taught English at the University of Louisville, Santa Clara University, and Emory University; since 2015 at Emory University, he has been an associate professor in the Department of Film and Media Studies.

In the period after World War II, American universities expanded severalfold, admitting unprecedented numbers of new students and hiring new faculty. The system

was built on substantial support from state and federal governments, which enabled low tuition and fees for students and good job conditions for professors. However, things started changing in the 1970s, and from the 1980s onward governmental support declined in relative terms, tuition and fees increased sharply, and the number of full-fledged professorial positions shrank. One result was that many Ph.D.s in fields like English could no longer attain a full-fledged professorial position, and soon there were twice as many new Ph.D.s as there were advertised professorships. At first, some hypothesized that the problem was temporary, as an older generation, hired in the 1950s and 1960s during the expansion, formed a kind of labor bubble that would resolve in the 1990s when that cohort retired. However, even after they retired, the problem intensified: by 2010 only one-fourth of teaching positions were held by full-fledged faculty. What had happened was that university teaching positions had been reconfigured—instead of putting a professor in most classrooms, higher education management turned to using contingent or “casual” (adjunct, part-time, or nontenurable) teaching labor, installing a system of what Bousquet calls “perma-temping.”

Confronting these changes, a new wave of criticism arose in the 1990s that looked at politics and culture in academe itself. (The movement started somewhat later in the United Kingdom, where more state support was sustained, but it appeared after the turn of the century, gaining strength particularly after an enormous increase of fees in 2010.) It had ties to graduate student union movements active in the late 1980s and 1990s that aimed for better working conditions for graduate students, who do a significant portion of the teaching, particularly at state colleges and universities in the United States, often teaching two courses (of English composition, for instance) each term while pursuing their own studies. Bousquet became involved in the union at City University and also in the Graduate Student Caucus of the MLA, of which he was for a time president and which urged professional organizations such as the MLA to devote more attention to the state of their graduate students. Initially, faculty and those in professional organizations, operating under outdated or overly optimistic expectations, were often ignorant of or in denial about the actual situation: they resisted seeing graduate students as workers, instead saying that teaching was not labor but part of graduate education.

“The Waste Product of Graduate Education” comes out of this context, characterized not only by pinched job prospects but by a lack of critical understanding of these conditions. Most commentators simply invoked the laws of supply and demand—there were fewer jobs, so there must be less demand. But that explanation was misguided, as the number of undergraduate students—the demand for education—increased steadily through the past century. In a sense, Bousquet turns the tools of deconstruction on the figure of the graduate student, showing how the conventional figure of an apprentice was a mystification and asking a basic question: if one is actually not going to get a job, then what is the real position that one holds? He also deconstructs the idea of the “job market.” The figure of the market makes academic hiring appear to be a natural process whose workings are inevitable and, over time, self-balancing. However, Bousquet suggests that the idea of the market functions ideologically, masking what is really going on: deliberate labor strategies geared toward the accumulation of capital at the expense of labor, intensified under contemporary neoliberalism, as diagnosed by DAVID HARVEY, which disrupts secure employment to offer “just-in-time” services or products and privatizes public institutions like education. Bousquet’s solution is that workers should have control—hence his subtitle, “the dictatorship of the flexible,” which plays off the Marxist goal of the dictatorship of the proletariat, updated with the contemporary idea of flexible labor.

Though Bousquet’s deconstruction of the logic of academic labor centers on English—which is typically one of the largest departments on campuses because almost all students in U.S. universities are required to take a composition class—it

struck a nerve for graduate students in many disciplines. In the sciences, for instance, graduate students often work as research assistants in labs where they are subject to sometimes exploitive or substandard conditions, with a limited hope of gaining a professorial job; and in history or mathematics, graduate students teach many lower-level courses and suffer similarly daunting job prospects. Bousquet's analysis also resonated with those who held contingent positions, as it explained their situation and pointed to one way to respond—to organize into what has come to be called “the new faculty majority.”

One other significant element of Bousquet's argument is his moral outrage. When we read theory, we usually encounter a more distant and dispassionate tone. But Bousquet moves between a careful analysis of the system and discernable anger at its effects on those subject to its policies. One might cringe at the crude but unforgettable metaphor of treating graduate students like “a waste product,” but Bousquet's outrage stems from his humanist assumption that people should not be treated that way. He not only criticizes the theoretical system of labor but holds responsible those who have instituted it, particularly executive administrators who invented and implement it. As he puts it, “cheap teaching is not a victimless crime.” He also mocks the tendency of some permanent faculty to offer sympathy (“I feel your pain”), because the clear solution is not mere compassion but political action.

From an organic focus on graduate labor, Bousquet expanded his critique to consider other elements of the current system, notably management (at the other side of the table from labor) and the plight of undergraduates, in his book *How the University Works: Higher Education and the Low-Wage Nation* (2008), as well as in essays and columns in the *Chronicle of Higher Education*, *Inside Higher Ed*, and his website, howtheuniversityworks.com. Bousquet observes that because most permanent faculty in composition do not teach but have become managers of contingent teachers, tenure ironically offers greater protection to administrators than to most faculty. In the phrase of a chapter title of *How the University Works*, he points out that undergraduate “students are already workers,” and he demonstrates that rather than holding a special status, students—particularly those at public colleges and universities—currently work record numbers of hours, a burden that lowers completion rates and impedes academic success. As he did in deconstructing the image of graduate students as apprentices, he shows how companies use the category of “student” to exploit young laborers, so that they don't have to pay higher wages or provide normal job protections and benefits.

The exposure of the real conditions of academe follows in the line of institutional criticism of RICHARD OHMANN, who argued in his groundbreaking *English in America: A Radical View of the Profession* (1976) that English functions not just to cultivate literary values but to inculcate white-collar discipline—one works on paper rather than doing physical labor, one does assignments independently but on time, and one should follow polite etiquette. It also dovetails with ANDREW ROSS's analysis of “mental labor” (see “The Mental Labor Problem,” 2004, above), showing how contemporary tech jobs share characteristics with those in the academy, drawing on love of a pursuit in order to exploit or gain discounted labor. Overall, Bousquet's work forms a major plank in the emerging field of what Jeffrey J. Williams has called “Critical University Studies.” Like the 1980s movement critical legal studies, which sought to expose the way that presumably neutral institutions actually operate in the service of power, critical university studies aims to expose the practices of higher education that support corporate business rather than educational or socially progressive goals. As Bousquet remarks at the close of “The Waste Product of Graduate Education,” the university is not exempt from neoliberal capitalism but in fact enables it and adopts some of its most pernicious practices.

Provocatively framed, Bousquet's theories of academic labor have incited a great deal of debate. Bousquet has been a hero to those in graduate student or contingent positions, but a scourge to those more concerned with administration. Many in the

middle acknowledge the difficulties of academic working conditions, but refuse to see graduate students as labor. And some suggest that while Bousquet underscores a significant problem, his solutions are too idealistic and not pragmatically possible. Nonetheless, while his analysis of “the waste product of graduate education” was first met with controversy, his recognition of the problems of academic labor has become generally accepted, spurring reports from professional organizations, expressions of concern from administrators, and organizing efforts among graduate student and contingent faculty.

* * *

Like many scholars of my cohort, I entered graduate school in 1991 informed by a common sense about academic work significantly influenced by the projections of the 1989 Bowen report, which projected what it emphasized would be “a *substantial* excess demand for faculty in the arts and sciences” by the mid-1990s, with the consequence that early in the new millennium we could expect “roughly four candidates for every five positions.”¹ The department administrators who recruited me into the profession were of the thoughtful and concerned variety: they were up on the literature and very glad to inform me that something called the “job market” would radically improve just six years in the future. There had been a cycle of bad times for holders of the Ph.D., they admitted, but prosperity was just around the corner. During the early 1990s, buoyed in part by the election of a Democrat to the White House,² liberal newspapers and major disciplinary associations recirculated the Bowen projections with a sense of relief and general optimism: with the certain onset of universal health coverage, could full employment for English faculty be far behind? David Laurence, MLA’s staffer for its association of chairs of English departments (ADE), wrote with typical emotion when he enthused, “Friends, the future we’ve all been waiting for is about to arrive.”³ As late as 1995, disciplinary associations and scholars on the state of the profession such as David Damrosch gave serious credence to the Bowen projections of “increased demand” for the academic employment of holders of the doctoral degree.⁴ (In fact, as of this writing, the report

of the American Philosophical Association on employment issues, republished on many department Web sites, still gives credence to the Bowen projections.⁵) It wasn't until 1994 that the *Chronicle of Higher Education* finally ran a short item questioning the validity of the report.⁶ Over the next couple of years, most disciplinary associations, somewhat reluctantly, gave up citing the Bowen projections of a rosy future.

It is easy enough to measure the difference between the five jobs for every four candidates projected by Bowen and the reality of .25 or .30 jobs per candidate. The reporters of the *Chronicle* and one or two angry reviewers of Bowen's subsequent work have made a point of revisiting the rather startling gap between projection and reality.⁷ But the more important and interesting question is analytical: what was wrong with Bowen's assumptions that he strayed so outrageously into fantasy? And what was it about these projections that generated such a warm and uncritical welcome? Essentially, Bowen's "method" was to impose neoliberal market ideology⁸ on data that attest, instead, to the unfolding process of casualization. Most egregiously, for instance, when confronted with data that increasing numbers of doctoral degree holders had been taking nonacademic work since the 1970s, Bowen ignores the abundant testimony by graduate students that this dislocation from the academy was involuntary and imposes the ideology of "free choice" on the phenomenon, generating the claim that this ever-upward "trend" shows that even more people will "choose" similarly, with the result that he projects a need to *increase* graduate school admissions (to compensate for the ever-increasing numbers of people who "choose" nonacademic work). This error is only one element in an overall methodological neoliberalism that assumes the academic labor system operates as a "market" that, by unwarranted analogy to other markets in the business cycle, has a "natural" boom-bust pattern. In order to manufacture an empirically existing "job market" out of data that indicate a labor system running on the continual substitution of student and casual labor for faculty, Bowen has to virtually exclude the labor of students, full-time lecturers, and part-time faculty from his model of the labor system. This is like modeling the solar system without the sun: he populates his "universe of faculty" with only twelve thousand part-timers, whereas the National Study of the Post-Secondary Faculty (NSOPF) saw more than a quarter million (and felt its numbers deeply undercounted).⁹ Furthermore, Bowen's projections rest on the counterfactual assumption that "institutions always *want* to have more faculty and will add faculty positions *when they can afford to do so*"¹—when every nook and cranny of the public discourse on the question holds reams of evidence attesting that what institutions "want" is to accumulate capital and conserve

labor costs by casualizing faculty positions by any means available: early retirement, expanded graduate programs, outsourcing, distance education, deskilling, and the like. Bowen's response to the "bear market"² in academic hiring 1970–89 was, in a sense, predetermined: he started out looking for the complementary swing of the pendulum, what he viewed as the inevitable bull market in academic hiring, and he found it.

But Bowen is hardly alone in erroneously imposing market ideology on data about the structure and relations of academic labor. The interpretive engine driving Bowen's projections—the notion that there is a "job market" in academic labor (a notion that has to be held distinct from true "labor market" analyses) is nearly universal throughout the academy.

* * *

Theorizing Blockage

Under the general neoliberal onslaught, the notion of "market" serves as the only available heuristic for thinking at the level of totality: in this airless environment, even the slightest displacement of market logic yields insight into a very different underlying reality. One doesn't have to become wildly unconventional to accomplish this displacement. For instance: it is perfectly conventional for scholars of professional work more generally to employ the heuristic of a labor monopoly rather than a labor "market." (The best application of a labor-market mode of analysis to academic work might include the concept of segmentation: asking, for example, how is it that women comprise a vast majority in the casual sector and a distinct minority in the tenured sector.) Monopoly control of professional labor generally reflects a social bargain made by professional associations that exchange a service mission with the public for substantial control over the conditions of their work, generally including deciding who gets to practice. In a professionalized police culture, for instance, only the graduates of police academies may practice, and the police unions, like professional associations, supervise this instruction and apprenticeship and safeguard the employment conditions of these recruits against the depredations of would-be amateur and volunteer police practitioners. From this perspective, the ideological literalization of the "job-market" analogy may be seen as having obscured the very useful possibility of describing the academic labor system in perfectly scholarly and conventional terms as a failed monopoly of professional labor. That is: postsecondary educators generally fulfill the service mission that constitutes their half of the bargain, and society in return continues to grant them monopoly control over degrees, but the labor monopoly fails because degree holding no longer represents control over who may practice.³

2. That is, a declining market—a term from securities trading, as is "bull market" (a market in which prices and values rise).

3. On the failure of professional associations to exert even modest influence upon university employers, see Watt's entry, "The Modern Language Association," in Cary Nelson and Stephen Watt, *Academic Keywords: A Devil's Dictionary for Higher Education* (New York: Routledge, 1999), 169–78, and his "What Is an 'Organization Like

the MLA?" From Gentleman's Club to Professional Association," *Workplace*, no. 1 (1998): 27–35. As Lennard Davis observes in his "manifesto" against them, "the obvious thing about professional organizations in general is how well they dovetail with institutional agendas" ("Dancing in the Dark: A Manifesto against Professional Organizations," *Minnesota Review*, nos. 45/46 [1995–96]: 197) [Bousquet's note]. DAVIS (b. 1949), American literary and cultural critic.

Indeed, the inescapable observation must be this: under casualization, *degree holding increasingly represents a disqualification from practice*. The ultimate refutation to job market theory is that, in observing that the holder of the doctoral degree is the “waste product of graduate education,” we are only moving toward an acknowledgment of simple fact.

For most graduate employees, the receipt of the Ph.D. signifies the end—and not the beginning—of a long teaching career. Degree holders frequently serve as university teachers for eight or ten years before earning their doctorate. In English departments, a degree holder will have taught many writing classes, perhaps also a literature survey or theme class, even an upper-division seminar related to his or her field of study. Many degree holders have served as adjunct lecturers at other campuses, sometimes teaching M.A. students and advising their theses en route to their own degrees. Some will have taught thirty to forty sections, or the equivalent of five to seven years’ full-time teaching work. During this time, they received frequent mentoring and regular evaluation; most will have a large portfolio of enthusiastic observations and warm student commendations. A large fraction will have published essays and book reviews and authored their departmental Web pages. Yet at precisely the juncture that this “preparation” should end and regular employment begin—the acquisition of the Ph.D.—the system embarrasses itself and discloses a horrible truth that every recent degree holder knows and few administrators wish to acknowledge: under the actually existing system of graduate education, the terminal degree is no longer the beginning of one’s teaching career but the logical end of that career.

Acknowledging that the receipt of the doctorate names the end of many long teaching careers asks us to confront the reality of casualization. As presently constructed, the system of academic work requires persons who have the terminal M.A. or the M.Phil., or who are ABD⁴—ideally persons who have a well-paid partner or other means of support enabling them to teach for wages below the poverty line for an extended period of time without undue suffering.⁵ Without a degree and presupposing another source of income, persons of this description can and do teach virtually forever. The system cannot run without persons who are doing or who have done graduate study, quite frequently persons who can be represented as on some long trajectory toward the terminal doctorate. For our analysis, the inescapable point must be this: all of these nondegreed persons—graduate employees and former graduate employees working on an adjunct basis—are the “products” of the system of graduate education in the same way that persons who hold the Ph.D. are its product. Indeed, these other “products” are what the labor system produces to sustain itself. The system “really needs” a continuous flow of replaceable nondegreed labor. As presently constructed, the academic labor system requires few if any new degree holders—but it gasps and sputters when there is a tiny interruption in the steady stream of new

4. All but dissertation: the stage in the process of attaining a doctorate after course work and qualifying examinations are successfully completed but before a dissertation is written.

5. The most recent surveys on the question of wages for casual academic teachers are those conducted by the Coalition on the Academic Work Force (see American Historical Association,

“Summary of Data from Surveys by the Coalition on the Academic Workforce,” November 2000). In English composition, fewer than one-third of the responding programs paid more than \$2,500 a class. Nearly half (47.6 percent) paid less than \$2,000 per class: teaching a full-time load or eight classes nets less than \$16,000 annually, usually without benefits [Bousquet’s note].

graduate students (hence the appearance of employment contracts in admittance packets).⁶

What needs to be quite clear is that this is not a “system out of control,” a machine with a thrown rod or blown gasket. Quite the contrary: it’s a smoothly functioning new system with its own easily apprehensible logic, a logic premised entirely on the continual replacement of degree holders with nondegreed labor. The plight of recent degree holders encapsulates this logic. Let us say that Jane Doe has taught sections 101-97 and 101-98 for the past seven years and, for the past four, women’s studies 205, a special topics course fulfilling a university-wide diversity requirement. Upon earning the degree (or in many circumstances much earlier), Doe becomes ineligible to teach those sections, unless given a special waiver or postdoctoral invitation. The reason most universities limit the number of years a graduate student is “eligible to teach” is to ensure a smooth flow of new persons into the system. The many “exceptions” to these eligibility rules are the expression of this labor pool’s flexibility, enabling the administration to be confident that it can deliver low-cost teaching labor “just in time”⁷ to any point on the factory floor.

This system has no trouble bringing persons in through its primary gateways: admission to a graduate program at a research university. Its only problem is disposing of them after it has extracted six to ten years of their labor, to make room for new cheap teachers. This logic of replacement creates many local ironies. Because persons who are declared “ineligible to teach” by a graduate program frequently serve as flexible labor at other campuses, it is often at the junior colleges and other less-prestigious locations that the most experienced and dedicated flexible faculty can be found. That is: whereas the flexible labor at research universities with graduate programs will typically have between zero and five years of experience, the flexible labor at junior colleges will typically have between five and twenty years of experience. These local ironies are important because they make clear that the system’s logic is not designed to provide better teaching even at the richest schools: it is designed to accommodate capital accumulation, which transpires with greater efficiency at the richest schools.

To the extent that our understanding of casualization continues to be grafted onto the assumptions of the job market theory of graduate education, we have continued to flounder epistemologically. Thinking about casualization means abandoning the vividly counterfactual job market premise, that doctoral education functions primarily to create a “supply” of teachers with the Ph.D., and asking instead: What does it mean that the primary

6. This can be described as a system of “all but unwaged” work or a kind of volunteerism, like the Peace Corps, increasingly approachable through an ethos of service or creativity, as with the “avocational” and “supplemental” activities that generate a large fraction of Web content. Recently, Tiziana Terranova, “Free Labor: Producing Culture for the Digital Economy,” *Social Text*, no. 63 (2000): 33–58, and Andrew Ross, “The Mental Labor Problem,” *Social Text*, no. 63 (2000): 1–31, have attempted to chart the strategic exploitation of “free labor” in both digital capitalism and the occupations of mental work more generally. As Ross observes, from the point

of view of accumulation, the phenomenon of doctoral degree holders driving taxicabs does not represent a “waste” of education but testifies instead to the ruthless and systematic conversion of it to “un- or undercompensated labor” in ways we have yet to fully chart (27) [Bousquet’s note]. Terranova (b. 1967), Italian media theorist; ross (b. 1956), Scottish-born American cultural critic (for the essay cited, see above).

7. A term that originated in manufacturing practices of the 1960s and 1970s (now common) that save money by reducing the costs associated with overproduction and excessive inventory; such manufacturing relies on on-demand production.

function of the vast web of doctoral education is to provide the university with teachers who *don't* hold the doctorate?

Any real examination of graduate education and casualization leads inescapably to the conclusion that the real "labor market" in the academy is a market in the labor of persons without the terminal degree. And if this is true, the creation of persons holding the doctorate may be more properly named a "by-product" of the graduate employee system: persons who don't hold the degree are inherently more "marketable" than persons who do. That is, this is a system that creates holders of the Ph.D. but doesn't have much use for them. Indeed, the buildup of degree holders in the system represents a potentially toxic blockage. The academic labor system produces degree holders largely in the sense that a car's engine produces heat—a tiny fraction of which is recycled into the car's interior by the cabin heater, but the vast majority of which figures as waste energy that the system urgently requires to be radiated away. The system of academic labor creates degree holders only out of a tiny fraction of the employees it takes in by way of graduate education: leaving aside the use of M.A. students as instructional staff, doctoral programs in the humanities typically award the Ph.D. to between 20 and 40 percent of their entrants. And the system employs only perhaps a third of the degree holders it makes. Like a car's engine idling in the takeout food line, the system's greatest urgency is to dispel most of the degree-holding waste product.

From the perspective of casualization, the possibility of a toxic buildup of degree holders is not, as commonly maintained by job market theorists, the result of "too many" graduate students. On the contrary, it is precisely the nature of perma-templing to arrange that there are always "just enough" graduate students and other nondegreed flex workers to be delivered "just in time" to serve the university's labor needs. It is in the interest and logic of the system to have as many graduate students as it can employ while producing the fewest number of degrees—or, better yet, to produce persons with degrees who don't make a claim for permanent academic employment. This is one of the reasons why graduate school administrations have recently promoted the Marie Antoinette or "let them eat cake" theory of graduate education: "Why, if they cannot find teaching work, let them be screenwriters!"⁸ This is a kind of excrement theory for managers, through which the degree holder figures as a horrible stain or blot, an embarrassment that the system is hysterically trying to scrape from its shoes. By institutionalizing the practice of preparing degree holders for "alternate careers," the system's managers are creating a radiator or waste pipe to flush away persons whose teaching services are no longer required—precisely because they now hold the degree.

In suggesting the need for an "excrement theory" to replace market theories of graduate education, I am in a way only insisting upon the urgency of recognizing the already excremental circumstance of the degree holder. Persons who actually hold the terminal degree are the traumatic

8. A reference to proposals for alternative careers ("alt-ac") for those with advanced academic degrees—in particular, the suggestion by then MLA president Elaine Showalter in 1998 that Ph.D.s might pursue work in the film industry.

Marie-Antoinette (1755–1793), queen of France executed with Louis XVI after the French Revolution; she is popularly believed to have said "Let them eat cake" after hearing that the people had no bread to eat.

Real⁹ puncturing the collective fantasy powering this system. Degree in hand, loans coming due, the working partner expecting a more fair financial contribution, perhaps the question of children growing relevant, the degree holder asks a question to which the system has no answer: if I have been a splendid teacher and scholar while nondegreed for the past ten years, why am I suddenly unsuitable? The answer to this question is the one that makes us writhe with humiliation: only the degree itself renders the previously splendid teacher suddenly an undesirable waste product.

Nearly all of the administrative responses to the degree holder can already be understood as responses to waste: flush it, ship it to the provinces, recycle it through another industry, keep it away from the fresh meat. Until graduate employees have an excrement theory of their own, they will continue to grasp their circumstance incompletely—that is, that they feel “treated like shit”—without grasping the systemic reality that they *are* waste. Insofar as graduate employees feel “treated like” waste, they can maintain the fantasy that they really exist elsewhere, in some place other than the overwhelmingly excremental testimony of their experience. This fantasy becomes an alibi for inaction, because in this construction agency lies elsewhere, with the administrative touch on the flush-chain. The affect of people who feel “treated like” waste is an appeal to some other agent: please stop treating us this way. Which is to say to that outside agent, “please recognize that we are not waste,” even when that benevolent recognition is contrary to the testimony of our understanding. (And it is of course only good management to tell the exploited and super-exploited, “Yes, I recognize your dignity. You are special.”) Persons who have the grasp of the totality of the system that proceeds from the understanding that they are indeed the waste of that system—persons who know they are not merely “treated like” waste but are in fact the actual shit of the system, being churned inexorably toward the outside, not merely “disposable” labor but labor *that must be disposed of* for the system to work—these are persons who can perform acts of blockage. They are the system’s constitutive exterior: without expelling the degree holder, the system could not be what it is. The difference in consciousness between feeling treated like waste and knowing one’s excremental condition is the difference between experiencing casualization as “local disorder” (which authority will soon rectify) and having the grasp of one’s potential for transforming the systemic realities of an actually existing new order. Where the degree-holding waste product understands its capacity for blockage and refuses to be expelled, the system organizing the inside must rapidly succumb.

There are obviously many ways of writing about the casualization of academic work. The larger picture is of the corporatization of the university and the informationalization of higher education (so that some pale fraud going by the name of education can be delivered in the way information is delivered: “just in time” and “on demand”). I wish to state unequivocally: To these problems generally and to the specific pressure point of graduate student

9. Psychoanalytic term from JACQUES LACAN, who theorized that while the Real situates the Imaginary (modeled on the preverbal mother-child dyad, or on the relation between an infant and its mirror image) and the Symbolic (the

dimension of language, law, and the father) in their respective positions, it is by definition impossible to talk about and can be studied only in its effects on the other two dimensions.

experience, the only solution is the continual mobilization of a united and activist movement of faculty, graduate employees, and students consistent with the most inclusive forms of unionization. And the specific philosophies of mobilization appropriate to unionism by members of the academic community will inevitably be those that seek to bring down the barriers between academic work and other kinds of work, to struggle with the exceptionalism associated with "mental" labor generally.¹ The affiliation of many of the UC graduate employee locals with UAW and the social-movement unionism of CUNY² Professional Staff Congress's New Caucus instantiate these achieved and continuously achievable realities. Ultimately, the most helpful standpoint from which to initiate action will be one that sees contingent labor as the experience of two generations of young people in North America and globally, one that sees the university as a dynamic node of post-Fordist³ employment from the sweatshop to the classroom.

In this enlarged context, it is fair to ask: Why bother to talk about the doctoral degree holder at all, when the experience of contingency is general, or at least generational? Isn't it frivolous to speak of an "excrement theory" of graduate education when the democratic promise of higher education is eroding everywhere around us? Don't we just need more clear positive knowledge regarding flex work? In the big picture, just how important are the problems of underemployed holders of doctoral degrees anyway?

Insisting on the need for an excrement theory of graduate education is in a way making an argument for privileging the systemic location of the degree holder. Without a theory of the waste product—the system's constitutive exterior—we have so far utterly failed to see that the effects of academic casualization are immanent throughout the system (not merely "local" to the casualized). For thirty years the bad knowledge of "markets" for degree holders has enabled faculty unions and disciplinary associations alike to accommodate the creation of a two-tier labor system, the most dramatically tiered labor system in North America. With the exception of the City University of New York, no faculty labor union has ever bargained for graduate students and other flex workers under the basic principle of collective bargaining: parity, or equal pay for equal work. Faculty bargaining agents have accepted the collective fantasy regarding the waste of the labor system, that graduate employees are being "trained" for future jobs, not toiling in the only academic job they will ever have. Subtract the largely

2. City University of New York. UC: University of California. UAW: United Auto Workers (union).

3. After the era of modern industrial production that has been called "Fordism" (notably in the writings of David Harvey). In the 1920s, Henry Ford paid his workers relatively high wages and offered secure full-time jobs so that they could buy expensive consumer products such as the cars they were manufacturing; this "Fordist" strategy is credited with helping to create a middle class. Since the 1970s, companies have moved away from that model toward just-in-time production by casualized labor.

imaginary relationship of most graduate employee labor to a future job, and the systemic effects of that labor are visible as the effects of casualized second-tier labor in any workplace: management domination of the work rules, speedup, moonlighting, grossly depressed wages for everyone.

Without a theory of the specificity of the degree holder's location in the system, the logic of replacement governing this system of disposable labor has been consistently mistaken as a problem only for the relatively small constituency of the graduate student. For instance, the total compatibility of the cheap teaching system with capital accumulation has enabled most schools (or the public funding them) to spend money on other things besides teaching labor—to engage in vast building programs, to create enormous endowments, to launch new programs and services, and so on. From this perspective, one might sentimentally deplore the way that graduate students are exploited by being cycled out of the system after a period of service and debt accumulation but go on to feel that “other constituencies” are surely benefiting from new stadiums, business centers, and prisons. The money saved by cheap teaching surely benefits some people, and if the only people harmed are a few graduate students, or persons whose other sources of income allow them to teach as a kind of philanthropy, what's the big deal?

One of the most useful aspects of the knowledge of graduate employee unionists is the way it addresses the system as a totality, enabling us to see that no one working, learning, or even investing in the education ecology really benefits from the system of cheap teaching.

From *From “I Feel Your Pain” to “Oh, Shit!
Your Problem Is My Problem!”*

* * *

In recognizing that their work is—in fact—labor, graduate employees have been able to get beyond the fetish of “the economy,” “the market,” and “the law” that bedevils second-wave knowledge.⁴ Graduate employees understand that all of these forces exist not in a distant field of titans but in the arena of everyday struggle with the employer for control of the workplace. For the graduate employees, it has not been a question—as for the dominant discourse—of forecasting the economy or learning the limits established by the law—but rather of making the law responsive to their understanding. Despite setbacks in state courts and before the National Labor Relations Board (NLRB)⁵ in the 1970s and the extraordinary, sustained, and frequently illegal opposition by university employers, graduate employee unionists have throughout the 1990s continually won victories writing their knowledge (“we work”) into law. At public universities, the organization of graduate employee unions is subject to state law. In order to win recognition, organizers have had to initiate multiyear legislative campaigns—the ongoing

4. In an omitted passage, Bousquet characterizes academic labor in the United States as moving from a first wave of secure conditions catalyzed by faculty unionization movements in the 1960s and 1970s to a second wave of casualization inspired by neoliberalism in the 1980s

and 1990s, and he projects a third wave propelled by graduate employee unions (GEUs).

5. An independent agency of the U.S. government charged with regulating elections for labor unions and investigating unfair labor practices.

litigation of the UAW-affiliated University of California unions is finally bringing to a close seventeen years of foot-dragging by the university employer. In decisions involving unionists at private universities (Yale and NYU) between 1996 and 2001, the National Labor Relations Board essentially reversed itself on previous holdings (1972, 1974, 1976) regarding the workplace status of graduate employees: under these decisions, graduate students working as teachers and various postdoctoral employees have the right to bargain their working conditions, opening the way to organizing drives at more than a dozen private universities. The will and capacity of university employers to defy the law rival the most ruthless union busting of any other commercial enterprise. When in March 2000 the Illinois House of Representatives passed a bill written by the University of Illinois graduate employees, granting them the right to collectively bargain their working conditions, the support of the state Public Employment Relations Board has meant that even this special act of the legislature has not ended the university's continuing refusal to recognize the union.

Implicit in the understanding "we work" and the corollary understanding that the consciousness of work has to be materialized in law, social policy, and workplace practice are a set of important realizations.

1. We are not "overproducing Ph.D.s"; we are underproducing jobs. There is plenty of work in higher education for everyone who wants to do it. The problem is that this enormous quantity of work no longer comes in the bundle of tenure, dignity, scholarship, and a living wage that we call "a job." The concrete aura of the claim that degree holders are "overproduced" conceals the necessary understanding that there is in fact a huge shortage of degree holders. If degree holders were doing the teaching, there'd be far too few of them. Graduate employees understand that "labor markets" are socially structured: with a single stroke (by, say, recovering the tenure lines lost in either New York or California since 1972), all of the "surplus" degree holders could be immediately employed. Even a modest "reconversion" plan designed to re-create jobs out of part-time piecework would swiftly generate a real shortage of degreed persons. The intervening official knowledge, informed by liberal economic determinism (what I call vulgar liberalism), works to conceal the operation of a policy universe (social, legal, institutional) shaping academic working conditions—a policy universe that organized graduate employees understand that they can and must transform.
2. Cheap teaching is not a victimless crime. Graduate employees understand that the system of cheap teaching hurts everyone, not just the persons who teach cheaply. The cheapness of their labor holds down salaries in the ladder ranks: professorial salaries have stagnated 50 percent against per capita gains since 1970 and have stagnated most in the disciplines most reliant upon graduate employee labor. In this period, tenured faculty have stagnated more in real wages than any other group besides persons without a college education. The cheapness and disorganization of flexible labor supports speed up throughout the system: assistant and associate professors teach more, serve more, and publish more in return for lower compensation than any previous

generation of faculty. Senior faculty suffer as well. At my institution,⁶ as in many other locations, the phenomenon of salary compression is so bad that newly hired junior faculty frequently earn wages similar to or higher than those of associate professors and within spitting distance of the wages of full professors: nearly everyone in the ladder ranks of departments like mine earns between \$40,000 and \$60,000—regardless of rank, distinction, or term of service. This means that a sixty-year-old distinguished scholar with a national reputation and three books (and three children in college) earns a salary similar to that of junior faculty in many other disciplines. Because salary compression is really also salary depression, it also means that this distinguished scholar earns about as much as a good accountant with two or three years of experience or a twenty-five-year-old district attorney. At the end of a career covered with distinction, this professor earns about half of what moderately accomplished professionals in law and medicine earn at the beginning of their careers. He or she frequently earns less than a secondary school teacher, civil servant, factory employee, or bartender with the same term of service. In many ways, he or she also has less control over work and fewer rights to due process, despite the fantasies of unfireable tenured faculty. You have to look pretty hard to find other avenues of employment where sixty-year-old persons who've distinguished themselves at their work get paid less than college faculty. And cheap teaching hasn't only reduced salaries: it has diminished the dignity, research support, and academic freedom of the tenured, as well as affecting their morale and their capacity to govern the academy.

The system of graduate education has also radically altered the experience of general education for nearly all undergraduate students. Ask any thirty-seven-year-old graduate employee with ten or more years of service, who is just beginning to peak in pedagogical and scholarly powers, yet soon to be replaced by a twenty-two-year-old M.A. candidate: Is this a system that teaches well? And that graduate employee will answer: Heck, no, it is just a system that teaches cheaply. Accomplishing its marvelous cheapness by allocating an ever-larger section of the curriculum to flexible instructors who typically have between zero and four years of teaching experience, or who have brought their graduate studies to early termination, the system replaces its most experienced and accomplished teachers with persons who are less accomplished and less experienced. In English departments it is now typical for students to take nearly all first-year classes, many lower-division survey courses, and some advanced topics courses from nondegreed persons who are imperfectly attuned to disciplinary knowledge, who may or may not have an active research agenda, who may or may not have a future in the profession. The whole zone of general education—that is, the education that most persons who go to college have in common with each other—has been radically evacuated. The proletarianized teachers who will be the only experience that most students have of a language department generally don't even enjoy

6. The University of Louisville, where Bousquet was an assistant professor.

such necessities as offices, telephones, or photocopying privileges—much less the protections of due process that guarantee academic freedom. It is usual practice for administrations to simply dispense with the services of flexible teachers who exercise academic freedom: those who teach controversial material, of course, but also those who generate student complaints by teaching difficult material. Flexible teachers cannot afford to provide an obstacle to the advancing administrative ideal of an ultimately education-free transfer of cash for course credits. Most citizens wouldn't dream of employing an accountant without an office or a telephone—or go to a lawyer who practiced avocationally—but they regularly send their children for writing and liberal arts instruction by a person working out of the trunk of a car.

To paraphrase Emma Goldman,⁷ cheap teaching is a social crime and failure. This is true even if the injuries to all persons who teach are excluded from the equation. Even the persons who seemingly “benefit” from the labor savings—students and the public they serve and also become—are substantially injured. Nor is it just a matter of teaching. The whole complex of research production is diminished by the elimination of tenurable faculty positions. Casualization systematically replaces the scholarly activity of the professoriat with new management tasks and profoundly degrades the undergraduate educational experience—producing such “efficiencies” as a reduced variety of course offerings, reduced access to faculty doing active scholarship in their field, and the regular replacement of experienced professionals with students and avocational labor.

3. Casualization is an issue of racial, gendered, and class justice. Frequently the cheap teachers are persons who can afford to teach with little or no compensation, as idealized in the recent financial services commercial illustrating the corporate employee taking a plush early retirement so he can “afford” to realize his “dream” of being a teacher. What does it mean that increasingly only persons who can “afford to teach” are entering higher education as a profession? Surely one reason the neoliberal second-wave knowledge took such hold of the academy during the 1980s and 1990s is the degree to which academic casualization has increasingly closed the profession to persons who rely on waged work to live—and replaced them with persons for whom teaching figures as a secondary income. If it typically requires family support to become a teacher, how do factors such as class and the racialized wealth gap affect the composition of the professoriat? Today's graduate employee unionists are at least half women, and they understand that casualization is a feminist issue. The recent Coalition of Graduate Employee Unions' “Casual Nation” report (2000) headlines the fact that women take about 40 percent of the doctorates but represent about 58 percent of the full-time temporary instructors and only 25 percent of senior professors. There is a sharp generational break: women who joined the faculty from 1985 to 1992 were much less likely to join the faculty as members of the ladder ranks than women

7. Russian-born American anarchist and writer (1869–1940); in 1917 she published an essay titled “Prisons: A Social Crime and Failure.”

who joined the faculty in earlier cohorts. Despite a plentiful “surplus” of women holding the doctorate, junior faculty women are substantially more likely to work in poorer-paying and less-satisfying sectors of higher education than junior faculty men. The NSOPF “New Entrants” analysis shows that fewer than half of the women who began full-time work from 1985 to 1992 held the Ph.D.: women were about as likely to hold the M.A. (44.2 percent) as the Ph.D. (48.4 percent), whereas male “new entrants” overwhelmingly hold the Ph.D. (71.0 percent).⁸ The only fields in which women have achieved near parity in numbers with male faculty in the upper ranks are the most ill-paid fields, primarily language, literature, and writing instruction. The sectors in which women outnumber men in the academy are uniformly the worst paid, frequently involving lessened autonomy (as in writing instruction, where the largely female staff is generally not rewarded for research, usually excluded from governance and even union representation, and frequently barred even from such basic expressions of academic discretion as choosing course texts, syllabi, requirements, and pedagogy).

4. Late capitalism⁹ doesn't just happen to the university; the university makes late capitalism happen. The flexible faculty are just one dimension of an informationalized higher ed—the transformation of the university into an efficient and thoroughly accountable environment through which streaming education can be made available in the way that information is delivered: just in time, on demand, in spasms synchronized to the work rhythm of student labor on the shop floor. The university has not only casualized its own labor force: it operates as a kind of fusion reactor for casualization more generally, directly serving the casual economy by supplying it with flexible student labor (which is to say: by providing flex workers with the identity of “student”), normalizing and generalizing the experience of casual work. The casualization of the higher education teacher has been accompanied by the wholesale reinventing of what it means to be an undergraduate: the identity of “student” has been disarticulated from the concept and possibility of leisure and vigorously rearticulated to contingent labor. In the twenty-first century, “being a student” names a way of work. The graduate employee understands that the gen-x¹ structure of feeling proceeds from the generational register of the economic order: insofar as casualization colonizes the experience and possibilities of “youth,” cheerfully extending the term of youth and youthful “enjoyment” into the fourth decade of life—because youth now delimits a term of availability for super-exploitation.

8. M. J. Finkelstein, R. Seal, and J. H. Schuster, “New Entrants to the Full-Time Faculty of Higher Education Institutions” (Washington, D.C.: National Center for Education Statistics, 1998), 98–252 [Bousquet's note].

9. A Marxist term for capitalism after World War II, characterized by a shift from industrial pro-

duction to mass consumption, globalized markets, and commodified information, consonant with neoliberalism; see, e.g., FREDRIC JAMESON's *Postmodernism, or the Cultural Logic of Late Capitalism* (1991).

1. Generation X, the American cohort born between, roughly, the mid-1960s and 1980.

Moving from the discourse of “I feel your pain” to the collective recognition that our problems are mutual ultimately means acknowledging the intellectual and political leadership of the graduate employee union movement. Acting at the level of system means acting as graduate employees have acted, writing their knowledge into law and policy at every level of social organization, from the campus and community to state and federal statute, developing linkages to labor on a global scale. This means that everyone else implicated in the system of academic work will benefit from “acting with” the graduate employee (rather than “sounding like” them while “acting with” administration). Against the dominative totality of higher ed marketization—the flexible dictatorship of university administration—the possibility of antagonism at the same level of systemic totality is emergent in the GEU movement. Acting with the GEU movement, we are privileging the perspective of the graduate employee (as incipient degree holder) and doing so in the belief that accomplishing the particular agenda of the graduate employee will address the problems that are general to the system (but feel “specific” to other locations). That is, in re-creating jobs out of the piecework done by the graduate employees and other incipient degree holders, we address with one stroke the problems experienced by everyone else: tenure-stream faculty benefit because eliminating cheap teaching raises the price of experienced teaching and reinstalls the value of research in pedagogy; undergraduates benefit by receiving experienced, secure faculty (who “do knowledge” rather than “provide information”) in the first two years, when they are most vulnerable; other movement activists benefit from a more diverse and de-marketized professoriat; the public, taxpayers, and employers receive a more literate, accomplished, thoughtful, and civically oriented citizenry—the embodied and political subjects of education, not the reactive “meatware” of information capitalism. We of the academic system would in a way, then, be submitting to a “dictatorship of the flexible,” saying instead of “I feel your pain” something more like this: “Oh heck, now I realize that your problems are intimately related to my own difficulties. Solving your problem *is* solving my problem.” This is an accession to the moral and political imperative of the incipient degree holders, acknowledging their marginality as a constitutive exterior, where actions have effects immanent throughout the system as a whole. And to the extent that the system of academic labor is a system interlocking in a plane with other systems, it seems plausible that a dictatorship of the knowledge proletariat could be articulated to the proletarian struggles elaborating themselves elsewhere. (The GEU movement, for instance, might be the basis for an important evolution in the undergraduate movement against sweatshops, which in my view would acquire even greater vitality by becoming conscious of the North American student’s own status as flexible labor.) The articulation of the GEU movement to other proletarian movements will necessarily take place on the equal relation of the shared consciousness of work rather than the hierarchical relation of expertise. But the articulation of the GEU movement within “the knowledge class” itself *will* take place in a hierarchical relation—a revived apprenticeship, if you will—except that this apprenticeship runs on the opposite trajectory: we can only have a workers’ movement in the academy when the professoriat (and their unions and institutions) are willing to politically and intellectually indenture themselves to the graduate employee.

MARK MCGURL

b. 1966

Mark McGurl has defined the contemporary period in American literature as “the Program Era.” From the time of the Romantic poets, such as WILLIAM WORDSWORTH, we have tended to think of literature as arising from solitary genius; but since World War II most writers in the United States have attended a creative writing program, and many teach in them. Some see this institutional setting as a constraint, thwarting originality, but McGurl argues that the expansion of the American university system for the most part has fostered good conditions for writers and precipitated a remarkable flourishing of fiction. Blending the systems theory of the German sociologist Niklas Luhmann with literary history, in “The Program Era: Pluralisms of Postwar American Fiction” (2005) McGurl examines how writing programs work through autopoiesis—that is, how they reflexively generate writing, often about writers and writing itself. The system cultivates modernist literary values and techniques in an era of mass media and technology, resulting in what he terms “technomodernism,” and it also encourages “high cultural pluralism,” valuing the diverse identities of individual writers.

Born in Connecticut, McGurl attended Phillips Exeter Academy and Harvard University (B.A., 1989). He then explored a career in literary journalism and publishing, working for the *New York Times* and *New York Review of Books* and doing freelance writing, including an essay on the ecologically oriented criticism of ANDREW ROSS in *Lingua franca* (1994). However, as he recounts in an interview, he decided that he was best suited to work as a literary scholar, so he entered the graduate program at Johns Hopkins University, where he studied with the New Historicist critic Walter Benn Michaels and the art historian Michael Fried, receiving his Ph.D. in 1998. He has taught at UCLA and, since 2011, Stanford University, where he is Albert Guérard Professor of Literature.

McGurl represents a generation of scholars who are reconsidering American literary history. During the 1980s and early '90s, when he started graduate school, the New Historicism, practiced by STEPHEN GREENBLATT, Michaels, and others, was a leading approach: it drew on MICHEL FOUCAULT's theories of the way that modern institutions, such as schools, hospitals, and the census bureau, perpetuate a culture of discipline and surveillance. New Historicists emphasized how texts, even if expressing progressive views, frequently played out “subversion and containment”—that is, a text might seem to dissent from and thus subvert capitalism, for example, but in actuality it was still a product of capitalism, did not alter the relations of power, and tacitly reinforced capitalism's disciplinary hold. In contrast, McGurl sees institutions more neutrally. Turning to Luhmann rather than Foucault, he explains how writing programs spur writing in a kind of feedback loop, or autopoiesis. Though bounded as a game might be, the system enables creativity. Put a lot of people in a workshop and some will write good stories and novels.

Like many influential critical insights, McGurl's starts with a simple observation that others seem to have missed or misinterpreted: perhaps the most significant development in contemporary American literature has been the rise of creative writing programs. The first such program was founded at the University of Iowa in 1936, and particularly from the 1960s onward, as U.S. universities expanded, these programs multiplied; their numbers climbed to more than 300 by 2000. Their establishment changed the way writers were trained: before World War II, most writers worked in journalism or other jobs, whereas by the latter part of the century, most had significant connections with university creative writing programs. This shift has prompted complaints that contemporary writing has become too routinized and that

writers have only a small world to portray, as they have spent most of their time in academe.

McGurl provocatively turns the tables on this bias against creative writing in his essay "The Program Era," whose thesis he further elaborates in his book *The Program Era: Postwar Fiction and the Rise of Creative Writing* (2010), which won the Truman Capote Prize for Literary Criticism. In our selection, he surveys the historical facts of the modern American university system and the rise of creative writing in it. To counter negative views of these programs, he points out their overall excellence and the productivity of their participants. Driven by autopoiesis, the system encourages "portraits of the artist" and other self-representations that center on education. As modernist authors became a key part of the canon in American higher education through the mid- and late twentieth century, modernism became a dominant value of the system; the result, combined with awareness of contemporary mass media and technology, has been what McGurl calls technomodernism, a label that might describe the work of postmodern authors like Thomas Pynchon but also extends to more recent writers such as David Foster Wallace and Karen Tei Yamashita. A second and interrelated line of fiction falls under what McGurl calls "high cultural pluralism." The value of diversity, foregrounded by the postwar "multiversity," was internalized by fiction coming from the program, which stressed individuality not just in ethnicity and race but in region, class, and other factors. The lower-middle-class modernism evident in writers such as Raymond Carver and Joyce Carol Oates reflects the adoption of highbrow modernist modes by students who were outside the traditional elites and were welcomed into the postwar U.S. university education system.

In addition to defending creative writing, "The Program Era" revises the standard definition of the current period—as seen, for instance, in FREDRIC JAMESON's Marxist theory of postmodernism. For Jameson, post-1945 literature and other arts reflect the current mode of capitalism, which he identifies as consumer or postindustrial capitalism. McGurl does not necessarily disagree with this view, but he finds that the more specific institutional history of creative writing offers a better explanation of the tendencies of contemporary fiction. He turns to a sociology of the institution rather than to the macro history of capitalism.

The first decade of the twenty-first century saw the rise of new sociological approaches to literature in place of linguistic or other historical focuses, and McGurl forges a distinctive sociological approach. In his first book, *The Novel Art: Elevation of Fiction after Henry James* (2001), McGurl uses PIERRE BOURDIEU's concept of cultural capital to explain the embrace of elitist techniques in modernist fiction during the first half of the twentieth century—in effect, making the novel "high art." To explain the situation after World War II, he finds systems theory more relevant, as it illuminates how complex natural and institutional systems generate their effects. This version of the sociology of American literature differs from that of RICHARD OHMANN, perhaps the leading U.S. critic of the institution of literature, whose *English in America: A Radical View of the Profession* (1976) examines literary studies in terms not of literature per se but of the ways in which literary instruction supports the status quo and reinforces class differences. Ohmann has likewise looked at the institutions surrounding contemporary fiction in "The Shaping of the Canon: American Fiction, 1960–1975" (1983; see above), focusing particularly on publishing and reviewing and on the work done by agents, editors, advertisers, reviewers, and professors, who all contribute to produce a book. For Ohmann, fiction is heavily influenced by the professional-managerial class position of those who create it, as they elevate fiction that assumes their values, taste, and sensibility. In "The Program Era," McGurl sees fiction almost entirely in terms of its academic location, in a self-enclosed feedback loop.

"The Program Era" has drawn a great deal of response, both positive and negative, and almost immediately was regarded as a major contribution to the discussion.

One rebuttal pointed out that it was too limited in its account and in fact many writers worked independently of academe. Calling the division “MFA vs. NYC,” the novelist Chad Harbach observed that there are actually two leagues of fiction writers, those who have M.F.A.s and earn their livelihood teaching, and those who live primarily in New York and earn their livelihood writing. The former favor short stories, the latter novels; the former lean toward complexity, the latter toward readability; the former are more oriented toward an academic audience, the latter toward a larger public; the former see books as a credential, the latter as a living.

Other critics have faulted the narrow focus of the systems framework, which sets to the side other sociological concerns, such as publishing, as well as historical forces like capitalism. In addition, it is not clear how McGurl’s thesis applies to poetry, which forms a significant part of writing programs and has a markedly different social and professional position than fiction. Nonetheless, McGurl is acknowledged—notably by Jameson himself—to have proposed a new paradigm for considering contemporary literature, and his thesis has opened a new approach for research on the ways in which writing programs have influenced contemporary literature.

“The Program Era: Pluralisms of Postwar American Fiction” Keywords: Institutional Studies, Literary History, Modernity, The Novel, Postmodernity

From The Program Era: Pluralisms of Postwar American Fiction

It had to be U.

—Richard Powers,¹ *Galatea* 2.2 (1995)

1. *Getting with the Program*

The American writer’s intimacy with the university in our time is not an entirely unprecedented phenomenon. If only as students, occasionally as teachers, writers have been spotted on campus before now. The gradual conjoining of the activities of literary production and teaching over the course of the postwar period is, however, in the sheer scale of the institutional program building upon which it has depended and in the striking reversal of attitudes that it suggests about as close to a genuine literary historical novelty as one could hope to see. Once perceived as the stuffy enemy of modernist innovation in the arts, the last place a self-respecting artist would want, or be welcomed, to ply his or her trade, the university has with the rise and spread of classroom instruction in creative writing—and with it the creative writing professorship and other forms of writer-in-residency—become perhaps the most important patron of artistically ambitious literary practice in the United States, the sine qua non of countless careers. “All this represents a very great change,” wrote Alfred Kazin in the mid-1950s, already amazed by the transformation he was witnessing: “When I was in college in the ’thirties, it was still well understood that scholars were one class and writers quite another. They did not belong to the same order of mind, they

1. Celebrated American novelist (b. 1957); *Galatea* 2.2 is a novel set in a university where a researcher is trying to develop artificial intelli-

gence capable of passing an M.A. qualifying exam in English literature.

seemed quite antithetical in purpose and temperament, and at the very least, they needed different places to work in.”²

Of course there were some obvious exceptions to Kazin’s rule—most importantly the New Critics,³ who had previously convened in the environs of Vanderbilt in the 1920s as the Fugitive poets and whose later promotion of the practice of close reading of literary texts in the classroom would harmonize conspicuously well with the obsessive concern for “craft” that began to define writing programs at roughly the same time.⁴ The New Critics began as relatively marginal figures in academia, with low status even at places like Vanderbilt, but lived to see their ideas lodged at the core of American literary studies in the postwar period; in this they can be taken as emblematic of American writers more broadly, who, since the founding of the Iowa Writers’ Workshop in the late 1930s, have gradually seen the “extramural” consciousness of their modernist predecessors turned inside out—or, rather, outside in. The handful of creative writing programs that existed in the 1940s had, by 1970, increased to forty-four in number. By 1980 there would be more than one hundred, and as of 2000 there were more than three hundred creative writing programs in the United States, all of them staffed by practicing writers, most of whom, by now, are themselves holders of an M.F.A. degree in creative writing.⁵ You don’t have to be a dogmatic historical materialist to believe that a transformation of the institutional context of literary production as fundamental as this one might matter to a reading of postwar American literature.

Indeed, one might imagine that the rise of the writing program would have already attracted considerable attention from literary scholars, who have after all been on hand to watch it occur at close range. But in fact—perhaps as a result of its occurring at too close range—it is only a small exaggeration to say that the rise of the creative writing program has been ignored in historicist studies of the postwar period. Discussion of the writer’s relation to the university has instead largely been confined to the domain of literary journalism and to the question of whether the rise of the writing program has been good or bad for American writers.⁶ Whether couched in populist

2. Alfred Kazin, *The Inmost Leaf: A Selection of Essays* (New York, 1956), p. 244 [McGurl’s note; some of the author’s notes are abridged, and some omitted]. Kazin (1915–1998), American literary critic and member of the group called the New York Intellectuals.

3. Group named and led by the poet and critic JOHN CROWE RANSOM, which included his onetime students CLEANTH BROOKS and Robert Penn Warren (1905–1989); they first gathered in the 1920s as the Fugitive poets at Vanderbilt University, celebrating the agrarian values of the U.S. South against those of the industrial North.

4. One of the original Fugitive-Agrarians, novelist Andrew Lytle, would teach fiction writing at Iowa for a time, where he was a mentor of his fellow southerner Flannery O’Connor [McGurl’s note]. O’Connor (1925–1964), major American fiction writer.

5. These figures are reported in David Gershon Myers, *The Elephants Teach: Creative Writing since 1880* (Englewood Cliffs, N.J., 1996), p. 146. Figures from 2000 are gleaned from the Associated Writing Programs, *AWP Official Guide to Writing Programs*, 10th ed. (New York, 2002). As

Myers notes, the formation of the AWP in 1967, coming some 80 years after the formation of the Modern Language Association, itself marks an important moment in the history of creative writing programs [McGurl’s note].

6. Mainly focused on the six decades leading up to World War II, Myers’s *The Elephants Teach* is to my knowledge the best account of the historical emergence of the ideas and institutions of creative writing instruction in the U.S. and has been of help in establishing the background of my project here. Some initial steps toward an analysis of the postwar writer’s relation to the university are taken in *The American Writer and the University*, ed. Ben Siegel (Newark, N.J., 1989). A theoretically assertive account of the workshop is available in Donald Morton and Mas’ud Zavarzadeh, “The Cultural Politics of the Fiction Workshop,” *Cultural Critique*, no. 11 (Winter 1988–89): 155–73, which argues that the writing program’s commitment to realism betrays its efforts to “keep intact the legitimacy of bourgeois values” (p. 159). The weakness in this left-formalist argument is not in the claim that the writing program is a bourgeois enterprise, which

or elitist terms, the suspicion running throughout these discussions is that there may be something inherently wrong with artistic activity being, as critics ominously say, institutionalized in such a way. Published to considerable fanfare in *Harper's* magazine in 1989, Tom Wolfe's "manifesto" for a new social realism, "Stalking the Billion-Footed Beast," is perhaps the most notorious of these critiques, complaining of "writers in the university writing programs" who in "long, phenomenological discussions" have "decided that the act of writing words on a page" is the "real thing and the so-called real world of America" is the fiction.⁷ In place of this effete and tedious navel-gazing, Wolfe would have writers return to the robust example of nineteenth-century naturalism, as in Zola,⁸ where the practices of novel writing partially converged with those of investigative journalism.

Others such as John W. Aldridge⁹ have given thumbs down to the writing program, not only for its removal of writers from the manifold stimulations of the real world, but for the damage it has done to the originality of the individual authorial voice. Demonstrating the continuing appeal of the romantic conception of the artist as an original genius, Aldridge blames "assembly-line" writing programs for producing a standardized aesthetic, a corporate literary style that makes a writer identifiable as, say, an Iowa writer. The claim here is that the collective pursuit of perfectly crafted, "workshopped" prose has the effect of eliminating the salutary unpredictability of the students in question, ironically reproducing the machine-made quality of formulaic genre fiction on another, slightly more elevated or rarefied cultural level. The result, according to Aldridge, is that products of the writing program become, not writers, but "clonal fabrications of writers" who can only be expected to produce "small, sleek, clonal fabrications of literature."¹

A nervousness surrounding these issues is evident even in the official history of the illustrious program at Iowa, available on its website, whose rhetorical curlicues are a typical response to the simple but difficult questions that have haunted creative writing programs since their inception:

Though we agree in part with the popular insistence that writing cannot be taught, we exist and proceed on the assumption that talent can be developed, and we see our possibilities and our limitations as a school in that light. If one can "learn" to play the violin or to paint, one can "learn" to write, though no processes of externally induced training can ensure that one will do it well. Accordingly, the fact that the Workshop can claim as alumni nationally and internationally prominent poets, novelists, and short story writers is, we believe, more the result of what they brought here than of what they gained from us. We continue to look for the most promising talent in the country, in our conviction that writing cannot be taught but that writers can be encouraged.²

it most certainly is, but in the assumption that antirealist fiction (hardly absent from the writing program establishment in any case) would necessarily be a nonbourgeois enterprise [McGurl's note].

7. Wolfe, "Stalking the Billion-Footed Beast: A Literary Manifesto for the New Social Novel," *Harper's Magazine* (Nov. 1989): 49 [McGurl's note]. Wolfe (b. 1931), American writer known for combining the techniques of journalism and fiction.

8. Émile Zola (1840–1902), French writer who

pioneered "naturalism," a literary movement that combines realism with scientific determinism, so that characters are portrayed as determined by their social environment.

9. American literary critic (1922–2007).

1. John W. Aldridge, *Talents and Technicians: Literary Chic and the New Assembly-Line Fiction* (New York, 1992), p. 28 [McGurl's note].

2. <https://writersworkshop.uiowa.edu/about/about-workshop/philosophy> [McGurl's note, with URL updated].

Tilling the symbolic ground between teaching and development, teaching and encouragement, this cannily argued document manages on the one hand to pay respect to the “popular” idea of natural individual genius and to communicate a strong sense of Iowa’s considerable historical importance and continuing prestige. The point here, indeed, is to make populism and elitism indistinguishable. The same sort of fusion is evident in the creative writer’s distinct claim to prestige in the English departments to which creative writing programs tend to be attached; although typically somewhat undereducated, he or she may actually be known to a nonacademic readership. Combined with the spiritual privilege derived from the writer’s intimate commerce with the Muse, this offsets to some degree the intramural dominance of Ph.D. scholars who largely run the place but who are famous, if at all, only to each other.

Writing programs: pro or con? There is nothing wrong with this debate, but surely it’s time for the museless pedants to have their say. What is needed now, that is, are studies that take the rise and spread of the creative writing program not as an occasion for praise or lamentation but as an established fact in need of historical interpretation: how, why, and to what end has the writing program reorganized American literary production in the postwar period? How might it be brought to bear on a reading of the literature itself? Focusing on fiction at the expense of the equally interesting (and potentially interilluminating) cases of poetry and the other arts, this essay will take some modest steps toward answering these large questions. It will do so precisely by taking the two charges most frequently heard against program fiction in literary journalism—that it is self-involved, that it is unoriginal—as occasions for a nonpartisan examination of the reflexivity and systematicity of American fiction in the Program Era.³ Unpacking, in turn, some of the contents of that well-travelled portmanteau *postmodernism*, this production will be described as being governed by the interaction of two aesthetic formations called, respectively, high cultural pluralism and technomodernism. Only in conclusion will we return to the important question of aesthetic value judgments, seeing if the studiously neutral scholarly account I will have begun to sketch here can be made to intersect meaningfully with a debate from which, until now, scholars have mostly absented themselves.

2. In Studentdom

It’s hard to say when exactly the presence of creative writers on campus came to seem natural—assuming that it ever has. Certainly as late as the mid-1960s, by which time creative writing programs were beginning to multiply exponentially, the sense of strangeness hovering about this juxtaposition of scholars and writers had not yet diminished. This can be gauged from the prefatory “Cover-Letter to the Editors and Publisher” attached to the long, bizarre, comic novel *Giles Goat-Boy* (1966), where John Barth notes that “like most of our authors these days I support myself by preaching what I practice.”⁴

* * *

3. McGurl is playing off the title of a major critical book on modernist writers, *The Pound Era* (1971), by Hugh Kenner; that era, according to Kenner, was the modernist period of the early 20th century, at whose center he placed Ezra

Pound (1885–1972).

4. John Barth, *Giles Goat-Boy or, The Revised New Syllabus* (Garden City, N.Y., 1966), p. xviii; hereafter abbreviated GGB [McGurl’s note]. Barth (b. 1930), American novelist.

John Barth began to write *Giles Goat-Boy* at Pennsylvania State University, a land-grant institution where, as he later explained, “in an English department of nearly one hundred members” he taught his “classes not far from an experimental nuclear reactor, a water tunnel for testing the hull forms of missile submarines, laboratories for ice-cream research and mushroom development, a lavishly produced football program . . . , a barn-size computer with elaborate cooling systems . . . and the literal and splendid barns of the animal husbandry departments.”⁵

Massively infused with federal funding for the support of cold war weapons technology and other scientific research but still catering to a regional and state economy (and its large football fan base), the secular university has become, for Barth, comically expanded and diversified in its worldly pursuits, nothing like the pious gentleman’s college of yore. In this Barth echoes what was no doubt the most influential and widely read account of higher educational institutions in the early sixties, Clark Kerr’s *The Uses of the University* (1963), which proposed the neologism “multiversity” as a description of these institutions that are, as Kerr later reiterated, “pluralistic in several senses: in having several purposes, not one; in having several centers of power, not one; in serving several clienteles, not one.” The multiversity, in short, “worship[s] no single God” and “constitute[s] no single, unified community.”⁶

* * *

* * * Barth’s disciplinary allegory works in both directions. If it reimagines the secular research university in terms of a spiritually elevated literary tradition, it also strongly associates the “preaching” and practice of literature in the university with the scientific research being conducted in the same institutional space. Clark Kerr had done the same when he had begun to rationalize the presence of creative writers and other artists on campus by linking them to scientists:

Another field ready to bloom is that of the creative arts, hitherto the ugly ducklings or Cinderellas of the academic world. America is bursting with creativity in painting, music, literature, the theater with a vigor equaled in few other parts of the world today. . . . In the arts the universities have been more hospitable to the historian and the critic than to the creator; he has found his havens elsewhere. *Yet it is the creativity of science that has given science its prestige in the university.* Perhaps creativity will do the same again for the humanities, though . . . the tests of value are far less precise [than in the sciences].⁷

Updating the traditional term, Barth associates creative writing in the university not with the dusty workshop but with the modern cold war laboratory. Often labeled postmodernist, this sprawling enterprise would, I think, more helpfully be described as technomodernist. This term reasserts the

5. Barth, “Four Forewords: *Giles Goat-Boy*,” *Further Fridays: Essays, Lectures, and Other Nonfiction*, 1984–1994 (Boston, 1995), p. 269 [McGurl’s note].

6. Kerr, *The Uses of the University* (Cambridge, Mass., 1972), p. 136 [McGurl’s note]. Kerr (1911–2003), American economist who, as chancellor of

the University of California at Berkeley (1952–58) and then president of the entire University of California system (1958–67), oversaw its massive expansion.

7. Kerr, *The Uses of the University*, pp. 112–13 [McGurl’s note].

obvious continuity of much postwar American fiction with the modernist project of systematic experimentation with narrative form, even as it registers a growing acknowledgment of the “scandalous” continuity of the literary technē⁸ (craft) with technology in the grosser sense—including, most importantly, mass media technology. Seen in the sickly light cast by the latter, modernist narrative becomes visible not as the antithesis of debased genre fiction but as a genre in its own right called literary fiction—which relativization does not, it should be noted, disable the distinction between high and low (one common account of what postmodernism entails) but situates it in a larger cultural industrial system.⁹ The potential for such an acknowledgment of kinship between high literary technē and media technology was already latent in an earlier modernist fascination with technology explored by Hugh Kenner in *The Mechanic Muse* (1987) and in the high literary appropriation of low media one sees in John Dos Passos’s *U.S.A.* trilogy (1930–36).¹ And while the term is most easily applied to those writers who have gained prominence by featuring techno-mediatic themes—that is, mostly white males like Barth, Thomas Pynchon, Don DeLillo, Robert Coover, Joseph McElroy, Richard Powers, and so on—experimental narratives like Samuel Delany’s *Dhalgren* (1975) and Karen Tei Yamashita’s² *Tropic of Orange* (1997), with their depictions of simultaneously ethnicized and media-saturated landscapes and their ethnically marked authorship, suggest a broader reach. The most literal instantiation of technomodernism, meanwhile, is found in the emergent field of electronic literature (including hypertext fictions like Shelley Jackson’s³ *Patchwork Girl* [1995]), strongly associated with Brown University and with the pedagogy of Coover. Remediating the values and practices of textual modernism (the fragmentation, difficulty, and general “literariness” still so abundant in Coover’s own print productions), electronic literature replays the venerable modernism/mass culture dialectic in its status war with a nonliterary commercial variant, the video game.

* * *

3. Autopoetics

Giles Goat-Boy is only one of the odder of innumerable examples of a conspicuously flourishing genre in the postwar period, the campus novel. Typically written as satire, this genre usually registers not the metaphysics but, more humbly, the ironies of institutionalization. The proliferation of universities as settings for novels is what we might call a thematic symptom of a larger shift in the institutional arrangements of postwar literary production as such. The question is whether and to what degree all novels aspiring to

8. The Greek word (*technē*) that also means “art, skill.”

9. Indeed the high/low distinction floats everywhere in this system, internally differentiating genre-fiction categories (science fiction, detective fiction, spy novels, fantasy novels, romances, and so on) and literary fiction alike along various scales, including those of greater or lesser consumability, originality, and/or self-conscious attention to craft [McGurl’s note].

1. The novel sequence by the American novelist

Dos Passos (1896–1970)—*The 42nd Parallel* (1930), *1919* (1932), and *The Big Money* (1936)—includes newspaper headlines and other popular forms.

2. Japanese American novelist (b. 1951). The “white males”—Barth, Pynchon (b. 1937), DeLillo (b. 1936), Coover (b. 1932), and McElroy (b. 1930)—are well-known literary novelists; Delany (b. 1942), an African American writer, is best known for his science fiction.

3. American writer (b. 1963).

the honorific status of literature must now be considered campus novels of a sort. Beyond the question of a novel's setting, for instance, how might we see the metafictional reflexivity of so much postwar fiction as being related to its production in and around a programmatically analytical and pedagogical environment? That, certainly, was Wolfe's implication in "Stalking the Billion-Footed Beast." Pursuing this line of inquiry, but setting aside Wolfe's negative evaluation of the phenomenon, we could read the reflexive prose experiments of academic creative writers such as Barth not as radically "deconstructive," as they sometimes are, but as radically conventional, as testaments to the continuing interest of literary forms as objects of a certain kind of professional research.

At least one contemporary strand of theoretical endeavor, systems theory, would insist that we understand reflexivity, not as an invitation to the abyss, but as a necessary component of any system's self-constitution, its "autopoiesis."⁴ Self-reference in this view is perfectly routine, not impeding but participating in the making and organizing of things, including literature, whose construction of autonomous fictional realities serves, according to Niklas Luhmann, to make visible "the inevitability of order as such."⁵ While reflexivity, as systems theory sees it, is the general condition of reflexive modernity—this is why Mark Seltzer can produce such a powerful diagnosis of what he calls the pathological public sphere from a reading of the lowly true crime genre—a particular aura of intellectual sophistication still attaches to overtly reflexive (that is, reflexively reflexive) projects, inviting critics to take them seriously as participating in the modernist/postmodernist high literary tradition.⁶ Holding up a flattering mirror to the critic's own sophistication, these invitations are often accepted, but at the risk of the critic's experiencing his or her tiresome redundancy.

What this means is that, in the modernist tradition, the portrait of the artist is not only an important single book and an important genre but also an indication of the routine operations of literary modernism. For the modernist artist, that is, the reflexive production of the "modernist artist"—the job description itself—is a large part of the job. This reveals itself most obviously on the level of theme. Flouting the strictures against personality proposed by T. S. Eliot in "Tradition and the Individual Talent," works like Joyce's *Portrait of the Artist as a Young Man*, or Thomas Wolfe's *Look Homeward, Angel* (1929), or—looking ahead to a profusion of postwar examples—Maxine Hong Kingston's⁷ *The Woman Warrior* (1976) stage the autobiographical drama of heroic self-authorization that accounts, in circular fashion, for its

4. This term was coined by the neurophysiologist Humberto Maturana to describe the self-making activities of the biological organism, which in his account lives in the solipsistic domain of its own structures of sense perception. See, for instance, Humberto R. Maturana and Francisco J. Varela, *The Tree of Knowledge: The Biological Roots of Human Understanding* (Boston, 1992). Systems theory borrows the term to describe the self-referential closure of all systems, biological, social, or otherwise [McGurl's note].

5. Niklas Luhmann, *Art as a Social System*, trans. Eva M. Knodt (Stanford, Calif., 2000), p. 149 [McGurl's note]. Luhmann (1927–1998), German sociologist and social theorist.

6. See Mark Seltzer, "The Crime System," *Criti-*

cal Inquiry 30 (Spring 2004): 557–83. Witness how, in Stephen King, a notorious desire to be thought literary coincides with the obsessive reflexivity of his bestselling horror oeuvre, where novelists are tortured in various ways by their popularity [McGurl's note]. Seltzer (b. 1951), American literary critic; King (b. 1947), bestselling American novelist.

7. Chinese American writer (b. 1940). ELIOT (1888–1965), American-born British poet and critic; for "Tradition and the Individual Talent" (1919), see above. James Joyce (1882–1941), Irish writer; the *A Portrait of the Artist* (1914–15) was his first novel. Wolfe (1900–1938), American novelist.

own existence. Taking the suggestion of Barth's notionally computer-generated heroism in *Giles Goat-Boy*, we might understand these acts of authorial self-making neither—or not merely—as the feats of individuation they often represent themselves to be, nor as evidence of a postheroic, postmodern dispersal of subjectivity in and across the mediasphere, but as moments in the operation, the autopoiesis, of a larger system geared for the production of self-expressive originality. Taking advantage of a common Greek root in *autopoiesis* (self-making) and *poetics*, and forcing an obvious but helpful pun, we can call the routinely reflexive operations of literature *autopoetics*.

The ways and means of interwar literary modernism were modified in the postwar university, where it was codified in the pedagogy of New Criticism and then disseminated to a range of student populations previously under-represented in the writing profession. Among other effects, the institutionalization of modernism conspicuously strengthened and broadened its social functionality by coupling it with the educational system. Once the product of urban coterie, circulating in the tiny sphere of little magazines, now the texts of the modernist tradition reside helpfully on the syllabus as objects of study; its canon of literary practices, including a demand for self-conscious attention to technique, are pursued across the land in classes in creative writing; and its latter-day practitioners, sometimes called postmodernists, attend faculty meetings. For a small percentage of these practitioners—Kingston, Toni Morrison, Sandra Cisneros, Tim O'Brien,⁸ and others—this coupling has created a significant student market for their wares. The rest exhibit the same more or less vexed relation to the publishing market as their modernist forebears, selling relatively modest numbers of books, not intentionally, exactly, but by design. Meanwhile the autopoietic thematization of authorship in the various projects of postwar literary fiction has continued unabated.

Consider the case of Philip Roth,⁹ who between 1959 and 2005, even as he has frequently associated himself with colleges and universities (including, briefly, the Iowa Writers' Workshop) as an adjunct faculty member, has published some twenty-five novels and other books. In that period he has developed what it seems fair to call a singular authorial persona, where an unmistakably forceful and mostly invariant writing style—a “foaming confluence,” as he puts it in *The Anatomy Lesson* (1983), of “diatribe, alibi, anecdote, confession, expostulation, promotion, pedagogy, philosophy, assault, apologia, denunciation”—is matched with an obsessive attachment to a small constellation of patently autobiographical themes: masculinity, family, Jewishness, and authorship itself.¹ Even beyond the explicitly interrelated Zuckerman novels,² the internal coherence and serial continuity of this autopoietic enterprise over so many years and so many novels is astonishing. Roth can seem by turns endlessly inventive in finding new ways to manipulate its few terms and yet abysmally unimaginative, a nasty narcissist lost in a highly polished hall of mirrors. The hall of mirrors effect is most forcefully introduced into the system by the Zuckerman novels, which provide a kind of

8. American novelist (b. 1946). MORRISON (b. 1931), African American novelist and essayist. Cisneros (b. 1954), Latina American novelist.

9. American novelist (b. 1933).

1. Philip Roth, *The Anatomy Lesson* (New York, 1983), p. 233; hereafter abbreviated AL [McGurl's note].

2. *The Ghost Writer* (1979), *Zuckerman Unbound* (1981), *The Anatomy Lesson*, the novella *The Prague Orgy* (1985), *The Counterlife* (1993), *American Pastoral* (1997), *I Married a Communist* (1998), *The Human Stain* (2000), and, after the publication of McGurl's article, *Exit Ghost* (2007).

running commentary on the life and career of a Jewish American novelist named Nathan Zuckerman, who, we are given to understand, has written his own versions of Roth's non-Zuckerman books, including most importantly the controversial National Book Award winner, *Goodbye, Columbus* (1959; Zuckerman's *Higher Education*) and the hugely best-selling *Portnoy's Complaint* (1969; renamed *Carnovsky*).

* * *

4. High Cultural Pluralism

Another way to get at the impressive typicality of the figure of Philip Roth would be to note how, seen against the forty-year backdrop of the field he has inhabited, he can seem to figure either as a culturally conservative white male writer, staunchly upholding high modernist literary values, or, as was more plainly the case in the 1960s, as a conspicuously "ethnic" writer ("The Jew You Can't Permit into the Parlor") who introduces cultural difference into that system. Braiding these roles together, he could be said to personify the aesthetic ideology of postwar literary fiction that I will call high cultural pluralism, which combines the routine operation of modernist autopoetics with a rhetorical performance of cultural group membership preeminently, though by no means exclusively, marked as ethnic. Paired with and against the complementary aesthetic of technomodernism, high cultural pluralism has governed the production of a very wide swath of postwar American fiction.

Cultural pluralism is of course a term historically associated with figures like Randolph Bourne, Alain Locke, and especially Horace Kallen, the American pragmatist philosopher and Zionist who began in the early twentieth century to transpose the philosophical pluralism of his teacher at Harvard, William James,³ into the domain of cultural identity. Decades later, but with no mention of race or ethnicity, Kerr would also trace the intellectual origins of his conception of the multiversity back to James's philosophical pluralism. No wonder, then, that cultural pluralism and the multiversity have coupled so nicely. Both are driven by the logic of expansion and differentiation; the continual birth of new scientific subdisciplines is echoed, on the other side of campus, in the emergence of ethnic and women's and cultural studies and, within English departments, in the demarcated study of alternative literary canons.

High cultural pluralism enacts a layering of positively marked differences. In the modernist tradition, it understands its self-consciously "crafted" and intellectually substantial products as importantly distinct from mass culture or genre fiction, although in practice—for example, when Joyce Carol Oates⁴ flirts with low genres, or when Roth produces a best seller on the titanic scale of *Portnoy's Complaint*, or when Morrison's *Beloved* (1987) is read by Oprah's book club⁵—this distinction is often blurred or intentionally put at

3. American philosopher and psychologist (1842–1910). Bourne (1886–1918), American critic and essayist. Locke (1886–1954), African American philosopher and critic. Kallen (1882–1974), American philosopher who coined the term "cultural pluralism" to replace the image of the American "melting pot."

4. Prolific American author in a wide range of

styles and genres (b. 1938).

5. Influential book club featuring books chosen by the American entrepreneur and television personality Oprah Winfrey (b. 1954); originally a segment on her popular talk show, *The Oprah Winfrey Show* (1996–2010), and since 2012, somewhat more irregularly, promoted on social media platforms.

risk. The high cultural pluralist writer is additionally called upon to testify as a member of a hyphenated culture, synthesizing the particularity of the ethnic—or analogously marked—voice with the elevated idiom of literary modernism. Thus, while one path to literary distinction in the postwar period has been to assert the themes of technomodernism, another, though sometimes overlapping, path has been to forge a career in literary cultural pluralism, from the Jewish American writers who emerged in force in the early postwar period, such as Saul Bellow⁶ and Roth; to the Native American renaissance that began with N. Scott Momaday's *House Made of Dawn* (1968) and continues through the novels of Leslie Marmon Silko, Louise Erdrich,⁷ and many others; to the appearance of a growing number of celebrated Asian American writers from Kingston to Chang-Rae Lee;⁸ to the distinctly theory-inflected field of Chicana/o literature, most prominently represented by Cisneros; to—and all along—the African American experience as it has been represented by writers working in the modernist tradition, from Ralph Ellison to Ishmael Reed⁹ to Morrison. All of these writers are widely taught, and all were or remain significantly connected to universities.

Occurring in the broader context of the rise of mass higher education in the U.S., high cultural pluralism is the product of a certain institutional history, the most important feature of which has been the partially overlapping institutionalizations of elitist high modernism and cultural pluralism in university English departments of the postwar period. The result could be described either as a partially democratized modernism, which would emphasize the conditioning effect of a liberal-progressive (at least as compared to other American institutions) institutional context on an elitist aesthetic discourse, or, because universities are still a long way from offering unrestricted social access to the masses, as an elitist pluralism in which the lucky ones, among their other privileges, are taught to savor their own open-mindedness; or, yet again, it can be described simply as an enterprise that makes for unprecedented amounts of good reading. But let's save these judgments for later. For now we can simply observe that, associating the individual writer with a group from which he or she draws a claim to personal literary distinction, high cultural pluralism becomes one model, in the university environment, for the productive mediation of "group-think" and "individual genius."

Describing his own initiation into the modernist tradition at a largely Protestant liberal arts college in the early 1950s, Roth notes how at first it "did not dawn on" him that the "anecdotes and observations" of his boyhood in Newark, with which he entertained his highbrow friends, "might be made into literature. . . . Thomas Wolfe's exploitation of Asheville or Joyce's of Dublin suggested nothing." Instead the "stories I wrote, set absolutely nowhere, were mournful little things about sensitive children, sensitive adolescents, and sensitive young men crushed by coarse life. . . . The Jew was nowhere to be seen; there were no Jews in the stories, no Newark, and not a sign of comedy."¹ This would soon change. Like so many other writers of

6. Canadian-born American novelist (1915–2005).

7. Three Native American novelists: Momaday (b. 1934), Silko (b. 1948), and Erdrich (b. 1954).

8. Korean-born American novelist (b. 1965).

9. African American poet, playwright, and satiri-

cal novelist (b. 1938). Ellison (1914–1994), African American author of a single novel in his lifetime, the classic *Invisible Man* (1952).

1. Roth, *The Facts: A Novelist's Autobiography* (New York, 1988), pp. 59–60 [McGurl's note].

the postwar period, Roth would learn to join the modernist literary sophistication of his higher educational training with the ethnic experiential specificity of his upbringing, the late modernist version of writing what you know.

While the privileged marker of difference here is a racial or ethnic one, it would be a serious mistake to think that writers with no strong ethnic associations have been shut out of the high cultural pluralist enterprise; they are merely (and ironically) "minoritized" to a small degree. The exquisitely refined lower middle-class ordinariness of "K-mart Realism" seen in the work of Raymond Carver and his many students gets inflected by the "hidden injuries" of social class.² In Tim O'Brien's Veteran American fiction, the psychic wounds of war experience, marking their author as different, become foundational to a career. A form of analogy that generally hasn't worked, it should be noted in this context, is identification with the wounds of female experience alone, perhaps because, as detailed by Sandra Gilbert and Susan Gubar, the category of woman writer was precisely the category, associated with sentimental fiction, against which modernist fiction had originally defined itself.³ What has worked, though, has been the form of alignment by analogy visible in the many writers, from Wallace Stegner to William Kennedy to Cormac McCarthy,⁴ who have staged their careers in the continuing tradition of literary regionalism.

Regionalist fiction has always been cultural pluralist in the sense that it is a form of appreciation of diversity within a larger national whole. Here, for instance, Flannery O'Connor, a white Southerner returning from the workshop in Iowa to her home in Milledgeville, Georgia, associates her fiction with a cultural entity understood to be significantly different from American culture as such. Doing so, she achieves the logical equivalent of an ethnic difference within the system. In one of her essays, echoing Roth's assessment of his own earliest collegiate fiction, she notes disapprovingly how she "read some stories at one of the colleges not long ago . . . [and] with the exception of one story, they might all have originated in some synthetic place that could have been anywhere or nowhere."⁵ In another essay she establishes the importance of Southern cultural difference for her fiction in strong, if negative, terms, noting how Southern writers

are all known to be anguished. [And some editorialists] suggest that our anguish is a result of our isolation from the rest of the country. I feel that this would be news to most Southern writers. The anguish that most of us [feel] . . . has been caused not by the fact that the South is alienated from the rest of the country, but by the fact that it is not alienated enough, that every day we are getting more and more like the rest of the country, that we are being forced out not only of our many sins, but of our few virtues.⁶

2. An allusion to the celebrated study *The Hidden Injuries of Class* (1972) by Jonathan Cobb and Richard Sennett. Carver (1938–1988), major American short story writer.

3. See Sandra M. Gilbert and Susan Gubar, *No Man's Land: The Place of the Woman Writer in the Twentieth Century*, 3 vols. (New Haven, Conn., 1988–94) [McGurl's note]. GILBERT (b. 1936) and GUBAR (b. 1944), American feminist literary critics.

4. The fiction of Stegner (1909–1993) is often set in the West; of Kennedy (b. 1928), in Albany, New York; and of McCarthy (b. 1933), in the Southwest.

5. O'Connor, "The Regional Writer," *Mystery and Manners: Occasional Prose*, ed. Sally and Robert Fitzgerald (New York, 1969), p. 56 [McGurl's note].

6. O'Connor, "The Fiction Writer and His Country," *Mystery and Manners*, pp. 28–29 [McGurl's note].

Written during the civil rights era, when the South was beginning to be pressed into conformity with federal law,⁷ O'Connor's anguished appeal to and for the maintenance of difference would reinstall *southern culture* as one of the terms in the developing cultural pluralist aesthetic program of the 1960s, promoting southern writing as, in effect, a white minority discourse that resists assimilation into the American mainstream.⁸

At the very limits of the high cultural pluralist enterprise, where the space it inhabits begins to curve, one encounters technomodernism, its unmarked dialectical reversal. One sometimes hears of a postwar literary field divided cleanly into postmodernist and ethnic realist traditions. Apart from the descriptive weakness of this notion—as though there could be either a more “postmodernist” or a more “black” writer than Ishmael Reed—this way of conceiving things misses the profound complementarity of high cultural pluralism and technomodernism, each of which contains, in latent form, the other's primary term. If we apply interpretative pressure to overtly pluralist fiction to make visible the machinery involved in its production of difference, with overtly machinic technomodernism we can apply it in the opposite direction. Doing so, we see how even the whitest-seeming technomodernism can function as a discourse of difference, producing a symbolic placeholder for a paradoxically nonethnic ethnicity that might as well be called (with apologies to John Guillory) “technicity.”⁹ Put baldly, what Roth knows about Jewishness, and Morrison knows about blackness, writers like Powers, DeLillo, and Pynchon know about the second law of thermodynamics, cybernetic causality, communications and media theory, and the like, and it is on that basis that they, too, are put on the syllabus. That technicity, no less than ethnicity, might be imagined to be lodged in the body is suggested by Pynchon's intensely collegiate, occasionally even sophomoric *Gravity's Rainbow* (1973), where it is the distinction of the character Tyrone Slothrop, who imagines inscribing his name on a missile, to become sexually aroused at the sites of future rocket blasts. Registering the dialectical interpenetration of high cultural pluralism and technomodernism in this way, we still need to locate these inheritors of the modernist tradition in relation to the broader institutional structures of the multiversity that has become its primary institutional patron.

6. Systematic Excellence

What is creative writing to the university? Inheritor of the New Critical positioning of aesthetic value as something that might be produced, as well as appreciated, in an academic environment, creative writing is an odd but, to all appearances, healthy duck. Unlike recent literary scholarship, which, in rekindling the eagerly fact-gathering historicism of an earlier era, has swerved

7. “The Regional Writer” was originally published in 1963; “The Fiction Writer and His Country,” in 1957.

8. See my fuller discussion of this issue in McGill, “Faulkner's Ambit: Modernism, Regionalism, and the Location of Cultural Capital,” *The Novel Art: Elevations of American Fiction after Henry James* (Princeton, N.J., 2001), pp. 135–57

[McGill's note].

9. For Guillory, “technicity” is a linguistic phenomenon arising from intellectual specialization. See John Guillory, “The Memo and Modernity,” *Critical Inquiry* 31 (Autumn 2004): 130. [McGill's note]. Guillory (b. 1952), American literary theorist.

at least part of the way back into sync with the scientism of its wider institutional environment, creative writing might seem to have no ties at all to the pursuit of positive knowledge. It is, rather, an exercise in subjectivity. Symptomatically, the very genre that would seem to bind the arts and sciences at the level of theme, science fiction, is only minimally represented in the creative writing program establishment. Privileging ideas and adventures over disciplined elevations of literary form, this genre is often brainy but is only rarely considered literary. Furthermore, commercially successful writers like Stephenson¹ have little financial incentive to seek the patronage (that is, don the shackles) of the university. What role, then, is the creative writer playing there?

One way to answer this question is, first, to ask another question: If the modern university is an assemblage of centrifugal pluralisms—of splintered knowledges, divergent research agendas, and multiplying bureaucratic expressions of cultural and other forms of difference—how does the system hold together? Once it was supposed to be the domain of “culture,” the quasi-sacred arts, which offered the secular institution an avenue back to the unity of specialized knowledges in God, but no longer. Nor has a unity founded in national purpose, expressed in the intellectual exploration of a national culture, been the prize possession of the American university, even during the cold war. The typically strong regional and state affiliations of American higher educational institutions—the U.S. does not even have a national university—and their tendency to oppositional liberal intellectualism have meant that its most impressive contributions to the nation-qua-nation have taken the form of technical assistance. (That assistance has of course been massive and very well paid.) In his compellingly bleak and extremist analysis of the situation, *The University in Ruins*, Bill Readings suggests that the new God of the university is “excellence”:

Generally, we hear a lot of talk from University administrators about excellence, because it has become the unifying principle of the contemporary University. C. P. Snow’s “Two Cultures” have become “Two Excellences,” the humanistic and the scientific. As an integrating principle, excellence has the singular advantage of being entirely meaningless, or to put it more precisely, non-referential. . . . Today, all departments of the University can be urged to strive for excellence, since the general applicability of the notion is in direct relation to its emptiness.²

The University Readings describes is one that has begun to behave like a corporation, integrating new management techniques and market valuations into its wholly self-referential, self-reproducing practices. In this scheme, excellence is the “integrating principle that allows ‘diversity’ (the other watchword of the University prospectus) to be tolerated without threatening the unity of the system.” A “unit of value entirely internal” to that system, marking “nothing more than the moment of technology’s self-reflection,”

1. Neal Stephenson (b. 1959), American writer best known for his science fiction.

2. Bill Readings, *The University in Ruins* (Cambridge, 1996), pp. 22–23 [McGurl’s note]. Readings (1960–1994), British literary critic. The British scientist and novelist Snow (1905–1980)

argued in his 1956 essay (expanded in 1959 as *The Two Cultures and the Scientific Revolution*) that the modern university had developed “two cultures,” each ignorant and sometimes scornful of the other: that of the sciences and that of the humanities.

it is a sign, above all, of bureaucratic efficiency, the smooth running of the pluralist machine.³

Readings is right to see Excellence as the new God of the university and as a marker of institutional self-reflection, but crucially wrong, I think, in seeing it as a measure of bureaucratic efficiency alone. For one thing, as his own documentation shows, the rhetoric of excellence in the university tends to appear in contexts where what is at issue is competition—say, between one funding application and another—or reputation, as in the hierarchically arranged schools in the *U.S. News and World Report* rankings. If this is not yet “referential” to something wholly outside the educational system itself, it is nonetheless profoundly and importantly relational, a measure of relative “distinction” that, among other effects, cashes out in the workplace as the relative value of a degree from a given institution. In the early twentieth century Thorstein Veblen had a lot to say about the orientation of higher education toward business interests that echoes even now in Readings’s account of the university in ruins; but Veblen, even more importantly, drew our attention to the excessive symbolic activity (that is, showing off) entailed in the creation and maintenance of such invidious distinctions.⁴ Knowing this we should be on guard against assuming that appeals to excellence are, as Readings claims, a matter only of technocratic efficiency.

On the contrary, keying off his observation that the university increasingly functions as an “autonomous system” with little direct involvement in extracurricular agendas, we might say that the “excellence” of the university is an index not of its functional efficiency but of its more or less impressive capacity to waste. *Excellence* in this view is a primarily aesthetic term, the guise in which judgments of beauty-as-superiority reappear in an otherwise efficiency-oriented university environment. Readings is wrong, therefore, to say that the disappearance of a referential appeal to national culture has occasioned the “ruin” of the traditional university in our time, at least in the United States. Indeed, insofar as American culture has become a corporate culture, the rhetoric of excellence could be understood as a deep expression of that national culture and seems for now to be holding educational institutions together quite well.

It is safe to say, then, that creative writing in the university will exist as long as it seems simply too excellent to resist. The ideologues of science can make no effective arguments against this excellence, a form of beauty they worship every bit as fervently and irrationally as do the arts. Still less can academic administrators afford to be insensitive to the beauty of excellence; they often must judge the value of highly specialized research at second hand by measuring the evidence of its relative prestige. Not only this, but an impressive creative writing program can be had for what amounts, as against particle accelerators and the like, to chump change, much of which is returned (as with master’s programs in general) in the form of healthy tuition payments. Thus, while academic creative writers have often perceived themselves as outsiders to the institution that houses them, it is not hard to

the Conduct of University by Business Men (1918; New York, 1992) and *The Theory of the Leisure Class* (1899; New York, 1994) [McGurl’s note]. Veblen (1857–1929), American economist and pioneering sociologist.

enumerate their uses beyond the obvious one of teaching students something about writing. Inwardly, their job as teachers is to stand as inspiring exemplars of the unalienated laborer. In this sense, every artist on campus is half a performance artist; making his name, doing her job, owning the product of his or her labor of "self-expression," the artist or writer-in-residence is in a sense the purest version of the kind of worker, the professional, that so many college students are preparing themselves to be.⁵ Alternatively, but relatedly, the artist can be seen as offering a form of educational therapy to some of these students, the "creative types," in advance of their lifelong capture by the usual cubicle. Outwardly the task of the academic creative writer is to produce, in his or her writings, unconscious allegories of institutional quality, aesthetically pure because luxuriously useless. More simply, they contribute a certain form of prestige to the university's overall portfolio of cultural capital, adding their bit to the market value of the degrees it confers. In this role they are somewhat like varsity athletes, but whereas varsity athletics typically symbolizes the excellence of competitive teamwork, creative writing and the other arts testify to the institution's systematic hospitality to the excellence of individual self-expression.

And isn't postwar American fiction, after all, unprecedented in its excellence? If I could, I would ask this concluding question with two voices in counterpoint, and only one of them sarcastic. The conservative modernism of T. S. Eliot and his ilk has ingrained in us the notion that art never improves, and judgments of postwar American literature, including critiques of the writing program, habitually see it in sad decline from the heroic heights of the as-yet-unprogrammed interwar modernist era. But perhaps, in the interest of dislodging some tedious prejudices, and for love of the educational system that has made most of us what we are, or maybe just for the fun of it, it's time to resist this notion.

One way to do so would be to convert historical materialism⁶ into a mode of aesthetic judgment, putting literary production in line with other human enterprises, such as technology and sports, where few would deny that systematic investments of capital over time have produced a continual elevation of performance. Granted there is no way, these days, to engage in strenuous aesthetic appreciation as a literary scholar without sounding goofily anachronistic, so call the effort what you will. Call it a strategic triumphalism. Owing to the tremendous expansion of the literary talent pool coincident to the advent of mass higher education; and to the wide distribution, therein, of elevated literary ambitions; and to cultivation in these newly vocal, vainglorious masses of the habits of self-conscious attention to craft through which these ambitions might plausibly be realized; is it not true that owing to the organized efforts of the program, owing to the simple fact of our trying harder than ever before, there has been a system-wide rise in the excellence of American literature in the postwar period?

5. A few of these students, of course, will become professional writers, the creative writing instructors of tomorrow. Modeling unalienated labor, the function of creative writing seems continuous, in some ways, with its proletarianized alter ego, composition, which when taught on the influential Peter Elbow model is also seen as an exercise in autonomy, of "tak[ing] charge of yourself as you write" (Peter Elbow, *Writing with*

Power: Techniques for Mastering the Writing Process [New York, 1981], p. 8). It is however possible to see a gulf between the two disciplines, the first emphasizing open-ended self-creation, the second a process of self-disciplining more immediately useful in the workplace [McGurl's note].

6. Mode of analysis developed by KARL MARX in which society is viewed as determined by economic forces.

Granted, we can only measure literary excellence on our own terms, and the task of elevating individual authors high above their numerous accomplished peers has become increasingly difficult. This may have produced, as with the disappearance of the .400 hitter in professional baseball, a kind of optical illusion of encroaching mediocrity; being the dominant figure in Shakespeare's or even Pound's time was, by comparison to today, as easy as cake.⁷ But seriously, laying aside our anachronistic prejudices for the One over the Many Ones, moving our minds from the Pound Era into the Program Era, do we not bear daily witness to a surfeit of literary excellence, an embarrassment of riches? Is there not more excellent fiction being produced now than anyone (especially considering the excellence of television) has time to read?

What kind of traitor to the mission of mass higher education would you have to be to think otherwise?

2005

7. See Stephen Jay Gould, *Full House: The Spread of Excellence from Plato to Darwin* (New York, 1996). Granted, literature has nothing as convenient as baseball's numerical batting average to measure "excellence," the very definition of

which, in literature, is subject to dispute [McGurl's note]. The last major league baseball player to hit over .400 for the season was Ted Williams (.406) in 1941.

STEPHEN BEST

b. 1969

SHARON MARCUS

b. 1966

Most literary critics do a form of "reading." However, much debate centers on what kind of reading they choose to do and how they characterize it. From the 1940s through the 1970s, the New Critics, such as JOHN CROWE RANSOM and CLEANTH BROOKS, advocated "close reading" of the language and form of literary texts over historical or other approaches. From the 1960s through the 1990s, critics shifted to reading from specific theoretical perspectives, conducting Marxist, feminist, psychoanalytic, and other kinds of readings to expose the linguistic, political, or psychological meaning underlying texts. This general practice has been called "symptomatic reading" because it looks at the statements in texts as symptoms of underlying causes—for instance, the unconscious in FREDRIC JAMESON's landmark book *The Political Unconscious* (1981)—making it the critic's task to bring those hidden meanings to light. In "Surface Reading: An Introduction" (2009), from which we take our selection, Stephen Best and Sharon Marcus declare that we have over-emphasized symptomatic reading and propose that we should attend to texts' manifest meaning. Their call has galvanized a great deal of controversy, in part because it has been taken to prescribe the end of theory.

Attending graduate school in the late 1980s and early 1990s, Best and Marcus entered literary studies after major theoretical movements such as deconstruction, Marxism, and feminism had won central place in the field. Though trained in theory, they both gravitated toward literary and cultural history, Best focusing on law and African American literature and history, and Marcus on nineteenth-century British and French literature and culture. Early in their careers they also worked for several years as colleagues at the University of California at Berkeley, and their collaboration on "Surface Reading" is an outgrowth of that period. Best attended

Williams College (B.A., 1989) and the University of Pennsylvania (M.A., 1992; Ph.D., 1997), and he has taught at Berkeley since 1997. His book *The Fugitive's Properties: Law and the Poetics of Possession* (2004) elaborates the legal context of slavery, and he is on the editorial board of *Representations*, a major critical journal affiliated with Berkeley that published "Surface Reading."

Marcus was born in 1966 in Queens, New York, and attended Brown University (B.A., 1986) and Johns Hopkins University (Ph.D., 1995). She first taught at Berkeley (1994–2003), moving in 2003 to Columbia University, where in 2008 she became Orlando Harriman Professor of English and Comparative Literature. She is also the co-founder and editor of *Public Books*, an online literary review. Her first book, *Apartment Stories: City and Home in Nineteenth-Century Paris and London* (1999), is a historical study of buildings, architecture, and urban planning in England and France, examining how they appear in the novel and how they revise our notion of domestic space. Her next book, *Between Women: Friendship, Desire, and Marriage in Victorian England* (2007), conducts a similarly erudite historical investigation of the relations that women had in the era—often loving and sometimes sexual but usually not secret or hidden for the critic to detect and uncover. In one chapter, she sets out her idea of "just reading," which presages "surface reading": it emphasizes the manifest rather than allegorical meaning of texts (their meaning when they are "just read"), in contrast with Jameson's insistence on looking to the unconscious.

Symptomatic reading reflects a modern stance that the French philosopher Paul Ricoeur termed "the hermeneutics of suspicion." According to Ricoeur, beginning in the late nineteenth and early twentieth century with NIETZSCHE, MARX, and FREUD, many modern thinkers start with a mistrust of the conventional bases of language, the concept of truth itself, society, and the psyche. The hermeneutics of suspicion runs through much contemporary literary theory. For instance, MICHEL FOUCAULT argues that power and discipline control society without our conscious choice; PAUL DE MAN finds that language deconstructs efforts to discern a stable meaning, requiring the critic to uncover the "mystifications" of meaning; and Jameson sees modern culture as expressing capitalist ideology. While the New Historicists, led by STEPHEN GREENBLATT, showed a renewed interest in history beginning in the 1980s, they adopted poststructuralist ideas of textuality, and one of their common moves was to reveal how texts express "subversion and containment"—that is, even if a text purports to criticize or subvert dominant power, it is contained by power. In other words, they continued the hermeneutics of suspicion, applying it to literary texts that claimed to be radical and finding the opposite.

By the 1990s a number of critics began casting doubt on poststructuralist theory, some turning "against theory," some embracing the more literary modes of personal or autobiographical criticism, and some urging a less obscure and more accessible criticism. Questions were raised even among influential critics associated with theoretical critique. The queer theorist EVE KOSOFSKY SEDGWICK speculated that a good deal of theory veered toward "paranoid reading," assuming a kind of conspiracy underlying texts, and she called for a more recuperative stance of "reparative reading." The sociologist of science BRUNO LATOUR crystallized reservations about the hermeneutics of suspicion in "Why Has Critique Run Out of Steam? From Matters of Fact to Matters of Concern" (2003, 2004; see above), contending that we have put too much stress on a negative critical perspective at the expense of any positive value. He argues that while theory has debunked the idea of objective truth, it does not follow that no way exists to ascertain relative truths—for example, about issues like climate change.

"Surface Reading" calls for a nonparanoid, more constructive sense of interpretation. The title of Marcus's *Between Women*, in which she proposes "just reading," plays on the title of Sedgwick's *Between Men: English Literature and Male Homosexual Desire* (1985), a pioneering work of gay and lesbian theory that uncovered in many texts a latent homosociality among the male characters. Marcus tacitly pays

homage to Sedgwick but shifts ground, arguing that the relationships between women were manifest rather than latent or hidden. In fact, part of her feminist argument is that they did not need to be hidden, because women's relationships were generally not valued; the task of interpretation is thus to bring texts' manifest meaning to the fore. As a formulation from our selection puts it, we should look at rather than see through texts.

Beyond their own practices, in "Surface Reading: An Introduction" Best and Marcus survey a number of other critics and find several allies in the turn to this new mode of reading. Indeed, the critics included in the special issue that the essay prefaces variously advocate a renewed poetics or "new formalism," narratology, the history of the book, and other material textual approaches. Another approach in the background is "distant reading," promoted by FRANCO MORETTI: that is, looking at large numbers of texts through quantitative and other means. While Moretti focuses on the evolution of the novel, many who work under the rubric of digital humanities also tend toward surface rather than close or symptomatic reading (for example, N. KATHERINE HAYLES). One aspect of the surface reading movement might be generational, as our selection asserts, but in a subsequent interview Marcus qualified this view, noting that the turn toward the surface does not necessarily track along lines of age. Moretti, for instance, is of an earlier generation but has energetically pioneered new approaches using statistical modeling.

At first glance, "Surface Reading" might seem to be "against theory," and that is how a number of respondents have taken it. Yet it does not renounce theory for the more concrete realm of history; rather, it tempers some of the assertions made about the political effect of criticism. A Marxist reading, or a feminist reading, or a Foucauldian reading typically is framed as an attack on hierarchy, power, and normative society, and theorists often claim to "make an intervention," suggesting that their work produces a political change. In doing so, they are positioning themselves at the end of a long line of thinking about the relation of literature and society, stretching from PERCY BYSSHE SHELLEY, who deemed poets the "unacknowledged legislators" of society, to the New York Intellectuals of the mid-twentieth century, who believed, in LIONEL TRILLING's words, that criticism has an "adversarial" relation to culture. Best and Marcus call for a more measured sense of the actual political effects of criticism, which are often very small, deflating the notion of the critic as an oppositional hero that seemed to hold sway in the heyday of theory during the closing decades of the twentieth century.

Because of its political reservations, "Surface Reading" has drawn rebuttals from critics on the left, who maintain the importance of symptomatic reading and charge that "surface reading" expresses a kind of resignation to the corporatized university. The essay has incited some Victorianists to form the V21 Collective (seeking to revitalize Victorian studies for the twenty-first century), whose manifesto attacks the "accumulation of mere information" through surface approaches and reasserts the need for speculative methods. More sympathetic critics draw on Best and Marcus's diagnosis to argue for the renewed use of description in criticism, in particular as it contributes to a "new sociology" of literature. Others see their diagnosis as a defense of formalist methods and literature against theory. Overall, "Surface Reading" takes stock of the possibilities of criticism in its moment, as well as auguring a shift to "surface" methods.

"Surface Reading: An Introudction" Keywords: Defense of Criticism, Hermeneutics, Interpretation Theory, Marxism, Psychoanalysis

From Surface Reading: An Introduction

Reading "The Way We Read Now"

The title of this special issue¹ raises many questions. To begin with, who are "we"? Although *Representations* is a multidisciplinary journal, this issue's contributors and editors constitute a relatively homogeneous group of scholars who received doctoral degrees in either English or comparative literature after 1983. Our shared training delimits what we mean and don't mean by the term "read." As literary critics, we were trained to equate reading with interpretation: with assigning a meaning to a text or set of texts. As scholars formed in the era of interdisciplinarity, we take for granted that the texts we read and interpret include canonical and non-canonical literary works. We also feel licensed to study objects other than literary ones, using paradigms drawn from anthropology, history, and political theory, which themselves borrowed from literary criticism an emphasis on close reading and interpretation after the linguistic turn of the 1970s.

One factor enabling exchanges between disciplines in the 1970s and 1980s was the acceptance of psychoanalysis and Marxism as metalanguages. It was not just any idea of interpretation that circulated among the disciplines, but a specific type that took meaning to be hidden, repressed, deep, and in need of detection and disclosure by an interpreter. This "way" of interpreting went by the name of "symptomatic reading."² We were trained in symptomatic reading, became attached to the power it gave to the act of interpreting, and find it hard to let go of the belief that texts and their readers have an unconscious.

So much for the way we read. What about "now"? In the last decade or so, we have been drawn to modes of reading that attend to the surfaces of texts rather than plumb their depths. Perhaps this is because, at the end of the first decade of the twenty-first century, so much seems to be on the surface. "If everything were transparent, then no ideology would be possible, and no domination either," wrote Fredric Jameson in 1981, explaining why interpretation could never operate on the assumption that "the text means just what it says."³ The assumption that domination can only do its work when veiled, which may once have sounded almost paranoid, now has a nostalgic, even utopian ring to it. Those of us who cut our intellectual teeth on deconstruction, ideology critique, and the hermeneutics of suspicion⁴ have often found those demystifying protocols superfluous in an era when images of torture at Abu Ghraib and elsewhere were immediately circulated on the internet; the real-time coverage of Hurricane Katrina⁵ showed in ways that

1. This essay originally introduced *The Way We Read Now*, a special issue of the journal *Representations* (no. 108 [2009]) that contained essays by the literary critics Anne Anlin Cheng, Margaret Cohen, Mary Thomas Crane, Christopher Nealon, and Leah Price, with an afterword by Emily Apter and Elaine Freedgood [editor's note; except as indicated, all notes are Best and Marcus's—some have been edited and some omitted].

2. Any mode of interpretation according to which texts exhibit symptoms stemming from unconscious motivations that the analyst seeks to uncover (an extension of the psychoanalytic terms of SIGMUND FREUD) [editor's note].

3. Fredric Jameson, *The Political Unconscious: Narrative as a Socially Symbolic Act* (Ithaca, 1981), 61. Page references in the text. [JAMESON (b. 1934), American Marxist literary theorist—editor's note.]

4. Phrase coined by the French philosopher Paul Ricoeur (1913–2005) to characterize the stance of suspicion in the major 19th- and early 20th-century theorists FRIEDRICH NIETZSCHE, KARL MARX, and Freud [editor's note].

5. A major storm in August 2005 that devastated the Gulf Coast and caused massive flooding in New Orleans after the levees gave way; more than 1,000 died, and the slow federal response led to widespread criticism of President George W. Bush (b. 1946; president 2001–09). The Bush

required little explication the state's abandonment of its African American citizens; and many people instantly recognized as lies political statements such as "mission accomplished."⁶ Eight years of the Bush regime may have hammered home the point that not all situations require the subtle ingenuity associated with symptomatic reading, and they may also have inspired us to imagine that alongside nascent fascism there might be better ways of thinking and being simply there for the taking, in both the past and the present. We find ourselves the heirs of Michel Foucault,⁷ skeptical about the very possibility of radical freedom and dubious that literature or its criticism can explain our oppression or provide the keys to our liberation. Where it had become common for literary scholars to equate their work with political activism, the disasters and triumphs of the last decade have shown that literary criticism alone is not sufficient to effect change. This in turn raises the question of why literary criticism matters if it is not political activism by another name, a question to which we return in the last section of this essay.

We have chosen our title for its resonance but are aware of the many readers and ways of reading that our contributors do not discuss at all, some of which our co-editors address in the afterword. "The Way We Read Now" calls to mind the title of Anthony Trollope's 1875 novel *The Way We Live Now*, echoed in recent books by Amanda Anderson (*The Way We Argue Now*) and Elaine Freedgood (in the coda to *The Ideas in Things*, entitled "Victorian Thing Culture and the Way We Read Now").⁸ As a rubric, the phrase announces that we plan to perform a self-assessment, to survey the present—the deictic "now" carrying with it a note of urgency. It connotes change, the sense that now we do things a bit differently than they did back then. These essays also incorporate a site-specific "now" and "then," since the majority were first delivered at a 2008 conference jointly sponsored by Columbia University and New York University, which in turn emerged from a 2006 American Comparative Literature Association seminar convened to mark the twenty-fifth anniversary of Fredric Jameson's publication of *The Political Unconscious* (1981), the book that popularized symptomatic reading among U.S. literary critics. The 2008 conference invited speakers to reflect on the current place of symptomatic reading, but in asking our contributors to expand their talks into essays, we set a somewhat different agenda, requesting that they articulate what alternatives to symptomatic reading currently shape their work, and how those alternatives might pose new ways of reading.

administration was similarly held responsible for the torture of Iraqi detainees by U.S. personnel at Iraq's Abu Ghraib prison, which had been taken over by the United States in 2003 after the invasion of Iraq; the abuses were exposed in late 2003, with photographs published in 2004 [editor's note].

6. We note that there remain things that government powers go to extraordinary lengths to keep hidden, to keep as state secrets, "extraordinary rendition" being one of them. A hermeneutics of suspicion in which understanding requires a subtle reading of the situation thus remains readily pertinent to the work of critique. See, for example, Trevor Paglen, *Blank Spots on the Map: The Dark Geography of the Pentagon's Secret World* (New York, 2009). ["Extraordinary rendition": the kidnapping by agents of one country of individu-

als who are transferred to another country. "Mission accomplished": the statement on a banner behind President Bush as he announced in May 2003, on the deck of an aircraft carrier, that "major combat operations in Iraq have ended"; U.S. involvement continued until 2011, and most casualties occurred after that speech—editor's note.]

7. French philosopher and cultural historian (1926–1984, see above), who suggested that resistance was assimilated by disciplinary structures of power [editor's note].

8. Amanda Anderson, *The Way We Argue Now: A Study in the Cultures of Theory* (Princeton, 2006); Elaine Freedgood, *The Ideas in Things: Fugitive Meaning in the Victorian Novel* (Chicago, 2006). [Trollope (1815–1882), English novelist; *The Way We Live Now* looks critically at economic speculation in England during his time—editor's note.]

These essays represent neither a polemic against nor a postmortem of symptomatic reading. Our contributors trace nascent practices in the text-based disciplines, some of which evolve from symptomatic reading, some of which break from it. The “way” of our title should not be construed as a unitary mode or a pilgrimage to a single point, but as a road branching in multiple directions, like Jorge Luis Borges’s garden of forking paths.⁹ It would be inaccurate, however, to call this issue “the *ways* we read now,” because these articles demonstrate significant overlap among our contributors. To that extent, a different literary allusion is also apt for picturing how these articles are related, that of Swann’s way, which initially appears separate from the Guermantes way¹ but turns out to be connected to it at key points.

Symptomatic Reading

All of the contributors to this volume are responding to a particular notion of interpretation that came to be known as symptomatic reading. Broadly speaking, this practice encompasses an interpretive method that argues that the most interesting aspect of a text is what it represses, and that, as Fredric Jameson argued, interpretation should therefore seek “a latent meaning behind a manifest one” (60). The interpreter “rewrite[s] the surface categories of a text in the stronger language of a more fundamental interpretive code” (60) and reveals truths that “remain unrealized in the surface of the text” (48). As the letter of invitation to the 2008 conference put it, symptomatic reading asserts that “what a text means lies in what it does not say, which can then be used to rewrite the text in terms of a master code. By disclosing the absent cause that structures the text’s inclusions and exclusions, the critic restores to the surface the deep history that the text represses.”²

When symptomatic readers focus on elements present in the text, they construe them as symbolic of something latent or concealed; for example, a queer symptomatic reading might interpret the closet, or ghosts, as surface signs of the deep truth of a homosexuality that cannot be overtly depicted. Symptomatic readings also often locate outright absences, gaps, and ellipses in texts, and then ask what those absences mean, what forces create them, and how they signify the questions that motivate the text, but that the text itself cannot articulate.³ Symptomatic reading thus often conflates three pairs of oppositions: present/absent, manifest/latent, and surface/depth. Strictly speaking, these are not compatible sets of terms. What is absent is simply not there; what is latent is present but invisible, unrecognized either because it is concealed or because it is undeveloped; what is deep is fully present and thus theoretically visible, but is positioned so far down, in, or back relative to a viewer, or is so completely covered by an opaque surface, that it can only be detected by an extreme degree of penetration or insight. The different connotations of manifest and surface are especially significant.

9. “The Garden of Forking Paths” (1941), short story by the Argentine writer Borges (1899–1986) [editor’s note].

1. An allusion to the first (*Swann’s Way*) and third (*The Guermantes Way*) volumes of Marcel Proust’s 7-volume *À la recherche du temps perdu* (1913–27, *In Search of Lost Time*; French) [editor’s note].

2. The conference proposal was written by Emily

Apter, Elaine Freedgood, and Sharon Marcus [editor’s note].

3. As Ellen Rooney has put it, symptomatic reading produces “the absent question . . . that the reading . . . establishes as unthinkable within the text’s own problematic”; “Better Read Than Dead: Althusser and the Fetish of Ideology,” *Yale French Studies* 88 (1995): 187.

The surface is associated with the superficial and deceptive, with what can be perceived without close examination and, implicitly, would turn out to be false upon closer scrutiny. The manifest has more positive connotations, as what is truthful, obvious, and clearly revealed.

The notion underlying all forms of symptomatic reading, that the most significant truths are not immediately apprehensible and may be veiled or invisible, has a very long history. Umberto Eco traces it back to the Gnostics in the second century CE, who, in contrast to Greek philosophers who defined reason as noncontradiction, posited truth as secret, deep, and mysterious, and language as inadequate to meaning.⁴ Eco might also have noted, however, the equally Greek roots of the idea that truth does not lie in evidence directly available to the senses, since this was the point of Plato's parable of the cave, which influenced not only the Gnostics but also Christians such as Paul, and led to their emphasis on allegory.⁵ Symptomatic reading thus has links to what Eco calls the hermetic theory of interpretation: the idea that words "hide the untold" and the secret of meaning is its impossibility (39–40). The notion of truth as recessive was not limited, however, to ancient mystics; as Mary Crane explains in her contribution to this volume,⁶ the idea that meaning and verity must be deep and inaccessible to view was also promoted by a technique that had close ties to science: the development of perspective in early modern European painting.

The nineteenth-century roots of symptomatic reading lie with Marx's interest in ideology and the commodity and Freud's in the unconscious and dreams.⁷ In an important essay entitled "Clues: Roots of an Evidential Paradigm," Carlo Ginzburg noted that Freud was "accustomed to divine secret and concealed things from unconsidered or unnoticed details"; in psychoanalysis, "infinitesimal traces permit the comprehension of a deeper, otherwise unattainable reality."⁸ Those traces are clues, symptoms, details on the surface that indicate the form and content of hidden depths to the trained and intuitive interpreter. In *Freud and Philosophy: An Essay on Interpretation* (1970), Paul Ricoeur showed how Freud's model of interpretation was particularly suited to symbolic language, which he defined as any form of language "where another meaning is both given and hidden in an immediate meaning." Ricoeur defined the symbolic function as "to mean something other than what is said," and posited that "to interpret is to understand a double meaning." What he called a "hermeneutics of suspicion" in Freud described a method of understanding double meaning based not on the

8. Carlo Ginzburg, "Clues: Roots of an Evidential Paradigm," in *Clues, Myths, and the Historical Method*, trans. John and Anne C. Tedeschi (Baltimore, 1989), 99, 101. [Ginzburg (b. 1939), Italian historian—editor's note.]

religious model of revealed meaning but on the demystification of illusion.⁹ This hermeneutics of suspicion became a general property of literary criticism even for those who did not adhere strictly to psychoanalysis.

The other set of critics invested in symptomatic reading were Marxists engaged with the writings of Louis Althusser.¹ In *Reading Capital* (published in French in 1968, in English translation in 1970), Althusser unfolded a method of symptomatic reading that he found in Marx and used to read Marx, one that “divulges the undivulged event in the text it reads, and in the same movement relates it to a different text, present as a necessary absence in the first.”² For Althusser, symptomatic reading makes “lacunae perceptible” (86); it assumes that texts are shaped by questions they do not themselves pose and contain symptoms that help interpreters articulate those questions, which lie outside texts as their absent causes. Althusser dismissed “the religious phantasm of epiphanic transparency” (35), the theory of reading as one of logos, in which each part immediately expresses the whole and there is no split between manifest and latent meaning. Although Althusser equated religious reading with instantaneous transparency, his theory actually harkens back to the Gnostic concept of truth as too complex to describe, because he defined history as what could not be read in manifest discourse, as “the inaudible and illegible notation of the effects of a structure of structures” (17). This concept of truth as antilogos, as what cannot be immediately understood, also resonates with Jacques Derrida’s³ critique of truth as presence.

In *The Political Unconscious* (1981), Fredric Jameson argued that only weak, descriptive, empirical, ideologically complicit readers attend to the surface of the text. In an affirmative version of symptomatic reading, Jameson insisted that the “strong” critic must rewrite narrative in terms of master codes, disclosing its status as ideology, as an imaginary resolution of real contradictions (13). Like Althusser, Jameson saw the text as shaped by absence, but unlike Althusser, Jameson saw only one absent cause, history itself, and insisted that interpretation should seek a repressed, mystified, latent meaning behind a manifest one (60). For Jameson, interpretation is “unmasking”; meaning is the allegorical difference between surface and depth; and the critic restores to the surface the history that the text represses (20). That restoration entails the “semantic enrichment and enlargement of the *inert* givens and materials of a particular text” (75, emphasis added). Jameson’s image of the critic as wresting meaning from a resisting text or inserting it into a lifeless one had enormous influence in the United States, perhaps because it presented professional literary criticism as a strenuous and heroic endeavor, one more akin to activism and labor than to leisure, and therefore fully deserving of remuneration.⁴ The influence of Jameson’s version of symptomatic reading can be felt in the centrality of two scholarly texts from the 1990s: Eve Kosofsky Sedgwick’s *Epistemology of the Closet*

2. Louis Althusser and Etienne Balibar, *Reading Capital*, trans. Ben Brewster (London, 1977), 28.

3. French deconstructionist philosopher and critic (1930–2004); see above [editor’s note].

4. Mary Poovey argues that this account of reading as work originated with John Ruskin, who tended to cast meaning “not as self-evident because simply denoted by the author’s words but as *difficult* and *evasive*.” See her *Genres of the Credit Economy: Mediating Value in Eighteenth- and Nineteenth-Century Britain* (Chicago, 2007), 312–13. [Ruskin (1819–1900), English critic and artist—editor’s note.]

(1991), which crystallized the emergent field of queer theory, and Toni Morrison's⁵ *Playing in the Dark: Whiteness and the Literary Imagination* (1992), which set forth an agenda for studying the structuring role of race in American literature. Both showed that one could read a text's silences, gaps, style, tone, and imagery as symptoms of the queerness or race absent only apparently from its pages.

* * *

Surface Reading

Surface looms large in the vocabulary of our contributors,⁶ but rarely do they mean the literal surface of texts: paper, binding, typography, the sounds of words read aloud. Nor do they construe surface as symptomatic readers often have—as a layer that conceals, as clothing does skin, or encloses, as a building's facade does its interior. Following the lead of our contributors, we take surface to mean what is evident, perceptible, apprehensible in texts; what is neither hidden nor hiding; what, in the geometrical sense, has length and breadth but no thickness, and therefore covers no depth. A surface is what insists on being looked *at* rather than what we must train ourselves to see *through*.

Many types of reading, some quite old, some fairly new, might come under the rubric of “surface reading.”

Surface as materiality. This kind of surface emerges primarily in two forms—in the history of the book and in cognitive reading. Bibliography attends to the literal surfaces of books themselves, making signs inseparable from their material supports. Histories of reading, publication, and circulation study books as things that link their producers, sellers, and users. Cognitive studies of literature attend to the material workings of the brain during the reading process and show how writing prompts readers to imitate what Elaine Scarry calls “the material conditions” that structure perception.⁷ Scarry shows that we can best produce mental images of depth and solidity by picturing one surface passing in front of another, because surfaces are easier to imagine than three-dimensional objects (10–12). The verbal arts, Scarry points out, are often associated with immateriality because they are “counterfactual” and ask us to picture what does not exist, but they are also significantly “counterfactual,” because they infuse our ordinarily pallid imaginings with vivacity (38). Crucial to this process are objects, such as flowers, that we can easily envision and that thus become “the tissue of the mental images themselves—not the thing pictured, but the [mental] surfaces on which the images will get made” (48).

Surface as the intricate verbal structure of literary language. This understanding of surface produces close readings that do not seek hidden meanings, but focus on unraveling what Samuel Otter, in a recent account of New Formalism, has called the “linguistic density” and “verbal complexity”

5. American novelist and essayist (b. 1931); see above. SEDGWICK (1950–2009), American critic and theorist [editor's note].

of literary texts.⁸ This type of surface reading, as Otter shows, would move slowly, if at all, from text to context, from parsing meaning to interpreting significance.⁹ This valorization of surface reading as willed, sustained proximity to the text recalls the aims of New Criticism,¹ which insisted that the key to understanding a text's meaning lay within the text itself, particularly in its formal properties. Formalisms new and old argue against the traditional association of the surface with what is too simple to merit notice. As I. A. Richards pointed out, though such criticism "is very largely . . . an exercise in navigation" it still requires great skill. Since most readers have trouble construing the sensuous form and literal sense of poetry, simply paraphrasing a text or understanding its verbal meaning is a demanding "craft."²

Embrace of the surface as an affective and ethical stance. Such an embrace involves accepting texts, deferring to them instead of mastering or using them as objects, and refuses the depth model of truth, which dismisses surfaces as inessential and deceptive. An early and influential statement of this approach was Susan Sontag's "Against Interpretation" (1966), which argued that interpreters do not disclose the text's true meaning but alter it. Instead of saying, "Look, don't you see that X is really—or, really means—A?" Sontag admonished, the critic of a work should "show it is what it is, even that it is what it is, rather than . . . show what it means." Sontag's manifesto against the model of interpretation drawn from Freud and Marx refused the notion that meaning and content define the work of art and proposed that we set aside the theory of mimesis in favor of the experience of art in its "pure, untranslatable, sensuous immediacy," a stance that she also called an "erotics of art."³ Such an erotics can take the form of attending to the text, or to one's affective responses to it. Other versions of receptiveness and fidelity to the text's surface, as opposed to suspicious and aggressive attacks on its concealed depths, include Eve Kosofsky Sedgwick's "reparative reading" (discussed in the afterword to this issue), Timothy Bewes's "reading with the grain," and Jane Gallop's meditation on the ethics of close reading.⁴

8. Samuel Otter, "An Aesthetics in All Things," *Representations*, no. 104 (Fall 2008): 116–25, 119. [Otter (b. 1956), American scholar of American literature. New Formalism: a movement among poets and critics, arising in the decades before and after the turn of the 21st century, that renews the focus on literary language and form—aspects to which New Historicism (dominant from roughly the 1980s) had paid little attention—editor's note.]

9. The distinction between meaning and significance belongs properly to E. D. Hirsch, for whom the former describes what an author means by a chosen sign sequence, whereas the latter names a relationship between that meaning "and a person, or a conception, or a situation, or indeed anything imaginable." E. D. Hirsch Jr., *Validity in Interpretation* (New Haven, 1967), 8. [Hirsch (b. 1928), American theorist of hermeneutics and education, best known for his advocacy of cultural literacy—editor's note.]

1. The dominant critical practice in North American and British universities from the 1940s through the 1960s, which advocated "close read-

ing" and attention to verbal texture and literary structure; it was named by JOHN CROWE RANSOM [editor's note].

2. I. A. Richards, *Practical Criticism: A Study of Literary Judgment* (1929; reprint, London, 1973), 312, 11. [Richards (1893–1979), English critic and poet who strongly influenced the American New Critics—editor's note.]

3. Susan Sontag, "Against Interpretation," in *Against Interpretation and Other Essays* (New York, 1966), 6, 5, 14. [SONTAG (1933–2004), American critic and novelist; for this essay (1964), see above—editor's note.]

4. To these we would add three other ways of doing surface reading that deeply interest us and that we hope will generate more discussion:

Attention to surface as a practice of critical description. This focus assumes that texts can reveal their own truths because texts mediate themselves; what we think theory brings to texts (form, structure, meaning) is already present in them. Description sees no need to translate the text into a theoretical or historical metalanguage in order to make the text meaningful. The purpose of criticism is thus a relatively modest one: to indicate what the text says about itself. Though we would not endorse Paul de Man's insistence on the "void that separates" poetic intent from reality, we remain intrigued by his observation that poetry is the "foreknowledge" of criticism, and that the interpreter therefore "discloses poetry for what it is" and articulates "what was already there in full light."⁵ Similarly, Joel Fineman's *Shakespeare's Perjured Eye* argued that the traditional questions for criticism of the sonnets are already questions *in* the sonnets themselves; there is no need for a critical metalanguage to explain the sonnets because, as Aaron Kunin has recently observed, "the poems provide the most accurate description of their own operations."⁶ Here, depth is not to be found outside the text or beneath its surface (as its context, horizon, unconscious, or history); rather, depth is continuous with surface and is thus an effect of immanence.

Surface as the location of patterns that exist within and across texts. This notion includes narratology, thematic criticism, genre criticism, and discourse analysis. Symptomatic reading looks for patterns in order to break free of and reach beyond them to a deep truth too abstract to be visible or even locatable in a single text. Jameson thus urges interpreters to sketch the ideological rectangles that structure texts only in order to move toward what lies outside them. Surface readers, by contrast, find value in the rectangles themselves and locate narrative structures and abstract patterns on the surface, as aggregates of what is manifest in multiple texts as cognitively latent but semantically continuous with an individual text's presented meaning. In this type of surface reading, the critic becomes an anatomist breaking down texts or discourses into their components, or a taxonomist arranging and categorizing texts into larger groups. The anatomist and taxonomist rearrange texts into new forms but nonetheless attend to what is present rather than privilege what is absent. Examples of this kind of work include Clifford Siskin's demonstration that large-scale shifts in how literature defines reality coincide with epochal changes in media history, and Marc Angenot's study of "social discourse," in which he looks at everything published in France in a particular year in order to chart "a global typology of the prevailing sayable."⁷ Unconvinced that literature differs significantly from other kinds of writing, Angenot places literary surfaces

7. Clifford Siskin, "Textual Culture in the History of the Real," *Textual Culture* 2, no. 2 (Autumn 2007): 118–30; Marc Angenot, "Social Discourse Analysis: Outlines of a Research Project," *Yale Journal of Criticism* 17 (2004): 199–215, 200. [Angenot (b. 1941), Belgian-born literary critic and social theorist—editor's note.]

on the same plane as “social discourse,” defined as “the total network of meaning.”⁸ For Angenot, what defines ideology is its dispersal, and to understand it we must chart its extent as a commonplace worldview, not expose its falsity.

Surface as literal meaning. What Sharon Marcus has called “just reading” accounts for what is in the text “without construing presence as absence or affirmation as negation.”⁹ Her example is female friendship in Victorian novels, which has often been read as a cover story for an otherwise unspeakable desire between women. Because critics assume that novels ending in marriage eliminate lesbian desire, they have also assumed that courtship plots exile female friendship to the narrative margins. In fact, Marcus shows, female friends rarely lose their centrality in novels with marriage plots, but critics have overlooked this out of an insistence on reading female friendship as something other than it is. Taking friendship in novels to signify friendship is thus not mere tautology; it highlights something true and visible on the text’s surface that symptomatic reading had ironically rendered invisible. Similarly, Benjamin Kahan argues that, rather than interpret celibacy as repressed homosexuality, we adopt a “depthless hermeneutic” that would take celibacy as “the ‘absence’ of sex that it is.”¹ Ann Stoler, in *Along the Archival Grain*, looks at imperial violence that was never hidden, and attends to the colonial state’s interests in family life as a genuine preoccupation, not as “metaphors for something else.”²

Other examples suggest an emerging interest in literal readings that take texts at face value. In his study of rumor in the archive, Stephen Best reads first-person testimony by Caribbean slaves who believed that the British monarch had freed them, viewing their words neither as evidence irredeemably corrupted by the sovereign power that extracted them, nor as verbatim speech through which we can recover subjects lost to history. Those words are, rather, exactly what they appear to be: “impossible speech” that oscillates between loyalty and insurgency, speech and paraphrase, fact and prophecy, confession and coercion, and in that sense reflects back to us the deeply felt uncertainty of the enslaved. Attention to the rumors on the surface of the archive challenges our conception of the latter as a repository of latent voices and “hidden transcripts,” and requires that we reconsider whether the story of slavery can ever be narrated “from below” if our aim is to register what is inaccessible in the voice of the enslaved.³ Elisa Tamarkin similarly reads the American love of hierarchy, caste, and British traditions as meaning what it said. Unlike cultural historians who have read Anglophilia symptomatically, as a “guilty conscience that will not own [the egalitarian democracy] it has fought to gain,” Tamarkin takes Anglophilia

literally, as a statement of American national character that comprises attachment to deference as well as allegiance to independence.⁴

These understandings of what one can learn from surfaces resonate with a rarely cited statement Foucault made about his relationship to archives: rather than dig for “relations that are secret, hidden, more silent or deeper than . . . consciousness,” he described himself as seeking “to define the relations on the very surface of discourse” and “to make visible what is invisible only because it’s too much on the surface of things.”⁵ Just reading sees ghosts as presences, not absences, and lets ghosts be ghosts, instead of saying what they are ghosts of.

Freedom in Attentiveness

If criticism is not the excavation of hidden truths, what can it add to our experience of texts? Can surface reading be anything other than a tacit endorsement of the status quo, the academic version of resignation’s latest mantra, “It is what it is”? These questions are especially urgent because many of our most powerful critical models see criticism as a practice of freedom by locating autonomy, self-reflexiveness, detachment, and liberatory potential either in the artwork itself or in the valiant labor of the critic. In the former case, a measure of heroism is attributed to the artwork due to its autonomy from ideology; the latter makes the critic a hero who performs interpretive feats of demystification. The surface readers in this volume place noticeably less faith than many other critics in the heroic qualities of art, and they understand their critical activity as something other than wresting truths from the hidden depths of resisting texts. We feel it is important, therefore, to situate this volume in relation to dominant tendencies and to significant emergent moments within recent literary criticism that position themselves in relation to the two poles of critical freedom.

First, the dominant trends. One of the most emphatic recent articulations of the notion that freedom lies in aesthetic objects and aesthetic play can be found in the broad field styled as “New Formalist.” As Marjorie Levinson describes in her recent review essay on the movement, a common assumption in much New Formalist work is that we do not need to criticize artworks, because they contain their own “critical (and self-critical) agency.” New Formalists characterize the task of the critic as restoring the artwork to its “original, compositional complexity,” a position that corresponds by and large to the aims of the old New Criticism and distances itself from what it perceives as attacks on literary form by New Historicism.⁶ In this essentially modernist view of art as a locus of critical autonomy, reading becomes what Levinson calls “learned submission,” which is not as submissive as it sounds, because in submitting to the artwork, we come to share its freedom, by experiencing “the deep challenge that the artwork poses to ideology, or to the flattening, routinizing, absorptive effects associated with ideological regimes” (560). Immersion in texts frees us from the apathy and instrumentality of

capitalism by allowing us to bathe in the artwork's disinterested purposelessness.

* * *

At our most speculative and exploratory, we want to ask what it might mean to stay close to our objects of study, without citing as our reason for doing so a belief that those objects encapsulate freedom. We pose this question, in part, out of a sense of political realism about the revolutionary capacities of both texts and critics, and doubts about whether we could ever attain the heightened perspicacity that would allow us to see fully beyond ideology. We also detect in current criticism a skepticism about the very project of freedom, or about any kind of transcendent value we might use to justify intellectual work. A variety of critical styles in the second half of the twentieth century were marked by a utopian strain and a striving for redemption. Sontag subscribed to the "cult of art," Jameson expressed the divine aspirations of revolutionary critics, and those pursuing various forms of identity politics (feminism, queer studies, critical race studies) believed in the authority imbedded in particular subject positions. Across these various styles, the project of freedom came to be associated with what Christopher Nealon calls a "comportment"; he points out that for long it seemed to be the mandated task of either the artwork or the critic's theories about it to provide a finite array of stances from among which we had to choose "the one that will count as resistant, or subversive."⁷ This appears to be less the case now if we take our contributors as at all representative. All seem to be relatively neutral about their objects of study, which they tend less to evaluate than to describe, and which they situate in landscapes neither utopian nor dystopian. * * *

Surface reading, which strives to describe texts accurately, might easily be dismissed as politically quietist, too willing to accept things as they are. We want to reclaim from this tradition the accent on immersion in texts (without paranoia or suspicion about their merit or value), for we understand that attentiveness to the artwork as itself a kind of freedom. This strikes an ideal expressed most succinctly by Charles Altieri: "an ideal of being able not to worry about performing the self so that one can pursue potentials within the range of ongoing practices that are blocked by worries about identity and authenticity . . . [a freedom to be able] to enjoy what and where one is without having to produce any supplemental claims that promise some 'significance' not immediately evident."⁸ To some ears this might sound like a desire to be free from having a political agenda that determines in advance how we interpret texts, and in some respects it is exactly that. We think, however, that a true openness to all the potentials made available by texts is also prerequisite to an attentiveness that does not reduce them to instrumental means to an end and is the best way to say anything accurate and true about them. Criticism that valorizes the freedom of the critic has often assumed that an adversarial relation to the object of criticism is the only

way for the critic to free himself from the text's deceptive, ideological surface and uncover the truth that the text conceals. We want to suggest that, in relinquishing the freedom dream that accompanies the work of demystification, we might be groping toward some equally valuable, if less glamorous, states of mind.

This brings us to two emergent styles of doing literary criticism that resonate with the work in this volume—work that attends as much to the complexities of the critic's position as to those of the artwork, but seeks to occupy a paradoxical space of minimal critical agency.

We have in mind here, first, the recent turn toward computers, databases, and other forms of machine intelligence across a range of fields and practices, from book history to distant reading. Where the heroic critic corrects the text, a nonheroic critic might aim instead to correct for her critical subjectivity, by using machines to bypass it, in the hopes that doing so will produce more accurate knowledge about texts. Where the heroic text commands admiration of its unique features, computers can help us to find features that texts have in common in ways that our brains alone cannot. Computers are weak interpreters but potent describers, anatomizers, taxonomists. New media create new forms of knowledge, and digital modes of reading may be the inspiration for the hope that we could bypass the selectivity and evaluative energy that have been considered the hallmarks of good criticism, in order to attain what has almost become taboo in literary studies: objectivity, validity, truth. This might raise alarm that we are destroying existing rationales for studying the humanities: critical thinking, the uniqueness of art and culture, and the correspondingly distinctive ways that humanist disciplines study them. But to suggest that there might be ways of studying culture that would neither attack nor defend it is not to suggest that we abandon the study of culture altogether. It is to propose that rather than evaluate culture as masterworks of genius or documents of barbarism, we instead define what is unique about the disciplines that study culture as their interest in human artifacts, in contrast to the sciences, which focus on processes beyond our creation and control. To adopt some of the methods of science to the study of culture is not to say that scientists would be the better students of it, for scientists not only have little interest in studying cultural objects but also lack training in how to study them qualitatively. We are not envisioning a world in which computers replace literary critics but are curious about one in which we work with them to expand what we do.

We are thinking, second, of a critic like Anne-Lise François and her interest in a form of reading whose minimal agency would match that of certain textual moments of silence, deferral, acceptance, "complaisance without hope."⁹ Taking its distance from the recuperative ethos of earlier styles that seemed capable of reading only "for hidden meanings and lost histories" (32), this type of criticism highlights "the agency of the act of bearing witness to the given" (35). Instead of turning to literature for models of how to overcome constraint, or for a right way to live under capital, or to register the difference between our critical freedom and the limits placed on others, we are interested in how to register the ways that constraints structure existence as much as breaking free of them does. The neutrality of description

9. Anne-Lise François, *Open Secrets: The Literature of Uncounted Experience* (Stanford, 2008), xix.

is thus not neutrality about the constraints themselves, which we may find ourselves moved to deplore, but neutrality about the existences entwined with them, which we would like to be able to recognize without judging. Just as many dismiss surface reading as obvious, but find themselves unable to sustain the slow pace, receptiveness, and fixed attention it requires, many readers might find that to refuse to celebrate or condemn their objects of study is, in practice, both difficult and discomfiting.

The essays that follow remind us that as much as our objects of study may conceal the structures that give rise to them, they also wear them on their sleeves; that the moments that arrest us in texts need not be considered symptoms, whose true cause exists on another plane of reality, but can themselves indicate important and overlooked truths. As Edgar Allan Poe's story "The Purloined Letter"¹ continues to teach us, what lies in plain sight is worthy of attention but often eludes observation—especially by deeply suspicious detectives who look past the surface in order to root out what is underneath it. These essays also gesture toward a future for literary criticism that does not involve the untenable claim that we are always more free than those who produce the texts we study and that our insights and methods therefore have the power to confer freedom. At the same time, we would suggest that to begin to challenge the state of things, or the distortions of ideology, we must strive to produce undistorted, complete descriptions of them. Of course, one of the great questions of the last two centuries has been whether we can ever set aside our responses in order to produce undistorted accounts of things, since our responses are often unconscious and unknowable. Without fully answering that question, we believe that even if we cannot exhaustively explain what causes our responses, we can strive to describe them accurately, and that there is nothing inherently truthful or misleading about them. Sometimes our subjectivity will help us see a text more clearly, and sometimes it will not.

In closing, we want to underscore two points: that to see more clearly does not require that we plumb hidden depths and that producing accurate accounts of surfaces is not antithetical to critique; indeed, it may be, as Bruno Latour has recently suggested, the best way to move past the impass created by what has become an excessive emphasis on ideological demystification. Referring to the ease with which conservatives question global warming by referring to it as a social construction rather than a scientific truth, he asks, "While we spent years trying to detect the real prejudices hidden behind the appearance of objective statements, do we now have to reveal the real objective and incontrovertible facts hidden behind the *illusion* of prejudices?"² Latour reminds us that "the question was never to get *away* from facts but *closer* to them" (231) and notes that the critic "is not the one who debunks, but the one who assembles" (246). We began this essay by asserting the distance we would like to take from the type of symptomatic reading we inherited from psychoanalysis and Marxism, but in concluding we note that the work of assembly and the desire for a more complete

1. Detective story (1844) about a letter that is hidden in plain sight, by the American writer POE (1809–1849); it is the focus of JACQUES LACAN's celebrated "Seminar on 'The Purloined Letter'" (1966) [editor's note].

TIMOTHY MORTON

b. 1968

In his influential book *The Environmental Imagination* (1996), the Harvard University professor Lawrence Buell defines *ecocriticism* as “study of the relation between literature and environment conducted in a spirit of commitment to environmentalist praxis.” In his book *The Ecological Thought* (2010), from which our selection is taken, Timothy Morton complains that “Ecocriticism has overlooked the way in which all art—not just explicitly ecological art—hardwires the environment into its *form*.” Morton highlights problems with existing ecocritical theories, particularly how representations of ecology in literature reflect a narrow-minded perception of nature. In response, Morton develops a distinctive mode of materialist ecological thinking based on the interconnectedness of all beings, living and nonliving.

Timothy Morton was born in London in 1968. He earned his B.A. and his D.Phil. in English from Oxford University, studying at Magdalen College. His dissertation, “Re-Imagining the Body: Shelley and the Languages of Diet,” examined diet, temperance, and consumption in the works of PERCY BYSSHE SHELLEY (1792–1822). Over the years, Morton has worked for several institutions: he was a tutor at Oxford’s Magdalen College and Lincoln College. He held the positions of visiting fellow at Princeton University and visiting assistant professor at New York University. He worked as an assistant professor at the University of Colorado at Boulder, where he later became an associate professor. He taught at the University of California at Davis. Since 2012, he has been the Rita Shea Guffey Chair in English at Rice University. While Morton’s interests span a wide array of contemporary fields, his writings focus on theories of ecology, food studies, and Romanticism.

In *The Ecological Thought*, Morton wonders: “Is the ecological thought thinking about ecology?” He answers, “Yes and no. It is a thinking that is ecological, a contemplating that is a doing.” The book explores the interrelatedness of various forms of life and thinking. Morton uses the awkward phrase “the ecological thought” to refer to the ability to perceive “interconnectedness.” Dwelling on the concept of the ecological thought, the book builds on existing approaches to ecocriticism in order to liberate the discipline from problematic conservative and ideological thinking. It argues that ecology not only addresses global warming, wastewater recycling, and wind power but extends to space and time, emotions, and other features of culture. Ecology, Morton maintains, is not a description of nature; it is “coexistence,” “interconnectedness,” and ongoing mobility and mutability. Ecological thinking therefore prompts wide-ranging questions, explores ideas, and rejects fixed resolutions; it confronts the damage done to thinking by modernity; it “has to do with amazement, open-mindedness, and wonder. It has to do with doubt, confusion, and skepticism.”

The Ecological Thought deconstructs nature as an ideology and a commodified object. The book argues that the traditional concept of “Nature” fails to serve ecology

well. Morton capitalizes the N in “Nature” in order to defamiliarize our perception that nature is a thing with default “hierarchy, authority, harmony, purity, neutrality, and mystery.” Nature, according to Morton, is always interconnected with all other things and persons in the universe, and therefore is constantly changing. He advocates an ecology without reified Nature.

Timothy Morton argues that the ecological thought is available only to modern society, because its apparent “totality” was not accessible to premodern humans. Yet modernity’s understanding of ecology, with its narrow account of totality, is problematic: its ideal and pure image of nature, stemming from the Enlightenment era, has prevented the progress of the ecological thought, making the act of thinking of secondary importance to “Nature.” Here, Morton agrees with Emmanuel Lévinas’s (1906–1995) astute critique of MARTIN HEIDEGGER to the effect that “our concepts of ‘faceless generous mother nature’ are based on ‘sedentary’ agricultural societies with their idea of ‘possession.’” He observes that through the contemporary spread of mobile consumerism and capitalism, the modern individual is getting well rid of this idea of “pristine” nature. Modern “human beings are past the point at which Nature is a help.” In his discussion of the numerous contents and forms of the ecological thought and in his urgent and copious lyrical style, Morton self-consciously enacts Lévinas’s maxim that he uses as his book’s epigraph: “Infinity overflows the thought that thinks it.”

While developing his account of the ecological thought, which globalization is helping to force upon us, Morton reassesses the nature of art. Art manifests to us how to think ecologically. Morton explains: “Ecological art, and the ecological-ness of all art,” is not defined by the portrayal of objects in nature; rather, art is ecological by virtue of its phenomenological substance and its location—it is made from and takes place in “the world.” Art “*is something*”; for example, poems are written on paper, which comes from trees. Simultaneously, art “*does something*”; it forms the environment—for instance, the way in which a poem looks on paper shapes our perception of that paper. When we read, our body occupies space and adopts a certain stance. “The poem organizes space.” In short, the environment is embedded in art; absence of overt references to it does not mean that it is not there. Morton argues that “all texts—all artworks, indeed—have an irreducibly ecological form. Ecology permeates all forms.”

As he proceeds, Morton runs into problems that he quickly and self-consciously acknowledges. He admits to a tendency to a leveling vitalism, in which all existence is equally animated with positive life forces. Here ontological hierarchies collapse in the name of radical openness to all modes of being, an outcome characteristic of twenty-first-century object-oriented ontology and new materialism (as in the work of JANE BENNETT and IAN BOGOST). In this context, distinctions of race, class, and gender go unmentioned. Morton admits to a commitment to theory, to its powers and complexities, though he simultaneously tries to push it aside in order to reach a wider audience. His prose style mixes the accessible vocabulary of the public intellectual with the theory jargon of a Continental philosopher. Nevertheless, Morton’s critique of the modern ideology of Nature and his materialist phenomenology of “the ecological thought,” a new mode of interconnected thinking for our twenty-first-century condition, work to open up new views for contemporary arts and sciences.

From The Ecological Thought

From *Introduction: Critical Thinking*

The ecological crisis we face is so obvious that it becomes easy—for some, strangely or frighteningly easy—to join the dots and see that everything is interconnected. This is *the ecological thought*. And the more we consider it, the more our world opens up.

We usually think of ecology as having to do with science and social policy. But as the poet Percy Shelley said, regarding developments in science, “We want the creative faculty to imagine that which we know.”¹ Ecology seems earthy, pedestrian. It’s something to do with global warming, recycling, and solar power; something to do with quotidian relationships between humans and nonhumans. Sometimes we associate ecology with fervent beliefs that are often explicitly religious: the Animal Liberation Front or Earth First! To the extent that we don’t yet have a truly ecological world, religion cries aloud in a green voice.² But what would an ecological society look like? What would an ecological mind think? What kinds of art would an ecologically minded person enjoy? All these questions have one thing in common: *the ecological thought*.

As the success of the 2008 Pixar masterpiece *Wall•E* demonstrated, the question is on everyone’s mind: what is ecological awareness?³ How do we restart Spaceship Earth with the pieces we have to hand? How do we move forward from the melancholy of a poisoned planet? *Wall•E* begins several hundred years into the future, with the depressing scene of a little garbage-compacting robot piling skyscraper-high towers of human detritus. There’s something wrong with “his” software, something that manifests as an obsessive collecting. It looks like he’s searching for some key to humanness among the Rubik’s Cubes, the video of *Hello Dolly*,⁴ the tiny sprout in a flow-erpot. *Wall•E* happily shows that the “broken” software, the mental disorder of the little robot, is the viral code that reboots Earth: this time around, we evolve from memes, not genes. Yet isn’t his obsessive compulsion, so like a manifestation of grief (from where we sit in the cinema at least, spectators to future ruin), exactly our situation right now? How do we begin? Where do we go from here? Is that the sound of something calling us from within the grief—the sound of the ecological thought?

The ecological thought is a virus that infects all other areas of thinking. (Yet viruses, and virulence, are shunned in environmental ideology.) This book argues that ecology isn’t just about global warming, recycling, and solar power—and also not just to do with everyday relationships between humans and nonhumans. It has to do with love, loss, despair, and compassion. It has to do with depression and psychosis. It has to do with capitalism and with what might exist after capitalism. It has to do with amazement,

open-mindedness, and wonder. It has to do with doubt, confusion, and skepticism. It has to do with concepts of space and time. It has to do with delight, beauty, ugliness, disgust, irony, and pain. It has to do with consciousness and awareness. It has to do with ideology and critique. It has to do with reading and writing. It has to do with race, class, and gender. It has to do with sexuality. It has to do with ideas of self and the weird paradoxes of subjectivity. It has to do with society. It has to do with coexistence.

Like the shadow of an idea not yet fully thought, a shadow from the future (another wonderful phrase of Shelley's), the ecological thought creeps over other ideas until nowhere is left untouched by its dark presence.⁵ Darwin trusted the theory of evolutionary impermanence so much that he was prepared to suspend his disbelief in continental permanence, although in his day there was no tectonic plate theory.⁶ Such is the force of the ecological thought. As one philosopher put it (see this book's epigraph), "infinity overflows the thought that thinks it."⁷

You could think of *The Ecological Thought* as the prequel to my previous book, *Ecology without Nature*. What must I have been thinking in order to realize that in order to have "ecology," we have to let go of "nature"?⁸ You can't make a prequel until you have made the "original" movie. In some strong sense, the ecological thought rigorously comes afterward—it is always to come, somewhere in the future. In its fullest scope, it *will have been thought* at some undefined future point. You find yourself caught in its tractor beam (it's like a mathematical "attractor"). You didn't mean to. You must have been thinking it all along. But you had no idea. The ecological thought sneaks up on you from the future, a picture of what will have had to be there, already, for "ecology without nature" to make sense.

Like archaeologists of the future, we must piece together what will have been thought. Ultimately, the ecological thought surpasses what passes for environmentalism. It thinks otherwise than small-minded, and big-minded, manipulation. It goes beyond thinking "How many other living beings must we kill in order to be around next winter?" It goes beyond "Whatever is, is right."⁹ It goes beyond "Let it be, let it be."¹ It goes beyond self, Nature, and species. It goes beyond survival, Being, destiny, and essence. Yet like a virus, like the lowest of the lowest (are they even alive?), like the tiny macromolecules in our cells, in our very DNA, the ecological thought has been there all along.

Why "ecology without nature"? "Nature" fails to serve ecology well. I shall sometimes use a capital N to highlight its "unnatural" qualities, namely (but not limited to), hierarchy, authority, harmony, purity, neutrality, and mystery. Ecology can do without a concept of a something, a thing of some kind,

The song, the title track of the Beatles' final album, was one of the band's most popular—editor's note.]

“over yonder,” called Nature. Yet thinking, including ecological thinking, has set up “Nature” as a reified thing in the distance, under the sidewalk, on the other side where the grass is always greener, preferably in the mountains, in the wild. One of the things that modern society has damaged, along with ecosystems and species and the global climate, is thinking. Like a dam, Nature contained thinking for a while, but in the current historical situation, thinking is about to spill over the edge.

Ecological thinking might be quite different from our assumptions about it. It isn’t just to do with the sciences of ecology. Ecological thinking is to do with art, philosophy, literature, music, and culture. Ecological thinking has as much to do with the humanities wing of modern universities as with the sciences, and it also has to do with factories, transportation, architecture, and economics. Ecology includes all the ways we imagine how we live together. Ecology is profoundly about coexistence. Existence is always coexistence. No man is an island.² Human beings need each other as much as they need an environment. Human beings *are* each others’ environment. Thinking ecologically isn’t simply about nonhuman things. Ecology has to do with you and me.

Why call this book *The Ecological Thought*? Why not *An Ecological Thought* or *Some Ecological Thoughts*? Or more modestly, *Notes toward Ecological Thinking*? Or just *Ecological Thought*? Of course there are ecological thoughts. And this book has no monopoly on ecological thinking. But there is a particular kind of thinking that I call *the* ecological thought. It runs like a strand of DNA code through thousands of other kinds of thoughts. Moreover, the *form* of the ecological thought is at least as important as its *content*. It’s not simply a matter of *what* you’re thinking about. It’s also a matter of *how* you think. Once you start to think the ecological thought, you can’t unthink it: it’s a sphincter—once it’s open, there’s no closing.

THE SCOPE OF THE DAMAGE

Modern economic structures have drastically affected the environment. Yet they have had an equally damaging effect on thinking itself. I don’t mean that before now we thought ecologically and properly. The ecological thought in its full richness and depth was unavailable to nonmodern humans. Even now, on the brink—over the brink, indeed—of climate catastrophe, we’re only just capable of glimpsing its magnitude and profundity. The modern age compels us to think big, in the words of the first chapter.³ Any thinking that avoids this “totality” is part of the problem. So we have to face it. Something about modern life has prevented us from thinking “totality” as big as we could. Now we can’t help but think it. Totality looms like a giant skyscraper shadow into the flimsiest thought about, say, today’s weather. We may need to think bigger than totality itself, if totality means something closed, something we can be sure of, something that remains the same. It might be harder to imagine four and a half billion years⁴ than abstract eternity. It might be harder to imagine evolution than to imagine abstract

4. The estimated age of Earth [editor’s note].

infinity. It's a little humiliating. This "concrete" infinity directly confronts us in the actuality of life on Earth. Facing it is one of the profound tasks to which the ecological thought summons us.

We've gotten it wrong so far—that's the truth of climate disruption and mass extinction. I don't advocate a return to premodern thinking. The ecological thought is modern. The paradox is that the modern era—let's say it began around the late eighteenth century—impeded its own access to the ecological thought, even though the ecological thought will have been one of its lasting legacies. As far as ecology goes, modernity spent the last two and a half centuries tilting at windmills. The ghost of "Nature," a brand new entity dressed up like a relic from a past age, haunted the modernity in which it was born.⁵ This ghostly Nature inhibited the growth of the ecological thought. Only now, when contemporary capitalism and consumerism cover the entire Earth and reach deeply into its life forms, is it possible, ironically and at last, to let go of this nonexistent ghost. Exorcise is good for you, and human beings are past the point at which Nature is a help. Our continued survival, and therefore the survival of the planet we're now dominating beyond all doubt, depends on our thinking past Nature.

Modern thinkers had taken it for granted that the ghost of Nature, rattling its chains, would remind them of a time without industry, a time without "technology," as if we had never used flint or wheat. But in looking at the ghost of Nature, modern humans were looking in a mirror. In Nature, they saw the reflected, inverted image of their own age—and the grass is always greener on the other side. Nature was always "over yonder," alien and alienated.⁶ Just like a reflection, we can never actually reach it and touch it and belong to it. Nature was an ideal image, a self-contained form suspended afar, shimmering and naked behind glass like an expensive painting. In the idea of pristine wilderness, we can make out the mirror image of private property: Keep off the Grass, Do Not Touch, Not for Sale. Nature was a special kind of private property, without an owner, exhibited in a specially constructed art gallery. The gallery was Nature itself, revealed through visual technology in the eighteenth century as "picturesque"—looking like a picture.⁷ The "new and improved" version is art without an object, just an aura: the glow of value.⁸ Nature isn't what it claims to be.

While we're on the subject of Nature and "new and improved" upgrades, this book makes a rigorous distinction between *environmentalism* and *ecology*. By the time you finish, you may feel that there are good reasons for advocating not just ecology without nature but also *ecology without environmentalism*.

In *Reflections on the Edge of Askja*, Pall Skulason tells us why we need Nature:

To live, to be able to exist, the mind must connect itself with some kind of order. It must apprehend reality as an independent whole . . . and

must bind itself in a stable fashion to certain features of what we call reality. It cannot bind itself to the ordinary world of everyday experience, except by taking it on faith that reality forms an objective whole, a whole which exists independently of the mind. The mind lives, and we live, in a relationship of faith with reality itself. This relationship is likewise one of confidence in a detached reality, a reality which is different and other than the mind. We live and exist in this relationship of confidence, which is always by its nature uncertain and insecure. . . . [This] relationship of confidence . . . is originally, and truly, always a relationship with reality as a natural totality: as Nature.⁹

It isn't hard to detect in this passage the violent, repetitive actions of someone desperate to restart a broken machine. Skulason cranks handles, attaches jumper cables, rolls it down a hill . . . it's not just what he says or even how he says it. It's the attitude with which he says it, the "subject position." From the tone of hope and fear, you can tell that the game is up and that he knows it. He is indulging in magical thinking: "If I just keep saying this in the right way, it'll be okay. Nature will exist." The desperation is legible in the sheer amount of writing. It goes on and on, waiting for something that never comes. It's Nature writing reduced to *Waiting for Godot*:¹ "I must keep going. I can will Nature into existence, write it into the script." Skulason is trying to cheer us up in the middle of the slow motion disaster we're facing. The more he says, the worse it gets.

In the name of ecology, we must scrutinize Nature with all the suspicion a modern person can muster. Let the buyer beware. Nature has turned out to be a plastic knockoff of the real thing. As Emmanuel Levinas puts it in an astonishing passage that is among other things a passionate critique of deep ecology's favorite philosopher, Martin Heidegger, our concepts of "faceless generous mother nature" are based on "sedentary" agricultural societies with their idea of "possession." The myth of the faceless mother provides the very motivation for our exploitation of Earth, seen as "inexhaustible matter for things."² Wilderness areas are giant, abstract versions of the products hanging in mall windows. Even when we've tried to preserve an enclave of safety from the ravages of the modern age, we've been getting it all wrong, on a more profound level.

Can we get over our addiction to possession and the myth of the faceless mother? What is the real thing? We can get a sense of it, to be sure, though it will upgrade our ideas of "real" and "thing" to boot. Ecology shows us that all beings are connected. *The ecological thought* is the thinking of interconnectedness. The ecological thought is a thought about ecology, but it's also a thinking that is ecological. Thinking the ecological thought is part of an ecological project. The ecological thought doesn't just occur "in the mind." It's a practice and a process of becoming fully aware of how human beings are connected with other beings—animal, vegetable, or mineral. Ultimately, this includes thinking about democracy. What would a truly democratic

encounter between truly equal beings look like, what would it be—can we even imagine it?

When we start looking, we find the ecological thought everywhere. This isn't surprising, since the ecological thought is interconnectedness in the fullest and deepest sense. Even Descartes' infamous "I think therefore I am" takes place in an environment, and this environment is present in the very text of the cogito. Descartes begins the *Meditations* by describing himself sitting by a fire, holding in his hand the paper on which he is writing.³ Environmentalist thinking frequently condemns Cartesianism as a prototype of the dreaded dualism that separates mind and body, self and world, subject and object. Descartes is framed as environmental public enemy number one. The ecological thought insists that we're deeply connected even when we say we're not. Thinking itself is an ecological event. The kind of environmentalist ideology that wishes that we had never started to think—ruthlessly immediate, aggressively masculine, ruggedly anti-intellectual, afraid of humor and irony—is dubious at best. In fact, it's part of the problem. The constant assertion that we're "embedded" in a lifeworld is, paradoxically, a symptom of drastic separation.⁴

When we think the ecological thought, we encounter all kinds of beings that are not strictly "natural." This isn't surprising either, since what we call "nature" is a "denatured," unnatural, uncanny sequence of mutations and catastrophic events: just read Darwin. The ecological view to come isn't a picture of some bounded object or "restrictive economy," a closed system.⁵ It is a vast, sprawling mesh of interconnection without a definite center or edge. It is radical intimacy, coexistence with other beings, sentient and otherwise—and how can we so clearly tell the difference? The ecological thought fans out into questions concerning cyborgs, artificial intelligence, and the irreducible uncertainty over what counts as a person.⁶ Being a person means never being sure that you're one. In an age of ecology without Nature, we would treat many more beings as people while deconstructing our ideas about what counts as people. Think *Blade Runner* or *Frankenstein*:⁷ the ethics of the ecological thought is to regard beings as people even when they aren't people. Ancient animisms treat beings as people, without a concept of Nature. Perhaps I'm aiming for an upgraded version of animism. (I'm also aiming for another good excuse to write about my favorite film, *Blade Runner*.)

OPENING MOVES

Thinking the ecological thought is difficult: it involves becoming open, radically open—open forever, without the possibility of closing again. Studying

Zone Books, 1988), 1:19–26 (25).

6. The "cyborg" represents personhood in an age of digital and ecological interconnectedness: see DONNA HARAWAY, "A Cyborg Manifesto: Science, Technology, and Socialist-Feminism in the Late Twentieth Century," in *Simians, Cyborgs, Women: The Reinvention of Nature* (London: Routledge, 1991), 149–81. [For this essay, see above—editor's note.]

7. Two American films: the artificial "replicants" hunted in *Blade Runner* (1982, dir. Ridley Scott) and the "monster" created in *Frankenstein* (1931, dir. James Whale) insist on their humanity [editor's note].

art provides a platform, because the environment is partly a matter of perception. Art forms have something to tell us about the environment, because they can make us question reality. I would like to stay for as long as possible in an open, questioning mode. This open mode is intrinsic to whatever we inadequately call the environment.⁸ Is the ecological thought thinking about ecology? Yes and no. It is a thinking that is ecological, a contemplating that is a doing. Reframing our world, our problems, and ourselves is part of the ecological project. This is what *praxis* means—action that is thoughtful and thought that is active. Aristotle asserted that the highest form of praxis was contemplation.⁹ We shouldn't be afraid to withdraw and reflect.

The ecological thought is also difficult because it brings to light aspects of our existence that have remained unconscious for a long time; we don't like to recall them. It isn't *like* thinking about where your toilet waste goes. It *is* thinking about where your toilet waste goes. Anxiety over wastewater treatment provides a good example. In the United States, many people now drink recycled wastewater. Some people simply don't want to know that their water is recycled excrement. It is public policy to tune out this fact. Yet recycled water is less unclean than "naturally" filtered water. We lose not only our undisturbed dreams of civilized cleanliness through this process but also our sense of Nature as pristine and nonartificial. Nature becomes wastewater treatment version 1.0.¹ Freud² described the unconscious as a wilderness area. Wilderness areas are the unconscious of modern society, places we can go to keep our dreams undisturbed. The very form of modern consciousness is itself this dream.

In Lakewood, Colorado, residents objected to the construction of a solar array in a park in 2008, because it didn't look "natural."³ Objections to wind farms are similar—made not because of the risk to birds but because they "spoil the view." A 2008 plan to put a wind farm near a remote Scottish island was, well, scotched, because residents complained that their view would be destroyed. This is truly a case of the aesthetics of Nature impeding ecology and a good argument for why ecology must be without Nature. Why is a wind turbine less beautiful than an oil pipe? Why does it "spoil the view" any more than pipes and roads?

You could see turbines as environmental art. Wind chimes play in the wind; some environmental sculptures sway and rock in the breeze. Wind farms have a slightly frightening size and magnificence. One could easily read them as embodying the aesthetics of the sublime (rather than the beautiful).⁴ But it's an ethical sublime that says, "We humans choose not to use carbon"—a choice visible in gigantic turbines. Perhaps it's this very visibility of choice that makes wind farms disturbing: visible choice, rather than secret pipes, running under an apparently undisturbed "landscape" (a word

for a painting, not actual trees and water). As a poster in the office of Mulder in the television series *The X-Files*⁵ used to read, "The Truth Is Out There." Ideology isn't just in your head. It's in the shape of a Coke bottle. It's in the way some things appear "natural"—rolling hills and greenery—as if the Industrial Revolution had never occurred. These fake landscapes are the original greenwashing. What the Scots are saying, in objecting to wind farms, isn't "Save the environment!" but "Leave our dreams undisturbed!"

If you're a parent, you will understand our resistance to cleaning things up. Ecology talks about areas of life that we find annoying, boring, and embarrassing. Art can help us, because it's a place in our culture that deals with intensity, shame, abjection, and loss. It also deals with reality and unreality, being and seeming. If ecology is about radical coexistence, then we must challenge our sense of what is real and what is unreal, what counts as existent and what counts as nonexistent. The idea of Nature as a holistic, healthy, real thing avoids this challenge.

We must face some puzzling questions. What is an environment? Is there such a thing as *the environment*? Is it everything "around" us? At what point do we stop, if at all, drawing the line between *environment* and *non-environment*: The atmosphere? Earth's gravitational field? Earth's magnetic field, without which everything would be scorched by solar winds? The sun, without which we wouldn't be alive at all? The Galaxy? Does the environment include or exclude us? Is it natural or artificial, or both? Can we put it in a conceptual box? Might the word *environment* be the wrong word? *Environment*, the upgrade of *Nature*, is fraught with difficulty. This is ironic, since what we often call the environment is being changed, degraded, and eroded (and destroyed) by global forces of industry and capitalism. Just when we need to know what it is, it's disappearing.

Along with the ecological crisis goes an equally powerful and urgent opening up of our view of who we are and where we are. What, therefore, is environmental art? If what we inadequately call the environment entails a radical openness, how does this appear in art forms? Are there environmental ways of reading and doing criticism that account for this radical openness? Various kinds of ecocriticism have emerged to explore the role of ecology in literature. In particular, Romantic literature, from the beginning of the modern age of industry and capitalism, has served as a touchstone for ecocriticism.⁶ This brand of criticism, however, restricts the radical openness the ecological thought implies, employing a prepackaged conceptual container labeled "Nature." Ironically, Romantic "Nature" is an artificial construct. And extra-ironically, Romantic-period art itself already thought

about the environment in ways that were decisively “out of the box.” We will thus find it helpful to explore Romantic literature in *The Ecological Thought*.⁷ Nothing much has changed since. There is more concrete, more plastic, more democracy, more intense science and technology, more GDP, more alienation, and more self-consciousness about whether writing poems really can change the world. These are quantitative differences, not qualitative ones.

A truly ecological reading practice would think the environment beyond rigid conceptual categories—it would include as much as possible of the radical openness of the ecological thought. Ecocriticism has overlooked the way in which all art—not just explicitly ecological art—hardwires the environment into its *form*. Ecological art, and the ecological-ness of all art, isn’t just *about* something (trees, mountains, animals, pollution, and so forth). Ecological art *is* something, or maybe it *does* something. Art is ecological insofar as it is made from materials and exists in the world. It exists, for instance, as a poem on a page made of paper from trees, which you hold in your hand while sitting in a chair in a certain room of a house that rests on a hill in the suburbs of a polluted city. But there is more to its ecological quality than that. The shape of the stanzas and the length of the lines determine the way you appreciate the blank paper around them. Reading the poem aloud makes you aware of the shape and size of the space around you (some forms, such as yodeling, do this deliberately). The poem organizes space. Seen like this, all texts—all artworks, indeed—have an irreducibly ecological form. Ecology permeates all forms. Nowadays we’re used to wondering what a poem says about race or gender, even if the poem makes no explicit mention of race or gender. We will soon be accustomed to wondering what any text says about the environment even if no animals or trees or mountains appear in it.⁸

The ecological thought affects all aspects of life, culture, and society. Aside from art and science, we must build the ecological thought from what we find in philosophy, history, sociology, anthropology, religion, cultural studies, and critical theory. I shall combine empirical evolution theory with “Continental” thinking about being and existence. This seems perverse: “high” philosophy merging shamelessly with “vulgar” materialism. There are pretty good boundaries between science and humanities departments and within the humanities themselves. This won’t be to everyone’s taste. Daniel Dennett, a Darwinist cognition theorist, pooh-poohs deconstruction.⁹ Much Continental thinking assumes that there is no continuity between humans and animals, adopting a haughty “everyone knows that” tone and declaring that thinking otherwise is “asinane” (worse than asinine—and worse because we’re behaving like donkeys).¹ This is condescending exclusivity. Some insist

8. For an analysis of environmental form, see Timothy Morton, “Of Matter and Meter: Environmental Form in Coleridge’s ‘Effusion 35’ and ‘The Eolian Harp,’” *Literature Compass Romanticism* 5 (January 2008).

9. Daniel C. Dennett, *Darwin’s Dangerous Idea: Evolution and the Meanings of Life* (New York: Simon & Schuster, 1995), 115, n. 10.

1. The word sometimes used is “continuum,” from Jacques Derrida, *The Animal That Therefore I Am*, ed. Marie-Louise Mallet, trans. David Wills (New York: Fordham University Press, 2008), 30. The

assumption that Derrida always knows what he is talking about is not Derridean. Derrida is also responsible for “asinane” (18, 31). Derrida finds himself in company with Luc Ferry, “Neither Man nor Stone,” in Peter Atterton and Matthew Calarco, eds., *Animal Philosophy: Ethics and Identity* (London: Continuum, 2007), 147–56 (155). For a different view, see Felipe Fernández-Armesto, *So You Think You’re Human? A Brief History of Humankind* (Oxford: Oxford University Press, 2004), 37. [DERRIDA (1930–2004), French deconstructionist philosopher and critic; for *The Animal That Therefore I Am*, see above—editor’s note.]

proudly that they “refuse to accept the theory of evolution,” which to a biologist sounds like refusing to accept that the Earth is round.² Even creationists take evolution more seriously than that. It doesn’t have to be like this. No less a figure than Derrida maintained that deconstruction was a form of radical empiricism.³ You want anti-essentialism and antibiologism? Just read Darwin.

Taken at their trivial and ideological worst, the humanities is hamstrung by “factoids,” quasi- or pseudofacts that haven’t been well thought out, while the sciences are held in the sway of unconscious “opinions.” Humanities and sciences hold broken pieces of a jigsaw puzzle, pieces that might not fit together. Like William Blake I’m suspicious of “fitting & fitted.”⁴ The ecological thought must interrogate both the attitude of science, its detached authoritarian coldness; and the nihilistic, baselessly anthropocentric arguments in the humanities as well as humanist refusals to see the big picture, often justified by self-limiting arguments against “totalization”—talk about shooting yourself in the foot.⁵ The ecological thought is about warmth and strangeness, infinity and proximity, tantalizing “thereness” and head-popping, wordless openness.

The ecological thought is intrinsically open, so it doesn’t really matter where you begin. There are good reasons for trusting the biases and specialties that I bring to this task. Studying art is important, because art sometimes gives voice to what is unspeakable elsewhere, either temporarily—one day we will find the words—or intrinsically—words are impossible. Since the ecological thought is so new and so open, and therefore so difficult, we should expect art to show us some of the way. The ecological thought supplies good reasons to study culture and philosophy. Ecology is a matter of human experience. Humanities research can ask questions that science should address, questions that scientists may not have asked yet. For its part, science is about being able to admit that you’re wrong. This means that if we want to live in a science-based society, we will have to live in the shadow of the possibility of wrongness. A questioning attitude needs to become habitual. Philosophy and critical theory in the humanities can help. Some people, including left humanities scholars who should know better, either think that scientists should be left to get on with their work, or even when they don’t, the net effect of their beliefs is that science is untouched.⁶ We have a responsibility to examine, participate in, support, and criticize scientific experiments: to that end, this book shall propose some.

For example, are nonhumans capable of aesthetic contemplation? Can they enjoy art? Fascinating research projects, to say the least, are beginning find out whether the beings we call animals are capable of this. If they were, it would be essential to find out whether this contemplation was an advanced

2. Peter Atterton, “Ethical Cynicism,” Atterton and Calarco, eds., *Animal Philosophy*, 51–61 (61). GILLES DELEUZE and FÉLIX GUATTARI assert that they are beyond evolution in proposing the codevelopment of all beings in “alliance”: “Becoming-Animal,” in Atterton and Calarco, eds., *Animal Philosophy*, 87–100 (88). On the contrary, symbiosis, far from being the opposite of evolution, is deeply entrenched in it.

3. Jacques Derrida, *Of Grammatology*, trans.

Gayatri Chakravorty Spivak (Baltimore: Johns Hopkins University Press, 1987), 162.

4. William Blake, *The Complete Poetry and Prose of William Blake*, ed. D. V. Erdman (New York: Doubleday, 1988), 667.

5. By “attitude” I mean what Lacanian ideology theory calls “subject position.”

6. See, for instance, Slavoj Žižek, “Ecology without Nature,” talk given at Panteion University, Athens [October 3, 2007].

cognitive state or a simple one, if not the simplest. Is our capacity to enjoy art one of those things that makes us uniquely human (along with hands, tools, laughter, and dancing, all of which have been discovered in nonhumans)? Or do we share this capacity with nonhuman beings? These questions get to the heart of some of our cultural and political assumptions regarding nonhuman beings.

While it's deeply informed by critical theory, this book won't be talking very explicitly about theory. Why? Not because I want to dumb down the argument. I do this because people who aren't members of the in crowd of specialists familiar with the language of theory (and the kinds of things that are cool to say with it) badly need to read this book. Otherwise the ecological thought separates theory haves from have-nots. Humanities scholars have some very good and important ideas, if only they would let others read them. We simply can't leave environmentalism to the anti-intellectualists. If you're interested, this book does engage with theory in the notes. Or you can read my essays, perhaps starting with "Queer Ecology" in *PMLA*, and also *Ecology without Nature*.⁷ I won't be doing a lot of green close reading either. You can find some examples, based on the view this book lays out, by following this note.⁸

ALONDRA NELSON

b. 1968

Alondra Nelson is among a group of critical theorists committed to studying and discussing the theoretical and cultural aesthetic called Afrofuturism. It engages the intersections between race and technology, between technoculture and the histories and futures of the African diaspora. Nelson is professor of sociology and gender studies at Columbia University, where she also has served as inaugural dean of social science for the Faculty of Arts and Sciences and director of the Institute for Research on Women, Gender, and Sexuality. An interdisciplinary social scientist, Nelson publishes writings at the intersections of sociology and history, gender and sexuality, race and technology, medicine and inequality, and art and new media. She has appeared on radio and television's popular science-oriented *Star Talk Live*, hosted by the cosmologist and astrophysicist Neil deGrasse Tyson.

Born to middle-class parents in Bethesda, Maryland, Nelson moved as a child with her family to San Diego, California. Nelson's interest in science and technology developed from her parents: her father served as a technician in the U.S. Navy, and

her mother, an immigrant from Jamaica, was a cryptologist for the U.S. Army. She studied anthropology at the University of California, San Diego, receiving her B.A. magna cum laude. She earned a Ph.D. in American studies from New York University in 2003. Her first position was at Yale, where she taught in the Departments of African American Studies and Sociology before leaving for Columbia in 2009.

While at New York University, Nelson enrolled in a semester-long course on FRANTZ FANON offered by the art historian Kobena Mercer. Fanon's work on science and technology as critical apparatuses and his political and critical interventions as a medical doctor greatly affected Nelson's dissertation, "Black Power, Biopolitics and the Politics of Knowledge." That dissertation would form the basis of her first scholarly monograph, *Body and Soul: The Black Panther Party and the Fight against Medical Discrimination* (2011), a social and political history of the Black Panther Party from its founding in 1966 to its formal end in 1980 that won four awards: Distinguished Book Contribution to Scholarship from the American Sociological Association, the Association for Humanist Sociology Book Award, the Letitia Woods Brown Memorial Book Award, and the Mirra Komarovsky Book Award. While the Panthers are most often remembered for their revolutionary rhetoric and militant action, Nelson deftly recovers a lesser-known but indispensable aspect of their broader struggle for social justice: the battle for access to health care.

In 1998, Nelson was instrumental in building an Internet online community around Afrofuturism—a term coined by Mark Dery in "Black to the Future" (1993). That essay, which contains interviews with the scholar Tricia Rose, journalist Greg Tate, and science fiction writer Samuel R. Delany, attempts to frame black identity and the black experience in science and technology—in effect, to historicize black technoculture. It resonated with Nelson's work. In 2002, she curated and edited *Afrofuturism*, a special issue of *Social Text*, a leading U.S. journal of cultural studies. In it, several authors address the intersections between African diasporic culture and technology through literature, poetry, science fiction and speculative fiction, music, visual art, and the Internet. The issue demonstrates that racial identity fundamentally influences technocultural practices.

Nelson's "AfroFuturism: Past-Future Visions" (2000), our selection, articulates Afrofuturism's narrative, sonic, and visual components while namechecking its practitioners and innovators. Innovation and improvisation, she argues, are at the heart of black technoculture and of African diasporic peoples' histories and futures. For Nelson, history may inform the future of the African diaspora, but it does not wholly define it. Here Afrofuturists are vital as they envision those alternative tomorrows, sometimes utopic and at other times dystopic.

Along the way, Nelson highlights Afrodiasporic technical innovations in jazz, hip-hop, film, and especially photography. The pioneering work of the Nigerian-born photographer Fatimah Tuggar receives special attention. Tuggar's digital artistry creates works of contrast. Her photography captures what we think we know about Africa, a continent so vast and varied, but here reimaged as a place of decided technological and economic underdevelopment mixed with development. We see rural Nigerian women in domestic spaces and in traditional dress as well as Nigerian women involved in the global production of goods, services, and information via work in data processing and on assembly lines. For Nelson, Tuggar's photography and the women it pictures represent the past, present, and future possibilities of women's soft power, their facility with global digital and technological innovations in private and public spaces on a continent now gripped by Chinese soft power, a distilled form of neocolonialism that promises development and cooperation yet is revealed in Tuggar's work as uneven.

"AfroFuturism: Past-Future Visions" Keywords: Cultural Studies, Identity, Ideology, Media, Popular Culture, Postcolonial Theory, Race and Ethnicity Studies

AfroFuturism: Past-Future Visions

Visions of the future abound, celebrating progress, speed, and the empowering presence of technology in our lives, often accompanied by pronouncements about a brave new world coming into being—a world free from race, class, and gender conflicts. But how utopian are visions of new gizmos and gadgets fueled by commercial imperatives? And to whom do these futures belong?

They say you can't see race in cyberspace, but it is certainly not a coincidence that post-identity sentiments thrive in a climate intolerant to appeals for social and racial justice. Cyber-libertarian ideology holds that assertions of race, class, or gender difference in technologically enabled environments are like broaching politics at a dinner party—the epitome of bad taste. As a result, a false opposition is created, placing women and people of color on one side of the utopian equation, and technoculture on the other.

This split is partly a function of the “digital divide”—a gap that, not surprisingly, falls along race and class lines. Even in the midst of a digital revolution, the social conditions produced by the new information order have much in common with those that shaped the old industrial order. So the digital divide has become a call-to-arms for many African Americans, activists and entrepreneurs alike. But while it speaks to very material concerns that require real solutions, the digital divide is also ideological. This gap has become a self-fulfilling prophecy, reinforcing stereotypes of black technophobia; it confirms that African Americans can't keep pace in a hi-tech world that threatens to outstrip them. Focusing on the digital divide has paralyzed the thinking even of those who seek to bridge it.

Why don't we look at the innovations in technique and communication that can be found throughout black diasporic culture? Technology speaks to identity, but identity also speaks to technology. While identifying the class, race, and gender inequities that structure the so-called digital divide, we can also identify glimpses of creative possibility in the application of African diasporic cultural traditions to technology.

AfroFuturism has emerged as a term of convenience to describe the analysis, criticism, and cultural production that addresses the intersections between race and technology. Neither a mantra nor a movement, AfroFuturism is a critical perspective that opens up inquiry into the many overlaps between technoculture and black diasporic histories. AfroFuturism looks across popular culture—jazz, hip-hop, and techno music; experimental film; graffiti art; new photography—to find models of expression that transform spaces of alienation into novel forms of creative potential. In the process, it reclaims theorizing about the future.

New Icons, New Heroes, New Futures

In response to prevailing views about race, culture, and technology, alternative AfroFuturist narratives insist that who we've been and where we've traveled is always an integral component of who we can become. They provide novel takes on lived experience in a technologized world, perspectives

that open up space for new ideas about politics and new visions of black life: new icons, new heroes, new futures.

AfroFuturist communiques are issued in the writing of Ishmael Reed, Octavia Butler, Ralph Ellison, Samuel R. Delany, and Nalo Hopkinson;¹ they are delivered in the music of Sun Ra and the Omniverse Arkestra, George Clinton, 4 Hero, Underground Resistance, Lee “Scratch” Perry, Missy Elliot, and DJ Spooky;² they are made manifest in the imagery weaved by video maker Hype Williams, independent director John Akomfrah, and filmmaker Julie Dash;³ and they are revealed in the visual speculation of artists Rammellzee, Jean-Michel Basquiat, Fatimah Tuggar, and Keith Piper.⁴

These artists are self-styled mavericks whose creations reflect the long and impressive history of African diasporic culture, but also push the envelope of these traditions. They garner text, sound, and image in the service of reimagining black life. They create reflections on the African diasporic past and renderings of our possible futures. These are past-future visions, and in this sense, AfroFuturism is an antidote to unbridled, raceless future-lust.

Envisioning The Future

Cultural production can produce social reflection. Art that attends to themes of science and technology offers particularly sharp models of social reflection, for it is in the realm of art—with its ability to bring heightened perception and a critical distance to bear on lived experience—that we are better able to consider how technology is significant in everyday life. And AfroFuturist narratives in which time collapses into a single plane are not necessarily unconcerned with history.

The work of digital artist Fatimah Tuggar might best be characterized as “cyborg⁵ realism”: a body of work that is equally true to the traditions of the Nigerian communities that she photographs and to shifting social relations in an increasingly technological world. Tuggar’s unlikely cyborgs are most often rural African women engaged in domestic activities.

Tuggar’s method tricks the eye. At first glance, her digitally modified and U.V. laminated images seem to depict familiar visions of Africa: Nigerian women in traditional dress and rural villages bereft of modern influence and modern comforts. These images are seductive, drawing the viewer’s eye with rich hues and tones. They are also deceptive. Tuggar’s images seem to provide confirmation of the “real Africa” we already know, that place where

1. All writers of color: Reed (b. 1938), American playwright, novelist, and poet; Butler (1947–2006), American author of science fiction; Ellison (1914–1994), American novelist; Delany (b. 1942), American author best known for his science fiction; Hopkinson (b. 1960), Jamaican-born author of science fiction and fantasy.

2. Musicians in a range of genres: Sun Ra (born Herman Poole Blount, 1914–1993), American jazz composer and leader of the Arkestra, an ensemble; Clinton (b. 1941), American funk singer, songwriter, and music producer; 4hero: an electronic music group from London formed in 1989; Underground Resistance: a highly political techno music collective from Detroit, Michigan, formed in 1989; Perry (b. 1936), Jamaican music producer; Elliott (b. 1971), American rapper and music producer; and DJ Spooky (Paul D. Miller, b.

1970), American electronic and hip-hop musician. 3. American film director, writer, and producer (b. 1952). Harold “Hype” Williams (b. 1970), American screenwriter and director and producer of films and music videos. Akomfrah (b. 1957), Ghanaian-born British artist and film director.

4. Maltese-born British multimedia artist and curator (b. 1960), a founding member of the BLK Art Group. Rammellzee (1960–2010), American visual, graffiti, and hip-hop artist. Basquiat (1960–1988), American expressionist artist. Tuggar (b. 1967), Nigerian-born visual artist who often creates Web-based interactive works, computer montages, and video collages.

5. On the cyborg, see DONNA HARAWAY’s “A Manifesto for Cyborgs: Science, Technology, and Socialist Feminism in the 1980s” (1985), excerpted above.

technology has never existed, that dark continent that is the opposite of the West.

But, in fact, the surreal settings she composes exist in “no place.” For these are images of a virtual Africa—virtual because they are digitally built environments and because, in their juxtaposition of hi-tech artifacts with rural African life, they depict scenarios that are unimaginable, and therefore unreal, to many Western eyes. The result is a body of utopian, and sometimes dystopian, reflections on Africa and modernity.

Tuggar also deals with domestic and information technologies that are coded as feminine. Her collaged images bring into relief the contradictions and the ambiguities of post-modern progress, simultaneously exploring the important role that non-Western women play in the free trade zone assembly lines, or rural data processing outposts, and their desire for modern convenience. Her method allows her to consider, side-by-side, the contradiction between the sometimes tragic history of modernity and colonialism in Nigeria, and the power that digital technologies offer to better connect Africa to the global flow of goods, services, and information.

In this sense, her work responds to what she keenly terms “soft power,” the flow of electronics and information that enables neo-colonial power, despite the absence of physical proximity. Tuggar believes that soft power must be battled with soft power. She exercises her own by creating images of African women at ease with technology in the public and private sphere, women who own and desire technological gadgets and the power that they can wield. Her representations are not blanket indictments of technological advance, but rather an opportunity for the viewer to consider the incongruities and contradictions of uneven development. They examine soft power as both a tool of domination and a tool of possibility.

With her digital photomontage, Tuggar provides alternative, critical icons for the digital revolution that look neither like the hyper-aestheticized cyborg women of television, film, or photography nor like the white male “pirates of Silicon Valley.”⁶ Her unlikely cyborgs, rather than indulging in the glamour of the posthuman, offer images and reflections on the effect of technology upon women’s everyday lives. Tuggar’s images revisit the past, redefine the probable, and forecast the possible.

Alien Nation

The central focus of AfroFuturist thought is in defining the relationships between race and technology through the many places where they intersect, including fiction and digital art. But there is no consensus among critics about the absolute significance of these associations. Like the cultural productions they write about, the strength of what we might cautiously call AfroFuturist criticism lies in the speculative and fragmented nature of the ideas. Mark Dery⁷ coined the word “AfroFuturism” in a 1993 essay, first published in *South Atlantic Quarterly*, called “Black to the Future.” Dery argued that “African American voices have other stories to tell about culture, technology, and things to come.” He continued, “If there is an AfroFuturism, it must be sought in unlikely places, constellated from far-flung points.”

6. The title of a 1999 made-for-television biographical film about the founders of Apple Com-

puter and of Microsoft, Steve Jobs and Bill Gates.
7. American cultural critic (b. 1959).

Surveying black cultural production in film, music, literature, genre fiction, comics, and the arts, Dery assembled these “other stories,” models of subjectivity which resonated with African American history due to their uncanny parallels with the geographic dislocations and abuses of chattel slavery. In an oft-quoted passage, Dery wrote, “African Americans, in a very real sense, are the descendants of alien abductees; they inhabit a sci-fi nightmare in which unseen but no less impassable force fields of intolerance frustrate their movements; official histories undo what has been done; and technology is too often brought to bear on black bodies (branding, forced sterilization, the Tuskegee [syphilis] experiment⁸ and tasers come readily to mind).”

Was there ever anyone more “alien” than the black men and women abducted from Africa and brought to the New World against their will? Wasn’t the history of black Americans a “sci-fi nightmare” in which the tools of the future were continually turned against black people? In posing these questions, Dery brilliantly elucidated recurring themes in black culture that crossed genres and forged paths for further inquiry.

But he leaves the full depth of Afrodiasporic technoculture underexplored. We are presented with an abject people with escapist visions. By virtue of their historically subjugated relationship to technology, blacks are given more of a reactionary than a constitutive relationship to technoculture in Dery’s account. The affiliation he established between AfroFuturist artists is limited to their shared racial background rather than to the improvisation and innovation of black diasporic culture. These artists are notable more because they appropriate images of technology than because of the use of technologies in their work. By focusing on themes rather than techniques, Dery underappreciates the history of black technological innovation.

Free At Last—Of History?

Much of that innovation has occurred in music production, so it’s not surprising that another strain of AfroFuturist thought has developed in music writing and criticism. In hip-hop, the separation and machination of break beats, achieved with turntables and sampling technology, become the building blocks for new combinations of sound. For cultural critic Tricia Rose, author of *Black Noise: Rap Music and Black Culture in Contemporary America*,⁹ these technological innovations express the Afro-diasporic “cultural priorities” of rhythmic layering and rupture. Other experimental and electronic music forms like electro, techno, and drum-and-bass have built on these innovations. These often lyric-less musics marry science fiction themes in song titles and futurist imagery on cover art, with a post-industrial soundtrack of synthetic sounds and noises. Because the lyrics or narrative elements of these musics are pared down or absent, the techniques that make them possible are often brought to the forefront.

8. A notorious example of unethical medical experimentation on human subjects, examining the course of untreated syphilis in black men. This study (1932–72), conducted by the U.S. Public Health Service, involved 600 poor sharecroppers, who were never informed of the real purpose

of the study and were told they would receive free health care; those infected with syphilis were not given the option of effective treatment, which became available in the mid-1940s.

9. Published in 1994.

For Kodwo Eshun,¹ author of *More Brilliant than the Sun*, the complexity of these compositions, and the high level of aptitude required of the music makers, deserve nothing less than the name “science.” “Breakbeat science” describes the application of scientific technique to the production of music. Eshun even extends the term “science” to musics that existed before the advent of this “sampladelia,” like the music of John Coltrane² and Sun Ra. In this clever formulation, Eshun duly recognizes the artists’ ingenuity of aesthetic and technique. Eshun is also interested in the philosophical possibilities of the “break.” Musical innovations always begin as breaks with tradition, as stark discontinuities with how music had been made prior to the point of innovation. For Eshun, such breaks are irrevocable, they mark an unbridgeable distance between the past and the future. What is produced stands alone in the sphere of novelty.

Tradition, Eshun argues, hinders our ability to experience the “new.” Eshun wants “to reverse traditional accounts of Black Music. Traditionally, they’ve been autobiographical or biographical, or they’ve been heavily social or political. My aim is to suspend all of that absolutely, and then, in the shock of these absences, this huge world is opened up.” But, despite Eshun’s focus on what is usually called Black Music—a term that he rejects—the effect of this position is to negate the constitutive role of racial histories in shaping representations of the future and uses of technology. Race disappears into technology and the “Afro” in AfroFuturism is deconstructed until its effects are negligible.

If with Dery, AfroFuturism leads down a path to the constraints of history, with Eshun the future holds a new, improved, and dispersed “blackness,” free of the weight of the historical past. Eshun’s disposable history reacts to theories of black culture that place all Afrodiasporic cultural production in a linear and strictly chronological trajectory, that fail to recognize the borrowed and hybrid melange from which these creative efforts spring.

Beyond Reality

Though Eshun can be taken to task for his dismissal of any semblance of a unified black cultural tradition, he does rightly critique what might be called “black authenticity”—the tendency to believe that there are real and true ways of uniformly representing the collectivity of black diasporic experience. Black creative life has too often been determined by this impulse to “keep it real.” In order to be taken seriously, we have fostered and encouraged a long tradition of social realism in our cultural production. And we feared that to stop keeping things real was to lose the ability to recognize and protest the very real inequities in the social world. But we created a cultural environment often hostile to speculation, experimentation, and abstraction.

Yet future vision is a necessary complement to realism, for the reality of oppression without utopianism will surely lead to nihilism. And we should not think of speculative cultural production as only “escapist,” but rather as

1. British Ghanaian writer and filmmaker (b. 1967); *More Brilliant Than the Sun* (1998) examines the development of “sampladelia,” a form of dance music that uses sampling and other

digital technologies.

holding important insights about people's lived conditions. Uniting the strengths of Eshun and Dery, from a decidedly feminist perspective, Fatimah Tuggar's "cyborg realism" projects the future as a hybrid of times, places, influences, and techniques; novelty and tradition exist simultaneously.

Here imagination becomes crucial. As science fiction writer and theorist Samuel R. Delany suggests: "We need images of tomorrow; and our people [black people] need them more than most. Without an image of tomorrow, one is trapped by blind history, economics, and politics, beyond our control. One is tied up in a web, in a net, with no way to struggle free. Only by having clear and vital images of the many alternatives, good and bad, of where one can go, will we have any control over the way we may actually get there in a reality tomorrow will bring all too quickly."³

The future is neither an uncritical embrace of the past nor a singular conception of what lies ahead. It's ours for the imagining.

SIANNE NGAI

b. 1971

One of the most remarkable things about literature is its ability to create very real feelings in response to imaginary events. Although there is a long history of speculation on literature's capacity to arouse emotion, from the ancient Greeks (GORGIAS, PLATO, and ARISTOTLE) all the way down to SIGMUND FREUD, much twentieth-century literary theory avoided explicitly theorizing emotion, viewing it as too subjective to be easily available for theoretical scrutiny. The New Critics banished it with the doctrine of the affective fallacy. It was too personal for structuralism's positivism or deconstruction's withering interrogation of the categories of the "subject" and "experience." Critiques of ideology (Marxism, feminism, critical race theory) that drew on a "hermeneutics of suspicion" sought to demystify oppressive social relations. Only psychoanalysis, some early myth criticism, and reader-response theory offered terms for theorizing literature's emotional impact. Around 2000, however, a number of theorists, including EVE KOSOFSKY SEDGWICK, LAUREN BERLANT, and Brian Massumi, returned to the question of literature's affective qualities, its ability to arouse feelings and emotions. Sianne Ngai has been praised as one of the most insightful and inventive theorists of this turn to affect. But rather than taking on the great emotions of the literary canon—rage, love, joy, hatred—her first book, *Ugly Feelings* (2005), focuses instead on the smaller and meaner feelings that seem to pervade late modernity, such as envy, irritation, anxiety, paranoia, and disgust. "If *Ugly Feelings* is a bestiary of affects," Ngai writes, "it is one filled with rats and possums rather than lions, its categories of feeling generally being, well, weaker and nastier."

Ngai was born in California and raised in Hawaii. She earned a B.A. (1993) and an M.F.A. (1995) from Brown University, and she received her Ph.D. from Harvard University (2000). From 2000 until 2007, she was an assistant professor of English

at Stanford University; from 2007 until 2011, she was an associate professor of English at UCLA. She has been a professor of English at Stanford University since 2011. Ngai received a 2007–08 Charles A. Ryskamp Fellowship from the American Council of Learned Societies and in 2014–15 was a fellow at the Institute of Advanced Studies in Berlin, Germany. In 2015 she was awarded an honorary D.Phil. in Humanities from the University of Copenhagen. She is the author of two books, both major studies, and several articles. Her published work—including *Ugly Feelings* and *Our Aesthetic Categories: Zany, Cute, Interesting* (2012), which won both the MLA James Russell Lowell Prize and the PCA/ACA Ray and Pat Browne award for Best Reference or Best Primary Source Work—consistently engages with the minor, unappreciated, and overlooked. Ngai is also an accomplished poet and avant-garde fiction writer.

Affect theory follows and builds on the work of trauma theorists such as Cathy Caruth, E. ANN KAPLAN, and KELLY OLIVER by exploring emotional responses to more mundane events. While literary theorists have long attempted to objectify literary emotions through concepts such as John Dewey's "esthetic emotion" or T. S. ELIOT's "art emotion," what characterizes this most recent return to emotion is the distinction drawn between affect and emotion. Ngai notes that the concept of affect, which owes something to the philosophy of BARUCH SPINOZA, took on its contemporary meaning in the field of psychoanalysis as a means of characterizing "feeling described from an observer's (analyst's) perspective," as opposed to emotion, "designating feeling that 'belongs' to the speaker" or patient. That is, it attempts to separate what is objective about emotion from what is subjective, providing a way to put emotion into therapeutic discourse. The concept was further elaborated by GILLES DELEUZE and FÉLIX GUATTARI to emphasize bodily experience independent of a subject. Drawing on the work of the psychologist Silvan Tomkins (1911–1991), affect theorists such as Sedgwick and Massumi argue that while emotion is rooted in an experiencing subject, affect preexists the subject. Affect theory, then, designates feelings as personal, emotions as social, and affects per se as the biological substrate of emotion, which, according to Tomkins, is "hard-wired, pre-programmed, and genetically transmitted." Because affect, in this theory, is prior to and outside of consciousness, it eludes representation in language or signs. Once affect has been given social meaning, it becomes an emotion. This distinction between affect and emotion enables affect theorists to rebut the charge that the study of emotion is subjective and idiosyncratic. By creating a proper object of study, an authentic locus of feeling, they create a more objective approach to emotion—an approach rooted in biological bodies rather than idiosyncratic individuals.

Not all affect theorists accept such a hard-and-fast distinction, however; some, like Ngai, use the two words more or less interchangeably. Ngai acknowledges that the problem of sorting out what is subjective or objective about emotion remains; at the same time, she insists that for her purposes, "the difference between affect and emotion is taken as a modal difference of intensity or degree, rather than a formal difference of quality or kind." Affect, for her, is less "sociolinguistically fixed" than emotion, but not outside of meaning or language. If affect did elude language, how could it become an object of discourse? In our selection, from the introduction to *Ugly Feelings*, Ngai describes emotions/affects as "unusually knotted or condensed 'interpretations of predicaments.'" Within a literary text, affects or emotions provide a focal point for condensing problems that are at once formal, ideological, and sociohistorical. These knots correspond to the somewhat amorphous literary critical concept of "tone," which she defines as a text's "global or organizing affect, its general disposition or orientation toward its audience and the world." What makes tone such a difficult literary concept is that it is almost impossible to determine whether a text's affect is produced by the text (objective) or by its reader (subjective): thus, tone recapitulates the very subject/object problem that the emotion/affect distinction tries to resolve. By untying these knots (for example, by paying attention

to tone), Ngai seeks to connect the formal features of literary texts and their ideological and sociocultural contexts—contexts that include entanglements of race and gender. In doing so, she fashions a method of reading emotion that balances formal analysis of texts with contemporary cultural and political issues.

The particular knots she chooses for her study are those typical of what THEODOR ADORNO called “the fully administered world of late modernity,” in which individuals may feel a sense of “obstructed agency” that spawns enervation rather than action. Ngai turns to what she calls ugly feelings; these are emotions or affects that are “explicitly amoral and noncathartic, offering no satisfactions of virtue, however oblique, nor any therapeutic or purifying release”—emotions like envy, irritation, and paranoia. She even invents two previously unnamed “knots,” which she calls *animatedness* (the representation of the black subject as an excessively emotional and expressive subject) and *stuplimity* (“an amalgamation of shock and boredom”). These ugly feelings are negative in three ways. They are experientially negative in evoking pain or displeasure, they are syntactically negative in repelling rather than attracting, and they are semantically negative in carrying socially stigmatized meanings.

These negative feelings or “sentiments of disenchantment,” perhaps because they are repulsive (both unpleasant and repelling), tend to attach themselves not to canonical texts, which probe the strong emotions on which philosophers have tended to focus, but to minor literatures: Herman Melville’s “tonally ambiguous” *Confidence-Man* (1857) rather than *Moby-Dick* (1851), Samuel Beckett’s “exhausting” poetry rather than the Romantic lyric. The cultural canon, writes Ngai, “seems to prefer higher passions and emotions—as if minor or ugly feelings were not only incapable of producing ‘major’ works, but somehow disabled the works they do drive from acquiring canonical distinction.” The presiding genius of *Ugly Feelings* is Melville’s inscrutable Bartleby—the titular character of his “Bartleby, the Scrivener” (1853), a short story about a clerk working on Wall Street. Bartleby’s all-encompassing refrain, “I prefer not to,” serves as a motto for the sense of blocked agency that gives rise to ugly feelings in modern society.

Ugly feelings focalize the problem of art’s own limited agency in the modern world. Following Adorno, Ngai argues that in our highly differentiated society, art is cordoned off from the “empirical,” the utilitarian. Art’s powerlessness in the political sphere, for Ngai, makes it an ideal space for theorizing political resistance. Extending the thinking of the contemporary Italian Marxist philosopher Paolo Virno, Ngai treats ugly feelings as socially symptomatic of capitalist society—as ideological material. At the same time, she recognizes that ugly feelings are ambiguous enough, being amoral and nonvirtuous, that they might be mobilized for either progressive or regressive ends, by the Right as easily as by the Left. This contradiction tends to make her claims for the efficacy of ugly feelings as a form of political praxis weaker. Some critics have characterized her claims as “doomed to failure,” given the pervasive powerlessness so well illustrated by Ngai’s book. For these critics, art is not the handmaiden of politics and should not be measured by its ability to initiate political resistance. Yet even her critics recognize that Ngai’s sensitivity to the complex paradoxes produced by ugly feelings leads to nuanced readings of both literature and popular culture.

From Ugly Feelings

From *Introduction*

This book presents a series of studies in the aesthetics of negative emotions, examining their politically ambiguous work in a range of cultural artifacts produced in what T. W. Adorno calls the fully “administered world” of late modernity.¹ This is the world already depicted by Herman Melville² with startling clarity in “Bartleby, the Scrivener: A Story of Wall Street” (1853)—a fiction in which the interpretive problems posed by an American office worker’s *affective* equivocality seem pointedly directed at the *political* equivocality of his unnervingly passive form of dissent. What, if anything, is this inexpressive character feeling? Is Bartleby’s unyielding passivity, even in the polemical act of withholding his labor (“I prefer not to”), radical or reactionary? Should we read his inertness as part of a volitional strategy that anticipates styles of nonviolent political activism to come, or merely as a sign of what we now call depression? In Melvillean fashion, the following chapters dwell on affective gaps and illegibilities, dysphoric feelings, and other sites of emotional negativity in literature, film, and theoretical writing, to explore similarly ambivalent situations of suspended agency. They thus draw together two seemingly disparate philosophical definitions—Hannah Arendt’s claim that “what makes man a political being is his faculty of action” and Baruch Spinoza’s description of emotions as “waverings of the mind” that can either increase or diminish one’s power to act—and attend to the aesthetics of the ugly feelings that index these suspensions.³

Recalling the corner of the office in which Melville’s scrivener is wedged and cordoned off by a screen, we might think of this book’s project as Bartlebyan in a more reflexive sense, in that it privileges the circumscribed standpoint of the literary to examine problems whose greatest import arguably lies beyond the sphere of the aesthetic per se. For Bartleby’s powerful powerlessness can also be thought of as exemplified by literature or art itself, as a relatively autonomous, more or less cordoned-off domain in an increasingly specialized and differentiated society. As Adorno’s analysis of the historical origins of this aesthetic autonomy suggests, the separateness from “empirical society” which art gains as a consequence of the bourgeois revolution ironically coincides with its growing awareness of its inability to significantly change that society—a powerlessness that then becomes the privileged object of the newly autonomous art’s “guilty” self-reflection (AT, 225). Yet one could argue that bourgeois art’s reflexive preoccupation with its *own* “powerlessness and superfluity in the empirical world” is precisely what makes it capable of theorizing social powerlessness in a manner unrivaled by other forms of cultural praxis (104). In this manner, the discussion

of aesthetic autonomy in *Aesthetic Theory* suggests that literature may in fact be the ideal space to investigate ugly feelings that obviously ramify beyond the domain of the aesthetic proper, since the situation of restricted agency from which all of them ensue is one that describes art's own position in a highly differentiated and totally commodified society.

Each of the feelings explored in the following chapters—envy, anxiety, paranoia, irritation, a racialized affect I call “animatedness,” and a strange amalgamation of shock and boredom I call “stuplimity”—can thus be thought of as a mediation between the aesthetic and the political in a nontrivial way. As a whole, the book approaches emotions as unusually knotted or condensed “interpretations of predicaments”—that is, signs that not only render visible different registers of problem (formal, ideological, sociohistorical) but conjoin these problems in a distinctive manner.⁴ My exclusive focus, however, is on the negative affects that read the predicaments posed by a general state of obstructed agency with respect to other human actors or to the social as such—a dilemma I take as charged with political meaning regardless of whether the obstruction is actual or fantasized, or whether the agency obstructed is individual or collective. These situations of passivity, as uniquely disclosed and interpreted by ignoble feelings like envy (of the disempowered for the powerful) or paranoia (about one's perceived status as a small subject in a “total system”), can also be thought of as allegories for an autonomous or bourgeois art's increasingly resigned and pessimistic understanding of its *own* relationship to political action. At the core of *Ugly Feelings*, then, is a very old predicament—the question of relevance—that has often haunted the discipline of literary and cultural criticism. The evidence here would suggest that the very effort of thinking the aesthetic and political together—a task whose urgency seems to increase in proportion to its difficulty in an increasingly anti-utopian and functionally differentiated society—is a prime occasion for ugly feelings.

Yet I want immediately to emphasize the deeply equivocal status of the ugly feelings featured in this study. For although dysphoric affects often seem to be the psychic fuel on which capitalist society runs, envy, paranoia, and all the emotional idioms I examine are marked by an ambivalence that will enable them to resist, on the one hand, their reduction to mere expressions of class *ressentiment*,⁵ and on the other, their counter-valorization as therapeutic “solutions” to the problems they highlight and condense. Admittedly it is part of this book's agenda to recuperate several of these negative affects for their *critical* productivity, but no one warns us better about the danger of romanticizing them than Paolo Virno, for whom the classic “sentiments of disenchantment” that once marked positions of radical alienation from the system of wage labor—anxiety, distraction, and cynicism—are now perversely integrated, from the factory to the office, into contemporary capitalist production itself: “Fears of particular dangers, if only virtual ones, haunt the workday like a mood that cannot be escaped. This fear, however, is transformed into an *operational requirement*, a special tool of the trade. Insecurity about one's

place during periodic innovation, fear of losing recently gained privileges, and anxiety over being 'left behind' translate into flexibility, adaptability, and a readiness to reconfigure oneself."⁶ Here we see how capitalism's classic affects of disaffection (and thus of potential social conflict and political antagonism) are neatly reabsorbed by the wage system and reconfigured into professional ideals. Nothing could be further from Fredric Jameson's more widely known thesis about the "waning" of negative affect in our contemporary moment.⁷ Instead, Virno shows how central and perversely *functional* such affective attitudes and dispositions have become, as the very lubricants of the economic system which they originally came into being to oppose.⁸ Yet while irreversibly integrated into the contemporary, post-Fordist organization of labor,⁹ these ugly feelings remain, for Virno, "open to radically conflicting developments" ("AD," 26). For example, while there is nothing redeeming about the "eager" disposition of opportunism, its "'truth' . . . what might be called its neutral kernel, resides in the fact that our relation with the world tends to articulate itself primarily through possibilities, opportunities, and chances, instead of according to linear and univocal directions." As Virno points out, "This modality of experience, even if it nourishes opportunism, does not necessarily result in it" (25). For other kinds of behavior, and even kinds diametrically opposed to opportunism, "might also be inscribed within an experience fundamentally structured by these same possibilities and fleeting opportunities. We can discern such radical and transformative behavior, however, only by tracing in the opportunism so widespread today the specific modality of experience to which this behavior might indeed be correlated, even if in a completely different way" (25). Indeed, one could extrapolate from Virno's claims to argue that in the transnational stage of capitalism that defines our contemporary moment, our emotions no longer link up as securely as they once did with the models of social action and transformation theorized by Aristotle, Thomas Hobbes,¹ and others under the signs of relatively unambiguous emotions like anger or fear. In other words, the nature of the sociopolitical itself has changed in a manner that both calls forth and calls upon a new set of feelings—ones less powerful than the classical political passions, though perhaps more suited, in their ambient, Bartlebyan, but still diagnostic nature, for models of subjectivity, collectivity, and agency not entirely foreseen by past theorists of the common-

8. In fact, according to Virno, nothing currently unites "the software technician, the autoworker, and the illegal laborer" more than a process of socialization that, in teaching "habitual mobility, the ability to keep pace with extremely rapid conversions, adaptability in every enterprise, [and] flexibility in moving from one group of rules to another" ("Ambivalence of Disenchantment," 14),

effectively runs on the affects of fear (which prompts mobility in the form of flight), opportunism (which relies on flexibility and adaptability), and cynicism (which arises from a particular intimacy with rules).

9. That is, after the era of modern industrial production that has been called "Fordism" (notably in the writings of DAVID HARVEY). In the 1920s, Henry Ford paid his workers relatively high wages and offered secure full-time jobs so that they could buy expensive consumer products such as the cars they were manufacturing; this "Fordist" strategy is credited with helping to create a middle class. Since the 1970s, companies have moved away from that model toward just-in-time production by casualized labor [editor's note].

1. English political philosopher (1588–1679). ARISTOTLE (384–322 B.C.E.), Greek philosopher [editor's note].

wealth. This is why, for Virno, even an unattractive feeling like opportunism can provide the “kernel” from which to shape “transforative behavior.” For all its pettiness, the feeling calls attention to a real social experience and a certain kind of historical truth.

While this book makes a similar if more modest claim for the social significance of its own fundamentally ambivalent “sentiments of disenchantment” (an ambivalence demonstrated by the fact that all are mobilized as easily by the political right as by the left, as the histories of disgust and paranoia illustrate so well), it is useful to recall that with notable exceptions like Hobbes or Niccolò Machiavelli, who made fear central to their theories of modern sovereignty and the state, it is the discourse of philosophical aesthetics, rather than that of political philosophy or economy, in which emotions have traditionally played the most pivotal role—from Longinus to Immanuel Kant² on the sublime (perhaps the first “ugly” or explicitly non-beautiful feeling appearing in theories of aesthetic judgment), to the twentieth-century mutation of this affect I describe in my chapter on stuplimity. Or, to trace another exemplary arc, from the seventeenth-century “Affect Theorists” who tried to systematize the correlation of musical forms and genres to specific emotions, to Susanne Langer’s³ analysis of music as a “tonal analogue of emotive life” in *Philosophy in a New Key*, to my own attempt to reanimate the concept of literary “tone” by means of the atonal but no less musical concept of noise. The investigation of how new theories of affect might expand the discourse of aesthetics thus continues a long-standing intellectual project, even as it sets this book apart from cultural histories of specific emotions (as, for instance, *American Nervousness*, 1903: *An Anecdotal History*, by Tom Lutz; *Anatomy of Disgust*, by William Ian Miller; and *Cato’s Tears and the Making of Anglo-American Emotion*, by Julie Ellison), as well as from new philosophies of emotion that inquire into what feeling is (*Parables for the Virtual*, by Brian Massumi; *Feeling in Theory*, by Rei Terada; and *The Vehement Passions*, by Philip Fisher). In a sense, the book’s turn to ugly feelings to reanimate aesthetics is simply the flip side of its privileging of the aesthetic domain as the ideal site to examine the politically ambiguous work of negative emotions.

More specifically, this book turns to ugly feelings to expand and transform the category of “aesthetic emotions,” or feelings unique to our encounters with artworks—a concept whose oldest and best-known example is Aristotle’s discussion of catharsis in *Poetics*.⁴ Yet this particular aesthetic emotion, the arousal and eventual purgation of pity and fear made possible by the genre of tragic drama, actually serves as a useful foil for the studies that follow. For in keeping with the spirit of a book in which minor and generally unprestigious feelings are deliberately favored over grander passions like anger and fear (cornerstones of the philosophical discourse of emotions, from Aristotle to the present), as well as over potentially ennobling or mor-

ally beatific states like sympathy, melancholia, and shame (the emotions given the most attention in literary criticism's recent turn to ethics), the feelings I examine here are explicitly *amoral* and *noncathartic*, offering no satisfactions of virtue, however oblique, nor any therapeutic or purifying release. In fact, most of these feelings tend to interfere with the outpouring of other emotions. Moods like irritation and anxiety, for instance, are defined by a flatness or ongoingness entirely opposed to the "suddenness" on which Aristotle's aesthetics of fear depends.⁵ And unlike rage, which cannot be sustained indefinitely, less dramatic feelings like envy and paranoia have a remarkable capacity for duration. If *Ugly Feelings* is a bestiary of affects, in other words, it is one filled with rats and possums rather than lions, its categories of feeling generally being, well, weaker and nastier.

* * *

The equivocality of the Bartlebyan aesthetic suggests that there is a special relationship between ugly feelings and irony, a rhetorical attitude with a decidedly affective dimension, if not a "feeling" per se. For the morally degraded and seemingly unjustifiable status of these feelings tends to produce an unpleasurable feeling *about* the feeling (a reflexive response taking the form of "I feel ashamed about feeling envious" or "I feel anxious about my enviousness") that significantly parallels the doubleness on which irony, as an evaluative stance hinging on a relationship between the said and the unsaid, fundamentally depends.⁶ In their tendency to promote what Susan Feagin calls "meta-responses" (since it is hard to feel envy without feeling that one should *not* be feeling envy, reinforcing the negativity of the original emotion), there is a sense in which ugly feelings can be described as conducive to producing ironic distance in a way that the grander and more prestigious passions, or even the moral emotions associated with sentimental literature, do not.⁷ This is why the aesthetic examples in this book tend *not* to be drawn from the more recognizably "emotional" genres—such as melodrama, sentimental fiction, tales of supernatural horror, or lyric poetry—to which literary critics interested in such matters have traditionally turned. While the ironic as well as the noncathartic aspect of ugly feelings drives this book's preference for "constructivist" rather than "expressivist" forms as ideal sites for examining the social and symbolic productivity of emotion in general, it is another key aspect of these negative feelings—that of being noticeably weaker in intensity than what Philip Fisher calls the "vehement passions" underwriting canonically major forms and genres like Homeric epic and Shakespearean tragedy—which informs its preference for texts that even seem oddly impassive: texts that, like "Bartleby," foreground the absence of a strong emotion where we are led to expect one, or turn entirely on the interpretive problems posed by an emotional illegibility. The fact that this book reads the tonally ambiguous *Confidence-Man* rather than the rage-driven epic *Moby-Dick*, Nella Larsen's superficially "irritated" *Quicksand* but not the melodrama of jealousy that is *Passing*, and

Beckett's⁸ exhausting poetry of permutations and combinations as opposed to the Romantic lyric, proceeds directly from its emphasis on the ignoble cousins of the philosophically canonical emotions featured in Fisher's study. With the turn to the ambiguous affects of the administered world's many "Sub-Subs"—Melville's appellation for the minor employee, or "mere pains-taking burrower and grub-worm," who dutifully assembles the cetological "Extracts" that open *Moby-Dick*⁹—rather than those of more iconic figures such as Ahab, Othello, or Lear,¹ my focus will be on irritation *instead of* anger, envy *rather than* jealousy, and "stuplimity" *as opposed to* the transcendent feeling of the sublime. It is interesting to note here that while the texts chosen for the way they highlight these feelings are drawn from both high and mass culture, all are canonically minor. Something about the cultural canon itself seems to prefer higher passions and emotions—as if minor or ugly feelings were not only incapable of producing "major" works, but somehow disabled the works they do drive from acquiring canonical distinction.

Still, while partly a response to one philosopher's call for a study of feeling with a more idiosyncratic focus than those that "concentrate on analyzing the features of a handful of classic emotions,"² the "negativity" of the feelings in this book obtains at several levels that the classic emotions share. Like rage and fear, ugly feelings such as envy can be described as dysphoric or experientially negative, in the sense that they evoke pain or displeasure. They can also be described as "semantically" negative, in the sense that they are saturated with socially stigmatizing meanings and values (such as the "pettiness" one traditionally associates with envy); and as "syntactically" negative, in the sense that they are organized by trajectories of repulsion rather than attraction, by phobic strivings "away from" rather than philic strivings "toward." In the case of these explicitly agonistic emotions, informed by what one psychoanalyst calls the global affect of "against," the negativity at stake is algorithmic or operational, rather than value- or meaning-based, involving processes of aversion, exclusion, and of course negation.³ It is these multiple levels of negativity that make the ugly feelings in this study so useful for *conjoining* predicaments from multiple registers—showing how socio-historical and ideological dilemmas, in particular, produce formal or representational ones. The affect I call animatedness, for instance, will allow us to take the disturbingly enduring representation of the African-American as at once an excessively "lively" subject and a pliant body unusually susceptible to external control and link this representation to the rhetorical figure of apostrophe (in which a speaker animates or "gives life" to nonhuman objects by addressing them as subjects capable of response), and, further, to connect these to a symptomatic controversy surrounding the televisual aesthetics of dimensional animation, a technique in which clay or foam

* * * The question of feeling’s objective or subjective status has in fact been central to numerous philosophical investigations into the exact role and status of emotion in the aesthetic encounter. These investigations include debates over whether Aristotle uses *katharsis*⁴ to refer to something that takes place in the audience or that takes place in the tragic drama (that is, whether it refers to a response undergone by the viewing subject or to an event presented in the object viewed); John Dewey’s⁵ effort to divorce expression from “the mere issuing forth or discharge of raw material” by describing “esthetic emotion” as “objectified” emotion; T. S. Eliot’s⁶ closely related attempt to separate “personal emotion” from “art emotion,” which he describes as a mixture or cocktail producing “feelings which are not in actual emotions at all”; the counterintuitive effort, on the part of Edmund Burke⁷ and other Enlightenment empiricists, to use emotional qualities to “objectify” or standardize judgments of taste (so as to avoid the problem of relativism it inevitably poses); and Gérard Genette’s⁸ unapologetically subjectivist theory of aesthetic judgment as a mode of illusory projection, in which a quality or value reflecting the negative or positive feeling inspired by an object’s appearance, in what amounts to a fundamentally subjective appraisal, is treated “as if” it were one of the object’s own intrinsic properties.⁹ For Genette, who claims to “out-Kant” Kant by fully acknowledging the relativism Kant’s subjectivist theory of aesthetic judgment attempted to sidestep (by asserting the claim for universality in the judgment itself), aesthetic judgment is this illusory objectification. It is this process that produces what Genette calls “aesthetic predicates,” affective-aesthetic values like “precious,” “stilted,” “monotonous,” or “imperious,” created from, or based upon, the feeling of pleasure or displeasure that accompanies our initial perception of the aesthetic object (AR, 90). Genette in fact describes these objectifying predicates, which bear a close resemblance to what I. A. Richards called “aesthetic or ‘projectile’ adjectives,” as descriptive terms that “sneak in” evaluations of the object based on *feelings* about the object.¹ There is thus a sense in which the “aesthetic relation,” which for Genette is more or less synonymous with “objectification,” can be understood as an oblique effort to justify the presence of feeling in every aesthetic encounter.

1. I. A. Richards, *Practical Criticism: A Study of Literary Judgement* (New York: Harcourt Brace Jovanovich, 1929), 336–40. [Richards (1893–1979), English literary theorist—editor’s note.]

The subjective-objective problematic, magnified by the relativism of aesthetic judgment and other classic problems in the discourse of aesthetics (including the contested notion of special “aesthetic feelings”), is central, as we have seen, to the ugly feelings in this book, as well as to the artistic forms and genres they generate. It will be a particular concern in my discussion of “tone” (Chapter 1), the affective-aesthetic concept that will implicitly inform all the analyses of the aesthetics of specific feelings that follow. Yet the subjective/objective problematic so central to the philosophy of aesthetics can also be traced back to the philosophy of *emotion* in general. It has become the über-question of recent theoretical writing on feeling in particular, as evinced in the analysis of emotion after “the death of the subject” (Rei Terada) or attempts to differentiate “emotion” and “affect” on the grounds that the former requires a subject while the latter does not (Lawrence Grossberg, Brian Massumi).² These questions reflect the extent to which the subjective dimension of feeling, in particular, in seeming to undercut its validity as an object of *materialist* inquiry, has posed a difficulty for contemporary theorists. The present spotlight on emotion in literary criticism can be understood partly as an attempt to redress its earlier exclusion on such “subjectivist” grounds, including its failure to be grasped by the more positivistic kinds of cultural-historical analysis and the more dryly technical kinds of semiotic analysis that dominated literary studies in the 1970s and 1980s, as well as by poststructuralist theories of literary language prevailing in the 1980s and early 1990s. In the former case, feeling’s marginalization stemmed from its perceived incompatibility with “concrete” social experiences; in the latter (as Terada most fully examines), from its perceived incompatibility with poststructuralism’s skeptical interrogation of the category of experience itself. Though emotion once posed an embarrassment to these very different critics for very different reasons, most critics today accept that far from being merely private or idiosyncratic phenomena, or reflecting a “romantically raw domain of primitive experiential richness” that materialist analysis will be unable to grasp (Massumi, *PV*, 29), feelings are as fundamentally “social” as the institutions and collective practices that have been the more traditional objects of historicist criticism (as Raymond Williams³ was perhaps the earliest to argue, in his analyses of “structures of feeling”), and as “material” as the linguistic signs and significations that have been the more traditional objects of literary formalism. Although feeling is not reducible to these institutions, collective practices, or discursive significations, it is nonetheless as socially real and “infrastructural” in its effects “as a factory” (Massumi, *PV*, 45).

The affect/emotion split originated in psychoanalysis for the practical purpose of distinguishing third-person from first-person representations of feeling, with “affect” designating feeling described from an observer’s (analyst’s) perspective, and “emotion” designating feeling that “belongs” to the

speaker or analysand's "I." Yet Massumi and Grossberg have made claims for a stronger distinction, arguing not just that emotion requires a subject while affect does not, but that the former designates feeling given "function and meaning" while the latter remains "unformed and unstructured" (Massumi, *PV*, 260, note 3).⁴ As Grossberg puts it, "Unlike emotions, affective states are neither structured narratively nor organized in response to our interpretations of situations."⁵ Similarly, Massumi argues that while emotion is "a subjective content, the sociolinguistic fixing of the quality of an experience which is from that point onward defined as personal," affect is feeling or "intensity" disconnected from "meaningful sequencing, from narration" (*PV*, 28). The difficulty affective "intensity" poses for analysis is thus strikingly analogous to the analytical difficulty which Williams coined his term "structures of feeling" to address—that is, the kind posed by social experiences which "do not have to await definition, classification, or rationalization before they exert palpable pressures and set effective limits on experience and action."⁶ In escaping qualification much like Williams' structures of feeling, which as "social experiences in solution" lie "at the very edge of semantic availability" (*ML*, 132), affective intensity clearly creates difficulties for more positivistic kinds of materialist analysis, even as it always remains highly *analyzable* in or as effect (Massumi, *PV*, 260, note 3).

While strong arguments have thus been made—primarily on the basis of a subjective/objective divide, but also in terms of oppositions like narrative/nonnarrative or semiotic/asignifying—for the idea that emotion and affect "follow different logics and pertain to different orders," some aspects of this taxonomic division will be more useful and important to this book than others (Massumi, *PV*, 27). Certainly less narratively structured, in the sense of being less object- or goal-directed, the intentionally weak and therefore often politically ambiguous feelings in this book are in fact much more like affects, in accordance with the definitions above, than emotions—which, for Martha Nussbaum, are "closely connected with action; few facts about them are more obvious."⁷ Tied intimately, in contrast, with situations of what Dewey calls "being withheld from doing,"⁸ the feelings in this book are obviously not as strategic as the emotions classically associated with political action; with their indeterminate or undifferentiated objects, in particular, they are less than ideally suited for setting and realizing clearly defined goals. Whereas Hobbes and Aristotle have shown how the principle of mutual fear actively binds men into the contracts that support the political commonwealth, and how anger advances the redressing of perceived injustices

4. On the psychoanalytical origins of the emotion/affect taxonomy, see Donna M. Orange, "Affect and Emotional Life," in *Emotional Understanding: Studies in Psychoanalytic Epistemology* (New York: Guilford, 1995), 90.

5. Grossberg, *We Gotta Get out of This Place*, 81.
6. Raymond Williams, "Structures of Feeling," in idem, *Marxism and Literature* (Oxford: Oxford University Press, 1977), 128. Hereafter designated *ML*. It should be clarified that in "Structures of Feeling" Williams is not really talking about emotions or even affects. For while "structures of feeling" do designate "affective elements of consciousness and relationships" or "social content of [a] present and affective kind" (132,

133), Williams defines them more broadly (and at the same time much more precisely) as "structured formation[s] . . . at the very edge of semantic availability" (132). His term thus represents a "cultural hypothesis" derived from efforts to understand "a social experience which is still in process" (132), and thus has "many of the characteristics of a pre-formation, until specific articulations—new semantic figures—are discovered in material practice" (134).

8. Dewey, *Art as Experience*, 16.

through retaliation,⁹ it is difficult to imagine how either of these actions might be advanced by an affective state like, say, irritation. While one can be irritated without realizing it, or knowing exactly what one is irritated about, there can be nothing ambiguous about one's rage or terror, or about what one is terrified of or enraged about. Yet the unsuitability of these weakly intentional feelings for forceful or unambiguous action is precisely what amplifies their power to diagnose situations, and situations marked by blocked or thwarted action in particular.

While the distinction between affect and emotion is thus helpful here in a number of ways, I will not be theoretically leaning on it to the extent that others have—as may be apparent from the way in which I use the two terms more or less interchangeably. In the chapters that follow, the difference between affect and emotion is taken as a modal difference of intensity or degree, rather than a formal difference of quality or kind. My assumption is that affects are *less* formed and structured than emotions, but not lacking form or structure altogether; *less* “sociolinguistically fixed,” but by no means code-free or meaningless; *less* “organized in response to our interpretations of situations,” but by no means entirely devoid of organization or diagnostic powers. As suggested above, ambient affects may in fact be better suited to interpreting ongoing states of affairs. What the switch from formal to modal difference enables is an analysis of the *transitions* from one pole to the other: the passages whereby affects acquire the semantic density and narrative complexity of emotions, and emotions conversely denature into affects. At the end of the day, the difference between emotion and affect is still intended to solve the same basic and fundamentally descriptive problem it was coined in psychoanalytic practice to solve: that of distinguishing first-person from third-person feeling, and, by extension, feeling that is contained by an identity from feeling that is not. Rather than also trying to dissolve this subjective/objective problematic by creating two distinct categories of feeling, this study aims to preserve it for its aesthetic productivity.

IAN BOGOST

b. 1976

A video game designer, cultural theorist, and public intellectual, Ian Bogost has emerged as one of the world's leading experts on the cultural significance of video games. Bogost is a gaming guru who eschews the isolation of “game studies” from other academic disciplines. His work in a variety of genres has consistently made connections between poetry, cinema, and visual art as well as philosophy, literary criticism, and information technology. Perhaps more than any other contemporary

theorist, Bogost continues to demonstrate and interrogate the marriage of art and technology that has become a representative feature of postmodern culture.

Bogost's own video game creations began appearing in numerous festivals and curated exhibits around 2005, shortly after he finished doctoral work in comparative literature at the University of California at Los Angeles (2004). He had previously earned a B.A. in philosophy and comparative literature from the University of Southern California (1998), an M.A. in comparative literature from UCLA (2001), and a *Diplôme Approfondi de Langue Française* from the Centre International d'Etudes Pédagogique in Sèvres, France (1997). His early video game creations—such as *Howard Dean for Iowa* (2003), *Take Back Illinois* (2004), *Horde of Directors* (2004), and *Airport Insecurity* (2005)—garnered critical praise for the complex ways in which they make social and political arguments. For example, *Airport Insecurity* invites players to navigate impatient fellow passengers, incompetent security officers, and humiliating searches in American airports while attempting to carry their personal effects—including contraband items such as scissors and guns—past security checkpoints. Though completing this process is harrowing for even the most innocent of passengers, smuggling dangerous items onto the plane turns out to be surprisingly easy. Based on data regarding airport security gathered by the Transportation Security Administration (TSA) and investigative journalists, the game puts pressure on those who play to reconsider political justifications for the violation of travelers' personal privacy while it exposes just how ineffective the airport security system really is at guaranteeing their safety. Created in the wake of 9/11 and the USA PATRIOT Act of 2001, the game raises broader questions regarding trade-offs between national security and personal rights. As Bogost has repeatedly argued, the procedures that constitute such games invite players to think in fresh ways about the systems in which they live and to imagine alternative social possibilities.

Shortly after Bogost's games began receiving widespread critical attention, he published his first book, *Unit Operations* (2006). It draws on influential contemporary theorists such as Alain Badiou and SLAVOJ ŽIŽEK—in addition to classical philosophy and information technology—to argue that insights from the humanities and technology studies can be combined to develop productive new tools for analyzing a wide array of human artifacts. In the book, Bogost employs his innovative fusion of technical and literary theories to analyze video games such as *Half-Life* (first release, 1998) and *The Legend of Zelda* (first release, 1986) as well as literary works such as Gustave Flaubert's *Madame Bovary* (1857) and James Joyce's *Ulysses* (1922). Though *Unit Operations* yields numerous valuable insights, such as the connections between structuralism and the processes of computation, its most important contribution is perhaps its groundbreaking demonstration that deep interdisciplinary dialogue between literary theory and information technology can bring about new ways to interpret the world, a task that seems particularly urgent given the ubiquitous presence of technologically mediated cultural expressions in the contemporary era.

Bogost's subsequent work has continued to explore new frontiers through both genre-mixing creative projects and interdisciplinary cultural theory. For example, his 2010 release, *A Slow Year*, consists of four "game poems"—each of which invites readers into meditative observations corresponding to the four seasons of the year—accompanied by two essays about the connections between video games and poetry. Meanwhile, Bogost has continued to publish academic books that demonstrate how the analysis of games can produce new insights of broad cultural and philosophical significance. *How to Do Things with Video Games* (2011) draws inspiration from the speech-act theory of J. L. AUSTIN in order to further develop Bogost's theory of games as creative interventions with the potential to dramatically transform human cultures. Venturing into the realm of metaphysics, Bogost's *Alien Phenomenology, or What It's Like to Be a Thing* (2012) proposes an "object-oriented ontology" that draws on his experiences as a video game designer. In addition to producing avant-garde games and heady academic treatises, Bogost is a public intellectual who writes and

lectures in a variety of venues, including *The Atlantic*, for which he is a contributing editor. The breadth and reach of this work demonstrate that both video games and the once-esoteric field of game studies have become mainstream phenomena with which contemporary cultural theorists and students need to grapple.

In our selection, "The Rhetoric of Video Games" (2007), Bogost argues that video games can and do make claims about the world. Though such games often employ images and have narrative components, Bogost does not situate his argument within the theoretical domains of visual rhetoric or narratology. Instead, he proposes that we should analyze games through the lens of "procedural rhetoric," which he defines as "the practice of using processes persuasively." He contends that games make assertions by presenting rule-based models and representations of reality—procedures—that players must learn to interpret and evaluate. Rules, which are the basis of all computation, simultaneously create the possibility of play and construct the meaning of the game. The concept of procedural rhetoric opens up fresh possibilities for analyzing games as well as other human artifacts.

Central to Bogost's argument in this essay is his insistence that we need to challenge conventional ideas about the nature and significance of "play." Though the word is often associated with childhood or leisure and used to signify the opposite of "serious work," Bogost argues that a broader and more positive theory of play has the power to illuminate all kinds of cultural activities in new ways. He builds on Katie Salen and Eric Zimmerman's definition of play as "the free space of movement within a rigid structure" in order to draw connections between the rhetoric of video games and other forms of art. For example, Bogost notes that much poetry may be understood as individual poets' exploitation of the unique opportunities for free expression afforded by rule-based genres such as the haiku. As such observations make clear, Bogost's work has important points of contact with structuralism, genre theory, and poetics. In fact, Bogost's argument about the ways that rules create "possibility spaces" for creative play has broad philosophical implications, which he subsequently examined in *Play Anything: The Pleasure of Limits, the Uses of Boredom, and the Secret of Games* (2016). As it turns out, play is a serious matter.

One important application of Bogost's theories of play and procedural rhetoric becomes apparent when, in an expanded definition of literacy, he demonstrates that they can be used for ideological criticism of video games. He draws on both PLATO and KARL MARX in order to articulate his own theory of ideology and then subjects several games to ideological analyses. For instance, the procedures of *America's Army: Operations* (a game developed by the U.S. Army as a recruitment tool; first release, 2002) are designed to communicate that the military conducts itself according to a code of honor that is founded on soldiers' following strict rules of engagement. Unlike many first-person shooter games, in which indiscriminate violence is rewarded, the rules of this game heavily punish such behavior while rewarding those actions that are considered honorable. However, Bogost points out that "honor" in this context signifies unquestioning submission to authority, and the game's politically decontextualized mission assignments discourage players from considering the moral or social implications of the orders themselves. For contrast, Bogost also analyzes the ways in which more subversive games wield procedural rhetoric to expose problematic elements of systems that range from neoliberal capitalism and the fast-food industry in *The McDonald's Videogame* (2006) to the treacherous social terrain of a high school populated by bullies, jocks, and nerds in *Bully* (2006). Such analyses reveal how video games have the potential to reinforce, obscure, expose, or challenge the sociopolitical status quo.

Bogost's argument here is open to criticism and further development. For example, his insistence that games may carry ideological messages with or without the conscious knowledge of their creators shows awareness of the problems associated with authorial intentionality; but this argument also needs to take into account how authorship is complicated by the collaborative nature of game development: many

are created by large teams of designers and artists, who may invest the final product with conflicting values and ideas. Moreover, as theorists in the field of game studies continue to debate the ways in which narrative, visual rhetoric, and procedural rhetoric interact in video games, some may not be convinced that the last is always dominant in how games communicate. From a different angle, Bogost's argument that games can be conscious political interventions in the world may invite questions about the principles guiding his own decision to create games commissioned by both Republicans and Democrats for the explicit purpose of helping to elect their respective candidates for public office. Nevertheless, it is clear that Bogost is both a sophisticated artist and an important theorist whose work breaks new ground through the interdisciplinary interaction of literary criticism, philosophy, and information technology.

"The Rhetoric of Video Games" Keywords: Cultural Studies, Ideology, Media, Popular Culture, Representation, Rhetoric

The Rhetoric of Video Games

Animal Crossing is an "animal village simulator" for the Nintendo GameCube and DS video game consoles.¹ As the game begins, the player has just left home to move to the game's small village. There he meets a host of cartoonish animal residents and settles into a new life. The player is penniless upon arrival, and the game quickly thrusts him into the reality of making ends meet. The village's resident real estate tycoon and shopkeeper, Tom Nook, helps the player out, offering him a small shack to live in and a job of planting trees, delivering goods, and creating marketing materials on the town notice board. After completing these chores, Nook releases the player to explore the town on his own. He may then work, trade, and personalize his environment. The game offers a series of innocuous, even mundane activities like bug catching, gardening, and wallpaper designing.

One of the more challenging projects in the game is paying off the mortgage on one's house. *Animal Crossing* allows players to upgrade their homes, but doing so requires paying off a large note the player must take out to start the game in the first place. The player must then pay down renovation mortgages for even larger sums.² While the game omits some of the more punitive intricacies of long-term debt, such as compounding interest, improving one's home does require consistent work in the game world. Catching fish, hunting for fossils, finding insects, and doing jobs for other townsfolk all produce income that can be used to pay off mortgage debt or to buy carpets, furniture, and objects to decorate one's house.

When my then five-year-old began playing the game seriously, he quickly recognized the dilemma he faced. On the one hand, he wanted to spend the money he had earned from collecting fruit and bugs on new furniture,

1. Nintendo, *Animal Crossing* (Kyoto, Japan: Nintendo, 2002); and idem, *Animal Crossing: Wild World* (Kyoto, Japan: Nintendo, 2005) [except as indicated, all notes are Bogost's].

2. Just to give the reader a sense of the magnitude of work that faces players of *Animal Crossing*, the

final renovation mortgage is over 700,000 "bells" (the currency unit in the game). The most lucrative fish and insects one can catch in the game sell for 10,000 bells, but they are quite rare. More typical items sell for 300–1,000 bells.

carpets, and shirts. On the other hand, he wanted to pay off his house so he could get a bigger one like mine. Once he managed to amass enough savings to pay off his mortgage, Tom Nook offered to expand his house. While it is possible to refrain from upgrading, the unassuming raccoon continues to offer renovations as frequently as the player visits his store. My son began to realize the dilemma facing him: the more material possessions he took on, the more space he needed, and the more debt he had to assume to provide that space. And the additional space just fueled more material acquisitions, continuing the loop. This link between debt and acquisition gives form to a routine that many mortgage holders fail to recognize: buying more living space not only creates more debt, it also drives the impulse to acquire more goods. More goods demand even more space, creating a vicious cycle.

In real life, when we pay our mortgage bill we don't see where that money ends up. But in *Animal Crossing*, the player experiences the way his debt makes bankers wealthy. After a player makes a major payment to his mortgage, Tom Nook closes his shop and upgrades it: the game starts with Nook's Cranny, a wooden shack general store, and ends with Nookington's, a two-story department store. Each upgrade allows Tom Nook to sell more goods. None of the townsfolk ever appear in Tom Nook's shop, although they occasionally refer to it somewhat disdainfully; the animals seem to have little drive to consume. *Animal Crossing's* nonplayer characters (NPCs) are much less materialistic. The cute animals that occupy the village sternly berate the player if they haven't seen him around for many days, but they seem to have no concern for the quantity or type of material properties that the players possess. Occasionally, animals will express desire for a shirt or furniture item the player carries with him around the village, and they will offer to trade for it. But this type of transaction is both rare and charming; the animals frame their requests in terms of inveterate longing—"I've always wanted a Modern Lamp!"—quite a different refrain from the mallgoer's "one overriding interest, to spend money."³

In contrast, the player participates in a full consumer regimen: he pays off debt, buys and sells goods. Tom Nook buys the player's goods, which he converts to wealth. As the player pays off debt and upgrades his home to store more goods, he sees Tom Nook convert that wealth into increased commercial leverage—one's own debt makes the bank rich. Tom Nook then leverages that wealth to draw more capital out of the player, whose resources remain effectively constant. While the player spends more, Nook makes more. By condensing all of the environment's financial transactions into one flow between the player and Tom Nook, the game models the redistribution of wealth in a way even young children like my five-year-old can understand. Tom Nook is a condensation of the corporate bourgeoisie.⁴

Animal Crossing simulates the social dynamics of a small town, complete with the material demands of keeping up with the Joneses. As such, the game serves as a sandbox for experimenting with the ways one can recombine personal wealth. While the player diligently works to pay off that new upstairs

3. John de Graaf, David Wann, and Thomas H. Naylor, *Affluenza: The All-Consuming Epidemic* (San Francisco: Berrett Koehler, 2005).

4. That is, middle-class capitalists who own the

means of production and become wealthy by exploiting the labor of the working classes (a term from Marxist theory) [editor's note].

addition, the other animals retain their small shacks perpetually. They never sell old belongings or acquire new ones, seemingly unconcerned that their homes are filled only with fish, or rocks, or fruit furniture. *Animal Crossing*'s animals enjoy walks outdoors. They snooze on their porches at twilight. They stop to watch the player fish. They meander aimlessly and take great care to partake in the community events that transpire on holidays. They are not consumers but naturalists, more Henry David Thoreau than Paris Hilton.⁵

Animal Crossing is a game about everyday life in a small town. It is a game about customizing and caring for an environment. It is a game about making friends and about collecting insects. But *Animal Crossing* is also a game about long-term debt. It is a game about the repetition of mundane work necessary to support contemporary material property ideals. It is a game about the bittersweet consequences of acquiring goods and keeping up with the Joneses. *Animal Crossing* accomplishes this feat not through moralistic regulation, but by creating a model of commerce and debt in which the player can experience and discover such consequences. In its model, the game simplifies the real world in order to draw attention to relevant aspects of that world.

We often think that video games have a unique ethos. Video game players have their own culture and values. Video game players often self-identify as "gamers" and devote a major part of their leisure time to video games. They discuss games online, follow new trends, and adopt new technology early. Video game play could be understood as a "community of practice," a name Jean Lave and Etienne Wenger have given to a common social situation around which people collaborate to develop ideas.⁶ In this sense, the people who play video games develop values, strategies, and approaches to the practice of play itself. For example, a large group of *Animal Crossing* players contribute to an online community called Animal Crossing Community (ACC for short) to discuss the game, share things they've made, find strategies, or look up the value of different fish, insects, or furniture.⁷ Within this community, as in all communities, cultural values develop, both by design and by evolution. For example, ACC offers players the option of "getting adopted." A veteran "Scout" is assigned to a new member as a "foster buddy" to help the newbie "learn the ropes of ACC . . . They'll also help you with any of your Animal Crossing questions, and may even give you a free item as a welcoming gift!"⁸ Venues like ACC show that video game play is a cultural activity where values develop over time.

But the values of a video game community like ACC exist *outside* the game. While the neighborliness of the foster buddy program might suggest a carryover of values from the video game, the ACC is primarily focused on the social practices of *playing* the game, rather than the social practices *represented in* the game. This is an important distinction: video games are

not just stages that facilitate cultural, social, or political practices; they are also media where cultural values themselves can be represented—for critique, satire, education, or commentary. When understood in this way, we can learn to read games as deliberate expressions of particular perspectives. In other words, video games make claims about the world, which players can understand, evaluate, and deliberate. Game developers can learn to create games that make deliberate expressions about the world. Players can learn to read and critique these models, deliberating the implications of such claims. Teachers can learn to help students address real-world issues by playing and critiquing the video games they play. And educators can also help students imagine and design games based on their own opinions of the world. When games are used in this fashion, they can become part of a whole range of subjects.

Play

One of the reasons we tend not to consider video games as legitimate venues for learning to take place is precisely because they are *games*, playthings. Play is often considered a children's activity, a trifle that occupies or distracts kids and which they eventually grow out of, turning to more serious pursuits. Play and learning have been segregated from one another in contemporary schooling, further cementing their perceived disparity. Children learn while seated in desks, listening attentively to a teacher or reading from a book. This sort of valid learning is interrupted by recess where children are allowed to play. Understood in this way, play is a distraction useful only to let off the necessary steam to allow kids (or adults) to get back to the serious business of learning (or working).

Video games also subscribe to this value model. They are a part of the “entertainment software” industry, and they are generally considered a leisure practice by players and the general public alike. Video game play is considered an unproductive expenditure of time, time that fills the breaks between work. This goes for children playing games at home after school as well as adults playing games after work. Parents might worry about their children playing video games after school instead of doing their homework or playing outside. Video games are perceived to interrupt learning and social life, acting as a leech on normal childhood development. During the 1990s dot-com boom,⁹ many offices teeming with young workers took lunch or after-work breaks to play networked games on the office computers, taking respite from the “productive” practices of work. While it is rarely discussed directly, this conflation of work and play at the office serves as an archetype for the ill-founded business acumen of that era. These early internet companies failed because they weren't serious; they were merely “playing” at business.

But this association of video games with leisure is not a necessary condition. It is, rather, a by-product of a misunderstanding of the nature of play. Instead of understanding play as child's activity, or as the means to consume

9. The surge of speculative investment in Internet and e-commerce companies in the late 1990s, causing a financial bubble that was followed by the “dot-com crash” [editor's note].

games, or even as the shifting centers of meaning in poststructuralist thought, I suggest adopting Katie Salen and Eric Zimmerman's useful, abstract definition of the term: "play is the free space of movement within a more rigid structure."¹ Understood in this sense, play refers to the "possibility space" created by constraints of all kinds. Play activities are not rooted in one social practice, but in many social and material practices. For example, Salen and Zimmerman use the example of the play in a mechanism like a steering column, in which the meshing gears create "play" in the wheel before the turning gesture causes the gears to couple.

The possibility space of play includes all of the gestures made possible by a set of rules. As Salen and Zimmerman explain, imposing rules does not suffocate play, but makes it possible in the first place. On a playground, the possibility space refers to the physical properties of the play space, as well as the equipment, time allotted, and number and type of children. Kids are particularly adept at inventing new games based on the constraints of their environment; if one listens closely to children at play, one of the most common things to overhear is the establishment of new rules ("Now you be the monster." "This square is safe!"). When children play, they constantly renegotiate their relationship with a possibility space.

In more traditional media like poetry, the possibility space refers to the expressive opportunities afforded by rules of composition, form, or genre. For example, the poetic form of haiku enforces three lines of five, seven, and five syllables each.² The imposition of these restrictions constrains poetic authorship. To write haiku means exploring configurations of language that intersect with these rules of composition.

While possibility spaces like haiku develop over time (in this case, dating from a linked verse style of the fifteenth century), other literary practices have invented new possibility spaces with the specific purpose of creating new forms of expression. The artistic movement known as Oulipo (*Ouvroir de littérature potentielle*),³ founded in Paris in 1960, adopted precisely this practice. The group's members invented, revived, or adopted forms for literary expression, each of which changes the possibility space of literary expression. One familiar example is the palindrome, a word or phrase that reads the same forward and backward. Georges Perec wrote "Le Grand Palindrome" of roughly 1,500 words,⁴ although writers Nick Montfort and William Gillespie topped Perec's record with 2002, a palindromic novel of 2,002 words, authored in the year 2002.⁵ Another Oulipian construct is the lipogram, a text in which use of a particular letter is forbidden. The most famous lipogrammatic text is Georges Perec's *La Disparition*, a lipogram in *E* (i.e., the letter *e* appears nowhere in the work).⁶ The prisoner's constraint

2. In Japanese, the divisions are not precisely commensurate with English syllables, although this is usually the way we adapt haiku for Western languages.

3. Workshop for potential literature (French) [editor's note].

4. Georges Perec, "Le Grand Palindrome," in *La*

clôture et autres poèmes [Closure and other poems] (Paris: Hachette/Collection POL, 1980).

5. Montfort and Gillespie's 2002: *A Palindrome Story in 2002 Words* (Urbana, IL: Spineless Books, 2002) was written with the assistance of a computer program called Deep Speed [editor's note].

6. Georges Perec, *La disparition* (1969; reprint Paris: Gallimard, 1990); and idem, *A Void*, trans. Gilbert Adair (1994; reprint Boston: Verba Mundi, 2005).

is a lipogram in ascenders and descenders; that is, letters that stick up or down from the line are forbidden (*b, d, f, g, h, j, k, l, p, q, t, and y*).

The constrained forms of Oulipo practitioners impose even more stringent restrictions than those of natural grammar and “ordinary” literary convention, but more importantly these artists deliberately *invented* new constraints, rather than adopting the forms provided by a particular historical and cultural moment. By designing the rules of literary composition, Oulipian writers share much in common with children on a playground: first they create a possibility space, then they fill that space with meaning by exploring the free movement within the rigid structure of literary rules. Likewise, readers of work like Perec’s must take into account the rules of its composition, which tightly couple to the meaning of the work (“la disparition” means “the disappearance”; the novel follows a group of people who cannot find a hunting companion). Likewise, the rules children adopt in playground play alter the experience and meaning of the play. For example, consider a game of hide-and-seek in which an older player must count for a longer time to allow younger players a better chance to hide more cleverly. This rule is not merely instrumental; it suggests a value of equity in the game and its players.

In a video game, the possibility space refers to the myriad configurations the player might construct to see the ways the processes inscribed in the system work. This is really what we do when we *play* video games: we explore the possibility space its rules afford by manipulating the symbolic systems the game provides. The rules do not merely create the experience of play—they also construct the meaning of the game. That is to say, the gestures, experiences, and interactions a game’s rules allow (and disallow) make up the game’s significance. Video games represent processes in the material world—war, urban planning, sports, and so forth—and create new possibility spaces for exploring those topics. That representation is composed of the rules themselves. We encounter the meaning of games by exploring their possibility spaces. And we explore their possibility spaces through play.

Procedurality

We rely on the practice of *procedurality* to craft representations through rules, which in turn create possibility spaces that can be explored through play. Procedurality is a somewhat technical term that requires explanation. The term *procedure* itself does not usually give rise to positive reactions. We typically understand procedures as established, entrenched ways of doing things. *Procedure* often invokes notions of officialdom, even bureaucracy. In common parlance, a procedure is a static course of action, perhaps one established long ago and in need of revision. Often, we talk about procedures only when they go wrong: *after several complaints, we decided to review our procedures for creating new accounts*. But in fact, procedures in this sense of the word structure behavior of all types. Procedures (or processes) are sets of constraints that create possibility spaces, which can be explored through play.

In her influential book *Hamlet on the Holodeck*, Janet Murray defines four essential properties of digital artifacts: procedurality, participation, spatial-

ity, and encyclopedic scope.⁷ Murray uses the term *procedural* to refer to the computer's "defining ability to execute a series of rules."⁸ Procedurality in this sense refers to the core practice of software authorship. Software is composed of algorithms that model the way things behave. To write procedurally, one authors code that enforces rules to generate some kind of representation, rather than authoring the representation itself. Procedural systems generate behaviors based on rule-based models; they are machines capable of producing many outcomes, each conforming to the same overall guidelines. The "brain" or "heart" of a computer is its *processor*, the chip that executes instructions. *Procedurality* gets its name from the function of the processor—procedurality is the principal value of the computer, which creates meaning through the interaction of algorithms. While Murray places procedurality alongside three other properties, these properties are not equivalent. The computer, she writes, "was designed . . . to embody complex, contingent behaviors. To be a computer scientist is to think in terms of algorithms and heuristics, that is, to be constantly identifying the exact or general rules of behavior that describe any process, from running a payroll to flying an airplane."⁹ This ability to execute computationally a series of rules fundamentally separates computers from other media.

Among computer-based media, video games tend to emphasize procedurality more than other types of software programs. Chris Crawford has used the term *process intensity* to refer to the "degree to which a program emphasizes processes instead of data."¹ Higher process intensity—or in Crawford's words a higher "crunch per bit ratio"—suggests that a program has greater potential for meaningful expression. That is to say, video games more frequently and more deeply exploit the property of the computer that creates the kind of possibility spaces that we can explore through play. Furthermore, unlike productivity software such as word processors and spreadsheets, video games are usually created with some expressive purpose in mind; they represent models of systems or spaces that players can inhabit, rather than serving as mere tools.

Video games depict real and imagined systems by creating procedural models of those systems, that is, by imposing sets of rules that create particular possibility spaces for play. Often, when we think of video games we think of the themes of fantasy and power, like the space marine of *Doom* who must combat demons to save the world.² But these themes represent only part of the expressive capacity of games. Other games go beyond models of fantasy worlds, creating representations of the ordinary world that might give players new perspectives on the world they inhabit. For example, *Animal Crossing* creates a representation of everyday life in which labor and debt are a part. When video games represent things—anything from space demons to long-term debt—they do so through procedurality, by construct-

ing rule-based models of their chosen topics. In *Doom*'s model of the world, emphasis is placed on the trajectory and power of weaponry. In *Animal Crossing*'s model of the world, emphasis is placed on work, trade, and arrangement of the environment.

In the context of digital media and learning, video games offer two overlapping opportunities. In one, players can learn about aspects of the world that particular games model, such as consumption in *Animal Crossing* or urban planning in *Sim City*.³ This is a kind of subject-centered literacy focused on examples of human practice. In the other, players can learn about procedurality itself, an inscriptive practice that will become more important only as computers continue to expand their role in society.

Rhetoric

Some games' procedural representations serve mostly to create an entertainment experience, a fantastic situation that transports the player to another world. But other games use procedurality to make claims about the cultural, social, or material aspects of human experience. Some do this deliberately, while others do it inadvertently. When we talk about making claims or arguments about things, we enter the domain of *rhetoric*, the field of communication that deals with persuasive speech. I would like to take a brief historical detour through the field of rhetoric in order to connect it to procedurality, learning, and to video games in turn.

Like procedurality, rhetoric is not an esteemed term. Despite its two-and-a-half-millennia-long history, today rhetoric invokes largely negative connotations. We often speak of "empty rhetoric," elaborate and well-crafted speech that is nevertheless devoid of actual meaning. Rhetoric might conjure the impression of *hot* air, as in the case of a fast-talking con who crafts pretentious language to hide barren or deceitful intentions. Academics and politicians are particularly susceptible to this sort of criticism, perhaps because we (and they) tend to use flourish and lexis⁴ when coherence runs thin, as in this very sentence. Rhetoric is often equated with a type of smoke screen; it is language used to occlude, confuse, or manipulate the listener.

However, turgidity and extravagance are relatively recent inflections to this term, which originally referred only to persuasive speech, or oratory. The term rhetoric (ῥητορικὴ) first appears in Plato's *Gorgias*,⁵ written some 2,500 years ago, in reference to the art of persuasion. The term itself derives from the rhetor (ῥήτωρ), or orator, and his practice, oratory (ῥητωρεύω).⁶ Rhetoric in ancient Greece meant public speaking for civic purposes.

Because of the importance of public speech in Golden Age Athens, rhetorical training became a promising business opportunity. Technical rhetoric, as this type is sometimes called, is useful for the everyman but perhaps too simplistic for the professional orator. Skilled orators developed numerous other techniques in much the same way as motivational business

4. That is, elaborate diction or vocabulary [editor's note].

5. Dialogue (ca. 385 B.C.E.) by the Greek philosopher PLATO (ca. 427–ca. 347 B.C.E.); it features GORGIAS OF LEONTINI (ca. 483–376 B.C.E.), a

prominent teacher of rhetoric, and argues that rhetoric needs moral guidance from philosophy [editor's note].

6. Plato, *Plato: Complete Works* (New York: Hackett, 1997), 453a. [*Rhētorēuō* literally means "I practice oratory" (Greek)—editor's note.]

speakers do today. These experts charged for their services, and were called *sophists*. The popularity of books and sophistry bred critique. Such approaches motivated the work of Socrates⁷ and Plato, who rejected the social and political contingency of the court and the assembly in favor of more lasting philosophical truths.

Responding to Plato, Aristotle attempts a systematic, philosophical approach to the art of persuasive oratory;⁸ he argues that rhetorical practice has the final cause of persuasion to correct judgment. For Aristotle, rhetoric is “the faculty of observing in any given case the available means of persuasion.”⁹ The adept rhetorician does not merely follow a list of instructions for composing an oratory (technical rhetoric), nor does he merely parrot the style or words of an expert (sophistic rhetoric), but rather he musters reason to discover the available means of persuasion in any particular case. This variety of rhetoric implies an understanding of both the reasons to persuade and the tools available to achieve that end.

Classical rhetoric passed into the Middle Ages and modern times with considerable alteration. Civil rhetoric never disappeared entirely, and indeed it remains a common form of rhetoric today. But the concept of rhetoric expanded to account for new modes of inscription—especially literary and artistic modes. Writers and artists have expressive goals, and they deploy techniques to accomplish those goals. Here, persuasion shifts from the simple achievement of desired ends to the effective arrangement of a work so as to create a desirable possibility space for interpretation. In contemporary rhetoric, the goal of persuasion is largely underplayed or even omitted as a defining feature of the field, replaced by the more general notion of elegance, clarity, and creativity in communication. In this sense, rhetoric “provides ways of emphasizing ideas or making them vivid.”¹ Success means effective expression, not necessarily effective influence.

Twentieth-century rhetorician Kenneth Burke identifies the need to identify with others as the ancestor of the practice of rhetoric. He extends rhetoric beyond persuasion, instead suggesting “identification” as a key term for the practice.² We use symbolic systems like language, says Burke, as a way to achieve this identification. While rhetoric still entails persuasion for Burke, he greatly expands its purview, arguing that it facilitates human action in general. In addition to expanding the conception of rhetoric, Burke expands its domain. In the tradition of oral and written rhetoric, language remains central. But Burke’s understanding of humans as creators and consumers of symbolic systems expands rhetoric to include nonverbal domains known and yet to be invented or discovered.

The wide latitude Burke affords to rhetoric won him both champions and critics, but his expansion of the concept is particularly useful for our interest in video game rhetoric.³ Thanks to the influence of Burke, and amplified by

the increasingly inescapable presence of nonoral, nonverbal media, increasing interest has mounted around efforts to understand these other, newer modes of inscription that also appear to serve rhetorical ends. In particular, the emergence of photographic and cinematic expression in the nineteenth and twentieth centuries suggested a need to understand how those new, nonverbal media mount arguments. This subfield is called *visual rhetoric*. Visual communication cannot simply adopt the figures and forms of oral and written expression, so a new form of rhetoric must be created to accommodate these media forms.

Visual rhetoric offers a useful lesson in the creation of new forms of rhetoric in the general sense. One would be hard pressed to deny that advertisements, photographs, illustrations, and other optical phenomena have no effect on their viewers. To be sure, visual rhetoric is often at work in video games, a medium that deploys both still and moving images. But visual rhetoric does not account for procedural representation. This is not a flaw in the subfield of visual rhetoric; in procedural media like video games, images are frequently constructed, selected, or sequenced in code, making the stock tools of visual rhetoric inadequate. Image is subordinate to process.

Other efforts to unite computers and rhetoric do not make appeals even to visual rhetoric, instead remaining firmly planted in the traditional frame of verbal and written rhetoric. *Digital rhetoric* often abstracts the computer as a consideration, focusing on the text and image content a machine might host and the communities of practice in which that content is created and used. E-mail, Web sites, message boards, blogs, and wikis⁴ are examples of these targets. To be sure, all of these digital forms can function rhetorically, and they are worthy of study. James P. Zappen begins his integrated theory of digital rhetoric on this very note: "Studies of digital rhetoric," he writes, "help to explain how traditional rhetorical strategies of persuasion function and are being reconfigured in digital spaces."⁵ But for scholars of digital rhetoric, to "function in digital spaces" often means mistaking subordinate properties of the computer for primary ones. Other digital rhetoricians likewise focus on the use of digital computers to carry out culturally modified versions of existing oral and written discourse; letters become e-mails, conversations become instant message sessions.

Procedural Rhetoric

I suggest the name *procedural rhetoric* for the practice of using processes persuasively, just as verbal rhetoric is the practice of using oratory persuasively and visual rhetoric is the practice of using images persuasively.⁶ Procedural rhetoric is a general name for the practice of authoring arguments through processes. Following the classical model, procedural rhetoric entails persuasion—to change opinion or action. Following the contemporary model, procedural rhetoric entails expression—to convey ideas effectively. Procedural rhetoric is a subdomain of procedural authorship; its arguments are made not

4. Websites that allow visitors to make changes or corrections. "Blogs": personal online journals (weblogs) [editor's note].

6. A much more detailed version of this argument, with additional examples from the domains of politics, advertising, and education, can be found in my book on the subject, Ian Bogost, *Persuasive Games* (Cambridge, MA: MIT Press, 2007).

through the construction of words or images, but through the authorship of rules of behavior, the construction of dynamic models. In computation, those rules are authored in code, through the practice of programming.

My rationale for suggesting a new rhetorical domain is very similar to the one that motivates visual rhetoricians. Just as photography, motion graphics, moving images, and illustrations have become pervasive in contemporary society, so have computer hardware, software, and video games. Just as visual rhetoricians argue that verbal and written rhetorics inadequately account for the unique properties of the visual expression, so I argue that verbal, written, and visual rhetorics inadequately account for the unique properties of procedural expression. A theory of procedural rhetoric is needed to make commensurate judgments about the software systems we encounter everyday and to allow a more sophisticated procedural authorship with both persuasion and expression as its goal. As a high process intensity medium, video games can benefit significantly from a study of procedural rhetoric.

Procedural rhetoric affords a new and promising way to make claims about *how things work*. As I argued earlier, video games do not simply distract or entertain with empty, meaningless content. Rather, video games can make claims about the world. But when they do so, they do it not with oral speech, nor in writing, nor even with images. Rather, video games make argument with *processes*. Procedural rhetoric is the practice of effective persuasion and expression using processes. Since assembling rules together to describe the function of systems produces procedural representation, assembling particular rules that suggest a particular function of a particular system characterizes procedural rhetoric.

Another way to understand procedural representation is in terms of *models*. When we build models, we normally attempt to describe the function of some material system accurately—for example, in this volume James Paul Gee offers a number of ways one might create a model of a plane, from child's toy to engineer's wind tunnel stress test.⁷ Models of all kinds can be thought of as examples of procedural rhetoric; they are devices that attempt to persuade their creators or users that a machine works in a certain way. Video games too can adopt this type of goal; for example, a flight simulator program attempts to model how the mechanical and professional rules of aviation work. But since procedurality is a symbolic medium rather than a material one, procedural rhetorics can also make arguments about conceptual systems, like the model of consumer capitalism in *Animal Crossing*. Gee argues that modeling allows “specific aspects of experience to be interrogated and used for problem solving in ways that lead from concreteness to abstraction.”⁸ Games like *Animal Crossing* demonstrate that such models include, but extend far beyond physical and formal models to include, arguments about how social, cultural, and political processes work as well.

Artifacts that deploy procedural rhetoric can also make arguments about how things *don't* work just as easily as they can make arguments about how they do. Consider a particularly sophisticated example, *The McDonald's Videogame*.⁹ The game is a critique of McDonald's business practices by Italian

art collective Molleindustria, an example of a genre I call anti-adverggames, games created to censure or disparage a company rather than support it. The player controls four separate aspects of the McDonald's production environment, each of which he has to manage simultaneously: the third-world pasture where cattle are raised as cheaply as possible; the slaughterhouse where cattle are fattened for slaughter; the restaurant where burgers are sold; and the corporate offices where lobbying, PR, and marketing are managed. In each sector, the player must make difficult business choices, but more importantly he must make difficult moral choices. In the pasture, the player must create enough cattle grazing land and soy crops to produce the meat required to run the business. But only a limited number of fields are available; to acquire more land, the player must bribe the local governor for rights to convert his people's crops into corporate ones. More extreme tactics are also available: the player can bulldoze rain forest or dismantle indigenous settlements to clear space for grazing. These tactics correspond with the questionable business practices the developers want to critique.

To enforce the corrupt nature of these tactics, public interest groups can censure or sue the player for violations. For example, bulldozing indigenous rainforest settlements yields complaints from antiglobalization groups. Overusing fields reduces their effectiveness as soil or pasture; too much use without crop cycling creates dead earth, which angers environmentalists. However, those groups can be managed through PR and lobbying in the corporate sector. Corrupting a climatologist may dig into profits, but it ensures fewer complaints in the future. Regular corruption of this kind is required to maintain allegiance. Likewise, in the slaughterhouse players can use growth hormones to fatten cows faster, and they can choose whether to kill diseased cows or let them go through the slaughter process. Removing cattle from the production process reduces material product thereby reducing supply and thereby again reducing profit. Growth hormones offend health critics, but they also allow the rapid production necessary to meet demand in the restaurant sector. Feeding cattle animal by-products cheapens the fattening process, but is more likely to cause disease. Allowing diseased meat to be made into burgers may spawn complaints and fines from health officers, but those groups too can be bribed through lobbying. The restaurant sector demands similar trade-offs, including balancing a need to fire incorrigible employees with local politician's complaints about labor practices.

The McDonald's Videogame mounts a procedural rhetoric about the necessity of corruption in the global fast food business, and the overwhelming temptation of greed, which leads to more corruption. In order to succeed in the long-term, the player must use growth hormones, he must coerce banana republics, and he must mount PR and lobbying campaigns. Furthermore, the temptation to destroy indigenous villages, launch bribery campaigns, recycle animal parts, and cover-up health risks is tremendous, although the financial benefit from doing so is only marginal. As Patrick Dugan explains, the game imposes "constraints simulating necessary evils on one hand, and on the other hand . . . business practices that are self-defeating and, really just stupid."¹ Players learn to "read" this argument in the system of

play and can interpret the relevance of the argument in the context of their own lives.

Ways of Using Procedural Rhetoric: Interrogating Ideology

I have argued for procedural rhetoric as a representational form, and as the specific communication practice at work in games like *Animal Crossing* and *The McDonald's Videogame*. But to use games for learning purposes requires general approaches that might be applied to many games and many subjects. As such, it is worth sketching a few of the different ways video games can be used rhetorically, whether for design, critique, or learning.

One use of procedural rhetoric is to expose and explain the hidden ways of thinking that often drive social, political, or cultural behavior. We often call such logics *ideology*, a term with a long and conflicted intellectual history. In Plato's famous parable of the cave in the *Republic*, humans' understanding of the world is likened to prisoners watching shadows cast on the wall of a cave by objects and agents passing above. The prisoners see only a flawed shadow of the ideal form (*εἶδος*) of the object.² For Plato, the disparity between the ideal and material realms can only be reconciled through a recollection of the forms, a claim that assumes that our souls were once connected to these forms and, therefore, are also immortal. The term *ideology* itself can be traced to eighteenth-century French revolutionary Antoine Destutt de Tracy, who conceived of it as a science of the origin of ideas, that is, of how humans access the ideal realm from the material.³ As Raymond Boudon clarifies, it was Napoleon's response to de Tracy that gave ideology its more familiar meaning.

When Destutt de Tracy and Volney tried to thwart Napoleon's imperial ambitions, he scornfully called them *ideologues*, meaning people who wanted to substitute abstract considerations for *real* politics, as it was later called. From that time on, ideology signified those abstract (and rather dubious) theories allegedly based on reason or science, which tried to map out the social order and guide political action.⁴

Karl Marx understood the concept this way, and gave it perhaps its most famous characterization, "they aren't aware of it, but they do it [*Sie wissen das nicht, aber sie tun es*]."⁵ Ideology thus lost the sense of a weapon against entrenched ideas and gained a decidedly negative connotation, as the very entrenchment of those ideas.

Like all cultural artifacts, no video game is produced in a cultural vacuum. All bear the biases of their creators. Video games can help shed light on these ideological biases. Sometimes these biases are inadvertent and deeply hidden. Other times, the artifacts themselves hope to expose their creators' biases as positive ones, but which of course can then be read in support or opposition.

In 2002, the U.S. Army released an unprecedented government-funded first-person shooter (FPS) game. *America's Army: Operations*⁶ was conceived and openly publicized as an Army recruiting and communications tool, one crafted "to recreate the US Army for the benefit of young civilians."⁷ The game represented a major step for the military-entertainment complex; it was created on the then-current Unreal 2 engine, a costly professional-grade game engine, and released for free on the Army's Web site. Within the first six months, over a million users had registered, of which over 600,000 had completed the game's basic rifle marksmanship and combat training (BCT), a necessary step before gaining access to combat missions.⁸

While *America's Army* shares a genre with other popular multiplayer FPS games, the Army's desire to offer "a realistic look at army personal and career opportunities via sophisticated role-playing" altered or eliminated many of the conventions of movement in both conventional and tactical first-person shooters.⁹ But the game's political simulation is more interesting than its mechanical and physical simulation. *America's Army* enforces strict Army Rules of Engagement (ROE), preventing the brouhaha of typical squad-based fighting games. Whereas *Counter-Strike*¹ encourages the player to log as many kills as possible, *America's Army* players collaborate in short missions, such as rescuing a prisoner of war, capturing an enemy building, or assaulting an enemy installation. The ROE guides play with an iron fist. Writing about the game, designers Michael Zyda et al. explain:

All players abide by rules of warfare. If a player violates the Uniform Code of Military Justice, rules of engagement, or laws of land warfare, reprisal is instant. He will find himself in a cell at Fort Leavenworth, accompanied by a mournful harmonica playing the blues. Continued violation of the rules may cause a player to be eliminated from the game. To rejoin he must create a new ID and restart.²

Many players discover this constraint in basic training; turning a weapon on one's drill sergeant immediately lands the player in the brig. The direct mapping of in-game behavior to the very ability to continue playing serves as a convincing procedural rhetoric for the chain of command, the principal structure new recruits must understand immediately. Even the use of foul language is grounds for in-game discipline.

But the game also ties ROE and chain of command directly to the moral imperative of the U.S. Army. As in many similar games, when players successfully complete levels, they earn points that persist on Web-based global statistics boards. At specified point targets, a player character's Honor statistic increases. Since Honor telegraphs commitment and expertise, disincentives to violate the ROE and chain of command become especially strong; losing a character through violation would require considerable effort to rebuild.

The correlation of honor with the performance of arbitrary and politically decontextualized missions offers particular insight into the social reality of the U.S. Army. While the use of arbitrary honor points may seem contrived at first, the system bears much in common with the practice of military decoration. Ribbons, medals, and other designations reward successful completion of military objectives. Training, professional development, wounds, completion of missions, and many other events earn soldiers decorations, which when worn on a dress uniform speak to the honor and nobility of the bearer. The average citizen's lack of familiarity with the specific actions that warrant a ribbon or medal ensure that these designations signify the soldier's abstract worth rather than his individual achievements. *America's Army's* Honor mechanic successfully proceduralizes this value system. As Zyda et al. summarize, "The game insists on the mission orientation of the US Army. Above all, soldiers must be team players, following army values and rules."³

This approach is similar to, but different from, the idea of epistemic games advanced by David Williamson Shaffer.⁴ Shaffer argues that games can model how professions work, offering an incomplete, yet embodied experience of real-world jobs. As Gee explains in this volume, these types of games "already give us a good indication that even young learners, through video games embedded inside a well-organized curriculum, can be inducted into professional practices as a form of value-laden deep learning that transfers to school-based skills and conceptual understandings."⁵ On first blush, *America's Army* would appear to be a superb example of epistemic games: the game models the values and practices of the army, giving the player an embodied experience of the recruit. However, *America's Army* also shows that epistemic games bear a risk: sometimes, we may want to question the values of professional practices rather than assume those values blindly. Procedural rhetoric offers an approach to do so.

Ways of Using Procedural Rhetoric: Making and Unpacking An Argument

Video games that expose ideology may or may not do so intentionally. But video games can also be created to make explicit claims about the way a material or conceptual system works. *The McDonald's Videogame* is an example of such a one, albeit a satire and a political commentary meant to critique the processes employed in the fast food business. Other games strive to explain and support a particular method for accomplishing a political or social goal; these games use procedural rhetoric to make an argument, and players unpack that argument through play.

In the early fall 2004, the Illinois House Republicans commissioned a game I designed to represent their positions on several public policy issues at the center of their 2004 state legislative election. These issues—medical malpractice tort reform, education standards policy, and local economic development—are abstract and dry at best. As such, citizens were even less

puter Games Help Children Learn (New York: Palgrave/MacMillan, 2007).

5. Gee, "Learning and Games."

likely to engage with them in the public or private forum, which provided only soapbox sound bites or lengthy, unreadable policy documentation. Moreover these topics, like most public policy issues, are tightly interwoven. Educational quality affects job qualification, which in turn affects economic welfare. *Take Back Illinois* attempts to create a complex, interrelated procedural rhetoric that communicated the candidates' positions on these topics.⁶

Four subgames comprise the game, three for each of the policy issues and one game about citizen participation. These subgames interrelate; play in one affects performance in the others. Each subgame provides a goal for the player to reach. For example, in the medical malpractice reform subgame, the player must raise the public health level to a predefined target. The subgame goal and the player's progress toward it are displayed directly under the game field. A small calendar serves as a timer for the game, starting at January 1, and counts up one day for every few seconds of game time. To win, the player must reach the goal before the calendar reaches the end of the year. Faster success yields a lower, and therefore better, score.

The procedural rhetoric for each policy issue was designed to compress as much detail into the smallest possible rule-set. For example, in the medical malpractice reform subgame, a representation of a city was filled with citizens of varying health—healthy, ill, gravely ill. Unwell citizens were contagious, and healthy citizens nearby them would eventually become ill themselves. If left untreated, gravely ill citizens would die. The city contained several medical offices, and the player could send sick citizens to those offices for treatment. However, Illinois suffered higher medical malpractice insurance rates than its neighboring states. The candidates' positions on tort reform were partially motivated by the potential reduction in insurance rates such changes would encourage. The game provides a “policy panel” that allows the player to change simple public policy settings for the game environment. In this case, the player could alter maximum noneconomic damages awarded in medical malpractice lawsuits as well as investment in medical research to prevent repeat tragedies. In the medical malpractice subgame, maintaining a high threshold on noneconomic damages keeps insurance rates high, which is likely to cause doctors to leave the state. Once this happens, the medical office dims and the player can no longer treat citizens there.

The other policy subgames created similar procedural rhetorics for each of the issues. In the education reform subgame, players simultaneously manage a handful of school districts across the state. Some districts start out with different educational standards in place, while other districts enjoy disproportionate funding and teacher-to-student ratios. To play the game, the player has to “teach” in each district by keying in a Simon-like⁷ memory sequence that corresponds with the educational standard in each district. This procedural rhetoric embodies the candidate's policy position: maintaining multiple standards across the state made the educational system on the

6. Persuasive Games, *Take Back Illinois* (Atlanta, GA: Persuasive Games/Illinois House Republicans, 2004). [In 2004, both the Illinois house and senate had Democratic majorities (Republicans had lost the majority in the senate in

2002)—editor's note.]

7. *Simon* is an electronic game, first released by Milton Bradley in 1978, that requires players to memorize sequential patterns [editor's note].

whole difficult to manage. Players would quickly understand this position upon being forced to remember four or five different memory sequences for all the schools. To play more efficiently, the player could reassign standards on a district-by-district basis by changing policy. The player could also reassign funding to needy schools in order to raise their educational output.

In public forums, policy issues are often discussed independently, even though most are bound to one another in significant ways. To communicate the rhetoric of interrelations, *Take Back Illinois* maintained a set of scores for each subgame and used those scores as inputs for settings in other games. For example, higher performance in the educational reform subgame increased the efficiency of job training centers in the economic development game. The parameterized interaction between simulation models serves as a rudimentary procedural rhetoric for the interrelationship of these issues in particular, and other issues by extension.

To play the game successfully, the player is forced to acknowledge the campaign's position on the issues it represents—for example, it is impossible to win the medical malpractice reform subgame without reducing maximum noneconomic damages for malpractice lawsuits (although reducing them beyond reason decreases the likelihood of faults). The game's procedural rhetoric is a compressed version of the campaign's policy position. In playing the game, the player is not "brainwashed" or otherwise fooled into adopting the candidates' policy position. Rather he is afforded an understanding of that position for further inquiry, agreement, or disapproval. However, none of the subgames argue that policy change alone is sufficient to create social change. In each of the games, the player must perform nontrivial actions to accomplish goals like improved health care and education. These actions trace the interconnectedness of political conditions.

Take Back Illinois and *The McDonald's Game* are specialty titles, created for specific purposes in which their persuasion outweighs entertainment. But procedural rhetoric is not limited to the narrow domain of educational or political games; the same properties can be found in commercial titles as well.

Consider *Bully*, from Rockstar Games, the creators of the *Grand Theft Auto* series.⁸ In *Bully*, the player takes the role of Jimmy Hopkins, an adolescent just dropped off at Bullworth Academy by his disinterested mother and stepfather, who are on the way to their lavish honeymoon. The school is riddled with bullies and troublemakers, and Jimmy struggles to get by amidst the conflicted social situation of high school politics. The game has been reviled for supposedly glorifying bullying, but the experience it creates is anything but celebratory. Even if the player struggles to steer Jimmy away from trouble, it catches up to him thanks to the petty malevolence of his peers. Students mill in the quad and buildings, either verbally and physically abusing each other or receding from verbal and physical attacks. Staying out of the way of the bullies (bullies in the game conveniently have their own clique, and all wear the same clothes) allows a player to avoid tussles. If a player stands in front of the wrong locker, he or she should expect to get

8. Rockstar Games, *Grand Theft Auto III* (New York: Take Two Interactive, 2001); idem, *Grand Theft Auto: Vice City* (New York: Take Two Interactive, 2003); idem, *Grand Theft Auto: San*

Andreas (New York: Take Two Interactive, 2004); and Rockstar Vancouver, *Bully* (New York: Take Two, 2006).

shoved out of the way. *Bully* models the social environment of high school through an expressive system of rules, and makes a procedural argument for the necessity of confrontation. Confronting bullies is not a desirable or noble action in the game, but it is necessary if one wants to restore justice. The game privileges the underdogs—nerds and girls—and the player spends most of his time undermining the bullies and the jocks in order to even the social pecking order.

Bully is part social commentary, part satire. But it also bears the usual features of an entertainment title. While games like *The McDonald's Game* are more didactic, games like *Bully* are more subtly expressive. Neither technique is inherently more or less valid than the other, but each accomplishes a different kind of video-game-based speech, each of which might be more or less appropriate in different circumstances.

Rockstar does not generally discuss or acknowledge the procedural rhetorics they build into games like *Bully*. But other designers make more deliberate efforts to frame the ideas they put forward in their games. Consider the Will Wright/Maxis game *Spore*.⁹ In *Spore*, the player starts with a micro-organism and grows it into a complex sentient creature, then a civilization, then a military power, and finally a space-traveling superrace. The game is a rich and complex one that clearly addresses a number of topics, most notably the tension between evolution and natural selection (creatures evolve, but the player carefully designs their attributes). But in a discussion of the game at the annual Game Developers Conference, Wright explained that the real topic he hoped to address in the game was astrobiology, the study of life throughout the cosmos.¹ Often when we wonder if there is intelligent alien life in the universe, we assume that life arises naturally and evolves slowly. Thus the chance of finding intelligent life seems remarkably small; to do so would require the greatest of coincidences in a place as large as the (ever expanding) universe. In the theory Wright hopes to advance in his video game, intelligent life does not occur and grow naturally, but is cultured and transported from planet to planet by other, more advanced civilizations. The perspective on astrobiology Wright advocates borrows the concept of seed spread by wind or other environmental factors; these reproductive structures are called *spores*. *Spore* adopts the logic of this particular view on astrobiology, subtly arguing through its game play that the spread of life in the universe is most likely caused by sentient beings transporting other creatures from star to star. While a book might make this argument by explaining the process, in *Spore* the player discovers the argument by playing in the possibility space the game's rules create. This act of discovering a procedural argument through play is endemic to procedural rhetoric.

Learning from Procedural Rhetoric

Video games are models of real and imagined systems. We always *play* when we use video games, but the sort of play that we perform is not always the

9. Maxis, *Spore* (Redwood Shores, CA: Electronic Arts, forthcoming). As of this writing, *Spore* is expected to be released in 2009. [Will Wright (b. 1960), American video game designer and co-founder of the company Maxis, best known for

designing *SimCity* and *The Sims*; *Spore* was released in 2008—editor's note.]

1. Will Wright, "What's Next in Content?" Paper presented at the Game Developers Conference, San Jose, CA, 2006.

stuff of leisure. Rather, when we play, we explore the possibility space of a set of rules—we learn to understand and evaluate a game's meaning. Video games make arguments about how social or cultural systems work in the world—or how they could work, or don't work. Video games like *Spore* and *Take Back Illinois* make arguments about abstract, conceptual systems the way mechanical models make them about material ones. When we play video games, we can interpret these arguments and consider their place in our lives.

In this way, playing video games is a kind of literacy. Not the literacy that helps us read books or write term papers, but the kind of literacy that helps us make or critique the systems we live in. By "system," I don't just mean large-scale, impersonal things like political systems. Any social or cultural practice can be understood as a set of processes, and our understanding of each of them can be taught, supported, or challenged through video games. *Animal Crossing* presents a model of consumer capitalism that players might embrace, reinforcing their interest in property in the material world. Or, through their experience of the game, players might question the goals they set for themselves, particularly the often endless feedback loop between the desire for material goods and the work needed to support it. When we learn to play games with an eye toward uncovering their procedural rhetorics, we learn to ask questions about the models such games present.

The kind of technology literacy that procedural rhetoric offers is becoming increasingly necessary for kids and adults alike. As more of our cultural attention moves from linear media like books and film to procedural, random-access media like software and video games, we need to become better critics of the latter kind. This process starts at home where parents can help their kids play games critically, just as they might help their kids understand novels or films by virtue of their own familiarity with those media. Of course, such a future requires parents who are themselves literate in the medium of video games. Parents of all kinds can learn to play video games, but those who grew up with video games themselves are already raising the next generation of children—a six-year-old who played the Atari VCS² in 1978 was thirty-five years old in 2007. These parents must play games with their kids just as a previous generation watched westerns or read comic books with them. And before they do so, they must begin playing games critically themselves, perhaps unlearning decades of treating video games as mere distraction.

Educators also have a role to play. When video games are used in schools, we often think that they should be used pedagogically. That is, if video games have any purpose in schools, it is for supplementing or replacing lesson plans for concrete, factual learning, such as principles of chemistry. But once we understand video games as procedural representations that make arguments about systems in the world, they resemble creative artifacts as much as—and perhaps more so—than they do pedagogical tools. Educators should consider adopting video games as artifacts to be discussed alongside traditional media in subjects like literature, language arts, history, and art, teaching game playing as an argumentative and expressive practice alongside reading, writing, and debating.

2. The first hugely successful home video console (released in 1977) [editor's note].

Finally, procedural rhetoric has a role to play in the way we teach programming and video game development. As interest in games as a cultural activity increases, and as the importance of computing itself has increased, some educators have hoped to teach game development as an entry point into computer science.³ Video games are appealing, kids want to play them, and they also want to make them. By luring kids into computer science through video game development, we can attempt to increase dwindling interest in math, science, and technology.

This is not a bad approach to programming education. But unfortunately, such approaches risk assuming that creating any kind of video game offers the same pedagogical value. Programming education must take care to ensure that it supports sophisticated responses to the medium, rather than reinforcing the idea that play is equivalent to leisure, and that video games are intended to produce fun and distraction rather than critical response. In addition to using video games to teach kids how to write computer programs (procedural literacy), we can use them to teach kids how to write computer arguments (procedural rhetoric). When kids program, just as when they write, they can learn to make their own claims about the world in the form of processes. Such a practice reframes video game development as a rhetorical practice, not just a craft practice or a technical practice. By actively teaching kids to mount arguments in procedural form—even simple ones like models of their everyday life—video games can become a carrot medium for both programming and expression. Work in teaching kids to program games has already begun (examples include MIT's Scratch,⁴ the MacArthur-funded University of Wisconsin/Gamelab Game Designer project,⁵ the London Knowledge Lab's Making Games Project,⁶ Carnegie Mellon University's Alice,⁷ among others). Efforts like these can be used as the basis for a combined program in procedural literacy and rhetoric.

Video games are not mere trifles, artifacts created only to distract or to amuse. But they are also not *automatically* rich, sophisticated statements about the world around us. Video games have the power to make arguments to persuade, to express ideas. But they do not do so inevitably. As we evolve our relationship with video games, one of the most important steps we can take is to learn to play them critically, to suss out the meaning they carry, both on and under the surface. To do this requires a fluency in procedural-ity, the core representational form of computing. But programming or using computers is not the sole answer to such a charge. Rather, we need to play video games in order to understand the possibility spaces their rules create, and then to explore those possibility spaces and accept, challenge, or reject them in our daily lives.

Author Bibliographies

Chinua Achebe

Called “the father of the African novel,” Chinua Achebe is best known for his fiction foregrounding the political struggles of Nigeria. His novels include *Things Fall Apart* (1958), *No Longer at Ease* (1960), *Arrow of God* (1964), *A Man of the People* (1966), and *Anthills of the Savannah* (1987). He has also published two short story collections, three volumes of poetry, four works of juvenile literature, and several edited collections of African literature. *Morning Yet on Creation Day: Essays* (1975) and *Hopes and Impediments: Selected Essays, 1965–1987* (1988) are overlapping collections of his literary criticism, primarily dealing with the role of the African writer in society. Both include “An Image of Africa.” His other criticism includes the slim volumes *A Tribute to James Baldwin* (1989) and *Home and Exile* (2000), and three volumes directly addressing Nigerian politics: *The Trouble with Nigeria* (1983), *The World of the Ogbanije* (1986), and *The University and the Leadership Factor in Nigerian Politics* (1988). He also published a short memoir, *There Was a Country: A Personal History of Biafra* (2012). The interviews collected in *Conversations with Chinua Achebe*, edited by Bernth Lindfors (1997), record Achebe’s views on literature and politics.

The large secondary literature on Achebe deals primarily with his career as a novelist. Ezenwa-Ohaeto’s *Chinua Achebe: A Biography* (1997) is a detailed account of Achebe’s life and travels. Catherine Innes’s *Chinua Achebe* (1990) offers the best critical survey of his novels as well as his other writings. Though focused on Achebe’s novels, Simon Gikandi’s *Reading Chinua Achebe: Language and Ideology in Fiction* (1991) examines them in relation to the critical essays. *The Chinua Achebe Encyclopedia*, edited by M. Keith Booker (2003), is a comprehensive guide to many facets of his life and work. *Achebe and Friends at Umuahia: The Making of a Literary Elite* (2015), by Terri Ochiagha, gives a detailed account of the formation of a cohort of pioneering African writers.

There are many entries in the debate over “An Image of Africa”: defenders of Conrad include Caribbean writer Wilson Harris in “The Frontier on Which *Heart of Darkness* Stands,” *Research on*

African Literatures 12 (1981), and Hunt Hawkins, “The Issue of Racism in *Heart of Darkness*,” *Conradiana* (1982); following Achebe is Frances B. Singh, “The Colonialistic Bias of *Heart of Darkness*,” *Conradiana* 10 (1978); and compromise views are offered by the postcolonial critic Benita Parry in *Conrad and Imperialism* (1983), and Patrick Brantlinger, “*Heart of Darkness*: Anti-Imperialism, Racism, or Impressionism?,” *Criticism* 27 (1985). The collections *Conrad in Africa: New Essays on “Heart of Darkness,”* edited by Attie de Lange and Gail Fincham (2002), and *Approaches to Teaching Conrad’s “Heart of Darkness” and “The Secret Sharer,”* edited by Hunt Hawkins and Brian W. Shaffer (2002), both offer notable reassessments of the controversy and comment on the ethics of reading *Heart of Darkness* in the twenty-first century. Ezenwa-Ohaeto’s *Chinua Achebe* (cited above) contains a useful bibliography of his writing and of selected secondary sources, and the *Achebe Encyclopedia* (cited above) includes a comprehensive bibliography.

Joseph Addison

Donald F. Bond prepared modern editions of *The Spectator* (5 vols., 1965) and *The Tatler* (3 vols., 1987). One-volume editions include *Addison and Steele: Selections from “The Tatler” and “The Spectator,”* edited by R. J. Allen (1957); *Selected Essays from “The Tatler,” “The Spectator,” and “The Guardian,”* edited by Daniel McDonald (1973); and *Selections from the “Tatler” and the “Spectator” of Steele and Addison*, edited by Angus Ross (1982). For texts and contexts, and a biographical and literary overview, see *The Commerce of Everyday Life: Selections from “The Tatler” and “The Spectator,”* edited by Erin Mackie (1998). For Addison’s correspondence, see *Letters*, edited by Walter Graham (1941).

A good biography is Peter Smithers, *The Life of Joseph Addison* (2d ed., 1968). For a cogent brief overview, consult Robert M. Otten, *Joseph Addison* (1982). Helpful critical studies include Lee Andrew Elioseff, *The Cultural Milieu of Addison’s Literary Criticism* (1963); Edward A. Bloom and Lillian D. Bloom, *Joseph Addison’s Sociable Animal: In the Market Place, on the Hustings, in the Pulpit* (1971); and Michael G. Ketcham, *Transparent Designs: Reading, Performance, and*

Form in the "Spectator" Papers (1985). In *The Constitution of Literature: Literacy, Democracy, and Early English Literary Criticism* (2008), Lee Morrissey discusses theories of reading in the seventeenth and eighteenth centuries, as articulated in *The Spectator* and in the writings of Dryden, Hume, and Johnson. Other resources include *Addison and Steele: The Critical Heritage*, edited by Edward A. Bloom and Lillian D. Bloom (1980), and Charles A. Knight, *Joseph Addison and Richard Steele: A Reference Guide, 1730–1991* (1994).

Adūnīs

Adūnīs is a prolific literary critic, historian, editor, and theorist as well as being one of the Arab world's most renowned poets. Over a half dozen of his more than thirty books of poetry are available in English, including two of his more influential collections: *Mihyar of Damascus: His Songs* (2008) and *A Time between Ashes and Roses* (2004). The latter contains, in addition to the poems, a particularly fine biographical and critical study by the translator, Shawkat M. Toorawa, of Adūnīs as both critic and poet and provides a lengthy bibliography of his more important works. Many of his own critical reflections and manifestos have appeared in the Lebanese literary journal *Shi'r* (1957–70), which he co-founded, and later *Mawāqif*, which he founded in 1968. To date, two books of his writings in prose have been translated into English: *An Introduction to Arab Poetics* (1985; trans. 1990), which was originally a series of lectures given at the Collège de France in Paris, and *Sufism and Surrealism* (1995; trans. 2005). His major works of criticism and literary history in Arabic include *Muqaddima li-al-shi'r al-'Arabī* (1971, *An Introduction to Arabic Poetry*)—not to be confused with the later *An Introduction to Arab Poetics*—and *Al-Thābit wa-al-mutahawwil* (1974, *The Static and the Dynamic*).

Later Adūnīs combined his various interests and functions in an experimental work, *Al-Kitābams al-makān al-ān: mak-htūta tunsabu ilā al-Mutanabbī* (1995, *The Book Yesterday the Place Now: A Manuscript Attributed to al-Mutanabbi*), in which he blends the roles of poet and critic in his commentary on a poem by his forebear al-Mutanabbī. This volume continues the critical impulse begun by Adūnīs in *Dirwān al-shi'r al-'Arabī* (1964, *Collection of Arabic Poetry*), his selections of the most significant poets and poetry in the Arabic literary heritage.

Adūnīs's *Al-Thābit* (1974) elicited an attentive, often admiring, and sometimes contentious response from many of his contemporaries. The outlines of this immediate response can be profitably traced in articles written by three Arab critics and academics working mostly in English: Issa J. Boullata, Mounah A. Khouri, and Kamal Abu-Deeb. Particularly helpful in situating Adūnīs's work in *Al-Thābit* are Boullata's "Adonis: Revolt in

Modern Arabic Poetics," *Edebiyat* 2.1 (1977), and Khouri's "A Critique of Adonis's Perspectives on Arabic Literature and Culture," a chapter in his *Studies in Contemporary Arabic Poetry and Criticism* (1987). Abu-Deeb—himself a central figure in Arabic modernism—has published several fine studies of the broader impact of Adūnīs's theories about Arabic literature on his contemporaries. The most accessible and informative of these is probably "The Collapse of Totalizing Discourse and the Rise of Marginalized/Minority Discourses," in *Tradition, Modernity and Postmodernity in Arabic Literature: Essays in Honor of Professor Issa J. Boullata* (ed. Kamal Abdel-Malek and Wael Hallaq, 2000), which examines in detail Adūnīs's concept of "modernity" and tracks its influence on others.

For broader studies of Adūnīs that link the poetic and critical aspects of his work, consult the rewarding articles of Kamal Abu-Deeb in various journals and Festschriften, as well as Muhsin J. al-Musawi's fine survey *Arabic Poetry: Trajectories of Modernity and Tradition* (2006), which refers throughout to Adūnīs's critical legacy and poetic example. For other assessments, see Roger Allen, *The Arabic Literary Heritage* (1998) and *An Introduction to Arabic Literature* (2000), especially the sections titled "Poetry" and "The Critical Tradition"; M. M. Badawi, *A Critical Introduction to Modern Arabic Poetry* (1975); Salma Khadra Jayyusi, *Trends and Movements in Modern Arabic Poetry* (2 vols., 1977); Mohammad Mohmoud Khazali, "Modernity: A Study of Adūnīs' Theory and Poetry" (Ph.D. diss., 1983); and Atif Y. Faddul, *The Poetics of T. S. Eliot and Adunis: A Comparative Study* (1992). The role of Adūnīs in the broader intellectual debates concerning decline and renewal in Arabic culture has been admirably traced by Elizabeth Suzanne Kassab in her *Contemporary Arab Thought: Cultural Critique in Comparative Perspective* (2010), which can be supplemented by her valuable and lucid study of the intellectual reaction to the 2011 Arab uprisings, "Critics and Rebels: Older Arab Intellectuals Reflect on the Uprisings," *British Journal of Middle Eastern Studies* 41 (2014).

For further biographical details on Adūnīs—besides those found in Shawkat Toorawa's afterword to *A Time between Ashes and Roses* (cited above)—see the entries in *Modern Arabic Literature* (ed. Roger Allen, 1987) and *Encyclopedia of Arabic Literature* (ed. Julie Scott Meisami and Paul Starkey, 1998).

Giorgio Agamben

Almost all Agamben's work has been translated into English; the major works, in order of English publication (with the date of the original Italian listed first, where applicable), are *Language and Death: The Place of Negativity* (1982; 1991), *The Coming Community* (1990; 1993), *Stanzas: Word and Phantasm in Western Culture* (1977; 1993), *Idea of Prose* (1985; 1995), *The End of the Poem: Studies in Poetics* (1996; 1999), *The Man without*

Content (1970; 1999), *Potentialities: Collected Essays in Philosophy* (2000), *Means without End: Notes on Politics* (1996; 2000), *The Open: Man and Animal* (2002; 2004), *The Time That Remains: A Commentary on the Letter to the Romans* (2000; 2005), *Infancy and History: On the Destruction of Experience* (1978, new ed. 2001; 1993; 2007), *Profanations* (2005; 2007), *What Is an Apparatus? And Other Essays* (2009), *The Signature of All Things: On Method* (2008; 2009), *Nudities* (2009; 2011), *The Church and the Kingdom* (2010; 2012), *Nymphs* (2007; 2013), *The Unspeakable Girl: The Myth and Mystery of Kore* (2010; 2014), *Pilate and Jesus* (2013; 2015), *The Fire and the Tale* (2015; 2017), *The Mystery of Evil: Benedict XVI and the End of Days* (2013; 2017), *What Is Philosophy* (2016, 2017), and *Karman: A Brief Treatise on Action, Guilt, and Gesture* (2017, 2018). The nine volumes of the *Homo Sacer* series (listed here by their order in the sequence, not by date of publication) are *Homo Sacer: Sovereign Power and Bare Life* (1995; 1998), *State of Exception* (2003; 2005), *Stasis: Civil War as Political Paradigm* (2015; 2015), *The Sacrament of Language: An Archaeology of the Oath* (2008; 2010), *The Kingdom and the Glory: For a Theological Genealogy of Economy and Government* (2007; 2011), *Opus Dei: An Archaeology of Duty* (2012; 2013), *Remnants of Auschwitz: The Witness and the Archive* (1998; 1999), *The Highest Poverty: Monastic Rules and Form-of-Life* (2011; 2013), and *The Use of Bodies* (2014; 2016). The full *Homo Sacer* series has now been collected in one volume, *The Omnibus Homo Sacer* (2017). The best source for biographical information is Juliette Cerf's interview with Agamben found at www.versobooks.com/blogs/1612-thought-is-the-courage-of-hopelessness-an-interview-with-philosopher-giorgio-agamben (accessed September 15, 2017). Agamben explains his refusal to come back to the United States after 9/11 in "No to Biopolitical Tattooing," *Le Monde*, January 10, 2004.

The best single-volume introduction is Leland de la Durantaye's *Giorgio Agamben: A Critical Introduction* (2009). See also de la Durantaye's superb essay "To Be and to Do: The Life's Work of Giorgio Agamben," *Boston Review*, January 26, 2016. Catherine Mill's *The Philosophy of Agamben* (2008); *The Agamben Dictionary*, edited by Alex Murray and Jessica Whyte (2011); and Claire Colebrook and Jason Maxwell's *Agamben* (2016) also provide useful overviews. Jacques Derrida's engagement with Agamben's work can be found in *The Beast and the Sovereign*, vol. 1 (2009). Of the more specialized monographs, of special interest to literary theorists are William Watkin's *The Literary Agamben: Adventures in Logopoiesis* (2010), Thanos Zartaloudis's *Giorgio Agamben: Power, Law and the Uses of Criticism* (2010), and Kevin Attell's *Giorgio Agamben: Beyond the Threshold of Deconstruction* (2015). Three superb collection of essays on Agamben's work are

Politics, Metaphysics, and Death: Essays on Giorgio Agamben's "Homo Sacer," edited by Andrew Norris (2005); *Giorgio Agamben: Sovereignty and Life*, edited by Matthew Calarco and Steven DeCaroli (2007); and *Towards the Critique of Violence: Walter Benjamin and Giorgio Agamben*, edited by Brendan Moran and Carlo Salzani (2015). Calarco and DeCaroli's volume has the most complete bibliography of Agamben's work; it can be supplemented with the more recent bibliography in de la Durantaye's book, which also can be consulted for secondary sources.

Louis Althusser

Althusser's major essays are collected in three influential books: *For Marx* (1965; trans. 1969); *Lenin and Philosophy and Other Essays* (1969; trans. 1971), which contains "Ideology and Ideological State Apparatuses"; and *Reading Capital*, a reconsideration of Marx's masterwork written with his student Étienne Balibar (1968; trans. 1970). Subsequent collections in English, gathering his many essays, are *Politics and History: Montesquieu, Rousseau, Hegel, and Marx* (1972), which includes the long essay published as his first book, *Montesquieu: Politics and History* (1959); *Essays in Self-Criticism* (1974; trans. 1976); *Philosophy and the Spontaneous Philosophy of the Scientists, and Other Essays* (1974; trans. 1990); *Essays on Ideology* (1984); *Writings on Psychoanalysis: Freud and Lacan* (1993; trans. 1996); *On the Reproduction of Capitalism: Ideology and Ideological State Apparatuses* (1995; trans. 2014), which presents material (including "Ideology and Ideological State Apparatuses") from two unfinished book manuscripts; *The Spectre of Hegel: Early Writings* (1997); *Machiavelli and Us* (1999); *The Humanist Controversy and Other Writings* (1966–67) (2003); *Philosophy of the Encounter: Later Writings, 1978–1987* (2006); the short selection *On Ideology* (2008), which includes "Ideology and Ideological State Apparatuses"; a series of lectures, *Psychoanalysis and the Human Sciences* (trans. 2016); and *Philosophy for Non-Philosophers* (trans. 2016). *Journal de captivité: Stalag XA 1940–1945* (1992, *Journal of Captivity*) records Althusser's experiences as a prisoner of war. Written during the mid-1980s, the autobiographical texts collected in *The Future Lasts Forever*, edited by Olivier Corpet and Yann Moulier Boutang (1992; trans. 1993), should be approached with caution, since many passages bear witness to Althusser's mental decline. The definitive biography is Yann Moulier Boutang, *Louis Althusser: Une Biographie* (*Louis Althusser: A Biography*); only the first volume, *La Formation du mythe (1918–1956)* (1992, *The Formation of the Myth*), has appeared to date.

Warren Montag's *Louis Althusser* (2003) and Luke Ferretter's *Louis Althusser* (2006) provide useful introductions, as well as selective annotated bibliographies. There was a great deal of sometimes contentious discussion of Althusser through the 1970s and early 1980s. The philosopher Jacques

Rancière, a onetime student of Althusser's, criticized him from a Maoist perspective for adhering to theory over practice, in his book *Althusser's Lesson* (1974; trans. 2011), whereas the English historian E. P. Thompson, "The Poverty of Theory or an Orrery of Errors" (1978), declared Althusserian theory to be Stalinist. In *Althusser: The Detour of Theory* (1987), Gregory Elliott helpfully traces the political background that shaped Althusser's work.

Elliott also edited an excellent collection of critical essays from a range of political and theoretical perspectives, *Althusser: A Critical Reader* (1994); see especially the essay by Francis Mulhern considering Althusser's impact on literary studies. *The Althusserian Legacy*, edited by E. Ann Kaplan and Michael Sprinker (1994), contains a revealing interview with his onetime student Jacques Derrida, conducted by Sprinker. See also *Postmodern Materialism and the Future of Marxist Theory: Essays in the Althusserian Tradition*, edited by Antonio Calari and David F. Ruccio (1996).

Since 2000, there has been a new wave of commentary. William S. Lewis, *Louis Althusser and the Traditions of French Marxism* (2005), places Althusser's work in historical context. In contrast to earlier interpretations, commentators have focused on the influence of Spinoza on Althusser's version of materialism, notably Montag's *Louis Althusser. Montag's subsequent study, Althusser and His Contemporaries: Philosophy's Perpetual War* (2013), is a major reevaluation of Althusser in relation to French theory. See also *Encountering Althusser: Politics and Materialism in Contemporary Radical Thought*, edited by Katja Diefenbach et al. (2013). Elliott's *Althusser: A Critical Reader* includes a comprehensive bibliography of all Althusser's publications up to 1993.

Benedict Anderson

Apart from his specialized works on Southeast Asian politics and history, Anderson wrote several books relevant to students of nationalism and postcolonialism: *Imagined Communities: Reflections on the Origin and Spread of Nationalism* (1983; 2d ed., 1991; 3d ed., 2006), *Language and Power: Exploring Political Cultures in Indonesia* (1990), *The Spectre of Comparisons: Nationalism, Southeast Asia, and the World* (1998), *The Age of Globalization: Anarchists and the Anticolonial Imagination* (2005, as *Under Three Flags*; 2d ed., 2013), and a memoir, *A Life beyond Boundaries* (2016). Biographical information, as well as a sense of Anderson's influence, can be found in the obituaries published in the *New York Times* (December 14, 2015), *The New Republic* (December 13, 2015), and the *Guardian* (January 1, 2016).

Two collections of essays specifically address Anderson's work: *Grounds of Comparison: Around the Work of Benedict Anderson*, edited by Pheng Cheah and Jonathan Culler (2003), and *Southeast Asia over Three Generations: Essays Presented to*

Benedict R. O'G. Anderson, edited by James T. Siegel and Audrey R. Kahin (2003). Umut Özkırımlı's *Theories of Nationalism: A Critical Introduction* (2d ed., 2010) is a good place to start on the topic and pays particular attention to Anderson's work. Other valuable studies include Craig Calhoun's *Nations Matter: Culture, History, and the Cosmopolitan Dream* (2007), Anthony D. Smith's *Nationalism: Theory, Ideology, History* (2d ed., 2010), Partha Chatterjee's *Empire and Nation: Selected Essays* (2010), Bernard Yack's *Nationalism and the Moral Psychology of Community* (2012), and John Coakley's *Nationalism, Ethnicity and the State: Making and Breaking Nations* (2012). Two very useful reference works on the topic are *Nationality and Nationalism*, edited by Athena S. Leoussi and Steven Grosby, vol. 1, *Theoretical Studies* (2004), and *The SAGE Handbook of Nations and Nationalism*, edited by Gerard Delanty and Krishan Kumar (2006). Özkırımlı's book provides a good working bibliography.

Gloria Anzaldúa

Anzaldúa's books include *Speaking in Tongues: A Letter to Third World Women Writers* (1983), *Borderlands/La Frontera: The New Mestiza* (1987), *Towards a New Consciousness* (1990), and three children's books, *Prietita Has a Friend* (1991), *Friends from the Other Side/Amigos del otro lado* (1993), and *Prietita and the Ghost Woman/Prietita y la Llorona* (1996). She is also the co-editor (with Cherríe Moraga) of *This Bridge Called My Back: Writings by Radical Women of Color* (1981; 3d revised ed., 2002), editor of *Making Face, Making Soul / Haciendo caras: Creative and Critical Perspectives by Women of Color* (1990), and co-editor (with AnaLouise Keating) of *This Bridge We Call Home: Radical Visions for Transformation* (2002), three highly influential collections. *The Gloria Anzaldúa Reader*, edited by AnaLouise Keating (2009) collects writings from across her life, while *Light in the Dark=Luz en lo oscuro: Rewriting Identity, Spirituality, Reality* (2015), also edited by Keating, offers late essays and stories, including some works in progress. The detailed chronology of Anzaldúa's life found in *The Gloria Anzaldúa Reader* is best supplemented with the autobiographical reflections found in *Interviews/Entrevistas*, edited by Keating (2000), a collection of interviews with Anzaldúa.

Anzaldúa's work has generated numerous responses that address issues of ethnicity, sexuality, feminism, hybridity, and identity politics. The best place to start are the retrospective essays found in the section devoted to Anzaldúa in PMLA 121 (2006). Collections of essays that offer reflections on her work include *Other Sisterhoods: Literary Theory and U.S. Women of Color*, edited by Sandra Kumamoto Stanley (1998); *Chicana Feminisms: A Critical Reader*, edited by Gabriela F. Arredondo et al. (2003); *Entre Mundos/Among Worlds: New Perspectives on Gloria*

Anzaldúa, edited by AnaLouise Keating (2005); and *Bridging: How Gloria Anzaldúa's Life and Work Transformed Our Own*, edited by AnaLouise Keating and Gloria González-López (2011). Three monographs that devote significant attention to Anzaldúa's work are Arturo J. Aldama's *Disrupting Savagism: Intersecting Chicana/o, Mexican Immigrant, and Native American Struggles for Self-Representation* (2001), Sheila Marie Contreiras's *Blood Lines: Myth, Indigenism, and Chicana/o Literature* (2008), and Theresa Delgadillo's *Spiritual Mestizaje: Religion, Gender, Race, and Nation in Contemporary Chicana Narrative* (2011). The *Gloria Anzaldúa Reader* provides a complete bibliography of Anzaldúa's own writings and an extensive bibliography of secondary works. Anzaldúa's manuscripts, letters, and unpublished writings are housed at the Nettie Lee Benson Latin American Collection at the University of Texas at Austin.

Hannah Arendt

The major works published during Arendt's lifetime are *The Origins of Totalitarianism* (1951; 3d ed., 1966), *The Human Condition* (1958), Rahel Varnhagen: *The Life of a Jewess* (1957; rev. ed., 1974), *Between Past and Future: Eight Exercises in Political Thought* (1961; enlarged ed., 1968), *On Revolution* (1963), *Eichmann in Jerusalem: A Report on the Banality of Evil* (1963), *Men in Dark Times* (1968), and *Crises of the Republic: Lying in Politics; Civil Disobedience; On Violence; Thoughts on Politics and Revolution* (1972). *The Life of the Mind: Thinking and Willing*, left unfinished at Arendt's death, was published in 1978. Most of Arendt's essays and occasional pieces have now been collected in books: *The Jew as Pariah: Jewish Identity and Politics in the Modern Age* (1978), *Lectures on Kant's Political Philosophy* (1982), *Essays in Understanding, 1930–1954* (1994), *Responsibility and Judgment* (2003), *The Promise of Politics* (2005), *Reflections on Literature and Culture* (2007), and *The Jewish Writings* (2007), as well as a translation of her 1929 doctoral dissertation, *Love and Saint Augustine* (1996). There are also five volumes of letters: *Hannah Arendt Karl Jaspers Correspondence* (1985; trans. 1992), *Between Friends: The Correspondence of Hannah Arendt and Mary McCarthy, 1949–1975* (1995), *Within Four Walls: The Correspondence between Hannah Arendt and Heinrich Blücher, 1936–1968* (1996; trans. 2000), *Letters, 1925–1975*, by Hannah Arendt and Martin Heidegger (1998; trans. 2004), and *The Correspondence of Hannah Arendt and Gershom Scholem* (2017). Her papers are held at the Library of Congress. Biographical material can be found in *Hannah Arendt: The Last Interview and Other Conversations* (2013). Margarethe von Trotta's excellent film *Hannah Arendt* (2012) provides a good rendition of the controversy surrounding the Eichmann book. Elisabeth Young-Bruehl's full-scale biography, *Hannah Arendt: For Love of the World* (1982;

2d ed., 2004), is superb; nothing more recent compares to it.

The secondary literature is immense. The best place to start is Elisabeth Young-Bruehl's *Why Arendt Matters* (2006). Simon Swift's *Hannah Arendt* (2009) and *Hannah Arendt: Key Concepts*, edited by Patrick Hayden (2014), are good introductory overviews. To get a sense of the critical response, consult the following collections of essays by diverse hands: *The Cambridge Companion to Hannah Arendt*, edited by Dana Villa (2000); *Thinking in Dark Times: Hannah Arendt on Ethics and Politics*, edited by Roger Berkowitz, Jeffrey Katz, and Thomas Keenan (2010); *Politics in Dark Times: Encounters with Hannah Arendt*, edited by Seyla Benhabib (2010); *Action and Appearance: Ethics and the Politics of Writing in Hannah Arendt*, edited by Anna Yeatman (2011); and *Arendt and Adorno: Political and Philosophical Investigations*, edited by Lars Rensmann and Samir Gandesha (2012). Among the monographs of special interest to literary theorists are Seyla Benhabib's *The Reluctant Modernism of Hannah Arendt* (1996), Julia Kristeva's *Hannah Arendt* (1999; trans. 2001), Hanna Fenichel Pitkin's *The Attack of the Blob: Hannah Arendt's Concept of the Social* (2002), Judith Butler's *Notes toward a Performative Theory of Assembly* (2015), and Roberto Esposito's *The Origin of the Political: Hannah Arendt or Simone Weil?* (2017). Of more general note are Steve Buckler's *Hannah Arendt and Political Theory: Challenging the Tradition* (2011) and Richard H. King's *Arendt and America* (2015). Hayden's *Hannah Arendt: Key Concepts* has a fairly comprehensive bibliography of primary and secondary works.

Aristotle

There are a vast number of editions and translations of Aristotle's works, from the medieval period to the present. Our text of the *Poetics* comes from Aristotle's *Poetics*, admirably translated into discursive English by James Hutton (1982), which is based on the standard edition of Rudolf Kassel, *Aristotelis "De Arte Poetica Liber"* (1965). Our selection from *On Rhetoric* is taken from the definitive present-day English version, *On Rhetoric: A Theory of Civic Discourse*, translated and annotated by George A. Kennedy (1991; 2d ed., 2007), which also includes useful commentary. It draws on an amalgam of Greek texts, including *Aristotelis "Ars Rhetorica,"* edited by W. David Ross (1959); *Aristote, "Rhétorique,"* edited by Ménédec Dufour and André Wartelle (3 vols., 1960–73); and *Aristotelis "Ars Rhetorica,"* edited by Rudolf Kassel (1976). *The Complete Works of Aristotle*, edited by Jonathan Barnes (2 vols., 1984), contains the best compendium of Aristotle's works in English.

Jonathan Barnes's *Aristotle* (1982) is a brief, accessible overview of Aristotle's life and works. In a crowded field, Abraham Edel's *Aristotle and His Philosophy* (1982) and John M. Rist's *Mind of*

Aristotle (1989) also stand out as good basic introductions. *The Cambridge Companion to Aristotle*, edited by Barnes (1995), contains chapters on important phases of Aristotle's philosophical project, including a survey of his life and work by Barnes. See also *A Companion to Aristotle*, edited by Georgios Anagnostopoulos (2009), a collection of forty essays covering the range of Aristotle's work. Carlo Natali, *Aristotle: His Life and School* (1991; trans. 2013), sorts through conjectures about Aristotle's biography; in addition, it includes a bibliography of ancient sources.

On the *Poetics*, Stephen Halliwell's *Aristotle's "Poetics"* (1986) is the authoritative contemporary interpretation; see also Halliwell's chapter, "Aristotle's *Poetics*," in *The Cambridge History of Literary Criticism*, vol. 1, *Classical Criticism*, edited by George A. Kennedy (1989). Gerald F. Else, *Aristotle's "Poetics": The Argument* (1957), provides a detailed commentary on the text, and his *Plato and Aristotle on Poetry* (1986) is a useful comparative study. D. W. Lucas's *Aristotle—"Poetics"* (1968) offers significant commentary as well as the Kassel edition of the Greek text. Martha Nussbaum's *Fragility of Goodness: Luck and Ethics in Greek Philosophy* (1986) contains an influential modification of the argument about catharsis. *Aristotle's "Poetics" and English Literature: A Collection of Critical Essays*, edited by Elder Olson (1965), gathers views from the eighteenth century through the 1960s. *Essays on Aristotle's "Poetics"*, edited by Amélie Oksenberg Rorty (1992), is an excellent contemporary collection by philosophers and scholars of Aristotle, clarifying concepts such as mimesis, catharsis, and comedy. Though contemporary narrative theory has developed more sophisticated distinctions than Aristotle's basic ones of plot and character, the *Poetics* still has significant influence among filmmakers; see Ari Hiltunen, *Aristotle in Hollywood: The Anatomy of Successful Storytelling* (2002). *Ancient Literary Criticism*, edited by Andrew Laird (2006), reprints three older essays on the *Poetics*. In *The Lost Second Book of Aristotle's "Poetics"* (2012), Walter Watson attempts to reconstruct Aristotle's view of comedy and the laughable as a counterpart to his view of tragedy and the pitiable. Malcolm Heath, *Ancient Philosophical Poetics* (2013), compares Plato's and Aristotle's poetics and emphasizes Aristotle's grounding in biology. The *Routledge Philosophy Guidebook to Aristotle and the "Poetics"* (2016), by Angela Curran, offers detailed commentary.

For *On Rhetoric*, W. M. A. Grimaldi's *Aristotle, "Rhetoric": A Commentary* (1980) is a useful exposition. *Essays on Aristotle's "Rhetoric"* (1996), edited by Amélie Oksenberg Rorty as a companion to her volume on the *Poetics*, provides an excellent range of contemporary interpretations and reevaluations of the text. Alexander Nehamas's "Pity and Fear in the *Rhetoric* and *Poetics*," in *Aristotle's "Rhetoric": Philosophical Essays* (ed. David

J. Furley and Nehamas, 1994), cogently compares Aristotle's treatment of emotion in both texts and, in a provocative argument, claims that catharsis refers to the internal resolution of a tragic plot itself rather than to the response of the audience. Our translator, George A. Kennedy, has written standard histories of rhetoric; see his *Classical Rhetoric and Its Christian and Secular Tradition from Ancient to Modern Times* (2d ed., 1999), which has a useful discussion of Aristotle's development of a "philosophical rhetoric." See also *Rereading Aristotle's "Rhetoric"*, edited by Alan G. Gross and Arthur E. Walzer (2000). Dana LaCourse Munteanu, *Tragic Pathos: Pity and Fear in Greek Philosophy and Tragedy* (2012), represents another effort to reinterpret catharsis, drawing on the *Rhetoric* as well as the *Poetics*.

The "*Poetics*" of Aristotle and the "*Tractatus Coislinianus*": *A Bibliography from about 900 till 1996*, compiled by Omert J. Schrier (1998), testifies to the massive literature relating to the *Poetics*. Aristotle's "*Rhetoric*": *Five Centuries of Philological Research*, compiled by Keith V. Erickson (1975), covers the many studies of *On Rhetoric*. *The Cambridge Companion to Aristotle* contains an excellent bibliography on all of Aristotle's work, with individual sections on the *Poetics* and *On Rhetoric*. Halliwell's *Aristotle's Poetics* and Kennedy's edition of *On Rhetoric* include selective bibliographies on their respective texts. The Rorty collections on the *Poetics* and *On Rhetoric* also include good selective bibliographies.

Matthew Arnold

The Complete Prose Works of Matthew Arnold, edited by R. H. Super (11 vols., 1960–77), offers a definitive text and excellent notes. P. J. Keating (1970) and Christopher Ricks (1972) have edited collections of Arnold's critical writings. For the poetry and prose, the editions by Lionel Trilling (1949) and A. Dwight Culler (1961) are useful, though thin in their annotations. For the correspondence, *Letters, 1848–1888*, edited by George W. E. Russell (2 vols., 1895), remains important, although this edition and other selections have been superseded by *Letters of Matthew Arnold*, edited by Cecil Y. Lang (6 vols., 1996–2001). Excellent biographies include Park Honan, *Matthew Arnold: A Life* (1981); Nicholas Murray, *A Life of Matthew Arnold* (1995); and Ian Hamilton, *A Gift Imprisoned: The Poetic Life of Matthew Arnold* (1999).

For critical overviews, see Lionel Trilling, *Matthew Arnold* (1939); Douglas Bush, *Matthew Arnold: A Survey of His Poetry and Prose* (1971), a cogent and informative survey of Arnold's life and literary career; and Stefan Collini, *Matthew Arnold: A Critical Portrait* (2008). Also helpful is a collection of essays, *Matthew Arnold*, edited by Kenneth Allott (1976).

Critical studies that focus on Arnold's prose include John Holloway, *The Victorian Sage: Studies*

in *Argument* (1953), insightful on Arnold's style and rhetorical strategies; Raymond Williams, *Culture and Society: 1780–1950* (1958), a landmark history of British cultural criticism that includes a substantial discussion of Arnold; Vincent Buckley, *Poetry and Morality: Studies on the Criticism of Matthew Arnold, T. S. Eliot, and F. R. Leavis* (1959); Leon Gottfried, *Matthew Arnold and the Romantics* (1963); David J. DeLaura, *Hebrew and Hellene in Victorian England: Newman, Arnold, and Pater* (1969), which explicates the affinities and differences between Arnold and his contemporaries and successors; Fred G. Walcott, *The Origins of Culture and Anarchy: Matthew Arnold and Popular Education in England* (1970); Sidney Coulling, *Matthew Arnold and His Critics: A Study of Arnold's Controversies* (1974), which provides historical context; Joseph Carroll, *The Cultural Theory of Matthew Arnold* (1982), an excellent study of Arnold's main themes and ideas; and Ruth apRoberts, *Arnold and God* (1983). For responses to Arnold by his contemporaries, see *Matthew Arnold—Prose Writings: The Critical Heritage*, edited by Carl Dawson and John Pfordresher (1979). Edward W. Said, in *The World, the Text, and the Critic* (1983), and Geoffrey H. Hartman, in *Criticism in the Wilderness: The Study of Literature Today* (1980), are among the important contemporary literary theorists who have assessed Arnold's impact on the academy. Additional commentaries can be found in an edition of *Culture and Anarchy* prepared by Samuel Lipman (1994). In *Ethnicity and Cultural Authority: From Arnold to Du Bois* (2006), Daniel G. Williams studies Arnold in a transatlantic context, showing how he, William Dean Howells, W. B. Yeats, and W. E. B. Du Bois draw on ethnicity and race in their cultural and literary criticism. Also stimulating are Antony H. Harrison, *The Cultural Production of Matthew Arnold* (2009), which situates Arnold as a poet and an elite male literary intellectual in social, political, literary, and gender/sexual identity contexts in the 1840s/1850s and later, and James Walter Caufield, *Overcoming Matthew Arnold: Ethics in Culture and Criticism* (2012), which examines Arnold's literary and cultural criticism and religious essays.

Concentrating on Arnold's poetry but including pertinent commentary on the prose are A. Dwight Culler, *Imaginative Reason: The Poetry of Matthew Arnold* (1961); Alan Roper, *Arnold's Poetic Landscapes* (1969); and David G. Riede, *Matthew Arnold and the Betrayal of Language* (1988).

Thomas Burnett Smart has compiled *The Bibliography of Matthew Arnold* (1892); it should be supplemented by the listing in *The Works of Matthew Arnold*, vol. 15 (1903–04). See also Clinton Machann, *The Essential Matthew Arnold: An Annotated Bibliography of Major Modern Studies* (1993). For more recent work, consult the bibliography in Caufield's *Overcoming Matthew Arnold* (see above).

Erich Auerbach

Auerbach's earliest scholarly work was a German translation of Vico's *New Science* (1926). His first monograph, *Dante: Poet of the Secular World* (1929; trans. 1961), is still considered one of the best introductions to Dante's work. *Mimesis: The Representation of Reality in Western Literature* (1946), the work for which Auerbach is best remembered, was translated into English in 1953; the fiftieth anniversary of the book's translation saw the release of a new edition with a preface by Edward W. Said (2003). Other books include *Introduction to Romance Languages and Literature* (1953; trans. 1961) and *Literary Language and Its Public in Late Latin Antiquity and in the Middle Ages* (1953; trans. 1965). Auerbach's last book, *Scenes from the Drama of European Literature* (1959; trans. 1984), contains the essay "Figura," considered his definitive statement on figural history. *Time, History, and Literature: Selected Essays of Erich Auerbach*, edited by James I. Porter and translated by Jane O. Newman (2014), collects twenty essays by Auerbach, including twelve that have never before been translated into English and one previously unpublished work.

Geoffrey Green's *Literary Criticism and the Structures of History: Erich Auerbach and Leo Spitzer* (1982) is a useful introduction to Auerbach that provides an intellectual biography. Geoffrey Hartman's *A Scholar's Tale: Intellectual Journey of a Displaced Child of Europe* (2007) ends with an extended meditation on his encounters with Auerbach at Yale during the late 1950s. Renewed interest in Auerbach's response to Nazi oppressions, which he experienced firsthand, was sparked by Martin Elsky, Martin Vialon, and Robert Stein's translation in *PMLA* 122 (2007) of a series of letters written by Auerbach during the war years to, among others, his student Martin Hellweg, to Karl Vossler, and to Walter Benjamin.

Edward W. Said discusses Auerbach's legacy in the introductory chapter to his *The World, the Text, and the Critic* (1983), and the central chapters of Paul Bové's *Intellectuals in Power: A Genealogy of Critical Humanism* (1986) are devoted to Auerbach. With the approach of a new century, reevaluations of Auerbach's legacy focused on the place of philology in literary criticism, on his status as a German Jew in exile in Istanbul during the Holocaust, and on his brush there with Orientalism. Aamir R. Mufti explores the importance of Auerbach for Edward W. Said's notion of "secular criticism" in "Auerbach in Istanbul: Edward Said, Secular Criticism, and the Question of Minority Culture," *Critical Inquiry* 25 (1998). In *East-West Mimesis: Auerbach in Turkey* (2010), Kader Konuk challenges the standard narrative of Auerbach's exile in Istanbul, arguing that there was a reciprocal exchange of knowledge and culture between the German émigrés and their host Muslim culture. The essays collected in *Literary*

History and the Challenge of Philology: The Legacy of Erich Auerbach, edited by Seth Lerer (1996), examine Auerbach's work in the context of nineteenth- and twentieth-century philology, the European discipline that studies cultures through historical analyses of their languages. *Poetics Today* devoted a special issue (20.1) to Auerbach, *Erich Auerbach and Literary Representation* (1998). In "Literary History and the Sublime in Erich Auerbach's *Mimesis*," *New Literary History* 38 (2007), Robert Doran places Romance philology within the critical tradition, derived from Longinus, of the sublime. In "Erich Auerbach and the Judaizing of Philology," *Critical Inquiry* 35 (2008), James I. Porter reads in Auerbach's contrast in "Odysseus' Scar" between Jewish and Greek forms of representation a challenge to Germanic philology from the perspective of a secular Jewish intellectual writing during and in the immediate aftermath of the Holocaust. A selective but up-to-date bibliography, including recent trends in Auerbach scholarship, is provided by Porter in *Time, History, and Literature* (see above).

Augustine of Hippo

Augustine's complete works in Latin can be found in his *Opera Omnia* (14 vols., 1830–38). More up-to-date editions of some works appear in the unfinished *Bibliothèque Augustinienne* (1947–). English translations of Augustine's major works are included in Catholic University's *Fathers of the Church* series (1947–). In the past D. W. Robertson Jr.'s 1958 translation of *On Christian Doctrine* was usually favored by scholars. R. P. H. Green's 1997 *On Christian Teaching* has become the preferred version. John Healey's 1940 translation of *The City of God* is widely cited, as is John K. Ryan's 1960 translation of *The Confessions*, Augustine's chronicle of his own life. The Loeb dual-language edition of this work has been reissued (2 vols., 2014–16), newly edited and translated by Carolyn J.-B. Hammond. James J. O'Donnell's *Augustine: A New Biography* (2005) offers not only a readable introduction to the saint's life, based on newly discovered material, but also a sustained meditation on the saint's own self-fashioning.

Eugene Portalie's *Guide to the Thought of St. Augustine* (1960) is an accessible and carefully indexed guide to Augustine's writings. *What Are They Saying about Augustine?* (2014) by Joseph T. Kelly provides an accessible overview of Augustine's life and thought for those new to Augustinian studies. D. W. Robertson's *Preface to Chaucer* (1963), controversial since its publication, is a learned and useful introduction to Augustinian aesthetics. Marcia L. Colish's *Mirror of Language: A Study in the Medieval Theory of Knowledge* (1968) cogently draws out the implications of Augustinian sign theory for later medieval theorists such as Thomas Aquinas and Dante. *De doctrina christiana: A Classic of Western Culture*, edited by

Duane W. H. Arnold and Pamela Bright (1995), provides a range of critical views. Extrapolating from Augustinian sign theory, Brian Stock explores Augustine's theory of reading and its implications for later medieval writers in two books, *Augustine the Reader: Meditation, Self-Knowledge, and the Ethics of Interpretation* (1996) and *After Augustine: The Meditative Reader and the Text* (2001). Augustine's influence on the later Middle Ages is examined in *Reading and Wisdom: The De doctrina christiana of Augustine in the Middle Ages*, edited by E. D. English (1995). Brent D. Shaw's *Sacred Violence: African Christians and Sectarian Hatred in the Age of Augustine* (2011) examines the sectarian politics of late fourth- and early fifth-century Christianity in Augustine's native Africa. *A Companion to Augustine*, edited by Mark Vessey (2012), collects essays that view the saint as product of his own culture, as well as a cultural influence in his own right. *The Cambridge Companion to Augustine*, edited by Eleonore Stump and Norman Kretzmann (2001), was revised in 2014 by Stump and David Vincent Meconi, SJ. This second edition contains significant new material, including a section on Augustine's writing about language and faith. Several other books explore Augustinian theories of language, rhetoric, and poetics, including Edward Morgan, *The Incarnation of the Word: The Theology of Language of Augustine of Hippo* (2010); James A. Andrews, *Hermeneutics and the Church: In Dialogue with Augustine* (2012); and Simone Marchesi, *Dante and Augustine: Linguistics, Poetics, Hermeneutics* (2011), which examines the influence of the saint on the poet Dante. Among other works on Augustinian interpretation are Michael Cameron's *Christ Meets Me Everywhere: Augustine's Early Figurative Exegesis* (2012); Susanah Ticciati's *A New Apophaticism: Augustine and the Redemption of Signs* (2013); Mark F. M. Clavier's *Eloquent Wisdom: Rhetoric, Cosmology and Delight in the Theology of Augustine of Hippo* (2014); and a collection of essays edited by Calvin L. Troup, *Augustine for the Philosophers: The Rhetor of Hippo, the "Confessions," and the Continentals* (2014), which looks at the saint's influence on several philosophers, including Martin Heidegger, Hannah Arendt, Albert Camus, Jean-François Lyotard, and Paul Ricoeur. The *Augustinus-Lexicon* (1985–), when completed (vols. 1–3 are currently available), will become the standard reference work, containing encyclopedic articles on Augustine's life, works, and doctrine. The *Fichier Augustinien* (1972) offers a comprehensive bibliography to 1970, with one supplemental volume (1978). See also the substantial bibliography in *The Cambridge Companion to Augustine* (2d ed., 2014).

J. L. Austin

Austin's two posthumously published sets of lectures are *How to Do Things with Words* (1962) and

Sense and Sensibilia (1962). His essays are collected in *Philosophical Papers* (3d ed., 1979). G. J. Warnock's "John Langshaw Austin, A Biographical Sketch," in *Symposium on J. L. Austin* (ed. K. T. Fann, 1969), is the most useful biographical source. The Fann volume, along with John Searle, *Speech Acts* (1969); Isaiah Berlin et al., *Essays on J. L. Austin* (1973); *Speech Act Theory and Pragmatics*, edited by John Searle, Ferenc Kiefer, and Manfred Bierwisch (1980); and *The Philosophy of J. L. Austin*, edited by Martin Gustafsson and Richard Sørli (2011), provide good overviews of Austin's reception within Anglo-American philosophy. G. J. Warnock's *J. L. Austin* (1989) is an excellent, concise introductory text. Mary Louise Pratt's *Toward a Speech Act Theory of Literary Discourse* (1977), Charles Altieri's *Act and Quality* (1981), and Sandy Petrey's *Speech Acts and Literary Theory* (1990) are the most influential uses of Austin to account for the capacities of literary texts. For more general reflections on theoretical issues arising out of Austin's work, see Stanley Fish, *Is There a Text in This Class? The Authority of Interpretive Communities* (1980); Alice Crary, "'The Happy Truth': J. L. Austin's *How to Do Things with Words*," *Inquiry* 45 (2002); Michael J. Golec, "'The Thinking's Man Filter': J. L. Austin's Ordinary Language Philosophy as Cultural Criticism," *Cultural Critique*, no. 72 (2009); and Maximilian de Gaynesford, "How Not to Do Things with Words: J. L. Austin on Poetry," *British Journal of Aesthetics* 51 (2011). Jacques Derrida's essay on Austin and his side in the debate with Searle is collected in *Limited INC* (1988); for Searle's side, one must go to "Reiterating the Difference: A Reply to Derrida," *Glyph* 1 (1977). The most original American disciple of Austin is Stanley Cavell, a philosopher who is also a major literary and film critic. He has revisited the Derrida-Searle debate in his *Philosophical Passages: Wittgenstein, Emerson, Austin, Derrida* (1995). Cavell and Judith Butler contribute commentaries to Shoshana Felman's *The Scandal of the Speaking Body: Don Juan with J. L. Austin, or Seduction in Two Languages* (1980; trans. 2002). The best available bibliography can be found in Gustafsson and Sørli's *Philosophy of J. L. Austin*, but it is incomplete and limited to work in Anglo-American philosophy.

Mikhail M. Bakhtin

The standard Russian-language edition of Bakhtin's works is *Sobranie sochinenii*, edited by S. G. Bocharov et al. (7 vols., 1996–2012). The earliest works survive only in fragments, collected and translated into English by Vadim Liapunov as *Art and Answerability* (1990) and *Toward a Philosophy of the Act* (1993). *Problems of Dostoevsky's Poetics*, first published in 1929, was revised and reissued in Russian in 1963; Caryl Emerson translated it into English in 1984. Bakhtin's dissertation of the 1930s and 1940s, finally published in 1965, was translated by Hélène Iswolsky as *Rabelais and His World* (1968). The important group of lengthy

essays Bakhtin wrote between 1934 and 1941—including "Discourse in the Novel"—was not published in Russia until 1973; they were translated by Caryl Emerson and Michael Holquist as *The Dialogic Imagination: Four Essays* (1981). Fragments of Bakhtin's late—and largely unfinished—works were collected in a Russian volume and translated into English as *Speech Genres and Other Late Essays* (1986). Works attributed to Bakhtin by some scholars though their title pages list other authors include V. N. Voloshinov, *Freudianism: A Marxist Critique* (1926; trans. 1976); P. N. Medvedev, *The Formal Method in Literary Scholarship* (1928; trans. 1978); and Voloshinov, *Marxism and the Philosophy of Language* (1929; trans. 1973). For selections of works by members of the Bakhtin circle, see *The Bakhtin Reader: Selected Writings of Bakhtin, Medvedev, and Voloshinov*, edited by Pam Morris (1994).

The standard biography is Katerina Clark and Michael Holquist, *Mikhail Bakhtin* (1984). Gary Saul Morson edited one of the first English collections of essays, *Bakhtin: Essays and Dialogues on His Work* (1981), still valuable for its critical readings. Tzvetan Todorov, who, with Julia Kristeva, was instrumental in bringing Bakhtin's work to the attention of the West, provides a useful brief introduction to Bakhtinian dialogics in *Mikhail Bakhtin: The Dialogic Principle* (1981; trans. 1984). Two collections of essays—*Bakhtin and Cultural Theory*, edited by Ken Hirschkop and David Shepherd (1989; 2d ed., 2001), and *Rethinking Bakhtin: Extensions and Challenges*, edited by Gary Saul Morson and Caryl Emerson (1989)—offer readings of Bakhtin across a range of theoretical and political positions. For the feminist reception of Bakhtin, see Dale Bauer and Susan McKinstry, *Feminism, Bakhtin, and the Dialogic* (1991). Michael Holquist's *Dialogism: Bakhtin and His World* (1991; 2d ed., 2002) provides a comprehensive overview of Bakhtin's work. Gary Saul Morson and Caryl Emerson's *Mikhail Bakhtin: Creation of a Prosaics* (1990) is the single most thorough and authoritative book-length study of Bakhtin's writing and should be the starting point for more advanced study of his work. With the end of the cold war in 1989, the work of Russian scholars on Bakhtin has become available for the first time, notably in *Face to Face: Bakhtin in Russia and the West*, edited by Carol Adlam (1997), which collects essays from a 1995 Bakhtin conference in Moscow. Sue Vice's *Introducing Bakhtin* (1997) and Alastair Renfrew's *Mikhail Bakhtin* (2015) may be more accessible introductions than Todorov's for students new to Bakhtin's thought. For a retrospective on Bakhtin's works that places him in the context of twentieth-century Russian thought, see Caryl Emerson, *The First One Hundred Years of Mikhail Bakhtin* (1997), as well as *Critical Essays on Bakhtin*, edited by Emerson (1999). Ken Hirschkop's *Mikhail Bakhtin: An Aesthetic for Democracy*

(1999), drawing on the new Russian scholarship, challenges many of the myths about Bakhtin's life and work to explore in a more nuanced fashion his contributions to an ethical and democratic cultural theory. *The Bakhtin Circle: In the Master's Absence*, edited by Craig Brandist, David Shepherd, and Galin Tihanov (2004), offers new translations and studies of texts produced by the Bakhtin Circle, as well as new archival material related to their activity, highlighting the distinctiveness of works by such theorists as Vološinov and Medvedev, who have been closely identified with Bakhtin. *Bakhtin's Theory of the Literary Chronotope: Reflections, Applications, Perspectives*, edited by Nele Bemong et al. (2010), collects theoretical and critical essays on the chronotope. *Dialogues with Bakhtinian Theory: Proceedings of the Thirteenth International Mikhail Bakhtin Conference*, edited by Mykola Polyuha, Clive Robert Thomson, and Anthony J. Wall (2012), features essays by Bakhtin scholars from around the world. *Bakhtin and His Others: (Inter)subjectivity, Chronotope, Dialogism*, edited by Liisa Steinby and Tintti Klapuri (2013), considers Bakhtinian ethics over his sociological poetics in the wake of scholarship on Bakhtin's German sources. As readers of Bakhtin have examined his debts to German philosophers in his earlier works, they have become more interested in Bakhtin as a philosopher of ethics than as a theorist of aesthetics and literature (since most Bakhtinians have considered works like *Discourse in the Novel* to be about literature concerns). Daphna Erdinast-Vulcan's *Between Philosophy and Literature: Bakhtin and the Question of the Subject* (2014) reads Bakhtin alongside philosophers such as Henri Bergson, Maurice Merleau-Ponty, and Emmanuel Lévinas. In *Difference, Dialogue, and Development: A Bakhtinian World* (2016), Lakshmi Bandlamudi, a developmental psychologist, offers a reading of Bakhtin's dialogism from the perspective of development. Julio Peiró Sempere, in *The Influence of Mikhail Bakhtin on the Formation and Development of the Yale School of Deconstruction* (2014), argues that Bakhtin's philosophical and ethical approach to interpretation should be understood as one of the antecedents of deconstructive criticism.

The Annotated Bakhtin Bibliography, edited by Carol Adlam and David Shepherd (2000), is the most up-to-date print bibliography, drawing on the extensive resources of the online Bakhtin Archive, which is maintained by the Bakhtin Center at the University of Sheffield. It can be supplemented by Donald L. Anderson, "Mikhail Bakhtin" (2015), in the online Oxford Bibliographies.

Roland Barthes

Roland Barthes wrote fourteen books: *Writing Degree Zero* (1953; trans. 1967), *Michelet* (1954; trans. 1987), *Mythologies* (1957; trans. 1972, 2012), *On Racine* (1963; trans. 1964), *Elements of Semiology*

(1964; trans. 1968), *The Fashion System* (1967; trans. 1983), *S/Z* (1970; trans. 1974), *The Empire of Signs* (1970; trans. 1982), *The Pleasure of the Text* (1973; trans. 1975), *Roland Barthes by Roland Barthes* (1975; trans. 1977), *A Lover's Discourse: Fragments* (1977; trans. 1978), *Leçon* (1978; trans. 1979), *Camera Lucida: Reflections on Photography* (1980; trans. 1981), and *Incidents* (1987; trans. 1992). In addition, there are several volumes of Barthes's essays available in English. Barthes published four collections of essays in French, which have all been translated by Richard Howard (*Critical Essays*, 1972; *New Critical Essays*, 1980; *The Responsibility of Forms*, 1986; and *The Rustle of Language*, 1986). Howard has also translated *What Is Sport?* (2004; trans. 2007), a posthumous book developed from Barthes's text for a short TV documentary (1960), as well as *Mourning* (2009; trans. 2010), a private journal that chronicles Barthes's mourning after the death of his mother. Rosalind E. Krauss and Denis Hollier have translated *The Neutral: Lecture Course at the Collège de France, 1977–1978* (2002; trans. 2005). Columbia University Press has published two translations of lectures delivered before Barthes's death: *The Preparation of the Novel: Lecture Courses and Seminars at the Collège de France, 1978–1979 and 1979–1980* (2003; trans. 2011) and *How to Live Together: Novelistic Simulations of Some Everyday Spaces* (2002; trans. 2012). *A Barthes Reader*, edited by Susan Sontag (1982), has a good selection but does not include some of the best-known essays. The collection edited by Stephen Heath, *Image, Music, Text* (1977), is perhaps the best short selection available. Andy Stafford and Michael Carter have edited and translated a collection of all of Barthes's writings on fashion, *The Language of Fashion* (2006). A collection of interviews, *The Grain of the Voice: Interviews, 1962–1980*, was translated by Linda Coverdale (1985), and an additional informative interview published in *Tel Quel* has been translated in *The "Tel Quel" Reader* (ed. Patrick Ffrench and Roland-François Lack, 1998). Éditions du Seuil has published Barthes's complete works in French in chronological order, *Oeuvres complètes* (5 vols., 2002); his 1974 impressions of Mao's China as *Carnets du voyage en Chine* (2009, *Travels in China*); and *Album: Inédits, correspondances et varia* (2015, *Album: Unedited Writings, Correspondence, and Miscellaneous Works*).

There are numerous studies of Barthes's life and work. The biography by Louis-Jean Calvet, *Roland Barthes: A Biography* (1990; trans. 1994), is excellent. Andy Stafford's *Roland Barthes, Phenomenon and Myth: An Intellectual Biography* (1998) is thoroughgoing. Two recent biographies introduce previously unpublished materials about Barthes's life and work: Andy Stafford's *Roland Barthes* (2015) and Tiphaine Samoyault's *Barthes: A Biography* (2015; trans. 2017). Of the general introductions to Barthes's work as a whole, the following are brief and meaty: the essay on Barthes by John Sturrock

in *Structuralism and Since* (ed. John Sturrock, 1979); Jonathan Culler, *Roland Barthes* (1983); Mireille Ribière, *Barthes: A Beginner's Guide* (2002); and Graham Allen, *Roland Barthes* (2003). Longer studies include books—all called *Roland Barthes*—by Philip Thody (1977, rev. 1983; an early conservative reading), Annette Lavers (1982; an early admirer and expositor), Steven Ungar (1983; focusing on Barthes as “professor of desire”), and Mike and Nicholas Gane (3 vols., 2004; an edited collection of many assessments of Barthes’s career). Other studies—still called *Roland Barthes*—include those by Michael Moriarty (1991; closely argued and extensive) and Rick Rylance (1994; readable and useful, organized in terms of Barthes’s “hot” and “cold” writing). Among the numerous critical studies, *The Barthes Effect: The Essay as Reflexive Text* by Réda Bensmaïa (1986; trans. 1987) deserves mention as an interesting study of the essay in Barthes and Montaigne. See also Timothy Sheie’s fascinating *Performance Degree Zero: Roland Barthes and Theatre* (2006) and the British journal *Paragraph*’s wide-ranging special issue on Barthes, *Roland Barthes Retroactively*, edited by Jürgen Pieters and Kris Pint (2008). Published in a set together with Barthes’s posthumous *Incidents* (see above) is D. A. Miller’s *Bringing Out Roland Barthes*, an analysis of the movement of gay desire through Barthes’s texts. The annotated bibliography published by Sanford Freedman and Carole Anne Taylor, *Roland Barthes: A Bibliographical Reader's Guide* (1983), is useful but dated. Comprehensive bibliographies are provided by Allen’s *Roland Barthes*, Samoyault’s and Stafford’s bibliographies, and the collection *Album*.

Jean Baudrillard

Baudrillard’s books (with French publication date first, followed by the date of the English translation) are *The System of Objects* (1968; 1996), *The Consumer Society* (1970; 1998), *For a Critique of the Political Economy of the Sign* (1972; 1981), *The Mirror of Production* (1973; 1983), *Symbolic Exchange and Death* (1976; 1993), *The Beauborg Effect* (1977; 1982), *Forget Foucault* (1977; 1978), *In the Shadow of the Silent Majorities* (1978; 1983), *Seduction* (1979; 1990), *Simulations* (1981; 1983), *Fatal Strategies* (1983; 1990), *America* (1986; 1988), *The Ecstasy of Communication* (1987; 1988), *Cool Memories, 1980–1985* (1987; 1990), *The Transparency of Evil* (1990; 1993), *Cool Memories II, 1987–1990* (1990; 1996), *The Gulf War Did Not Take Place* (1991; 1995), *The Illusion of the End* (1992; 1994), *The Perfect Crime* (1993; 1996), *Fragments: Cool Memories III, 1990–1995* (1995; 1997), *Impossible Exchange* (1999; 2001), *Passwords* (2000; 2003), *Cool Memories IV: 1995–2000* (2000; 2005), *The Spirit of Terrorism and Other Essays* (2002; 2003), *The Intelligence of Evil, or the Lucidity Pact* (2004; 2005), *Cool Memories V: 2000–2004* (2005; 2006), *Exiles*

from Dialogue, with Enrique Valiente Noailles (2005; 2007), and *Why Hasn't Everything Already Disappeared?* (2009). There are also five selections of Baudrillard’s work in translation: *The Revenge of the Crystal: Selected Writings on the Modern Object and Its Destiny, 1968–1983*, edited by Paul Foss and Julian Pefanis (1990); *Jean Baudrillard: Selected Writings*, edited by Mark Poster (2d ed., 2001); *The Uncollected Baudrillard*, edited by Gary Genosko (2001); *Mass, Identity, Architecture: Architectural Writings of Jean Baudrillard*, edited by Francesco Proto (new ed., 2006); and *The Jean Baudrillard Reader*, edited by Steve Redhead (2008). Five books collect interviews with Baudrillard: *Baudrillard Live: Selected Interviews*, edited by Mike Gane (1993); *Paroxysm: Interviews with Philippe Petit* (1997; trans. 1998); *Fragments: Conversations with François L'Yvonnet* (2001; trans. 2004); *Jean Baudrillard: From Hyperreality to Disappearance: Uncollected Interviews*, edited by Richard G. Smith and David B. Clarke (2015); and *The Disappearance of Culture*, also edited by Smith and Clarke (2017). The best biographical sources are the entry in *Current Biography Yearbook* (1993) and the introduction to Redhead’s *The Jean Baudrillard Reader*.

Four excellent overviews of Baudrillard’s career and ideas are the best places to start: Mike Gane’s *Jean Baudrillard: In Radical Uncertainty* (2000), Paul Hegarty’s *Jean Baudrillard: Live Theory* (2004), William Pawlett’s *Jean Baudrillard: Against Banality* (2007), and Richard J. Lane’s *Jean Baudrillard* (2d ed., 2009). William Merrin’s more specialized *Baudrillard and the Media: A Critical Introduction* (2005) is also recommended. Kim Toffoletti’s *Baudrillard Reframed: Interpreting Key Thinkers for the Arts* (2011) considers Baudrillard’s influence on contemporary art, while Mihail Evans’s *The Singular Politics of Derrida and Baudrillard* (2014) provides a good understanding of Baudrillard’s work in relation to French theory after World War II. Among numerous volumes of collected critical essays on Baudrillard’s work, *Baudrillard: A Critical Reader*, edited by Douglas Kellner (1994); *Baudrillard Now: Current Perspectives in Baudrillard Studies*, edited by Ryan Bishop (2009); and *Jean Baudrillard: Fatal Theories*, edited by David B. Clarke et al. (2009), are particularly useful. *The Baudrillard Dictionary*, edited by Richard G. Smith (2010), offers succinct accounts of key concepts in Baudrillard’s work. It also contains a comprehensive bibliography of all Baudrillard’s work, both in French and in English translation, along with a good, although not complete, bibliography of secondary work in English on Baudrillard.

Simone de Beauvoir

First published in France as *Le Deuxième Sexe* (1949), *The Second Sex* (1952) was published in the United States in an incomplete translation by a

zoologist, H. M. Parshley. A new translation, marking the sixtieth anniversary of its publication, appeared in 2009, restoring a third of the original work. Besides her six novels, short stories, and play, Beauvoir wrote several books of philosophy and cultural criticism, including *Pyrrhus et Cinéas* (1944); *The Ethics of Ambiguity* (1947; trans. 1948); *L'Existentialisme et la sagesse des nations* (1948, *Existentialism and Popular Wisdom*); *America Day by Day* (1948; trans. 1948); *Must We Burn Sade?* (1951–52; trans. 1953); *The Long March* (1957; trans. 1958); *Brigitte Bardot and the Lolita Syndrome* (1959; trans. 1960); *Djamila Boupacha: The Story of a Young Algerian Girl Which Shocked Liberal French Opinion*, with Gisele Halimi (1962; trans. 1962); and *Old Age* (1970; trans. 1972). Margaret Simon's multivolume Beauvoir Series, produced in consultation with Sylvie Le Bon de Beauvoir, Beauvoir's adopted daughter and literary executor, aims to make available in English translation previously unpublished and little-known works by Beauvoir. Initial volumes include *Philosophical Writings*, edited by Margaret Simons with Marybeth Timmermann and Mary Beth Mader (2004), which includes scholarly translations of twelve essays that span Beauvoir's career, and *Diary of a Philosophy Student*, volume 1, 1926–27, edited by Barbara Klaw, Sylvie Le Bon de Beauvoir, and Margaret A. Simons, with Marybeth Timmermann (2006), which makes available for the first time Beauvoir's preoccupations with key philosophic issues as early as 1926 and 1927, before she met Sartre. Newer volumes, all edited by Simons and Timmermann, collect Beauvoir's literary writing in *"The Useless Mouths," and Other Literary Writings* (2011), her political essays in *Political Writings* (2012), and her other writing about women in *Feminist Writings* (2015). Beauvoir's extensive autobiographical writing—*Memories of a Dutiful Daughter* (1958; trans. 1959), *The Prime of Life* (1960; trans. 1962), *Force of Circumstances* (1963; trans. 1964), *A Very Easy Death* (1972; trans. 1973), *All Said and Done* (1972; trans. 1974), and *Adieux: A Farewell to Sartre* (1981; trans. 1984)—have supplied most of the information for her biographers. Deirdre Bair's *Simone de Beauvoir: A Biography* (1990) remains the most authoritative biography of the philosopher.

For excellent introductions to Beauvoir's writing, see Ursula Tidd, *Simone de Beauvoir* (2004), and Stella Sandford, *How to Read Beauvoir* (2006). *The Cambridge Companion to Simone de Beauvoir*, edited by Claudia Card (2003), will appeal to more advanced students. One of the most astute French writers on Beauvoir is Michèle le Doeuff, who discusses Beauvoir in the context of women's relationship to philosophy in *Hipparchia's Choice: An Essay Concerning Women, Philosophy, etc.* (1989; trans. 1991). The decade leading up to the centennial of Beauvoir's birth (2008) saw a virtual explosion of scholarship on the philosopher. Attempts to extricate Beauvoir's reputation from its dependence on Sartre have proved especially fertile for revisionary

scholarship, the most radical rethinking being Edward Fullbrook and Kate Fullbrook's *Sex and Philosophy: Rethinking de Beauvoir and Sartre* (2008). Toril Moi's considerable contributions to Beauvoir scholarship include *Feminist Theory and Simone de Beauvoir* (1990), *Simone de Beauvoir: The Making of an Intellectual Woman* (1994; 2d ed., 2008), and *Sex, Gender, and the Body: The Student Edition of "What Is a Woman?"* (2005), a critical study that explores Beauvoir's contributions to ongoing feminist debates about sex and gender and about the place of the personal in philosophical thought. Fredrika Scarth, *The Other Within: Ethics, Politics, and the Body in Simone de Beauvoir* (2004), examines Beauvoir's reformulation of the Cartesian subject from a feminist ethical perspective. Several collections of essays attest to the vibrancy of Beauvoir scholarship: see *Beauvoir and "The Second Sex": Feminism, Race, and the Origins of Existentialism* (1999) and *The Philosophy of Simone de Beauvoir: Critical Essays* (2006), both edited by Margaret A. Simons; and *The Legacy of Simone de Beauvoir*, edited by Emily R. Grosholz (2004). Approximately one hundred years after her birth, scholarship on Beauvoir has turned to Beauvoir's other writing, on phenomenology—*The Existential Phenomenology of Simone de Beauvoir*, edited by Wendy O'Brien and Lester Embree (2001); politics—Sonia Kruks, *Simone de Beauvoir and the Politics of Ambiguity* (2012); aging—*Simone de Beauvoir's Philosophy of Age: Gender, Ethics, and Time*, edited by Silvia Stoller (2014); and humanism—*Simone de Beauvoir: A Humanist Thinker*, edited by Tove Pettersen and Annlaug Bjørnsnos (2015). *Beauvoir and Western Thought from Plato to Butler*, edited by Shannon M. Mussett and William S. Wilkerson (2012), considers Beauvoir's relationship to other philosophers, including Plato, Kant, Marx, and Judith Butler. In *Simone de Beauvoir's Philosophy of Individualism* (2017), Laura Hengehold offers a Deleuzian reading of both *The Second Sex* and Beauvoir's novels. Joan Nordquist's dated 1991 *Simone de Beauvoir: A Bibliography* can be supplemented with more current bibliographies in the *Cambridge Companion* and Sandford's *How to Read Beauvoir*.

Aphra Behn

The standard text of Behn's works is the seven-volume edition by Janet M. Todd, *The Works of Aphra Behn* (1992–96). For two valuable biographies of Behn, see Maureen Duffy, *The Passionate Shepherdess: Aphra Behn, 1640–1689* (1977; rpt. 2000), and Janet Todd, *The Secret Life of Aphra Behn* (1999). Frederick M. Link's *Aphra Behn* (1968) offers a useful introduction to Behn's work. Tanya Claire Tenkarian describes Behn's contributions to the development of the novel in *Aphra Behn and the Rise of the English Novel: Gender and Genre* (1993). Two fine anthologies of essays, with contributions by several prominent Behn scholars, are *Rereading Aphra Behn: Histo-*

ry, *Theory, and Criticism*, edited by Heidi Hutner (1993), and *The Cambridge Companion to Aphra Behn*, edited by Derek Hughes and Janet M. Todd (2004). Todd describes Behn's literary reputation in *The Critical Fortunes of Aphra Behn* (1998), while Jane Spencer explores Behn's legacy in the eighteenth century in *Aphra Behn's Afterlife* (2000). In *Aphra Behn and Her Female Successors*, edited by Margarete Rubik (2011), contributors explore Behn's literary reputation, examining intertextual relations and literary parallels with other women writers. *Aphra Behn Online: An Interactive Journal for Women in the Arts, 1640–1830* (2011–) is an open access scholarly journal sponsored by the Aphra Behn Society. Two recent special issues of the journal *Women's Writing* have been devoted to Behn's work; *Aphra Behn*, edited by Margarete Rubik (19.2 [2012]), and *Aphra Behn, New Questions and Contexts*, edited by Claire Bowditch and Elaine Hobby (22.1 [2015]).

For bibliography, see Mary Ann O'Donnell, *Aphra Behn: An Annotated Bibliography of Primary and Secondary Sources* (2d ed., 2004).

Walter Benjamin

Not until decades after his death did Benjamin's diverse work become readily available in German and later in English. In addition to his two dissertations, *The Concept of Criticism in German Romanticism* (1920) and *The Origin of German Tragic Drama* (1928; trans. 1977), he published many essays and articles and left several unfinished book manuscripts. The first collected edition in German, the two-volume *Schriften* (Writings), edited by Theodor Adorno and Gershom Scholem (1955), brought renewed attention to Benjamin's work. The standard scholarly edition of the complete writings in German is *Gesammelte Schriften*, edited by Rolf Tiedemann and Hermann Schweppenhäuser (7 vols., 1972–89). The first selection of essays in English, *Illuminations*, was edited by Hannah Arendt (1968); it includes an early, popular translation of our selection, "The Work of Art in the Age of Its Technological Reproducibility." A string of English collections followed, most notably *Reflections: Essays, Aphorisms, Autobiographical Writings*, edited by Peter Demetz (1978), and *One-Way Street and Other Writings* (1979). In the 1990s, Harvard University Press began publishing a wide array of Benjamin's writings in English, foremost four volumes of *Selected Writings*, under the general editorship of Michael W. Jennings: volume 1, 1913–1926 (1996); volume 2, 1927–1934 (1999); volume 3, 1935–1938 (2002); and volume 4, 1938–1940 (2003). The press also published Benjamin's massive but incomplete *Arcades Project* (1999) and a series of short, spin-off collections, among them *Berlin Childhood around 1900* (1950; trans. 2006), *On Hashish* (2006), *The Writer of Modern Life: Essays on Charles Baudelaire* (2006), *The Work of Art in the Age of Its Technological*

Reproducibility, and Other Writings on Media (2008), and *Early Writings (1910–1917)* (2011).

Our selection, "The Work of Art in the Age of Its Technological Reproducibility," comes from the last volume of the *Selected Writings*. There are several versions and translations of the essay, and scholars continue to debate which is the closest to Benjamin's intentions and is the best rendering. Benjamin began the essay in the mid-1930s, completing a first version in 1935. He then prepared a second version that appeared in French translation in 1936; the latter text was the only version published in his lifetime. However, Benjamin continued to revise the essay, as he did with most of his work, up to the spring of 1939. This later, unfinished version, called the third version, is what Adorno included in the 1955 edition of Benjamin's writings, the basis of both the well-known 1968 translation in *Illuminations* and our translation. We chose this version because, though unfinished, it presumably most closely represents Benjamin's final intentions. It includes a larger selection of quotations, reliance on which being one of Benjamin's signature habits—for instance, the opening and very relevant epigraph from the modern French poet Paul Valéry. The Benjamin scholar Esther Leslie notes of the third version "that the Brechtian elements are amplified." The most prominent advocate of the second version is the film scholar Miriam Hansen, who argues that it better conveys Benjamin's intention because it was completed and is more consistent. See Howard Caygill, *Walter Benjamin: The Colour of Experience* (1998), for an extended comparison of the two versions. Caygill believes that Benjamin "refined and improved" his views in the 1939 version, while perhaps playing down the stronger political claims about magic in the earlier version. We use the 2003 translation because it more closely follows Benjamin's German (beginning with the title, which renders *technischen Reproduzierbarkeit* literally as "technological reproducibility" rather than using the more idiomatic English phrase "mechanical reproduction").

Among several collections of letters, the most comprehensive is *The Correspondence of Walter Benjamin, 1910–1940*, edited by Scholem and Adorno (1966; trans. 1994). For Adorno's as well as Benjamin's letters, see Adorno and Benjamin, *The Complete Correspondence, 1928–1940* (1999). *Walter Benjamin's Archive*, edited by Ursula Marx et al. (2007), reprints manuscript pages, notes, pictures, and other curiosities from Benjamin memorabilia.

The standard biography is Momme Brodersen's *Walter Benjamin: A Biography* (1990; trans. 1996), although Howard Eiland and Michael W. Jennings's *Walter Benjamin: A Critical Life* (2014) promises to become the new standard. Gershom Scholem's *Walter Benjamin: The Story of a Friendship* (1975; trans. 1981) offers a firsthand personal account.

The secondary literature on Benjamin in English is extensive. Fredric Jameson provided an

influential introduction of Benjamin in *Marxism and Form: Twentieth-Century Dialectical Theories of Literature* (1971). Susan Buck-Morss's *The Origin of Negative Dialectics: Theodor W. Adorno, Walter Benjamin, and the Frankfurt School* (1977) roots Benjamin's work in the context of the Frankfurt School. A spirited attempt to recapture Benjamin for the Left was undertaken by Terry Eagleton in *Walter Benjamin, or Towards a Revolutionary Criticism* (1981). Much of the criticism on Benjamin, such as Richard Wolin, *Walter Benjamin: An Aesthetic of Redemption* (1982; 2d ed., 1994), follows the mystical interpretation inaugurated by Scholem. *On Walter Benjamin: Critical Essays and Recollections*, edited by Gary Smith (1988), contains important texts by Benjamin's contemporaries Adorno, Scholem, and Ernst Bloch and an assessment by the philosopher Jürgen Habermas. In addition, there have been more than twenty special issues of journals on Benjamin; Noah Isenberg's "The Work of Walter Benjamin in the Age of Information," in a special issue of *New German Critique* (no. 83 [2001]), reviews the outpouring of criticism up to that point.

More recently Esther Leslie, *Walter Benjamin: Overpowering Conformism* (2000), provides a good overview; see also Graeme Gilloch, *Walter Benjamin: Critical Constellations* (2002). *The Cambridge Companion to Walter Benjamin*, edited by David S. Ferris (2004), covers the range of Benjamin's work. The compendium *Walter Benjamin: Critical Evaluations in Cultural Theory*, edited by Peter Osborne (3 vols., 2005), reprints key essays on many facets of Benjamin's work. See also David Ferris, *The Cambridge Introduction to Walter Benjamin* (2008). Uwe Steiner's *Walter Benjamin: An Introduction to His Work and Thought* (2004; trans. 2010) offers a good survey. Testifying to the influence Benjamin has on contemporary culture, there are also a few fictionalized accounts—notably Jay Parini's novel *Benjamin's Crossing* (1997).

For works focusing on aesthetics, see Caygill's *Walter Benjamin*, cited above; Lutz Koepnick, *Walter Benjamin and the Aesthetics of Power* (1999); *Benjamin's Ghosts: Interventions in Contemporary Literary and Cultural Theory*, edited by Gerhard Richter (2002); *Mapping Benjamin: The Work of Art in the Digital Age*, edited by Hans Ulrich Gumbrecht and Michael Marrinan (2003); and *Walter Benjamin and Art*, edited by Beatrice Hanssen and Andrew Benjamin (2005). Specifically on our selection, see Miriam Hansen, "Benjamin, Cinema, and Experience," *New German Critique*, no. 40 (winter 1987); Susan Buck-Morss, "Aesthetics and Anaesthetics: Walter Benjamin's Artwork Essay Reconsidered," *October*, no. 62 (fall 1992); and Hansen, "Room-for-Play: Benjamin's Gamble with Cinema," *October*, no. 109 (summer 2004). The first two are collected in Osborne, *Walter Benjamin*; the latter contains Hansen's argument for the second version of the "Work of Art" essay. See also

Hansen's *Cinema and Experience: Siegfried Kracauer, Walter Benjamin, and Theodor W. Adorno* (2012) and Jaeho Kang's *Walter Benjamin and the Media: The Spectacle of Modernity* (2014).

The standard bibliography in German is *Walter Benjamin: Eine kommentierte Bibliographie*, compiled by Momme Brodersen et al. (1996), which includes a section on Benjamin's work in English. Gary Smith's *Benjamin* (cited above) includes a bibliography of Benjamin's work and selected secondary material up to 1988. *The Cambridge Companion, Gilloch's Walter Benjamin*, and Steiner's *Walter Benjamin* include selected bibliographies of Benjamin's writing and criticism on it.

Jane Bennett

Jane Bennett is the author of four books and dozens of articles. *Unthinking Faith and Enlightenment: Nature and the State in a Post-Hegelian Era* (1987) engages with contemporary debates over the environment and the state; *Thoreau's Nature: Ethics, Politics, and the Wild* (1994) stages a series of dialogues between Thoreau and contemporary theorists to explore his concept of "the Wild," which she defines as an openness to the foreignness of things; *The Enchantment of Modern Life: Attachments, Crossings, and Ethics* (2001) continues this investigation of wonder, attempting to rehabilitate enchantment for a disenchanted modern world; and *Vibrant Matter: A Political Ecology of Things* (2010) offers a manifesto for a politics of the nonhuman. In addition, she has edited, with William Chaloupka, *In the Nature of Things: Language, Politics, and the Environment* (1993) and, with Michael J. Shapiro, *The Politics of Moralizing* (2002). In "Systems and Things: A Response to Graham Harman and Timothy Morton," *New Literary History* 43 (2012), Bennett outlines some of the differences among proponents of the new materialism.

Interviews provide a good entry into Bennett's work; see Gulshan Khan, "Agency, Nature and Emergent Properties: An Interview with Jane Bennett," *Contemporary Political Theory* 8 (2009), and Janell Watson, "Eco-Sensibilities: An Interview with Jane Bennett," *Minnesota Review*, no. 81 (2013). Steven Shaviro's *The Universe of Things: On Speculative Realism* (2014) is a more advanced theoretical exploration of speculative realism, including its philosophical history. *The Nonhuman Turn*, edited by Richard Grusin (2015), offers an introduction to a range of theoretical and philosophical work decentering the human, including actor-network theory, animal studies, and speculative realism. It includes essays by Bennett, Shaviro, Ian Bogost, and Timothy Morton. On object-oriented literary criticism, see Graham Harman, "The Well-Wrought Broken Hammer: Object-Oriented Literary Criticism," *New Literary History* 43 (2012). For critiques of the new materialism, see Andrew Cole, "The Call

of Things: A Critique of Object-Oriented Ontologies," *Minnesota Review*, no. 80 (2013), and Andrew Galloway, "The Poverty of Philosophy: Realism and Post-Fordism," *Critical Inquiry* 39 (2013).

Lauren Berlant and Michael Warner

Lauren Berlant's first three books constitute a trilogy on feeling, national form, and citizenship: *The Anatomy of National Fantasy: Hawthorne, Utopia, and Everyday Life* (1991), which began as her dissertation; *The Queen of America Goes to Washington City: Essays on Sex and Citizenship* (1997); and *The Female Complaint: The Unfinished Business of Sentimentality in American Culture* (2008). She followed them with a major book on affect theory, *Cruel Optimism* (2011), as well as the brief meditation *Desire/Love* (2012) and a dialogue on queer theory with Lee Edelman, *Sex, or the Unbearable* (2014). She has also edited several books, including *Intimacy* (2000), *Our Monica, Ourselves: The Clinton Affair and the National Interest* (co-edited with Lisa Duggan, 2001), and *Compassion: The Culture and Politics of an Emotion* (2004). In addition, she has introduced a volume of photographs by Laura Letinsky, *Venus Inferred* (2000). For an account of her work and life, see the interviews "The Promise of Lauren Berlant," by Imogen Tyler and Elena Loizidou, *Cultural Values* 4 (2000), and "Citizen Berlant," by Andrew Hoberek, in *Critics at Work: Interviews, 1993–2003* (ed. Jeffrey J. Williams, 2004).

Michael Warner began as an early Americanist, and his first book was the influential *The Letters of the Republic: Publication and the Public Sphere in Eighteenth-Century America* (1990). While continuing to write on American literature, he became known as a queer theorist with the edited collection *Fear of a Queer Planet: Queer Politics and Social Theory* (1993), which drew essays from a special issue of the journal *Social Text* (1991) and introduced the concept of "heteronormativity," and with his crossover book, *The Trouble with Normal: Sex, Politics, and the Ethics of Queer Life* (1999). He developed his ideas about the public sphere in *Publics and Counterpublics* (2002); the book includes "Sex in Public," which originally appeared in *Critical Inquiry* 24 (1998). In addition, Warner has edited a number of volumes, including *The Origins of Literary Study in America: A Documentary Anthology*, with Gerald Graff (1989); *The English Literatures of America: 1500–1800*, with Myra Jehlen (1997); *American Sermons: The Pilgrims to Martin Luther King, Jr.* (1999); *The Portable Walt Whitman* (2003); and *Varieties of Secularism in a Secular Age*, with Jonathan VanAntwerpen and Craig Calhoun (2010). He has also written for less academic audiences in magazines such as the *Nation*, the *Village Voice*, and the *Advocate*. For an account of his religious upbringing, see "Tongues Untied: Memoirs of a Pentecostal Boyhood," in *Curioser: On the Queerness of Children* (ed. Steven

Bruhm and Natasha Hurley, 2004); see also the interview "Queer World Making," by Annamarie Jagose, *Genders*, no. 31 (2000).

Both Berlant and Warner are regularly referred to in queer theory, discussions of the public sphere, and recent publications in American studies, although there are not yet individual studies of their works. Their analysis of heteronormativity has influenced contemporary thought in education, sociology, and anthropology as well as literary and cultural studies. For instance, see Suzanne Fraser, "Poetic World-Making: *Queer as Folk*, Counterpublic Speech and the 'Reader,'" *Sexualities* 9 (2006). For an early assessment of Berlant's work, see Lora Romero, "Making History," *Novel* 26 (1993); on her work on sentimental narrative, see Kathleen Woodward, "Calculating Compassion," *Indiana Law Journal* 77 (2002); and on her work on trauma, see John Johnston, "The Intuitionist and Pattern Recognition: A Response to Lauren Berlant," *American Literary History* 20 (2008). *Life Writing as Intimate Publics*, edited by Margaretta Jolly, a special issue of *Biography* (34.1 [2011]), starts from Berlant's ideas of sentimentality, affect, and the public. For a less-sympathetic response, see Tim Dean, "No Sex Please, We're American," *American Literary History* 27 (2015). For responses to Warner's influential work in queer theory, see John Nguyet Erni, "Eternal Excesses: Toward a Queer Mode of Articulation in Social Theory," *American Literary History* 8 (1996); and Jeffrey Escoffier, chapter 8 of *American Homo: Community and Perversity* (1998). For considerations of Warner's analysis of the public sphere, see Jodi Dean, "The Lure of the Public," *Theory and Event* 6.3 (2003), and Sandra M. Gustafson, "American Literature and the Public Sphere," *American Literary History* 20 (2008). There are no bibliographies of Berlant and Warner to date.

Stephen Best and Sharon Marcus

Stephen Best examines law and literature, particularly in relation to slavery, in a number of essays and in *The Fugitive's Properties: Law and the Poetics of Possession* (2004). He also serves on the editorial board of *Representations* and co-edited its special issue *Redress* (no. 92 [2005]), as well as *The Way We Read Now* (no. 108 [2009]), for which he co-wrote our selection, "Surface Reading: An Introduction," with Sharon Marcus. Marcus is a scholar of comparative literature, studying nineteenth-century literature and culture in England and France. Her first book, *Apartment Stories: City and Home in Nineteenth-Century Paris and London* (1999), examines architecture, planning, and the domestic sphere; her next book, *Between Women: Friendship, Desire, and Marriage in Victorian England* (2007), studies the relations that women had in the era. In *Between Women*, she explains the value of "just reading" as opposed to Fredric Jameson's and

other theorists' symptomatic approaches. She has also examined the rise of modern celebrity in articles such as "Salomé!! Sarah Bernhardt, Oscar Wilde, and the Drama of Celebrity," *PMLA* 126 (2011). For her thinking about the controversy over "surface reading" as well as her work overall, see Jeffrey J. Williams's "Ways of Reading: An Interview with Sharon Marcus," *Minnesota Review*, no. 89 (2017).

Though "Surface Reading" was an introduction to a special issue, not a featured article, it has drawn a great deal of response. For criticism of the absence of politics in it, see Crystal Bartolovich, "Humanities of Scale: Marxism, Surface Reading—and Milton," *PMLA* 127 (2012), and Ellen Rooney, "Live Free or Describe: The Reading Effect and the Persistence of Form," *differences* 21.3 (2010). Carolyn Lesjak's "Reading Dialectically," *Criticism* 55 (2013), provides a useful survey of the different senses of "reading," finally arguing against reading on the surface. The journal *Eighteenth Century* 54 (2013) featured a cluster of five responses, and in 2015 a group of Victorianists under the name "V21" ("21" indicates their stance in the twenty-first century) issued an online "Manifesto of the V21 Collective" criticizing the "positivist historicism" suggested by surface reading and reasserting the importance of theory.

A more sympathetic line of response has agreed with surface reading's eschewal of "critique" and its nod to emerging methods. N. Katherine Hayles, in "How We Read: Close, Hyper, Machine," *ADE Bulletin* 150 (2010), places surface reading in the context of digital approaches. For Heather Love, in "Close But Not Deep: Literary Ethics and the Descriptive Turn," *NLH* 41 (2010), it accords with her interest in sociological description rather than critique. Rita Felski, in both "Suspicious Minds," *Poetics Today* 32 (2011), and *The Limits of Critique* (2015), finds surface reading to be a salutary sign of moving past the "hermeneutics of suspicion." For a general account, see Jeffrey J. Williams, "The New Modesty in Literary Criticism," *Chronicle of Higher Education*, January 5, 2015.

Homi K. Bhabha

Bhabha's reputation primarily rests on his essays, twelve of which are collected in his book *The Location of Culture* (1994; new ed., 2004), which includes "The Commitment to Theory." He has also edited an influential anthology on the cultural construction of nationality, *Nation and Narration* (1990). Many of his later essays, as yet uncollected, focus on globalization, identity, and what he calls "vernacular cosmopolitanism." In addition, he was among four editors of the collection *Cosmopolitanism* (2002) and co-edited, with W. J. T. Mitchell, *Edward Said: Continuing the Conversation* (2005), to which he contributed an essay, "Adagio." He also writes regularly on art, with contributions to *Artforum* and a number of exhibition catalogs or

collections, including *Negotiating Rapture: The Power of Art to Transform Lives* (ed. Richard Francis, 1996), *Intervention Architecture: Building for Change* ([ed. Aga Khan Foundation,] 2007), *Iranian Photography Now* (ed. Rose Issa, 2009), *Anish Kapoor* (2009), *Midnight to the Boom: Painting in India after Independence* (ed. Susan S. Bean, 2013), and *Matthew Barney: River of Fundament* (ed. Okwui Enwezor, 2014).

Bhabha is the subject of a growing body of criticism. Robert Young's "The Ambivalence of Bhabha," in his *White Mythologies: Writing History and the West* (1990), is a useful discussion of Bhabha's overall project. From the left, Aijaz Ahmad's "The Politics of Literary Postcoloniality," *Race and Class* 36.3 (1995), criticizes Bhabha's philosophical conception of politics and his elision of the concrete relations of class and caste. Bart Moore-Gilbert, in *Postcolonial Theory: Contexts, Practices, Politics* (1997), situates Bhabha's work among that of other prominent postcolonial theorists and comments on its "babelian" or many-voiced performance. Anthony Easthope's "Bhabha, Hybridity, and Identity," *Textual Practice* 12.2 (1998), uncovering its Derridean roots, criticizes the amorphous nature of "hybridity." Two books titled *Homi K. Bhabha*, by David Huddart (2006) and Eleanor Byrne (2009), provide useful overviews. Patricia Pisters's "Homi K. Bhabha," in *Film, Theory and Philosophy: The Key Thinkers* (ed. Felicity Coleman, 2009), assesses Bhabha's relevance to film and art criticism; see also Felix Hernández, *Bhabha for Architects* (2010). Shai Ginsburg, "Signs and Wonders: Fetishism and Hybridity in Homi Bhabha's *The Location of Culture*," *New Centennial Review* 9.3 (2009), argues that Bhabha does not escape conventional thinking about colonialism with his neologisms but instead produces a new fetish for theory. Alan Ramón Ward, "Sartre as Silent Partner: Reading Bhabha's Existential Turn," *Cultural Critique* 83 (2013), explores a surprising connection to the French philosopher Jean-Paul Sartre, via Bhabha's use of Fanon and Lacan. Huddart's volume includes a good selected, annotated bibliography of Bhabha's work and critical responses to it.

Harold Bloom

Bloom began as a critic of Romantic poetry, with *Shelley's Mythmaking* (1959), *The Visionary Company: A Reading of English Romantic Poetry* (1961; rev. ed., 1971), *Blake's Apocalypse: A Study in Poetic Argument* (1963), *Yeats (1970), Romanticism and Consciousness: Essays in Criticism* (1970), and *The Ringers in the Tower: Studies in Romantic Tradition* (1971). *The Anxiety of Influence: A Theory of Poetry* (1973; 2d ed., 1997) introduced his theoretical view of the poet's struggle with tradition, which was elaborated in *A Map of Misreading* (1975), *Kabbalah and Criticism* (1975), *Poetry and Repression: Revisionism from Blake to Stevens* (1976), *Figures of Capable Imagination* (1976), and

Agon: Towards a Theory of Revisionism (1982). Other books are Wallace Stevens: *The Poems of Our Climate* (1977), the novel *The Flight to Lucifer: A Gnostic Fantasy* (1979), *The Breaking of the Vessels* (1982), *Ruin the Sacred Truths: Poetry and Belief from the Bible to the Present* (1989), *The Book of J* (1990), *The American Religion: The Emergence of a Post-Christian Nation* (1992), *The Western Canon: The Books and School of the Ages* (1994), *Omens of Millennium: The Gnosis of Angels, Dreams, and Resurrection* (1996), *Shakespeare: The Invention of the Human* (1998), *How to Read and Why* (2000), *Genius: A Mosaic of One Hundred Exemplary Creative Minds* (2002), *Hamlet: Poem Unlimited* (2003), *Where Shall Wisdom Be Found?* (2004), *The Art of Reading Poetry* (2005), *Jesus and Yahweh: The Names Divine* (2005), *Fallen Angels* (2007), *The Shadow of a Great Rock: A Literary Appreciation of the King James Bible* (2011), *The Anatomy of Influence: Literature as a Way of Life* (2011), and *The Daemon Knows: Literary Greatness and the American Sublime* (2015). Two excellent interviews are the best place to find biographical information and to sample Bloom's characteristic tone and obsessions: with Cassandra Atherton in *Writing on the Edge* 17 (2007), and with Adam Fitzgerald in *Boston Review*, April 27, 2011.

Graham Allen's *Harold Bloom: A Poetics of Conflict* (1994) offers the fullest engagement with Bloom's works on poetic influence. *The Salt Companion to Harold Bloom*, edited by Allen and Roy Sellars (2007), provides a generous sampling of critical responses to Bloom's work and can be paired with *Reading, Writing, and the Influence of Harold Bloom*, edited by Alan Rawes and Jonathon Shears (2010). Two specialized monographs serve those interested in Bloom's place in contemporary theory: Agata Bielik-Robson's *The Saving Lie: Harold Bloom and Deconstruction* (2011) and Alistair Hey's *The Anatomy of Bloom: Harold Bloom and the Study of Influence and Anxiety* (2014). Cynthia Ozick's shrewd evaluation of Bloom's whole career in her review of *The Daemon Knows* (*New York Times*, May 18, 2015) is well worth consulting.

Giovanni Boccaccio

A modern Italian edition of the complete works of Giovanni Boccaccio was published under the editorial direction of Vittore Branca, *Tutte le opere di Giovanni Boccaccio* (10 vols., 1964–98). For the Latin text of *Genealogy of the Gentile Gods*, consult the definitive edition by Vincenzo Romano (1951). Jon Solomon is preparing a new English translation of *Genealogy of the Pagan Gods*; volume 1 (2011) contains books 1–5. An English translation of books 14 and 15 of *Genealogy of the Gentile Gods* is available in Charles G. Osgood, *Boccaccio on Poetry* (1930). Other of Boccaccio's critical works in English include his *Life of Dante*, translated by J. G. Nichols (2002); *Famous Women*, edited and translated by Virginia Brown

(2001); and *De casibus: The Fates of Illustrious Men*, translated in an abridged version by Louis Brewer Hall (1965). For an intellectual biography of Boccaccio in English with important primary material translated, see Vittore Branca, *Boccaccio: The Man and His Works* (1976).

Much of the secondary criticism of Boccaccio focuses on the *Decameron*. The introduction to Charles Osgood's *Boccaccio on Poetry* is an indispensable guide to Boccaccio's literary criticism. Erich Auerbach's chapter on Boccaccio in *Mimesis* (1953) offers a fundamental discussion of realism in his writing. Herbert G. Wright traces Boccaccio's considerable influence on English poets in *Boccaccio in England: From Chaucer to Tennyson* (1957). For a general introduction to Boccaccio and his work, see Judith Powers Serafini-Sauli, *Giovanni Boccaccio* (1982), and *The Cambridge Companion to Boccaccio*, edited by Guyda Armstrong, Rhiannon Daniels, and Stephen J. Milner (2015). Thomas Hyde's essay "Boccaccio and the Genealogies of Myth," *PMLA* 100 (1985), offers a close analysis of the *Genealogy of the Gentile Gods*. Gregory Stone provides an advanced study of Boccaccio's literary criticism in *The Ethics of Nature in the Middle Ages: On Boccaccio's Poetaphysics* (1998), as does Lina Insana in "Redefining *Dulce et utile*: Boccaccio's Organization of Literature on Economic Terms," *Heliotropia* 2.1 (2004). For a study of the *Genealogy of the Gentile Gods*, see Jon Solomon's "Historian and Humanist: Gods, Greeks, and Poetry (*Genealogia deorum gentilium*)," in *Boccaccio: A Critical Guide to the Complete Works* (ed. Victoria Kirkham, Michael Sherberg, and Janet Levarie Smarr, 2013). For a bibliography, consult Joseph P. Consoli, *Giovanni Boccaccio: An Annotated Bibliography* (1992), and "Giovanni Boccaccio Bibliography" by Jason Houston, in the online *Oxford Bibliographies* (2014).

Ian Bogost

In addition to creating video games and authoring scholarly and popular articles, Ian Bogost has written a broad array of academic books. *Unit Operations: An Approach to Videogame Criticism* (2006) is a pioneering work that integrates literary theory with information technology in order to generate new interpretive modes for understanding both video games and older forms of art and literature. *Persuasive Games: The Expressive Power of Videogames* (2007) offers an extended account of the argument—introduced in our selection, "The Rhetoric of Video Games" (2007)—that games employ "procedural rhetoric." Co-authored with Nick Montfort, Bogost's *Racing the Beam: The Atari Video Computer System* (2009) makes a contribution to scholarly understanding of the history of video games by offering a technical and cultural analysis of the pioneering Atari system. A second co-authored book, *Newsgames: Journalism at Play* (2010)—written with Simon Ferrari and Bobby Schweizer—argues that games

can provide new possibilities for journalism by creating interactive models that enable people to encounter and interpret the news for themselves in ways that are not possible in traditional media. Bogost's *How to Do Things with Videogames* (2011) seeks to move beyond denouncing games as mindless entertainment or defending them as serious aesthetic objects in order to show how games have already begun to permeate every aspect of culture and how they will continue to do so with culturally transformative effects. A *Slow Year: Game Poems* (2010) contains four poetic video games plus two essays on the relationship between games and poetry, and *Alien Phenomenology, or, What It's Like to Be a Thing* (2012) develops an object-oriented ontology while drawing on Bogost's creative experiences as a game designer for illustrative material. Bogost teamed up with nine other authors to collaborate on the highly innovative (and esoterically titled) *10 PRINT CHR \$(205.5+RND(1)); : GOTO 10* (2012), which offers diverse analyses of programming language (especially that of the landmark BASIC program for the Commodore 64) as a kind of cultural text with linguistic, aesthetic, and social implications. In *The Geek's Chihuahua: Living with Apple* (2015), Bogost perceptively explores the dark side of widespread addiction to contemporary technologies such as the iPhone, which he argues have complex effects on human existence, such as burdening consumers with stress and anxiety. Bogost's *How to Talk about Videogames* (2015) is a probing analysis both of the ways that video games (which he describes as inhabiting a space between "art" and "appliance") continue to shape human lives in ever-evolving ways and of the danger that academic "game criticism" runs by cutting itself off from the dynamic phenomena of play it seeks to understand. A related philosophical inquiry, *Play Anything: The Pleasure of Limits, the Uses of Boredom, and the Secret of Games* (2016), draws on his theory of play to suggest how playfulness can help contemporary people live with creativity and joy in the midst of the systems and constraints that define our social existence. Bogost maintains an up-to-date bibliography as well as a gallery of his games and other creative projects on his personal website, bogost.com.

Theorists have offered critical analyses of the concept of procedural rhetoric that Ian Bogost develops in our selection and in his book *Persuasive Games*. For example, Jennifer deWinter, in a review of *Persuasive Games in Kairos: A Journal for Rhetoric, Technology, and Pedagogy* 14.1 (2009), praises Bogost's concept of procedural rhetoric but argues that he overemphasizes the purposes and intentions of authors to the exclusion of considering how players actively participate in the process of determining the meaning of games. Consequently, deWinter suggests that many who play the video games that Bogost analyzes may understand the games as carrying mes-

sages very different than those suggested in his own sophisticated ideological analyses. Similarly, in "Procedural Rhetoric and Expression," *JAC: A Journal of Composition Theory* 30 (2010), Annette Vee favorably assesses Bogost's theory of procedural rhetoric but implies that his sanguine faith in the ability of players to critically evaluate how games represent the world may be somewhat disconnected from the actual experiences and interpretations of many who play games.

Susan Bordo

Bordo is the author of *The Flight to Objectivity: Essays on Cartesianism and Culture* (1987), *Unbearable Weight: Feminism, Western Culture, and the Body* (1993), *Twilight Zones: The Hidden Life of Cultural Images from Plato to O.J.* (1997), *The Male Body: A New Look at Men in Public and in Private* (1999), *The Creation of Anne Boleyn: A New Look at England's Most Notorious Queen* (2013), and *The Destruction of Hillary Clinton* (2017). She is co-editor of two collections—with Alison M. Jaggar, *Gender/Body/Knowledge: Feminist Reconstructions of Being and Knowing* (1989), and with Cristina Alcalde and Ellen Rosenman, *Provocations: A Transnational Reader in the History of Feminist Thought* (2015)—as well as the sole editor of *Feminist Interpretations of René Descartes* (1999). Representative reviews of *Unbearable Weight* can be found in the *New York Times Book Review*, September 26, 1993 (by Maud Ellmann); the *London Review of Books*, March 10, 1994 (by Carol Gilligan); *Hypatia* 10 (1995) (by Susan Hekman); and *Ethics* 105 (1995) (by Rosemarie Tong). Ellen Rooney, "What Can the Matter Be?" *American Literary History* 8 (1996), and Susan Hekman, "Material Bodies," in *Body and Flesh: A Philosophical Reader* (ed. Donn Welton, 1998), offer fuller engagements with Bordo's work. See also the chapter on Bordo in Michael P. Spikes, *Understanding Contemporary American Literary Theory* (rev. ed., 2003). Reviews of Bordo's work after *Unbearable Weight* include the *New York Times*, September 12, 1999 (of *The Male Body*, by Jesse Green), and April 14, 2013 (all of *The Creation of Anne Boleyn*, by Jennifer Schuessler); the *Daily Beast*, April 25, 2013 (by Lauren Elkin); and the *Telegraph*, January 6, 2014 (by Anna Whitelock). Margo DeMello's excellent *Body Studies: An Introduction* (2014) discusses Bordo's work in the context of this new field.

Pierre Bourdieu

Bourdieu's published works (almost all of which are available in English; the date of the original French is given first) fall into three groups: his work in sociological and anthropological theory; his work on art, intellectuals, and the school system; and his directly political works. In the first group, the major texts are *Outline of a Theory of Practice* (1972; 1977); *The Logic of Practice* (1980;

1990); *Sociology in Question* (1980; 1993); *In Other Words: Essays towards a Reflexive Sociology* (1987; 1990); *An Invitation to Reflexive Sociology*, with L  c Wacquant (1992); *Practical Reason: On the Theory of Action* (1994; 1998); *Pascalian Meditations* (1997; 2000); *The Social Structures of the Economy* (2000; 2005); and *Science of Science and Reflexivity* (2001; 2004). On intellectuals, art, and schooling the major books are *Photography: A Middle-brow Art*, with Luc Boltanski et al. (1965; 1990); *Academic Discourse: Linguistic Misunderstanding and Professorial Power*, with Jean-Claude Passeron and Monique de Saint Martin (1965; 1994); *Reproduction in Education, Society, and Culture*, with Jean-Claude Passeron (1970; 1977); *Distinction: A Social Critique of the Judgement of Taste* (1979; 1984); *Language and Symbolic Power* (1982; 1991); *Homo Academicus* (1984; 1988); *The State Nobility: Elite Schools in the Field of Power* (1989; 1996); *The Rules of Art: Genesis and Structure of the Literary Field* (1992; 1995); *Free Exchange*, with the artist Hans Haacke (1993; 1995); and *On Television* (1996; 1998). His political writings include *The Political Ontology of Martin Heidegger* (1988; 1991); *The Weight of the World: Social Suffering in Contemporary Society*, with Alain Accardo et al. (1993; 1999); *Acts of Resistance: Against the New Myths of Our Time* (1998; 1998); *Masculine Domination* (1998; 2001); *Firing Back: Against the Tyranny of the Market 2* (2001; 2003); and *Political Interventions: Social Science and Political Action* (2002; 2008). An important selection of translated essays has been collected in *The Field of Cultural Production: Essays on Art and Literature*, edited by Randal Johnson (1993). Four posthumous collections gather essays and interviews: *Sketch for a Self-Analysis* (2004; 2007) comes close to an autobiography, while *Picturing Algeria* (2003; 2012), *Algerian Sketches* (2013), and *The Sociologist and the Historian* (2010; 2015) cover a variety of topics and Bourdieu's whole career. Transcripts of some of Bourdieu's lectures have been published in French as *Sur l'  tat: Cours au Coll  ge de France, 1898–1992* (2012), *On the State: Lectures from the Coll  ge du France*. Another set of lectures has been published in English as *Manet: A Symbolic Revolution* (2017). The most detailed biography is *Pierre Bourdieu: Vers une   conomie du bonheur* (2008, *Toward an Economy of Happiness*) by Marie-Anne Lescouret. The English reader will find a succinct biography in the very useful reference book *Pierre Bourdieu: Key Concepts*, edited by Michael Grenfell (2012).

Richard Jenkins's *Pierre Bourdieu* (rev. ed., 2002) is an excellent general introduction. John Guillory's influential *Cultural Capital: The Problem of Literary Canon Formation* (1993) addresses the changing shape of literary studies in ways that creatively employ and expand Bourdieu's work. Three noteworthy full-length monographs are John R. W. Speller's *Bourdieu and*

Literature (2011), David Gartman's *Culture, Class, and Critical Theory: Between Bourdieu and the Frankfurt School* (2013), and David Swartz's superb *Symbolic Power, Politics, and Intellectuals: The Political Sociology of Pierre Bourdieu* (2013). Several collections of essays provide good overviews of various responses and approaches to Bourdieu's work: *Pierre Bourdieu 2*, edited by Derek Robbins (4 vols., 2005); *The Legacy of Pierre Bourdieu: Critical Essays*, edited by Simon Susen and Bryan S. Turner (2011); *The Routledge Companion to Bourdieu's "Distinction,"* edited by Philippe Coulangeon and Julien Duval (2014); *Bourdieu's Theory of Social Fields: Concepts and Applications*, edited by Mathieu Hilgers and Eric Mangez (2015); and the essays collected in *Beyond Bourdieu and Other Essays*, a special issue of *New Literary History* (46.3 [2015]). A good, although not exhaustive, bibliography of primary and secondary works can be found in Grenfell's *Key Concepts*.

Marc Bousquet

Marc Bousquet's dissertation was on nineteenth-century American literature, and several of his initial scholarly articles dealt with canonical authors such as Henry James, but since the late 1990s he has focused on academic labor. He published several groundbreaking essays on the plight of graduate students, the managerial turn of professors (particularly in service fields like English composition), and the corporatization of higher education, culminating in his book *How the University Works: Higher Education and the Low-Wage Nation* (2008). In conjunction with his focus on labor, he co-founded *Workplace: A Journal for Academic Labor*, whose first issue appeared in February 1998. In addition, he has co-edited, with Katherine Wills, *The Politics of Information: The Electronic Mediation of Social Change* (2003) and, with Tony Scott and Leo Parascondola, *Tenured Bosses and Disposable Teachers: Writing Instruction in the Managed University* (2004). For a discussion of his background and work, see "Higher Exploitation: An Interview with Marc Bousquet," by Jeffrey J. Williams, *Minnesota Review*, nos. 71–72 (2009).

Bousquet's writing has received a great deal of response. His initial arguments about graduate education and labor almost immediately drew rebuttals, notably in a special issue of *Journal of Advanced Composition* (22.4 [2002]), which includes responses from those in the composition community, some questioning his credentials to talk about the field. A more considered, wide-ranging assessment of his work appears in *Information University: Rise of the Education Management Organization*, edited by Teresa Derickson, a lengthy special issue of *Works and Days* (21.1–2 [2003]) that gathers fourteen essays, as well as reprinting five of his previous essays, among them "The Waste Product of Graduate Education."

Several subsequent evaluations place his work in the tradition of criticism and theory: see Vincent B. Leitch, "Work Theory," *Critical Inquiry* 31 (2005), and Jeffrey J. Williams, "The Post-Welfare State University," *American Literary History* 18 (2006). In addition, Williams's "The Academic Devolution," *Dissent* (fall 2009), examines *How the University Works*, comparing it favorably to accounts of higher education that display more resignation, and Williams's "The Need for Critical University Studies," in *A New Deal for the Humanities: Liberal Arts and the Future of Public Higher Education* (ed. Gordon Hutner and Feisal G. Mohamed, 2016), inducts Bousquet into this new critical movement. See also *Graduate Education in English Studies*, edited by Leonard Cassuto, a special issue of *Pedagogy* (15.1 [2015]) that includes essays responding to Bousquet as well as an essay by him.

Rosi Braidotti

Braidotti has written widely in several languages. Her most important early books in English are *Patterns of Dissonance: A Study of Women in Contemporary Philosophy* (1991), *Nomadic Subjects: Embodiment and Sexual Difference in Contemporary Feminist Theory* (1994; 2d ed., 2011), *Metamorphoses: Towards a Materialist Theory of Becoming* (2002), *Transpositions: On Nomadic Ethics* (2006), and *The Posthuman* (2013). *Nomadic Theory: The Portable Rosi Braidotti* (2011) collects thirteen of her essays. Braidotti co-authored *Women, the Environment and Sustainable Development: Towards a Theoretical Synthesis* (1994) with Ewa Charkiewicz, Sabine Hausler, and Saskia Wierringa, and she has co-edited many collections of essays: *Between Monsters, Goddesses and Cyborgs: Feminist Confrontations with Science, Medicine, and Cyberspace* (1996), with Nina Lykke; *Thinking Differently: A Reader in European Women's Studies* (2002), with Gabriele Griffin; *Deleuze and Law: Forensic Futures* (2009), with Claire Colebrook and Patrick Hanafin; *Revisiting Normativity with Deleuze* (2012), with Patricia Pisters; *After Cosmopolitanism* (2013), with Patrick Hanafin and Bolette Blaagaard; *This Deleuzian Century: Art, Activism, Life* (2014), with Rick Dolphijn; *Transformations of Religion and the Public Sphere: Postsecular Publics* (2014), with Bolette Blaagaard, Tobijn de Graauw, and Eva Midden; and *Conflicting Humanities* (2016), with Paul Gilroy.

Braidotti is perhaps better known in Europe than in the United States. For an introduction to her work, see two interviews: "Nomadic Philosopher: A Conversation with Rosi Braidotti," by Kathleen O'Grady, *Women's Education des femmes* 12.1 (1996); and "Nomadism, the European Union, and Embedding Identities: An Interview with Rosi Braidotti," by Thea Arnold, Mina Karavanta, and Robert P. Marzec, *Crossings: A Counter-Disciplinary Journal*, no. 2 (1998). In the 1990s several articles examined Braidotti's

feminism, including Irene Gedalof, "Can Nomads Learn to Count to Four? Rosi Braidotti and the Space for Difference in Feminist Theory," *Women: A Cultural Review* 7 (1996); Inge E. Boer, "The World beyond Our Window: Nomads, Travelling Theories and the Function of Boundaries," *Parallax* 2.2 (1996); and Pelagia Goulimari, "A Minoritarian Feminism? Things to Do with Deleuze and Guattari," *Hypatia: A Journal of Feminist Philosophy* 14.2 (1999). (Post)Human Lives, edited by Gillian Whitlock, a special issue of *Biography* (35.1 [2012]), explores work on the posthuman, including Braidotti's, that challenges the very notion of biography—a genre dependent on the ideas of the human that posthumanism challenges. In a substantive review of *The Posthuman Machine* (2013), Stefan Herbrechter situates Braidotti's work within the broad landscape of posthumanism. *The Subject of Rosi Braidotti: Politics and Concepts*, edited by Bolette Blaagaard and Iris van der Tuin (2014), offers a comprehensive evaluation of Braidotti's work in twenty-eight essays; among the contributors are Judith Butler, Catherine Stimpson, and Genevieve Lloyd, as well as several of her collaborators and Braidotti herself. It includes a section on Braidotti's work on the posthuman and also an extensive bibliography.

Cleanth Brooks

Brooks's most noteworthy books are *Modern Poetry and the Tradition* (1939), *The Well Wrought Urn: Studies in the Structure of Poetry* (1947), and the textbook on poetry he co-edited with Robert Penn Warren, *Understanding Poetry* (1938). See also his *William Faulkner: The Yoknapatawpha Country* (1963) and *William Faulkner: Toward Yoknapatawpha and Beyond* (1978). He also coauthored, with William K. Wimsatt Jr., *Literary Criticism: A Short History* (1957); with Warren and R. W. B. Lewis, he co-edited *American Literature: The Makers and the Making* (1973), a two-volume, 3,000-page anthology. Collections of his essays include *The Hidden God: Studies in Hemingway, Faulkner, Yeats, Eliot, and Warren* (1963), *A Shaping Joy: Studies in the Writer's Craft* (1971), *Historical Evidence and the Reading of Seventeenth-Century Poetry* (1991), and *Community, Religion, and Literature: Essays* (1995). Another important source is *Cleanth Brooks and Robert Penn Warren: A Literary Correspondence*, edited by James A. Grimshaw (1998). See also *Cleanth Brooks and Allen Tate: Collected Letters, 1933–1976*, edited by Alphonse Vinh (1998). For an excellent biography, consult Mark Royden Winchell, *Cleanth Brooks and the Rise of Modern Criticism* (1996).

The Possibilities of Order: Cleanth Brooks and His Work, edited by Lewis P. Simpson (1976), is a valuable collection of critical essays that includes an interview with Brooks conducted by Robert Penn Warren. For cogent discussions of Brooks in the

context of Anglo-American New Criticism, see Grant Webster, *The Republic of Letters: A History of Postwar American Literary Opinion* (1979), and James J. Sosnoski, *Token Professionals and Master Critics: A Critique of Orthodoxy in Literary Studies* (1994). See also Thomas W. Cutrer, *Parnassus on the Mississippi: "The Southern Review" and the Baton Rouge Literary Community, 1935–1942* (1984); Mark Jancovich, *The Cultural Politics of the New Criticism* (1993), which considers Brooks in relation to John Crowe Ransom, Robert Penn Warren, and Allen Tate; and John Michael Walsh, *Cleanth Brooks: An Annotated Bibliography* (1990). Another good resource is *Rereading the New Criticism*, edited by Miranda B. Hickman and John D. McIntyre (2012), a collection of essays on the New Critics, their influences (e.g., T. S. Eliot), their relation to some of their contemporaries (e.g., Theodor Adorno), and the theory and practice of "close reading."

Edmund Burke

For complete editions of Burke, see *Writings and Speeches of Edmund Burke*, edited by Paul Langford (9 vols., 1980–2015); *Works* (9 vols., 1839); and *Works* (8 vols., 1868–80). An important source is the *Correspondence* (10 vols., 1958–78). A selection of the letters has been edited by Harvey C. Mansfield (1984). There are two annotated editions of *A Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful*, the first by James T. Boulton (1958), the second by Adam Phillips (1990). For Burke's biography, consult Alice P. Miller, *Edmund Burke and His World* (1979), and Stanley Ayling, *Edmund Burke: His Life and Opinions* (1988). For a detailed, measured assessment, see F. P. Lock's study *Edmund Burke* (2 vols., 1998–2006). David Bromwich, *The Intellectual Life of Edmund Burke: From the Sublime and Beautiful to American Independence* (2014), the first part of a two-volume intellectual biography, is essential. So too is Richard Bourke's *Empire and Revolution: The Political Life of Edmund Burke* (2015), which depicts Burke as a philosopher-in-action who evaluated the political realities of the day through the lens of Enlightenment thought.

Contemporary literary critics have paid much attention to Burke as a thinker and writer. Good discussions can be found in David Bromwich, *A Choice of Inheritance: Self and Community from Edmund Burke to Robert Frost* (1989); Terry Eagleton, *The Ideology of the Aesthetic* (1990); Frances Ferguson, *Solitude and the Sublime: Romanticism and the Aesthetics of Individuation* (1992), a study of Burke, Kant, and eighteenth- and nineteenth-century aesthetic theory; and Tom Furniss, *Edmund Burke's Aesthetic Ideology: Language, Gender, and Political Economy in Revolution* (1993). Luke Gibbons, in *Edmund Burke and Ireland: Aesthetics, Politics, and the Colonial Sublime* (2003), treats Burke's contribution to aes-

thetic theory, in the context of the role of sensibility within Enlightenment thought and the politics of the eighteenth century.

For background, see *The Sublime: A Reader in British Eighteenth-Century Aesthetic Theory*, edited by Andrew Ashfield and Peter de Bolla (1996). *The Sublime: From Antiquity to the Present*, edited by Timothy M. Costelloe (2012), includes a challenging essay on Burke by Rodolphe Gasché. Also recommended are Mark Canuel, *Justice, Dissent, and the Sublime* (2012); Cian Duffy, *The Landscapes of the Sublime, 1700–1830: Classic Ground* (2013), a fascinating study of the "natural sublime" encountered by British and European travelers and explorers (the Alps; the Italian volcanoes, Vesuvius and Etna; the Arctic and the Antarctic; the deserts of central and southern Africa; and the universe being revealed by the new astronomy); and Emily Brady, *The Sublime in Modern Philosophy: Aesthetics, Ethics, and Nature* (2014). For a detailed, rigorous survey, consult Robert Doran, *The Theory of the Sublime from Longinus to Kant* (2015); he examines how theories of sublimity are united by a common structure—the paradoxical experience of being at once overwhelmed and exalted—and a common concern: the preservation of a notion of transcendence in the midst of the secularization of modern culture.

Recent studies of Burke are diverse and intellectually rich. Clearly written, balanced, and stimulating is Yuval Levin, *The Great Debate: Edmund Burke, Thomas Paine, and the Birth of Right and Left* (2014). *The Cambridge Companion to Edmund Burke*, edited by David Dwan and Christopher J. Insole (2012), is a valuable resource that contains an excellent essay on Burke's "aesthetic psychology" by Paddy Bullard. Ian Crowe, *Patriotism and Public Spirit: Edmund Burke and the Role of the Critic in Mid-Eighteenth-Century Britain* (2012), is informative on the political and cultural contexts of the 1750s and on early philosophical and literary influences on Burke's thought. Bibliographical resources on Burke include William B. Todd, *A Bibliography of Edmund Burke* (1964); Clara I. Gandy, *Edmund Burke: A Bibliography of Secondary Studies to 1982* (1983); and Leonard W. Cowie, *Edmund Burke, 1729–1797: A Bibliography* (1994).

Judith Butler

Butler's first book, *Subjects of Desire: Hegelian Reflections in Twentieth-Century France* (1987), traces French theories of subject formation as influenced by the nineteenth-century German philosopher G. F. W. Hegel. Her first three books after *Gender Trouble: Feminism and the Subversion of Identity* (1990)—*Bodies That Matter: On the Discursive Limits of "Sex"* (1993), *Excitable Speech: A Politics of the Performative* (1996), and *The Psychic Life of Power* (1997)—address various objections to her work and further develop

her performative model of subject formation. Her subsequent works—*Antigone's Claim: Kinship between Life and Death* (2000), *Precarious Life: The Powers of Mourning and Violence* (2004), *Giving an Account of Oneself: A Critique of Ethical Violence* (2005), *Frames of War: When Is Life Grievable?* (2009), *Parting Ways: Jewishness and the Critique of Zionism* (2012), and *Dispossession: The Performative in the Political* (2013)—turn to questions of mourning, violence, and responsibility, often in response to events in the Middle East since 2001. Of the later works, *Undoing Gender* (2004) and *Senses of the Subject* (2015) are more directly tied to the themes explored in *Gender Trouble*, while *Notes Toward a Performative Theory of Assembly* (2015) deploys her interest in the performative to consider contemporary political movements.

Butler has participated in a number of published interchanges with other theorists: *Feminist Contentions: A Philosophical Exchange*, by Seyla Benhabib et al. (1995); *Contingency, Hegemony, and Universality: Contemporary Dialogues on the Left*, by Butler, Ernesto Laclau, and Slavoj Žižek (2000); *Who Sings the Nation-State? Language, Politics, Belonging*, by Butler and Gayatri Chakravorty Spivak (2007); *Is Critique Secular? Blasphemy, Injury, and Free Speech*, by Talal Asad et al. (2009); *The Power of Religion in the Public Sphere*, by Butler et al. (2011); and *What Is a People?*, by Alain Badiou et al. (2013; trans. 2016). She has also co-edited a number of collections of essays, including, with Joan Scott, *Feminists Theorize the Political* (1992); with Elizabeth Weed, *The Question of Gender: Joan W. Scott's Critical Feminism* (2011); and, with Zeynep Gambetti and Leticia Sabsey, *Vulnerability in Resistance* (2016). *The Judith Butler Reader* (2004), edited by Sara Salih with Butler's assistance, provides selections from the first five books, along with other essays and an illuminating interview. For other useful interviews, see Butler, Lynne Segal, and Peter Osborne, "Gender as Performance," *Radical Philosophy* 67 (1994), and Vicki Kirby, *Judith Butler: Live Theory* (2006). For two autobiographical accounts of Butler's intellectual formation, see her new preface to the tenth anniversary edition of *Gender Trouble* (1999) and the chapter "Can the 'Other' of Philosophy Speak?" in *Undoing Gender*.

The best single-volume introduction is Moya Lloyd's *Judith Butler: From Norms to Politics* (2007). Kirby's book and Anita Brady's *Understanding Judith Butler* (2011) are also useful. Annika Thiem's *Unbecoming Subjects: Judith Butler, Moral Philosophy, and Critical Responsibility* (2008), Arthur Kroker's *Body Drift: Butler, Hayles, Haraway* (2012), and Birgit Schippers's *The Political Philosophy of Judith Butler* (2014) offer more focused discussions of her work. Two collections of essays attend to the whole of Butler's career: *Judith Butler's Precarious Politics: Critical Encounters*, edited by Terrell Carver and Samuel A.

Chambers (2008), and *Butler and Ethics*, edited by Moya Lloyd (2015). *Butler Matters: Judith Butler's Impact on Feminist and Queer Studies*, edited by Margaret Söner Breen and Warren J. Blumenfeld (2016) focuses more on issues raised by *Gender Trouble*.

Rey Chow

Rey Chow is the author of nine books and the editor of one collection of essays. *Woman and Chinese Modernity: The Politics of Reading between West and East* (1991) explores gender and sexuality, popular literature and film. *Writing Diaspora: Tactics of Intervention in Contemporary Cultural Studies* (1993) examines the West's attitude toward China from a "diasporic consciousness"—that is, from the perspective of those Chinese who live outside of China. With *Primitive Passions: Visuality, Sexuality, Ethnography, and Contemporary Chinese Cinema* (1995), Chow brings a postcolonial lens to cinema and contemporary visual technologies. *Ethics after Idealism: Theory—Culture—Ethnicity—Reading* (1998) argues for a critique of the idealism that underwrites identity politics. Chow's edited collection, *Modern Chinese Literary and Cultural Studies in the Age of Theory: Reimagining a Field* (2000), continues to illuminate ethnicity, as does her *The Protestant Ethic and the Spirit of Capitalism* (2002). In *The Age of the World Target: Self-Referentiality in War, Theory, and Comparative Work* (2006), she reflects on area studies, poststructuralism, and comparative literature, historicizing these influential fields within the U.S. academy. *Sentimental Fabulations, Contemporary Chinese Films: Attachment in the Age of Global Visibility* (2007) examines the sentimental in twelve contemporary Chinese films from the 1990s. *Entanglements, or Transmedial Thinking about Capture* (2012) highlights the crucial importance of the mediated image in transnational modes of connection. In *Not Like a Native Speaker: On Language as a Postcolonial Experience* (2014), Chow investigates the experiences of intellectuals for whom racialization has followed from the experience of learning the colonists' language. A generous selection of Chow's work is available in *The Rey Chow Reader* (2010), edited by Paul Bowman. For an account of Chow's life, see her essay "The Postcolonial Difference: Lessons in Cultural Legitimation," *Postcolonial Studies* 1 (1998).

Paul Bowman's introduction to the *Rey Chow Reader* is the best introduction to Chow's theoretical writing. Bowman has also edited special issues on Chow in two journals: *Rey Chow and Postcolonial Social Semiotics* (*Social Semiotics* 20.4 [2010]), a selection of eight articles by prominent scholars assessing the significance of Chow's work in postcolonialism, feminism, and visual culture, and *Postcoloniality and Interdisciplinarity* (*Postcolonial Studies* 13.3 [2010]), which focuses on Chow's contributions to interdisciplinarity in postcolonial studies. For a book-

length critical study, see Bowman's *Reading Rey Chow: Visuality, Postcoloniality, Ethnicity, Sexuality* (2013), which contains a bibliography.

Christine de Pizan

Perhaps the surest sign of the critical neglect of Christine de Pizan is the lack of any editions or translations of her collected works. Maurice Roy edited *Oeuvres poétiques de Christine de Pizan* (1886–89), but it excludes the prose works for which Christine is best known. Charity Canon Willard edited a selection of Christine's works in translation, *The Writings of Christine de Pizan* (1992), which better captures the diversity of her writing. Generally, it is easier to find translations than editions of individual works. Eric Hicks edited the "Quarrel of the Rose" as *Le Débat sur le Roman de la Rose* (1977). All of the letters in the debate were finally made available in English in *Debating the "Roman de la rose,"* edited by Christine McWebb and translated by McWebb and Earl Jeffrey Richards (2007); the volume includes both the original texts and their English translations. In 2010, David F. Hult also published a dual-language edition of these letters in *The Debate of the "Romance of the Rose."* The only edition of *The Book of the City of Ladies* in the original Old French is Maureen Curnow's 1975 Ph.D. dissertation, "The *Livre de la Cité des Dames*: A Critical Edition," which Earl Jeffrey Richards translated as *The Book of the City of Ladies* in 1982. A new translation by Rosalind Brown-Grant appeared in 1999. The earliest English translation of *City of Ladies*, Brian Anslay's sixteenth-century *The Boke of the Cyte of Ladyes*, has been edited by Hope Johnston (2015). Much of what we know about Christine's life comes to us from her own autobiographical writing, especially *Christine's Vision*, translated by Glenda K. McLeod (1993). Charity Canon Willard offers the best modern biography in *Christine de Pizan: Her Life and Works* (1984).

Nadia Margolis's *An Introduction to Christine de Pizan* (2011) is the first comprehensive introduction to Christine's works. Critical interest in Christine and her writing increased exponentially in the 1980s and 1990s, largely because of the influence of feminist criticism. Sandra Hindman's *Christine de Pizan's "Epistre d'Othea": Painting and Politics at the Court of Charles VI* (1986) offers a richly detailed description of the social context of Christine's writing. Sheila Delany's controversial essay "Mothers to Think Back Through: Who Are They? The Ambiguous Example of Christine de Pizan," in *Medieval Texts, Contemporary Readers* (ed. Laurie A. Finke and Martin B. Shichtman, 1987), was instrumental in raising questions about feminist appropriations of Christine. Maureen Quilligan's *Allegory of Female Authority: Christine de Pizan's "Cité des Dames"* (1991) offers a sophisticated theoretical analysis of *The City of Ladies*. Two studies shed light on the relationship between Christine's participation in the debate over the *Roman de la*

Rose and her defense of women in *The City of Ladies*. In *Christine de Pizan and the Moral Defense of Women: Reading beyond Gender* (1999), Rosalind Brown-Grant considers the evolution of Christine's attack on misogyny and her defense of women throughout her career, while Douglas Kelly, in *Christine de Pizan's Changing Opinion: A Quest for Certainty in the Midst of Chaos* (2007), positions Christine's writing within a medieval philosophical tradition of opinion at a time of great political and intellectual upheaval. The variety of contemporary critical responses to Christine's writing is usefully represented by collections of essays; the best include *Christine de Pizan and the Categories of Difference*, edited by Marilyn Desmond (1998), and *Christine de Pizan: A Casebook*, edited by Barbara K. Altmann and Deborah L. McGrady (2003). Sarah Kay's "Allegory and Melancholy in Luce Irigaray, Julia Kristeva, and Christine de Pizan," which appeared in *Provocation and Negotiation: Essays in Comparative Criticism* (ed. Gesche Ipsen, Timothy Mathews, and Dragana Obradović, 2013), uses *City of Ladies* to elucidate the psychoanalytic work of Irigaray and Kristeva. Finally, Tracy Adams's *Christine de Pizan and the Fight for France* (2014) examines Christine's literary engagement with the French politics of her time. The most up-to-date bibliography is Angus J. Kennedy, *Christine de Pizan: A Bibliographical Guide* (1984; supplements 1994, 2004).

Hélène Cixous

In 1969 Cixous won the prestigious Medici Prize for her first novel, *Dedans* (trans. 1986, *Inside*), and she has published many writings since, first called novels, then called fictions, then often not characterized; among those available in English are *Angst* (1977; trans. 1985), *The Book of Promethea* (1983; trans. 1991), *Manna, for the Mandelstams for the Mandelas* (1988; trans. 1993), *Manhattan: Letters from Prehistory* (2002; trans. 2007), *So Close* (2007; trans. 2009), *Philippines* (2009; trans. 2011), *Hemlock: Old Women in Bloom* (2008; trans. 2011), and *Eve Escapes: Ruins and Life* (2009; trans. 2012). These are part mythic autobiography, part meditation, part philosophy, and part poetry, and the mobility of her style gives pronouns and structures of address a range far beyond any person or character. She has written a number of plays as well, including *Portrait of Dora* (1976; trans. 1979) and two historical dramas, one on Cambodia and one on India, which she wrote in collaboration with Ariane Mnouchkine's celebrated Théâtre du Soleil. Eric Prenowitz's *Selected Plays of Hélène Cixous* (2004) is a collection of four plays, three of which had never before been translated into English. Cixous is the author of more than fifty books, including the bilingual edition of *The Writing Notebooks of Hélène Cixous*, edited and translated by Susan Sellers (2004); it contains a very informative interview with Cixous. Other interviews from three decades are collected

in her *White Ink: Interviews on Sex, Text, and Politics*, edited by Susan Sellers (2008).

"The Laugh of the Medusa" forms part of a larger project Cixous was working on in 1975, another part of which ("Sorties") she published in collaboration with the more historicist feminist Catherine Clément as *La Jeune née* (trans. 1986, *The Newly Born Woman*). These are the texts in which Cixous speaks most explicitly about *écriture féminine*, and they are the best-known works by her in English. In addition to *The Exile of James Joyce* (1969; trans. 1976), she has also written a book on the contemporary Brazilian writer Clarice Lispector, translated as *Reading with Clarice Lispector* (1989; trans. 1990). Two volumes of her other literary criticism and theory have been published as *Coming to Writing and Other Essays*, edited by Deborah Jenson (1991), and *Readings: The Poetics of Blanchot, Joyce, Kleist, Kafka, Lispector, and Tsvetayeva*, edited by Verena Andermatt Conley (1991). Her essay in *The Future of Literary Theory* (ed. Ralph Cohen, 1989), titled "From the Scene of the Unconscious to the Scene of History," gives a good overview of Cixous's own poetics. A collection, *The Hélène Cixous Reader*, with a preface by Cixous and a foreword by Derrida, was edited in 1994 by Susan Sellers. It consists of short extracts from a large number of works, mainly "fictional." *The Portable Cixous*, edited by Marta Segarra (2010), brings together a mix of Cixous's theoretical, autobiographical, theatrical, and fictional writings. The fifteen essays in *Volleys of Humanity: Essays 1972–2009*, edited by Eric Prenowitz (2011), which include six previously unpublished and five newly published in English, also provide insight into Cixous's oeuvre. Although there is no full-length biography, Cixous has written a partly autobiographical text, complete with family histories and photographs, with Mireille Calle-Gruber called *Hélène Cixous, Photos de racines* (1994; trans. 1997, *Hélène Cixous, Rootprints: Memory and Life Writing*).

There are many critical studies devoted to the work of Cixous. For a good introduction and bibliography for students, see *Hélène Cixous: Live Theory* (2004), by Ian Blyth with Susan Sellers. Two books by Verena Andermatt Conley, *Hélène Cixous: Writing the Feminine* (1984) and *Hélène Cixous* (1992), also provide excellent introductions. *Hélène Cixous: A Politics of Writing* (1991) by Morag Shiach presents a somewhat critical assessment but discusses aspects of Cixous's work not often mentioned in Anglo-American theory, while Susan Sellers's *Hélène Cixous: Authorship, Autobiography, and Love* (1996) presents a more admiring view. Discussions of Cixous in the context of other "French feminists" (a designation that exists only in English) began with the 1981 anthology called *New French Feminisms*, painstakingly and far-reaching edited by Elaine Marks and Isabelle de Courtivron. Alice Jardine's *Gynesis: Configurations of Women and Modernity* (1985) analyzes how post-

structuralist male theorists in France made use of the figure of woman in their attempts to articulate what had been marginalized from traditional philosophical discourse. Susan Sellers, in her *Language and Sexual Difference: Feminist Writing in France* (1991), sees Cixous as the central theorist of feminine writing. And in a larger study of French thought around 1968, *Logics of Failed Revolt: French Theory after May '68* (1995), Peter Starr sees Cixous as the theorist of a "hysteria" that might be politically enabling. For bibliographies, see the entry on Cixous by Verena Andermatt Conley in *French Women Writers: A Bio-Bibliographic Source Book* (ed. Eva Martin Sartori and Dorothy Wynne Zimmerman, 1991); *French Feminist Theory (III): Luce Irigaray and Hélène Cixous: A Bibliography* (1996), by Joan Nordquist; Blyth and Sellers, *Hélène Cixous*; and Segarra's selected bibliography in *The Portable Cixous*.

Samuel Taylor Coleridge

Primary sources include *The Collected Works of Samuel Taylor Coleridge*, general editor Kathleen Coburn (23 vols., 1969–2002), published by the Bollingen Foundation and Princeton University Press, superbly edited and with comprehensive introductions; *The Collected Letters*, edited by Earl Leslie Griggs (6 vols, 1956–71); and *Selected Letters*, edited by H. J. Jackson (1987). Also illuminating are *The Notebooks*, edited primarily by Kathleen Coburn (5 vols., 1957–2002). Collections of Coleridge's criticism include *Shakespearean Criticism* (2 vols., 1930) and *Miscellaneous Criticism* (1936), both edited by T. M. Raysor. See also *Coleridge on the Seventeenth Century*, edited by Roberta Florence Brinkley (1955), and *Writings on Shakespeare: A Selection of the Essays, Notes, and Lectures*, edited by Terence Hawkes (1959). A compilation of Coleridge's prose, organized by theme, is *Coleridge's Responses: Selected Writings on Literary Criticism, the Bible, and Nature*, edited by John Beer et al. (3 vols., 2008). A good collection of primary and secondary sources is *Coleridge's Poetry and Prose: Authoritative Texts, Criticism*, edited by Nicholas Halmi, Paul Magnuson, and Raimonda Modiano (2003).

Walter Jackson Bate, *Coleridge* (1968), is a fine introduction to the life and works; two volumes by Richard Holmes, *Coleridge: Early Visions, 1772–1804* (1989) and *Coleridge: Darker Reflections, 1804–1834* (1999), constitute the best biography. Rosemary Ashton, *The Life of Samuel Taylor Coleridge: A Critical Biography* (1996), is astute. Adam Sisman's *The Friendship: Wordsworth and Coleridge* (2006) is an engaging biographical and intellectual overview. Norman Fruman, *Coleridge: The Damaged Archangel* (1971), assembles the evidence of Coleridge's plagiarisms. Additional resources include *The Oxford Handbook of Samuel Taylor Coleridge*, edited by Frederick Burwick (2009), and John Worthen, *The Cambridge Introduction to Samuel Taylor Coleridge* (2010), a

concise survey of the life, poetry, and literary criticism.

The best point of departure for studying Coleridge's criticism is the *Biographia Literaria*. See especially the editions by James Engell and Walter Jackson Bate, vol. 7 of the Bollingen *Samuel Taylor Coleridge* (1983), and by John Shawcross (2 vols., 1907). Scholarly studies of *Biographia Literaria* include Kathleen M. Wheeler, *Sources, Processes, and Methods in Coleridge's "Biographia Literaria"* (1980); Catherine Miles Wallace, *The Design of "Biographia Literaria"* (1983); and Coleridge's "*Biographia Literaria*": *Text and Meaning*, edited by Frederick Burwick (1989), which presents fourteen essays on major themes of the text and on its style, sources, significance for the history of Romanticism, and connections to contemporary literary theory. For critical responses to Coleridge to the year 1900, consult *Coleridge: The Critical Heritage*, edited by J. R. de J. Jackson (2 vols., 1970–91).

There are many fine books on Coleridge's literary theory: J. A. Appleyard, *Coleridge's Philosophy of Literature: The Development of a Concept of Poetry, 1791–1819* (1965); Thomas McFarland, *Coleridge and the Pantheist Tradition* (1969), which includes cogent chapters on Coleridge's plagiarisms and pantheist beliefs; J. R. de J. Jackson, *Method and Imagination in Coleridge's Criticism* (1969); J. Robert Barth, *The Symbolic Imagination: Coleridge and the Romantic Tradition* (1977); and Jerome C. Christensen, *Coleridge's Blessed Machine of Language* (1981). On Coleridge's theories of literary language and poetic diction, see Emerson R. Marks, *Coleridge on the Language of Verse* (1981), a treatment of Coleridge's interest in language "as an artistic medium"; Timothy Corrigan, *Coleridge, Language, and Criticism* (1982); Paul Hamilton, *Coleridge's Poetics* (1983), an insightful study of Coleridge's significant influence on post-Romantic literary criticism; James C. McKusick, *Coleridge's Philosophy of Language* (1986); and A. C. Goodson, *Verbal Imagination: Coleridge and the Language of Modern Criticism* (1988), which relates Coleridge's theory of poetry to the development of modern literary criticism. The following are also recommended: John B. Beer, *Coleridge's Play of Mind* (2010), a stimulating exploration of the relationship between the life and the work, with pertinent chapters on the literary criticism and lectures on Shakespeare; Gregory Leadbetter, *Coleridge and the Daemonic Imagination* (2011), which explores the themes of exaltation and transgression in Coleridge's poetry and philosophy; J. C. C. Mays, *Coleridge's Experimental Poetics* (2013); and David Ward, *Coleridge and the Nature of Imagination: Evolution, Engagement with the World, and Poetry* (2013). On Coleridge and the sublime, a major topic in the Romantic period, see Christopher Stokes, *Coleridge, Language and the Sublime: From Transcendence to Finitude* (2010), and Mur-

ray J. Evans, *Sublime Coleridge: The Opus Maximum* (2012).

For bibliographies, see Samuel Taylor Coleridge: *An Annotated Bibliography of Criticism and Scholarship*, edited by Richard and Josephine Haven and Maurianne Adams (2 vols., 1976–83), which covers work to 1939. See also Jefferson D. Caskey and Melinda M. Capper, *Samuel Taylor Coleridge: A Selective Bibliography of Criticism, 1935–1977* (1978). A guide to further reading can be found in *The Cambridge Companion to Coleridge*, edited by Lucy Newlyn (2002), as well as cogent essays on Coleridge's criticism, philosophy, and political and religious thought. Suggestions for further reading are also included in Worthen's *Cambridge Introduction* (see above).

Pierre Corneille

Corneille's third *Discours* is the one most often reprinted, in part because its title, "Of the Three Unities of Time, Place, and Action," is so closely associated with the theory of classical drama. The three *Discours* do not exist in a single English edition. The first, "On the Uses and Elements of Dramatic Poetry," is translated by Beatrice Stewart MacClintock in *European Theories of the Drama* (ed. Barrett H. Clark, 1965). The second, "Discourse on Tragedy and of the Methods of Treating It, according to Probability and Necessity," can be found in *Dramatic Essays of the Neoclassic Age* (ed. Henry Hitch Adams and Baxter Hathaway, 1950). The third, our selection, is found in *The Continental Model* (ed. Scott Elledge and Donald Schier, 1960). The three essays are published together in French, with a helpful introduction and notes in English, in *Pierre Corneille: Writings on the Theatre*, edited by H. T. Barnwell (1965).

Two notable introductory works are P. J. Yarrow, *Corneille* (1963), and Claire L. Carlin, *Pierre Corneille Revisited* (1998); the latter offers a biographical chapter. Mitchell Greenberg's *Corneille, Classicism, and the Ruses of Symmetry* (1986) is an invaluable study of Corneille's tragic universe. David R. Clarke, *Pierre Corneille: Poetics and Political Drama under Louis XIII* (1992), and John Lyons, *The Tragedy of Origins: Pierre Corneille and Historical Perspective* (1996), provide two different interpretations of the nature of "history" in Corneille's plays. Three comparative studies—Benedetto Croce's classic *Ariosto, Shakespeare, and Corneille* (1920), A. Donald Sellstrom's more speculative *Corneille, Tasso, and Modern Poetics* (1986), and Richard E. Goodkin's provocative *Birth Marks: The Tragedy of Primogeniture in Pierre Corneille, Thomas Corneille, and Jean Racine* (2000)—are of interest. Timothy Hampton's *Fictions of Embassy: Literature and Diplomacy in Early Modern Europe* (2009) explores the fluidity between politics and aesthetics in the author's oeuvre, with particular attention to Corneille as dramatist of geopolitics, while John D. Lyons revisits Corneille's poetics of tragedy, engaging *The Three Discourses* and the concepts of

fortune, randomness, and chance in chapter 1 of *The Phantom of Chance: From Fortune to Randomness in Seventeenth-Century French Literature* (2012). The best bibliography of Corneille studies is the Corneille chapter in *A Critical Bibliography of French Literature*, vol. 3A, *The Seventeenth Century* (ed. Mare Fumaroli and Gwyneth Castor, 1983).

Hamid Dabashi

Hamid Dabashi has published two dozen books, four edited volumes, and numerous articles and chapters. *The World Is My Home: A Hamid Dabashi Reader* (2010), edited by Andrew Davison and Himadeep Muppidi, conveniently brings together some of his main ideas. In *Theology of Discontent: The Ideological Foundations of the Islamic Revolution in Iran* (1993), which displays his intimate familiarity with Islam and with post-structural and postmodern concepts, Dabashi argues that the global rise of Islamism is a form of liberation theology. He presses here to see beyond the standard viewpoints of Western scholars, which he often depicts as having only some of the truth at hand. In *Truth and Narrative: The Untimely Thoughts of 'Ayn al-Qudāt al-Hamadhānī* (1999), Dabashi deconstructs the essentialist conceptions of Islam propounded by Orientalists as well as by Islamists, proposing instead a "poly-focal" conception of Islam in which three narratives, readings, and institutions of authority compete simultaneously. He believes that these three readings of "Islam" encompass the vast majority of Muslims' moral, political, and intellectual history. In *Staging a Revolution: The Art of Persuasion in the Islamic Republic of Iran* (1999), Dabashi and Peter Chelkowski examine the public myths and collective symbols that contributed to the making of Iran's Islamic Revolution of 1978–79, commenting on the effects of its war with Iraq (1980–88) on the evolution of the country's postrevolutionary politics. In his polemical article "For the Last Time: Civilizations," *International Sociology* 16 (2001), Dabashi postulates a dichotomy between "Islam and the West" and casts European modernity as a constructed center in relation to the rest of the world.

At the start of the twenty-first century, Dabashi's interests expanded into Iranian cinema; in *Close Up: Iranian Cinema, Past, Present, Future* (2001), he presents Iranian national cinema as a form of cultural modernity. A few years later he edited *Dreams of a Nation: On Palestinian Cinema* (2006), whose essays and interviews reflect on the challenges of film production and the impact of Palestinian films; his introduction and essay focus on Palestinian cinema as the most important artistic expression of "a much-maligned people." In *Masters and Masterpieces of Iranian Cinema* (2007), Dabashi guides the reader on an exploration of twelve Iranian films, each subjected to combined formal, historical, and textual analyses.

In the past decade, Dabashi has published several major books. *Iran: A People Interrupted* (2007) traces the country's history, cultural trends, and political developments over two hundred years, up to the collapse of the Green Movement of 2009. In it, Dabashi contends that "Iran needs to be understood as the site of an ongoing contest between two contrasting visions of modernity, one colonial, the other anticolonial." Dabashi's *Post-Orientalism: Knowledge and Power in a Time of Terror* (2009) extends Edward W. Said's critical portrait of Orientalism by focusing less on colonial misrepresentation and domination and more on postcolonial agency and resistance. His *Shi'ism: A Religion of Protest* (2011) provides Western readers with an understanding of Islam and its Shiite branch as a religion of protest, offering critical analyses and extended discussions of Shia Islam's doctrine, historical development, visual and performing arts, and three largest areas of concentration (Iran, Iraq, and Lebanon). *The World of Persian Literary Humanism* (2012) surveys the multinational history of Persian literature from the seventh to the twenty-first centuries, taking into unsparing critical account both Arab imperialism and European Orientalism and colonialism, plus much modern literary criticism and cultural theory. *The Arab Spring: The End of Postcolonialism* (2012) explains the movements in a number of countries that together came to be labeled the Arab Spring, which has led to a rethinking of the Middle East from within as well as without. Dabashi argues that the revolutionary uprisings that have consumed several countries in the Middle East were driven by a "delayed defiance," a rebellion against local tyranny and globalized disempowerment. *Corpus Anarchicum: Political Protest, Suicidal Violence, and the Making of the Posthuman Body* (2012) examines suicidal violence in the decade between 2001 and 2011, highlighting the attacks of 9/11, led by Muhammad Atta, and the suicide in 2010 of the Tunisian street vendor Mohamed Bouazizi, which sparked the Arab Spring. Dabashi contends that though suicidal violence is specific neither to Islam nor to the contemporary era, it is today entirely different because it is perpetrated on what he calls the contour of a posthuman body. In *Being a Muslim in the World* (2013), Dabashi addresses the question of what it means to be a Muslim in what he calls the "post-Western world," where Islam and the West no longer constitute a binary opposition and the West no longer holds "the same normative hegemony." He argues that today the task facing Muslims is to gain self-consciousness and not self-alienation.

In *Can Non-Europeans Think?* (2015), a collection of philosophical explorations, Dabashi returns to his earliest concerns, especially the sociology of culture, discussing important thinkers whom he sees as regularly marginalized, patronized, and misrepresented, because they lack the pedi-

gree of European philosophy, and offering a new perspective in “postcolonial theory” by examining how intellectual debate reinforces a “hidden colonial system of knowledge.” Dabashi’s *Persophilia: Persian Culture on the Global Scene* (2015) argues that Persian culture has been integral to European history since the biblical period and classical antiquity through the Renaissance and the Enlightenment. That is, European artists, poets, and thinkers have looked to Persian culture and history for inspiration and ideas that have helped shape both Western views of Iran and Iranian’s views of themselves. In his argument, Dabashi draws on Jürgen Habermas’s theory of “the public sphere” to trace the formation of a civil discourse in Iran that led to the creation of a modern nation-state out of an ancient civilization. As always, Dabashi connects his arguments to the history of European colonialism, even though Iran was never formally colonized. The wide-ranging and provocative book refers to such seminal works as Xenophon’s *Cyropaedia*, Nietzsche’s *Thus Spoke Zarathustra*, Handel’s *Xerxes*, and Puccini’s *Turandot*, as well as analyzes Gauguin’s and Matisse’s fascination with Persian art. In *Iran without Borders: Towards a Critique of the Postcolonial Nation* (2016), Dabashi depicts Iran from the eighteenth century onward as a modern cosmopolitan nation, while in *Iran: The Rebirth of a Nation* (2016), he reflects on the contemporary history of Iran, emphasizing the profound difference between the nation and the state.

Dabashi’s critics raise a number of points. In a review, “Iran: A People Interrupted,” *Comparative Studies of South Asia, Africa and the Middle East* 28 (2008), Kouroos Esmaeli notes that Dabashi fails to define some key concepts, including *cosmopolitanism*, resulting in a conflation of “the consciously internationalist nature of the pre-1979 political life of Iran with the cosmopolitanism of his own early-twenty-first-century New York milieu.” In her review of Dabashi’s *Shi’ism: A Religion of Protest* in *Journal of Shi’a Islamic Studies* 6 (2013), Amina Inloes highlights “the unspoken assumption that Shi’ism is Iranian, and, hence, anything Iranian is relevant to Shi’ism.” Some critics note that in *The World of Persian Literary Humanism*, Dabashi does not engage with a number of important prior works on classical Persian literature. In “Alternative Versions of Being Human: The World of Persian Literary Humanism,” *PopMatters* (2013; www.popmatters.com/), Subashini Navaratnam addresses many concerns at once: “But Persian literature was also in service of its own empires, and here Dabashi tends to gloss over the factors of class and elitism that powered much of Persian *adab* (court poets and philosophers and members of the aristocracy were more likely than not to be its central figures) and fumbles when he talks about the ‘creative consciousness’ that makes up the subject of Persian literary humanism.” And, like others, Na-

varatnam faults Dabashi’s tendency to at times “pontificate from within the confines of an insular, self-absorbed language of high theory.” Nevertheless, she acknowledges that “*Persian Literary Humanism* not only maps out the production and formation of Persian *adab* from within the spaces and regions from which it grew, but is also in conversation with European and American cultural critics like Theodor Adorno and Fredric Jameson.”

Dabashi’s books and articles have been translated into more than a dozen other languages, from Catalan to Urdu. A select bibliography is available in *The World Is My Home* (cited above).

Dante Alighieri

Dante’s literary criticism can be found in the Italian *Opere minori di Dante Alighieri* (1986). The standard Italian edition of *Il Convivio* was edited by Maria Simonelli (1966). Two recent English translations of *Il Convivio*, by Christopher Ryan (1989) and by Richard H. Lansing (1990), both based on the Simonelli edition, are superior to earlier translations. *The Letters of Dante* (1920), with Latin text, edited and with English translation by Paget Toynbee, is the standard edition of Dante’s letters. The best translation of the “Letter to Can Grande” can be found in Robert S. Haller’s *Literary Criticism of Dante Alighieri* (1973), which also contains *Eloquence in the Vernacular Tongue* and other critical statements. Barbara Reynolds’s *Dante: The Poet, the Political Thinker, the Man* (2006) offers a reassessment of the poet’s life and times.

For an introduction, see *Dante: A Very Short Introduction* (2015), by Peter Hainsworth and David Robey. Dante has been the subject of commentaries by important poet-critics, the most prominent among them T. S. Eliot’s *Dante* (1928). Major statements about Dante by modern poets have been collected in *The Poet’s Dante: Twentieth-Century Responses*, edited by Peter S. Hawkins and Rachel Jacoff (2001). Erich Auerbach, in *Dante: Poet of the Secular World* (1929) and *Mimesis: The Representation of Reality in Western Literature* (1953), argues that Dante’s comments on allegorical reading are central to an interpretation of *The Divine Comedy*. For important introductions to Dantean poetics, see Robert Hollander’s *Dante: A Life in Works* (2001) and *The Cambridge Companion to Dante*, edited by Rachel Jacoff (2d ed., 2007). Peter Dronke, in *Dante and the Medieval Latin Tradition* (1986), and Henry Ansgar Kelly, in *Tragedy and Comedy from Dante to Pseudo-Dante* (1989), have both questioned the authenticity of the letter to Can Grande, arguing that Auerbach’s insistence on a figural reading of *The Divine Comedy* based on that letter is mistaken. J. F. Took’s *Dante, Lyric Poet and Philosopher: An Introduction to the Minor Works* (1990) contains an important chapter on *Il Convivio*. In *Dante’s Epistle to Can Grande* (1993), Robert Hollander summarizes the

debate over the letter to Can Grande, while defending Dante's authorship and its relevance to the allegorical reading of *The Divine Comedy*. *Dante in Context*, edited by Zygmunt G. Barański and Lino Pertile (2015), collects essays that locate the poet in his historical, cultural, and intellectual context, including literary culture and literary theory and criticism. Essays by the translator and Dante scholar John Freccero on Dante and his influence on later poets have been collected in *Dante's Wake: Reading from Medieval to Modern in the Augustinian Tradition* (2015), edited by Danielle Callegari and Melissa Swain. For a bibliography on Dante, consult "American Dante Bibliography," published annually in *Dante Studies* (1953–).

Lennard Davis

Lennard Davis's first two books, *Factual Fictions: The Origins of the Novel* (1983; rpt. 1997) and *Resisting Novels: Ideology and Fiction* (1987), focus on the history of the novel. With M. Bella Mirabella, he also co-edited *Left Politics and the Literary Profession* (1990). He turned to disability studies in his pathbreaking book *Enforcing Normalcy: Disability, Deafness, and the Body* (1995) and his anthology, *The Disability Studies Reader* (1997; 5th ed., 2016), which has defined the field. In addition, Davis edited his parents' correspondence, published as *Shall I Say a Kiss?: Courtship Letters of a Deaf Couple, 1936–1938* (1999), which conveys the experience of two deaf people in England just before World War II. He has expanded his analysis of disability in several books: *Bending Over Backwards: Disability, Dismodernism, and Other Difficult Positions* (2002), *The End of Normal: Identity in a Biocultural Era* (2013), and *Enabling Acts: The Hidden Story of How the American with Disabilities Act Gave the Largest US Minority Its Rights* (2015), a book for a general audience. He also elaborated his view of psychoanalysis in *Obsession: A History* (2008) and co-edited, with Dan Goodley and Bill Hughes, the collection *Disability and Social Theory: New Developments and Directions* (2012).

Alongside his academic work, he has tried his hand at fiction in *The Sonnets: A Novel* (2001) and has published articles in mainstream magazines and newspapers, including the *Nation*, the *New York Times*, *McCall's*, and *Redbook*. The best biographical source about Davis is his autobiography, *My Sense of Silence: Memoirs of a Childhood with Deafness* (2000), as well as his memoir *Go Ask Your Father: One Man's Obsession with Finding His Origins through DNA Testing* (2009).

Davis's investigation of the origin of the novel has received significant attention, notably in Catherine Gallagher's *Nobody's Story: The Vanishing Act of Women Writers in the Marketplace, 1679–1820* (1994). On disability, Rachel Adams's "Enabling Differences: New Work in Disability Studies," *Michigan Quarterly Review* 37 (1998),

praises Davis's critique of normalcy but faults his failure to take into account the "differences between deafness and other forms of physical impairment." Brenda Jo Brueggeman draws on Davis's work in *Lend Me Your Ear: Rhetorical Constructions of Deafness* (1999). In "What a Difference a Decade Makes: Reflections on Doing 'Emancipatory' Disability Research," *Disability and Society* 18 (2003), Colin Barnes assesses Davis's political position. David Bolt, in "Social Encounters, Cultural Representation and Critical Avoidance," in *Routledge Handbook of Disability Studies* (ed. Nick Watson, Alan Roulstone, and Carol Thomas, 2012), surveys Davis's formative work in the field; see also Dan Goodley, *Disability Studies: An Interdisciplinary Introduction* (2011). In *The Biopolitics of Disability: Neoliberalism, Ablenationalism, and Peripheral Embodiment* (2015), David T. Mitchell and Sharon L. Snyder draw on Davis's concept of dismodernism but find that it tends to level social difference.

Gilles Deleuze and Félix Guattari

Deleuze and Guattari are best known for their *Anti-Oedipus* (1972; trans. 1983, 2009), *Kafka: Toward a Minor Literature* (1975; trans. 1986), *A Thousand Plateaus* (1980; trans. 1987), and *What Is Philosophy?* (1991; trans. 1994). In addition to the books mentioned above, Gilles Deleuze's writings, most of which are available in English, include *Proust and Signs* (1964; trans. 1972); *Masochism: An Interpretation of Coldness and Cruelty* (1967; trans. 1971); *Kant's Critical Philosophy* (1971; trans. 1984); *Dialogues*, with Claire Parnet (1977; trans. 1987), on the relation between culture and politics; *Foucault* (1986; trans. 1988); *Essays Critical and Clinical* (1993; trans. 1997), with chapters on Alfred Jarry, Herman Melville, and Walt Whitman; *The Abecedaire of Gilles Deleuze* (1997), a set of taped television interviews; *Desert Islands and Other Texts, 1953–1974* (2004); and *Two Regimes of Madness, 1975–1995* (2006). *The Deleuze Reader*, edited and introduced by Constantin V. Boundas, was published in 1993. Félix Guattari's Works include, in addition to the titles mentioned in the headnote, *Molecular Revolution: Psychiatry and Politics* (1977; trans. 1984); "A Liberation of Desire," in *Homosexualities and French Literature* (ed. George Stambolian and Elaine Marks, 1979); *Chaosmosis* (1992; trans. 1995); and *The Anti-Oedipus Papers* (2004; trans. 2006). *The Guattari Reader*, edited and introduced by Gary Genosko, was published in 1996. *Gilles Deleuze and Félix Guattari: Intersecting Lives* (2007; trans. 2010), by François Dosse, devotes more than 600 pages to chronicling the intellectual and personal lives of the two.

Brian Massumi's *User's Guide to Capitalism and Schizophrenia: Deviations from Deleuze and Guattari* (1992) is a sprightly, provocative reading that both explains a revolutionary Deleuze and Guattari and deviates from them. Eleanor

Kaufman and Kevin Jon Heller's *Deleuze and Guattari: New Mappings in Politics, Philosophy, and Culture* (1998) contains a variety of articles, including Bruno Bosteel's detailed account of Guattari's relation to language and Aden Evens et al.'s cogent discussion of difference and creativity. Charles J. Stivale's *The Two-Fold Thought of Deleuze and Guattari* (1998) is also useful. A three-volume collection of criticism titled *Critical Assessments: Deleuze and Guattari*, edited by Gary Genosko (2000), gives a wide range of responses. Ian Buchanan's *Deleuze and Guattari's "Anti-Oedipus": A Reader's Guide* (2008), with its suggestions for further reading and bibliography, is a very useful introduction for students, as is Eugene W. Holland's *Deleuze and Guattari: A Thousand Plateaus: A Reader's Guide* (2013).

Criticism on Deleuze includes Michael Hardt, Gilles Deleuze: *An Apprenticeship in Philosophy* (1993), which presents a concrete and existential Deleuze, and Gilles Deleuze and the Theater of Philosophy, edited by Constantin V. Boundas and Dorothea Olkowski (1994), which is a good sampler of readings of Deleuze's work; it includes a terse analysis by the French philosopher Alain Badiou, who has since published *Deleuze: The Clamor of Being* (1997; trans. 2000). Other collections of criticism are *Deleuze: A Critical Reader*, edited by Paul Patton (1996), and Gilles Deleuze: *Image and Text*, edited by Eugene W. Holland, Daniel W. Smith, and Charles J. Stivale (2009). A good overview of Deleuze's involvement with film is provided by David Rodowick in *The Time-Machine* (1997). See also Gregory Flaxman's collection *The Brain Is the Screen: Deleuze and the Philosophy of Cinema* (2000) and Richard Rushton's comprehensive study, *Cinema After Deleuze* (2012). Feminists, who initially rejected Deleuze and Guattari for robbing women of being with their insistence on becoming, are now revising earlier views. An entire volume, *Deleuze and Feminism*, edited by Ian Buchanan and Claire Colebrook (2000), includes a fresh look at Deleuze by a dozen feminists. See also Buchanan's collection *Gilles Deleuze: A Philosopher for Our Century?* (2000). The best bibliographies are Timothy S. Murphy's "Bibliography of the Works of Gilles Deleuze" in Patton's *Deleuze*, cited above; *The Guattari Effect*, edited by Eric Alliez and Andrew Goffey (2011); and Gary Genosko's bibliography in *Félix Guattari: An Aberrant Introduction* (2002). Eugene B. Young's *The Deleuze and Guattari Dictionary* (2013) also has an updated bibliography.

Paul de Man

De Man's early reputation derived primarily from his essays, which were collected in books published later in his life or posthumously. His first book, *Blindness and Insight: Essays in the Rhetoric of Contemporary Criticism* (1971; 2d ed., 1983), surveys a range of important critics and argues that criticism is frequently predicated on

a blindness to its own rhetoric, which paradoxically also enables its insight; it includes a famous critique of Derrida, "The Rhetoric of Blindness" (1971). His most unified book, *Allegories of Reading: Figural Language in Rousseau, Nietzsche, Rilke, and Proust* (1979), best exemplifies his deconstructive reading methods and has been extremely influential. The remainder of de Man's books, gathering numerous essays, were published after his death; they include *The Rhetoric of Romanticism* (1984); *The Resistance to Theory* (1986); *Critical Writings, 1953–1978*, edited by Lindsay Waters (1989); *Romanticism and Contemporary Criticism: The Gauss Seminars and Other Papers*, edited by E. S. Burt, Kevin Newmark, and Andrzej Warminski (1992); *Aesthetic Ideology*, edited by Andrzej Warminski (1996); and several volumes of miscellaneous writings, such as *The Post-Romantic Predicament*, edited by Martin McQuillan (2012), and *The Paul de Man Notebooks*, edited by McQuillan (2014). His controversial journalism dating from World War II is included in *Wartime Journalism, 1939–1943*, edited by Werner Hamacher, Neil Hertz, and Thomas Keenan (1988).

De Man's work has drawn a large body of commentary. Ortwin de Graef's *Serenity in Crisis: A Preface to Paul de Man, 1939–1960* (1993) and *Titanic Light: Paul de Man's Post-Romanticism, 1960–1969* (1995) review de Man's intellectual career, though the best biographical recounting is Lindsay Waters's lengthy introduction to *Critical Writings*, "Paul de Man: Life and Works." Evelyn Barish, *The Double Life of Paul de Man* (2014), attacks de Man's character while admitting little knowledge of his work. A useful factual chronology of de Man's early life is offered in *Responses: On Paul de Man's Wartime Journalism*, edited by Hamacher, Hertz, and Keenan (1989), their companion volume to *Wartime Journalism*. Robert Moynihan, "Interview with Paul de Man," *Yale Review* 73 (1984), is accessible and illuminating.

Important early critical responses include Frank Lentricchia's critique of de Man's "rhetoric of authority" in *After the New Criticism* (1980); Rodolphe Gasché's "'Setzung' and 'Übersetzung': Notes on Paul de Man," *Diacritics* 11 (1981), which compares de Man's use of deconstruction unfavorably with that of Derrida; and Barbara Johnson's "Gender Theory and the Yale School" (1984), collected in her *World of Difference* (1987), which notes the lack of consideration of gender among Yale critics.

Immediately after de Man's death, there was a spate of publications largely sympathetic to his work. See *The Lesson of Paul de Man*, a special issue of *Yale French Studies*, no. 69 (1985); Jacques Derrida's *Mémoires: For Paul de Man* (1986), a moving meditation on de Man's project that distinguishes his focus on literature and allegory from Derrida's version of deconstruction; and *Reading de Man Reading*, edited by Lindsay Waters and Wlad

Godzich (1989). Following the publication of his wartime writings, the criticism on de Man changed markedly. *Responses* (cited above) records the range of debate, from condemnations to defenses.

A new wave of reconsiderations of de Man's work began in the 1990s. In his *Cultural Capital: The Problem of Literary Canon Formation* (1993), John Guillory devotes a chapter to de Man's influence as a teacher. Rodolphe Gasché's *The Wild Card of Reading: On Paul de Man* (1998) focuses, often critically, on de Man's use of philosophy (it also reprints the 1981 essay noted above). Gathering contributions by Derrida, Judith Butler, Johnson, and others, *Material Events: Paul de Man and the Afterlife of Theory*, edited by Tom Cohen, Barbara Cohen, J. Hillis Miller, and Andrzej Warminski (2000), proposes new directions for the study of de Man. Martin McQuillan's *Paul de Man* (2001) is an accessible introduction. *Legacies of Paul de Man*, edited by Marc Redfield (2007), gathers eight essays reassessing de Man. See also *The Political Archive of Paul de Man: Property, Sovereignty, and the Theotropic*, edited by McQuillan (2012), which collects essays by leading critics. Marc Redfield's *Theory at Yale: The Strange Case of Deconstruction in America* (2016) is a major reassessment of the central role of theory in the institution of American literary study, and particularly of de Man's influence in establishing his version of theory. The 1985 special issue of *Yale French Studies* cited above and de Man's posthumous *Resistance to Theory* provide complete bibliographical lists of his work up to 1985; de Graef (see above) lists de Man's publications up to 1983, as well as more recent secondary sources. In addition, McQuillan's *Paul de Man* includes a selective annotated bibliography.

Jacques Derrida

Derrida's analysis of the nontransparency of writing did not slow publication by him or by those inspired (or incensed) by his writing. Derrida's first published book was a translation with a lengthy introduction, Edmund Husserl's "*Origin of Geometry*": *An Introduction* (1962; trans. 1978). In 1967 Derrida published three books: *La Voix et le phénomène* (trans. 1973, *Speech and Phenomena*), *De la grammatologie* (trans. 1976, *Of Grammatology*; corrected ed., 1998), and *L'Écriture et la différence* (trans. 1978, *Writing and Difference*). In 1972 he published three more books: *La Dissémination* (trans. 1981, *Dissemination*), *Positions* (trans. 1981, *Positions*), and *Marges—de la philosophie* (trans. 1982, *Margins of Philosophy*).

Glas (1974; trans. 1986, *Glas*), a huge book written in two columns broken up in various ways on the page, discusses the works of the German philosopher Hegel and the transgressive French playwright and novelist Jean Genet; one of the translators, John P. Leavey Jr., published an accompanying volume, *Glossary* (1986). *Éperons: Les Styles de Nietzsche* (1976, 1978; trans. 1979, *Spurs: Nietzsche's Styles*), in which Derrida ana-

lyzes how certain philosophers have used concepts of sexual difference, has had an impact on feminist criticism. In *La Vérité en peinture* (1978; trans. 1987, *The Truth in Painting*), he discusses Heidegger, Kant, van Gogh, and art criticism. *La Carte postale de Socrate à Freud et au-delà* (1980; trans. 1987, *The Post Card*) continues the discussions of Plato and Socrates, speech and writing, that Derrida began in "Plato's Pharmacy" and includes a groundbreaking reading of Freud's *Beyond the Pleasure Principle*; it also contains "Le facteur de la vérité" ("The Purveyor of Truth"; *facteur* means "mailman" as well as "factor"), Derrida's famous critical reading of Jacques Lacan's seminar on "The Purloined Letter" by Edgar Allan Poe.

Derrida's next publication, *Signéponge/Sign-sponge* (1983), was a bilingual study of the work of Francis Ponge in which he unpacked the French poet's signature ("anagrammatically") from the poet's works. *Mémoires: For Paul de Man*, a collection of lectures that appeared in English in 1986, was revised in 1989 to comment on de Man's wartime journalism.

To simplify the increasingly complex publication history of the later writings only the English titles of Derrida's important works are given hereafter, unless they appeared in French under a different title. In 1988 Gerald Graff edited *Limited, Inc.*, in which appeared an exchange between Derrida and the philosopher John Searle (first collected in the journal *Glyph* in 1977) about the nature of performative language, with additional texts by Derrida. "Declarations of Independence," *New Political Science* 15 (1986), an influential reading of the American Declaration of Independence, first appeared in French in *Otobiographies: L'enseignement de Nietzsche et la politique du nom propre* (1984). Many essays on Heidegger, Roland Barthes, Emmanuel Levinas, and Paul de Man and on such topics as racism, translation, and metaphor were published in *Psyche: Inventions of the Other* (2 vols., 1987–2003; trans., 2007–08). Derrida's thesis defense, "The Time of a Thesis: Punctuations," in *Philosophy in France Today* (ed. Alan Montefiore, 1983), was published among other texts addressing the institutions of philosophy in *Eyes of the University: Right to Philosophy 2* (1990; trans. 2004); the companion volume is *Who's Afraid of Philosophy? Right to Philosophy 1* (1990; trans. 2002). *The Other Heading: Reflections on Today's Europe* (1991; trans. 1992) took up political issues, as did Derrida's long-awaited engagement with the texts of Karl Marx, *Specters of Marx: The State of the Debt, the Work of Mourning, and the New International* (1993; trans. 1994). Derrida responded to 9/11 in *Philosophy in a Time of Terror: Dialogues with Jürgen Habermas and Jacques Derrida*, interviewed by Giovanna Borradori (2003), and investigated democracy in *Rogues: Two Essays on Reason* (2003; trans. 2005).

His meditations on the gift and givenness can be found in his *Given Time: I, Counterfeit Money*

(1991; trans. 1992), which focuses on Baudelaire and Heidegger, and *The Gift of Death* (1992; trans. 1995), one of Derrida's most explicit discussions of religion; on that subject, see also the collection *Acts of Religion*, edited by Gil Anidjar (2002). In 1995 three short works (*Passions*, *Sauf le nom*, and *Khôra*) were translated under the title *On the Name. Archive Fever: A Freudian Impression* (1995; trans. 1996), on Freud's *Moses and Monotheism*, was followed by *The Politics of Friendship* (1994; trans. 1997). And two translations appeared in 1998: *Monolingualism of the Other, or, The Prosthesis of Origin* (1996) and *Resistances of Psychoanalysis* (1996).

Between 2000 and his death in 2004, Derrida continued lecturing and publishing prodigiously. Many seminars and volumes were published and translated, some posthumously. *Of Hospitality* (1997; trans. 2000), a compilation of two seminar lectures given in Paris in January 1996, examines the concept of hospitality as it relates to political and ethical dilemmas. *A Taste for the Secret*, with Maurizio Ferraris (1997; trans. 2001), a set of conversations, provides both an autobiographical and a theoretical overview of Derridean thought. *On Cosmopolitanism and Forgiveness* (1997; trans. 2001) is a lean but penetrating exegesis on forgiveness, healing, truth and reconciliation, and world events; *Without Alibi* (2002) is collection of long pieces, a number of which focus on sovereignty. In *On Touching: Jean-Luc Nancy* (2000; trans. 2005), Derrida engages in a philosophical investigation of touching, grounded in the work of the philosopher Nancy. *The Work of Mourning*, edited by Pascale-Anne Brault and Michael Naas (2001), is a meditation on friendship and the passing of French intellectual luminaries such as Louis Althusser and Roland Barthes, among others. *For What Tomorrow . . . : A Dialogue* (2001; trans. 2004), with his friend the historian Elisabeth Roudinesco, offers accessible and wide-ranging insights into Derrida's intellectual and political evolution. *Paper Machine* (2001; trans. 2005) investigates the archive, writing, and media. *Negotiations: Interventions and Interviews, 1971–2001*, edited by Elizabeth Rottenberg (2002), a disparate collection of many essays and some interviews, provides biographical as well as intellectual insights often on political topics. Derrida published two late volumes on his friend the writer Hélène Cixous: *H.C. for Life, That Is to Say—* (2002; trans. 2006) and *Geneses, Genealogies, Genres, and Genius: The Secrets of the Archive* (2003; trans. 2006). In the literary treatise *Demeure: Fiction and Testimony* (1998), published together in English (2000) with the essay by Maurice Blanchot to which it responds, *The Instant of My Death* (1994), Derrida discusses literature, witnessing, and memory as it relates to truth. With the essays collected in *Sovereignities in Question: The Poetics of Paul Celan* (2005), another foray into literature, Derrida explores the poetics of the twentieth-century poet Paul Celan, a Romanian-French Jew who

wrote in German. In *Learning to Live Finally: The Last Interview* (2005; trans. 2007), Derrida reflects on death, dying, and living in an interview with the *Le Monde* journalist Jean Birnbaum. And in *The Animal That Therefore I Am*, edited by Marie-Louise Mallet (2006; trans. 2008), a seminar, Derrida considers the roles played by animals throughout his corpus, delving into animal life and rights.

Derrida's annual seminars are being published in France and rapidly issued in English by the University of Chicago Press. The series started with *The Beast and the Sovereign* (2 vols., 2008–10; trans. 2009–11), followed by *The Death Penalty* (2 vols., 2012–15; trans. 2014–17) and *Heidegger: The Question of Being and History* (2013; trans. 2016); several dozen more volumes are projected.

As the selection above suggests, Derrida participated in many interviews and dialogues, which often clarified his work and his positions. The first interviews were collected in *Positions*, which was followed by *Points—: Interviews, 1974–1994*, edited by Elisabeth Weber (1992; trans. 1995 [with two added articles]), and *Negotiations*. Among the most revealing and informative dialogues, all cited above, are *A Taste for the Secret*, *For What Tomorrow*, and *Philosophy in a Time of Terror*.

Four readers in English provide useful starting points: *A Derrida Reader: Between the Blinds*, edited by Peggy Kamuf (1991), gives a good overall sample of his writing; *Acts of Literature*, edited by Derek Attridge (1992), and *The Derrida Reader: Writing Performances*, edited by Julian Wolfreys (1998), are more explicitly geared toward literature; and *Jacques Derrida: Basic Writings*, edited by Barry Stocker (2007), addresses topics in philosophy.

The best source of biographical information is *Jacques Derrida*, coauthored by Geoffrey Bennington and Jacques Derrida (1991; trans. 1993, rev. 1999). Bennington's exposition of Derrida's work, titled "Derridabase," is at the top of each page; Derrida's autobiographical commentary, "Circumfession," is at the bottom. The book also provides photographs, a chronology, and a good bibliography. *Jacques Derrida: A Biography* (2006) by Jason Powell is an introduction more to his philosophy than to his life. Benoît Peeters's *Derrida: A Biography* (2010; trans. 2013) covers Derrida's life and work in great depth, as well as providing an excellent bibliography. Several documentary films take the philosopher as their subject; *Derrida* (2002), directed by Kirby Dick and Amy Ziering Kofman, offers a very personal view.

Christopher Norris's *Derrida* (1987) remains the best introduction to Derrida's early work. *The Cambridge Introduction to Jacques Derrida*, edited by Leslie Hill (2007), and Nicholas Royle's *Jacques Derrida* (2003) are also very accessible. Simon Glendinning's *Derrida: A Very Short Introduction* (2011) unpacks and relates the difficulties and significance of Derrida's philosophical contributions. *Working through Derrida*, edited by Gary B. Madison (1993),

presents very well the divisions around Derrida in Anglo-American philosophy, from John Searle's critique to explications and extensions of Derrida by the leading philosophers Barry Allen, John D. Caputo, and Drucilla Cornell, with Nancy Fraser and Richard Rorty falling somewhere in between. The four-volume *Jacques Derrida*, edited by Christopher Norris and David Roden (2003), reprints sixty-five pieces of critical reaction spanning three decades, with a focus on philosophers and philosophy. Another collection, *Deconstruction and the Possibility of Justice*, edited by Drucilla Cornell, Michel Rosenfeld, and David Gray Carlson (1992), considers his work's political implications; it begins with an essay by Derrida. Samir Haddad's *Derrida and the Inheritance of Democracy* (2013) also explores Derrida's political writings, with particular attention to the nature of democracy and democratic traditions in conversation with issues of violence and justice, while *Derrida and Our Animal Others: Derrida's Final Seminar, "The Beast and the Sovereign"* (2013) by David Farrell Krell engages Derrida's ideas on animals, humans, and political sovereignty. Allison Weiner and Simon Morgan Wertham have put together an interesting collection of essays on the future of deconstruction, *Encountering Derrida: Legacies and Futures of Deconstruction* (2007). Exceptional monographs on Derrida include Rodolphe Gasché, *Inventions of Difference: On Jacques Derrida* (1994), which takes seriously Derrida's philosophical critique of reflexivity and specularity and distinguishes between Derrida's deconstruction and American deconstructive literary criticism; Marion Hobson, *Jacques Derrida: Opening Lines* (1998), a difficult but worthwhile reading of the inseparability of Derrida's writing strategies from his arguments; and Christina Howells, *Derrida: Deconstruction from Phenomenology to Ethics* (1999), a very readable introduction to Derrida, with particular attention to the parallel writings of Jean-Paul Sartre. For a substantial sympathetic account of the late Derrida, see J. Hillis Miller, *For Derrida* (2009).

Two constant critical engagements with deconstruction have come from feminism and Marxism. See, in particular, Diane Elam, *Feminism and Deconstruction: Ms. en Abyrne* (1994); *Feminist Interpretations of Jacques Derrida*, edited by Nancy J. Holland (1997); and *Derrida and Feminism: Recasting the Question of Woman*, edited by Ellen K. Feder, Mary C. Rawlinson, and Emily Zakin (1997). More recent turns in feminist engagements with Derrida revolve around pornography, reproductive freedom, and transgender rights. See, for instance, Christopher Morris, "Derrida on Pornography: Putting (It) Up for Sale," *Derrida Today* 6 (2013), and Shannon Hoff, "Translating Principle into Practice: On Derrida and the Terms of Feminism," *Journal of Speculative Philosophy* 29 (2015). The response from Marxism has been divided: in *Marxism and De-*

construction: A Critical Articulation (1982), Michael Ryan discusses analytical strategies common to Marx and Derrida as inheritors of Hegel; Terry Eagleton, in contrast, attacks deconstruction in his *Literary Theory: An Introduction* (1983; 2d ed., 1996) for not being political. Bill Martin, in *Humanism and Its Aftermath: The Shared Fate of Deconstruction and Politics* (1995), argues that deconstruction is political but doesn't go as far as it could. And after Derrida published *Specters of Marx*, Michael Sprinkler organized a symposium around the work, "Ghostly Demarcations," whose proceedings were published under the same title (1999). For critiques of deconstruction from more traditional standpoints, see John Ellis, *Against Deconstruction* (1989); David H. Hirsch, *The Deconstruction of Literature: Criticism after Auschwitz* (1991); and M. C. Dillon, *Semiological Reductionism: A Critique of the Deconstructionist Movement in Postmodern Thought* (1995).

Studies that extend Derrida's writings in various directions include Jasper Neel, *Plato, Derrida, and Writing* (1988), which investigates the relevance of Derrida's reading of Plato to composition theory; *Writing the Politics of Difference*, edited by Hugh J. Silverman (1991); Jonathan Loesberg, *Aestheticism and Deconstruction: Pater, Derrida, and de Man* (1991); Simon Critchley, *The Ethics of Deconstruction: Derrida and Levinas* (1992; 2d ed., 1999); Morag Patrick, *Derrida, Responsibility, and Politics* (1997); Joseph G. Kronick, *Derrida and the Future of Literature* (1999); Christine van Boheemen-Saaf, *Joyce, Derrida, Lacan, and the Trauma of History: Reading, Narrative, and Postcolonialism* (1999); and Peter Pericles Trifonas, *The Ethics of Writing: Derrida, Deconstruction, and Pedagogy* (2000). Both Joanna Hodge, *Derrida on Time* (2007), and David Wood, *Time after Time* (2007), contrast Derrida's use of temporality with that of Heidegger, Lévinas, and others.

William Schultz's *Jacques Derrida: An Annotated Primary and Secondary Bibliography* (1992) is useful up to 1992. *Jacques Derrida (II): A Bibliography*, compiled by Joan Nordquist (1995), goes up to 1995. For more recent bibliographies, see Bennington and Derrida, *Jacques Derrida*; Royle, *Jacques Derrida: The Cambridge Introduction to Jacques Derrida*; and Peeter's *Derrida: A Biography*, as well as Glendinning's *Derrida: A Very Short Introduction*.

John Dryden

For many years the standard edition of Dryden was the eighteen-volume collection first published in 1808 and revised in 1882–93. It has been replaced by the University of California Press edition, edited E. N. Hooker, H. T. Swedenberg Jr., et al. (20 vols., 1956–2002). There are two well-annotated collections of Dryden's criticism, the first edited by W. P. Ker (2 vols., 1900), the second by George Watson (2 vols., 1962). Other helpful

collections include John Aden, *Critical Opinions of John Dryden* (1963); *Literary Criticism of John Dryden*, edited by Arthur C. Kirsch (1966); H. James Jensen, *A Glossary of John Dryden's Critical Terms* (1969); and *John Dryden: Selected Criticism*, edited by James Kinsley and George Parfitt (1970).

The best biography is James Anderson Winn, *John Dryden and His World* (1987). Also valuable are James Marshall Osborn, *John Dryden: Some Biographical Facts and Problems* (rev. ed., 1965), and Winn, "When Beauty Fires the Blood": *Love and the Arts in the Age of Dryden* (1992). A good survey of the life and works is Paul Hammond, *John Dryden: A Literary Life* (1991).

Important modern studies of Dryden include T. S. Eliot, *Homage to John Dryden* (1924) and *John Dryden: The Poet, the Dramatist, the Critic* (1932); and Louis I. Bredvold, *The Intellectual Milieu of John Dryden* (1934). The best books on the criticism are Edward Pechter, *Dryden's Classical Theory of Literature* (1975), and James Engell, *Forming the Critical Mind: Dryden to Coleridge* (1989). Philip Harth, *Contexts of Dryden's Thought* (1968), is the standard work on Dryden's philosophical and religious views; Harth's *Pen for a Party: Dryden's Tory Propaganda in Its Contexts* (1993) is also valuable. Michael Werth Gelber, *The Just and the Lively: The Literary Criticism of John Dryden* (1999), analyzes the criticism as a full and coherent body of literary theory. The essays included in *The Cambridge Companion to John Dryden*, edited by Steven N. Zwicker (2004), examine Dryden's work as a poet, playwright, and literary critic in its political and cultural contexts. *Dryden, Pope, Johnson, Malone*, edited by Claude Rawson (2010), in the Great Shakespeareans series, includes a cogent essay by Harold Love on Shakespeare's impact on Dryden's contribution to the interpretation and appreciation of Shakespeare's work. Philip Smallwood, in *Critical Occasions: Dryden, Pope, Johnson, and the History of Criticism* (2011), situates Dryden's criticism in relation both to the critics he read (e.g., Thomas Rymer, Nicolas Boileau) and to modern critics, theorists, and historians (e.g., R. G. Collingwood, Hans-George Gadamer, Paul Ricoeur).

For bibliographic works, see Hugh Macdonald, *John Dryden: A Bibliography of Early Editions and Drydeniana* (1939); *John Dryden: The Critical Heritage*, edited by James Kinsley and Helen Kinsley (1971); *An Annotated Bibliography of John Dryden: Texts and Studies, 1949–1973*, edited by John A. Zamonski (1975); *John Dryden: A Survey and Bibliography of Critical Studies, 1895–1974*, edited by David J. Latt and Samuel Holt Monk (1976); and James M. Hall, *John Dryden: A Reference Guide* (1984). For more recent bibliography of primary and secondary sources, consult Zwicker's *Cambridge Companion* (see above).

Joachim du Bellay

Little of du Bellay's work has been translated into English: the *Defense* is available in an English translation by Gladys M. Turquet (1939), as is *Regrets*, translated by C. H. Sisson (1984). Richard Helgerson has put together a bilingual edition of du Bellay's work that includes *Regrets*, *Antiquities*, and the *Defense* (2006). Our selection is taken from Helgerson's volume. *Joachim du Bellay* (1971) by L. Clark Keating includes a biography as well as a general introduction.

There are relatively few book-length studies of du Bellay in English; however, many books on Renaissance poetics contain chapters on him. Walter Pater's chapter on du Bellay in *The Renaissance: Studies in Art and Poetry* (1877) and Arthur Tilley's *The Literature of the French Renaissance* (2 vols., 1904) represent some of the earliest studies on du Bellay's poetry. Especially useful are the chapters in W. F. Patterson's *Three Centuries of French Poetic Theory: A Critical History of the Chief Arts of Poetry in France (1328–1630)* (1935) and in S. J. Holyoake's concise study, *An Introduction to French Sixteenth Century Poetic Theory* (1972). The chapter on du Bellay in Margaret Ferguson's *Trials of Desire: Renaissance Defenses of Poetry* (1983) examines the political and historical context of the *Defense*, as well as the implications of du Bellay's own "borrowing" from Italian treatises. Hassan Melehy's *The Poetics of Literary Transfer in Early Modern France and England* (2010), a critical comparative study, has a chapter on du Bellay's *Defense*, examining the literary interplay and interrelationship between early modern and medieval writers and their attention to classical poetics. For a theoretical discussion of the Pléiade poets as a whole, see Grahame Castor's *Pléiade Poetics: A Study in Sixteenth-Century Thought and Terminology* (1964). Other good general studies include Dorothy Coleman, *The Chaste Muse: A Study of Joachim Du Bellay's Poetry* (1980), and David Hartley, *Patriotism in the Work of Joachim Du Bellay: A Study of the Relationship between the Poet and France* (1993). Margaret Brady Wells has compiled an extensive unannotated bibliography: *Du Bellay, a Bibliography* (1974). Helgerson's bilingual edition, mentioned above, has a robust bibliography related to the *Defense*.

W. E. B. Du Bois

The *Complete Published Works of W. E. B. Du Bois* has been edited by Herbert Aptheker (36 vols., 1973–86). It is supplemented by two other works edited by Aptheker: *The Correspondence of W. E. B. Du Bois* (3 vols., 1973–78) and *Against Racism: Unpublished Essays, Papers, Addresses, 1887–1961* (1985). The Du Bois volume in the Library of America series, edited by Nathan Irvin Huggins (1986), includes *The Suppression of the African Slave Trade, The Souls of Black Folk, and Dusk of Dawn*, as well as a number of essays. A range of selections is also available in *W. E. B. Du*

Bois: A Reader, edited by David Levering Lewis (1995), and *The Oxford W. E. B. Du Bois Reader*, edited by Eric J. Sundquist (1996).

There are several excellent biographies: Manning Marable, *W. E. B. Du Bois, Black Radical Democrat* (1986), a cogently written survey by an author fully familiar with Du Bois's writings and the major issues in African American social and political history; Gerald Horne, *Black and Red: W. E. B. Du Bois and the Afro-American Response to the Cold War, 1944–1963* (1986), a detailed account of the final phase of Du Bois's career; and David L. Lewis, *W. E. B. Du Bois, a comprehensive two-volume biography: Biography of a Race, 1868–1919* (1993) and *The Fight for Equality and the American Century, 1919–1963* (2000).

The best study of Du Bois as a writer is Arnold Rampersad's *Art and Imagination of W. E. B. Du Bois* (1976), which explores all of Du Bois's major books. See also the extensive chapter on Du Bois in Eric J. Sundquist, *To Wake the Nations: Race in the Making of American Literature* (1993); Keith Eldon Byerman, *Seizing the Word: History, Art, and Self in the Work of W. E. B. Du Bois* (1994); Shamoan Zamir, *Dark Voices: W. E. B. Du Bois and American Thought, 1888–1903* (1995); Adolph Reed Jr., *W. E. B. Du Bois and American Political Thought: Fabianism and the Color Line* (1997); and Raymond Wolters, *Du Bois and His Rivals* (2002), which examines Du Bois's ideological disputes with Booker T. Washington and Marcus Garvey. Other helpful resources include two collections: *Critical Essays on W. E. B. Du Bois*, edited by William L. Andrews (1985), and *W. E. B. Du Bois on Race and Culture*, edited by Bernard W. Bell, Emily R. Grosholz, and James B. Stewart (1996), which sheds light on Du Bois's attitudes toward race, gender equality, and Pan-Africanism.

For primary sources leading up to *The Souls of Black Folk*, see *The Problem of the Color Line at the Turn of the Twentieth Century: The Essential Early Essays*, edited by Nahum Dimitri Chandler (2015). Also valuable for context and interpretation is Stephanie J. Shaw, *W. E. B. Du Bois and "The Souls of Black Folk"* (2013); she contends that Du Bois appropriates Hegelian idealism in order to include the United States, the nineteenth century, and African Americans in the historical narrative of Hegel's philosophy of history.

Recent studies of Du Bois have situated him in relation to modern and contemporary issues of world history and democracy. See Eric Porter, *The Problem of the Future World: W. E. B. Du Bois and the Race Concept at Midcentury* (2010), which brings forward and reassesses Du Bois's writings of the 1940s and 1950s; Katharine Lawrence Balfour, *Democracy's Reconstruction: Thinking Politically with W. E. B. Du Bois* (2011), a cogent treatment of Du Bois as a political theorist; Terrence L. Johnson, *Tragic Soul-Life:*

W. E. B. Du Bois and the Moral Crisis Facing American Democracy (2012), which locates Du Bois in the midst of ongoing debates about race, politics, and religion; Kwame Anthony Appiah, *Lines of Descent: W. E. B. Du Bois and the Emergence of Identity* (2014), a keen consideration of Du Bois's educational experiences at Harvard and at the University of Berlin; and Bill V. Mullen, *Un-American: W. E. B. Du Bois and the Century of World Revolution* (2015), on Du Bois's revolutionary vision and commitment to human liberation.

For other dimensions of Du Bois's career, see *Protest and Propaganda: W. E. B. Du Bois, "The Crisis," and American History*, edited by Amy Helene Kirschke and Phillip Luke Sinitiere (2014), examining how the essays, columns, and visuals in *The Crisis*, a magazine published by the NAACP and edited by Du Bois from 1910 to 1934, changed perceptions and even laws in the United States; see also Aldon D. Morris, *The Scholar Denied: W. E. B. Du Bois and the Birth of Modern Sociology* (2015), a major study of Du Bois's role in the development of scientific sociology and his relationships with Booker T. Washington, Robert Park, and other members of the Chicago school, and with the preeminent social scientist Max Weber. Key bibliographic sources include Herbert Aptheker, *Annotated Bibliography of the Published Writings of W. E. B. Du Bois* (1973), and Paul G. Partington, *W. E. B. Du Bois: A Bibliography of His Published Writings* (1979). For additional bibliography, reference, and context, see *W. E. B. Du Bois: An Encyclopedia*, edited by Gerald Horne and Mary Young (2001), and *The Cambridge Companion to W. E. B. Du Bois*, edited by Shamoan Zamir (2008), which includes excellent essays on *The Souls of Black Folk* and on Du Bois's place in American and European intellectual history.

Terry Eagleton

Eagleton has been prolific, writing more than forty critical books, scores of pieces of literary journalism, several plays, and a novel. In this he follows the model of his teacher Raymond Williams, though he has focused primarily on literary criticism and theory rather than cultural and media studies. Eagleton's early books include *Shakespeare and Society: Critical Studies in Shakespearean Drama* (1967), *Exiles and Emigres: Studies in Modern Literature* (1970), and *The Body as Language: Outline of a "New Left" Theology* (1970). He also edited collections that reflect his involvement in the Catholic Left, including *Directions: Pointers for the Post-Conciliar Church* (1968) and, with Brian Wicker, *From Culture to Revolution: The "Slant" Symposium*, 1967 (1968). In the 1970s and early 1980s he published three works of Marxist theory: *Marxism and Literary Criticism* (1976), a superb short survey of major Marxist critics and debates; *Criticism and Ideology: A Study in Marxist Literary Theory* (1976); and

Walter Benjamin; or, *Towards a Revolutionary Criticism* (1981). He also published two works of literary criticism, *Myths of Power: A Marxist Study of the Brontës* (1975; 2d ed., 1988) and *The Rape of Clarissa: Writing, Sexuality, and Class Struggle in Samuel Richardson* (1982), which is notable for its engagement with feminism.

In the mid-1980s Eagleton published the popular overview *Literary Theory: An Introduction* (1983; 3d ed., 2008) and a short history, *The Function of Criticism: From the "Spectator" to Post-Structuralism* (1984), which is perhaps the best place to start reading his work. He also published *William Shakespeare* (1986); a collection of his essays, *Against the Grain: Essays, 1975–1985* (1986); and a fine edited collection assessing the influence of his teacher, *Raymond Williams: A Critical Reader* (1989). In the 1990s, Eagleton published *The Ideology of the Aesthetic* (1990), an engaging survey of aesthetic theory from the eighteenth century to the twentieth, and several guides to Marxist theory, including *Ideology: An Introduction* (1991), the brief *Marx* (1999), and the anthology *Marxist Literary Theory: A Reader*, co-edited with Drew Milne (1996). Of Irish ancestry, he also explored Irish culture in three works, *Heathcliff and the Great Hunger: Studies in Irish Culture* (1995), *Crazy John and the Bishop and Other Essays on Irish Culture* (1998), and *Scholars and Rebels in Nineteenth-Century Ireland* (1999). His creative work includes the novel *Saints and Scholars* (1987); a script, *Wittgenstein: The Terry Eagleton Script*, the *Derek Jarman Film* (1993); and plays, *Saint Oscar and Other Plays* (1997).

At the century's end, Eagleton complained about much contemporary theory, in *The Illusions of Postmodernism* (1996), *The Idea of Culture* (2000), and *After Theory* (2003), and collected his pithy reviews in *Figures of Dissent: Critical Essays on Fish, Spivak, Žižek and Others* (2003). Through the 2000s he concentrated on traditional literary topics in *Sweet Violence: The Idea of the Tragic* (2003), *The English Novel: An Introduction* (2004), *How to Read a Poem* (2007), *The Event of Literature* (2012), and *How to Read Literature* (2013). He also returned to his early concern with religion, in *Holy Terror* (2005), *The Meaning of Life* (2007), his substantial introduction to *Jesus Christ: The Gospels* (2007), *Reason, Faith, and Revolution: Reflections on the God Debate* (2009), *Trouble with Strangers: A Study of Ethics* (2009), *On Evil* (2010), *Culture and the Death of God* (2014), and *Hope without Optimism* (2015). In addition, he continued to write on Marxism in *Why Marx Was Right* (2011) and on the confused definitions of culture in *Culture* (2016), and he wryly commented on the United States in *Across the Pond: An Englishman's View of America* (2013). *The Gatekeeper: A Memoir* (2001) offers some information on Eagleton's early biography but is otherwise unrevealing; much more informative is the substantial series of interviews

with Matthew Beaumont, *The Task of the Critic: Terry Eagleton in Dialogue* (2009).

The Eagleton Reader, edited by Stephen Regan (1998), provides an excellent sampler of Eagleton's work, as well as a complete bibliography of both his writing and commentary on him up to 1996. A special issue of *The Year's Work in Critical and Cultural Theory* 1 (1994) includes nine essays and shorter pieces reflecting on Eagleton's style and career. Two volumes titled *Terry Eagleton*, by David Alderson (2004) and James Smith (2008), provide useful overviews; Smith includes a composite bibliography. See also Ola Sigurdson, *Theology and Marxism in Eagleton and Žižek: A Conspiracy of Hope* (2012), for a study of Eagleton's view of religion, as well as John E. O'Brien, *Critical Practice from Voltaire to Foucault, Eagleton, and Beyond: Contested Perspectives* (2014), which surveys the span of Eagleton's work. Beaumont's *The Task of the Critic* includes a comprehensive bibliography of works by and about Eagleton.

T. S. Eliot

Among Eliot's books of criticism, the key texts are *The Sacred Wood* (1920), *Selected Essays* (3d ed., 1972), and *On Poetry and Poets* (1957). Other important publications include *Homage to John Dryden* (1924), in which appear the brilliant essays "John Dryden," "The Metaphysical Poets," and "Andrew Marvell." A good selection is *Selected Prose of T. S. Eliot*, edited by Frank Kermode (1975). There are hundreds of reviews, introductions to books, essays, and other critical pieces that have not yet been collected. For further insight into Eliot's development as a critic, one should also consult the posthumous book *The Varieties of Metaphysical Poetry*, edited by Ronald Schuchard (1993).

Eliot did not want to be made the subject of a biography, and much source material is either sealed or is unavailable for citation. Despite these limitations, Peter Ackroyd's *T. S. Eliot* (1984) is a valuable, crisply written book. Also useful are Lyndall Gordon, *Eliot's Early Years* (1977) and *Eliot's New Life* (1988); she presents Eliot's life as a spiritual journey and is perceptive on the poetry, but pays little attention to the criticism. Tony Sharpe, *T. S. Eliot: A Literary Life* (1991), is also recommended. Recent scholarship on Eliot includes important primary sources: *The Letters of T. S. Eliot*, edited by Valerie Eliot, Hugh Haughton, and John Haffenden (7 vols. to date, 2011–); *The Complete Prose of T. S. Eliot: The Critical Edition*, general editor Ronald Schuchard (4 vols. to date, 2014–); and *The Poems of T. S. Eliot*, edited by Christopher Ricks and Jim McCue (2 vols., 2015). Robert Crawford's *Young Eliot: From St. Louis to "The Waste Land"* (2015) is the first volume of a new biography, comprehensive and lucidly written. An excellent complement to it is *T. S. Eliot in Context*, edited by Jason Harding (2011), a wide-ranging survey of Eliot's life and

times, which includes helpful essays on his literary journalism and on his social, political, and cultural writings. Steven Matthews, *T. S. Eliot and Early Modern Literature* (2013), is helpful on the relationship between Eliot's early poetry and his literary criticism. *The New Cambridge Companion to T. S. Eliot*, edited by Jason Harding (2017), offers separate chapters on Eliot as a literary critic and as a social critic, as well as on the roles of gender and sexuality in his work.

A good place to begin study of Eliot is *T. S. Eliot: Critical Assessments*, edited by Graham Clarke (4 vols., 1990). The fourth volume includes commentaries on Eliot's critical writings. A number of older studies, which include discussion of Eliot's criticism, remain useful: F. O. Matthiessen, *The Achievement of T. S. Eliot: An Essay on the Nature of Poetry* (1935; 3d ed., 1958); Hugh Kenner, *The Invisible Poet: T. S. Eliot* (1959); Northrop Frye, *T. S. Eliot* (1967); and Bernard Bergonzi, *T. S. Eliot* (1972).

On Eliot and the modernist movement in literature, see John D. Margolis, *T. S. Eliot's Intellectual Development, 1922–1939* (1972); Piers Gray, *T. S. Eliot's Intellectual and Poetic Development, 1909–1922* (1982); Sanford Schwartz, *The Matrix of Modernism: Pound, Eliot, and Early Twentieth-Century Thought* (1985); Louis Menand, *Discovering Modernism: T. S. Eliot and His Context* (1987; 2d ed., 2007); *T. S. Eliot: The Modernist in History*, edited by Ronald Bush (1991), which includes a good essay by Michael North on Eliot and György Lukács; Gail McDonald, *Learning to Be Modern: Pound, Eliot, and the American University* (1993); and Jewel Spears Brooker, *Mastery and Escape: T. S. Eliot and the Dialectic of Modernism* (1994). Though somewhat dated in approach, C. K. Stead's *New Poetic: Yeats to Eliot* (rev. ed., 1987) and *Pound, Yeats, Eliot, and the Modernist Movement* (1986) are informative and acute in judgment. Of the many collections of essays on Eliot, the best is the special issue of the *Southern Review* 21.4 (autumn 1985).

The studies of Eliot's criticism are disappointing, but some good work can be found in *The Literary Criticism of T. S. Eliot: New Essays*, edited by David Newton-Molina (1977). In *T. S. Eliot and the Philosophy of Criticism* (1988), Richard Shusterman describes Eliot as a postmodernist and relates his work to that of Theodor Adorno, Richard Rorty, Jacques Derrida, and other philosophers and theorists. The social, cultural, and economic contexts for Eliot's poetry and criticism and the modernist movement are described in Lawrence Rainey, *Institutions of Modernism: Literary Elites and Public Culture* (1998). *T. S. Eliot and the Concept of Tradition*, edited by Giovanni Cianci and Jason Harding (2007), includes a number of cogent essays on "Tradition and the Individual Talent."

Other resources include *The Cambridge Companion to T. S. Eliot*, edited by A. D. Moody (1994); Caroline Behr, *T. S. Eliot: A Chronology of His Life and Works* (1983); and *T. S. Eliot: The*

Critical Heritage, edited by Michael Grant (1982). For bibliography, see Donald Gallup, *T. S. Eliot: A Bibliography* (rev. ed., 1969); Mildred Martin, *A Half-Century of Eliot Criticism: An Annotated Bibliography of Books and Articles in English, 1916–1965* (1972); and Beatrice Ricks, *T. S. Eliot: A Bibliography of Secondary Works* (1980). For further reading, consult the bibliography in Harding's *T. S. Eliot in Context* (see above).

Ralph Waldo Emerson

The standard editions are *The Collected Works of Ralph Waldo Emerson*, edited by Robert Spiller et al. (10 vols., 1971–2013); *The Early Lectures*, edited by Stephen Whicher, Robert Spiller, and Wallace E. Williams (3 vols., 1959–72); *Journals and Miscellaneous Notebooks*, edited by William H. Gilman et al. (16 vols., 1960–84); and *Letters*, edited by Ralph L. Rusk (6 vols., 1939). For excellent single-volume collections (which include annotations), consult *Emerson's Literary Criticism*, edited by Eric W. Carlson (1979), and *Ralph Waldo Emerson*, edited by Richard Poirier, in the Oxford Authors series (1990). Also recommended are *The Annotated Emerson*, edited by David Mikics (2012), which includes both prose and poetry, and *Ralph Waldo Emerson: The Major Prose*, edited by Ronald A. Bosco and Joel Myerson (2015), with selections from sermons, lectures, addresses, and essays. For more wide-ranging selections, see the Emerson volumes in the Library of America series, especially *Essays and Lectures* (1983). For selections from the journals, refer to *Emerson in His Journals*, edited by Joel Porte (1982). *Selected Journals*, edited by Lawrence Rosenwald (2 vols., 2010), offers a fuller sampling.

Ralph L. Rusk's *Life of Ralph Waldo Emerson* (1949) remains a basic starting point. Biographies have also been written by Gay Wilson Allen, *Waldo Emerson: A Biography* (1981), and John McAleer, *Ralph Waldo Emerson: Days of Encounter* (1984). Robert D. Richardson, *Emerson: The Mind on Fire* (1995), explores Emerson's career as an American scholar, reader, and writer. Another keen study that combines biography and literary analysis, and that explores Emerson's work as a poet, essayist, literary critic and theorist, religious thinker, and philosopher, is Lawrence Buell, *Emerson* (2003). For an account of Emerson's friends and contemporaries, see Carlos Baker, *Emerson among the Eccentrics: A Group Portrait* (1996). For incisive commentaries on Emerson's style and strategies as a writer, turn to Warner Berthoff, introduction to his edition of *Nature* (1968); Alfred Kazin, *An American Procession* (1984); Richard Poirier, *The Renewal of Literature: Emersonian Reflections* (1984); and Poirier, *Poetry and Pragmatism* (1992).

Many books have been written on Emerson; particularly worthy of attention are Barbara L. Packer, *Emerson's Fall: A New Interpretation of*

the Major Essays (1982), an analysis of Emerson's uses of language; Julie Ellison, *Emerson's Romantic Style* (1984); Irving Howe, *The American Newness: Culture and Politics in the Age of Emerson* (1986), a suggestive book that relates Emerson to his contemporaries; David Van Leer, *Emerson's Epistemology: The Argument of the Essays* (1986), a cogent investigation of Emerson's theory of knowledge; Richard A. Grusin, *Transcendentalist Hermeneutics: Institutional Authority and the Higher Criticism of the Bible* (1991), which is helpful on religious contexts; Merton M. Sealts, *Emerson on the Scholar* (1992); George J. Stack, *Nietzsche and Emerson: An Elective Affinity* (1992), an argument for the German philosopher's deep indebtedness to Emerson's ideas; Christina Zwarg, *Feminist Conversations: Fuller, Emerson, and the Play of Reading* (1995); Stanley Cavell, *Philosophical Passages: Wittgenstein, Emerson, Austin, Derrida* (1995), a rewarding meditation on Emerson's significance for twentieth-century philosophy; and Pamela Schirmeister, *Less Legible Meanings: Between Poetry and Philosophy in the Work of Emerson* (1999), which scrutinizes Emerson's conception of the act of reading and his literary and cultural project for American letters. Recent studies include James M. Albrecht, *Reconstructing Individualism: A Pragmatic Tradition from Emerson to Ellison* (2012), on selfhood and social reform in Emerson, William James, John Dewey, and Ralph Ellison; David Greenham, *Emerson's Transatlantic Romanticism* (2012), on Emerson's creative debts to British and European writers, including Samuel Taylor Coleridge and Thomas Carlyle; and Samantha C. Harvey, *Transatlantic Transcendentalism: Coleridge, Emerson, and Nature* (2013), which examines Coleridge's literary, philosophical, and theological influences on Emerson. For a richly detailed, vivid study of the period, see David Reynolds, *Beneath the American Renaissance: The Subversive Imagination in the Age of Emerson and Melville* (1988; rpt. with new foreword, 2011). Also valuable are *Emerson and Thoreau: The Contemporary Reviews*, edited by Joel Myerson (1992), and *Critical Essays on Ralph Waldo Emerson*, edited by Robert E. Burkholder and Joel Myerson (1983).

Joel Myerson has prepared a bibliography of Emerson's writings, *Ralph Waldo Emerson: A Descriptive Bibliography* (1982), and, with Robert E. Burkholder, two bibliographies of secondary sources: *A Secondary Bibliography of Ralph Waldo Emerson* (1985) and *Ralph Waldo Emerson: An Annotated Bibliography of Criticism, 1980–1991* (1994). Albert J. Von Frank, *An Emerson Chronology* (1994), is an indispensable reference. Also helpful are Tiffany K. Wayne, *Critical Companion to Ralph Waldo Emerson: A Literary Reference to His Life and Work* (2010), and *Ralph Waldo Emerson in Context*, edited by Wesley T. Mott (2014), which includes a detailed chronology and a wide range of essays on

Emerson's travels, intellectual influences, interests in many fields, and other topics.

Frantz Fanon

Fanon's major works are *Black Skin, White Masks* (1952; trans. 1967), *A Dying Colonialism* (1959; trans. 1965), *The Wretched of the Earth* (1961; trans. 1963), and *Toward the African Revolution* (1964; trans. 1976). For a good, brief introduction to Fanon's life and ideas, see David Cauter's *Frantz Fanon* (1970). For more detailed biographies, see Peter Geismar's *Fanon* (1971) and David Macey's *Frantz Fanon: A Life* (2000). Fanon's life is also the subject of the documentary film *Frantz Fanon: Black Skin, White Mask* (1995), directed by Isaac Julien. For studies that combine biographical detail with critical analysis of Fanon's thought, see Richard C. Onwuanibe, *A Critique of Revolutionary Humanism: Frantz Fanon* (1983); Hussein Abadilahi Bulhan, *Frantz Fanon and the Psychology of Oppression* (1985); *Frantz Fanon's "Black Skin, Whites Masks": New Interdisciplinary Essays*, edited by Max Silverman (2005); and Lewis R. Gordon's *What Fanon Said: A Philosophical Introduction to His Life and Thought* (2015).

Other useful critical studies include Irene Gendzier, *Frantz Fanon: A Critical Study* (1973); Renate Zahar, *Frantz Fanon: Colonialism and Alienation* (1969; trans. 1974); Lewis Gordon, *Frantz Fanon and the Crisis of European Man* (1995); and Ato Sekyi-Otu, *Fanon's Dialectic of Experience* (1996). For a feminist engagement with Fanon's work, see "Dark Continents: Epistemologies of Racial and Sexual Difference in Psychoanalysis and the Cinema," a chapter in Mary Ann Doane's *Femmes Fatales: Feminism, Film Theory, Psychoanalysis* (1991) that critiques Fanon's psychoanalytic reading of miscegenation and the repressed desire for interracial sex as rape, and, more sympathetically, T. Denean Sharpley-Whiting's *Frantz Fanon: Conflicts and Feminisms* (1998) and Ashley Bohrer's "Fanon and Feminism: The Discourse of Colonization in Italian Feminism," *Interventions: International Journal of Postcolonial Studies* 17 (2015). Several essay collections of the 1990s marked a resurgence of interest in Fanon's thought: see *Frantz Fanon: Critical Perspectives*, edited by Anthony Alessandrini (1999); *Rethinking Fanon: The Continuing Dialogue*, edited by Nigel Gibson (1999); and *Fanon: A Critical Reader*, edited by Lewis Gordon, T. Denean Sharpley-Whiting, and Renee White (1996). The last of these also includes a particularly extensive bibliography; see also the primary and secondary bibliographies in Nigel Gibson's *Fanon: The Postcolonial Imagination* (2003) and Silverman's *Frantz Fanon's "Black Skin, Whites Masks"* (cited above).

Stanley E. Fish

Grounded in the study of seventeenth-century literature, Fish's early books are *John Skelton's Poetry* (1965), *Surprised by Sin: The Reader in "Paradise*

Lost" (1967; 2d ed., 1999), *Self-Consuming Artifacts: The Experience of Seventeenth-Century Literature* (1972), and *The Living Temple: George Herbert and Catechizing* (1978). *Is There a Text in This Class? The Authority of Interpretive Communities* (1980) expands his early consideration of the reader to more general discussions of interpretation and theory. Thereafter Fish broadened his field of inquiry to encompass law, pragmatism, and professionalism, as well as literature and literary theory, in three collections of essays: *Doing What Comes Naturally: Change, Rhetoric, and the Practice of Theory in Literary and Legal Studies* (1989), *There's No Such Thing as Free Speech . . . and It's a Good Thing, Too* (1994), and *The Trouble with Principle* (1999). Fish's *Professional Correctness: Literary Studies and Political Change* (1995) and subsequent *Save the World on Your Own Time* (2008) chastise contemporary critics, holding that politics are not a part of literary criticism. *How Milton Works* (2001) culminates Fish's thinking on the writer, and *Versions of Antihumanism: Milton and Others* (2012) collects essays from several decades. Fish has increasingly reached out beyond an academic audience in *How to Write a Sentence: And How to Read One* (2011), *The Fugitive in Flight: Faith, Liberalism, and Law in a Classic TV Show* (2011), *Versions of Academic Freedom: From Professionalism to Revolution* (2014), and *Think Again: Contrarian Reflections on Life, Culture, Politics, Religion, Law, and Education* (2015), a collection drawn from his columns in the *New York Times* (1995–2013). *The Stanley Fish Reader*, edited by H. Aram Veesser (1999), offers a diverse selection of his work. Gary A. Olson's *Stanley Fish, America's Enfant Terrible: The Authorized Biography* (2016) is merely a celebrity profile, lacking notes or bibliography. For an account of some aspects of his career, see "Stanley Agonistes: An Interview with Stanley Fish," conducted by Jeffrey J. Williams, in *Critics at Work: Interviews 1993–2003* (ed. Williams, 2004).

The first wave of commentary on Fish deals with reader-response theory. A famous debate between Fish and Wolfgang Iser appeared in *Diacritics* 11 (1981). The best discussion of Fish's concept of interpretive communities is Steven Mailloux's *Interpretive Conventions: The Reader in the Study of American Fiction* (1982). A leftist assessment of Fish is Mary Louise Pratt, "Interpretive Strategies/Strategic Interpretation: On Anglo-American Reader Response Criticism," *Boundary 2* 2.11 (1982/83). Important early critiques also include Gerald Graff's "Interpretation on Tlon: A Response to Stanley Fish," *New Literary History* 17 (1985), and a chapter in Ellen Rooney's *Seductive Reasoning: Pluralism as the Problematic of Contemporary Literary Theory* (1989).

The later commentary on Fish primarily deals with his antifoundationalism. Christopher Norris's *What's Wrong with Postmodernism: Critical Theory and the Ends of Philosophy* (1990) includes a repre-

sentative critique of the circularity of Fish's argument that theory has "no consequences." In "The Estate Agent," *London Review of Books*, March 2, 2000, the Marxist critic Terry Eagleton calls Fish "a brash, noisy entrepreneur of the intellect" and criticizes the apolitical outcome of Fish's "no consequences" argument. Gary A. Olson's *Justifying Belief: Stanley Fish and the Work of Rhetoric* (2002) is a good account of Fish's nonliterary work, and concludes with two interviews and a chronological bibliography of Fish's writing. See also *Postmodern Sophistry: Stanley Fish and the Critical Enterprise*, edited by Olson and Lynn Worsham (2004), which collects fifteen essays on Fish's work, including reassessments by Graff and Mailloux and Eagleton's "Estate Agent." *Stanley Fish on Philosophy, Politics, and Law: How Fish Works* (2014), by Michael Robertson, studies Fish's influence in legal theory.

Michel Foucault

Foucault's books published during his lifetime include *Madness and Civilization* (1961; trans. 1965); *The Birth of the Clinic* (1963; trans. 1973); *Death and the Labyrinth: The World of Raymond Roussel* (1963; trans. 1986); *The Order of Things* (1966; trans. 1970); *The Archaeology of Knowledge* (1969; trans. 1972); *This Is Not a Pipe* (1973; trans. 1981); *Discipline and Punish: The Birth of the Prison* (1975; trans. 1977); and the three volumes of *The History of Sexuality: An Introduction* (1976; trans. 1978), *The Use of Pleasure* (1984; trans. 1985), and *The Care of the Self* (1984; trans. 1986). Essays and interviews are collected in *Language, Counter-Memory, and Practice: Selected Essays and Interviews*, edited by Daniel Bouchard (1977); *Power/Knowledge*, edited by Colin Gordon (1980); *Technologies of the Self: A Seminar with Michel Foucault*, edited by Luther H. Martin, Huck Gutman, and Patrick H. Hutton (1988); *Politics, Philosophy, Culture: Interviews and Other Writings, 1977–1984*, edited by Lawrence Kritzman (1988); *Foucault Live: Interviews, 1966–1984*, edited by Sylvère Lotringer (1989; 2d ed., 1996); *The Foucault Effect: Studies in Governmentality*, edited by Graham Burchell, Colin Gordon, and Peter Miller (1991); *The Politics of Truth*, edited by Sylvère Lotringer (1997); a three-volume collection of essays and interviews, *The Essential Works of Michel Foucault, 1954–1984*, edited by Paul Rabinow (1997–2000); *Introduction to Kant's Anthropology* (2008; trans. 2008); *Speech Begins after Death* (2011; trans. 2013); and *Language, Madness, and Desire: On Literature* (2013; trans. 2015). Foucault's annual course lectures at the Collège de France have been translated and published in English: *Abnormal, 1974–1975* (2003), "Society Must Be Defended," 1975–1976 (2003), *The Hermeneutics of the Subject, 1981–1982* (2005), *Security, Territory, Population, 1977–1978* (2007), *Psychiatric Power, 1973–1974* (2008), *The Birth of Biopolitics, 1978–1979* (2008), *The Government of Self and Others, 1982–1983* (2011), *The*

Courage of Truth, 1983–1984 (2011), *Lectures on the Will to Know*, 1970–1971 (2013), *On the Government of the Living*, 1979–1980 (2014), and *On the Punitive Society*, 1972–1973 (2015). Foucault also edited three books: *I, Pierre Rivière, Having Slaughtered My Mother, My Sister, and My Brother . . . : A Case of Parricide in the 19th Century* (1973; trans. 1975), *Hercule Barbin: Being the Recently Discovered Memoirs of a Nineteenth-Century French Hermaphrodite* (1978; trans. 1980), and *Disorderly Families: Infamous Letters from the Bastille Archive* (1982; trans. 2017). Didier Eribon's sober and reliable biography *Michel Foucault* (1989, trans. 1991; 2d French ed., 2011) can be supplemented with Stuart Elden's more detailed intellectual biographies *Foucault's Last Decade* (2016) and *Foucault: The Birth of Power* (2017).

The critical commentary on Foucault is extensive. Lisa Downing, *Cambridge Introduction to Foucault* (2008); *Michel Foucault: Key Concepts*, edited by Dianna Taylor (2011); *A Companion to Foucault*, edited by Christopher Falzon, Timothy O'Leary, and Jana Sawicki (2013); *Cambridge Foucault Lexicon*, edited by Leonard Lawler and John Nale (2014); and *The Routledge Guidebook to Foucault's the History of Sexuality*, edited by Chloë Taylor (2017) are all reliable places to start. David M. Halperin's *Saint Foucault: Towards a Gay Hagiography* (1995) examines Foucault's gay activism and the impact of his work on queer theory. Béatrice Han's *Foucault's Critical Project: Between the Transcendental and the Historical* (1998; trans. 2002) addresses Foucault's methodology by tracing his debts to and differences from Kant, Nietzsche, and Heidegger. Jeffrey T. Nealon's *Foucault beyond Foucault: Power and Its Intensifications since 1984* (2008) offers a revisionist reading of Foucault's work on power. Four highly influential works that engage Foucault's Collège de France lectures are Giorgio Agamben's *Homo Sacer: Sovereign Power and Bare Life* (1995; trans. 1998), Roberto Esposito's *Bios: Biopolitics and Philosophy* (2004; trans. 2008), Nikolas Rose's *The Politics of Life Itself: Biomedicine, Power and Subjectivity in the Twenty-First Century* (2007), and Wendy Brown's *Undoing the Demos: Neoliberalism's Stealth Revolution* (2015). A good way to start studying Foucault is to read through the many collections of essays on his work, which include *Foucault Now: Current Perspectives in Foucault Studies*, edited by James D. Faubion (2014); *The Government of Life: Foucault, Biopolitics, and Neoliberalism*, edited by Vanessa Lemm and Miguel Vatter (2014); *Biopower: Foucault and Beyond*, edited by Vernon W. Cisney and Nicolae Morar (2016); and *Foucault and Neoliberalism*, edited by Daniel Zamora and Michael C. Behrent (2016). Taylor's *Key Concepts* volume has a superb bibliography of Foucault's work, while both it and Falzon's *Companion to Foucault* have good bibliographies of secondary work.

Sigmund Freud

The English translation of Freud's collected works, carried out under the direction of James Strachey for Leonard and Virginia Woolf's Hogarth Press, has become in many ways more authoritative than any collected works in German. This *Standard Edition of the Complete Psychological Works of Sigmund Freud* (24 vols., 1953–74) is thus the edition most often cited. A handy collection of Freud's literary and artistic essays was edited by Neil Hertz in 1997 under the title *Writings on Art and Literature*. For more general purposes, see Peter Gay's *Freud Reader* (1989) and Elisabeth Young-Bruehl's *Freud on Women* (1990). Many volumes of Freud's copious correspondence (he never left a letter unanswered) have also been published. A monumental three-volume biography, *The Life and Work of Sigmund Freud*, was published by Ernest Jones, who knew Freud well (1953–57; abridged into one volume, 1961). *Freud: A Life for Our Time* (1988) by Peter Gay is excellent; his invaluable bibliographical essays appended to each chapter delineate all the major debates. In *Freud: Darkness in the Midst of Vision* (2000), the psychoanalyst Louis Breger engages with Freud and his work in unexpected and new ways. For an intriguing study of Freud's final years in London and how he was affected by the rise of totalitarian figures like Hitler, see Mark Edmundson's *The Death of Sigmund Freud: The Legacy of His Last Days* (2004).

Philip Rieff's *Freud: The Mind of the Moralist* (1959) and Peter Gay's *Reading Freud* (1990) are good introductions, the latter more literary. See also Paul Ricoeur's *Freud and Philosophy: An Essay on Interpretation* (1970) and Steven Marcus's *Freud and the Culture of Psychoanalysis: Studies in the Transition from Victorian Humanism to Modernity* (1984). For a collection of essays critical of Freud, see *Unauthorized Freud: Doubters Confront a Legend*, edited by Frederick C. Crews (1998).

On the centrality of Freud to contemporary critical theory, see the works of Jacques Lacan and Jacques Derrida. Related developments can be found in *The Literary Freud: Mechanisms of Defense and the Poetic Will*, edited by Joseph H. Smith (1980); Malcolm Bowie, *Psychoanalysis and the Future of Theory* (1993), speculates about Freud's continuing impact on discussions of art; while *Freud and Forbidden Knowledge*, edited by Peter L. Rudnytsky and Ellen Handler Spitz (1994), investigates the literary and religious sources of Freud's concepts. See also Graham Frankland's *Freud's Literary Culture* (2000).

For a good general approach to early feminist responses to Freud, see Juliet Mitchell's *Psychoanalysis and Feminism* (1974). A related work by Lisa Appignanesi and John Forrester, *Freud's Women* (1992), analyzes both the historical and the theoretical importance of femininity and of the many women who surrounded Freud as analysts

and patients. Luce Irigaray, in *Speculum of the Other Woman* (1974; trans. 1985), and Sarah Kofman, in *The Enigma of Woman* (1980; trans. 1985), revisit Freud's writings on femininity from a French poststructuralist perspective. For a good overview of the intersection of Freud, feminism, and literary studies, see *In Dora's Case: Freud—Hysteria—Feminism*, edited by Charles Bernheimer and Claire Kahane (2d ed., 1990). A fascinating compilation by Susan Stanford Friedman, *Analyzing Freud: Letters of H.D., Bryher, and Their Circle* (2002), provides insight into Freud's mind as well as the minds of the modernist woman writer H.D. and her correspondents. In *Scenes of Projection: Recasting the Enlightenment Subject* (2015), Jill H. Casid engages Freudian psychoanalysis and feminist and queer theories to explore modernity, the modern subject, colonialism, and the history of projection.

On Freud's *Interpretation of Dreams*, see Lawrence M. Porter, *The Interpretation of Dreams: Freud's Theories Revisited* (1987); Alexander Welsh, *Freud's Wishful Dream Book* (1994); Harvie Ferguson, *The Lure of Dreams: Sigmund Freud and the Construction of Modernity* (1996); and the collection of interdisciplinary essays edited by Laura Marcus, *Sigmund Freud's "The Interpretation of Dreams": New Interdisciplinary Essays* (1999). Mary Bergstein's *Mirrors of Memory: Freud, Photography, and the History of Art* (2010) is a sweeping study of how Freud's photograph-filled library affected the psychoanalyst's unconscious, his interpretation of dreams, and the field itself.

Two essays on Freud's "Uncanny" deserve special note: Hélène Cixous, "Fiction and Its Phantoms," *New Literary History* 7 (1976), and "Freud and the Sandman" by Neil Hertz, published in his study of the sublime, *The End of the Line: Essays on Psychoanalysis and the Sublime* (1985). Contemporary literary studies have been greatly affected by Freud's notion of the uncanny, from those focusing on the Renaissance (Marjorie Garber, *Shakespeare's Ghost Writers: Literature as Uncanny Causality*, 1984) to the Enlightenment (Terry Castle, *The Female Thermometer: Eighteenth-Century Culture and the Invention of the Uncanny*, 1995) to the posthuman Gothic (Judith Halberstam, *Skin Shows: Gothic Horror and the Technology of Monsters*, 1995). Julia Kristeva, in *Strangers to Ourselves* (1988; trans. 1991), applies the notion to political science, while Anthony Vidler, in *The Architectural Uncanny: Essays in the Modern Unhomely* (1994), explores it in architecture.

E. L. McCallum's *Object Lessons: How to Do Things with Fetishism* (1999) offers a full-scale analysis of Freud's notion. Two books attempt to combine the Freudian and the Marxian versions of fetishism: Slavoj Žižek's *The Sublime Object of Ideology* (1989) and Rachel Bowlby's *Shopping with Freud* (1993). Alistair Rolls's *Paris and the Fetish: Primal Crime Scenes* (2014) uses Freud to

explore fetishism in the French crime scenes, the novel, and poetics of Charles Baudelaire.

Much research deals with Freud's Jewishness: Marthe Robert's *From Oedipus to Moses: Freud's Jewish Identity* (1974; trans. 1976) and Susan Handelman's *Slayers of Moses: The Emergence of Rabbinic Interpretation in Modern Literary Theory* (1982) give two early versions of this analysis, later taken in other directions by Sander Gilman in both *Freud, Race, and Gender* (1993) and *The Case of Sigmund Freud: Medicine and Identity at the Fin de Siècle* (1993). Jay Geller's *On Freud's Jewish Body: Mitigating Circumcisions* (2007) and Adam Phillips's *Becoming Freud: The Making of a Psychoanalyst* (2014) continue this trend. Diana Fuss's *Identification Papers* (1995) reads Freud through the lenses of queer and postcolonial theory. Fuss also has written a superior comparative study of Freud's interior life in *The Sense of an Interior: Four Writers and the Rooms That Shaped Them* (2004). Stefan Bird-Pollan's *Hegel, Freud, Fanon: The Dialectic of Emancipation* (2015) brings Freudian theories in conversation with Hegelian and Fanonian dialectics of recognition and liberation.

The Cambridge Companion to Freud, edited by Jerome Neu (1991), is a useful resource. Among the bibliographies available in English, by far the best for the period up to 1988 is the bibliographical survey in Peter Gay's biography. An excellent synthesis of subsequent bibliographic materials and resources is provided by Breger's biography cited above, *Freud*. Breger's follow-up to *Freud*, *A Dream of Undying Fame: How Freud Betrayed His Mentor and Invented Psychoanalysis* (2009), provides an updated bibliography on Freud and the history of psychoanalysis.

Northrop Frye

Frye's major books include *Fearful Symmetry* (1947), *Anatomy of Criticism* (1957), T. S. Eliot (1963), *The Return of Eden: Five Essays on Milton's Epics* (1965), and *A Study of English Romanticism* (1968). He also wrote a number of books on Shakespeare, including *Fools of Time: Studies in Shakespearean Tragedy* (1967) and *Northrop Frye on Shakespeare* (1986). Among his collections of essays on diverse topics are *Fables of Identity: Studies in Poetic Mythology* (1963), *The Stubborn Structure: Essays on Criticism and Society* (1970), and *Spiritus Mundi: Essays on Literature, Myth, and Society* (1976). See also *Reading the World: Selected Writings, 1935–1976*, edited by Robert D. Denham (1990). In addition, Frye has been a significant force in turning the attention of literary scholars to the narratives and structural patterns of the Bible; his books on this subject include *The Great Code: The Bible and Literature* (1982) and *Words with Power: Being a Second Study of the Bible and Literature* (1990).

The University of Toronto Press has published the *Collected Works of Northrop Frye* in thirty vol-

umes (1996–2012), under the general editorship of Alvin A. Lee; volume 30 is an index to the collection. See also *Northrop Frye's Uncollected Prose*, edited by Robert D. Denham (2015). Frye gave many interviews about his life, work, and career; see, for example, the collection *Northrop Frye in Conversation*, edited by David Cayley (1996). Also valuable is John Ayre's *Northrop Frye: A Biography* (1989). For further biographical contexts, see *Remembering Northrop Frye: Recollections by His Students and Others in the 1940s and 1950s*, edited by Robert D. Denham (2010); and Robert D. Denham, *Northrop Frye and Others: Twelve Writers Who Helped Shape His Thinking* (2015), on the impact of Aristotle, Longinus, and other writers, philosophers, and theologians on Frye's work. Another good resource is *The Northrop Frye Quote Book*, compiled by John Robert Colombo (2014).

Good brief overviews include Robert D. Denham, *Northrop Frye and Critical Method* (1974); David Cook, *Northrop Frye: A Vision of the New World* (1986); Ian Balfour, *Northrop Frye* (1988); and Joseph Adamson, *Northrop Frye: A Visionary Life* (1993). The most comprehensive studies are A. C. Hamilton, *Northrop Frye: An Anatomy of His Criticism* (1990), and Jonathan Locke Hart, *Northrop Frye: The Theoretical Imagination* (1994).

There are a number of helpful collections: *Northrop Frye in Modern Criticism*, edited by Murray Krieger (1966), which includes essays by Krieger, Angus Fletcher, William K. Wimsatt Jr., and Geoffrey H. Hartman, comments by Frye, and a checklist of his writings; *Centre and Labyrinth: Essays in Honour of Northrop Frye*, edited by Eleanor Cook et al. (1983); *Northrop Frye and Eighteenth-Century Studies*, edited by Howard D. Weinbrot—a special issue of *Eighteenth-Century Studies* 24 (winter 1990–91); *Visionary Poetics: Essays on Northrop Frye's Criticism*, edited by Robert D. Denham and Thomas Willard (1991); *The Legacy of Northrop Frye*, edited by Alvin A. Lee and Robert D. Denham (1994), which is especially useful in describing Frye's contributions to Canadian culture and his work on Romanticism, modernism, and religion; and Caterina Nella Cotrupi, *Northrop Frye and the Poetics of Process* (2000). Another excellent collection is *Rereading Frye*, edited by David Boyd and Imre Salusinsky (1999). In *The Twentieth-Century Humanist Critics: From Spitzer to Frye* (2007), William Calin examines Frye, Leo Spitzer, Erich Auerbach, C. S. Lewis, and others in the contexts of canon formation, humanism, and modernism. Recent scholarship includes *Northrop Frye's Canadian Literary Criticism and Its Influence*, edited by Branko Gorjup (2009); Michael Sinding, *Body of Vision: Northrop Frye and the Poetics of Mind* (2014), which connects Frye's studies of the imagination to cognitive poetics and cultural mythology; Brian Russell Graham, *The Necessary Unity of Opposites: The Dialectical Thinking of Northrop Frye* (2011), on Frye's dialectical approach to thought and effort to transcend binary

constructs in his considerations of literature, politics, and society; and *Educating the Imagination: Northrop Frye Past, Present, and Future*, edited by Alan Bewell, Neil ten Kortenaar, and Germaine Warkentin (2015), which includes essays on Frye's symbolism; utopianism; similarities to and differences from Fredric Jameson, Paul de Man, and Jacques Derrida; and other topics.

See also Robert D. Denham, *Northrop Frye: An Annotated Bibliography of Primary and Secondary Sources* (1987), and the essays and bibliographies in the *Northrop Frye Newsletter*. The Northrop Frye Centre was established in 1988 at the University of Toronto. Also helpful is the bibliography in Bewell, ten Kortenaar, and Warkentin's *Educating the Imagination* (see above).

Henry Louis Gates Jr.

Gates first had an impact on literary studies through his editorial work: he rediscovered the earliest novel by an African American, Harriet E. Wilson's *Our Nig: Or, Sketches from the Life of a Free Black, in a Two Story White House*, North (1983), which had been privately printed in 1859. He also edited three important anthologies of contemporary criticism: *Black Literature and Literary Theory* (1984), "Race," *Writing, and Difference* (1986), and *Reading Black, Reading Feminist: A Critical Anthology* (1990). Gates's first two books of his own, *Figures in Black: Words, Signs, and the "Racial" Self* (1987), a collection of essays, and *The Signifying Monkey: A Theory of African-American Literary Criticism* (1988), which won the 1989 American Book Award, innovatively combine poststructuralist literary theory and indigenous African literary sources. His next book, *Loose Canons: Notes on the Culture Wars* (1992), which includes "Talking Black," collects Gates's essays from the late 1980s through the early 1990s on the canon, race, and criticism. Though focused on scholarly debates, it shows Gates's move from post-structural theory toward broader cultural issues, and from a dense, academic style toward a more lively one, accessible to a wider public.

Through the 1990s Gates shifted to address mainstream, popular audiences. His *Colored People: A Memoir* (1994) is an interesting account of his childhood in a small town in West Virginia. *The Future of the Race* (1996) is a dialogue between Gates and the philosopher Cornel West on the social possibilities for African Americans. Subsequently, Gates published a series of books composed of vignettes of notable African Americans, including *Thirteen Ways of Looking at a Black Man* (1997); *The African-American Century: How Black Americans Have Shaped Our Country*, with Cornel West (2000); and the brief and fascinating *The Trials of Phillis Wheatley: America's First Black Poet and Her Encounters with the Founding Fathers* (2003). In addition, he has looked at the wide legacy of the African diaspora in *Tradition and the Black Atlantic: Critical Theory in the African*

Diaspora (2010), *Black in Latin America* (2011), and *Life upon These Shores: Looking at African American History, 1513–2008* (2011). *The Henry Louis Gates, Jr. Reader*, edited by Abby Wolf (2012), collects primarily shorter essays, several reflecting on his family and career, and also includes five interviews.

A number of his projects since the late 1990s derive from television specials; in 1999 he wrote and narrated the six-part series *Wonders of the African World*, which was published as a book of the same title (1999). Among other projects, he has explored the often surprising genealogies of African Americans, resulting in *Finding Oprah's Roots: Finding Your Own* (2007), *Faces of America: How 12 Extraordinary People Discovered Their Pasts* (2010), and *Finding Your Roots: The Official Companion to the PBS Series* (2014). He also wrote, with Donald Yacovone, *The African Americans: Many Rivers to Cross* (2013), the companion to his six-part PBS documentary.

One of Gates's major goals is to increase the institutional presence of African American writers; thus he and Nellie Y. McKay were general editors of *The Norton Anthology of African American Literature* (1997; 3d ed. 2014). He is the editor of the Schomburg Library of Nineteenth-Century Black Women Writers, the Amistad Critical Studies in African American Literature (with K. Anthony Appiah), and the Black Periodical Literature Project, and he has edited or co-edited more than sixty volumes of African American writing and criticism on African American literature and culture. One of his most important editorial achievements has been producing, with Kwame Anthony Appiah, *Encarta Africana* (2000)—an encyclopedia in electronic format, on the model of the *Encyclopaedia Britannica*, of African American experience. It was published as *Africana* (1999) and subsequently expanded to the five-volume *Africana: The Encyclopedia of the African and African-American Experience* (2d ed., 2005). He also co-edited, with Evelyn Brooks-Higginbotham, the eight-volume *The African American National Biography* (2008), and, with David Bindman, the five-volume *The Image of the Black in Western Art* (2010–14).

Meg Greene's *Henry Louis Gates, Jr.: A Biography* (2012) provides a sketch of his life and career. In addition, Gates has also been the subject of two biographies for young adults.

Joyce A. Joyce's "Who the Cap Fit: Unconsciousness and Unconsciousness in the Criticism of Houston A. Baker, Jr. and Henry Louis Gates, Jr.," *New Literary History* 18 (1987), charges Gates with elitism; it drew a sharp answer from Gates, distinguishing the different voices he uses in academic and public forums. In "Henry Louis Gates, Jr., and African American Literary Discourse," *New England Quarterly* 62 (1989), Wahneema Lubiano offers a balanced assessment of Gates's theory, which she defines as "precisely

a theory of literary history," and argues against the charge that it is apolitical. Kenneth W. Warren's "Delimiting America: The Legacy of Du Bois," *American Literary History* 1 (1989), criticizes Gates's reliance on the image of professionalistic pluralism "to establish some non-political notion of black unity." Sandra Adell, in *Double-Consciousness/Double Bind: Theoretical Issues in Twentieth-Century Black Literature* (1994), relevantly compares Gates and Baker. Adolph L. Reed, in *W. E. B. Du Bois and American Political Thought: Fabianism and the Color Line* (1997), castigates Gates, especially in his later work, as a center-right apologist. Phillip M. Richards, *Black Heart: The Moral Life of Recent African American Letters* (2006), discusses Gates's influence and criticizes his separation of African American culture from the broader humanistic tradition. The prominent critic Houston A. Baker Jr., in *Betrayal: How Black Intellectuals Have Abandoned the Ideals of the Civil Rights Era* (2008), attacks Gates's centrism. Charles J. Ogletree Jr., in *The Presumption of Guilt: The Arrest of Henry Louis Gates, Jr. and Race, Class, and Crime in America* (2010), gives a detailed account of a controversial case when Gates was arrested for disorderly conduct after forcing open a door of his own home in Cambridge, Mass. Greene's biography includes a selective bibliography of Gates's work.

Sandra M. Gilbert and Susan Gubar

Gilbert and Gubar have co-edited *Shakespeare's Sisters: Feminist Essays on Women Poets* (1979), *The Norton Anthology of Literature by Women: The Traditions in English* (1985; 3d ed., 2007), *The Female Imagination and the Modernist Aesthetic* (1986), *Mothersongs: Poems for, by, and about Mothers* (1995), and *Feminist Literary Theory and Criticism: A Reader* (2007). They also coauthored a three-volume sequel to their *Madwoman in the Attic* (1979) on women and modernism titled *No Man's Land: The Place of the Woman Writer in the Twentieth Century*, containing *The War of the Words* (1988), *Sexchanges* (1989), and *Letters from the Front* (1994). Paying more attention than *Madwoman in the Attic* did to the historical and ideological context of literary works and focusing less on masterpieces by great writers, *No Man's Land* reflects the changes in feminism and prevailing critical models during the 1980s. Gilbert and Gubar's satire of contemporary academic critical schools and movements, *Masterpiece Theatre: An Academic Melodrama*, was published in 1995. A second edition of *Madwoman in the Attic* was published in 2000 and features an indispensable introduction that traces the origins and reception of the book.

Sandra M. Gilbert's works are *Acts of Attention: The Poems of D. H. Lawrence* (1973); the nonfiction account of the death of her husband, *Wrongful Death: A Medical Tragedy* (1995), and *Death's Door: Modern Dying and the Way We Grieve*

(2006); *Rereading Women: Thirty Years of Exploring Our Literary Traditions* (2011); *The Culinary Imagination: From Myth to Modernity* (2014); and nine books of poetry: *In the Fourth World* (1978), *Summer Kitchen* (1983), *Emily's Bread* (1984), *Blood Pressure* (1988), *Ghost Volcano* (1995), *Kissing the Bread* (2000), *The Italian Collection: Poems of Heritage* (2003), *Belongings* (2005), and *Aftermath* (2011). Biographical information can be found in *Contemporary Authors*, New Revision Series 106 (2002).

Susan Gubar has co-edited *For Adult Users Only: The Dilemmas of Violent Pornography* (1989), with Joan Hoff; and *English Inside and Out: The Places of Literary Criticism* (1992), with Jonathan Kamholtz. She is the author of *Racechanges: White Skin, Black Face in American Culture* (1997), *Critical Condition: Feminism at the Turn of the Century* (2000), *Poetry after Auschwitz: Remembering What One Never Knew* (2003), *Rooms of Our Own* (2006), *Judas: A Biography* (2008), *Memoir of a Debulked Woman: Enduring Ovarian Cancer* (2012), and *Reading and Writing Cancer: How Words Heal* (2016). Biographical information can be found in *Contemporary Authors*, New Revision Series 70 (1999) and in Robin Wilson's "A Feminist Professor's Closing Chapters," *Chronicle of Higher Education*, April 22, 2012.

Toril Moi's famous critique of *Madwoman in the Attic* in her *Sexual/Textual Politics* (1985) encapsulates the "French feminist" objections to Gilbert and Gubar's work. Elizabeth Rosdeitcher's "Interview with Sandra M. Gilbert and Susan Gubar," *Critical Texts* 6.1 (1989), is a good place to start in studying their work. A range of critical responses can be traced in Laura E. Donaldson, "The Miranda Complex: Colonialism and the Question of Feminist Reading," *Diacritics* 18.3 (1988); Jane Marcus, "The Asylums of Antaeus: Women, War, and Madness," in *The New Historicism* (ed. H. Aram Vevers, 1989); and *Making Feminist History: The Literary Scholarship of Sandra M. Gilbert and Susan Gubar*, edited by William E. Cain (1994). Annette R. Federico's edited collection *Gilbert and Gubar's "The Madwoman in the Attic" after Thirty Years* (2009) provides valuable reflections on that work's legacy and an important introduction by Gilbert. Also useful are Jacqueline Vaught Brogan's interview with Gilbert in *Women's Studies* 38 (2009) and Janet Gezari's "Sandra M. Gilbert and Susan Gubar's *The Madwoman in the Attic*," *Essays in Criticism* 56 (2006).

Paul Gilroy

To date Paul Gilroy has written eight books. *There Ain't No Black in the Union Jack: The Cultural Politics of Race and Nation* (1987; new intro., 2002), his first, examines a twenty-year evolution in postwar British racial politics. Emphasizing the interrelations among discourses of race, class, and nation, he argues that British politicians and scholars on both sides of the political divide fail to

take account of insidious racial dynamics. In *Small Acts: Thoughts on the Politics of Black Cultures* (1993), published in the same year as *The Black Atlantic*, discussed above in the headnote, Gilroy combines photos, art reviews, speeches, and interviews with bell hooks, Toni Morrison, and others to highlight differences between black British culture and the diverse black community in the United States. In *Between Camps: Race, Identity and Nationalism at the End of the Colour Line* (2000), he claims that individuals currently live in "camps"—defined in terms of race, nationality, culture, and religion—and looks to the concept of diaspora, which decouples territory and identity, to heal the rifts between them. *Against Race: Imagining Political Culture beyond the Colour Line* (2000), a revised version of *Between Camps* for an American audience, continues to argue against race as an organizing principle in collective human experience. In his *After Empire: Melancholia or Convivial Culture?* (2004), published in the United States with the subtitle *Multiculture of Postcolonial Melancholia*, Gilroy examines race hierarchies and their consequences, notably involvements in colonialism and fascism. *Black Britain—A Photographic History* (2007), with a preface by Stuart Hall, uses photography to trace the cultural role of African and Caribbean descendants living in Great Britain. Originally delivered as the W. E. B. Du Bois Lectures at Harvard University, *Darker Than Blue: On the Moral Economies of Black Atlantic Culture* (2010) examines at once the global influence of black American culture, particularly music, and the acquisitive nature of American consumer capitalism, which has done harm to black political cultures as the right to acquire things, lauded in the music, has replaced the demands for black rights and social and restorative justice in the music of the civil rights and black power generation.

While Gilroy's calls for cosmopolitan and utopian conceptions of race, culture, and identity have been widely influential, they have also generated a great deal of controversy among academics and activists. Among articles and book chapters focusing on *The Black Atlantic* are Nadi Edwards's "Roots, and Some Routes Not Taken," *Found Object* 4 (1994), which faults Gilroy for equating "black community" with "oppressed"; Louis Chude-sokei's "The Black Atlantic Paradigm: Paul Gilroy and the Fractured Landscape of 'Race,'" *American Quarterly* 48 (1996), a book review that finds Gilroy's view of Black Atlantic identities too narrow; J. Blaine Hudson's "The African Diaspora and the 'Black Atlantic': An African American Perspective," *Negro History Bulletin* 60 (1997), which maintains that Gilroy's construct is not valid for exploring the historical dimensions of African diaspora before 1800; and Colin Palmer's "Defining and Studying the Modern African Diaspora," *Perspectives: A Newsletter of the American Historical Association* 36.6

(1998), which contends that Gilroy pays insufficient attention to the African continent and to African diasporic movement outside the Atlantic. In *Monsters and Revolutionaries: Colonial Family Romance and Métissage* (1999), Françoise Vergès raises the same criticisms as Chude-sokei and Hudson, adding that an exclusive focus on the Atlantic slave trade hinders the explorations of other areas, such as forced migrations across the Indian Ocean and the interactions of diasporic Africans with the Islamic world. Houston Baker, in *Turning South Again: Re-thinking Modernism/Re-reading Booker T.* (2001), takes issue with Gilroy's neglect of American blackness and also asserts that his discussion of modernity is limiting. Other critiques of Paul Gilroy's approach, such as Cheryl Johnson-Odim's "From Both Sides Now: Gendering the Black Atlantic," in *Women in African Studies: Scholarly Publishing* (ed. Cassandra Rachel Veney and Paul Tiyanbe Zeleza, 2001), take up the issue of race and gender. Edited anthologies that critically examine Gilroy's theoretical frameworks and his condemnations of ethnicity and nationality include *Beyond the Black Atlantic: Relocating Modernization and Technology*, edited by Walter Goebel and Saskia Schabio (2006), and *Recharting the Black Atlantic: Modern Cultures, Local Communities, Global Connections*, edited by Annalisa Oboe and Anna Scacchi (2008). Criticism of Gilroy's Anglophone-centered Black Atlantic can be found in *Comparative Perspectives on the Black Atlantic*, edited by Jossiana Arroyo and Elizabeth Marchant, a special issue of *Comparative Literature Studies* (49.2 [2012]); its articles expand Gilroy's concept of the Black Atlantic world and the African diaspora to include Latin America and the Caribbean as well as Luso-Africa and the Cape Verde Islands, while *Retrieving the Human: Reading Paul Gilroy*, edited by Rebecka Rutledge Fisher and Jay Garcia (2014), moves beyond *The Black Atlantic* to examine a range of Gilroy's interrogations of neoliberal politics, identity politics, empire, Frantz Fanon's theories of oppression, among other matters.

As part of the Routledge Critical Thinkers series, Paul Williams's *Paul Gilroy* (2013) engages Gilroy's work in its totality as well as the various influences on his thought. The volume provides a useful annotated bibliography of his work.

Gorgias of Leontini

D. M. MacDowell has published the Greek text of the *Encomium on Helen* with a parallel English translation (1989). Michael Gagarin and Paul Woodruff include all the extant fragments attributed to Gorgias in *Early Greek Political Thought from Homer to the Sophists* (1995). Their translations are based on the Greek text established by Thomas Buchheim in his edition with German translation, *Reden, Fragmente, und Testimonien* (1989). The standard account of the sophists is

The Sophists by W. K. C. Guthrie; the volume, published separately in 1971, was originally part of volume 3 of his *History of Greek Philosophy* (6 vols., 1962–81). George Kerferd offers a comprehensive interpretation of the whole movement in *The Sophistic Movement* (1981). Susan C. Jarratt's *Rereading the Sophists: Classical Rhetoric Refigured* (1991) reads the sophists with and against contemporary literary theories, including feminism and deconstruction. In *The Birth of Rhetoric: Gorgias, Plato and Their Successors* (1996), Robert Wardy sets Gorgias's radical epistemological relativism against Plato's defense of philosophy in his dialogue *Gorgias*, arguing that sophist and philosopher set the terms of later debates about the relationship between rhetoric and philosophy. Bruce McComiskey's *Gorgias and the New Sophistic Rhetoric* (2002) places Gorgias's antifoundationalism, his refusal to ground philosophy in a preexisting truth or reality, in the context of fifth- and fourth-century B.C.E. Athenian politics, arguing that Plato's advocacy of philosophical truth served the interests of oligarchic government, while Gorgias's antifoundationalism promoted democracy. C. J. Classen's *Sophistik* (1976) includes a thorough and useful bibliography. More recently, in her book on Helen of Troy, *Helen of Troy: Beauty, Myth, Devastation* (2013), Ruby Blondell situates Gorgias's encomium within a Greek tradition of writing about Helen. Her chapter on Gorgias proffers a reading that explores his failure to challenge the gender dynamics of the Greek culture in which he wrote while engaging with serious philosophical debates about human agency, moral responsibility, and the power of persuasive discourse.

Gerald Graff

Stemming from his doctoral dissertation, Graff's first book, *Poetic Statement and Critical Dogma* (1970), attacks the lack of social concern evinced by the New Criticism and other approaches. *Literature against Itself: Literary Ideas in Modern Society* (1979) extends his polemic to contemporary theory. Through the 1980s Graff turned his attention more concertedly to the university, in 1985 co-editing (with Reginald Gibbons) a collection, *Criticism in the University*; publishing *Professing Literature: An Institutional History* (1987; 20th anniv. ed., 2007), regarded as the standard history of the discipline; and compiling (with Michael Warner) a collection, *The Origins of Literary Studies in America: A Documentary History* (1988). *Beyond the Culture Wars: How Teaching the Conflicts Can Revitalize Higher Education* (1992) presents his program for "teaching the conflicts." His program inspired two casebooks co-edited with James Phelan, *Adventures of Huckleberry Finn: A Case Study in Critical Controversy* (1995) and *The Tempest: A Case Study in Critical Controversy* (2000). Through the 1990s, Graff focused more on the accessibility of academic work, publishing

Clueless in Academe: How Schooling Obscures the Life of the Mind (2003) and a slim textbook, "*They Say/I Say: The Moves That Matter in Academic Writing* (2006; 3d ed., 2014), co-written with his spouse, Cathy Birkenstein, which provides easily understood "templates" to help people write.

Graff's views have been widely discussed. A special issue of the journal *Critical Exchange* (23 [1987]) responds to his early work. The collection *Teaching the Conflicts: Gerald Graff, Curricular Reform, and the Culture Wars*, edited by William E. Cain (1994), gathers eleven essays assessing Graff's conflictual method; Cain's introduction provides an excellent survey. In *University in Ruins* (1996), Bill Readings assimilates Graff's conflictual model in recommending that the university be a community of "dissensus," but he argues that Graff's model itself becomes "a unified object of professional discourse." Don Bialostosky, in "Is Gerald Graff Machiavellian?" *Style* 33 (1999), provocatively compares Graff's notion of the productive uses of conflict with Machiavelli's prescriptions for power. See also the symposium "Teaching the Conflicts at Twenty Years," *Pedagogy* 3 (2003), and a roundtable on his book *Clueless in Academe: How Schooling Obscures the Life of the Mind*, in *Pedagogy* 5 (2005). Amanda Anderson sympathetically considers Graff's focus on how we argue, but finds that we need a stronger sense of disciplinary commitments in "The Way We Talk About the Way We Teach Now," *Profession* (2009). "Only Connect: An Interview with Gerald Graff," conducted by Jeffrey J. Williams, reviews Graff's career; it is collected in *Critics at Work: Interviews 1993–2003* (ed. Williams, 2004).

Antonio Gramsci

The complete *Prison Notebooks*, edited by Joseph A. Buttigieg (3 vols., 1992–2007), with an indispensable introduction and superb scholarly apparatus, is the scholarly edition. But *Selections from the Prison Notebooks*, edited by Quentin Hoare and Geoffrey Newell Smith (1971), remains the most accessible text for the general reader. *The Gramsci Reader: Selected Writings, 1916–1935*, edited by David Forgacs (2000), is also a good place to start. *Letters from Prison*, edited by Frank Rosengarten (2 vols., 1994), is an informative supplement to the *Prison Notebooks*. Parts of Gramsci's work before the prison years have been translated, including *Selections from Political Writings*, edited by Quintin Hoare (2 vols., 1977–78); *Selections from Cultural Writings*, edited by David Forgacs and Geoffrey Nowell Smith (1991); and *Pre-Prison Writings*, edited by Richard Bellamy (1994). There are two biographies: Arnold Davidson's *Antonio Gramsci: Toward an Intellectual Biography* (1977) focuses on Gramsci's intellectual development, while Giuseppe Fiori's *Antonio Gramsci: Life of a Revolutionary* (1966; trans., rev. ed. 1990) uses new

sources to offer the most comprehensive account of Gramsci's life.

Three excellent general introductions are Steve Jones's *Antonio Gramsci* (2006), John Schwarzmantel's *The Routledge Guidebook to Gramsci's "Prison Notebooks"* (2015), and George Hoare and Nathan Sperber's *An Introduction to Antonio Gramsci* (2016). Broader engagements with Gramsci's work can be found in Walter L. Adamson's *Hegemony and Revolution: A Study of Antonio Gramsci's Political and Cultural Theory* (1980), Anne Showstack Sassoon's *Gramsci and Contemporary Politics: Beyond Pessimism of the Intellect* (2000), and Peter D. Thomas's *The Gramscian Moment: Philosophy, Hegemony and Marxism* (2009). The four volumes of essays collected in *Antonio Gramsci: Critical Assessments of Leading Political Philosophers*, edited by James Martin (2002), contain many important and illuminating responses to and expansions on Gramsci's ideas. Perry Anderson's *Considerations on Western Marxism* (1976), a key place to begin looking into Western Marxism, discusses Gramsci at some length. Ernesto Laclau and Chantal Mouffe's *Hegemony and Socialist Strategy* (1985) joins Gramsci with poststructuralist thought to provide a fundamental rethinking of Marxist theory. The selections by Stuart Hall and Dick Hebdige in this anthology record the influence of Gramsci on cultural studies; David Harris's *From Class Struggle to the Politics of Pleasure: The Effects of Gramscianism on Cultural Studies* (1993) and Stuart Hall: *Critical Dialogues in Cultural Studies*, edited by David Morley and Kuan-Hsing Chen (1996), explore this connection further. A good, although incomplete, bibliography can be found in Schwarzmantel's *Routledge Guide* (see above).

Stephen J. Greenblatt

Stephen Greenblatt's first interest was the modern novel, and his undergraduate thesis, *Three Modern Satirists: Waugh, Orwell, and Huxley* (1965), was published in the Yale College Series. During graduate school he turned to Renaissance literature, resulting in his second book, *Sir Walter Raleigh: The Renaissance Man and His Roles* (1973), which derived from his dissertation and discussed what would prove a recurrent theme: how authors fashion their personas. With his next book, *Renaissance Self-Fashioning: From More to Shakespeare* (1980), Greenblatt captured wide attention in literary studies. During the 1980s he was involved in developing the New Historicism, notably through the journal *Representations*, which he founded with colleagues at Berkeley in 1982. Greenblatt also had a hand in editing several collections, including *Allegory and Representation* (1981), with a lead essay by Paul de Man; *The Power of Forms in the English Renaissance* (1982), which introduced the phrase "the new historicism"; and two collections of essays selected from

Representations, Representing the English Renaissance (1988) and *New World Encounters* (1993). His own *Shakespearean Negotiations: The Circulation of Social Energy in Renaissance England* (1988) provides models of New Historical reading in five influential and often-reprinted chapters on different Shakespeare plays. *Learning to Curse: Essays in Early Modern Culture* (1990) gathers essays practicing and reflecting on the New Historicism, including "Resonance and Wonder." *Marvelous Possessions: The Wonder of the New World* (1991) develops Greenblatt's concept of wonder in literature focusing on the New World.

Through the 1990s Greenblatt became a prominent public figure representing literary studies. He served as president of the Modern Language Association, co-editing (with Giles Gunn) *Redrawing the Boundaries: The Transformation of English and American Literary Studies* (1992), and became general editor of *The Norton Shakespeare* (1997; 3d ed., 2015) and general editor of *The Norton Anthology of English Literature* (9th ed., 2012). In 2000 Greenblatt wrote, with Catherine Gallagher (a Berkeley colleague on the board of *Representations*), a book defining his mode of criticism, *Practicing New Historicism*. His international standing as today's leading scholar of Shakespeare has been cemented by *Hamlet in Purgatory* (2001); the popular book *Will in the World: How Shakespeare Became Shakespeare* (2004), which was a finalist for the Pulitzer Prize; and *Shakespeare's Freedom* (2010). He also tried his hand at drama, co-writing *Cardenio* (performed 2008), and has since focused on cultural transmission, in the co-written volume *Cultural Mobility: A Manifesto* (2010) and in two trade books, *The Swerve: How the World Became Modern* (2011) and *The Rise and Fall of Adam and Eve* (2017). *The Greenblatt Reader*, edited by Michael Payne (2005), provides a good sampling of his writing. For an account of his background and early career in his own words, see "Critical Self-Fashioning: An Interview with Stephen J. Greenblatt," conducted by Jeffrey J. Williams, *Minnesota Review*, n.s. 71–72 (2009).

There is a large body of commentary on Greenblatt's work. Many responses have followed his model, especially in early modern scholarship, though some (especially Marxist critics) question his political stance. Donald Pease, "Toward a Sociology of Literary Knowledge: Greenblatt, Colonialism, and the New Historicism," in *Consequences of Theory* (ed. Jonathan Arac and Barbara Johnson, 1991), is a careful exposition of Greenblatt that criticizes him for perpetuating a linguistic colonialism, despite his disclaimers. Chapters of Scott Wilson's *Cultural Materialism: Theory and Practice* (1995) and Claire Colebrook's *New Literary Histories: New Historicism and Contemporary Criticism* (1997) provide useful overviews. *Critical Self-Fashioning: Stephen Greenblatt and the New Historicism*, edited by Jürgen Pieters (1999), gathers several essays from

European scholars assessing Greenblatt; see also Pieters's own *Moments of Negotiation: The New Historicism of Stephen Greenblatt* (2001), which puts Greenblatt's work in a vast theoretical frame. *The Touch of the Real: Essays in Early Modern Culture*, edited by Philippa Kelly (2002), presents essays in honor of Greenblatt from Australian scholars, though it focuses more broadly on extending historicist work. For an intriguing account of Greenblatt's method, see Ivo Kamps, "New Historicizing the New Historicism; or, Did Stephen Greenblatt Watch the Evening News in Early 1968?" in *Historicizing Theory* (ed. Peter C. Herman, 2004); in the same volume, see also Jonathan Gil Harris, "Stephen Greenblatt's 'X'-Files: The Rhetoric of Containment and Invasive Disease in 'Invisible Bullets' and 'The Sources of Soviet Conduct.'" Mark Robson's *Stephen Greenblatt* (2008) offers a short overview. See also Neema Parvini, *Shakespeare and Contemporary Theory: New Historicism and Cultural Materialism* (2012).

The Greenblatt Reader provides a complete list of Greenblatt's publications up to 2003, and Robson's *Stephen Greenblatt* includes a selected, annotated bibliography of Greenblatt's work and commentary on him.

Jürgen Habermas

Almost all of Habermas's major works have been translated into English (below, the German publication date is followed by the date of the translation). For those coming to Habermas for the first time, the interviews with him collected in *Autonomy and Solidarity*, edited by Peter Dews (1986), offer an accessible overview; in *The Philosophical Discourse of Modernity* (1985; 1987), Habermas articulates his basic position vis-à-vis the attacks on reason by Nietzsche, Adorno, Derrida, and Foucault. His other works include *The Structural Transformation of the Public Sphere: An Inquiry into a Category of Bourgeois Society* (1962; 1989); *On the Logic of the Social Sciences* (1967; 1988); *Knowledge and Human Interests* (1968; 1971); *Legitimation Crisis* (1973; 1975); *Communication and the Evolution of Society* (1976; 1979); *The Theory of Communicative Action* (2 vols., 1981; 1984–87); *Moral Consciousness and Communicative Action* (1983; 1990); *The New Conservatism: Cultural Criticism and the Historians' Debate* (1985, 1987; 1989); *Between Facts and Norms: Contributions to a Discourse Theory of Law and Democracy* (1992; 1996); *The Inclusion of the Other: Studies in Political Theory* (1996; 1998); *The Postnational Constellation: Political Essays* (1998; 2001); *Truth and Justification* (1999; 2003); *The Future of Human Nature* (2001; 2003); *Time of Transitions* (2001; 2006); *The Divided West* (2004; 2006); *Dialectics of Secularization: On Reason and Religion*, with Pope Benedict XVI (2005; 2006); *Europe: The Faltering Project* (2009); *An Awareness of What Is Missing: Faith and Reason*

in a Post-Secular Age (2008; 2010); *The Lure of Technocracy* (2015); *Postmetaphysical Thinking II* (2017); and *Philosophical Introductions* (2017). Eight volumes gather English translations of Habermas's essays written at various times: *Philosophical-Political Profiles* (1983), *Postmetaphysical Thinking: Philosophical Essays* (1994), *Justification and Application: Remarks on Discourse Ethics* (1993), *A Berlin Republic: Writings on Germany* (1997), *On the Pragmatics of Communication* (1998), *The Liberating Power of Symbols: Philosophical Essays* (2001), *Religion and Rationality: Essays on Reason, God, and Modernity* (2002), and *Between Naturalism and Religion: Philosophical Essays* (2005; 2008). Two books both collect and contextualize discussions between Habermas and Derrida: *Philosophy in a Time of Terror: Dialogues with Jürgen Habermas and Jacques Derrida*, interviewed by Giovanna Borradori (2003), and *The Derrida-Habermas Reader*, edited by Lasse Thomassen (2006). Biographical information can be found in Egbert Klautk's entry on Habermas in *Encyclopedia of Modern Political Thought* (ed. Gregory Claeys, 2013). Stefan Müller-Dooch's *Habermas: A Biography* (2014; trans. 2016) is the first full-length biography.

There are several superb overviews of Habermas's work, whose different emphases are indicated by their titles: Andrew Edgar's *The Philosophy of Habermas* (2005), Luke Goode's *Jürgen Habermas: Democracy and the Public Sphere* (2005), Pauline Johnson's *Habermas: Rescuing the Public Sphere* (2006), Uwe Steinhoff's *The Philosophy of Jürgen Habermas* (2009, an abridged trans. of a 2006 work), and the most comprehensive of the lot, *The Habermas Handbook*, edited by Hauke Brunkhorst, Regina Kreide, and Cristina Lafont (2018). Of the in-depth studies of Habermas, two of particular interest to literary studies are J. M. Bernstein's *Recovering Ethical Life: Jürgen Habermas and the Future of Critical Theory* (1995) and Pieter Duvenage's *Habermas and Aesthetics: The Limits of Communicative Reason* (2003). Of special value is David Couzens Hoy and Thomas A. McCarthy's *Critical Theory* (1994), which lays out the case for each side in the Habermas/poststructuralist debate. The best place to encounter the debates sparked by Habermas's work is in the large number of collections of responses to it. Noteworthy are *Habermas and Modernity*, edited by Richard J. Bernstein (1985); *Habermas and the Public Sphere*, edited by Craig Calhoun (1992), which contains the highly influential essay "Rethinking the Public Sphere: A Contribution to the Critique of Actually Existing Democracy," by the feminist philosopher Nancy Fraser; *The Cambridge Companion to Habermas*, edited by Stephen K. White (1995); *Feminists Read Habermas: Gendering the Subject of Discourse*, edited by Johanna Meehan (1995); *Habermas and the Unfinished Project of Modernity: Critical Essays on "The Philosophical*

Discourse of Modernity," edited by Maurizio Passerin d'Entrèves and Seyla Benhabib (1997); *Habermas: A Critical Reader*, edited by Peter Dews (1999); and a very comprehensive four-volume collection, *Jürgen Habermas*, edited by David M. Rasmussen and James Swindal (2002). The Bernstein and Calhoun collections have proved particularly influential in shaping the reception of Habermas's work. *Jürgen Habermas: Key Concepts*, edited by Barbara Fultner (2011), provides an excellent overview of Habermas's work along with a complete bibliography of his work and a substantial bibliography of secondary works.

Judith Jack Halberstam

Halberstam's first book, *Skin Shows: Gothic Horror and the Technology of Monsters* (1995), traces the cultural object of the monster from nineteenth-century Gothic novels like Mary Shelley's *Frankenstein* up to contemporary Hollywood movies like *Texas Chainsaw Massacre*. Using this broad range of texts, she argues both that the monster is rewritten over time to reflect "historically and culturally conditioned fears" which emerge from ideas about otherness and difference and that graphic violence empowers readers. Her second book—and her most influential—is *Female Masculinity* (1998), which explores butch/femme lesbian roles, transsexual and "transgender dyke" communities, and contemporary drag king performances, as she articulates her larger project of examining gender construction and pursuing a concept of masculinity without men. *The Drag King Book* (1999), which Halberstam coauthored with Del LaGrace Volcano under the name "Judith 'Jack' Halberstam," investigates drag king communities and performances for a broad audience. Her next book, *In a Queer Time and Place: Transgender Bodies, Subcultural Lives* (2005), considers the transgendered body's representation in the media and in queer art, while *The Queer Art of Failure* (2011) critiques the logic of failure and success in our culture and argues that failing offers creative possibilities, freedom, and other rewards through its resistance, subversion, and unmaking of punishing norms. Halberstam's sixth book, *Gaga Feminism: Sex, Gender and the End of Normal* (2012), analyzes the pop feminist icon Lady Gaga as a way to explore gender identity and sexuality in twenty-first-century feminism.

One important critical response to Halberstam is Pat Califia's "Dildo Envy and Other Phallic Adventures," in *A Dick for a Day: What Would You Do If You Had One?* (ed. Fiona Giles, 1997). Taking issue with Halberstam's classification "butch" (which straddles the line between lesbian and transgendered), Califia claims that it blocks the flow of desire and reflects self-hate rather than self-definition and understanding. Halberstam responds to Califia's criticisms in *Female Masculinity*, in a chapter titled "Lesbian Masculinity:

Even Stone Butches Get the Blues.” Chris Beasley’s *Gender and Sexuality: Critical Theory, Critical Thinkers* (2005) argues that Halberstam’s work on masculinity “stands at an interesting remove from Queer”: because her work enables and includes transgender desire and all its physical manifestations, her position is distinct from that of other queer theorists, who set “queer” and “transgender” in opposition to one another. Halberstam addresses some of these issues in “Within the New Moment,” an interview by Vicki Crowley in *Discourse* 25 (2004). In *Beauty and Misogyny: Harmful Cultural Practices in the West* (2005), Sheila Jeffreys asserts that Halberstam’s notion of female masculinity is both apolitical, in that it fails to grapple with masculinity as “the product of male dominance,” and antifeminist, in that liberation for women is identified with performing masculinity and disavowing femininity.

Several interviews helpfully introduce and supplement Halberstam’s written work; see Annmarie Jagose’s detailed “Masculinity without Men,” *Gender*, no. 29 (1999); Mathias Danbolt’s “The Eccentric Archive,” *Trikster—Nordic Queer Journal*, no. 1 (2008), in which Halberstam discusses the rationale behind her choice of texts; and Jeffrey J. Williams’s “The Drag of Masculinity: An Interview with Judith ‘Jack’ Halberstam,” *symploke*, 19 (2011), which offers a wide-ranging back-and-forth conversation about Halberstam’s biography, concepts, and writings, plus feminist politics.

Stuart Hall

Stuart Hall’s work (scattered in numerous journals and edited volumes) is slowly being collected in book form in a series titled *Stuart Hall: Selected Writings*, to be published by Duke University Press under the general editorship of Bill Schwarz and Catherine Hall; already in print (with more promised) are *The Hard Road to Renewal* (1988); *Cultural Studies 1983: A Theoretical History*, edited by Jennifer Darryl Slack and Lawrence Grossberg (2016); *Selected Political Writings: The Great Moving Right Show and Other Essays*, edited by Sally Davison, David Featherstone, Michael Rustin, and Bill Schwarz (2017); and *The Popular Arts* (2018). *The Fateful Triangle: Race, Ethnicity, Nation*, edited by Kobena Mercer (2017), is drawn from lectures delivered at Harvard in 1994. *Familiar Stranger: A Life Between Two Islands* (2017) collects his autobiographical reflections. The most influential collaborative texts done by various British cultural studies groups working with Hall (volumes that usually contain essays by Hall) are *The Popular Arts*, edited by Stuart Hall and Paddy Whannel (1964); *Resistance through Rituals: Youth Subcultures in Post-War Britain*, edited by Stuart Hall and Tony Jefferson (1976); *Policing the Crisis: Mugging, the State, and Law and Order*, edited by Stuart Hall et al. (1978); *Culture, Media, Language: Working Papers in Cultural Studies*, edited by Stuart Hall et al. (1980); *New Times: The*

Changing Face of Politics in the 1990s, edited by Stuart Hall and Martin Jacques (1990); *Questions of Cultural Identity*, edited by Stuart Hall and Paul du Gay (1996); *Modernity: An Introduction to Modern Societies*, edited by Stuart Hall et al. (1996); and *Representation: Cultural Representations and Signifying Practices*, edited by Stuart Hall (1997). *Different* (2001) is a collection of contemporary photographs by people of color selected by Hall along with explanatory text by him. *Women Take Issue: Aspects of Women’s Subordination*, edited by the Women’s Studies Group, Centre for Contemporary Cultural Studies (1978), and *The Empire Strikes Back: Race and Racism in 70s Britain*, edited by the Centre for Contemporary Cultural Studies (1982), are important early collections that extend cultural studies into studies of gender, race, and postcolonialism. The best biographical source is Hall’s own *Familiar Stranger* (2017), which can be supplemented with Caryl Philip’s “Interview with Stuart Hall,” *Bomb*, no. 58 (1997). Also of biographical interest is the film *The Stuart Hall Project* (2013, dir. John Akomfrah).

Chris Rojek’s *Stuart Hall* (2003) is by far the best overview of Hall’s life and work, although Helen Davis’s *Understanding Stuart Hall* (2004) is also worth consulting. *Stuart Hall: Critical Dialogues in Cultural Studies*, edited by David Morley and Kuan-Hsing Chen (1996), collects several key essays by Hall along with responses to his work; it can be supplemented by *Without Guarantees: In Honour of Stuart Hall*, edited by Paul Gilroy, Lawrence Grossberg, and Angela McRobbie (2000), a collection of essays that includes responses to Hall’s work by Judith Butler and Gayatri Chakravorty Spivak among many others. Fredric Jameson, “On Cultural Studies” (1993), in *The Identity in Question* (ed. John Rajchman, 1995), provides a sophisticated short introduction to cultural studies. Dennis Dworin’s *Cultural Marxism in Post-war Britain: History, the New Left, and the Origins of Cultural Studies* (1997) and Lawrence Grossberg’s *Cultural Studies in the Future Tense* (2010) usefully locate Hall’s work in the context of cultural studies more generally. Michael Bérubé’s *The Left at War* (2009) mobilizes Hall’s work as a guide for thinking about the Left’s responses to neoconservatism. The essays published after Hall’s death in the online journal *Open Democracy* (www.opendemocracy.net/ourkingdom/collections/stuart-hall-cultural-theorist-1932-2014; accessed July 12, 2017) offer a valuable overview of his career and influence; the obituaries by Robin Blackburn (in *New Left Review*, no. 86 [2014]) and Geoff Eley (in *History Workshop Journal*, no. 79 [2015]) along with the collection of responses to his work in *South Atlantic Quarterly*, no. 115 (October 2016), and Hua Hsu’s essay, “Stuart Hall and the Rise of Cultural Studies,” *New Yorker*, July 17, 2017, offer further reflections on his work and its impact. While waiting for the Duke Uni-

versity Press series to be completed, an assiduous reader can compile a fairly complete list of Hall's scattered writings by consulting the bibliographies in the books of Morley and Chen, Rojek, and Davis, cited above.

Donna Haraway

Haraway's dissertation appeared as *Crystals, Fabrics, and Fields: Metaphors of Organicism in Twentieth-Century Developmental Biology* (1976). Her "Manifesto for Cyborgs" (1985), first published in the journal *Socialist Review*, has been reprinted many times. *Primate Visions: Gender, Race, and Nature in the World of Modern Science* (1989), Haraway's second book, examines the cultural and ideological ramifications of twentieth-century primatology. In addition, she has published two collections of her early essays: *Simians, Cyborgs, and Women: The Reinvention of Nature* (1991) and *Modest_Witness@Second_Millennium. FemaleMan©Meets OncoMouse™* (1997). Haraway's most celebrated essays have been collected in *The Haraway Reader* (2004). Her more recent work includes *The Companion Species Manifesto: Dogs, People, and Significant Otherness* (2003) and *When Species Meet* (2008). *How Like a Leaf* (2000) is a book-length interview of Haraway by a former student, Thyra Goodeve, that explores the relationships between Haraway's life, her teaching, and her scholarship. *Manifestly Haraway* (2016) bundles "Cyborg Manifesto" with "Companion Species Manifesto," together with a conversation between Haraway and Cary Wolfe that explores the manifesto as a theoretical genre.

During the 1990s most critical engagement with Haraway's writing came in the form of articles. Among the earliest evaluations is Allison Fraiberg's "Of AIDS, Cyborgs, and Other Indiscretions: Resurfacing the Body in the Postmodern" (1991), published in the online journal *Postmodern Culture* (vol. 1), together with a response by David Porush. A 1993 special issue of the journal *Genders*, titled *Cyberpunk: Technologies of Cultural Identity*, examines the ways in which Haraway's analysis of the cyborg figures in several cyberpunk texts. For a more advanced evaluation of Haraway's manifesto, see Chela Sandoval, "Re-Entering Cyberspace: Sciences of Resistance," *Dispositio/n: American Journal of Cultural Histories and Theories* 19 (1994). Rosi Braidotti's "Cyberfeminism with a Difference," *New Formations* 29 (1996), uses Haraway's notion of the "informatics of domination" to investigate the politics of cyberfeminism. Jonathan Crewe examines Haraway's handling of postmodern theory in "Transcoding the World: Haraway's Postmodernism," *Signs* 22 (1997). After 2000, several book-length studies appeared. Useful introductions include Joseph Schneider's *Donna Haraway: Live Theory* (2005), which contains the most complete bibliography, and David Bell's *Cyberculture Theorists: Manuel Castells and Donna Haraway* (2007),

which introduces Haraway's foundational ideas about technoscience in relation to such cyberculture theorists as Sherry Turkle and Sean Cubitt. Arthur Kroker's *Body Drift: Butler, Hayes, Haraway* (2012) maps out a posthuman future for the body in the works of these three feminist thinkers. In *Beyond the Cyborg: Adventures with Donna Haraway* (2013), Margret Grebowicz and Helen Merrick resituate "Manifesto for Cyborgs" within a more nuanced reading of the body of Haraway's scholarship, including her recent work on companion species.

Michael Hardt and Antonio Negri

Michael Hardt and Antonio Negri have collaborated on six books: *Labor of Dionysus: A Critique of the State-Form* (1994), which collects four previously published essays by Negri as well as three co-authored essays; *Empire* (2000), their first systematic articulation of their theory of global capitalism; *Multitude: War and Democracy in the Age of Empire* (2004), which elaborates on the multitude, Hardt and Negri's contemporary model of revolutionary subjectivity; *Commonwealth* (2009), an extended analysis of "the common" that provides the conceptual and material basis for their understanding of communism; *Declaration* (2012), which extends earlier analyses of the multitude and the common to examine contemporary forms of resistance such as the Arab Spring and the Occupy Movement (which both began in 2011); and *Assembly* (2017), which proposes the concept of "assembly" as a means for inventing models of social organization necessary for the longevity and efficacy of so-called leaderless movements in an age of resurgent right-wing political regimes and the continued dominance of neoliberal capitalism.

Michael Hardt has also written *Gilles Deleuze: An Apprenticeship in Philosophy* (1993), which examines Deleuze's "philosophical apprenticeship" undertaken in his early works on Henri Bergson, Friedrich Nietzsche, and Baruch Spinoza. In addition to this book on Deleuze and his work with Negri, Hardt is the author of many articles on political theory and on globalization, including most importantly "The Withering of Civil Society," *Social Text*, no. 45 (1995), reprinted in *Deleuze and Guattari: New Mappings in Politics, Philosophy, and Culture* (ed. Eleanor Kaufman and Kevin Jon Heller, 1998); "The Global Society of Control," *Discourse* 20.3 (1998); "Affective Labor," *boundary 2* 26.2 (1999); "Jefferson and Democracy," *American Quarterly* 59 (2007); and "The Power to Be Affected," *International Journal of Politics, Culture, and Society* 28 (2015). Hardt co-edited both *Radical Thought in Italy: A Potential Politics* (with Paolo Virno, 1996)—which includes Negri's essay "Constituent Republic" as well as "Do You Remember Revolution?," coauthored by Negri and ten other figures from the Italian Left—and *The Jameson Reader* (with Kathi Weeks, 2000).

Antonio Negri has produced a large body of written work, much of it translated into English. He is particularly known in the Anglophone world for three things: his role as a leading contemporary commentator on Spinoza; his political and theoretical writings within the Italian Left, especially the Autonomia movement; and his revolutionary theories of contemporary oppositional subjectivities under global capital. On Spinoza, the most important books are *The Savage Anomaly: The Power of Spinoza's Metaphysics and Politics* (1981; trans. 1991) and *Subversive Spinoza: (Un)contemporary Variations*, edited by Timothy S. Murphy (1992; trans. 2004). Negri's writings in the context of the Italian Left of the 1960s to the 1980s include *Revolution Retrieved: Selected Writings on Marx, Keynes, Capitalist Crisis and New Social Subjects, 1967–1983* (1988) and *Books for Burning: War and Democracy in 1970s Italy* (1997; trans. 2005), which consists of five political pamphlets written from 1971 to 1977. Quotations from these pamphlets were used by the prosecutor in Negri's trial following his April 1979 arrest. Negri's *Pipeline: Letters from Prison* (1983; trans. 2014) collects twenty letters written by Negri from October 1981 to April 1982, while he was incarcerated at Rebibbia prison in Rome; in these letters Negri reflects on his own development as a radical theorist and activist and recounts the events leading to his accusation, trial, and imprisonment. For Negri's most important theorizations of resistance and revolution, see especially *Marx beyond Marx: Lessons on the "Grundrisse"* (1979; trans. 1984), which views not *Capital* but the *Grundrisse* of Marx as the fundamental revolutionary text of classical Marxism, identifying Marx's concept of the real subsumption of capital as the key to understanding contemporary capitalism; *The Politics of Subversion: A Manifesto for the Twenty-First Century* (1988; trans. 1989; 2d ed., 2005), a precursor to Negri and Hardt's theoretical work in their collaborative books; *Insurgencies: Constituent Power and the Modern State* (1992; trans. 1999), which analyzes the canceling out of revolutionary constituent power by the constituted power of the state in the English, American, French, and Russian revolutions; *Time for Revolution* (1997; trans. 2003), a phenomenological account of the temporality of antagonism, resistance, and revolt; and *Marx and Foucault* (2017), a collection of essays analyzing the influence and role of Foucault and other post-structuralists in Marxian and leftist theory and praxis from May 1968 to the Obama administration in the United States. Negri has also written a number of books that further elaborate and develop the arguments made with Hardt, including *Reflections on Empire* (2003; trans. 2008) and *The Porcelain Workshop: For a New Grammar of Politics* (2008). In addition, Negri has made forays into both literature and literary criticism: his *Trilogy of Resistance* (2009; trans. 2011) collects three of his plays (*Swarm: Didactics of the Multitude*, *The*

Bent Man: Didactics of the Rebel, and *Cithaeron: Didactics of Exodus*) that symbolically enact the formation of the multitude and the common, while *Flower of the Desert: Giacomo Leopardi's Poetic Ontology* (1987; trans. 2015) mounts a materialist rereading of the nineteenth-century Italian poet.

Although there are no book-length biographies of Negri in English, the film *Antonio Negri: A Revolt That Never Ends*, directed by Alexandra Weltz and Andreas Pichler (2005), follows Negri's career as an activist and theorist from his early involvement in Potere Operaio to his April 2003 release from prison. Biographical information can also be found in the translators' prefaces to *Marx beyond Marx* as well as in two encyclopedia articles on Negri by Timothy S. Murphy: one in the *Edinburgh Dictionary of Continental Philosophy* (ed. John Protevi, 2005) and the other in the *Encyclopedia of Literature and Politics: Censorship, Revolution, and Writing* (ed. M. Keith Booker, 2005). In connection with Negri's arrest, trial, and imprisonment, see Murphy's editor's introduction to *Books for Burning*; Rowan Wilson, "Inside the Radiant City," *The Philosophers' Magazine* (autumn 1999) and several of the essays included in *Autonomia: Post-Political Politics*, edited by Sylvère Lotringer and Christian Marazzi (2d ed., 2007). Interview collections include *Negri on Negri*, with Anne Dufourmantelle (2004; trans. 2004), and *Goodbye Mr. Socialism*, edited by Raf Valvola Scelsi (2006; trans. 2008). There is currently little biographical information available on Hardt, although in an interview with Caleb Smith and Enrico Minardi published in the *Minnesota Review*, nos. 61–62 (2004), he describes his entry into political thought via his work on alternative energy as an engineering student.

The 2000 publication of *Empire* prompted numerous critical responses. A "dossier" on *Empire* that constitutes a special issue of *Rethinking Marxism*, edited by Abdul-Karim Mustapha and Bülent Eken (13.3–4 [2001]); *Debating Empire*, edited by Gopal Balakrishnan (2003); and *Empire's New Clothes: Reading Hardt and Negri*, edited by Paul A. Passavant and Jodi Dean (2004), offer collections of responses to *Empire*, ranging from Saskia Sassen's sympathetic interpretation in *Empire's New Clothes* to Malcolm Bull's hostile rebuttals in all volumes. Atilio A. Boron's *Empire and Imperialism: A Critical Reading of Michael Hardt and Antonio Negri* (2005) mounts an "empirical refutation" of Hardt and Negri's postnationalist account of globalization, citing as counterexamples the actions undertaken during the administration of George W. Bush, including the U.S. military occupation of Iraq.

Timothy S. Murphy's *Antonio Negri: Modernity and the Multitude* (2012) provides a comprehensive overview of Negri's theoretical and political work. Another excellent secondary source on Negri is the two-volume *The Philosophy of Antonio Negri*, edited by Timothy S. Murphy and Abdul-

Karim Mustapha (2005–07), which also contains a very useful, but not exhaustive, bibliography of Negri's work. The bibliography in Negri's *Time for Revolution* is more scant, but still useful. There are no detailed bibliographies of Hardt's work in print.

David Harvey

After his first book, *Explanation in Geography* (1969), which deals with methodological debates among geographers, David Harvey more directly confronted social issues and engaged with Marxism, particularly in relation to the city, in *Social Justice and the City* (1973; rev. ed., 2009), *Limits to Capital* (1982; new ed., 2006), and the paired volumes *The Urbanization of Capital: Studies in the History and Theory of Capitalist Urbanization* (1985) and *Consciousness and the Urban Experience: Studies in the History and Theory of Urbanization* (1985), which were together abridged as *The Urban Experience* (1989). Through the 1990s he addressed postmodernism and cultural difference, while continuing his revision of Marxism, in *The Condition of Postmodernity: An Enquiry into the Origins of Cultural Change* (1989), *Justice, Nature, and the Geography of Difference* (1996), *Spaces of Hope* (2000), *Spaces of Capital: Towards a Critical Geography* (2001), and *Paris: Capital of Modernity* (2003).

Beginning in the 2000s, Harvey turned toward analyzing contemporary imperialism and neoliberalism rather than postmodernism in *The New Imperialism* (2003), *A Brief History of Neoliberalism* (2005), *Spaces of Global Capitalism: Towards a Theory of Uneven Geographical Development* (2006), *Cosmopolitanism and the Geographies of Freedom* (2009), *The Enigma of Capital: And the Crises of Capitalism* (2010), *Rebel Cities: From the Right to the City to the Urban Revolution* (2012), and *The Ways of the World* (2016). He also published a sequence of exegeses of Marx: *A Companion to Marx's "Capital"* (2010), *A Companion to Marx's "Capital," Volume 2* (2013), and *Seventeen Contradictions and the End of Capitalism* (2014). For an overview of his career in his own words, see "Reinventing Geography," an interview conducted by the editors of *New Left Review* (n.s., no. 4 [2000]), and "The Geography of Accumulation: An Interview with David Harvey," conducted by Jeffrey J. Williams, *Minnesota Review*, n.s., no. 69 (2007).

John L. Paterson's *David Harvey's Geography* (1984) is an early account of Harvey's adoption of Marxist methods. The cultural studies scholar Meaghan Morris analyzes Harvey's assumptions about culture's reflection of material conditions in "The Man in the Mirror: David Harvey's 'Condition' of Postmodernity," *Theory, Culture and Society* 9.1 (1992). Derek Gregory's *Geographical Imaginations* (1994) offers a good synopsis of Harvey's project to that point. In "Spaced Out," *London Review of Books*, April 24, 1997, Terry

Eagleton observes Harvey's tendency toward large-scale abstractions. John Paul Jones's *David Harvey: Live Theory* (2004) is a cursory overview. For the best overview of Harvey's work, provided by thirteen contributors, see *David Harvey: A Critical Reader*, edited by Noel Castree and Derek Gregory (2006). Loïc Wacquant offers a pointed criticism of Harvey, noting that his account of neoliberalism focuses on economic factors but misses the huge neoliberal expansion of prisons, in "Crafting the Neoliberal State: Workfare, Prisonfare, and Social Insecurity," *Sociological Forum* 25 (2010). Jamie Peck, *Constructions of Neoliberal Reason* (2010), draws on Harvey in surveying neoliberalism. Castree and Gregory's *David Harvey* includes a complete list of Harvey's publications up to 2006.

Friedrich A. Hayek

Hayek's major works are *Prices and Production* (1931; 2d ed., 1935), *Profits, Interest, and Investment, and Other Essays on the Theory of Industrial Fluctuations* (1939), *The Pure Theory of Capital* (1941), *The Road to Serfdom* (1944), *Individualism and Economic Order* (1948), *John Stuart Mill and Harriet Taylor: Their Correspondence and Subsequent Marriage* (1951), *The Sensory Order: An Inquiry into the Foundations of Theoretical Psychology* (1952), *The Counter-Revolution of Science: Studies on the Abuse of Reason* (1952; 2d ed., 1979), *The Constitution of Liberty* (1960), *Studies in Philosophy, Politics, and Economics* (1967), *The Mirage of Social Justice* (1976), *New Studies in Philosophy, Politics, Economics, and the History of Ideas* (1978), *The Political Order of a Free People* (1979), and *Knowledge, Evolution and Society* (1983). *The Collected Works of F. A. Hayek*, being published by the University of Chicago Press in nineteen volumes (1988–), will contain all the major works as well as occasional essays, reviews, and interviews, and stands as the definitive scholarly edition. Edited transcripts of a series of interviews with Hayek about his life and work are published under the title *Hayek on Hayek: An Autobiographical Dialogue*, edited by Stephen Kresge and Leif Wenar (1994). Bruce Caldwell's *Hayek's Challenge: An Intellectual Biography of F. A. Hayek* (2004) is not only the best biography but also the best overall account of his ideas.

Two excellent shorter introductions are G. R. Steele's *The Economics of Friedrich Hayek* (1993; 2d ed., 2007) and A. J. Tebble's *F. A. Hayek* (2010). Andrew Gamble's *Hayek: The Iron Cage of Liberty* (1996) and John Gray's *Hayek on Liberty* (1984; 3d ed., 1998)—the first critical, the second sympathetic—evaluate Hayek's arguments about the conditions required to secure liberty in any political and economic order. Michel Foucault's discussion of Hayek in *The Birth of Biopolitics: Lectures at the Collège de France, 1978–1979* (2008) has greatly influenced literary theorists' understanding of neoliberalism. *Friedrich A. Hayek: Critical Assessments of Contemporary Economists, Second*

Series, edited by John C. Wood and Robert D. Wood (4 vols., 2004), offers a comprehensive overview of responses to Hayek's work. *The Road from Mont Pèlerin: The Making of the Neoliberal Thought Collective*, edited by Philip Mirowski and Dieter Plehwe (2009), is an indispensable (albeit hostile) history of the development of neoliberal thought and its rise to political influence. *The Cambridge Companion to Hayek*, edited by Edward Feser (2006), provides superb introductory essays on all facets of Hayek's work and influence as well as a good working bibliography.

N. Katherine Hayles

In her first book, *The Cosmic Web: Scientific Field Models and Literary Strategies in the Twentieth Century* (1984), Hayles argues that early twentieth-century "field theory" introduces a dynamic and integrated perspective on reality that constitutes a paradigm shift in science, philosophy, and literature. A sequel and complement to her first book, *Chaos Bound: Orderly Disorder in Contemporary Literature and Science* (1990) shows how contemporary scientific chaos theory offers a cultural matrix that can be shared by science and literature, treating chaos not as simply meaningless disorder but as a productive means of generating higher orders of information and complexity. *How We Became Posthuman: Virtual Bodies in Cybernetics, Literature, and Informatics* (1999) examines the fate of human embodiment in a world increasingly dominated by information technology. Hayles here investigates three related aspects of the information age: the story of how information lost its body, the development of the cultural icon of the cyborg, and the emergence of posthuman identities. In *Writing Machines* (2002), whose page layouts sometimes resemble computer screens and abstract information patterns, Hayles playfully and creatively illustrates her notion of "flickering signifiers." Focusing on the complex ways in which various forms of media interpenetrate, she insists on the materiality of different kinds of literary artifacts such as hyperfiction, the artist's book, and the traditional novel. *My Mother Was a Computer: Digital Subjects and Literary Texts* (2005) offers new ways of understanding the relationships between language and code. It investigates processes of intermediation through which traditional cultural practices interact with digital media. Hayles's *Electronic Literature: New Horizons for the Literary* (2008) provides a systematic survey of the field of electronic literature, isolating major genres and central theoretical issues pertaining to networked and programmable media. It is accompanied by a CD featuring volume 1 of the *Electronic Literature Collection*, co-edited by Hayles with Nick Montfort, Scott Rettberg, and Stephanie Strickland; the collection of sixty works is intended for courses on contemporary electronic literature. In *How We Think:*

Digital Media and Contemporary Technogenesis (2012), Hayles argues that contemporary technogenesis—the idea that humans and technics are coevolving—is changing the ways we think about academic research, teaching, and publication. Tracing the neurological implications of working in digital media, she investigates the limitations and possibilities of new forms of analysis such as "hyperreading" and reading through machine algorithms. Mindful that the vast amount of digital material she had developed far exceeds the scope of her printed books, Hayles has made this voluminous material available on her website (<http://nkhayles.com>) and in *How We Think: A Digital Companion* (<http://howwethink.nkhayles.com>, 2013), which enables readers to put into practice new forms of reading and draw their own conclusions. In her *Unthought: The Power of the Cognitive Nonconscious* (2017), Hayles redefines cognition to include not only processes inaccessible to consciousness but also mechanisms governing other forms of life such as unicellular organisms and plants, in addition to human technical assemblages: for example, urban traffic control systems and the trading algorithms of financial markets. Working at the intersections of neuroscience, cognitive science, cognitive biology, and literature, Hayles traces the dynamics of what she calls a "planetary cognitive ecology," while arguing for a broader and more thorough understanding of the role humans might play in making the environment more sustainable for all forms of life. In addition to her own books, Hayles has edited the essay collection *Chaos and Order: Complex Dynamics in Literature and Science* (1991); guest edited *Technocriticism and Hypernarrative* (1997), a special issue of *Modern Fiction Studies* (43.3); and edited both *Nanoculture: Implications of the New Technoscience* (2004) and *Comparative Textual Media: Transforming the Humanities in the Postprint Era* (2013). She has also published numerous articles in books and journals on literature, computer culture, cyborg theory, and the history of technology.

Notable assessments of Hayles's work have come, for example, from literary critics concentrating on science fiction and on feminist theory. Istvan Csicsery-Ronay Jr.'s "Till We Have Interfaces," *Science Fiction Studies* 26 (1999), offers a pointed review of *How We Became Posthuman*. While praising Hayles as a sharp diagnostician of the social and cultural implications of information technologies, Csicsery-Ronay observes that her theory of the posthuman ends in anxiety and uncertainty, failing to indicate what comes after the demise of the liberal humanist subject. In "How We Think When We Think about Science Fiction," *Science Fiction Studies* 40 (2013), Pawel Prelik notes that Hayles's *How We Think* does not offer a definitive conclusion about the complex effects or the future of technogenesis; he also

points out that this very open-endedness may prove to be especially promising for the rethinking of the relationship within science fiction studies between human and machine. In "How We Think about Technology (Without Thinking about Politics)," *the b20 review*, November 4, 2015, R. Joshua Scannell faults Hayles for failing to fully engage with the social and political ramifications of her theory, including the hidden motivations of hyper and machine reading in strengthening the corporate university and the large-scale troubling transformation of labor in postindustrial capitalism.

Dick Hebdige

Hebdige's books are *Subculture: The Meaning of Style* (1979), *Cut 'n' Mix: Culture, Identity, and Caribbean Music* (1987), and *Hiding in the Light: On Images and Things* (1988).

In a series of essays responding to and growing out of Hebdige's work, Angela McRobbie, a leading figure of British cultural studies, has questioned the male focus of the subcultures Hebdige describes and has pondered the political effectiveness of subcultural resistance. See her "Settling Accounts with Subcultures: A Feminist Critique," *Screen Education* 34 (1980); "Postmodernism and Popular Culture," *Journal of Communication Inquiry* 10 (1986); and "New Times in Cultural Studies," *New Formations* 13 (1991). Further reactions to Hebdige's work can be found in Anne Beezer's "Dick Hebdige, *Subculture: The Meaning of Style*," in *Reading into Cultural Studies* (ed. Martin Barker and Anne Beezer, 1992); Vincent B. Leitch, *Cultural Criticism, Literary Theory, Poststructuralism* (1992); and Neil Nehring, *Flowers in the Dustbin: Culture, Anarchy, and Postwar England* (1993). Two excellent overviews of the history and theoretical outlook of cultural studies that discuss Hebdige's work are Simon During's *Cultural Studies: A Critical Introduction* (2005) and Chris Rojek's *Cultural Studies* (2007). Hebdige offers his reflections on *Subculture* and its impact in an interview, "Dick Hebdige: Unplugged and Greased Back," by Timothy Dugdale, *Post Identity* 4.1 (2004), and an article, "Contemporizing 'Subculture': 30 Years to Life," *European Journal of Cultural Studies* 15 (2012). Hebdige also contributed the essay "The Worldliness of Cultural Studies" to the important symposium on cultural studies published in the journal *Cultural Studies* 29 (2015).

Georg Wilhelm Friedrich Hegel

Edited by Eva Moldenhauer and Karl Markus Michel, Hegel's *Werke* (22 vols., 1969–72) is a complete German edition of his writings. Most of his work has been translated into English, though there is no standard scholarly edition of the complete works. Of special relevance to students of literature are *Philosophy of Right*, translated by T. M. Knox (1942); *Hegel's Aesthetics: Lectures on Fine Art*, translated by T. M. Knox (2 vols., 1975);

Lectures on the Philosophy of World History, edited by H. B. Nisbet (1975); *Phenomenology of Spirit*, translated by A. V. Miller (1977); and *Lectures on the History of Philosophy*, edited by Robert Brown (3 vols., 1990). *The Hegel Reader*, edited by Stephen Houlgate (1998), offers selections covering the breadth of Hegel's interests. The best biography is Terry Pinkard's *Hegel: A Biography* (2000).

The secondary literature on Hegel is immense; thus the following bibliography is extremely selective. Jean Hyppolite's *Genesis and Structure of Hegel's "Phenomenology of Spirit"* (1946; trans. 1974) and Alexandre Kojève's *Introduction to the Reading of Hegel* (1947; trans. 1969) are two French works that shaped the existentialist and poststructuralist understandings of Hegel.

The single best, and most influential, overview remains Charles Taylor's *Hegel* (1975), which also comes in a slimmer, more reader-friendly version titled *Hegel and Modern Society* (1979). G. W. F. Hegel: *Key Concepts*, edited by Michael Baur (2015), and Stephen Houlgate, *Hegel's "Phenomenology of Spirit": A Reader's Guide* (2013), along with *The Cambridge Companion to Hegel and Nineteenth-Century Philosophy*, edited by Frederick C. Beiser (2008), are recommended for those coming to Hegel for the first time. Jacques Derrida's *Glas* (1981; trans. 1986) is the most important of many poststructuralist encounters with Hegel. Judith Butler's *Subjects of Desire: Hegelian Reflections in Twentieth-Century France* (1987), Slavoj Žižek's *Less Than Nothing: Hegel and the Shadow of Dialectical Materialism* (2012), and Andrew Cole's *The Birth of Theory* (2014) all display Hegel's presence in contemporary theory. The theme of "recognition" has been the subject of much debate; major contributions to the discussion include Patchen P. Markell's *Bound by Recognition: The Politics of Identity after Hegel* (2003), Paul Ricoeur's *The Course of Recognition* (2005), and Axel Honneth's *The I in We: Studies in the Theory of Recognition* (2012). Three excellent books that address Hegel's aesthetics are Alan Speight's *Hegel, Literature, and the Problem of Agency* (2001), Theodore D. George's *Tragedies of Spirit: Tracing Finitude in Hegel's "Phenomenology"* (2006), and *Hegel and the Arts*, edited by Stephen Houlgate (2007).

Kurt Steinhauser's massive German/English *Hegel Bibliographie* (1980, 1998) covers almost all the secondary literature from 1802 to the end of the twentieth century. A more manageable and recent bibliography, arranged by topic, can be found in *The Cambridge Companion to Hegel and Nineteenth-Century Philosophy*.

Martin Heidegger

The standard edition of Heidegger's collected works in German is the *Gesamtausgabe* (1976–), which is projected to reach 102 volumes. About a dozen remain unpublished. An introductory collection of texts in English is available in *Basic*

Writings: From "Being and Time" (1927) to "The Task of Thinking" (1964), translated by various hands and edited by David Farrell Krell (rev. and expanded, 2008). English versions of Heidegger's writings bearing directly on his understanding of poetry and language are available in *Existence and Being*, edited by Werner Brock and translated by Douglas Scott (1949); *Poetry, Language, Thought*, edited and translated by Albert Hofstadter (1971); and *On the Way to Language*, translated by Peter D. Hertz and Joan Stambaugh (1971). Philosophical texts translated into English (with the date of German publication given first) include *What Is Philosophy?* (1956; 1956); *An Introduction to Metaphysics*, translated first by Ralph Manheim (1953; 1959), and then (as *Introduction to Metaphysics*) by Gregory Fried and Richard Polt (2000); *Being and Time*, translated first by John Macquarrie and Edward Robinson (1927; 1962), and then by Joan Stambaugh (1996); *What Is a Thing?* (1962; 1967); *Identity and Difference* (1957; 1969); *On Time and Being* (1969; 1972); *The Question Concerning Technology and Other Essays*, translated by William Lovitt (1977); *Nietzsche* (2 vols., 1961; 4 vols., 1979–87); *History of the Concept of Time: Prolegomena* (1979; 1985); *Hegel's Phenomenology of Spirit* (1980; 1988); *Kant and the Problem of Metaphysics* (1929; 1990); *The Concept of Time* (1992; 1992); *Basic Concepts* (1981; 1993); *The Fundamental Concepts of Metaphysics: World, Finitude, Solitude* (1983; 1995); *Pathmarks* (1967; 1998); *Contributions to Philosophy: From Enowning* [a term that translates *Ereignis*, "appropriation"] (1989; 1999); *Towards the Definition of Philosophy* (1987; 2000); *Supplements: From the Earliest Essays to "Being and Time" and Beyond*, edited by John van Buren (2002); *Four Seminars* (1977; 2003); *Mindfulness* (1997; 2006); and *Hegel* (2015), which collects an array of Heidegger's interpretations of Hegel's writings. A translation of Heidegger's interview on his Nazi past, "Only a God Can Save Us Now," can be found in the journal *Philosophy Today* 20 (winter 1976). For biographical sources, see Hugo Ott's *Martin Heidegger: A Political Life* (1993); Rüdiger Safranski's *Martin Heidegger: Between Good and Evil* (1994; trans. 1998); and James K. Lyon's *Paul Celan and Martin Heidegger: An Unresolved Conversation, 1951–1970* (2006), which draws on documentary material to offer the first systematic analysis of the troubled and unfinished relationship between the two.

For general introductions, see George Steiner's *Martin Heidegger* (2d ed., 1991); Michael Inwood's *Heidegger* (1997); *Heidegger Reexamined*, edited by Hubert Dreyfus and Mark Wrathall (4 vols., 2002); *The Cambridge Companion to Heidegger*, edited by Charles B. Guignon (2d ed., 2006); and John Richardson's *Heidegger* (2012). Among the important studies and applications of Heidegger's views on language and poetry are *On Heidegger*

and Language, edited by Joseph J. Kockelmans (1972); David A. White, *Heidegger and the Language of Poetry* (1978); *Martin Heidegger and the Question of Literature: Toward a Postmodern Literary Hermeneutics*, edited by William V. Spanos (1979); Paul A. Bové, *Destructive Poetics: Heidegger and Modern American Poetry* (1980); David Halliburton, *Poetic Thinking: An Approach to Heidegger* (1981); Joseph Kockelmans, *Heidegger on Art and Art Works* (1985); Gerald L. Bruns, *Heidegger's Estrangements: Language, Truth, and Poetry in the Later Writings* (1989); Hans-Georg Gadamer, *Heidegger's Ways* (1983; trans. 1994); Marc Froment-Meurice, *That Is to Say: Heidegger's Poetics* (1996; trans. 1998); Philippe Lacoue-Labarthe, *Heidegger and the Politics of Poetry* (2002; trans. 2007); Jennifer Anna Gosetti-Ferencei, *Heidegger, Hölderlin, and the Subject of Poetic Language: Toward a New Poetics of Dasein* (2004); Mark A. Wrathall, *Heidegger and Unconcealment: Truth, Language, and History* (2010); and Richard Capobianco, *Heidegger's Way of Being* (2015), which develops a well-informed rebuttal of antirealist interpretations of Heidegger's thought that reduce his concept of "being" to "human meaning-making." On Heidegger and the Nazi question, see Pierre Bourdieu, *The Political Ontology of Martin Heidegger* (1975; trans. 1991); Victor Farias, *Heidegger and Nazism* (1987; trans. 1990); Jacques Derrida, *Of Spirit: Heidegger and the Question* (1987; trans. 1990); Philippe Lacoue-Labarthe, *Heidegger, Art, and Politics: The Fiction of the Political* (1987; trans. 1990); Jean-François Lyotard, *Heidegger and "the Jews"* (1988; trans. 1990); *The Heidegger Controversy: A Critical Reader*, edited by Richard Wolin (1992); Fred Dallmayr, *The Other Heidegger* (1993); Hans D. Sluga, *Heidegger's Crisis: Philosophy and Politics in Nazi Germany* (1993); Julian Young, *Heidegger, Philosophy, Nazism* (1997); Miguel de Beistegui, *Heidegger & the Political: Dystopias* (1998); James Phillips, *Heidegger's Volk: Between National Socialism and Poetry* (2005); and Peter Trawny, *Heidegger and the Myth of a Jewish World Conspiracy* (2014; trans. 2015), which draws on Heidegger's *Black Notebooks* (2014; trans. 2016) to argue that anti-Semitism plays an integral role in Heidegger's philosophy of history. For bibliographies, see Hans-Martin Sass, *Martin Heidegger: Bibliography and Glossary* (1982); Joan Nordquist, *Martin Heidegger: A Bibliography* (1990) and *Martin Heidegger (II): A Bibliography* (1996); Miles Groth, *The Voice That Thinks: Heidegger Studies with a Bibliography of English Translations, 1949–1996* (1997); and *The Cambridge Companion to Heidegger*, cited above.

David Herman

David Herman has published numerous articles, chapters, review essays, and reviews, as well as

five books and nine edited volumes in the areas of narrative theory, modern and postmodern fiction, and storytelling across media. His books are *Universal Grammar and Narrative Form* (1995); *Story Logic: Problems and Possibilities of Narrative* (2002); *Basic Elements of Narrative* (2009); with James Phelan, Peter J. Rabinowitz, Brian Richardson, and Robyn Warhol, *Narrative Theory: Core Concepts and Debate* (2010); and *Storytelling and the Sciences of Mind* (2013). He has edited or co-edited *Narratologies: New Perspectives on Narrative Analysis* (1999); *Narrative Theory and Cognitive Sciences* (2003); with Manfred Jahn and Marie-Laure Ryan, *Routledge Encyclopedia of Narrative Theory* (2005); *The Cambridge Companion to Narrative* (2007); Muriel Spark: *Twenty-First-Century Perspectives* (2010); with Brian McHale and James Phelan, *Teaching Narrative Theory* (2010); *The Emergence of Mind: Representations of Consciousness in Narrative Discourse in English* (2011); *Creatural Fictions: Human-Animal Relationships in Twentieth- and Twenty-First-Century Literature* (2016); and *Animal Comics: Multispecies Storyworlds in Graphic Narratives* (2017). For particularly informative interviews with Herman, see Shang Biwu's, http://cf.hum.uva.nl/narratology/all_an_interview_with_david_herman.htm (2005), in which Herman discusses his use of postclassical narratology and storyworlds, and Barry Mazur's, <http://thalesandfriends.org/2007/07/22/interview-with-david-herman/> (2007), which examines Herman's "panoptic view of the field of narratology" and analyzes the experimental mathematical approach that Herman uses in one of his essays to create an interdisciplinary discourse between mathematics and narrative theory.

While reviewers of Herman's work sometimes complain about his use of technical vocabulary and his preference for theory, most critics praise his interdisciplinary efforts, especially in bringing cognitive theory to literary narratology. See, for example, Jan Baetens, who in his review of Herman's *Storytelling and the Sciences of Mind*, in *Leonardo* 47.5 (2014), deems the book an "important attempt to bridge the gap between several subdisciplinary approaches." Along the way Baetens points out some key issues unaddressed by Herman, such as the role in narratives of implied readers and implied authors as well as authorial intentions.

bell hooks

hooks's early critical writing, mainly essay collections, include, on feminist theory, *Ain't I a Woman: Black Women and Feminism* (1981), *Feminist Theory: From Margin to Center* (1984; 2d ed., 2000), *Talking Back: Thinking Feminist, Thinking Black* (1989), and *Sisters of the Yam: Black Women and Self-Recovery* (1993); on race, *Breaking Bread: Insurgent Black Intellectual Life* (with Cornel West, 1991), *Black Looks: Race and Representation*

(1992), *Killing Rage: Ending Racism* (1995), and *Writing Beyond Race: Living Theory and Practice* (2012); on teaching, *Teaching to Transgress: Education as the Practice of Freedom* (1994) and *Teaching Critical Thinking: Practical Wisdom* (2010); on film, *Reel to Real: Race, Sex, and Class at the Movies* (1996); and on cultural studies, *Yearning: Race, Gender, and Cultural Politics* (1990), *Outlaw Culture: Resisting Representation* (1994), *Art on My Mind: Visual Politics* (1995), and *Belonging: A Culture of Place* (2009). Her memoirs—*Bone Black: Memories of Girlhood* (1996), *Wounds of Passion: A Writing Life* (1997), and *Remembering Rapture: The Writer at Work* (1999)—are good sources of information on her life. hooks's most recent works include *Feminism Is for Everybody: Passionate Politics* (2000), *Where We Stand: Class Matters* (2000), *All About Love: New Versions* (2001), *Salvation: Black People and Love* (2001), *Communion: The Female Search for Love* (2002), *Teaching Community: A Pedagogy of Hope* (2003), *Rock My Soul: Black People and Self-esteem* (2003), *The Will to Change: Men, Masculinity, and Love* (2004), *We Real Cool: Black Men and Masculinity* (2004), and *Homegrown: Engaged Cultural Criticism*, with Amalia Mesa-Bains (2006). She has also written three books of poetry, *And There We Wept: Poems* (1978), *When Angels Speak of Love: Poems* (2007), and *Appalachian Elegy: Poetry and Place* (2012), plus five children's books. For a biographical sketch, see the entry by Online E. Le Blanc and Margaret L. Moser in *Contemporary Black Biography*, vol. 90 (2011).

A number of critical articles on hooks have appeared. Of most interest to students of literary criticism are Cassie Premo, "When the Difference Becomes Too Great: Images of the Self and Survival in a Postmodern World," *Genre* 28 (1995); Clive Thomson, "Culture, Identity, and Dialogue: bell hooks and Gayatri Chakravorty Spivak," in *Dialogism and Cultural Criticism* (ed. Thomson and Hans Raj Dau, 1995); and Marilyn Edelstein, "Resisting Postmodernism; or, 'A Postmodernism of Resistance': bell hooks and the Theory Debates," in *Other Sisterhoods: Literary Theory and U.S. Women of Color* (ed. Sandra Kumamoto Stanley, 1998). hooks's essays about teaching have also been of interest to critics, including Gary Olson and Elizabeth Hirsh, "Feminist Praxis and the Politics of Literacy: A Conversation with bell hooks," in *Women Writing Culture* (ed. Olson and Hirsh, 1995); Namulundah Florence, *bell hooks' Engaged Pedagogy: A Transgressive Education for Critical Consciousness* (1998); and Linda Strong-Leek, "bell hooks, Carter G. Woodson, and African American Education," *Journal of Black Studies* 38 (2008). Recent books on hooks's cultural criticism include *Critical Perspectives on bell hooks*, edited by Maria del Guadalupe Davidson and George Yancy (2009), and Catherine R. Squires, *bell hooks: A Critical Introduction to Media and Communication Theory* (2013). Sut Jhally features

hooks in his documentary film *bell hooks: Cultural Criticism and Transformation* (1997). Bibliographical information on hooks may be found in Genevieve Fabre's "Selected Bibliography of Essays on Black Women and Black Feminist Criticism," *Revue Française d'Études Américaines* 24 (1986), as well as in the Schomburg Center for Research in Black Studies' *Bibliographic Guide to Black Studies* (2003).

Horace

The complete Latin works of Horace are collected in *Q. Horati Flacci Opera*, edited by D. R. Shackleton Bailey (4th ed., 2001). The standard Latin edition of the *Ars Poetica* with English commentary can be found in *Epistles Book II and Epistle to the Pisones*, edited by Niall Rudd (1989). This text also includes the important "Epistle to Augustus" and the "Epistle to Florus." *The Complete Works of Horace*, edited by Charles E. Passage (1983), offers an English translation of Horace's collected poetry, including the *Ars Poetica*. There are a number of very accessible prose translations of *Ars Poetica*: D. A. Russell's in *Ancient Literary Criticism* (1972); Leon Golden's in O. B. Hardison and Leon Golden's *Horace for Students of Literature: The "Ars Poetica" and Its Tradition* (1995), which also includes a series of documents that demonstrate the influence of Horace's epistle throughout the history of Western literary criticism; and Ross S. Kilpatrick's eminently readable translation in *The Poetry of Criticism: Horace, Epistles II and the Ars Poetica* (1990), which we use here. A Latin *Life of Horace* exists; it is attributed to the Roman historian Suetonius (ca. 69–140 C.E.). For an English biography, see Peter Levi's *Horace: A Life* (1997).

D. A. Russell's essay on the *Ars Poetica* in *Horace* (ed. C. D. N. Costa, 1973) provides a useful and brief introduction to the poem. It is reprinted in *Ancient Literary Criticism* (ed. Andrew Laird, 2006). S. J. Harrison's *Horace* (2014) is also indispensable for the beginning student of Horace. Charles O. Brink's monumental three-volume study, *Horace on Poetry* (1963–82), is the standard text for advanced study of Horace's critical principles; it includes texts and commentaries on the *Ars Poetica*, the "Epistle to Augustus," and the "Epistle to Florus." Ross Kilpatrick, in *The Poetry of Criticism* (see above), examines the relationships between Horace's epistles on poetry, providing an account of the major themes of the *Ars Poetica*. Bernard Frischer, in *Shifting Paradigms: New Approaches to Horace's "Ars Poetica"* (1991), presents a detailed statistical analysis of the epistle's many controversies. Several collections of essays on Horace offer introductions to the life and works of Horace, as well as specific chapters on *Ars Poetica*; these include essays by Andrew Laird in *The Cambridge Companion to Horace*, edited by S. J. Harrison (2007); by Ellen Oliensis in *Horace, Satires and Epistles*, edited by Kirk Freudenburg (2009); by W. R. Johnson and Leon Golden in *A Companion to*

Horace, edited by Gregson Davis (2010); and by Tobias Reinhardt in *Brill's Companion to Horace*, edited by Hans-Christian Günther (2013). Ellen Oliensis's *Horace and the Rhetoric of Authority* (1998) includes a chapter on self-fashioning in the *Ars Poetica*, which is reprinted in Freudenburg's collection. In *Horace's Iambic Criticism: Casting Blame (Iambikē Poiēsis)* (2012), Timothy S. Johnson offers a more advanced examination of Horace's use and criticism of iambic meter in his literary practice.

Volume 3 of Brink's *Horace on Poetry* (cited above) contains an extensive bibliography of primary and secondary sources on Horace's literary criticism. *Horace* by S. J. Harrison (cited above) offers a complete survey of the scholarly literature on Horace since 1957.

Max Horkheimer and Theodor W. Adorno

The authoritative German edition of Adorno's collected works is the twenty-one-volume *Gesammelte Schriften*, edited by Rolf Tiedemann with Gretel Adorno, Susan Buck-Morss, and Klaus Schultz (1970–86). English translations of Adorno's writings on music theory, history, and criticism (with their original publication date given first) include *Philosophy of Modern Music* (1949; 1973 and 2006 [two trans.]), *Introduction to the Sociology of Music* (1962; 1976), *In Search of Wagner* (1952; 1981), *Alban Berg: Master of the Smallest Link* (1968; 1991), *Mahler: A Musical Physiognomy* (1960; 1992), *Quasi Una Fantasia: Essays on Modern Music* (1963; 1992), *Composing for the Films* (1994), *Sound Figures* (1959; 1998), *Beethoven: The Philosophy of Music* (1993; 1998), *Towards a Theory of Musical Reproduction: Notes, a Draft and Two Schemata* (2001; 2006), and *Current of Music: Elements of a Radio Theory* (2006; 2009). A substantial number of English translations of Adorno's sociological writings are readily available, including *Prisms* (1955; 1967), *Dialectic of Enlightenment* (1947; 1972 and 2002), *Aspects of Sociology* (1956; 1972), *Minima Moralia: Reflections from a Damaged Life* (1951; 1974), *The Positivist Dispute in German Sociology* (1976), *Culture Industry: Selected Essays on Mass Culture* (1991), *Stars Come Down to Earth and Other Essays on the Irrational* (1994), and *Critical Models: Interventions and Catchwords* (1963–69; 1998). Translations into English of works focusing on philosophy, aesthetics, and literature include *The Jargon of Authenticity* (1964; 1973), *Negative Dialectics* (1966; 1973), *Against Epistemology* (1956; 1982), *Kierkegaard: Construction of the Aesthetic* (1933; 1989), *Notes to Literature* (4 vols., 1958–74; 2 vols., 1991), *Hegel: Three Studies* (1963; 1993), *Aesthetic Theory* (1970; 1984 and 1997), *Problems of Moral Philosophy* (1963; 2000), *Kant's "Critique of Pure Reason"* (1959; 2001), *Metaphysics: Concept and Problems* (1965; 2000), and *Can One Live After Auschwitz? A Philosophical Reader* (1997; 2003). See also *The Authoritarian Personality* (1950), by Adorno and others.

For a selection, see *The Adorno Reader*, edited by Brian O'Connor (2000). English translations of Adorno's letters include Adorno and Alban Berg, *Correspondence, 1925–1935* (2006), and *Letters to His Parents, 1939–1951* (2006). A selection of Adorno's writings on his dreams, spanning the last twenty-five years of his life, appears in *Dream Notes* (2005; 2007). For the best introductory biography, see Martin Jay's *Adorno* (1984). More recent ones include Stefan Müller-Doohm's *Adorno: A Biography* (2003; trans. 2005), the most comprehensive account of Adorno's life and work; Lorenz Jäger's *Adorno: A Political Biography* (2003; trans. 2004), which is the first attempt to evaluate Adorno's philosophical and literary work in its political contexts; and Detlev Clausen's *Theodor W. Adorno: One Last Genius* (2003; trans. 2008), providing the best biographical account of primary texts written by Adorno.

The nineteen-volume *Gesammelte Schriften* of Horkheimer, edited by Alfred Schmidt and Gunzelin Schmid Noerr (1985–96), is the definitive German edition of his work. The major English translations of his writings are *Eclipse of Reason* (1947), *Critical Theory: Selected Essays* (1972), *Critique of Instrumental Reason: Lectures and Essays Since the End of World War II* (1974), *Dawn and Decline: Notes 1926–1931 and 1950–1969* (1974), and *Between Philosophy and Social Science: Selected Early Writings* (1993). For an English translation of Horkheimer's letters, see *A Life in Letters: Selected Correspondence*, edited and translated by Manfred R. Jacobson and Evelyn M. Jacobson (2007). The most comprehensive intellectual biography of Horkheimer is John Abromeit's *Max Horkheimer and the Foundations of the Frankfurt School* (2011), which includes a thorough survey of relevant secondary literary as well as interpretive analyses of Horkheimer's major works that are supplemented by insights from Abromeit's extensive archival research.

For a discussion of Adorno and Horkheimer's early involvement with the Frankfurt School, see Martin Jay's *Dialectical Imagination: A History of the Frankfurt School and the Institute of Social Research, 1923–1950* (1973). Susan Buck-Morss's *Origin of Negative Dialectics: Theodor W. Adorno, Walter Benjamin, and the Frankfurt Institute* (1977) provides a historical account of the beginnings of Critical Theory. For useful studies of Adorno, Horkheimer, Critical Theory, and the work of the Frankfurt School as a whole, see David Held's *Introduction to Critical Theory: Horkheimer to Habermas* (1980); *Foundations of the Frankfurt School of Social Research*, edited by Judith Marcus and Zoltán Tar (1984); and Stuart Jeffries's *Grand Hotel Abyss: The Lives of the Frankfurt School* (2016). Zoltán Tar's critical analysis, *The Frankfurt School: The Critical Theories of Max Horkheimer and Theodor W. Adorno* (1977; rev. ed., 2011), attempts to understand

Horkheimer and Adorno's theories in light of their experience as Jewish émigré intellectuals confronting fascism.

Gillian Rose's *Melancholy Science: An Introduction to the Thought of Theodor W. Adorno* (1978) offers a wide-ranging study of Adorno's work. Fredric Jameson's controversial *Late Marxism: Adorno, or, the Persistence of the Dialectic* (1990) demonstrates the relevance of Adorno to post-modern times. Peter Uwe Hohendahl's *Prismatic Thought: Theodor W. Adorno* (1995) provides a general overview, while Deborah Cook's *The Culture Industry Revisited: Theodor W. Adorno on Mass Culture* (1996) gives a comprehensive study of Adorno's writings on the culture industry. More recent studies include *Adorno: A Critical Reader*, edited by Nigel Gibson and Andrew Rubin (2001); Robert W. Witkin, *Adorno on Popular Culture* (2003); *The Cambridge Companion to Adorno*, edited by Thomas Huhn (2004); *Adorno and Literature*, edited by David Cunningham and Nigel Mapp (2006); *Feminist Interpretations of Theodor Adorno*, edited by Renée Heberle (2006); Bertold Hoeckner, *Apparitions: New Perspectives on Adorno and Twentieth-Century Music* (2006); *Adorno and Heidegger: Philosophical Questions*, edited by Iain Macdonald and Krzysztof Ziarek (2008); and Brian O'Connor's highly accessible *Adorno* (2013). For a bibliography of Horkheimer's work, along with a critical overview, see *On Max Horkheimer*, edited by Seyla Benhabib et al. (1993). Bibliographical information on Adorno is available in Müller-Doohm's biography and the *Cambridge Companion*, mentioned above.

Langston Hughes

Hughes published ten books of poetry, eight of fiction, and twenty of nonfiction prose (several coauthored). His social and literary criticism appeared in *A New Song* (1938), *Freedom's Plow* (1943), *Jim Crow's Last Stand* (1943), *Laughing to Keep from Crying* (1952), *Black Misery* (1969), and *Good Morning Revolution: Uncollected Social Protest Writings by Langston Hughes*, edited by Faith Berry (1973). His correspondence with the influential black writer and editor Arna Bontemps has been published in *Arna Bontemps–Langston Hughes Letters, 1925–1967*, edited by Charles H. Nichols (1980). A selection from all his work is available in *The Langston Hughes Reader* (1958), and *The Selected Letters of Langston Hughes*, edited by Arnold Rampersad and David Roessel (2015), covers his whole life, while *Letters from Langston: From the Harlem Renaissance to the Red Scare and Beyond*, edited by Evelyn Louise Crawford and MaryLouise Patterson (2016), documents his political opinions and affiliations. Hughes also edited many works, among them the important literary anthologies *The Poetry of the Negro* (1949), with Arna Bontemps; *The Book of Negro Folklore* (1958), with Arna Bontemps; *New Negro Poets: USA* (1964); and *The Best Short Stories by Negro Writers* (1967).

Hughes wrote two autobiographies, *The Big Sea* (1940) and *I Wonder as I Wander* (1956). Two biographies are Faith Berry's *Langston Hughes: Before and Beyond Harlem* (1983) and Arnold Rampersad's authoritative two-volume *Life of Langston Hughes* (1986–88). Critical studies that attend to Hughes's nonpoetical works include W. Jason Miller's *Langston Hughes and American Lynching Culture* (2011), Vera M. Kutzinski's *The Worlds of Langston Hughes: Modernism and Translation in the Americas* (2012), and David E. Chinitz's *Which Sin to Bear? Authenticity and Compromise in Langston Hughes* (2013). Three collections of essays are useful for giving a sense of Hughes's place in American letters and the range of responses to his work: *Montage of a Dream: The Art and Life of Langston Hughes*, edited by John Edgar Tidwell and Cheryl R. Ragan (2007); *Langston Hughes*, edited by Harold Bloom (new ed., 2008); and *Langston Hughes*, edited by R. Baxter Miller (2013). This last volume is a particularly good place to start, and also has an excellent bibliography covering Hughes's own works and the secondary literature on him.

David Hume

For Hume's writings, see *The Essays, Moral, Political, and Literary*, edited by T. H. Green and T. H. Grose (4 vols., 1874–75), and *The Philosophical Works of David Hume*, edited by T. H. Green and T. H. Grose (4 vols., 1882–86; rpt. 1964). Eugene F. Miller has prepared a good modern edition of Hume's essays (rev. ed., 1987). For a one-volume collection, see *The Essential David Hume*, edited by Robert Paul Wolff (1969). *Essays and Treatises on Philosophical Subjects*, edited by Lorne Falkenstein and Neil McArthur (2013), with detailed notes and contextual materials, is the first edition in over a century to present Hume's *Enquiry Concerning Human Understanding*, *Dissertation on the Passions*, *Enquiry Concerning the Principles of Morals*, and *Natural History of Religion* in the format he intended—collected together in a single volume. The correspondence is available in *The Letters of David Hume*, edited by J. Y. T. Greig (2 vols., 1932), and *New Letters of David Hume*, edited by Raymond Klibansky and Ernest C. Mossner (1954). The standard biography is Ernest C. Mossner, *The Life of David Hume* (2d ed., 1980). In *Hume: An Intellectual Biography* (2015), James A. Harris focuses on Hume's intentions as a philosophical analyst of human nature, politics, commerce, English history, and religion; he also examines Hume's intellectual relations with his contemporaries. Don Garrett's *Hume* (2015) is a full account of the life and work, with an excellent chapter on the influence and legacy of Hume's thought today.

Introductions to Hume's work include D. G. C. MacNabb, *David Hume: His Theory of Knowledge and Morality* (2d ed., 1966); Terence Penelhum, *Hume* (1975); Barry Stroud, *Hume* (1977);

and A. J. Ayer, *Hume* (1980). For more detailed discussions, see Norman Kemp Smith, *The Philosophy of David Hume: A Critical Study of Its Origins and Central Doctrines* (1966); James Noxon, *Hume's Philosophical Development* (1973); John Passmore, *Hume's Intentions* (3d ed., 1980); Donald W. Livingston, *Hume's Philosophy of Common Life* (1984); and Anthony Flew, *David Hume, Philosopher of Moral Science* (1986). On the empiricist tradition, see Jonathan Francis Bennett, *Locke, Berkeley, Hume: Central Themes* (1971). Recent studies include *David Hume: Historical Thinker, Historical Writer*, edited by Mark G. Spencer (2013), a very good collection on Hume's historical writings and their intersections with his work on philosophy and literature; Dennis C. Rasmussen, *The Pragmatic Enlightenment: Recovering the Liberalism of Hume, Smith, Montesquieu, and Voltaire* (2014), on morality, reason, and eighteenth-century political theory; Thomas W. Merrill, *Hume and the Politics of Enlightenment* (2015); and Jacqueline Anne Taylor, *Reflecting Subjects: Passion, Sympathy, and Society in Hume's Philosophy* (2015), which deals with Hume's social theory, focusing on the passions and imagination in relation to institutions such as government and the economy.

On Hume as a literary critic and theorist, see Teddy Brunius, *David Hume on Criticism* (1952), and Jan Wilbanks, *Hume's Theory of Imagination* (1968). Chapter 2 in Terry Eagleton, *The Ideology of the Aesthetic* (1990), examining Hume, Shaftesbury, and Burke, is provocative. Hume has also received much attention as a literary artist in his own right; see Leo Braudy, *Narrative Form in History and Fiction: Hume, Fielding, and Gibbon* (1970); John J. Richetti, *Philosophical Writing: Locke, Berkeley, Hume* (1983); Jerome Christensen, *Practicing Enlightenment: Hume and the Formation of a Literary Career* (1987); Leopold Damrosch, *Fictions of Reality in the Age of Hume and Johnson* (1989); M. A. Box, *The Suasive Art of David Hume* (1990); Adam Potkay, *The Fate of Eloquence in the Age of Hume* (1994); and Adela Pinch, *Strange Fits of Passion: Epistemologies of Emotion, Hume to Austen* (1996). On Hume's work and the empiricist background of aesthetics in the eighteenth century, Dabney Townsend's *Hume's Aesthetic Theory: Taste and Sentiment* (2001) is illuminating. *The Continuum Companion to Hume*, edited by Alan Bailey and Dan O'Brien (2012), offers wide-ranging coverage and includes an essay by M. W. Rowe on "Of the Standard of Taste."

An excellent resource is *The Cambridge Companion to Hume*, edited by David Norton and Jacqueline Taylor (2d ed., 2008), which includes an essay by Peter Jones on Hume's account of the arts and taste, plus a selected bibliography. See also T. E. Jessop, *A Bibliography of David Hume and of Scottish Philosophy from Frances Hutcheson to Lord Balfour* (1938); Roland Hall,

A Hume Bibliography, from 1930 (1971); the bibliographical essay in *Hume and the Enlightenment*, edited by William B. Todd (1974); and Roland Hall, *Fifty Years of Hume Scholarship: A Bibliographical Guide* (1978).

Zora Neale Hurston

Hurston's novels, stories, folklore, memoirs, and other writings are available from the Library of America in two volumes edited by Cheryl A. Wall, *Novels and Stories and Folklore, Memoirs, and Other Writings* (1995). See also *I Love Myself: A Zora Neale Hurston Reader*, edited by Alice Walker (1979).

Robert Hemenway's *Zora Neale Hurston* (1977) is an indispensable biography that has done much to spark interest in Hurston's work. Lillie P. Howard's *Zora Neale Hurston* (1980) is a concise survey of Hurston's life and writings. In addition, *Zora Neale Hurston: A Life in Letters*, edited by Carla Kaplan (2002), includes more than 600 letters that span nearly forty years of Hurston's life. Virginia Lynn Moylan's *Zora Neale Hurston's Final Decade* (2011) recounts the writer's turbulent last years. The best studies of Hurston are Karla F. C. Holloway, *The Character of the Word: The Texts of Zora Neale Hurston* (1987); Lynda Marion Hill, *Social Rituals and the Verbal Art of Zora Neale Hurston* (1996); Susan Edwards Meisenhelder, *Hitting a Straight Lick with a Crooked Stick: Race and Gender in the Work of Zora Neale Hurston* (1999); and Tiffany Ruby Patterson, *Zora Neale Hurston and a History of Southern Life* (2005).

Cheryl A. Wall's *Women of the Harlem Renaissance* (1995) places Hurston within a wider cultural and literary context. On the relation of Hurston's work to contemporary literary theory and African American cultural and literary studies, see Barbara Johnson, *A World of Difference* (1987), and Henry Louis Gates Jr., *The Signifying Monkey: A Theory of Afro-American Literary Criticism* (1988). A helpful collection of essays is *Zora Neale Hurston: Perspectives Past and Present*, edited by Henry Louis Gates Jr. and K. A. Appiah (1993). The documentary *Zora Neale Hurston: Jump at the Sun* (2008), produced and written by Kristy Andersen, is informative and moving. For bibliography, see Adele S. Newson, *Zora Neale Hurston: A Reference Guide* (1987); Rose Parkman Davis, *Zora Neale Hurston: An Annotated Bibliography and Reference Guide* (1997); and Cynthia Davis and Verner D. Mitchell's *Zora Neale Hurston: An Annotated Bibliography of Works and Criticism* (2013).

Wolfgang Iser

Iser's early works, *Die Weltanschauung Henry Fieldings* (1952, *Henry Fielding's Worldview*) and *Walter Pater: The Aesthetic Moment* (1960; trans. 1987), are traditional scholarly studies. He first developed his views of reader response in *Die*

Appellstruktur der Text (1970, *The Affective Structure of the Text*), *The Implied Reader: Patterns of Communication in Prose Fiction from Bunyan to Beckett* (1972; trans. 1974), and *The Act of Reading: A Theory of Aesthetic Response* (1976; trans. 1978). Thereafter, Iser published two literary studies, *Laurence Sterne: Tristram Shandy* (1987; trans. 1988) and *Staging Politics: The Lasting Impact of Shakespeare's Histories* (1988; trans. 1993). In *Prospecting: From Reader Response to Literary Anthropology* (1989), *The Fictive and the Imaginary: Charting Literary Anthropology* (1991; trans. 1993), and *The Range of Interpretation* (2000), Iser moved to develop "literary anthropology," examining why (rather than how) people read and exploring how fiction is a necessary human activity. Iser also published an introductory guide, *How to Do Theory* (2006); his brief *Stepping Forward: Essays, Lectures and Interviews* (2008) collects several previously unpublished pieces.

An early, notable response by Stanley Fish, "Why No One Is Afraid of Wolfgang Iser," appeared in *Diacritics* 11 (1981). Steven Mailloux's *Interpretive Conventions: The Reader in the Study of American Fiction* (1982) includes a good discussion of Iser's relation to the New Criticism and a pointed comparison between Iser and Fish. Robert Holub's "Reception Theory: School of Constance," in *The Cambridge History of Literary Criticism*, vol. 8, *From Formalism to Poststructuralism* (ed. Raman Selden, 1995), provides an excellent overview of Iser's work and the Constance School, noting its influence on a second generation of reception theorists. Michael Bérubé's "There Is Nothing Inside the Text, or, Why No One's Heard of Wolfgang Iser," in *Postmodern Sophistry: Stanley Fish and the Critical Enterprise* (ed. Gary A. Olson and Lynn Worsham, 2004), speculates that Fish's takedown turned attention away from Iser. Still, there has been a good deal of criticism reassessing his work since 2000. A special issue of *New Literary History* 31 (2000)—*On the Writings of Wolfgang Iser*, edited by John Paul Riquelme—gathers ten substantial essays on aspects of Iser's work and career; it includes Brook Thomas's "Restaging the Reception of Iser's Early Work, or Sides Not Taken in Discussions of the Aesthetic," which usefully contextualizes Iser's entrance on the American critical scene, and Winfried Fluck's dense but informative "The Search for Distance: Negation and Negativity in Wolfgang Iser's Literary Theory," which comments on Iser's interest in aesthetics as a generational response to the situation in Germany after World War II. Craig Hamilton and Ralf Schneider, "From Iser to Turner and Beyond: Reception Theory Meets Cognitive Criticism," *Style* 36 (2002), includes a substantial review of Iser's work and looks at how contemporary cognitive theory has developed from reception theory. Robert Folkenflik's "Wolfgang Iser's Eighteenth

Century," *Poetics Today* 27 (2006), examines the way that eighteenth-century British novels, one of Iser's specialties, influenced his views. See also Brook Thomas, "The Fictive and the Imaginary: Charting Literary Anthropology, or, What's Literature Have to Do with It?" *American Literary History* 20 (2008), which rebuts Bérubé and surveys recent work on Iser. On Iser's theory of reading in pedagogy, see Olga M. Hubbard, "The Act of Looking: Wolfgang Iser's Literary Theory and Meaning Making in the Visual Arts," *International Journal of Art and Design Education* 27 (2008), and Lisa Schade Eckert, "Bridging the Pedagogical Gap: Intersections between Literary and Reading Theories in Secondary and Postsecondary Literacy Instruction," *Journal of Adolescent and Adult Literacy* 52 (2008). Two articles amend Iser's concept of "the implied reader," showing its relevance to queer theory and cognitive theory: Hanna Kubowitz, "The Default Reader and a Model of Queer Reading and Writing Strategies Or: Obituary for the Implied Reader," *Style* 46 (2012), and Karin Kukkonen, "Presence and Prediction: The Embodied Reader's Cascades of Cognition," *Style* 48 (2014). Ben De Bruyn, *Wolfgang Iser: A Companion* (2012), surveys Iser's work and includes a selected bibliography.

Roman Jakobson

The best single collection of Jakobson's writings on literature is *Language in Literature*, edited by Krystyna Pomorska and Stephen Rudy (1987). A more complete selection is available in *Selected Writings* (7 vols., 1971–84), each volume of which is introduced with a "retrospective" by Jakobson himself. Biographical information is both plentiful and scant. The closest thing to a biography is a volume of conversations between Jakobson and Krystyna Pomorska, his third wife, titled *Dialogues* (1983); it perfectly illustrates Jakobson's "mythic" concept of autobiography: both participants are focused on displaying the charisma of Jakobson's intellectual, not personal, life.

Good introductions to Jakobson's work are Elmar Holenstein's *Roman Jakobson's Approach to Language: Phenomenological Structuralism* (1974; trans. 1976) and Richard Bradford's *Roman Jakobson: Life, Language, Art* (1994). For two excellent and different accounts of Russian formalism in context, see Victor Erlich, *Russian Formalism: History—Doctrine* (1955; 3d ed., 1981) and Fredric Jameson, *The Prison-House of Language: A Critical Account of Structuralism and Russian Formalism* (1972). *Roman Jakobson: Echoes of His Scholarship*, edited by Daniel Armstrong and C. H. Van Schooneveld (1977), gives a good general sense of the many directions those pursuing Jakobson's interests have taken. Svetlana Boym's *Death in Quotation Marks: Cultural Myths of the Modern Poet* (1991) furthers Jakobson's analysis of mythic biography. For a bibliography of works by Jakobson, see Stephen Rudy, *Roman Jakobson: A Complete Bibli-*

ography of His Writings, 1912–1982 (1985); for critical writings about Jakobson, see the annotated overview in Bradford's book along with bibliographies in the book by Holenstein and in *Language, Poetry, and Poetics: The Generation of the 1890s—Jakobson, Trubetskoy, Majakovskij*, edited by Krystyna Pomorska, Elzbieta Chodakowska, Hugh McLean, and Brent Vine (1987).

Henry James

James's literary criticism has been collected by the Library of America in two volumes, titled *Essays, American and English Writers and European Writers and the Prefaces* (1984). This is an essential collection for the student of James's work. Selections can be found in *Literary Reviews and Essays on American, English, and French Literature*, edited by Albert Mordell (1957); *Henry James: Selected Literary Criticism*, edited by Morris Shapira (1963); *Theory of Fiction: Henry James*, edited by James E. Miller Jr. (1972), arranged according to topics and categories; *The House of Fiction: Essays on the Novel*, edited by Leon Edel (1973); *The Art of Criticism: Henry James on the Theory and the Practice of Fiction*, edited by William Veeder and Susan M. Griffin (1986), which includes excellent discussion of and detailed notes for each selection; and *The Critical Muse: Selected Literary Criticism of Henry James*, edited by Roger Gard (1988), which is the best selection for an overview of James's achievement in criticism and theory. Also important is *The Art of the Novel: Critical Prefaces by Henry James*, with an introduction by R. P. Blackmur (new ed., 1984), which gathers the prefaces that James wrote for the New York Edition. Additional primary sources include *Henry James: Autobiography*, edited by F. W. Dupee (1956), written in James's late labyrinthine, evocative manner; *The Complete Notebooks of Henry James*, edited by Leon Edel and Lyall H. Powers (1987); and *Letters*, edited by Leon Edel (4 vols., 1974–84). *William and Henry James: Selected Letters*, edited by Ignas K. Skrupskelis and Elizabeth M. Berkeley (1997), is a fascinating collection. A new, complete edition of James's letters, edited by Pierre A. Walker and Greg W. Zacharias, is now in progress (11 vols. to date, 2006–). Another valuable resource is Edgar F. Harden, *A Henry James Chronology* (2005).

The definitive biography is *Henry James*, variously subtitled, in five volumes by Leon Edel (1953–72); it is condensed and updated in the single volume *Henry James: A Life* (1985). Other excellent biographies include Fred Kaplan, *Henry James: The Imagination of Genius: A Biography* (1992), and Kenneth Graham, *Henry James: A Literary Life* (1995). Lyndall Gordon, *A Private Life of Henry James: Two Women and His Art* (1999), probes the impact on James's writing of two important relationships: one with his cousin Minnie Temple, the other with the author Constance Fenimore Woolson. Sheldon M. Novick, in

Henry James: The Young Master (1996) and *Henry James: The Mature Master* (2007), examines the work and the life, including a speculative, and controversial, account of James's homosexuality. In *House of Wits: An Intimate Portrait of the James Family* (2008), Paul Fisher provides a keen study of the entire James family in the context of nineteenth- and twentieth-century society and culture. See also *A Historical Guide to Henry James*, edited by John Carlos Rowe and Eric Haralson (2012), which includes essays on race and empire, sexuality, gender, and other topics.

The best scholarly writings on James as a critic and theorist are Sarah B. Daugherty, *The Literary Criticism of Henry James* (1981), and Vivien Jones, *James the Critic* (1984). Also helpful are Adeline Tintner, *The Book World of Henry James: Appropriating the Classics* (1987); Jonathan Freedman, *Professions of Taste: Henry James, British Aestheticism, and Commodity Culture* (1990), which makes cogent connections between James, Walter Pater, and Oscar Wilde; Edwin S. Fussell, *The French Side of Henry James* (1990); Tony Tanner, *Henry James and the Art of Nonfiction* (1995), which includes a chapter on the criticism; and Pierre A. Walker, *Reading Henry James in French Cultural Contexts* (1995).

Among the many books on James's fiction, the most pertinent to his critical writings and context are Laurence Bedwell Holland, *The Expense of Vision: Essays on the Craft of Henry James* (1964), a brilliant analysis of the novels that relates them to the criticism, especially to the prefaces; John Carlos Rowe, *The Theoretical Dimensions of Henry James* (1984); Michael Anesko, "Friction with the Market": *Henry James and the Profession of Authorship* (1986), on the pressures that James faced in struggling to meet but not surrender to the demands of the literary marketplace; Sharon Cameron, *Thinking in Henry James* (1989); Ross Posnock, *The Trial of Curiosity: Henry James, William James, and the Challenge of Modernity* (1991), a wide-ranging comparison of the James brothers' attitudes toward the challenges of modernity; Garry Hagberg, *Meaning and Interpretation: Wittgenstein, Henry James, and Literary Knowledge* (1994); and Eric Haralson, *Henry James and Queer Modernity* (2003), rewarding for its analysis of sexual politics and aesthetic theory and practice in James, Willa Cather, Gertrude Stein, and Ernest Hemingway. For comparisons of James and other significant critics, see Rob Davidson, *The Master and the Dean: The Literary Criticism of Henry James and William Dean Howells* (2005), and Michèle Mendelssohn, *Henry James, Oscar Wilde and Aesthetic Culture* (2007). Recent scholarly work includes Kevin Ohi, *Henry James and the Queerness of Style* (2011), which gives subtle consideration to James's later writings in the context of queer theory; Lisi Schoenbach, *Pragmatic Modernism* (2012), a stimulating exploration of pragmatist

philosophy and its keywords (habit, institution, etc.), with cogent interpretations of James, Gertrude Stein, Marcel Proust, and other writers; and Michael Anesko, *Monopolizing the Master: Henry James and the Politics of Modern Literary Scholarship* (2012), an excellent examination of James and the literary marketplace and the critical reception of his writings, especially the groundbreaking biographical and critical interpretations by Percy Lubbock, Leon Edel, and others.

See also *A Bibliography of Henry James*, by Leon Edel and Dan H. Laurence, revised with the assistance of James Rambeau (3d ed., 1982). Secondary sources are listed in Linda J. Taylor, *Henry James, 1866–1916: A Reference Guide* (1982); Kristin Pruitt McColgan, *Henry James, 1917–1959: A Reference Guide* (1979); Dorothy McInnis Scura, *Henry James, 1960–1974: A Reference Guide* (1979); and Judith E. Funston, *Henry James: A Reference Guide, 1975–1987* (1991). Consult also the excellent biographical essay in Rowe and Haralson's *Historical Guide* (see above).

Fredric Jameson

Largely focused on stylistics rather than Jean-Paul Sartre's Marxist politics, Jameson's first book, *Sartre: The Origins of a Style* (1961), a revision of his doctoral dissertation, offered scant indication of his subsequent work. The two major studies of the early 1970s, *Marxism and Form: Twentieth-Century Dialectical Theories of Literature* (1971) and *The Prison-House of Language: A Critical Account of Structuralism and Russian Formalism* (1972), respectively introduced the work of the Frankfurt School and other European Marxists and the work of the Russian formalists and early French structuralists to the English-speaking world before much of it was available in translation. After writing a short book on the English modernist Wyndham Lewis, *Fables of Aggression: Wyndham Lewis, the Modernist as Fascist* (1979), Jameson captured the attention of Anglophone intellectual circles with *The Political Unconscious: Narrative as a Socially Symbolic Act* (1981), which solidified his position as the leading representative of Marxist theory. It was followed by a two-volume collection of previously published pieces, *The Ideologies of Theory: Essays, 1971–1986* (1988), which includes his succinct "Metacommentary" (1971) and his programmatic reflections on historical method, "Marxism and Historicism" (1980). *Late Marxism: Adorno, or, the Persistence of the Dialectic* (1990) extends his survey of Marxist figures begun in *Marxism and Form*.

In the 1990s Jameson turned increasingly to film and popular culture. *Signatures of the Visible* (1990) collects writings on film, concluding with an important essay theorizing its development from the silent era onward. *Postmodernism, or, The Cultural Logic of Late Capitalism* (1991) has had wide influence in

defining the postmodern era and its art. There followed a collection of essays on contemporary cinema, *The Geopolitical Aesthetic: Cinema and Space in the World System* (1992). Jameson also published two books assembled from lectures: *The Seeds of Time* (Wellek Library Lectures, 1994) and *Theory of Culture: Lectures at Rikkyo* (1994). The useful collection *The Cultural Turn: Selected Writings on the Postmodern, 1983–98* (1998), which includes “Postmodernism and Consumer Society,” records his developing views on postmodernism. *Brecht and Method* (1998) takes the German dramatist Bertolt Brecht (rather than Adorno) as an exemplary figure for reviving Marxism in the era of late capitalism, and *A Singular Modernity: Essay on the Ontology of the Idea of the Modern* (2002) is a short reconsideration of the idea of the modern. Two hefty collections, *The Modernist Papers* (2007) and *Archaeologies of the Future: The Desire Called Utopia and Other Science Fictions* (2005), gather Jameson’s essays from three decades on modern literature and on science fiction.

Since then, Jameson has readdressed major theoretical issues in *Valences of the Dialectic* (2009) and two studies focused on particular works, *The Hegel Variations: On the “Phenomenology of Spirit”* (2010) and *Representing “Capital”: A Reading of Volume One* (2011). In addition, *The Antinomies of Realism* (2013) revisits the question of realism and the historical novel, *The Ancients and the Postmoderns: On the Historicity of Forms* (2015) looks at art and the question of the classic and the modern, and *Raymond Chandler: The Detections of Totality* (2016) is a short study of the detective genre. *The Jameson Reader*, edited by Michael Hardt and Kathi Weeks (2000), provides an excellent selection of Jameson’s work, and *Jameson on Jameson: Conversations on Cultural Marxism*, edited by Ian Buchanan (2007), gathers interviews from three decades.

Jameson’s writings have drawn a substantial though uneven body of criticism. Perhaps the best early accounts are by Terry Eagleton, “The Idealism of American Criticism” (1981) and “Frederic Jameson: The Politics of Style” (1982), both collected in his *Against the Grain: Selected Essays* (1986). Two critical journals devoted special issues to *The Political Unconscious: Diacritics* 12 (1982), which includes essays by the historian Hayden White, Eagleton (cited above), and others, and *New Orleans Review* 11 (1984), which includes a response by Jean-François Lyotard. Mike Davis offers a celebrated challenge to Jameson’s account of postmodern architecture in “Urban Renaissance and the Spirit of Postmodernism,” *New Left Review*, no. 151 (1985). *Postmodernism/Jameson/Critique*, edited by Douglas Kellner (1989), gathers diverse essays as well as Jameson’s response to his critics. A famous riposte, Aijaz Ahmad’s “Jameson’s Rhetoric of Otherness and the ‘National Allegory’” (1987), polemically critiques Jameson’s notion of third world literature; it has been reprinted in Ahmad’s *In Theory: Classes, Nations, Literatures* (1992). Perry Anderson’s

Origins of Postmodernity (1998) is a short overview by a leading British Marxist; in addition, Sean Homer, *Fredric Jameson: Marxism, Hermeneutics, Postmodernism* (1998); Adam Roberts, *Fredric Jameson* (2000); and Ian Buchanan, *Fredric Jameson: Live Theory* (2006), provide useful introductions. The collections *Fredric Jameson: A Critical Reader*, edited by Sean Homer and Douglas Kellner (2004), and *On Jameson: From Postmodernism to Globalism*, edited by Caren Irr and Ian Buchanan (2006), investigate, respectively, the range of Jameson’s work and his more recent attention to globalism. Looking to his earlier work rather than to his analysis of postmodernism, *The Political Unconscious of Architecture: Re-opening Jameson’s “Narrative,”* edited by Nadir Lahiji (2011), collects fourteen essays on architecture. Two studies by former students, Robert T. Tally Jr.’s *Fredric Jameson: The Project of Dialectical Criticism* (2014) and Phillip E. Wegner’s *Periodizing Jameson: Dialectics, the University, and the Desire for Narrative* (2014), offer good surveys of his work over his career. *An American Utopia: Dual Power and the Universal Army*, edited by Slavoj Žižek (2016), includes the title essay by Jameson and responses by Žižek and eight other critics.

Homer, *Fredric Jameson*, contains a bibliography of primary and selected secondary texts. *The Jameson Reader* and *Jameson on Jameson* include comprehensive bibliographies of Jameson’s writings.

Samuel Johnson

The standard edition has been *The Works of Samuel Johnson* (11 vols., 1825; reprinted in 1970 as *Dr. Johnson’s Works*). It is being superseded by *The Yale Edition of the Works of Samuel Johnson* (22 vols. to date, 1958–). Other valuable editions of Johnson’s works include *The Lives of the English Poets*, edited by George Birkbeck Hill (3 vols., 1905); *Johnson’s “Lives of the Poets”: A Selection*, edited by J. P. Hardy (1971); and *The Life of Richard Savage*, edited by Clarence Tracy (1971). An important recent work in Johnson studies is Roger Lonsdale’s superb four-volume edition of *The Lives of the English Poets* (2006), which presents the primary texts; describes the origins, composition, and textual history of the *Lives*; and assesses Johnson’s assumptions and aim as biographer and critic. Also valuable is the excellent set of the *Lives* edited by John H. Mendendorf (2010), volumes 21–23 of the Yale edition. *The Letters of Samuel Johnson*, edited by Bruce Redford (5 vols., 1992–94), known as the Hyde Edition, is an indispensable resource. *The Complete English Poems*, edited by J. D. Fleeman (1971), is a well-edited collection. The best one-volume selection of Johnson’s poetry and prose is *Samuel Johnson*, edited by Donald J. Greene (1984). A good single volume of the prose is *Selected Writings*, edited by Peter Martin (2009). On Johnson’s critical outlook, see *The Critical Opinions of Samuel Johnson*, a topical anthology compiled by Joseph Epes Brown (1926), and *Johnson*

on the English Language, edited by Gwin J. Kolb and Robert DeMaria Jr. (2005), volume 18 of the Yale edition.

The points of departure for biography are James Boswell, *The Journal of a Tour to the Hebrides* (1785) and *The Life of Samuel Johnson*, LL.D. (1791). Of the many editions of these works—often published together—the best, with detailed notes, is by George Birkbeck Hill, revised and enlarged by L. F. Powell (6 vols., 1934–50, 1964). A paperback edition, with a cogent introduction and notes, has been prepared by David Womersley (2008). There are a number of excellent modern biographies: James L. Clifford, *Young Sam [or Samuel] Johnson* (1955), and his *Dictionary Johnson: Samuel Johnson's Middle Years* (1979); Walter Jackson Bate, *Samuel Johnson* (1977), which includes expert commentary on Johnson's writings; Thomas Kaminski, *The Early Career of Samuel Johnson* (1987); John Wain, *Samuel Johnson* (rev. ed., 1988), a vivid portrait of Johnson as a literary professional; Robert DeMaria Jr., *The Life of Samuel Johnson: A Critical Biography* (1993), a first-rate survey of Johnson's literary career; Richard Holmes, *Dr. Johnson and Mr. Savage* (1993); and Lawrence I. Lipking, *Samuel Johnson: The Life of an Author* (1998). Donald Greene, *Samuel Johnson* (rev. ed., 1989), offers a fine briefer treatment. Also useful are Norman Page, *A Dr. Johnson Chronology* (1990), and Pat Rogers, *The Samuel Johnson Encyclopedia* (1996). Recent biographies by Peter Martin, *Samuel Johnson: A Biography* (2008), and by Jeffrey Meyers, *Samuel Johnson: The Struggle* (2008), are enlightening; Martin is especially good on historical context and social background, while Meyers, taking a more literary point of view, deals expertly with Johnson as a writer. David Nokes, *Samuel Johnson: A Life* (2009), is solid on the facts and gives a good account of the *Dictionary*, the edition of Shakespeare, and the *Lives of the Poets*. See also John B. Radner, *Johnson and Boswell: A Biography of Friendship* (2012), and Nicholas Hudson, *A Political Biography of Samuel Johnson* (2013), which surveys Johnson's moral and political views during an era of revolutionary transition in the eighteenth century.

For a range of critical opinion, see Walter Jackson Bate, *The Achievement of Samuel Johnson* (1958); Paul Fussell, *Samuel Johnson and the Life of Writing* (1971), filled with sharp perceptions about Johnson's rhetoric and relation to his readers; and Thomas Reinert, *Regulating Confusion: Samuel Johnson and the Crowd* (1996), which explores Johnson's attitudes toward the crowd, the city, and urban culture. Nicholas Hudson, *Samuel Johnson and the Making of Modern England* (2003), examines the impact of Johnson's literary criticism and other writings on the creation of modern English identity. Early critical reception is collected in *Johnson: The Critical Heritage*, edited by James T. Boulton (1971). Collections of criticism include *Samuel Johnson: New Critical*

Essays, edited by Isobel Grundy (1984); *Johnson and His Age*, edited by James Engell (1984); and *Johnson after Two Hundred Years*, edited by Paul J. Korshin (1986).

On Johnson's literary criticism, see Jean H. Hagstrum, *Samuel Johnson's Literary Criticism* (1952), a good overview of Johnson's attitudes toward nature, the sublime, wit, and other key topics; Leopold Damrosch Jr., *The Uses of Johnson's Criticism* (1976); Morris R. Brownell, *Samuel Johnson's Attitude to the Arts* (1989), which astutely examines Johnson's positions on music, art, and architecture; Steven Lynn, *Samuel Johnson after Deconstruction: Rhetoric and "The Rambler"* (1992), with interesting comparisons between Johnson and Harold Bloom, Jacques Derrida, and other contemporary theorists; Charles Hinnant, "Steel for the Mind": *Samuel Johnson and Critical Discourse* (1994), which relates Johnson's work to recent debates in literary theory; and Robert DeMaria Jr., *Samuel Johnson and the Life of Reading* (1997). Examinations of Johnson's critical work on Shakespeare include G. F. Parker, *Johnson's Shakespeare* (1989), which includes cogent analysis of responses to Johnson by Romantic poets and critics, and Edward Tomarken, *Samuel Johnson on Shakespeare: The Discipline of Criticism* (1991). On Johnson as biographer of poets, consult Robert Folkenflik, *Samuel Johnson, Biographer* (1978); Martin Maner, *The Philosophical Biographer: Doubt and Dialectic in Johnson's "Lives of the Poets"* (1988); and Catherine Neal Parke, *Samuel Johnson and Biographical Thinking* (1991). Also recommended are the following collections of essays: *The Interpretation of Samuel Johnson*, edited by Jonathan Clark and Howard Erskine-Hill (2012), noteworthy for Erskine-Hill's essay on the *Lives of the Poets*; *Samuel Johnson: The Arc of the Pendulum*, edited by Freya Johnston and Lynda Mugglestone (2012); *Samuel Johnson in Context*, edited by Jack Lynch (2012), valuable on a wide range of topics, including a fine essay by Philip Smallwood on Johnson's literary criticism; and *Samuel Johnson: New Contexts for a New Century*, edited by Howard D. Weinbrot (2014), illuminating in its coverage of Johnson's writings, life, and relationships.

The standard bibliography is William P. Courtney and David Nichol Smith, *A Bibliography of Samuel Johnson* (1915). It is supplemented by R. W. Chapman and Allen T. Hazen, "Johnsonian Bibliography: A Supplement to Courtney," in *Oxford Bibliographical Society, Proceedings and Papers*, vol. 5, pt. 3 (1938). James L. Clifford and Donald J. Greene, *Samuel Johnson: A Survey and Bibliography of Critical Studies* (1970), contains 4,000 items. See also Donald J. Greene and John A. Vance, *A Bibliography of Johnsonian Studies, 1970–1985* (1987). *The Cambridge Companion to Samuel Johnson*, edited by Greg Clingham (1997), offers a selective guide to further reading. Compiled by J. D. Fleeman, *A Bibliography of the*

Works of Samuel Johnson (2 vols., 2000) treats the published items up to 1984. Johnson's *The Major Works*, edited by Donald J. Greene (rev. ed., 2008), provides a concise list of further reading.

Immanuel Kant

The Cambridge edition of the works of Immanuel Kant (1992–) offers the first complete scholarly edition in English of all of Kant's writing (in the list below, all translations published after 1991 belong to this edition). *Theoretical Philosophy, 1755–1770*, edited by David Walford (1992), contains much of Kant's early work (although not his 1764 book on aesthetics), while *Practical Philosophy*, edited by Mary J. Gregor (1996), collects the major works on morality (including *Groundwork of the Metaphysics of Morals*, 1785; *Critique of Practical Reason*, 1788; and *The Metaphysics of Morals*, 1797, along with the important essays "What Is Enlightenment?," 1784, and "Toward Perpetual Peace," 1795). Kant's major individual works are *Observations on the Feeling of the Beautiful and Sublime* (1764; trans. 1960); *Critique of Pure Reason* (1781; trans. 1998); *Prolegomena to Any Future Metaphysics* (1783; trans. 1997); *Metaphysical Foundations of Natural Science* (1786; trans. 2004); *Critique of Judgment* (1790; trans. 1987 and 2000); *Religion within the Boundaries of Mere Reason* (1793; trans. 1998); *The Conflict of Faculties* (1798; trans. 1992); and *Anthropology from a Pragmatic Point of View* (1798; trans. 2006). Kant's essays, lectures, and letters can be found in *Kant: On History*, edited by Louis White Beck (1963); *Selected Pre-Critical Writings and Correspondence with Beck*, edited by G. B. Kerferd and D. E. Walford (1968); *Kant's Political Writings*, edited by Hans Reiss (1970); *Lectures on Philosophical Theology*, edited by Allen W. Wood and Gertrude M. Clark (1978); *Perpetual Peace and Other Essays on Politics, History, and Morals*, edited by Ted Humphrey (1983); *Lectures on Logic*, edited by J. Michael Young (1992); *Lectures on Ethics*, edited by Peter Heath and J. B. Schneewind (1997); *Lectures on Metaphysics*, edited by Karl Ameriks and Steve Naragon (1997); and *Correspondence*, edited by Arnulf Zweig (1999). Ernst Cassirer's *Kant's Life and Thought* (1921; trans. 1981) remains of interest, but the standard biography is now Manfred Kuehn's *Kant* (2001).

The secondary literature on Kant is immense. Paul Guyer's *Kant* (2d ed., 2014) is a superb one-volume overview of Kant's entire work. Douglas Burnham's *An Introduction to Kant's "Critique of Judgment"* (2000), Christian Helmut Wenzel's *An Introduction to Kant's Aesthetics: Core Concepts and Problems* (2005), and Fiona Hughes's *Kant's "Critique of Aesthetic Judgement": A Reader's Guide* (2010) offer accessible guides to Kant's views on beauty, taste, the sublime, and art. *Kant's "Critique of the Power of Judgment": Critical Essays*, edited by Paul Guyer (2003), gathers a variety

of responses to Kant's aesthetics, while *The Cambridge Companion to Kant*, edited by Paul Guyer (1992), offers essays that cover Kant's whole career. See also *The Sublime and Its Teleology: Kant, German Idealism, and Phenomenology*, edited by Donald Loose (2012). Of the many encounters with Kant's work in contemporary theory, the following have been especially influential: Jacques Derrida, *The Truth in Painting* (1978; trans. 1987); Pierre Bourdieu, *Distinction: A Social Critique of the Judgment of Taste* (1979; trans. 1984); Hannah Arendt, *Lectures on Kant's Political Philosophy* (1982); Barbara Herrnstein Smith, *Contingencies of Value* (1988); Terry Eagleton, *The Ideology of the Aesthetic* (1990); Jean-François Lyotard, *Lessons on the Analytic of the Sublime* (1991; trans. 1994); J. M. Bernstein, *The Fate of Art: Aesthetic Alienation from Kant to Derrida and Adorno* (1992); and Rodolphe Gasché, *The Idea of Form: Rethinking Kant's Aesthetics* (2003). Within the Anglo-American philosophical tradition, the best treatments of Kant's aesthetics are Paul Guyer's *Kant and the Claims of Taste* (2d ed., 1997), Henry E. Allison's *Kant's Theory of Taste: A Reading of the "Critique of Aesthetic Judgment"* (2001), Eli Friedlander's *Expressions of Judgment: An Essay on Kant's Aesthetics* (2015), and Hannah Ginsborg's *The Normativity of Nature: Essays on Kant's "Critique of Judgment"* (2015). Kant's "Critique of the Power of Judgment": Critical Essays offers an annotated bibliography of commentaries on Kant's aesthetics; Christian Wenzel's "Kant's Aesthetics: Overview and Recent Literature," *Philosophy Compass* 4 (2009), provides another listing of secondary sources, as does Guyer's *Kant* (2014).

E. Ann Kaplan

E. Ann Kaplan began her career with studies of film, notably its relation to feminism, in *Talking about the Cinema* (1966; 2d ed., 1974), co-authored (as Ann Mercer) with Jim Kitses; *Fritz Lang: A Guide to References and Resources* (1981); and *Women and Film: Both Sides of the Camera* (1983). She took a broader view of popular culture in *Rocking around the Clock: Music Television, Postmodernism, and Consumer Culture* (1987), the first academic study of the new form of MTV, and *Motherhood and Representation: The Mother in Popular Culture and Melodrama* (1992; rpt. 2013), while continuing her research on film in *Looking for the Other: Feminism, Film, and the Imperial Gaze* (1997). In a turn linked with her interest in psychoanalysis, she examines trauma in *Trauma Culture: The Politics of Terror and Loss in Media and Literature* (2005), her most important and influential work, where she analyzes the artistic, literary, and cinematic forms through which individuals and collectives undergo, represent, and describe the experience of trauma. Also significant is *Climate Trauma: Foreseeing the Future in Dystopian Film and Fic-*

tion (2016), which explores expressions of “pre-traumatic stress disorder” in depictions of environmental and other crises in such films as *Soylent Green* (1973), *The Road* (2009), and *The Book of Eli* (2010) and in documentaries on climate change.

Kaplan has also edited or co-edited twelve books, including *Women in Film Noir* (1978; rev. and expanded ed., 1998); *Regarding Television: Critical Approaches—An Anthology* (1983); *Postmodernism and Its Discontents: Theories, Practices* (1988); *Psychoanalysis and Cinema* (1990); *Generations: Academic Feminists in Dialogue* (1997), with Devoney Looser; *Feminism and Film* (2000); and *Trauma and Cinema: Cross-Cultural Explorations* (2008), with Ban Wang. Biographical information is available in several interviews with Kaplan. See “Instituting Cultural Studies,” in *Critics at Work: Interviews, 1993–2003* (ed. Jeffrey J. Williams, 2004), where Kaplan talks about her relations with British cultural studies, and an interview in *Americana: The Journal of American Popular Culture, 1900 to Present* 4.1 (2005) in which Kaplan discusses her family in the context of her book *Motherhood and Representation* and addresses more broadly the roles in her work of feminism, psychoanalysis, and postmodernism.

Trauma studies reaches into many disciplines and fields; for contemporary literary theory and criticism, important points of departure noted in Kaplan’s book include Shoshana Felman and Dori Laub, *Testimony: Crises of Witnessing in Literature, Psychoanalysis, and History* (1991); Dominick LaCapra, *Representing the Holocaust: History, Theory, Trauma* (1994); *Trauma: Explorations in Memory*, edited by Cathy Caruth (1995); Caruth, *Unclaimed Experience: Trauma, Narrative, and History* (1996); and Shoshana Felman, *The Juridical Unconscious: Trials and Traumas in the Twentieth Century* (2002). See also Kali Tal, *Worlds of Hurt: Reading the Literatures of Trauma* (1996); Marianne Hirsch, *Family Frames: Photography Narrative and Postmemory* (1997); and Anne Whitehead, *Trauma Fiction* (2004). Also for students of literature, see *Postcolonial Trauma Novels*, edited by Stef Craps and Gert Buelens, a special issue of *Studies in the Novel* (40.1–2 [2008]).

For further discussion, see *Ethics and Trauma in Contemporary British Fiction* (2011) and *Trauma and Romance in Contemporary British Literature* (2013), both edited by Jean-Michel Ganteau and Susana Onega. See also *The Future of Trauma Theory: Contemporary Literary and Cultural Criticism*, edited by Gert Buelens, Sam Durrant, and Robert Eaglestone (2013); Alan Gibbs’s *Contemporary American Trauma Narratives* (2014); and Michael Richardson’s *Gestures of Testimony: Torture, Trauma, and Affect in Literature* (2016). Another good resource is *Contemporary Approaches in Literary Trauma Theory*, edited by Michelle Balaev (2014); the introductory chapter surveys the field and includes a bibliography.

Karatani Kōjin

Karatani Kōjin has written more than twenty books that cross disciplinary boundaries as a matter of principle; more than half a dozen are available in English. *Origins of Modern Japanese Literature* (1980; trans. 1993) is his most influential work as a literary critic self-consciously operating in New Historicist and deconstructionist modes. *Architecture as Metaphor: Language, Number, Money* (1983; trans. 1995) moves away from literary analysis to take on the problems of form and formalization in a broad array of domains, arguing that “the will to architecture” is the foundation of all manifestations of Western thought. *Transcritique: On Kant and Marx* (2001; trans. 2003), a rereading of Kant via Marx and Marx via Kant, seeks to establish a theoretical basis for collective resistance against global capital, nation, and state. *Nation and Aesthetics: On Kant and Freud* (2004; trans. 2017), a collection of essays, extends Karatani’s analysis on nationalism explored in *Transcritique. History and Repetition* (2004; trans. 2012) encompasses economic, historical, and literary analysis across the East–West divide; essays on Marx’s *The Eighteenth Brumaire of Louis Bonaparte* and on the thorny issue of periodicity in modern Japan lay the foundation for penetrating insights into the works of the Nobel Prize–winning novelist Kenzaburo Oe and the best-selling novelist Haruki Murakami. *The Structure of World History: From Modes of Production to Modes of Exchange* (2010; trans. with revisions, 2014) marks Karatani’s shift from densely layered textual analysis of literary and philosophical forebears to a boldly independent assertion that the key to understanding movements in social history, and the best chance we have for future progress, is to replace Marx’s analysis of modes of production with analysis of modes of exchange. A follow-up to *The Structure of World History*, Karatani’s *Isonomia and the Origins of Philosophy* (2012; trans. 2017) resituates the birth of Western philosophy and democracy in the ancient Greek colonies of Ionia (present-day Turkey) against the standard idealized narrative about Athens. As opposed to Athenian elitist democracy and its philosophical idealism, *Isonomia* embodies an earlier materialist egalitarian social vision.

Many works remain unavailable in English. Karatani’s major texts of literary criticism are *Ifu suru ningen* (1972, *Man in Awe*), *Imi to iu yamai* (1975, *The Sickness Called Meaning*), *Han-bungaku ron* (1979, *Against Literature*), *Hihyō to positomodan* (1985, *Criticism and the Postmodern*), *Kotoba to higeki* (1989, *Language and Tragedy*), *Sakaguchi Ango to Nakagami Kenji* (1996, *Sakaguchi Ango and Nakagami Kenji*), *Zōho Sōseki ron shūsei* (2001, *Writings on Sōseki*, expanded ed.), and *Kindai bungaku no owari* (2005, *The End of Modern Literature*). His main philosophical books include *Marukusu sono kanōsei no chūshin* (1978, *Marx: The Center of His Possibilities*), a pivotal attempt to read Marx’s *Capital* on its own terms; *Naisei to soko*

(1985, *Introspection and Retrospection*); and Tanjū (2 vols., 1986–89, *Philosophical Inquiries*), the latter two works being sustained philosophical inquiries into the problems and possibilities of alterity, difference, and the other. The essays collected in *Hyūmō to shite no yuibutsuron* (1993, *Materialism as Humor*) integrate inquiry into Western philosophical questions with analyses of modern Japanese history, politics, and literature. The essays collected in *Senzen no shikō* (1994, *Thinking before the War*) focus on overtly political issues such as imperialism, nationalism, democratic representation, the Japanese constitution, and the Gulf War. *Sekai kyōwakoku e: Shihon nēshon kokka o koete* (2006, *Toward a World Republic: Beyond the Trinity of Capital, Nation, and State*) marks a late development in Karatani's theory of capital, nation, and state as an interlocking system of mutually reinforcing entities. Yūdōrōn: *Yanagida Kunio to Yamabito* (2014, *On Nomadism: Yanagida Kunio and Mountain People*) and *Teikoku no kōzō: chūshin, shūhen, ashūhen* (2014, *The Structure of Empire: Center, Periphery, A-Periphery*) form a trilogy with *The Structure of World History* to elaborate Karatani's later theories of capital, nation, and state and the central importance of modes of exchange.

Karatani has also published numerous articles and interviews in journals and books on issues related to Japan and to Western philosophy. In English, see especially "One Spirit, Two Nineteenth Centuries," in *Postmodernism and Japan* (ed. Masao Miyoshi and H. D. Harootunian, 1989); "The Discursive Space of Modern Japan," in *Japan in the World* (ed. Masao Miyoshi and H. D. Harootunian, 1993), originally a special issue of *boundary 2* (18.3 [1991]); "Non-Cartesian Cogito, or Cogito as Difference," *Discours Social/Social Discourse* 6.1 (1994); "Nationalism and Écriture," *Surfaces* 5 (1995); "The Uses of Aesthetics: After Orientalism," in *Edward Said and the Work of the Critic: Speaking Truth to Power* (ed. Paul A. Bové, 2000), originally a special issue of *boundary 2* (25.2 [1998]); "Edo Exegesis and the Present," in *Modern Japanese Aesthetics: A Reader* (ed. Michele Marra, 1999); "Japan as Art Museum: Okakura Tenshin and Ernest Fenellosa," in *A History of Modern Japanese Aesthetics* (ed. Michael F. Marra, 2001); "Sōseki's Diversity: On Kokoro" and "Overcoming Modernity," in *Contemporary Japanese Thought* (ed. Richard F. Calichman, 2005); "Rethinking Sōseki's Theory," *Japan Forum* 20 (2008); "The Irrational Will to Reason: The Praxis of Sakaguchi Ango," in *Literary Mischief: Sakaguchi Ango, Culture, and the War* (ed. James Dorsey and Doug Slaymaker, 2010); "How Catastrophe Heralds a New Japan," in *Counterpunch*, March 24, 2011 (www.counterpunch.org/2011/03/24/how-catastrophe-heralds-a-new-japan/); "'Critique Is Impossible without Moves': An Interview of Kōjin Karatani by Joel Wainright," *Dialogues in Human Geography* 2 (2012); and "Rethinking

City Planning and Utopianism," in *The Political Unconscious of Architecture: Re-opening Jameson's Narrative* (ed. Nadir Lahiji, 2011).

Fredric Jameson's foreword to the English translation of *Origins of Modern Japanese Literature*, "In the Mirror of Alternate Modernities," is an important introduction to the work within the Western critical context (first published in *South Atlantic Quarterly* 92 [1993]); Brett de Bary's "Karatani Kōjin's *Origins of Modern Japanese Literature*," in *Postmodernism and Japan* (ed. Miyoshi and Harootunian, 1989), is an excellent analysis of the critical context, rhetorical strategies, and broader significance of the work. In "Exteriority and Transcritique: Karatani Kōjin and the Impact of the 1990s," *Japanese Studies* 27 (2007), Carl Casse-gard provides a very useful account of Karatani's shift from deconstruction to social activism; and in "From Withdrawal to Resistance: The Rhetoric of Exit in Yoshimoto Takaaki and Karatani Kōjin," *Japan Focus*, March 4, 2008, he analyzes the role of the 1960s social movements in Japan for Karatani's thought. Hosea Hirata's *Discourses of Seduction: History, Evil, Desire, and Modern Japanese Literature* (2005) contains a provocative comparison of Karatani's work to that of the contemporary Japanese novelist Murakami Haruki. Slavoj Žižek's "The Parallax View," *New Left Review*, ser. 2, no. 25 (2004), remains the most influential reading of *Transcritique: On Kant and Marx*; Giuseppe Tassone's "Antinomies of Transcritique and Virtue Ethics: An Adornian Critique," *Philosophy and Social Criticism* 34 (2008), pits Karatani's *Transcritique* against Adorno's critique of moral philosophy.

Julia Kristeva

Kristeva's writings first became widely available in English through the publication of the 1980 collection *Desire in Language*, edited by Leon S. Roudiez (who was also responsible for inviting Kristeva to be a regular visitor at Columbia University) and translated by Thomas Gora, Alice Jardine, and Roudiez. This collection, which does not correspond to any book in French, contains essays from her *Séméiotiké* (1969) and from her *Polylogue* (1977). Margaret Waller's English translation of *Revolution in Poetic Language* (1984) reproduces the first half of the original 1974 French text. The best-known translation of "Women's Time" is by Alice Jardine and Harry Blake, and was originally published in the journal *Signs* 7 (1981). Another translation, slightly updated by Kristeva, was produced by Ross Mitchell Guberman for the English translation of *New Maladies of the Soul* (1995). All of the work that derives from Kristeva's "psychoanalytic" period is deeply literary as well, grappling with such authors as Louis-Ferdinand Céline (1894–1961), Gérard de Nerval (1808–1855), Plotinus (ca. 204/5–ca. 270), and Charles Baudelaire (1821–1867). *Powers of Horror* (1980; trans. 1982), *Tales of Love* (1983; trans. 1987), and *Black Sun* (1987; trans. 1989) have been influential in literary stud-

ies. Among her other writings are *Language: The Unknown* (1981; trans. 1989) and *Time and Sense: Proust and the Experience of Literature* (1994; trans. 1996). More recently she has turned her psychoanalytic lens on issues of religion and belief; on hatred, love, and forgiveness; and on the severed human head in art as an avenue to understand violence and desire in, respectively, *This Incredible Need to Believe* (2006; trans. 2009), *Hated as Forgiveness* (2005; trans. 2010), and *The Severed Head: Capital Visions* (1998; trans. 2012). Kristeva has written what can be described as a series of studies of great female intellectuals: *Hannah Arendt* (1999; trans. 2001), on the philosopher; *Melanie Klein* (2000; trans. 2001), on the psychoanalyst; and *Colette* (2002; trans. 2004), on the novelist. The latest is a sizable book, *Thérèse mon amour: Sainte Thérèse d'Avila* (2008; trans. 2014 as *Teresa, My Love: An Imagined Life of the Saint of Avila*). In addition, she has engaged Simone de Beauvoir and feminism in a series of recent essays: "Beauvoir and the Risks of Freedom," *PMLA* 124 (2009); "Liberty, Equality, Fraternity, and . . . Vulnerability," *Women's Studies Quarterly* 38.1/2 (2010); and "Reading *The Second Sex* Sixty Years Later," *Philosophy* 1.2 (2011). Kristeva has also written a number of novels and a series of reflections on the limits of psychoanalysis. Toril Moi's *Kristeva Reader* (1986) and Kelly Oliver's *Portable Kristeva* (1997) present good selections and substantial introductions to Kristeva's writings. Two books contain biographical information: *Julia Kristeva: Interviews*, edited by Ross Mitchell Guberman (1996), and, with a grain of salt, *The Samurai* (1990; trans. 1992).

There exist a number of helpful explications of Kristeva's work. John Lechte and Maria Margaroni, *Julia Kristeva: Live Theory* (2004), provides a nice introduction to Kristeva, as does *The Kristeva Critical Reader*, edited by Lechte and Mary Zournazi (2003). Elizabeth Grosz's *Sexual Subversions: Three French Feminists* (1989) places Kristeva in the context of French philosophy and feminism, while Birgit Schipper's *Julia Kristeva and Feminist Thought* (2011) explores Kristeva's relationship more broadly to feminist thought. Michael Payne's *Reading Theory: An Introduction to Lacan, Derrida, and Kristeva* (1993) has a chapter devoted to *Revolution in Poetic Language*. John Lechte, *Julia Kristeva* (1990); Kelly Oliver, *Reading Kristeva: Unraveling the Double-Bind* (1993); Anna Smith, *Julia Kristeva: Readings of Exile and Estrangement* (1996); and Anne-Marie Smith, *Julia Kristeva: Speaking the Unspeakable* (1998), all provide overviews of Kristeva's main arguments and concepts. The critical literature on Kristeva is represented in numerous collections of essays, the most notable of which include *Abjection, Melancholia, and Love: The Work of Julia Kristeva*, edited by John Fletcher and Andrew Benjamin (1990); *Body / Text in Julia Kristeva: Religion, Women, and Psychoanalysis*, edited by David Crownfield (1992); *Eth-*

ics, Politics, and Difference in Julia Kristeva's Writing, edited by Kelly Oliver (1993); *After the Revolution: On Kristeva*, edited by John Lechte and Mary Zournazi (1998); and *Psychoanalysis, Aesthetics, and Politics in the Work of Julia Kristeva*, edited by Oliver and S. K. Keltner (2009).

French Feminist Criticism: Women, Language, and Literature, by Elissa D. Gelfand and Virginia Thorndike Hules (1985), contains a dated but well-annotated bibliography of the early Kristeva. Joan Nordquist's *Julia Kristeva: A Bibliography* (1995) provides a comprehensive list of Kristeva's books and essays as well as of relevant critical literature published in English. See also the generous and more recent bibliography in the book by Lechte and Margaroni, as well as in the collection edited by Lechte and Zournazi, both cited above. *Head Cases: Julia Kristeva in Philosophy and Art in Depressed Times* (2014), by Elaine P. Miller, also has an up-to-date Kristeva bibliography.

Jacques Lacan

The literature on Lacan illustrates the axiom that the more difficult the text, the more extensive the bibliography. In addition to his thesis, *De la psychose paranoïaque dans ses rapports avec la personnalité* (1932, *On Paranoiac Psychosis in Its Relations with the Personality*; not yet translated), Lacan published *Écrits* (1966), a small selection of which appeared in English as *Écrits: A Selection*, translated by Alan Sheridan (1977). Bruce Fink offers a judicious translation of *Écrits* in the aptly titled *Écrits: The First Complete Edition in English* (2006), as well as translating *The Triumph of Religion* (2016) and two lectures collectively titled *On the Names-of-the-Father* (2013). A series of lectures given at the Chapel at Sainte-Anne Hospital has been translated by Adrian Price as *Talking to Brick Walls* (2017). The "Seminar on 'The Purloined Letter'" as it appears in the French *Écrits* can be found, translated by Jeffrey Mehlman, in *The Purloined Poe*, edited by John Muller and William Richardson (1988), an excellent casebook containing essays by Jacques Derrida, Barbara Johnson, and many others. Another notable early translation of and commentary on one of Lacan's essays is Anthony Wilden, *The Language of the Self* (1968), which treats Lacan's "Rome discourse," "Fonction et champ de la parole et du langage en psychanalyse" (1953, "The Function of Language in Psychoanalysis"). A selection of Lacan's writings on female sexuality with two substantial introductions was published as *Feminine Sexuality*, edited by Juliet Mitchell and Jacqueline Rose (1982). To date, the annual seminars of Lacan that have been translated into English are book 1, *Freud's Papers on Technique*, 1953–54 (1988); book 2, *The Ego in Freud's Theory and in the Technique of Psychoanalysis*, 1954–55 (1988); book 3, *The Psychoses* (1993); book 7, *The Ethics of Psychoanalysis*, 1959–60 (1992); book 8, *Transference* (2015); book 10, *Anxiety* (2014); book 11, *The Four Fundamental Concepts of*

Psycho-Analysis (1977), a series of lectures given in 1964; book 17, *The Other Side of Psychoanalysis* (2007); book 19, ... or Worse (2017); book 20, *On Feminine Sexuality: The Limits of Love and Knowledge* (1998); and book 23, *The Sinthome* (2016). Several others have appeared in French. Lacan's *My Teaching*, translated by David Macey (2008), contains three lectures directed at those who are not psychoanalysts.

For an information-packed, fascinating biography, see the work of Elisabeth Roudinesco; volume 2 of her two-volume history of psychoanalysis in France (*La Bataille de cent ans*, 1982–86), devoted to Lacan, has been translated as *Jacques Lacan & Co.* (1990), and a separate work, *Jacques Lacan*, has also been translated (1993; trans. 1997). For a shorter but equally zesty account of psychoanalysis in France centered on Lacan's life and works, see Sherry Turkle, *Psychoanalytic Politics* (1978; rev. ed., 1992). The pithy biobibliography offered by Lacan's son-in-law, Jacques-Alain Miller, in *On the Names-of-the-Father* (see above) provides some interesting insights into the psychoanalyst's life and work processes. Miller has also published in French *Vie de Lacan* (2011, *Life of Lacan*), which examines previously unexplored aspects of Lacan's life in relation to his working through his psychoanalytic theories.

There are many introductions to Lacan's thought. The most useful for the nonspecialist are Elizabeth Grosz, *Jacques Lacan: A Feminist Introduction* (1990); Malcolm Bowie, *Lacan* (1991), a book that focuses particularly on Lacan's style; *Lacan and the Subject of Language*, edited by Ellie Ragland-Sullivan and Mark Bracher (1991); Madan Sarup, *Jacques Lacan* (1992), an introduction to Lacan in cultural context; Michael Payne, *Reading Theory: An Introduction to Lacan, Derrida, and Kristeva* (1993); and Bruce Fink, *The Lacanian Subject* (1995), *Lacan to the Letter: Reading "Écrits" Closely* (2004), and *Lacan on Love: An Exploration of Lacan's Seminar VIII, Transference* (2016), for a Lacanian understanding of love and the key concept of transference. Students should also consult Sean Homer's *Jacques Lacan* (2005), which engages key Lacanian concepts and suggests useful further readings. For advanced engagements with the process of reading Lacan, see Jane Gallop's *Reading Lacan* (1985) and Shoshana Felman's *Jacques Lacan and the Adventure of Insight* (1987). For a good explanation of the differences between Lacanian and American psychoanalysis, see *The Subject and the Self: Lacan and American Psychoanalysis*, edited by Judith Feher Gurewicz and Michel Tort (1996). On Lacan's importance for cultural and historical studies, see Juliet Flower MacCannell's *Figuring Lacan* (1986) and Teresa Brennan's *History after Lacan* (1993).

There are many critical and polemical books about Lacan. Some of the most interesting are Philippe Lacoue-Labarthe and Jean-Luc Nancy, *The Title of the Letter* (1973; trans. 1992), which

continues the famous critique Jacques Derrida had begun in his reading of Lacan's seminar on "The Purloined Letter" (see "The Purveyor of Truth" in *The Purloined Poe*); François Roustang, *Dire Mastery* (1976; trans. 1982), which considers the combination of the religionlike nature of psychoanalysis and the tyrannical power of Jacques Lacan; and Mikkel Borch-Jacobsen, *Lacan: The Absolute Master* (1990; trans. 1991), a more restrained but still thoroughgoing critique of the effects of power in Lacan's theory. A theorist whose work is an ongoing reinterpretation of the work of Lacan is Slavoj Žižek; see his 1992 *Everything You've Ever Wanted to Know about Lacan (But Were Afraid to Ask Hitchcock)*, *How to Read Lacan* (2007), and other works. *Culture/Clinic 1: "We're All Mad Here,"* edited by Jacques-Alain Miller and Maire Jaanus (2013), is a collective thematic volume that inaugurates the book series *Culture/Clinic: Applied Lacanian Psychoanalysis*; the collection explores Lacan's theories and concepts at the intersections of cultural studies and clinical practice.

For a dated but annotated bibliography, see Michael Clark, *Jacques Lacan: An Annotated Bibliography* (1988). Dylan Evans has published *An Introductory Dictionary of Lacanian Psychoanalysis* (1996), which is extremely useful and contains a good bibliography. Also worth consulting are the suggested readings in Homer's *Jacques Lacan*; in addition, *The Cambridge Companion to Lacan*, edited by Jean-Michel Rabaté (2003), has a solid bibliography, as does Bruce Fink's *Against Understanding*, vol. 1, *Commentary and Critique in a Lacanian Key* (2014).

Bruno Latour

Latour has written more than a dozen books in both English and French (for books translated into English, the date of the original French publication is given first), catalogues for two exhibits, and countless articles and reviews. His first anthropological investigation of scientists in action, *Laboratory Life: The Construction of Scientific Facts*, which he co-authored with Steve Woolgar in English, was published in 1979. It was followed by a study of Louis Pasteur and microbes, *The Pasteurization of France* (1984; 1988), and *Science in Action: How to Follow Scientists and Engineers through Society* (1987). *Conversations on Science, Culture, and Time* (1992; 1995), records his discussions with the French philosopher Michel Serres; *Aramis, or the Love of Technology* (1992; 1996) examines a failed transit initiative; and *We Have Never Been Modern* (1993) extends his exploration of the sciences to include political theory. *Politics of Nature: How to Bring the Sciences into Democracy* (1999; 2005) offers a radical rethinking of environmentalism and "political ecology." *Pandora's Hope: Essays on the Reality of Science Studies* (1999) is a collection of essays that articulates Latour's ideas about reality. In response to the attacks of 9/11, he published a small

pamphlet, *War of the Worlds: What about Peace?* (2002). That same year, he co-edited, with Peter Weibel, a collection of essays on the so-called image wars, *Iconoclasm: Beyond the Image Wars in Science, Religion, and Art* (2002); he also returned to more traditional areas of anthropological study with books on religion and on law, *Rejoicing: Or the Torments of Religious Speech* (2002; 2013) and *The Making of Law: An Ethnography of the Conseil d'État* (2002; 2010). The latter is a three-year study of the French Conseil d'État (a body that provides legal advice to the executive branch of the French government and serves as the final court of appeal for administrative law courts) that also marks his return to the methodology of ethnography. In 2005, Latour's English introduction to his Actor Network Theory appeared with the title *Reassembling the Social: An Introduction to Actor-Network-Theory*. In that same year he co-edited a second collection of essays with Peter Weibel, based on an exhibit they curated: *Making Things Public: Atmospheres of Democracy*, which attempts to redefine politics as not just a profession or a system of institutions, but as a concern for "things" brought to the attention of a public. *The Science of Passionate Interests: An Introduction to Gabriel Tarde's Economic Anthropology* (2008; 2009) was written with Vincent Antonin Lépinay. *On the Modern Cult of the Factish Gods* (2010), *An Inquiry into Modes of Existence: An Anthropology of the Moderns* (2012; 2013), and *Reset Modernity!*, edited by Latour, with Christophe Leclercq (2016), all continue and elaborate on ideas articulated in *We Have Never Been Modern*. For a biography, see *Bruno Latour in Pieces: An Intellectual Biography* (2011; trans. 2015) by Henning Schmidgen.

T. Hugh Crawford's extensive interview with Latour, published in *Configurations* 1.2 (1993), a journal dedicated to the cultural studies of science, explores his life, his intellectual influences, and his shifting focus from empirical research to philosophy to theory in the late 1980s. Ian Hacking, a philosopher of science who has written extensively on realism, offers an insightful reading of *Laboratory Life* in "The Participant Irrealist at Large in the Laboratory," *British Journal of the Philosophy of Science* 39 (1988). For substantive critical analyses that connect Latour's work in technoscience with literary theory, see Ronald Schleifer's "Disciplinarity and Collaboration in the Science and Humanities," *College English* 59 (1997). Criticism of Latour's position has been most forcefully articulated by essays in *The Flight from Science and Reason*, edited by Paul R. Gross, Norman Levitt, and Martin W. Lewis (1997). For a response to their arguments, see Robert Markley, "After the Science Wars: From Old Battles to New Directions in the Cultural Studies of Science," in *After the Disciplines: The Emergence of Cultural Studies* (ed. Michael Peters, 1999). Essays in a collection edited by John

Law and John Hassard, *Actor Network Theory and After* (1999), provide elaborations of Latour's theoretical model of the sciences. For a feminist perspective, see Vicki Kirby, "Natural Convers(at) ions: Or, What If Culture Was Really Nature All Along?," in *Material Feminisms* (ed. Stacy Alaimo and Susan Hekman, 2008). In *Prince of Networks: Bruno Latour and Metaphysics* (2009), Graham Harman provides a philosophical account of Latour's metaphysics, while in *Bruno Latour: Reassembling the Political* (2014), he explores Latour's political philosophy. On Latour's legal thinking, see Kyle McGee, *Bruno Latour: The Normativity of Networks* (2014), and *Latour and the Passage of Law*, edited by McGee (2015). Gerard de Vries's *Bruno Latour* (2016) provides a comprehensive overview of Latour's writing, from the early ethnographies to the more recent philosophical works. Schmidgen's *Bruno Latour in Pieces* (see above) contains a bibliography.

F. R. Leavis

Leavis's published work focuses on English poetry and fiction from 1800 to 1930, along with reflections on university education. He never finished a proposed survey of critical practices. His books are *New Bearings in English Poetry: A Study of the Contemporary Situation* (1932); with Denys Thompson, *Culture and Environment: The Training of Critical Awareness* (1933); *Revaluation: Tradition and Development in English Poetry* (1936); *Education and the University: A Sketch for an "English School"* (1943; 2d ed., 1979); *The Great Tradition: George Eliot, Henry James, Joseph Conrad* (1948); D. H. Lawrence, *Novelist* (1955); *Two Cultures? The Significance of C. P. Snow* (1962); *English Literature in Our Time and the University* (1969); with Q. D. Leavis, *Dickens: The Novelist* (1970); *The Living Principle: English as a Discipline of Thought* (1975); and *Thought, Words and Creativity: Art and Thought in Lawrence* (1976). There are many collections of Leavis's essays: *For Continuity* (1933); the influential *The Common Pursuit* (1952); *Anna Karenina and Other Essays* (1967); with Q. D. Leavis, *Lectures in America* (1969); *Nor Shall My Sword: Discourses on Pluralism, Compassion and Social Hope* (1972); *Letters in Criticism*, edited by John Tasker (1974); *The Critic as Anti-Philosopher: Essays and Papers*, edited by G. Singh (1982); *Valuation in Criticism and Other Essays*, edited by G. Singh (1986); and *F. R. Leavis: Essays and Documents*, edited by Ian MacKillop and Richard Storer (1995). The standard biography is Ian MacKillop's *F. R. Leavis: A Life in Criticism* (1995). The beginning reader will find Ronald Hayman's briefer treatment, *Leavis* (1976), more useful.

Francis Mulhern's *The Moment of 'Scrutiny'* (1979) is far and away the best in-depth study of Leavis's cultural significance. Ted Striphas's essay, "Known-Unknowns: Mathew Arnold, F. R.

Leavis, and the Government of Culture," *Cultural Studies* 31 (spring 2017), considers Leavis's influence on cultural studies. Michael Bell's *F. R. Leavis* (1988) and Richard Storer's *F. R. Leavis* (2009) provide good short overviews. Gary Day's *Re-reading Leavis: Culture and Literary Criticism* (1996) is an ambitious attempt to evaluate Leavis in relation to developments in literary theory after 1970. Stefan Collini's *Absent Minds: Intellectuals in Britain* (2006), Guy Ortolano's *The Two Cultures Controversy: Science, Literature and Cultural Politics in Postwar Britain* (2009), Christopher Hilliard's *English as a Vocation: The "Scrutiny" Movement* (2012), and David Ellis's *Memoirs of a Leavisite: The Decline and Fall of Cambridge English* (2013) all attest to the ongoing interest in Leavis's central place in British letters and education in the mid-twentieth century. *F. R. Leavis and Q. D. Leavis: An Annotated Bibliography*, edited by M. B. Kinch, William Baker, and John Kimber (1989), lists and comments on everything written by the Leavises and all that was written about them up to 1988. The bibliography in Hilliard's *English as a Vocation* covers more recent work on Leavis and his legacy.

Gotthold Ephraim Lessing

Lessing's *Laokoon* (1766) has been translated into English many times. The most easily accessible edition was published in 1962 as *Laocoön: An Essay on the Limits of Painting and Poetry*, translated with an introduction and useful notes by Edward Allen McCormick. Many of Lessing's other theoretical works, however, are available only in German. The best selection of Lessing's works, heavily oriented toward theater, is *Nathan the Wise, Minna von Barnhelm, and Other Plays and Writings*, edited by Peter Demetz (1991). For Lessing's drama theory, see *Hamburg Dramaturgy*, edited by Victor Lange (1962). See also *Lessing's Theological Writings*, edited by Henry Chadwick (1956). A more complete English translation was undertaken by E. C. Beasley and Helen Zimmern, under the editorship of Edward Bell, more than a century ago: *Selected Prose Works of G. E. Lessing* (1890). H. B. Nisbet's *Lessing: Philosophical and Theological Writings* (2005) includes some newly translated materials as well as overviews that provide useful context. Also see Nisbet's *Gotthold Ephraim Lessing: His Life, Works, and Thought* (2013). Good general studies devoted to Lessing's life and works are H. B. Garland, *Lessing: The Founder of Modern German Literature* (1962), and Edward M. Batley, *Catalyst of Enlightenment: Gotthold Ephraim Lessing* (1990). Studies situating Lessing in a larger context include a very useful collected volume edited by Alexej Ugrinsky called *Lessing and the Enlightenment* (1986), Robert S. Leventhal's *Disciplines of Interpretation: Lessing, Herder, Schlegel, and Hermeneutics in Germany, 1750–1800* (1994), and the anthology edited by Barbara Fischer and Thomas

C. Fox titled *A Companion to the Works of Gotthold Ephraim Lessing* (2005). Early in the twentieth century, Irving Babbitt's *New Laokoon: An Essay on the Confusion of the Arts* (1910) attempted to restore Lessing's sense of distinction to a world led astray by Romanticism's tendency to cross or blur boundaries. E. H. Gombrich's short *Lessing* (1957) paints a brilliant portrait of a man whose dialectical mind had no real use for visual art.

The publication in 1984 of David Wellbery's *Lessing's "Laocoön": Semiotics and Aesthetics in the Age of Reason* brought Lessing into post-Saussurian discussions of sign theory. Simon Richter's *Laocoön's Body and the Aesthetics of Pain: Winckelmann, Lessing, Herder, Moritz, Goethe* (1992) provides an interesting analysis of the relation between pain and beauty. Carol Jacobs offers a good analysis of the rhetoric of Lessing's polemics in "Fictional Histories: Lessing's *Laocoön*," in her *Telling Time* (1993). Susan Gustafson's *Absent Mothers and Orphaned Fathers: Narcissism and Abjection in Lessing's Aesthetic and Dramatic Production* (1995) combines a discussion of Lessing's plays with a reading of the *Laocoön* that uses Julia Kristeva's theory of maternal erasure, or "abjection," in a daring feminist psychoanalysis. A special issue of *Poetics Today* on Lessing (20.2 [1999]) offers a very interesting collection of essays, particularly striking for the debates about gender as a category of analysis. The volume concludes with a long, energetic, polemical review of the literature on Lessing by Meir Sternberg. For debates about ekphrasis, see Murray Krieger's 1967 essay "Ekphrasis and the Still Movement of Poetry; or, *Laokoön* Revisited," later collected in Krieger's *Ekphrasis: The Illusion of the Natural Sign* (1992); W. J. T. Mitchell's 1984 essay "Space and Time: Lessing's *Laocoön* and the Politics of Genre," later collected in his *Iconology: Image, Text, Ideology* (1986); and James Heffernan's *Museum of Words* (1993). There is a bibliography in German on Lessing by Doris Kuhles, *Lessing-Bibliographie 1971–1985* (1988). See also the updated bibliography in *A Companion to the Works of Gotthold Ephraim Lessing* and Nisbet's *Gotthold Ephraim Lessing: His Life, His Works, and Thought*.

Claude Lévi-Strauss

In addition to the works discussed in the headnote, Lévi-Strauss's notable publications include *The Savage Mind* (1962; trans. 1966); *Totemism* (1962; trans. 1963); "The Scope of Anthropology" (his 1960 inaugural lecture at the Collège de France; trans. 1967); *Mythologiques* (4 vols., 1964–71; trans. 1969–81 as *Introduction to the Science of Mythology*, with the individual volumes titled *The Raw and the Cooked*, *From Honey to Ashes*, *The Origin of Table Manners*, and *The Naked Man*); *Myth and Meaning* (1978), a short and very accessi-

ble introduction to the structural analysis of myth; *Anthropology and Myth* (1984; trans. 1986); and several additional volumes on myth. *Anthropology Confronts the Problems of the Modern World* (2013) is an English translation of a collection of lectures delivered in 1986 in Tokyo on structural anthropology. In honor of Lévi-Strauss's turning 100 in 2008, Gallimard published a 2,000-page collection of his work, *Oeuvres*, while Penguin issued an English edition of *Tristes Tropiques* (2012) with a new introduction. An assembled collection of Lévi-Strauss's essays, *We Are All Cannibals: And Other Essays* (2013; trans. 2016), comparatively explores customs, myths, and rituals. Besides the autobiographical *Tristes Tropiques* (1955), the best sources of biographical information available in English are two books of interviews, the first set with Georges Charbonnier (1961; trans. 1969), the second with Didier Eribon (1988; trans. 1991), each published under the title *Conversations with Claude Lévi-Strauss*. See also Christopher Johnson, *Claude Lévi-Strauss: The Formative Years* (2003).

Good introductions to Lévi-Strauss's work include Edmund Leach's respectfully critical *Claude Lévi-Strauss* (1970), which is particularly useful for situating Lévi-Strauss in relation to the discipline of anthropology; David Pace, *Claude Lévi-Strauss: The Bearer of Ashes* (1983); Roland Champagne, *Claude Lévi-Strauss* (1987); and Marcel Hénaff, *Claude Lévi-Strauss and the Making of Structural Anthropology* (1991; trans. 1998). In 2008 UNESCO devoted a special issue of its flagship journal, *The Courier*, to the man and his work.

Theoretically crucial readings of Lévi-Strauss's structuralism in general and *Tristes Tropiques* in particular have been published by Jacques Derrida in *Of Grammatology* (1967; trans. 1976) and *Writing and Difference* (1967; trans. 1978) and by Clifford Geertz in *The Interpretation of Cultures* (1973) and *Works and Lives: The Anthropologist as Author* (1988). Also noteworthy are several highly influential essays analyzing the sexual politics of Lévi-Strauss's kinship theory: Gayle Rubin, "The Traffic in Women: Notes on the 'Political Economy' of Sex," in *Toward an Anthropology of Women* (ed. Rayna Reiter, 1975); Hélène Cixous and Catherine Clément, *The Newly Born Woman* (1975; trans. 1986); and Luce Irigaray, *This Sex Which Is Not One* (1977; trans. 1985). Cleo McNelly's "Natives, Women, and Claude Lévi-Strauss," *Massachusetts Review* 16 (1975), addresses questions of race and gender in *Tristes Tropiques*, drawing comparisons with Charles Baudelaire and Joseph Conrad; other aspects of Lévi-Strauss's participation in literary trends are explored by James Boon's *From Symbolism to Structuralism: Lévi-Strauss in a Literary Tradition* (1972), and by *Rethinking Claude Lévi-Strauss* (1908–2009), edited by Robert Doran, a special issue of *Yale French Studies*, no. 123 (2013). The interdisciplinary essays in *The Cambridge Companion to Lévi-Strauss*, edited by Boris Wise-

man (2009), examine his body of ideas in relationship to aesthetics, anthropology, language, and literature. In "The Ethnic Ethnographer: Judaism in *Tristes Tropiques*," *Representations*, no. 15 (1995), David Damrosch discusses the specter of Nazi terror and Lévi-Strauss's ambivalent treatment of his own ethnicity in *Tristes Tropiques*. In "Lévi-Strauss: The Writing Lesson Revisited," *Modern Language Review* 92 (1997), Christopher Johnson reexamines Lévi-Strauss's framing of the writing lesson episode and proposes a recontextualized interpretation of it. For bibliographies, see Joan Nordquist's *Claude Lévi-Strauss: A Bibliography* (1987), which covers publications in English, and Marcel Hénaff's book (cited above), which provides a selective but nevertheless extensive bibliography. See also the impressive bibliography in Johnson, *Claude Lévi-Strauss and the Cambridge Companion*.

Li Zehou

Li Zehou has written two dozen books in Chinese, and several of his major works have been translated into Japanese, Korean, English, German, and other languages. The first to become available in English was his most popular study of Chinese history and theory of art, *Mei de licheng* (1981; trans. 1988, 2d ed., 1994, *The Path of Beauty*). The English version of *Meixue sijing* (1989, *Four Lectures on Aesthetics*), published in 2006 with the title *Four Essays on Aesthetics: Toward a Global View*, is a joint rendering by Li and Jane Cauvel. It differs significantly from the Chinese text, omitting many sections of the original. A third book translated into English is *Huaxia Meixue* (1989; trans. 2010, *The Chinese Aesthetic Tradition*). Translations of several other books are in process. A dozen of Li Zehou's essays are available in English, including "The Philosophy of Kant and a Theory of Subjectivity," *Analecta Husserliana* 21 (1986); "A Discourse on Zhuangzi and Chan Buddhism," *Social Sciences in China* 1 (1987); "Human Nature and Human Future: A Combination of Marx and Confucius," in *Chinese Thought in a Global Context: A Dialogue between China and Western Philosophical Approaches* (ed. Karl-Heinz Pohl, 1999); and "Subjectivity and 'Subjectality': A Response," *Philosophy East and West* 49.2 (1999), which succinctly summarizes his major philosophical and aesthetic ideas. In addition, a selection of his writings were published as a special issue of *Contemporary Chinese Thought* (32.2 [2000]) titled *Li Zehou*.

Li Zehou's writings fall into three categories: philosophy and aesthetics, studies of Chinese intellectual and art history, and studies of Chinese culture and society. Major works in the first group (titles given in English) are *Critique of Critical Philosophy* (1979), *Collection of Essays on Aesthetics* (1979), *The Path of Beauty* (1981), *Selected Writings on Philosophy and Aesthetics* by Li Zehou (1985), *The Chinese Aesthetic Tradition* (1989), *Four Lectures on Aesthetics* (1989), *An Outline of My Philosophy* (1990), *The Anthro-historical Ontology* (2008), *Ethics* (2010),

A Response to Michael Sandel and Other Matters (2014), and *What Is Morality?* (2015). In the second group are *A Study of the Thought of Kang Youwei and Tan Sitong* (1958); *On the History of Modern Chinese Intellectual Thought* (1979); *On the History of Ancient Chinese Intellectual Thought* (1985); *On the History of Contemporary Chinese Intellectual Thought* (1987); *History of Chinese Aesthetics*, with Liu Gangji (2 vols., 1984–87); and *From Shamanism to Ritual Regulation and Humaneness* (2015). The third group includes *Walk My Own Path* (1986), *Marxism in China* (1993), *New Dreams of the Century* (1998), *Reading Confucian Analects Today* (1998), *Five Essays from 1999* (1999), *Pragmatic Reason and the Culture of Optimism* (2005), *Should Chinese Philosophy Go on Stage?* (2011), *How Can Chinese Philosophy Go on Stage?* (2012), and *Collected Dialogues of Li Zehou* (7 vols., 2014). He has also published many miscellaneous essays in Chinese journals and newspapers.

Because of Li Zehou's prominence in China as a contemporary thinker, his works have been subjected to numerous studies and critiques in Chinese. In English, see the special section devoted to his ideas about philosophy and aesthetics in *Philosophy East and West* 49.2 (1999). A general introduction to Li's ideas and works is offered by Woei Lien Chong, "History as the Realization of Beauty: Li Zehou's Aesthetic Marxism," *Contemporary Chinese Thought* 32.2 (2000), and John Zijiang Ding, "Li Zehou: Chinese Aesthetics from a Post-Marxist and Confucian Perspective," in *Contemporary Chinese Philosophy* (ed. Chung-Ying Cheng and Nicholas Bunnin, 2002). For a critical assessment, see the lengthy article by Gu Xin, "Subjectivity, Modernity, and Chinese Hegelian Marxism: A Study of Li Zehou's Philosophical Ideas from a Comparative Perspective," *Philosophy East and West* 46.2 (1996). While acknowledging Li's contributions to philosophy and aesthetics through his efforts to transform Kant's idealistic doctrine of subjectivity into a materialistic one that denies the duality of matter and mind, Gu argues that Li's system of thought—despite his declared aim—remains within a Hegelian-Lukácsian Marxist framework. Ding's essay contains a useful bibliography of Li Zehou's complete works up to 2002.

Longinus

The original Greek text with valuable critical commentary can be found in "*Longinus*" on *the Sublime* (1964), edited by the leading Longinus scholar D. A. Russell. English translations include W. R. Roberts's *Longinus on the Sublime* (1899); W. H. Fyfe's Loeb Classical Library edition (vol. 199, 1927); and, most notably, D. A. Russell's version in *Ancient Literary Criticism: The Principal Texts in New Translations* (1972) and in *Classical Literary Criticism* (1989), both edited by Russell and M. Winterbottom. Fyfe's translation has also been revised by Russell in the more recent Loeb edition (1995). Both of Russell's translations offer useful and au-

thoritative introductions and annotations. A more recent version, also with notes, appears in the new edition of *Classical Literary Criticism* (2000), edited by Penelope Murray and T. S. Dorsch.

Works of criticism focusing on the English reception of Longinus include T. R. Henn's *Longinus and English Criticism* (1934) and S. H. Monk's *The Sublime: A Study of Critical Theories in Eighteenth-Century England* (1935). J. W. H. Atkins's *Literary Criticism in Antiquity, A Sketch of Its Development*, volume 2, *Graeco-Roman* (1934), and G. M. A. Grube's *Greek and Roman Critics* (1965) offer comprehensive discussions of the text of *On Sublimity*, covering important social and historical contexts. M. H. Abrams's *The Mirror and the Lamp: Romantic Theory and the Critical Tradition* (1953) and Thomas Weiskel's *The Romantic Sublime: Studies in The Structure and Psychology of Transcendence* (1976) include insightful comments on Longinus's relationship to the emergence of Romanticism, while Jules Brody's *Boileau and Longinus* (1958) concentrates on the poet-critic who with his late seventeenth-century French translation contributed the most to Longinus's great reputation in Europe. *Classical Criticism*, volume 1 of *The Cambridge History of Literary Criticism*, includes an informative short piece on Longinus by D. A. Russell (ed. George A. Kennedy, 1989). Yun Lee Too's *The Idea of Ancient Literary Criticism* (1998) places Longinus's theory of the sublime within the context of ancient criticism from its origins in archaic Greek poetry to the early Christian era. Adnan K. Abdulla's *A Comparative Study of Longinus and Al-Jurjani: The Interrelationships between Medieval Arabic Literary Criticism and Graeco-Roman Poetics* (2004) investigates the similarities and differences in how two major critics with different cultural backgrounds describe at disparate times the origin and the reception of sublime art. *Ancient Literary Criticism*, edited by Andrew Laird (2005), is a useful companion to the Russell and Winterbottom anthology, offering a collection of important scholarship on canonical texts of ancient rhetoric and poetics, including Longinus's *On Sublimity*. Emma Gilby's *Sublime Worlds: Early Modern French Literature* (2006) provides close readings of Longinus's theory of the sublime, tracing his influence on three major French authors: Pierre Corneille, Blaise Pascal, and Nicolas Boileau. Karl Axelsson's *The Sublime: Precursors and British Eighteenth-Century Conceptions* (2007) explores the ways in which Longinus's Greek treatise shaped much of late seventeenth- and eighteenth-century British criticism. For an overview of theories of the sublime, see *The Sublime: A Reader*, edited by Andrew Ashfield and Peter De Bolla (1993), and Philip Shaw's *The Sublime* (2006). The wide-ranging essays in *The Sublime: From Antiquity to the Present*, edited by Timothy M. Costelloe (2012), demonstrate the array of important cultural and philosophical issues connected with the concept of

sublimity. Robert Doran provides a well-informed and carefully nuanced analysis of Longinus and his eighteenth-century reception in *The Theory of the Sublime from Longinus to Kant* (2015). For bibliographic information, see Demetrio St. Marin's *Bibliography of the Essay on the Sublime* (1967) and Thomas Gwinup and Fidelia Dickinson's *Greek and Roman Authors: A Checklist of Criticism* (1982), as well as the bibliographies included in Castelleo's *The Sublime: From Antiquity to the Present* and Doran's *The Theory of the Sublime from Longinus to Kant*.

György Lukács

The standard edition of Lukács's writings is the German *Georg Lukács Werke* (18 vols., 1926–86). A number of scholarly edited texts are also available in Hungarian. A substantial collection of his letters, taped interviews, photos, unpublished works, and miscellaneous materials, plus his 10,000-volume personal library, is housed in the Lukács Archive in Budapest. English translations are *Soul and Form* (1910; trans. 1974), *The Theory of the Novel* (1916; trans. 1971), *History and Class Consciousness* (1923; trans. 1971), *Lenin: A Study on the Unity of His Thought* (1924; trans. 1971), *The Historical Novel* (1937; trans. 1962), *Studies in European Realism: A Sociological Survey of the Writings of Balzac, Stendhal, Zola, Tolstoy, Gorki, and Others* (1945; trans. 1950), *Goethe and His Age* (1947; trans. 1978), *Essays on Thomas Mann* (1947; trans. 1965), *The Young Hegel: Studies in the Relations between Dialectics and Economics* (1948; trans. 1976), *Essays on Realism* (1948; trans. 1981), *German Realists in the Nineteenth Century* (1951; trans. 1993), *The Destruction of Reason* (1954; trans. 1981), *The Meaning of Contemporary Realism* (1958; trans. 1963), *Conversations with Lukács* (1967; trans. 1975), *Tactics and Ethics: Political Writings, 1919–1929* (1968; trans. 1972), *Solzhenitsyn* (1969; trans. 1971), *Writer and Critic and Other Essays* (trans. 1970), *The Ontology of Social Being* (2 vols., 1976; trans. 1978), *Record of a Life: An Autobiographical Sketch* (1981; trans. 1983), *The Process of Democratization* (1985; trans. 1991), and *A Defence of History and Class Consciousness: Tailism and the Dialectic* (1996; trans. 2000). A sampling of essays is available in *The Lukács Reader*, edited by Arpad Kadarkay (1995). Lukács's essays on democracy from the post–World War II period, including those in his influential volume *Literature and Democracy* (1947), are available in *The Culture of People's Democracy: Hungarian Essays on Literature, Art, and Democratic Transition, 1945–1948*, edited and translated by Tyrus Miller (2013). For a detailed biography, see Kadarkay's *Georg Lukács: Life, Thought, and Politics* (1991).

On Lukács's theory of the novel, see Lucien Goldmann, *Towards a Sociology of the Novel* (1964; trans. 1975), and J. M. Bernstein, *The Philosophy of the Novel: Lukács, Marxism, and the Dialectic of*

Form (1984). For critical responses to Lukács's involvement in the realism debate, see the essays by Theodor Adorno, Walter Benjamin, Bertolt Brecht, and Ernst Bloch in the often-cited *Aesthetics and Politics*, edited by the *New Left Review* (1977). Also helpful in this regard is Eugene Lunn's *Marxism and Modernism: An Historical Study of Lukács, Brecht, Benjamin, and Adorno* (1982). Fredric Jameson's most developed account of Lukács's work appears in his *Marxism and Form* (1971). Béla Királyfalvi's *Aesthetics of György Lukács* (1975) offers a systematic examination of Lukács's aesthetic theories, while Terry Eagleton's introductory *Marxism and Literary Criticism* (1976) and his *Ideology of the Aesthetic* (1990) present some suggestive critical remarks on Lukács. Andrew Arato and Paul Breines's *The Young Lukács and the Origins of Western Marxism* (1979) and Martin Jay's *Marxism and Totality: The Adventures of a Concept from Lukács to Habermas* (1984) situate Lukács's work within the tradition of Western Marxism. Galin Tihanov's *The Master and the Slave: Lukács, Bakhtin, and the Ideas of Their Time* (2000) offers a comparative study focusing on intellectual background and historical context, while also introducing unknown archival material and overlooked texts by Lukács and Bakhtin. János Kelemen's *The Rationalism of Georg Lukács* (2014) explores the central motif of the defense of reason in Lukács's oeuvre by drawing on a number of his untranslated, lesser-known writings. For a survey of contemporary Marxist critics' assessments of Lukács, see the interviews gathered in *Lukács After Communism*, edited by Eva L. Corredor (1997). Bibliographies of Lukács's writing and criticism of it can be found in Peter Murphy's *Writings by and about Georg Lukács: A Bibliography* (1976), François Lapointe's *Georg Lukács and His Critics (1910–1982)* (1983), and Kadarkay's reader and biography mentioned above.

Jean-François Lyotard

Much, but not all, of Lyotard's work has been translated into English (the date of French publication is given first, where appropriate): *Phenomenology* (1954; 1991); *Discourse, Figure* (1971; 2011); *Libidinal Economy* (1974; 1993); *Duchamps's Trans/Formers* (1977; 1990); *The Pacific Wall* (1975; 1990); *The Postmodern Condition* (1979; 1984); *Just Gaming*, with Jean-Loup Thébaud (1979; 1985); *The Differend* (1983; 1988); *The Postmodern Explained* (1986; 1992); *Enthusiasm: The Kantian Critique of History* (1986; 2009); *The Inhuman: Reflections on Time* (1988; 1991); *Peregrinations: Law, Form, Event* (1988); *Heidegger and "the jews"* (1988; 1990); *Lessons on the Analytic of the Sublime* (1991; 1994); *Postmodern Fables* (1993; 1997); *Signed, Malraux* (1996; 1999); *Soundproof Room: Malraux's Anti-Aesthetics* (1998; 2001); *The Confession of Augustine* (1998; 2000); *The Hyphen: Between Judaism and Christianity* (1999); and *Why*

Philosophize (2012; 2013). There are five collections of work spanning Lyotard's career: *Drift-works*, edited by Roger McKeon (1984); *The Lyotard Reader*, edited by Andrew Benjamin (1989); *Political Writings*, edited by Bill Readings (1993); *Toward the Postmodern*, edited by Robert Harvey and Mark S. Roberts (1993); and *Music/Ideology: Resisting the Aesthetic*, edited by Adam Krims (1998). The untranslated works are *Dérive à partir de Marx et Freud* (1973, *Starting from Marx and Freud*); *Des dispositifs pulsionnels* (1973, *Driving Impulses*); *Instructions païennes* (1977, *Pagan Instructions*); *Récits tremblants* (1977, *Trembling Stories*); *La Guerre des Algériens: Écrits 1956–63* (1988, *The Algerian War: Writings, 1956–63*); and *Misère de la philosophie* (2000, *Poverty of Philosophy*). Stuart Sim's *Jean-François Lyotard* (1996) places Lyotard's work in historical and intellectual context. The most comprehensive biography is Kiff Bamford's *Jean-François Lyotard* (2017).

The best short introduction is Simon Malpas's *Jean François Lyotard* (2003). David Carroll's *Para-aesthetics: Foucault, Lyotard, Derrida* (1987) details Lyotard's connections with poststructuralism. Three excellent collections of essays on Lyotard's work are *Judging Lyotard*, edited by Andrew Benjamin (1992); *The Politics of Jean-François Lyotard*, edited by Chris Rojek and Bryan S. Turner (1998); and *Minima Memoria: In the Wake of Jean-François Lyotard*, edited by Claire Novel, Zrinka Stahuljak, and Kent Still (2007). *The Lyotard Dictionary*, edited by Stuart Sim (2011), offers succinct accounts of the major themes in Lyotard's work, while Dylan Sawyer's *Lyotard, Literature and the Trauma of the "différend"* (2014) examines Lyotard's relevance to literary criticism. *The Lyotard Dictionary* has a complete bibliography of Lyotard's work, along with a good, although not fully comprehensive, bibliography of secondary works in English.

Moses Maimonides

The modern Arabic edition of *The Guide of the Perplexed* (*Dalalat al-Ha'irin*) was compiled in 1929 by S. Munk and translated into English by Shlomo Pines (1963); Joseph Kafih's three-volume edition (1972) offers parallel Arabic and Hebrew versions. Large sections of the *Mishneh Torah* as well as other writings by Maimonides are available in English translation in *The Maimonides Reader*, edited by Isadore Twersky (1972). Ilil Arbel's *Maimonides: A Spiritual Biography* (2001) is an excellent popular introduction to Maimonides' life, while Joel L. Kraemer's *Maimonides: The Life and World of One of Civilization's Greatest Minds* (2008) is a more scholarly biography. Moshe Halbertal's *Maimonides: Life and Thought* (2009; trans. 2014), originally published in Hebrew, is an accessible introduction to both the philosopher's life and his work.

Leo Strauss's essay "The Literary Character of *The Guide for the Perplexed*," originally included in *Essays on Maimonides: An Octocentennial Vol-*

ume (ed. Salo W. Baron, 1941) and later reprinted in *Maimonides: A Collection of Critical Essays* (ed. Joseph A. Buijs, 1988), is an indispensable introduction to Maimonides' method in *The Guide*. Several recent volumes document the significance of the political philosopher Leo Strauss, whose work on Maimonides was instrumental in restoring the medieval philosopher's reputation in the twentieth century. Kenneth Hart Green, in *Leo Strauss on Maimonides: The Complete Writing* (2013), brings together in an annotated collection all Strauss's writing on Maimonides—a total of sixteen essays, three published in English for the first time. Aryeh Tepper's *Progressive Minds, Conservative Politics: Leo Strauss's Later Writings on Maimonides* (2013) identifies in Strauss's later writing a new focus on Maimonides' esoteric teaching on progress as a means to go beyond conflicts not only between reason and revelation but also between progressivism and conservatism in contemporary politics. Joshua Parens, in *Leo Strauss and the Recovery of Medieval Political Philosophy* (2016), focuses on Strauss's engagement with medieval political philosophy to offer a new interpretation of Strauss's understanding of *Guide of the Perplexed*. Susan A. Handelman, in *The Slayers of Moses: The Emergence of Rabbinic Interpretation in Modern Literary Theory* (1982), examines the relationship between early Jewish biblical hermeneutics and contemporary deconstructive literary theory. The collection of essays edited by Geoffrey H. Hartman and Sanford Budick, *Midrash and Literature* (1986), also examines the relationships between Jewish hermeneutics and literary theory. For an advanced introduction, see *The Cambridge Companion to Maimonides*, edited by Kenneth Seeskin (2005). Since the octacentennial of Maimonides' death there has been a virtual explosion of scholarship on the Jewish thinker. Menachem Kellner explores Maimonides' critique of Jewish mysticism in *Maimonides' Confrontation with Mysticism* (2006). Donald McCallum's *Maimonides' Guide for the Perplexed: Silence and Salvation* (2007) provides an overview of Maimonides scholarship. *Maimonides after 800 Years: Essays on Maimonides and His Influence*, edited by Jay M. Harris (2007), contains essays by leading scholars in the field. Recent volumes focus on the importance of hermeneutics and biblical exegesis in *The Guide of the Perplexed*, including *Maimonides as Biblical Interpreter* (2011), by Sara Klein-Braslavy, and *Method and Metaphysics in Maimonides' "Guide for the Perplexed"* (2011), by Daniel Davies. *The Matter and Form of Maimonides' "Guide"* (2013), by Josef Stern, attempts to provide a unified interpretation of the *Guide* through the philosophies of matter and form. Volumes on the reception of Maimonides include James Arthur Diamond's *Maimonides and the Shaping of the Jewish Canon* (2014), which describes the philosopher's reception in Jewish in-

tellectual history, and Howard Kriesel's *Judaism as Philosophy: Studies in Maimonides and the Medieval Jewish Philosophers of Provence* (2015), which examines his reception among medieval Jewish philosophers. Micah Goodman's *Maimonides and the Book That Changed Judaism: Secrets of "The Guide for the Perplexed"* (2010; trans. 2015), a best-selling book in Israel, offers an interpretation of the *Guide* that puts it into dialogue with contemporary religious thought, demonstrating the relevance of Maimonides not only to Jewish culture and identity but to Western philosophy as well. James T. Robinson, "Moses Maimonides," in the online *Oxford Bibliographies* (2015), is the most up-to-date bibliography.

Karl Marx and Friedrich Engels

The English translation of the collected works of Marx and Engels fills fifty volumes, *Karl Marx, Frederick Engels: Collected Works* (1975–2005). The best single-volume editions are David McLellan's *Karl Marx: Selected Writings* (1977) and Robert C. Tucker's *Marx-Engels Reader* (2d ed., 1978). For Marx's letters, see *Correspondence*, edited by Saul K. Padover (1979). Helpful introductions to Marx's life and writings include David McLellan, *Karl Marx: His Life and Thought* (1973); Isaiah Berlin, *Karl Marx: His Life and Environment* (4th ed., 1978); Francis Wheen, *Karl Marx* (1999); and Jonathan Sperber, *Karl Marx: A Nineteenth-Century Life* (2013). On Engels, see Steven Marcus, *Engels, Manchester, and the Working Class* (1974), an excellent work of cultural history; W. O. Henderson, *The Life of Friedrich Engels* (1976); Terrell Carver, *Engels* (1981), a good overview; and Carver, *Marx and Engels: The Intellectual Relationship* (1983). An excellent recent biography is Tristram Hunt, *Marx's General: The Revolutionary Life of Friedrich Engels* (2009).

There is a vast secondary literature on Marx and Engels's views on literature and criticism and on the long line of theorists and critics who belong to the Marxist tradition. Essay collections provide a good starting point: see *Radical Perspectives in the Arts*, edited by Lee Baxandall (1972); *Marxism and Art: Writings in Aesthetics and Criticism*, edited by Berel Lang and Forrest Williams (1972); *Marxism and Art: Essays Classic and Contemporary*, edited by Maynard Solomon (1973); *Karl Marx and Frederick Engels on Literature and Art: A Selection of Writings*, edited by Lee Baxandall and Stefan Morawski (1974); and *Marxists on Literature: An Anthology*, edited by David Craig (1975). More up-to-date are *Contemporary Marxist Literary Criticism*, edited by Francis Mulhern (1992), and *Marxist Literary Theory: A Reader*, edited by Terry Eagleton and Drew Milne (1996). See also *Aesthetics and Politics*, edited by Ernst Bloch (1977), and *Marxism and the Interpretation of Culture*, edited by Cary Nelson and Lawrence Grossberg (1988). Also stimulating are

the essays included in *Marxist Shakespeares*, edited by Jean E. Howard and Scott Cutler Shershow (2001). Robert Paul Wolff, *Understanding Marx: A Reconstruction and Critique of "Capital"* (1984); *A Dictionary of Marxist Thought*, edited by Tom Bottomore (2d ed., 1991); and Peter Singer, *Marx: A Very Short Introduction* (rev. ed., 2000), are all insightful. On Marx's relevance for the twenty-first century, see Jonathan Wolff, *Why Read Marx Today?* (2002), and Terry Eagleton, *Why Marx Was Right* (2011), which seeks to refute common objections to Marxism (that it leads to political tyranny, that it reduces everything to the economic and historical determinism, etc.). Cogent studies of Marx's social, political, and economic thought include Vincent Barnett, *Marx* (2009); Amy E. Wendling, *Karl Marx on Technology and Alienation* (2009); and David Harvey, *A Companion to Marx's "Capital"* (2010).

On the history of Marx and Engels's interest in and response to literature, Peter Demetz's *Marx, Engels, and the Poets: Origins of Marxist Literary Criticism* (1967) and S. S. Praver's *Karl Marx and World Literature* (1976) are informative. A concise and popular survey of Marxist literary criticism is Terry Eagleton, *Marxism and Literary Criticism* (1976). Tony Bennett, *Formalism and Marxism* (1979), deals well with Russian formalism and Marxist theory and criticism; and Fredric Jameson, *Marxism and Form: Twentieth-Century Dialectical Theories of Literature* (1971), examines several leading twentieth-century intellectuals influenced by Marx's writings. In *The Ideology of the Aesthetic* (1990) and *Ideology: An Introduction* (1991), Eagleton studies the meanings and implications of two key terms in Marxist criticism, *ideology* and *aesthetics*. *Marxism, Modernity and Postcolonial Studies*, edited by Crystal Bartolovich and Neil Lazarus (2002), also merits attention.

For studies of literature and culture that bear witness to Marx's influence, see Kevin Floyd, *The Reification of Desire: Toward a Queer Marxism* (2009), with provocative discussions of György Lukács, Michel Foucault, Judith Butler, Herbert Marcuse, and other writers and theorists; Orrin N. C. Wang, *Romantic Sobriety: Sensation, Revolution, Commodification, History* (2011), exploring the relationship among Romanticism, deconstruction, and Marxism through the themes of sensation and sobriety in Romantic literature and contemporary literary theory; John F. Lavelle, *Blue Collar, Theoretically: A Post-Marxist Approach to Working Class Literature* (2012), drawing on sociology, cognitive science, anthropology, and psychology, and supported by interpretations of literary texts by Stephen Crane and F. Scott Fitzgerald; and *Marx at the Movies: Revisiting History, Theory and Practice*, edited by Ewa Mazierska and Lars Kristensen (2014), which includes essays on Sergei Eisenstein, Orson Welles, and other American and European filmmakers and their films.

On the relationships between Marxism and recent theories of literature and criticism, consult Michael Ryan, *Marxism and Deconstruction: A Critical Articulation* (1982); John Frow, *Marxism and Literary History* (1986); and Scott Wilson, *Cultural Materialism: Theory and Practice* (1995). Dated but worth consulting are Lee Baxandall, *Marxism and Aesthetics: A Selective Annotated Bibliography* (1968), and Chris Bullock and David Peck, *Guide to Marxist Literary Criticism* (1980). There is a helpful, concise bibliography in Richard Schmitt's *Introduction to Marx and Engels: A Critical Reconstruction* (2d ed., 1997). See also Cecil L. Eubanks, *Karl Marx and Friedrich Engels: An Analytical Bibliography* (2d ed., 1984), and the bibliography included in David McLellan, *Karl Marx: A Biography* (4th ed., 2006).

Giacopo Mazzoni

There is no complete English translation of *On the Defense of the "Comedy" of Dante*. A book-length English rendering of its "Introduction and Summary" can be found in *On the Defense of the "Comedy" of Dante: Introduction and Summary*, translated by Robert L. Montgomery (1983), who also provides detailed scholarly annotations plus a superb preface covering textual, historical, biographical, and critical matters. The standard modern Italian edition is *Introduzione della Difesa della "Commedia" di Dante*, edited by Enrico Musacchio and Gigino Pellegrini (1982). A generous selection of excerpted passages from other parts of *On the Defense of the "Comedy" of Dante* appears in *Literary Criticism: Plato to Dryden* (ed. and trans. Allan H. Gilbert, 1940). A dated biography in Italian exists, Pierantonio Serassi's *La Vita di Jacopo Mazzoni*, Patrizio Cesenate (1790). Illuminating biographical details can be found in Montgomery's preface.

A comprehensive and authoritative critical overview of Mazzoni's work appears in Bernard Weinberg's magisterial *History of Literary Criticism in the Italian Renaissance* (2 vols., 1961). Also useful are Baxter Hathaway's *Age of Criticism: The Late Renaissance in Italy* (1962) and his *Marvels and Commonplaces: Renaissance Literary Criticism* (1968). The former contextualizes Mazzoni's work in relationship to five leading issues of his time, while the latter narrows its context to the debates surrounding imitation. A formalist critique of how Mazzoni evades defining poetry can be found in Robin Louis McAllister's "Meaning, Language, and Conceptualization: Alternatives in Mazzoni and Dante," *Language and Style* 5 (1971). Frederick Purnell's dissertation "Jacopo Mazzoni and His Comparison of Plato and Aristotle" (1971) offers a detailed study of Mazzoni in the context of Renaissance debates about classical philosophy. For a New Critical perspective on Mazzoni that accentuates the novelty of his treatment of the image, see Murray Krieger's "Jacopo Mazzoni, Repository of Diverse Critical Traditions or Source of

a New One?" in his *Poetic Presence and Illusion: Essays in Critical History and Theory* (1979). A limited bibliography of criticism can be found in Montgomery's book; for a bibliography of primary texts, see Weinberg's history.

Mark McGurl

McGurl's first book, *The Novel Art: Elevations of American Fiction after Henry James* (2001), examines American fiction from the late nineteenth century through World War II, showing how in that period the novel aspired to be high art. Drawing on Pierre Bourdieu's theory of cultural capital, it points to the ways in which modernist works distinguished themselves from mainstream fiction. His next book, *The Program Era: Postwar Fiction and the Rise of Creative Writing* (2009), starts where his previous account left off, taking up the second half of the century. Rather than examining the small, elite networks of modernism, it looks at the mass institution of creative writing and adopts systems theory to explain its operation. For an account of McGurl's career and thinking in his own words, see Jeffrey J. Williams, "With the Program: An Interview with Mark McGurl," *Contemporary Literature* 57 (2016).

The Program Era was immediately hailed as a major interpretation of contemporary American fiction. It received substantial treatment from influential critics such as Louis Menand, in "Show or Tell," *New Yorker*, June 8, 2009, and Fredric Jameson, in "Dirty Little Secret: The Programme Era," *London Review of Books*, November 22, 2012. It was also attacked by the writer Elif Batuman in "Get a Real Degree: Down with Creative Writing," *London Review of Books*, September 23, 2010; in "MFA vs. NYC," *n+1*, no. 10 (2010), Chad Harbach (identified as "the editors") pointed out that it left out a significant group of writers who responded to the popular rather than academic market. His essay is the anchor of *MFA vs. NYC: The Two Cultures of American Fiction*, edited by Harbach (2014), which also collects Batuman's essay, Jameson's review, and sixteen other pieces. See also Eric Bennett, *Workshops of Empire: Stegner, Engle, and American Creative Writing during the Cold War* (2015), which takes a less positive view than McGurl's, arguing that the workshop flattened fiction and served postwar U.S. politics. In addition, Chris Findeisen, "Injuries of Class: Mass Education and the American Campus Novel," *PMLA* 130 (2015), criticizes McGurl's overly positive view of higher education's ability to level classes.

Franco Moretti

Franco Moretti's first book—a collection of essays translated from Italian, *Signs Taken for Wonders: Essays in the Sociology of Literary Forms* (1983)—offers an analysis of the relations between high and mass culture, ranging across genres from horror and tragedy to detective fiction and classic

realism. In his next book, *The Way of the World: The Bildungsroman in European Culture* (1986; trans. 1987, new ed. 2000), he argues that the bildungsroman is the exemplary aesthetic form of modernity, a product of Europe's shifting socioeconomic conditions. In *Modern Epic: The World System from Goethe to García Márquez* (1994; trans. 1996), Moretti proposes a new genre, "modern epic," which includes canonical works that stretch from Goethe's *Faust* (1808–32) to García Márquez's *One Hundred Years of Solitude* (1967). To account for the continuity of this genre, Moretti uses a Darwinian-style evolutionary paradigm. His project to construct a scientific materialist history of literary genres is elaborated in his next two books: *Atlas of the European Novel, 1800–1900* (1997; trans. 1998) and *Graphs, Maps, Trees: Abstract Models for a Literary History* (2005). During this period, Moretti served as chief editor of *Il Romanzo* (5 vols., 2001–03), a collection of more than one hundred essays by leading contemporary critics that provide an international reassessment of the novel. Selections have been translated into English as *The Novel* (2 vols., 2006), which provides a detailed argument for understanding the genre as a "planetary form." Moretti's *The Bourgeois: Between History and Literature* (2013) explores the vicissitudes of bourgeois culture in modern European literature by analyzing both particular keywords (such as "useful," "earnest," "efficiency," and "influence") and specific formal mutations of prose. In the ten essays collected in *Distant Reading* (2013), Moretti reconstructs the intellectual trajectory of his theory of "distant reading" and his data-centric study of literature, summarizing two decades of critical work. In its regular section on "Theories and Methodologies" PMLA 132.3 (May 2017), Moretti responds to ten assessments of *Distant Reading*. While reiterating his "fascination with (nonliterary) conceptual models," he highlights the creative potential for literary study of the shifts from proximity to distance; from actual history to simulations of theoretical models; from the concrete reader to conventions and abstract institutions; and from close reading to "quantitative formalism." In addition to his books, Moretti has written numerous articles and is a frequent contributor to the *New Left Review*.

Critical evaluations of Moretti's work come from scholars working in literary history, the novel, and genre theory. In "How the Mule Got Its Tale: Moretti's Darwinian Bricolage," *Diacritics* 29.2 (1999), a review of *Atlas of the European Novel*, Geoffrey Winthrop-Young praises Moretti but also points out methodological limitations, arguing that Moretti's recourse to biological and cultural evolutionary models is arbitrary and tenuous. In "Anglo-Globalism?" *New Left Review*, 2d ser., no. 16 (2002), Jonathan Arac commends Moretti's global reach; he notes, however, that Moretti's theory of the novel as a "planetary form" risks strengthening the cultural hegemony of the En-

glish language as a deceptively transparent medium for analyzing diverse national literatures. In "Evolution and Literary History: A Response to Franco Moretti," *New Left Review*, 2d ser., no. 34 (2005), Christopher Prendergast discusses in detail the strengths of Moretti's theory of graphs, maps, and trees, while also indicating potential logical flaws and argumentative ellipses. In particular, Prendergast questions the causal links between form, time, and space that sustain Moretti's morphology of literary genres. In "The Dangers of Distant Reading: Reassessing Moretti's Approach to Literary Genres," *Genre: Forms of Discourse and Culture* 47 (2014), Maurizio Ascari contests the purported scientific objectivity of Moretti's method of inquiry, arguing that distant reading might in fact lead to biased interpretations of a pseudoscientific nature. In "Plotting Devices: Literary Darwinism in the Laboratory," in *Evolutionary Aesthetics*, a special issue of *Philosophy and Literature* (38.1A [2014]), John Hay argues that Moretti's quantitative analysis of the history of literary form might provide the missing link enabling literary Darwinism to realize its full scientific potential as "a more consilient literary criticism."

Toni Morrison

Toni Morrison's books of cultural and literary criticism include *The Black Book* (1974; reprinted 2009), a scrapbook on African American experiences that includes photographs, slave auction posters, newspaper clippings, and related materials, co-edited by Toni Morrison, Middleton A. Harris, and others; *Playing in the Dark: Whiteness and the Literary Imagination* (1992); and *What Moves at the Margin: Selected Nonfiction*, edited by Carolyn C. Denard (2008), containing several dozen essays and reviews. Two of Morrison's award speeches have been published as pamphlets: *Lecture and Speech of Acceptance, upon the Award of the Nobel Prize for Literature, Delivered in Stockholm on the Seventh of December, Nineteen Hundred and Ninety-three* (1994) and *The Dancing Mind: Speech upon Acceptance of the National Book Foundation Medal for Distinguished Contribution to American Letters on the Sixth of November, Nineteen Hundred and Ninety-six* (1996). She has edited three collections: *Race-ing Justice, En-Gendering Power: Essays on Anita Hill, Clarence Thomas, and the Construction of Social Reality* (1992); with Claudia Brodsky Lacour, *Birth of a Nationhood: Gaze, Script, and Spectacle in the O.J. Simpson Case* (1997); and *Burn This Book: PEN Writers Speak Out on the Power of the Word* (2009), a collection addressing literature and censorship.

Morrison has written eleven novels: *The Bluest Eye* (1970), *Sula* (1973), *Song of Solomon* (1977), *Tar Baby* (1981), *Beloved* (1987), *Jazz* (1992), *Paradise* (1997), *Love* (2003), *A Mercy* (2008), *Home* (2012), and *God Help the Child* (2015). Her only

short story, "Recitatif," was published in *Confirmation: An Anthology of African American Women* (1983), a collection co-edited by Black Arts movement poet and playwright Amiri Baraka and Amina Baraka, his wife. Morrison has also written two plays: *Dreaming Emmett* (1986), about the teenager (Emmett Till) whose 1955 murder helped catalyze the civil rights movement, and *Desdemona* (2012), which features Shakespeare's Desdemona and her African nursemaid. Morrison has written the libretto for the opera *Margaret Garner* (2005) as well as eleven children's books—all, except *Remember: The Journey to School Integration* (2004), co-written with her late son, Slade Morrison: *The Big Box* (1999); *The Book of Mean People* (2002); a number of adaptations of Aesop's fables under the series title *Who's Got Game*, *The Ant or the Grasshopper?* (2003), *Poppy or the Snake* (2003), *The Lion or the Mouse* (2003), and *The Mirror or the Glass* (2007); *Peeny Butter Fudge* (2009); *Little Cloud and Lady Wind* (2010); *The Tortoise or the Hare* (2010); and *Please, Louise* (2014).

Morrison's fiction and criticism have engendered numerous scholarly articles, monographs, and collections, and not all responses have been positive. The grounds for objections to her fiction range from liberties taken with the historical record—a charge aimed mostly at her use of Margaret Garner's story in *Beloved*—to her depictions of black male characters to her use of violence as part of her novels' narrative structures. Similarly, her criticism has been faulted for not accounting for gender and sexuality (*Playing in the Dark*), for skewering Clarence Thomas (*Race-ing Justice, En-Gendering Power*), and for erasing the body of Nicole Brown-Simpson (*Birth of a Nation'hood*).

A number of works provide good general introductions to Toni Morrison's life and work: Linda Wagner-Martin's *Toni Morrison: A Literary Life* (2015) is a good starting point. *Toni Morrison: Memory and Meaning*, edited by Adrienne Lanier Seward and Justine Tally (2014), has a foreword by Carolyn C. Denard, founder of the Toni Morrison Society, and essays that take up all manner of themes in Morrison's body of ideas; biographical insights are provided by Dana A. Williams's "To Make a Humanist Black: Toni Wofford's Howard Years." Tessa Roynon's *The Cambridge Introduction to Toni Morrison* (2013) is part biography, part close textual analysis of Morrison's fiction and engagement with her critical reception. Morrison's *What Moves at the Margin: Selected Nonfiction*, edited and with an introduction by Carolyn C. Denard (2008), a compilation of Morrison's commentaries, musings on her family history, and speeches, includes "The Nobel Lecture in Literature" (1994) and "The Dancin' Mind" (1996), both of which have been published separately as well (see above). Other solid resources are *The Cambridge Companion to Toni Morrison*, edited by Justine Tally (2007), which is divided into sections that treat Morrison's fiction

and nonfiction (particularly insightful is Cheryl A. Wall's essay on Morrison's legacy as an editor who nurtured the careers of African American writers, "Toni Morrison, Editor and Teacher"), and the classic *Critical Essays on Toni Morrison*, edited by Nellie Y. McKay (1988). See also *Toni Morrison: Conversations*, edited by Carolyn C. Denard (2008), which relies on interviews and conversations over a span of years to offer insights into Morrison's life, work, motivations, and literary inspirations; and Elizabeth A. Beaulieu's *The Toni Morrison Encyclopedia*, edited by Elizabeth Ann Beaulieu (2003), which helps identify and define key themes and trends in her oeuvre.

For compelling examinations of Morrison's *Playing in the Dark*, see Nathaniel F. Mills, "Playing in the Dark, on the Left, and Out of Bounds: Nelson Algren, World War II, and the Cross-Racial Imagination of Blackness," *MELUS* 38.4 (2013); Catherine Hall, "Playing in the Dark . . . and Racing Englishness," *European Journal of Women's Studies* 18 (2011); Sanyat Satar, "Playing in the Dark and the Quest of Identity: Morrison Painting the True Colours of Americanness," *Shiron*, no. 45 (2010); and Roynon's close reading in *The Cambridge Introduction to Toni Morrison* (see above). Harold Bloom, one of the leading partisans in the culture and canon wars, engages with debates on American literature, the canon, and Morrison's own mastery of the American novel as form in "Two African-American Masters of the American Novel," *Journal of Blacks in Higher Education*, no. 28 (2000).

Over the years, Morrison's edited collection on the Clarence Thomas–Anita Hill controversy, *Race-ing Justice, En-Gendering Power*, has elicited scholarship across a variety of disciplines. Luke Charles Harris's "Lessons Still Unlearned: The Continuing Sounds of Silence," *Du Bois Review* 10 (2013), provides a retrospective overview of the issues relating to black women, silence, justice, power, and intersectionality that its essays sought to engage.

The anthology on the O.J. Simpson saga edited by Morrison and Lacour, *Birth of a Nation'hood*, whose title plays on that of the American filmmaker D. W. Griffith's racially charged silent epic, *The Birth of a Nation* (1915)—itself inspired by Thomas F. Dixon Jr.'s novel *The Clansman* (1905)—led to two noteworthy articles on interracial sex, spectacle, black masculinity, and violence: Riché Richardson's "'The Birth of Nation'hood: Lessons from Thomas Dixon and D. W. Griffith to William Bradford Huie and *The Clansman*," O.J. Simpson's First Movie," *Mississippi Quarterly* 56 (2002/2003), and Rinaldo Walcott's "Deceived: The Unreadability of the O.J. Simpson Case," *Canadian Review of American Studies/Revue Canadienne d'Etudes Américaines* 28.2 (1998).

"Toni Morrison Remembers" (2015, dir. Jill Nichols), an episode in the BBC series *Imagine*

featuring Morrison herself, provides intimate insights into her life and work. For further reading, the bibliographies in Wagner-Martin's *Toni Morrison: A Literary Life* and Roynon's *Cambridge Introduction to Toni Morrison* are quite extensive. In addition to hosting a biennial conference, the Toni Morrison Society publishes an annual bibliography.

Timothy Morton

Timothy Morton is the author of eight books, co-author of two, editor of four, and co-editor of one. His *Shelley and the Revolution in Taste: The Body and the Natural World* (1994), described by the critic Charles J. Rzepka as a "magical mystery tour of a gargantuan subject largely unexamined in relation to its important role in shaping the modern Western world and English literature," discusses the topics of food and drink in the works of Percy Bysshe Shelley and Mary Wollstonecraft Shelley, offering new perspectives on recent theories of medicine and diet while treating food as a cultural construct. *The Poetics of Spice: Romantic Consumerism and the Exotic* (2000) studies the importance of spice and the spice trade, extending scholarship on the impact of consumerism and capitalism to Romantic writers. Defining spice as a "discourse, not an object, naively transparent to itself," the book makes use of Jacques Derrida's *pharmakon* in its reading of spice as a multifaceted "sign" and in its description of the ideological relationships dominating the spice trade. It also employs Slavoj Žižek's political philosophy. Morton edited *Radical Food: The Culture and Politics of Eating and Drinking, 1780–1830* (3 vols., 2000), Mary Shelley's "Frankenstein": *A Sourcebook* (2002), *Cultures of Taste/Theories of Appetite: Eating Romanticism* (2004), and *The Cambridge Companion to Shelley* (2006). With Nigel Smith, Morton co-edited *Radicalism in British Literary Culture, 1650–1830: From Revolution to Revolution* (2002). Morton's *The Ecological Thought* (2010) represents an extension of his *Ecology without Nature: Rethinking Environmental Aesthetics* (2007); the earlier work explores possible "political and social thinking, making, and doing" for our interaction with the environment. *Hyperobjects: Philosophy and Ecology after the End of the World* (2013) discusses the meaning of hyperobjects, such as global warming, radioactive plutonium, and climate change, and explores an ethicopolitics that acknowledges human weakness, lameness, and hypocrisy. His *Realist Magic: Objects, Ontology, Causality* (2013) offers innovative ways to perceive causality. With Marcus Boon and Eric Cazdyn, Morton wrote *Nothing: Three Inquiries in Buddhism* (2015); his emails with Björk Guðmundsdóttir make up *Björk*, vol. 4, *This Huge Sunlit Abyss from the Future Right There Next to You* (2015). His *Dark Ecology: For a Logic of Future Coexistence* (2016) questions the purity of nature, encouraging readers to quit looking for

the "origin point" at which nature has stopped being natural and, instead, inviting them to think ecologically: "we must think each state of affairs as entwined with one another and as consisting of nested loops of other states entwined with one another: humans within ecosystems, thoughts within brains." Here he defines "ecological awareness" as "a loop because human interference has a loop form, because ecological and biological systems are loops." Morton's *Humankind: Solidarity with Nonhuman People* (2017) mounts a radical call for solidarity and kindness between humans and nonhumans and for overcoming the ironclad notion of species in the interest of symbiosis and ecological coexistence. In addition, it aims to liberate current academic discourse on ecology from dominant cultural conservatism and hostility to theory, both of which should include humans and nonhumans alike.

Morton's "Guest Column: Queer Ecology," *PMLA* 125 (2010), imagines a field of study in which ecological and queer theories coexist and lays out some hypotheses regarding the interrelatedness of the two existing fields: "Ecology and queer theory are intimate. It's not that ecological thinking would benefit from an injection of queer theory from the outside. It's that, fully and properly, ecology is queer theory and queer theory is ecology: queer ecology." Morton has done several dozen interviews; for insight into his intellectual biography, see the February 2011 interview on the blog "New APPS: Art, Politics, Philosophy, Science" (www.newappsblog.com/2011/02/new-apps-interview-timothy-morton.html).

Timothy Morton's work has received much attention, both appreciative and critical. Eric Gidal's review of *The Ecological Thought* in *Studies in Romanticism* 50 (2011) acknowledges Morton's view of shared responsibility regarding ecological problems such as global warming but disagrees with the ways in which Morton applies his theory. Morton, not unlike other humanists, Gidal argues, prefers thinking to acting, rendering his work inaccessible to a general audience. In his review of *The Ecological Thought* in *Christianity and Literature* 61 (2012), Jeffrey Bilbro takes issue with the book's lack of "close textual analysis" and its "high-level theory," finding deficiencies in Morton's handling of choice and identity. Gregers Andersen's "Greening the Sphere: Towards an Eco-Ethics for the Local and Artificial," *symplekē* 21 (2013), sets Morton's global "eco-ethics" against Heidegger's "local eco-ethics." He recommends a middle ground between these two positions: "it is in the abyss between the old Heideggerian imperative to save authentic, local nature, and the abstract recognition of the strange strangers of an artificial world, suggested by Morton, that ecocriticism should seek its future place for action." Morton maintains a personal blog, "Ecology without Nature" (<http://ecologywithoutnature.blogspot.com/>),

which contains an up-to-date résumé plus lists of interviews and talks.

Laura Mulvey

Although "Visual Pleasure and Narrative Cinema" (1975) is her most frequently anthologized essay, Mulvey has written widely on film theory and criticism and media studies. She has published four books: *Visual and Other Pleasures* (1989; 2d ed., 2009) collects her essays on a wide range of topics; *Citizen Kane* (1992) explores what is perhaps the most celebrated American film; *Fetishism and Curiosity* (1996) examines how the concept of fetishism as it has been developed by Karl Marx and Freud relates to artistic texts; and *Death 24x a Second: Stillness and the Moving Image* (2006) discusses new forms of spectatorship created by new media technologies, such as the DVD. She has also contributed, with Michael Rush and Philippe-Alain Michaud, to a volume on the filmmaker Mark Lewis, *Mark Lewis* (2006). She has co-edited three collections of essays: *Experimental British Television* (2007), with Jamie Saxon; a critical reappraisal of the French filmmaker Jean-Luc Godard, *Godard's Contempt: Essays from the London Consortium* (2012), with Colin MacCabe; and *Feminisms: Diversity, Difference and Multiplicity in Contemporary Film Cultures* (2015), with Anna Backman Rogers. For biographical information on Mulvey, see her entry in *Movies in American History: An Encyclopedia* (ed. Philip C. DiMare, 2011).

David Sorfa's "Laura Mulvey," in *Film, Theory and Philosophy: The Key Thinkers* (ed. Felicity Colman, 2009), provides an introductory account of Mulvey's work. A great deal of feminist film criticism since 1975 has been written in response to Mulvey's essay. Among the most notable analyses are E. Ann Kaplan, *Women and Film: Both Sides of the Camera* (1983); *Re-vision: Essays in Feminist Film Criticism*, edited by Mary Ann Doane, Patricia Mellencamp, and Linda Williams (1984); Kaplan, *Rocking around the Clock: Music Television, Postmodernism, and Consumer Culture* (1987), which examines MTV and the popular music video, in another extension and critique of Mulvey's argument; and Mary Ann Doane, *The Desire to Desire: The Woman's Film of the 1940s* (1987). An anthology that demonstrates Mulvey's considerable influence on feminist film criticism is *Female Spectators: Looking at Film and Television*, edited by E. Deidre Pribram (1988). Several major psychoanalytic books on film assess Mulvey's contributions, including Kaja Silverman, *The Acoustic Mirror: The Female Voice in Psychoanalysis and Cinema* (1988); *Psychoanalysis and Cinema*, edited by E. Ann Kaplan (1990); and *Femmes Fatales: Feminism, Film Theory, Psychoanalysis*, edited by Mary Ann Doane (1991). *Viewing Positions: Ways of Seeing Films*, edited by Linda Williams (1995), offers a major reassessment of Mulvey's theories of film spectatorship.

Feminist Film Theorists: Laura Mulvey, Kaja Silverman, Teresa de Lauretis, Barbara Creed, edited by Shohini Chaudhuri (2006), explores connections between Mulvey's work and that of other feminist film theorists. Interviews that illuminate Mulvey's cinematic and critical practices include Jacquelyn Suter and Sandy Flitterman, "Textual Riddles: Women as Enigma or Site of Social Meanings? An Interview with Laura Mulvey," *Discourse* 1 (1979); Juan Suarez and Millicent Manglis, "Cinema, Gender, and the Topography of Enigmas: A Conversation with Laura Mulvey," *Cinefocus* 3 (1995); and Roberta Sassatelli, "Interview with Laura Mulvey: Gender, Gaze and Technology in Film Culture," *Theory, Culture and Society* 28.5 (2011).

C. D. Narasimhaiah

C. D. Narasimhaiah's main interest, beginning with his seminal collection of essays *The Swan and the Eagle* (1969; 3d ed., 1999), was comparing Indian and contemporary Western theories of criticism. Among his other books on literary criticism in India are *The Function of Criticism in India: Essays on Indian Response to Literature* (1987), *The Indian Critical Scene: Controversial Essays* (1990), *English Studies in India: Widening Horizons* (2002), and *An Inquiry into the Indianness of Indian English* (2003), and he edited or co-edited numerous collections, including *A Common Poetic for Indian Literatures* (with C. N. Srinath, 1984), *East-West Poetics at Work* (1991), and *Makers of Indian English Literature* (2000). He published extensively on literature of other Commonwealth nations, including *An Introduction to Australian Literatures* (ed., 1965), *Awakened Conscience: Studies in Commonwealth Literature* (1978), and *Essays in Commonwealth Literature: Heirloom of Multiple Heritage* (1995).

Narasimhaiah wrote and edited books on single authors, including *Better Literary History and Better Literary Criticism: The Work of F. R. Leavis and How It Strikes an Indian* (1963), *Raja Rao* (1973), *Ananda Coomaraswamy: Centenary Essays* (ed., 1982), and *T. S. Eliot and the Indian Literary Scene* (edited with C. N. Srinath, 1990). He also did much work on India's first prime minister, Jawaharlal Nehru: he collected a selection of Nehru's speeches in 1963, abridged Nehru's *The Discovery of India* (1946) in 1975, and wrote a biography, *Jawaharlal Nehru: The Statesman as Writer* (2001).

Narasimhaiah titled his life story "N" for *Nobody: An Autobiography of an English Teacher* (1991). He was honored by several festschrifts, notably *Theory in Practice: Essays in Honour of C. D. Narasimhaiah*, edited by D. A. Shankar, V. K. Natraj, and M. Sathyanarayana Rao (2001), and *Critical Spectrum: Essays in Literary Culture (in Honour of C. D. Narasimhaiah)*, edited by Satish C. Aikant (2004).

Narasimhaiah's work has drawn both approval and condemnation from Indian critics. Feroza

Jussawalla's *Family Quarrels: Towards a Criticism of Indian Writing in English* (1985) assesses both his handling of Indian writers and his use of European critics (especially F. R. Leavis and I. A. Richards). In the popular *The Empire Writes Back: Theory and Practice in Post-colonial Literature* (1989; 2d ed., 2002), the Australian critics Bill Ashcroft, Gareth Griffiths, and Helen Tiffin fault the Sanskrit-based aesthetic for trying to recover "the illusory essence of Indianness." Criticism of Narasimhaiah and other postcolonial and postmodern theorists for perpetuating colonialist discourse is widespread, especially on Internet blogs. In his conference paper "Decolonizing the Indian Mind" (2001), available online, Kapil Kapoor very broadly criticizes Anglicized and Americanized Indian critics for internalizing Western critical practices and defends Sanskritist theories. In "Indigenous Education and Brahminical Hegemony in Bengal," in *The Transmission of Knowledge of South Asia: Essays on Education, Religion, History, and Politics* (ed. Nigel Crook, 1996), Poromesh Acharya claims that Sanskritist theories lend support to the ancient Indian caste system.

Much work is being done, both in India and overseas, on the Sanskritist concepts of criticism that Narasimhaiah helped resurrect. At the Dhvanyaloka Centre, which he helped found, scholars engage at the same time with Indian critical theories and Western theories. Ragini Ramachandra's article "Rasa-Dhvani and British Formalism: Some Random Thoughts," *Dialogue* 7.1 (June 2011), and Uma Alladi's collection *The Study of Aesthetics: An Indian Perspective* (2007), which includes Mohan Ramanan's "C. D. Narasimhaiah's Contribution to Literary Criticism and Aesthetics," illustrate the continuing interest in bridging the two different critical traditions. In "From Downing to Dhvanyaloka: Leavis, Nationalism and Sanskrit Poetics," *Literary Criterion* (Diamond Jubilee Year Special Issue, 2012), T. J. Cribb continues the conversation between F. R. Leavis and Sanskritist poetics. Narasimhaiah's work is also the subject of a book co-authored by Bandana and L. R. Sharma, *The Twain Shall Meet—West East: Indian Criticism and C. D. Narasimhaiah* (1998).

Narasimhaiah's ideas have influenced some leading works of postcolonial criticism, such as *Reworlding: The Literature of the Indian Diaspora*, edited by Emmanuel S. Nelson (1992); Priya Joshi's *In Another Country: Colonialism, Culture, and the English Novel in India* (2002); and Srinivas Aravamudan's *Guru English: South Asian Religion in a Cosmopolitan Language* (2006). Another fruitful line of influence brings postcolonial studies to bear on the idea of Commonwealth literature, as in *Postcolonizing the Commonwealth: Studies in Literature and Culture*, edited by Rowland Smith (2000), a project pioneered by Narasimhaiah in his collection *Awakened Conscience*. Significantly, in his recent work the prominent postcolonial critic Ashish Nandy has revived and

applied *rasa-dhvani*. Other works that develop these concepts include G. N. Devy's *Indian Literary Criticism: Theory and Interpretation* (2002) and Revathi Krishnaswamy's "Toward World Literary Knowledge: Theory in the Age of Globalization," *Comparative Literature* 62 (2010). For more on Narasimhaiah's work and the concepts of *rasa* and *dhvani*, see John C. Hawley, *Encyclopedia of Postcolonial Studies* (2001), and *The Johns Hopkins Guide to Literary Theory and Criticism*, edited by Michael Groden, Martin Kreiswirth, and Imre Szeman (2d ed., 2005). A *Common Poetic for Indian Literatures* contains a bibliography of Narasimhaiah's work up to 1984.

Alondra Nelson

Alondra Nelson's books are *Body and Soul: The Black Panther Party and the Fight against Medical Discrimination* (2011) and *The Social Life of DNA: Race, Reparations, and Reconciliation after the Genome* (2016), which examines genetic genealogy as a new tool for addressing old and enduring issues around race, including grappling with the unfinished business of slavery, establishing ties with African ancestral homelands, and making legal claims for slavery reparations. Nelson edited *Technicolor: Race, Technology, and Everyday Life* (2001), which looks at the cultural impact of new information and communication technologies and how they have been constant topics of debate while questions of race and ethnicity fail to be raised; *Afrofuturism*, a special issue of *Social Text* (no. 71 [2002]); and, with the sociologist Catherine Lee and the historian Keith Wailoo, *Genetics and the Unsettled Past: The Collision of DNA, Race, and History* (2012), which explores how our genetic markers have come to be regarded as portals to the past. There is to date little secondary literature on Nelson's work.

Jalondra Davis Brown highlights the African American—centric dimensions of Afrofuturism as proposed by Nelson and others in "Imagining Africa," *Science Fiction Studies* 41 (2014). In his review of *Genetics and the Unsettled Past* in *Contemporary Sociology* 44 (2015), B. Ricardo Brown notes that Nelson's contribution to that collection, "Reconciliation Projects: From Kinship to Justice" (which formed the basis of her book *The Social Life of DNA*), suggests that the "genomic era" of heightened knowledge about DNA and genealogy may make possible "recognition and reconciliation in locations of intense social conflict." The most up-to-date bibliography of Nelson's writings can be found on her departmental website.

Sianne Ngai

Ngai is the author of two books. *Ugly Feelings* (2005) examines in art and popular culture the relatively small emotions of irritation, envy, anxiety, paranoia, and disgust, as well as two "feelings" to which Ngai gives the names "animatedness" and

"stuplimity." *Our Aesthetic Categories: Zany, Cute, Interesting* (2012) continues her exploration of less exalted art forms, investigating the ways in which the zany, cute, and interesting saturate contemporary commodity culture, including its art. Her articles have appeared in *PMLA*, *Critical Inquiry*, *American Literature*, and other prestigious journals. She discusses her work in "Our Aesthetic Categories: An Interview with Sianne Ngai," by Adam Jasper, in *Cabinet*, no. 43 (fall 2011).

For a brief introduction to affect theory, see Marta Figlerowicz's introduction to *Affect Theory Dossier*, a special issue of *Qui Parle* (20.2 [2012]). *The Affect Theory Reader*, edited by Melissa Gregg and Gregory J. Seigworth (2010), collects major statements on affect by contemporary theorists. Ruth Leys critiques the scientism of affect theory in "The Turn to Affect: A Critique," *Critical Inquiry* 37 (2011). In "Ugly Feelings, Powerful Sensibilities," *Contemporary Literature* 27 (2006), Charles Altieri calls Ngai's first book "stunning in its depth and range, exemplary in its learning, and almost continually surprising in its inventiveness," although he criticizes as a "doomed strategy" Ngai's focus "on art's powerlessness in the political sphere as her means of locating its possible power." Jennifer Fleissner, reviewing the book for *Modernism/modernity* 13 (2006), expresses irritation at its occasional inaccessibility, while at the same time calling it "one of the most intellectually dazzling and wide-ranging critical studies to appear in years." Ngai's influential work has been used by other scholars to illuminate topics as diverse as the West Indian novelist Jean Rhys in Anne Cunningham's "'Get On or Get Out': Failure and Negative Femininity in Jean Rhys's *Voyage in the Dark*," *Modern Fiction Studies* 59 (2013); Asian cinema in Jonathan Beller's "The Martial Art of 'Cinema': Modes of Virtuosity à la Hong Kong and the Philippines," *Positions: East Asia Cultures Critique* 19 (2011); and festivity in Naomi Milthorpe's "Heavy Jokes: Festive Unpleasure in the Interwar Novel," *Journal of Modern Literature* 38.3 (2015).

Ngugi Wā Thiong'o, Taban Lo Liyong, and Henry Owuor-Anyumba

Ngugi wā Thiong'o has published numerous critical essays on African literature, education, and politics, collected in *Homecoming: Essays on African and Caribbean Literature, Culture and Politics* (1973), which includes "On the Abolition of the English Department"; *Writers in Politics: Essays* (1981; rev. ed., 1997); *Education for a National Culture* (1981); *Barrel of a Pen: Resistance to Repression in Neo-Colonial Kenya* (1983); *Decolonising the Mind: The Politics of Language in African Literature* (1986); *Moving the Centre: The Struggle for Cultural Freedom* (1993); *Penpoints, Gunpoints, and Dreams: Towards a Critical Theory of the Arts and the State of Africa* (1998); *Something Torn and New: An African Re-*

naissance (2009); and *Globalectics: Theory and the Politics of Knowing* (2012), which reflects on the context of "On the Abolition of the English Department," written after British atrocities. He has also written several memoirs, including *Detained: A Writer's Prison Diary* (1981), *Dreams in a Time of War: A Childhood Memoir* (2010), and *In the House of the Interpreter: A Memoir* (2012). See also Ngūgĩ wā Thiong'o *Speaks: Interviews with the Kenyan Writer*, edited by Reinhard Sander and Bernth Lindfors (2005). Ngugi also has an international reputation as a novelist depicting twentieth-century Kenya; his best-known novels are *Weep Not, Child* (1964), *A Grain of Wheat* (1967), *Petals of Blood* (1977), and *Wizard of the Crow* (2006).

Published primarily in Africa, Taban lo Liyong is a prolific writer of poetry, short stories, and criticism. His most notable books in English are *The Last Word: Cultural Synthesism* (1969), the first book of literary criticism specifically focused on African literature, and *Fixions* (1968), a collection of short stories that contain elements of African oral tradition. Other works include *Eating Chiefs: Lwo Culture from Lolwe to Malkal* (1970), *Thirteen Offensives: Against Our Enemies* (1973), and *Carrying Knowledge up a Palm Tree* (1997), a collection of poems. Henry Owuor-Anyumba's publications in English include a collection, *Kikuyu Folktales*, co-edited with Rose N. Gecau (1970), and the monograph *A Musical Profile of Some Kalenjin Songs* (1973).

Carol Sicherman's "Revolutionizing the Literature Curriculum at the University of East Africa: Literature and the Soul of the Nation," *Research in African Literatures* 29.3 (1998), details the context out of which "On the Abolition of the English Department" arose and its subsequent impact on African literary study. See also Apollo Obonyo Amoko, *Postcolonialism in the Wake of the Nairobi Revolution: Ngugi Wa Thiong'o and the Idea of African Literature* (2010). There is a great deal of scholarship on Ngugi's work, especially his fiction. *Ngugi wā Thiong'o: The Making of a Rebel: A Source Book in Kenyan Literature and Resistance*, edited by Carol Sicherman (1989), is a helpful reference work. Simon Gikan-di, *Ngugi wā Thiong'o* (2000), is a useful study, as is Oliver Lovesey, *Ngūgĩ wa Thiong'o* (2000), which provides biographical information as well as a good bibliography. *Ngugi wā Thiong'o: A Bibliography of Primary and Secondary Works, 1957–1987*, compiled by Carol Sicherman (1991), is comprehensive but needs updating. There is to date little criticism and bibliography on Liyong or Owuor-Anyumba.

Friedrich Nietzsche

The standard German edition of Nietzsche's work is *Werke: Kritische Gesamtausgabe*, edited by Giorgio Colli and Mazzino Montinari (50+ vols., 1967–present). It is available online at www

.nietzschesource.org/ (accessed Nov. 22, 2015). All of Nietzsche's major works and much of his occasional unpublished works and notebooks have been translated, but the history of English editions of his works is vexed. After World War II, Random House published most of his major works in translations by Walter Kaufmann and R. J. Hollingdale, but Kaufmann especially has been criticized for heavy-handed editing. Since the 1990s, both Stanford University Press and Cambridge University Press have been engaged in issuing new translations that are based on the texts in the standard German edition. Here we list the Cambridge University edition where one exists and the Random House version where it still remains the most readily available (the original date of publication is given first, followed by the date of the English translation): *The Birth of Tragedy* (1872; 1999), *On the Advantages and Disadvantages of History for Life* (1877; 1980), *Daybreak: Thoughts on the Prejudices of Morality* (1881; 1997), *The Gay Science* (1882; 2001), *Thus Spoke Zarathustra* (1885; 2006), *Beyond Good and Evil* (1886; 2001), *Genealogy of Morals* (1887; 2007), and *The Case of Wagner* (1888; 1966). Three short late works, all written in 1888, are translated in the Cambridge University Press volume *The Anti-Christ, Ecce Homo, Twilight of the Idols, and Other Writings* (2005). *The Will to Power*, edited by Walter Kaufmann and R. J. Hollingdale (1967), is an important collection of entries from Nietzsche's notebooks, but the work is controversial because it was collated by Nietzsche's sister. The more recent *Writings from the Late Notebooks*, edited by Rüdiger Bittner (2003), explains the controversy in its introduction and attempts to provide a less tendentious selection of work that Nietzsche left unpublished. *Nietzsche on Rhetoric and Language*, edited by Sandor Gilman, Carole Blair, and David J. Parent (1989), collects work of particular interest to literary critics. *The Nietzsche Reader*, edited by Keith Ansell Pearson and Duncan Large (2006), offers generous selections from the whole range of Nietzsche's career. *Selected Letters of Friedrich Nietzsche*, edited by Christopher Middleton (1969), is the most useful collection of letters. *Ecce Homo* (1888) is Nietzsche's half-mad and fascinating autobiography; the most succinct biography is Ronald Hayman's *Nietzsche: A Critical Life* (1980), but Rüdiger Safranski's more comprehensive intellectual biography, *Nietzsche: A Philosophical Biography* (2000; trans. 2002), is essential for a full engagement with Nietzsche's life and thought. Also worth consulting are Thomas H. Brobjer, *Nietzsche's Philosophical Context: An Intellectual Biography* (2008), and Julian Young, *Friedrich Nietzsche: A Philosophical Biography* (2010).

The secondary literature is immense and we can touch here only on works likely to interest those coming to Nietzsche through an engagement with

literary theory. Gianni Vattimo's *Nietzsche: An Introduction* (1985; trans. 2001) and Alexander Nehamas's influential *Nietzsche: Life as Literature* (1985) are good places to start. Martin Heidegger's four-volume *Nietzsche* (1961; trans. 1979–86) is a major document of twentieth-century philosophy as well as a powerful, if idiosyncratic, interpretation of Nietzsche. Many poststructuralists have written extensively on Nietzsche. A partial list includes Gilles Deleuze, *Nietzsche and Philosophy* (1962; trans. 1983); Sarah Kofman, *Nietzsche and Metaphor* (1972; trans. 1993); Michel Foucault, *Language, Counter-Memory, Practice* (1977); Jacques Derrida, *Spurs: Nietzsche's Styles* (1978; trans. 1979); and Paul de Man, *Allegories of Reading* (1979). Five works that particularly address Nietzsche's aesthetics are James I. Porter's *The Invention of Dionysus: An Essay on "The Birth of Tragedy"* (2000), Matthew Rampley's *Nietzsche, Aesthetics and Modernity* (2000), Peter Sloterdijk's *Nietzsche Apostle* (2000; trans. 2013), Douglas Burnham and Martin Jesinghausen's *Nietzsche's "The Birth of Tragedy": A Reader's Guide* (2010), Robert R. Williams's *Tragedy, Recognition, and the Death of God: Studies in Hegel and Nietzsche* (2012), and *Nietzsche on Art and Life* (2014), edited by Daniel Came. Malcolm Bull's *Anti-Nietzsche* (2011) has been widely read and discussed, while Jennifer Ratner-Rosenhagen's *American Nietzsche: A History of an Icon and His Ideas* (2012) is a fascinating history of Nietzsche's reception in the United States. Peter R. Sedgwick, *Nietzsche: The Key Concepts* (2009); *Introductions to Nietzsche*, edited by Robert B. Pippin (2012); *The Oxford Handbook of Nietzsche*, edited by Ken Gemes and John Richardson (2013); and Douglas Burnham, *The Nietzsche Dictionary* (2015), are all useful reference works. *Nietzsche: Godfather of Fascism? On the Uses and Abuses of a Philosophy*, edited by Jacob Golomb and Robert S. Wistrich (2002), offers essays that explore Nietzsche's relation to National Socialism, including an important reassessment by Robert C. Holub of the notion that Nietzsche's sister is to blame for the Nazis' appropriation of Nietzsche's work. William H. Schaberg's *The Nietzsche Canon: A Publication History and Bibliography* (1995) carefully traces the history of all Nietzsche's texts. Useful bibliographies of secondary works can be found in Pearson and Large's *Nietzsche Reader* and Pippin's *Introductions to Nietzsche*.

Rob Nixon

In addition to numerous articles and reviews in academic and popular journals, Rob Nixon has published four books. *London Calling: V. S. Naipaul, Postcolonial Mandarin* (1992) is a scathing reassessment of the works of the Nobel Prize-winning author Naipaul, who has been celebrated for bridging cross-cultural divides between the West and postcolonial nations, but whom Nixon castigates for upholding an imperialistic representation

of the “third world” as existing in parasitic dependence on the creative and productive cultures of the West. In *Homelands, Harlem and Hollywood: South African Culture and the World Beyond* (1994), Nixon examines the anticolonialist and anti-apartheid struggles of South Africa while exploring the ways in which South Africa and the United States have mutually influenced one another. *Dreambirds: The Strange History of the Ostrich in Fashion, Food, and Fortune* (2000) is a partially autobiographical work of creative non-fiction in which Nixon raises probing personal, historical, and ethical questions while analyzing the strange obsessions with the ostrich that he encountered in both South Africa and the United States. Nixon’s interests in environmental and postcolonial theory intersect in *Slow Violence and the Environmentalism of the Poor* (2011), which analyzes both the slow environmental devastations caused by capitalist and imperialist forces and the movements of ecological justice in the global South that have emerged to resist these forces. An extended interview with Nixon by Robert P. Marzec and Allison Carruth in *Public Culture* 26 (2014) includes discussions of the concept of slow violence as well as of the intersections between environmentalism and postcolonialism.

Several reviews of *Slow Violence and the Environmentalism of the Poor* help demonstrate its significance and offer constructive criticisms. In a favorable review published in the *Times Higher Education Supplement*, September 15, 2011, Jules Pretty praises Nixon’s analysis of the intersections between imperialism, war, and environmental degradation, but argues that the concept of slow violence may hide the fast impacts of environmental degradation while reductively implying that such degradations are always caused by the violent intentions of malevolent persons. In *Research in African Literatures* 43.1 (2012), Byron Caminero-Santangelo celebrates Nixon as a member of a vanguard movement that attunes ecocriticism to the realities of imperialism. Caminero-Santangelo also claims that Nixon fills a gap in the work of Edward W. Said by demonstrating the environmental aspects of colonialism. In “The Varieties of Environmental Violence,” *Los Angeles Review of Books*, November 22, 2013, Subhankar Banerjee praises Nixon’s work for its fresh reframing of important theoretical concepts and its lucid prose while suggesting that his analysis should be extended both to address writer-activists outside of the global South and to situate the works of individual activists within the broader communities from which their activism emerges.

Martha C. Nussbaum

Martha Nussbaum is one of the most prolific scholars of her generation; she has written or edited more than forty books; published more than 300 articles, as well as over fifty reviews in prominent

magazines such as the *New Republic* and the *New York Review of Books*; and given scores of public lectures. Her first book, *Aristotle’s De Motu Animalium: Text with Translation, Commentary, and Interpretive Essays* (1978), was a revision of her dissertation. It was with her next book, *The Fragility of Goodness: Luck and Ethics in Greek Tragedy and Philosophy* (1986; rev. ed., 2001) that she gained wide attention. It inaugurated a cluster of works that deal with classical philosophy, ethics, emotion, and literature, including *Love’s Knowledge: Essays on Philosophy and Literature* (1990), *The Therapy of Desire: Theory and Practice in Hellenistic Ethics* (1994), *Poetic Justice: The Literary Imagination and Public Life* (1995), and *Cultivating Humanity: A Classical Defense of Reform in Liberal Education* (1997), from which we draw our selection. While continuing her focus on ethics, her next wave of books more explicitly address politics and human rights; they include *Sex and Social Justice* (1999), *Women and Human Development: The Capabilities Approach* (2000), *Upheavals of Thought: The Intelligence of Emotions* (2001), *Hiding from Humanity: Disgust, Shame, and the Law* (2004), and *Frontiers of Justice: Disability, Nationality, Species Membership* (2006). She also examined religion and its effect on politics, in *The Clash Within: Democracy, Religious Violence, and India’s Future* (2007), *Liberty of Conscience: In Defense of America’s Tradition of Religious Equality* (2008), and *The New Religious Intolerance: Overcoming the Politics of Fear in an Anxious Age* (2012). She followed *Cultivating Humanity* with a polemic against the corporate university in *Not for Profit: Why Democracy Needs the Humanities* (2010), and continued her reflections on social justice and emotions in a succession of short books: *From Disgust to Humanity: Sexual Orientation and Constitutional Law* (2010), *Creating Capabilities: The Human Development Approach* (2011), *Political Emotions: Why Love Matters for Justice* (2013), and *Anger and Forgiveness: Resentment, Generosity, Justice* (2016). In addition, she collected essays in *Philosophical Interventions: Reviews 1986–2011* (2012).

Nussbaum has co-edited more than a dozen collections, among them several on ancient philosophy; several deriving from her work with the United Nations University, such as *The Quality of Life* (with Amartya Sen, 1993), and *Women, Culture, and Development: A Study of Human Capabilities* (with Jonathan Glover, 1995); several on topical issues, including *Sexual Orientation and Human Rights in American Religious Discourse* (with Saul Olyan, 1998) and *Animal Rights: Current Debates and New Directions* (with Cass R. Sunstein, 2004); and several on literature, including *Subversion and Sympathy: Gender, Law, and the British Novel* (with Alison LaCroix, 2013). For an account of her work in her own words, see “The Capability of Philosophy: An Interview with Martha C. Nussbaum,” conducted by Jeffrey J. Williams, *Minnesota Review*, n.s. 71–72 (2009).

The critical commentary on Nussbaum is sizable, ranging from scholarly disputations on classical philosophy to engagement in public debates on politics and religion; she has appeared in television interviews and been the subject of a *New York Times Magazine* feature article by Robert S. Boynton, "Who Needs Philosophy?" November 21, 1999. A special issue of *New Literary History* 15 (1983), titled *Literature and/as Moral Philosophy*, focused on Nussbaum's reading of Henry James; it includes essays by the philosophers Richard Wollheim and Hilary Putnam. *For Love of Country?* (1996; new ed., 2002), edited by Joshua Cohen, contains sixteen responses to Nussbaum's essay "Patriotism and Cosmopolitanism" by leading philosophers and critics, among them Judith Butler; the issue of *Boston Review* 19 (1994) where it was originally published contained twenty-nine responses. A review attacking the multicultural leanings of *Cultivating Humanity* by the prominent conservative critic David Frum appears in *Public Interest*, spring 1998. A substantial section of Ronald L. Hall's *The Human Embrace: The Love of Philosophy and the Philosophy of Love: Kierkegaard, Cavell, Nussbaum* (2000) considers Nussbaum's focus on emotion. A special issue of *Ethics* 111 (2000) features "Symposium on Martha Nussbaum's Political Philosophy." For studies of her philosophical positions, see Peter Johnson, *Moral Philosophers and the Novel: A Study of Winch, Nussbaum, and Rorty* (2004), and John M. Alexander, *Capabilities and Social Justice: The Political Philosophy of Amartya Sen and Martha Nussbaum* (2008). Geoffrey Galt Harpham's "Criticism as Therapy: The Hunger of Martha Nussbaum," in his *The Character of Criticism* (2006), offers a good synthetic account of Nussbaum's career. An exchange in *California Law Review* 98 (2010) on gay marriage features an essay by Nussbaum and an interesting response by the queer theorist Michael Warner. See also *Honoring the Contributions of Professor Martha Nussbaum to the Scholarship and Practice of Gender and Sexuality Law*, a symposium volume of *Columbia Journal of Gender and Law* 19 (2010). Specifically addressing her theories of education, see Jon Nixon, *Interpretive Pedagogies for Higher Education: Arendt, Berger, Said, Nussbaum and Their Legacies* (2012). See also *Capabilities, Gender, Equality: Towards Fundamental Entitlements*, edited by Flavio Comim and Nussbaum (2014), which includes a number of responses to Nussbaum's positions on social justice.

Richard Ohmann

Richard Ohmann's early work includes *Shaw: The Style and the Man* (1962), the edited collection *The Making of Myth* (1962), two coauthored textbooks on rhetoric and composition, and several influential essays employing speech act theory to analyze the style of literary works. After the late 1960s, he turned to focus on the politics of the profession

and the socioinstitutional context of literature, publishing *English in America: A Radical View of the Profession* (1976; reissued in 1996 with a foreword by Gerald Graff and a new introduction by Ohmann) and a series of essays collected in *Politics of Letters* (1987), which includes "The Shaping of a Canon." Expanding his research to more general issues of literary culture, Ohmann's *Selling Culture: Magazines, Markets, and Class at the Turn of the Century* (1996), a prominent work of American cultural studies, examines the correlated rise of popular literary magazines and advertising in the late nineteenth and early twentieth century in the United States. In a related effort, Ohmann edited the collection *Making and Selling Culture* (1996), which includes essays by publishers and filmmakers as well as academics. He gathered his later essays in *Politics of Knowledge: The Commercialization of the University, the Professions, and Print Culture* (2003), a sequel to *Politics of Letters*. From 1966 through 1978, Ohmann also edited the influential journal *College English*, sponsoring innovative issues on feminism, gay studies, and other topics. His collection co-edited with W. B. Coley, *Ideas for English 101: Teaching Writing in College* (1975), derives from *College English*. "English in America Updated: An Interview with Richard Ohmann," conducted by Jeffrey Williams, recounts Ohmann's career and his embrace of radical politics; it is collected in *Critics at Work: Interviews, 1993–2003* (ed. Williams, 2004), as well as in Ohmann's *Politics of Knowledge*.

Notable responses to Ohmann include Gerald Graff's criticism of the radical assumptions of *English in America* in *Literature against Itself: Literary Ideas in Modern Society* (1979). In *Doing What Comes Naturally: Change, Rhetoric, and the Practice of Theory in Literary and Legal Studies* (1989), Stanley Fish finds a self-contradictory antiprofessional strand in Ohmann's critique of the profession. "The Shaping of a Canon" has provided a model for subsequent reception studies of the contemporary American canon and the "book market." In "Courses and Canons: The Post-1945 U.S. Novel," *Critique: Studies in Contemporary Fiction* 31 (1990), Raymond Mazurek expands on Ohmann's account to survey the recent canon taught in university courses, while noting the limitations of the category of "illness stories." A special issue of *Works and Days* 23 (2005) gathers fourteen essays assessing Ohmann's work, testifying to his influence in composition studies, American cultural studies, and the politics of literary studies. James F. English, "Everywhere and Nowhere: The Sociology of Literature after 'the Sociology of Literature,'" *New Literary History* 41.2 (2010), notes Ohmann's central work in developing a sociological approach. Jeffrey J. Williams, "The Rise of the Academic Novel," *American Literary History* 24 (2012), extends Ohmann's focus on fiction that dwells on the anxiety of the professional-managerial class.

Kelly Oliver

During the first two decades of her career, Oliver wrote ten books: *Reading Kristeva: Unraveling the Double-bind* (1993); *Womanizing Nietzsche: Philosophy's Relation to the "Feminine"* (1995); *Family Values: Subjects between Nature and Culture* (1997); *Subjectivity without Subjects: From Abject Fathers to Desiring Mothers* (1998); *Witnessing: Beyond Recognition* (2001); with Benigno Trigo, *Noir Anxiety* (2002); *The Colonization of Psychic Space: A Psychoanalytic Social Theory of Oppression* (2004); *Women as Weapons of War: Iraq, Sex, and the Media* (2007); *Animal Lessons: How They Teach Us to Be Human* (2009); and *Knock Me Up, Knock Me Down: Images of Pregnancy in Hollywood Films* (2012). More recently, *Technologies of Life and Death: From Cloning to Capital Punishment* (2013) analyzes the extremes of birth and death in their mediation by technologies of life and death. *Earth and World: Philosophy after the Apollo Missions* (2015) takes up discussions occurring within Continental philosophy about humanity's complex relationship to the earth and the environment. *Hunting Girls: Sexual Violence from "The Hunger Games" to Campus Rape* (2016) examines sexual violence and rape culture on-screen and offscreen. Books edited or co-edited by Oliver are *Ethics, Politics, and Difference in Julia Kristeva's Writing* (1993); *The Portable Kristeva* (1997; updated ed., 2002); with Marilyn Pearsall, *Feminist Interpretations of Nietzsche* (1998); with Christina Hendricks, *Language and Liberation: Feminism, Philosophy, and Language* (1999); with Penelope Deutsche, *Enigmas: The Writing of Sarah Kofman* (1999); *French Feminism Reader* (2000); with Steve Edwin, *Between the Psyche and the Social: Psychoanalytic Social Theory* (2002); with Lisa Walsh, *Contemporary French Feminism* (2004); with Alice A. Jardine and Shannon Lundeen, *Living Attention: On Teresa Brennan* (2007); and, with S. K. Keltner, *Psychoanalysis, Aesthetics, and Politics in the Work of Julia Kristeva* (2009).

A range of secondary scholarship responds to Oliver's work, especially on Nietzsche and feminism, Kristeva, and her theory of witnessing and testimony. Mae Henderson's *Speaking in Tongues and Dancing Diaspora: Black Women Writing and Performing* (2014) favorably extends Oliver's body of ideas on witnessing, recognition, and "response-ability" and "address-ability." Ewa Plonowska Ziarek's *An Ethics of Dissensus: Postmodernity, Feminism and the Politics of Radical Democracy* (2001) critically engages Oliver's theorizing on trauma, feminism, and Kristeva. In her review in *Hypatia* 20.2 (2005), Debra Bergoffen argues that Oliver's *Witnessing* would have been strengthened and challenged by engagements with Simone de Beauvoir and Martin Buber, particularly with regard to her wholesale rejection of subject-object relationships. For a representative list of Oliver's journal publications, see her facul-

ty page at Vanderbilt University's Philosophy Department.

Walter Pater

Primary sources include *The Works of Walter Pater* (10 vols., 1910; rpt. 1967) and *Letters*, edited by Lawrence Evans (1970). See also *Walter Pater: Three Major Texts*, edited by William E. Buckler (1986), which includes *Studies in the History of the Renaissance, Appreciations, and Imaginary Portraits*. For a good selection, see *The Selected Writings of Walter Pater*, edited by Harold Bloom (1974). Thomas Wright's biography, *The Life of Walter Pater* (2 vols., 1907), is informative but not always reliable. Overviews of the life and work are provided by Ian Fletcher, *Walter Pater* (rev. ed., 1972), and Gerald Monsman, *Walter Pater* (1977).

For background and annotations for *Studies in the History of the Renaissance*, consult the editions by Adam Phillips (1986) and Donald L. Hill (1980). Context and analysis are offered by Paul Barolsky, *Walter Pater's Renaissance* (1987). Another useful resource is Billie Andrew Inman, *Walter Pater and His Reading, 1874–1877, with a Bibliography of His Library Borrowings, 1878–1894* (1990).

On Pater's criticism, see David J. DeLaura, *Hebrew and Hellene in Victorian England: Newman, Arnold, and Pater* (1969); William E. Buckler, *Walter Pater: The Critic as Artist of Ideas* (1987); and Jonathan Loesberg, *Aestheticism and Deconstruction: Pater, Derrida, and de Man* (1991), which argues for the philosophical and political force of Pater's aestheticist views in *Studies in the History of the Renaissance* and other works. Critical studies include Wolfgang Iser, *Walter Pater: The Aesthetic Moment* (1960; trans. 1987); Robert Keefe, *Walter Pater and the Gods of Disorder* (1988), on Pater's interest in Greek culture and mythology; Carolyn Williams, *Transfigured World: Walter Pater's Aesthetic Historicism* (1989), illuminating on Pater's narrative and rhetorical strategies in his criticism and fiction; Jay Fellows, *Tombs, Despoiled and Haunted: "Under-Textures" and "After-Thoughts" in Walter Pater* (1991); Denis Donoghue, *Walter Pater: Lover of Strange Souls* (1995), a suggestive study of Pater as a writer who sees criticism as "an opportunity for the exercise of self-consciousness"; and William Shuter, *Rereading Walter Pater* (1997), especially cogent on the influence of Heraclitus, Plato, and Hegel on Pater's thought. Kenneth Daley, in *The Rescue of Romanticism: Walter Pater and John Ruskin* (2001), offers a stimulating account of Pater's response to and interpretation of the Romantic movement. Recent studies include *Victorian Aesthetic Conditions: Pater across the Arts*, edited by Elicia Clements and Lesley J. Higgins (2010), which provides interdisciplinary essays on Pater and art, music, theater, and literature; and Kate Hext, *Walter Pater: Individual-*

ism and Aesthetic Philosophy (2013), on Pater's conception of the individual and self-identity and its relation to his aesthetic philosophy.

Walter Pater: An Imaginative Sense of Fact, edited by Philip Dodd (1981), collects papers presented at the First International Pater Conference, held in Oxford in 1980. Another good collection is *Pater in the 1990s*, edited by Laurel Brake and Ian Small (1991). *Comparative Criticism*, vol. 17, edited by E. S. Shaffer (1995), includes excellent essays on Pater by Denis Donoghue, Richard Wollheim, and others. For his contemporaries' responses to Pater's writings, see *Walter Pater: The Critical Heritage*, edited by R. M. Seiler (1980). See also *Walter Pater: An Annotated Bibliography of Writings about Him*, edited by Franklin Court (1979).

Plato

The standard Greek edition of the entire works of Plato, including those of dubious authorship, is *Platonis Opera*, edited by John Burnet (5 vols., 1900–1907). This edition is being updated by a team of scholars led by E. A. Duke (2 vols. to date, 1995–). For a handy one-volume English translation of selected dialogues by various translators, see *The Collected Dialogues of Plato*, edited by Edith Hamilton and Huntington Cairns (1961; rpt. 1989). *Plato: Complete Works*, edited by John M. Cooper (1997), is the most complete one-volume collection, with the best translations available (done by various hands). The best translation of *Republic* is Robin Waterfield's (1993).

A. E. Taylor's *Plato, the Man and His Work* (1926; 7th ed., 1969) contains a complete translation of Diogenes Laërtius's third-century C.E. life of Plato, which has served as the basis for modern reconstructions of the philosopher's life. For a general introduction, see *Plato: A Very Short Introduction* (2003), by Julia Annas. Several books provide good introductions to Plato's aesthetic theory, including Iris Murdoch, *The Fire and the Sun: Why Plato Banished the Artists* (1977), which attempts to defend Plato's view of the arts; and Morriss Henry Partee, *Plato's Poetics: The Authority of Beauty* (1981). Gerald F. Else, *Plato and Aristotle on Poetry* (1986), is a comparative study of the aesthetic theory of Greece's two greatest philosophers. In *Postmodern Platos* (1985), Catherine H. Zuckert examines the centrality of Platonic thought to theorists from Friedrich Nietzsche to Jacques Derrida. Other books dealing with Plato's importance to poststructuralist criticism include Jasper Neel, *Plato, Derrida, and Writing* (1988), and *Plato and Postmodernism*, edited by Steven Shankman (1994). For feminist readings of Plato, see *Feminist Interpretations of Plato*, edited by Nancy Tuala (1994). *The Cambridge Companion to Plato*, edited by Richard Kraut (1992), contains essays on several aspects of Plato's thought, including aesthetics. Andrea Wilson Nightingale's *Genres in Dialogue: Plato*

and the Construct of Philosophy (1996) examines Plato's integration of Greek poetry and rhetoric into his dialogues. In *The Play of Character in Plato's Dialogues* (2002), Ruby Blondell explores the literary and philosophical questions raised by Plato's use of the dialogue form. *The Cambridge Companion to Plato's Republic*, edited by G. R. F. Ferrari (2007), offers a more advanced introduction to Plato's central work. Charles Griswold's article "Plato on Rhetoric and Poetry," in *The Stanford Encyclopedia of Philosophy* (2008), provides a useful summary of the "quarrel between philosophy and poetry" in Plato's dialogues, while recent studies challenge the traditional arguments about Plato's role in the split between poetry and philosophy in the Western tradition, offering new readings of *Republic's* critique of poetry. See Susan Levin, *The Ancient Quarrel between Philosophy and Poetry Revisited: Plato and the Greek Literary Tradition* (2001); Ramona Naddaff, *Exiling the Poets: The Production of Censorship in Plato's Republic* (2002); and David Wolfsdorf, *Trials of Reason: Plato and the Crafting of Philosophy* (2008). In *Between Ecstasy and Truth: Interpretations of Greek Poetics from Homer to Longinus* (2011), Stephen Halliwell contextualizes Plato's seemingly contradictory pronouncements about poetry in *Ion* and *Republic* as a dialectic that runs throughout Greek poetics: it focuses on the tension between ecstasy—emotional, imaginative responses—and truth, which emphasizes poetry's cognitive and ethical value. On *Phaedrus* and Plato's discussions of rhetoric and writing, see Ronna Burger, *Plato's "Phaedrus": A Defense of a Philosophic Art of Writing* (1980), and David A. White, *Rhetoric and Reality in Plato's "Phaedrus"* (1993). For an advanced, close reading of this dialogue, see Seth Benardete's *Rhetoric of Morality and Philosophy: Plato's "Gorgias" and "Phaedrus"* (1994). The most complete and up-to-date bibliography can be found in *The Cambridge Companion to Plato's Republic* (cited above).

Edgar Allan Poe

Poe wrote in a surprising variety of literary genres: poems, fantastic tales designed to explore what Freud would call "the uncanny," detective stories (a genre he seems to have invented), novels, reviews, and literary theory. For a good collection of Poe's literary theory and criticism, see the interesting short collection edited by Leonard Cassuto, *Edgar Allan Poe: Literary Theory and Criticism* (1999). For more extensive collections, see the Library of America volume titled *Edgar Allan Poe: Essays and Reviews* (1984), with selections, notes, and a useful chronology by G. R. Thompson. *Literary Criticism of Edgar Allan Poe*, edited by Robert L. Hough (1965), and *Selections from the Critical Writings of Edgar Allan Poe*, edited by F. C. Prescott (1981), are also useful. Kenneth Silverman's *Edgar Allan Poe: Mournful and Never-Ending Remembrance* (1991) and Arthur Hobson Quinn's *Edgar*

Allan Poe (1941; reprint, 1997) are towering full-length biographies. For a more recent brief life, see Peter Ackroyd's *Poe: A Life Cut Short* (2008). For an appreciation of broader biographical issues, the two essays on the history of Poe biography in *A Companion to Poe Studies* (ed. Eric W. Carlson, 1996) are indispensable, as is *A Poe Log: A Documentary Life of Edgar Allan Poe*, edited by Dwight Thomas and David K. Jackson, (1987).

For a book-length study of Poe's criticism, see Robert D. Jacobs's *Poe: Journalist and Critic* (1969). For good general collections of essays, see *Critical Essays on Edgar Allan Poe*, edited by Eric W. Carlson (1987), and *The Cambridge Companion to Edgar Allan Poe*, edited by Kevin J. Hayes (2002), as well as Hayes's anthology *Edgar Allan Poe in Context* (2013); *Poe and the Remapping of Antebellum Print Culture*, edited by J. Gerald Kennedy and Jerome McGann (2012) is also a useful source. Recent American work on poetic theory, race, gender, and historical context is found in *The American Face of Edgar Allan Poe*, edited by Shawn Rosenheim and Stephen Rachman (1995), which alludes to the earlier *The French Face of Edgar Allan Poe*, by Patrick Quinn (1954). The texts generated around Jacques Lacan's "Seminar on 'The Purloined Letter'"—authored by Lacan, Jacques Derrida, Barbara Johnson, and others—are collected in *The Purloined Poe* (ed. John P. Muller and William J. Richardson, 1988). And Roman Jakobson's essay on "The Raven" is in his *Language and Literature* (1987). For bibliographies, see J. Lasley Dameron and Irby B. Cauthen Jr., *Edgar Allan Poe: A Bibliography of Criticism, 1827–1967* (1974); Esther Hyneman, *Edgar Allan Poe: An Annotated Bibliography of Books and Articles in English* (1974); Leona Rasmussen, *Edgar Allan Poe: An Annotated Bibliography* (1978); and the *Cambridge Companion*.

Alexander Pope

The standard source for studying Pope is the Twickenham Edition of the Works of Alexander Pope (11 vols., 1939–69). Volume 1 (1961), edited by E. Audra and Aubrey Williams, includes a carefully annotated text of *An Essay on Criticism*. Also recommended is Robert M. Schmitz's "Essay on Criticism," 1709; *A Study of the Bodleian Manuscript Text with Facsimiles, Transcripts, and Variants* (1962), which examines the manuscript version of the Essay. A good one-volume selection is *Poetry and Prose of Alexander Pope*, edited by Aubrey Williams (1969), which uses the text established for the Twickenham edition. Another good edition, and one more up-to-date, is *Alexander Pope: The Rape of the Lock and Other Major Writings*, edited by Leo Damrosch (2011). Other important primary sources include *The Correspondence of Alexander Pope*, edited by George Sherburn (5 vols., 1956); and two volumes of prose works, the first edited by Norman Ault, *The Prose Works of Alexander Pope* (1936), and the second

by Rosemary Cowler, *The Prose Works of Alexander Pope*, vol. 2, *The Major Works, 1725–1744* (1986). For selections from Pope's critical writings, see *Literary Criticism of Alexander Pope*, edited by Bertrand A. Goldgar (1965).

There are two superb biographical treatments: George Sherburn, *The Early Career of Alexander Pope* (1934), which covers the period to 1727; and Maynard Mack, *Alexander Pope: A Life* (1985), which examines the life and the writings in depth and detail. Also recommended: Howard Erskine-Hill, *The Social Milieu of Alexander Pope: Lives, Example, and the Poetic Response* (1975); Maynard Mack, *The Garden and the City: Retirement and Politics in the Later Poetry of Pope, 1731–1743* (1969); and Reginald Berry, *A Pope Chronology* (1988).

Two older studies of Pope's verse remain valuable: Geoffrey Tillotson, *On The Poetry of Pope* (2d ed., 1950), and Reuben A. Brower, *Alexander Pope: The Poetry of Allusion* (1959). These should be supplemented by Laura Brown, *Alexander Pope* (1985), a Marxist study that relates Pope to the culture of empire and capitalism; Ellen Pollak, *The Poetics of Sexual Myth: Gender and Ideology in the Verse of Swift and Pope* (1985), a feminist analysis; G. Douglas Atkins, *Quests of Difference: Reading Pope's Poems* (1986), which draws on Jacques Derrida's and Paul de Man's deconstructive theories and practices; Leopold Damrosch Jr., *The Imaginative World of Alexander Pope* (1987), an exploration of Pope's literary career as the product of his feelings of isolation and sexual, artistic, political, and financial marginality; Valerie Rumbold, *Women's Place in Pope's World* (1989), a cogent treatment of Pope's relationships with women and his poetry about them; and Helen Deutsch, *Resemblance and Disgrace: Alexander Pope and the Deformation of Culture* (1996). For a stimulating account of "philosophical skepticism" in Pope's poetic theory and practice, see James Noggle, *The Skeptical Sublime: Aesthetic Ideology in Pope and the Tory Satirists* (2001). In *Swift and Pope: Satirists in Dialogue* (2010), Dustin H. Griffin compares and contrasts the work of these lifelong friends and fellow satirists, studying their letters, poems, and satires as stages in an ongoing literary dialogue.

Much of the best critical work on Pope has been collected in *Essential Articles for the Study of Pope*, edited by Maynard Mack (1968); *Alexander Pope: A Critical Anthology*, edited by F. W. Bateson and N. A. Joukovsky (1971); *Alexander Pope: Writers and Their Backgrounds*, edited by Peter Dixon (1972); and *Pope: The Critical Heritage*, edited by James Barnard (1973). More recent collections include *The Enduring Legacy: Alexander Pope Tercentenary Essays*, edited by G. S. Rousseau and Pat Rogers (1988), and *Pope: New Contexts*, edited by David Fairer (1990). See also the special issue of *The New Orleans Review*, vol. 15 (1980), edited by Ronald Schleifer and titled *The*

Poststructuralist Pope. Helpful bibliographical works are Reginald H. Griffith, *Alexander Pope: A Bibliography* (2 vols., 1922–27), and Wolfgang Iwanski, *Alexander Pope: An Annotated Bibliography of Twentieth-Century Criticism, 1900–1979* (1981). Also helpful is Paul Baines, *The Complete Critical Guide to Alexander Pope* (2000). A good recent bibliography is included, along with a wide range of biographical, interpretive, and thematic essays, in *The Cambridge Companion to Alexander Pope*, edited by Pat Rogers (2007).

John Crowe Ransom

Ransom's books include *The World's Body* (1938), *The New Criticism* (1941), *Poems and Essays* (1955), and *Beating the Bushes* (1971). See also Ransom's *Selected Essays*, edited by Thomas Daniel Young and John Hindle (1984), and *Selected Letters*, edited by Young and George Core (1985). He also edited *The Kenyon Critics: Studies in Modern Literature from "The Kenyon Review"* (1951). Thomas Daniel Young has written an excellent biography: *Gentleman in a Dustcoat: A Biography of John Crowe Ransom* (1976). See also *John Crowe Ransom: Critical Essays and a Bibliography*, edited by Young (1968).

On the Agrarian movement and its relationship to the New Criticism, see John Lincoln Stewart, *The Burden of Time: The Fugitives and Agrarians* (1965); Alexander Karanikas, *Tillers of a Myth: Southern Agrarians as Social and Literary Critics* (1966); Mark Jancovich, *The Cultural Politics of the New Criticism* (1993); and Charlotte H. Beck, *The Fugitive Legacy: A Critical History* (2001). Detailed information about Ransom and the New Critics can also be found in Marian Janssen, *The Kenyon Review, 1939–1970: A Critical History* (1990). *The New Criticism and Contemporary Literary Theory: Connections and Continuities*, edited by William J. Spurlin and Michael Fischer (1995), examines the history of modern criticism from the New Critics to later poststructuralist theorists. For bibliography of primary and secondary sources, consult Thomas Daniel Young, *John Crowe Ransom: An Annotated Bibliography* (1982).

Adrienne Rich

Rich published nearly two dozen books of poetry. Her prose is collected in *On Lies, Secrets, and Silence: Selected Prose, 1966–1978* (1979), *Blood, Bread, and Poetry: Selected Prose, 1979–1985* (1986), *What Is Found There: Notebooks on Poetry and Politics* (1993), *Arts of the Possible: Essays and Conversations* (2001), *Poetry and Commitment: An Essay* (2007), and *A Human Eye: Essays on Art and Society* (2009). Her book on motherhood, *Of Woman Born: Motherhood as Experience and Institution*, was published in 1976. *Adrienne Rich's Poetry and Prose*, edited by Barbara Charlesworth Gelpi and Albert Gelpi (1993), offers selections

from the span of Rich's career, along with critical essays on her work. The best biographical sources are the entry on Rich in *Contemporary Authors*, New Revision Series 53 (ed. Jeff Chapman, John D. Jorgenson, and Pamela S. Dear, 1997), and Philip Hobsbaum, "Adrienne Rich," in *American Writers, Retrospective Supplement II: A Collection of Literary Biographies* (ed. Jay Parini, 2003).

Reading Adrienne Rich: Reviews and ReViews 1951–1981, edited by Jane Roberta Cooper (1984), is a collection of critical responses to Rich, while Jeannette Riley's *Understanding Adrienne Rich* (2016) is the best overview of Rich's entire career. A book-length treatment of Rich's feminist work is Liz Yorke's *Adrienne Rich: Passion, Politics and the Body* (1997). Alice Templeton's *The Dream and the Dialogue: Adrienne Rich's Feminist Poetics* (1994) focuses primarily on the poetry. Two broader studies that consider Rich's contribution to feminism are noteworthy: Krista Ratcliff's *Anglo-American Feminist Challenges to the Rhetorical Tradition: Virginia Woolf, Mary Daly, Adrienne Rich* (1996) and Sabine Sielke's *Fashioning the Female Subject: The Intertextual Networking of Dickinson, Moore, and Rich* (1997). *From Motherhood to Mothering: The Legacy of Adrienne Rich's "Of Woman Born,"* edited by Andrea O'Reilly (2004), collects feminist responses to and expansions on that work, while Cheri Colby Langdell's *Adrienne Rich: The Moment of Change* (2004) and Amy Sickels's *Adrienne Rich* (2005) offer two comprehensive looks at Rich's whole career. Essays that attend to Rich's feminist work include D. Lynn O'Brien Hallstein, "The Intriguing History and Silences of *Of Woman Born*: Re-reading Adrienne Rich Rhetorically to Better Understand the Contemporary Context," *Feminist Formations* 22.2 (2010); Judith Taylor, "Enduring Friendship: Women's Intimacies and the Erotics of Survival," *Frontiers* 34.1 (2013); and Candace Johnson, "Negotiating Maternal Identity: Adrienne Rich's Legacy for Inquiry into the Political Philosophical Dimensions of Pregnancy and Childbirth," *PhiloSOPHIA* 4 (2014). The obituaries for Rich in the *Chicago Tribune* and *New York Times* (both May 29, 2012) and the longer memorial essay by Alice Friman in *Southern Review* 49 (2013) are good places to start to get a sense of Rich's importance and influence. Langdell's book (cited above) provides a good bibliography of Rich's own writings and of critical responses to her work.

Andrew Ross

The first book by Ross, a prolific writer, is a psychoanalytic account of modern poetry, *The Failure of Modernism: Symptoms of American Poetry* (1986). Thereafter, he left literary studies behind, writing on the New York Intellectuals and their fraught relation to popular culture in *No Respect: Intellectuals and Popular Culture* (1989), which gained him wide attention. He also was an active

member for more than a decade (1986–2000) of the editorial collective of the journal *Social Text*, from which he drew several edited collections, the first of which was *Universal Abandon? The Politics of Postmodernism* (1988). His next group of books deals with science and technology; they include *Strange Weather: Culture, Science, and Technology in the Age of Limits* (1991), *The Chicago Gangster Theory of Life: Nature's Debt to Society* (1994), and the edited collections *Technoculture* (co-edited with Constance Penley, 1991) and *Science Wars* (1996). On other cultural trends, he collected his essays in *Real Love: In Pursuit of Cultural Justice* (1998) and, with Tricia Rose, co-edited *Microphone Fiends: Youth Music and Youth Culture* (1994). His writing shifted in the late 1990s, as he began conducting ethnographic research on how people work and live, in *The Celebration Chronicles: Life, Liberty, and the Pursuit of Property Value in Disney's New Town* (1999), an account of a year spent living in Celebration, Florida, the town built by the Disney Company; *No-Collar: The Humane Workplace and Its Hidden Costs* (2003), an account of his time observing high-tech companies in New York; *Low Pay, High Profile: The Global Push for Fair Labor* (2004), which includes "The Mental Labor Problem" (a shorter version was first published in *Social Text* 18.2 [2000]); *Fast Boat to China: Corporate Flight and the Consequences of Free Trade—Lessons from Shanghai* (2006), his report on the new economy in China; *Nice Work If You Can Get It: Life and Labor in Precarious Times* (2009), on the global exploitation of workers; *Bird on Fire: Lessons from the World's Least Sustainable City* (2011), reporting on Phoenix; and *Creditocracy: And the Case for Debt Refusal* (2014). He also edited or co-edited *No Sweat: Fashion, Free Trade, and the Rights of Garment Workers* (1997), *Anti-Americanism* (with Kristin Ross, 2005), *The University against Itself: The NYU Strike and the Future of the Academic Workplace* (with Monika Krause et al., 2008), and *The Gulf: High Culture/Hard Labor* (2015). For an account of his shift in method, see "Scholarly Reporter: An Interview with Andrew Ross," conducted by Jeffrey J. Williams, *Minnesota Review*, nos. 73–74 (2009–10).

Ross has been subject to a considerable amount of public attention, including profiles in the *New York Times Magazine*, *GQ*, and *New York* magazine. He was criticized by the philosopher Richard Rorty in "Intellectuals in Politics," *Dissent* (fall 1991); a response by Ross and reply by Rorty appear in *Dissent* (spring 1992). Mark McGurl, "Green Ideas Sleep Furiously: Andrew Ross on Ecocriticism," *Lingua Franca*, November–December 1994, recounts his work on ecology. On Ross's role in the "Science Wars" of the 1990s, see the various charges and defenses in *The Sokal Hoax: The Sham That Shook the Academy*, edited by the editors of *Lingua Franca* (2000). Susan Fraiman, "Andrew Ross, Cultural Studies, and Feminism,"

Minnesota Review, nos., 52–54 (2001), analyzes his relative lack of attention to gender. Melissa Gregg, "Justice and Accountability: Andrew Ross, Intellectual Labour and the New Academic Activism," in her *Cultural Studies' Affective Voices* (2006), surveys his later writing and its connection to activism; on mental labor, see also Gregg's *Work's Intimacy* (2011). Jeffrey J. Williams, "How to Be an Intellectual: The Cases of Richard Rorty and Andrew Ross," *Dissent* (winter 2011), reassesses an attack on Ross's cultural politics and surveys his career. Probably because of the range of his topics, there has been to date no general account of his work, nor a bibliography.

Gayle Rubin

Rubin is a writer of essays, not books. Her landmark essay "The Traffic in Women: Notes on the 'Political Economy' of Sex" first appeared in *Toward an Anthropology of Women* (ed. Rayna Reiter, 1975); it has been frequently anthologized. Rubin's early writings on sexuality include "Sexual Politics, the New Right, and the Sexual Fringe," in *The Age Taboo: Gay Male Sexuality, Power, and Consent* (ed. Daniel Tseng, 1981), and "The Leather Menace," *Body Politic* 82 (1981). "Thinking Sex: Notes for a Radical Theory of the Politics of Sexuality" was published in *Pleasure and Danger: Exploring Female Sexuality* (ed. Carole Vance, 1984), and has subsequently been reprinted in several anthologies. "Of Catamites and Kings: Reflections on Butch, Gender, and Boundaries" was published in *The Persistent Desire: A Femme-Butch Reader* (ed. Joan Nestle, 1992). "Misguided, Dangerous, and Wrong: An Analysis of Anti-pornography Politics" appeared initially in *Bad Girls and Dirty Pictures: The Challenge to Reclaim Feminism* (ed. Alison Assiter and Avedon Carol, 1993) and was reprinted in *Gender, Race, and Class in Media: A Text-Reader* (ed. Gail Dines and Jean M. Humez, 1995). Rubin's later works have focused on the subject of her 1994 dissertation on leather culture among gay men. They include "The Catacombs: A Temple of the Butthole," in *Leatherfolk: Radical Sex, People, Politics, and Practice* (ed. Mark Thompson, 1991; 2d ed., 2001); "Elegy for the Valley of the Kings: AIDS and the Leather Community in San Francisco," in *In Changing Times: Gay Men and Lesbians Encounter HIV/AIDS* (ed. Martin P. Levine, Peter M. Nardi, and John H. Gagnon, 1997); "The Miracle Mile: South of Market and Gay Male Leather in San Francisco, 1962–1996," in *Reclaiming San Francisco: History, Politics, Culture* (ed. James Brook, Chris Carlsson, and Nancy J. Peters, 1998); "Sites, Settlements, and Urban Sex: Archaeology and the Study of Gay Leathermen in San Francisco, 1955–1995," in *Archaeologies of Sexuality* (ed. Robert A. Schmidt and Barbara L. Voss, 2000); and "Studying Sexual Subcultures: The Ethnography of Gay Communities in Urban North America," in *Out in Theory: The Emergence of Lesbian and Gay An-*

thropology (ed. Ellen Lewin and William L. Leap, 2002). "A Little Humility," in *Gay Shame* (ed. David M. Halperin and Valerie Traub, 2009), represents a departure from her engagement with gay male culture, as she examines the invention of the silicone dildo, used by lesbian women, by a disabled straight man. Here Rubin discusses female pleasure and the need for humility on the part of queer thinkers and activists with respect to who may contribute to political and sexual progress. "'Anthropologists Are Talking' about Feminist Anthropology," *Ethnos* 72 (2007), an interview of important feminist anthropologists including Rubin, Rayna Rapp, and Louise Lamphere, sketches the genesis of "Traffic in Women" in the early days of feminist activism at the University of Michigan and offers biographical information, as does the collection *Gay & Lesbian Biography* (ed. Michael J. Tyrkus, 1997). Rubin's *Deviations: A Gayle Rubin Reader* (2011) is a collection of previously published canonical and lesser-known works. Its introduction, "Sex, Gender, Politics," which tackles more than forty years of material, makes for a particularly engrossing autobiographical and intellectual read.

Mariane Valverde's "Beyond Gender Dangers and Private Pleasures: Theory and Ethics in the Sex Debates," *Feminist Studies* 15 (1989), contrasts "Thinking Sex" with the work of Catharine MacKinnon, offering critiques of both anti- and pro-sex perspectives. Elizabeth Weed and Naomi Schor's anthology *Feminism Meets Queer Theory* (1997) collects a number of valuable essays published in the journal *differences* in 1994 that expand on the aims of "Thinking Sex" and articulate its relation to queer theory. These pieces include an interview of Rubin by Judith Butler, titled "Sexual Traffic," as well as Butler's essay "Against Proper Objects," Biddy Martin's "Extraordinary Homosexuals and the Fear of Being Ordinary," and Elizabeth Weed's "The More Things Change." Two recent reevaluations of Rubin's first essay—Laura Kipnis, "Response to 'The Traffic in Women'" and Elizabeth A. Povinelli, "Feminism as a Way of Life"—appeared in *Women's Studies Quarterly* 34 (2006). Brooke Meredith Beloso's "Sex, Work, and the Feminist Erasure of Class," *Signs* 38 (2012), rethinks both "Thinking Sex" and "The Traffic in Women" with respect to women, gender, class, capitalism, labor, and sex work.

Edward W. Said

Said's first book, *Joseph Conrad and the Fiction of Autobiography* (1966), an outgrowth of his doctoral dissertation, is a literary study of Conrad's life and fiction. The groundbreaking *Beginnings: Intention and Method* (1975) established Said as a central figure in the leftist poststructuralist literary theory then emerging. *Orientalism* (1978), his most famous book, extended Said's influence to other disciplines and established him as a major contempo-

rary public intellectual. See also his retrospective comments, "Orientalism Reconsidered," in *Literature, Politics and Theory* (ed. Francis Barker et al., 1986), and the afterword to the 1995 edition of *Orientalism*. Said next published three books more directly addressing politics and the Middle East: *Reaction and Counterrevolution in the Contemporary Arab World* (1978), a brief exposé; *The Question of Palestine* (1979), a history of the status of Palestine; and *Covering Islam: How the Media and the Experts Determine How We See the Rest of the World* (1981), an analysis of popular media representations. The latter two, directed at nonacademic audiences, form a trilogy with *Orientalism*. Returning to the field of contemporary theory, *The World, the Text, and the Critic* (1983) gathers many important essays and provides perhaps the best introduction to Said's views on criticism. *After the Last Sky: Palestinian Lives* (1986) offers his personal, poetic reflections on Palestine alongside photographs (by Jean Mohr). Said also co-edited (with Christopher Hitchens) and contributed three essays to the collection *Blaming the Victims: Spurious Scholarship and the Palestinian Question* (1988), which attacks stereotypes of Arabs (as terrorists, for instance).

Said performed as a concert pianist and wrote an occasional column on music for the *Nation*; *Musical Elaborations* (1991) gathers his writings in this area. *Culture and Imperialism* (1993) is a capstone of his investigation into literary and cultural representations of imperialism. *Representations of the Intellectual: The 1993 Reith Lectures* (1994), a succinct and accessible survey of the role of the intellectual, culminates in Said's call for an independent intellectual who "speaks truth to power." Several later collections gather his diverse commentary on politics in the Middle East: *The Politics of Dispossession: The Struggle for Palestinian Self-Determination, 1969–1994* (1994), *The Pen and the Sword: Conversations with David Barsamian* (1994), *Peace and Its Discontents: Essays on Palestine in the Middle East Peace Process* (1998), and *End of the Peace: Oslo and After* (2000). *The Edward Said Reader*, edited by Moustafa Bayoumi and Andrew Rubin (2000), presents a range of selections covering his career. *Reflections on Exile and Other Essays* (2001), a companion to *The World, the Text, and the Critic*, gathers his later critical essays, and *Humanism and Democratic Criticism* (2004) brings together his final considerations of humanism. *Power, Politics, and Culture: Interviews with Edward W. Said*, edited by Gauri Viswanathan (2001), collects twenty-nine informative interviews about his writing, politics, and life. *Out of Place: A Memoir* (1999) is an illuminating biographical account, covering Said's early life in Palestine and Cairo through his college years at Princeton University.

From early in his career, Said attracted a large body of criticism. A special issue of the theory journal *Diacritics* (6.3 [1976]) is devoted to *Beginnings*;

it also contains an illuminating interview with Said. In *Intellectuals in Power: A Genealogy of Critical Humanism* (1986), Paul A. Bové analyzes Said's relation to the humanistic tradition. Jim Merod, in *The Political Responsibility of the Critic* (1987), sees Said rather than more academically oriented figures like Fredric Jameson as an exemplary politically engaged critic. *The Predicament of Culture: Twentieth-Century Ethnography, Literature, and Art* (1988), by the anthropologist James Clifford, contains a noted critique of *Orientalism*. In *White Mythologies: Writing History and the West* (1990), Robert Young assigns Said a central role in establishing postcolonial studies. John McGowan, in *Postmodernism and Its Critics* (1991), explores the problem of freedom in Said's concept of exile. *Edward Said: A Critical Reader*, edited by Michael Sprinker (1992), contains an excellent selection of essays examining the range of Said's work, as well as an informative interview with Said.

The Marxist critic Aijaz Ahmad, in his *In Theory: Classes, Nations, Literatures* (1992), severely criticizes Said's relation to postcolonial studies, taking him to task for his focus on the humanistic Western tradition and for his liberal politics. That attack was followed by a special issue of *Public Culture* 12 (1993) debating Ahmad's and Said's merits. Bruce Robbins, in *Secular Vocations: Intellectuals, Professionalism, Culture* (1993), analyzes Said's ambivalent views toward professionalism. In "Jane Austen and Edward Said: Gender, Culture, and Imperialism," *Critical Inquiry* 21 (1995), Susan Fraiman criticizes Said's lack of attention to gender and to texts by women. Bill Ashcroft and Pal Ahlumwalia's *Edward Said: The Paradox of Identity* (1999) is a useful overview, as is Valerie Kennedy's *Edward Said: A Critical Introduction* (2000). *Edward Said and the Work of the Critic: Speaking Truth to Power*, edited by Paul A. Bové (2000), gathers a range of essays on Said. Timothy Brennan, "The Illusion of a Future: *Orientalism* as Traveling Theory," *Critical Inquiry* 26 (2000), provides a retrospective account of the influence of *Orientalism*, arguing that it critiques rather than follows Foucault. Abdirahman A. Hussein, *Edward Said: Criticism and Society* (2002), argues that *Beginnings* is more important than *Orientalism* in understanding Said's work.

Since his death, the stream of books on Said's work and influence has only grown. Among monographs, see Mustapha Marrouchi, *Edward Said at the Limits* (2004); Conor McCarthy, *The Cambridge Introduction to Edward Said* (2008); and a critical account from a former student, H. Aram Veesser, *Edward Said: The Charisma of Criticism* (2010). Testifying to its influence, several books have devoted themselves to attacking *Orientalism*; see Robert Irvin, *Dangerous Knowledge: Orientalism and Its Discontents* (2006). Many collections of essays assessing Said, in special issues of journals and in books, have appeared; see *Edward Said: Continuing the Conversation*, edited by Homi K.

Bhabha and W. J. T. Mitchell (2005); *Counterpoints: Edward Said's Legacy*, edited by May Telmisany and Stephanie Tara Schwartz (2010); *Edward Said: A Legacy of Emancipation and Representation*, edited by Adel Iskandar and Hakem Rustum (2010); and *Edward Said's Translocations: Essays in Secular Criticism*, edited by Tobias Döring and Mark Stein (2012). For a comprehensive bibliography, see "A Bibliographical Guide to Edward Said," by Yasmine Ramadan, *Alif* 25 (2005).

Ferdinand de Saussure

There are two existing English translations of the *Course in General Linguistics*, first edited by Charles Bally and Albert Sechehaye in 1916. The one that has become canonical is by Wade Baskin (1959). Roy Harris's more recent version (1983) solves certain problems but creates as many new ones. A critical edition comparing six different sources was published in French by Rudolf Engler (1967). Saussure's anagram project, edited by Jean Starobinski, has been translated as *Words upon Words* (1979). The leading Saussure scholars Simon Bouquet, Rudolf Engler, Carol Sanders, Matthew Pires, and Peter Figueroa have edited and translated a newly discovered work by Saussure on language, the sign, and performance, *Writings in General Linguistics* (2006). John E. Joseph's *Saussure* (2012) is the first exhaustive biography of the linguist.

Several introductions to Saussure's work are excellent: Jonathan Culler's *Ferdinand de Saussure* (rev. ed., 1986) and David Holdcroft's *Saussure: Signs, System, and Arbitrariness* (1991) are accessible and clear. For an excellent exposition of the theories and limits of Saussure and the Russian formalists, see Fredric Jameson, *The Prison-House of Language: A Critical Account of Structuralism and Russian Formalism* (1972). Roy Harris's *Reading Saussure: A Critical Commentary of the "Cours de linguistique generale"* (1987) and Françoise Gadet's *Saussure and Contemporary Culture* (1987; trans. 1989) offer more information about Saussure in the context of linguistics. The even more detailed *Re-Reading Saussure: The Dynamics of Signs in Social Life* (1997) by Paul J. Thibault updates the discussion of many of the key concepts. For a confusing but detailed history of linguistics leading up to Saussure, see E. F. K. Koerner's *Ferdinand de Saussure: Origin and Development of His Linguistic Thought in Western Studies of Language* (1973). Beata Stawarska's *Saussure's Philosophy of Language as Phenomenology: Undoing the Doctrine of the "Course in General Linguistics"* (2015) offers a phenomenological interpretation of Saussure's conception of language. For a more theoretical discussion of Saussure's place in the history of linguistics, see Hans Aarsleff's insightful but not chronological *From Locke to Saussure: Essays on the Study of Language and Intellectual History* (1982). A bibliography, *Bibliographia Saussureana*,

was compiled by E. F. K. Koerner (1972); more recent items can be found in the bibliographies of the Harris and Thibault volumes cited above. *Writings in General Linguistics* includes a comprehensive bibliography on Saussure from 1970 to 2004. Carol Sanders has also put together a useful collection of scholarly writings and an equally impressive bibliography on Saussure in *The Cambridge Companion to Saussure* (2004). Joseph's biography (see above) also has an updated bibliography.

Friedrich von Schiller

German editions of Schiller's writings include the *Säkular-Ausgabe*, edited by Eduard von der Hellen (16 vols., 1904–05), and the *Horen Ausgabe*, edited by C. Schüddekopf and C. Hofer (22 vols., 1910–26), which includes many of his letters. German scholars have noted that many English translations of Schiller's texts are unreliable. Coleridge's translation of *Wallenstein* (1800) is important. The translation and edition of *On the Aesthetic Education of Man* by E. M. Wilkinson and L. A. Willoughby (1967) is outstanding. A single-volume edition is *Friedrich Schiller: An Anthology for Our Times* (trans. Jane Bannard Greene et al., 1959). For a selection of Schiller's writings on criticism and aesthetics, see *Essays*, edited by Walter Hinderer and Daniel O. Dahlstrom (1993). *Schiller's Literary Prose Works: New Translations and Critical Essays*, edited by Jeffrey L. High (2008), includes seven tales and novel fragments.

A good biographical point of departure is William Witte, *Schiller* (1949). See also John Simon, *Friedrich Schiller* (1981), and T. J. Reed, *Schiller* (1991). For critical analysis, consult S. S. Kerry, *Schiller's Writings on Aesthetics* (1961); Charles E. Passage, *Friedrich Schiller* (1975); Juliet Sychrava, *Schiller to Derrida: Idealism in Aesthetics* (1989); and Lesley Sharpe, *Friedrich Schiller: Drama, Thought, and Politics* (1991), a well-contextualized treatment of Schiller's work as a dramatist, poet, and literary theorist. Patrick T. Murray, *The Development of German Aesthetic Theory from Kant to Schiller: A Philosophical Commentary on Schiller's "Aesthetic Education of Man," 1795* (1994), places Schiller's aesthetics in their literary and national contexts. See also Linda Marie Brooks, *The Menace of the Sublime to the Individual Self: Kant, Schiller, Coleridge, and the Disintegration of Romantic Identity* (1996), and R. D. Miller, *Schiller and the Ideal of Freedom* (1970). For a study of Schiller's writings on aesthetics and their impact on Coleridge, see Michael John Kooy, *Coleridge, Schiller, and Aesthetic Education* (2002). *Who Is This Schiller Now? Essays on His Reception and Significance*, edited by Jeffrey L. High, Nicholas Martin, and Norbert Oellers (2011), is a wide-ranging collection of essays, some in German but most in English; two (in English) examine Schiller's aesthetic views. D. C. Schindler, *The Perfection of*

Freedom: Schiller, Schelling, and Hegel between the Ancients and the Moderns (2012), interprets freedom in terms of aesthetic form (Schiller), organic form (Schelling), and social form (Hegel).

For a concise study of the critical writings, see René Wellek, "Kant and Schiller," in *A History of Modern Criticism, 1750–1950*, vol. 1, *The Later Eighteenth Century* (1955). A more detailed, challenging assessment can be found in Anthony Savile, *Aesthetic Reconstructions: The Seminal Writings of Lessing, Kant, and Schiller* (1987). T. J. Reed, *The Classical Centre: Goethe and Weimar, 1775–1832* (1980), is stimulating on the relationship between Goethe and Schiller. For bibliography, see Wolfgang Vulpus, *Schiller-Bibliographie, 1893–1958* (1959) and *Schiller-Bibliographie, 1959–63* (1967); and R. Pick, "Schiller in England, 1787–1960: A Bibliography," *Publications of the English Goethe Society* 30 (1961). *The Cambridge Companion to German Idealism*, edited by Karl Ameriks (2000), provides a more recent bibliography of primary and secondary sources in both English and German, as well as essays on Kant, Schiller, Hegel, Marx, and other writers and philosophers in this tradition of theory and criticism.

Friedrich Schleiermacher

Schleiermacher's collected works, *Sämtliche Werke* (1835–64), mainly lecture notes, were published after his death in thirty-one volumes, including theological writings, sermons, and philosophical and miscellaneous texts, plus four volumes of letters (1858–63). Starting in the early 1980s his collected writings and correspondence began to appear in a multivolume German edition, *Kritische Gesamtausgabe*, with forty-eight volumes reaching print in the first three and a half decades. His manuscripts on interpretation theory were published posthumously and first translated into English by James Duke and Jack Forstman as *Hermeneutics: The Handwritten Manuscripts* (1977), based on the German edition by Heinz Kimmerle (1959; 2d ed., 1974), and then more fully in a new translation, *Hermeneutics and Criticism and Other Writings*, edited and translated by Andrew Bowie (1998). Several dozen texts by Schleiermacher covering an array of topics aside from hermeneutics are available in English translation.

Biographical information is available in *The Life of Schleiermacher as Unfolded in His Autobiography and Letters* (2 vols., 1860), translated by Frederica Rowan; Wilhelm Dilthey's monumental but unfinished *Das Leben Schleiermachers* (1870); Friedrich Wilhelm Kantzenbach's *Friedrich Daniel Ernst Schleiermacher in Selbstzeugnissen und Bilddokumenten* (1967); and Martin Redeker's spiritually sympathetic intellectual biography, *Schleiermacher: Life and Thought* (1968; trans. 1973).

Informative texts about Schleiermacher's work include Richard B. Brandt's *Philosophy of Schleiermacher: The Development of His Theory of*

Scientific and Religious Knowledge (1941); Richard E. Palmer's valuable introduction, *Hermeneutics: Interpretation Theory in Schleiermacher, Dilthey, Heidegger, and Gadamer* (1969); Manfred Frank's landmark reassessment of Schleiermacher's hermeneutics in *Das individuelle Allgemeine: Textstrukturierung und -interpretation nach Schleiermacher* (1977); Tilottama Rajan's contemporary contextualizing in *The Supplement of Reading: Figures of Understanding in Romantic Theory and Practice* (1990); Julie Ellison's innovative feminist exegesis and critique of Schleiermacher's hermeneutics in *Delicate Subjects: Romanticism, Gender, and the Ethics of Understanding* (1990); the cogent introduction in Jean Grondin's *Introduction to Philosophical Hermeneutics* (1994); Andrew Bowie's chapter factoring in the groundbreaking recent work of Manfred Frank in *From Romanticism to Critical Theory: The Philosophy of German Literary Theory* (1997); and Richard Crouter's engaging and historically nuanced essays in *Friedrich Schleiermacher: Between Enlightenment and Romanticism* (2005). An updated bibliography as well as a collection of scholarly studies on Schleiermacher's contributions to philosophy, Plato scholarship, and theology appears in *The Cambridge Companion to Friedrich Schleiermacher*, edited by Jacqueline Mariña (2005). Significant critical essays on the wide range of contemporary Schleiermacher scholarship, including his hermeneutical theory, can be found in *The State of Schleiermacher Scholarship Today: Selected Essays*, edited by Edwina G. Lawler, Jeffrey Kinlaw, and Ruth Richardson (2006). Terrence Tice's *Schleiermacher Bibliography* (1966) contains almost 2,000 items with annotations, and another 1,250 were added to his *Schleiermacher Bibliography (1784–1984): Updating and Commentary* (1985).

Eve Kosofsky Sedgwick

Sedgwick's books of criticism and theory are *The Coherence of Gothic Conventions* (1980), *Between Men: English Literature and Male Homosocial Desire* (1985), *Epistemology of the Closet* (1990), *Tendencies* (1993), *A Dialogue on Love* (1999), and *Touching Feeling: Affect, Pedagogy, Performativity* (2003). She also published a volume of poetry, *Fat Art, Thin Art* (1994). She edited *Performativity and Performances* (1994), with Andrew Parker; *Shame and Its Sisters: A Silvan Tompkins Reader* (1995); *Gary in Your Pocket: Stories and Notebooks* by Gary Fisher (1996); and *Novel Gazing: Queer Readings in Fiction* (1997), the first collection of queer criticism of the novel. In *The Weather in Proust* (2011), Jonathan Goldberg collected a series of essays written by Sedgwick in the last decade of her life as she worked toward a book on Proust.

One of the earliest critiques of *Between Men* was David Van Leer's "Beast of the Closet: Homosociality and the Pathology of Manhood," *Critical Inquiry* 15 (1989). A number of interviews with Sedgwick

appeared in print, including Sarah Chinn, Mario DiGangi, and Patrick Horrigan, "A Talk with Eve Kosofsky Sedgwick," *PreText: A Journal of Rhetoric and Theory* 13 (1992), and Jeffrey Williams, "Sedgwick Unplugged (An Interview with Eve Kosofsky Sedgwick)," *Minnesota Review* 40, n.s., (1993). After her death, several journals published special issues in her honor, including *PMLA* 125.2 (2010); *Criticism: A Quarterly for Literature and the Arts* 52.2 (2010), an issue edited by Erin Murphy and Keith Vincent; and *GLQ: A Journal of Lesbian and Gay Studies* 17.4 (2011), edited by Ann Cvetkovich and Annamarie Jagose. Robyn Wiegman's "Eve's Triangles, or Queer Studies beside Itself," *differences* 26.1 (2015), provides a significant retrospective that explores the power of incoherence and contradiction in Sedgwick's model for queer reading. *Regarding Sedgwick: Essays on Queer Culture and Critical Theory*, edited by Stephen M. Barber and David L. Clark (2002), collects essays about Sedgwick by prominent literary theorists; it includes a bibliography of her works. See also the introductory guide by Jason Edwards, *Eve Kosofsky Sedgwick* (2009), which offers an extensive section of further reading on Sedgwick.

Percy Bysshe Shelley

For Shelley's prose, primary sources include *The Prose Works*, edited by E. B. Murray (1 vol. to date, 1993–), and *The Letters*, edited by Frederick L. Jones (2 vols., 1964). For a single-volume collection that includes critical essays, see *Shelley's Poetry and Prose: Authoritative Texts, Criticism*, edited by Donald H. Reiman and Sharon B. Powers (1977; 2d ed., 2002). Other resources include *Shelley and His Circle, 1773–1822*, edited by Kenneth Neill Cameron (10 vols., 1961–2002), which presents the manuscripts by Shelley, his family, friends, and literary acquaintances held in the New York Public Library; it contains important critical and contextual commentary. The standard biographical work has long been Newman Ivey White, *Shelley* (2 vols., 1940), but a recent contender to replace it is James Bieri, *Percy Bysshe Shelley: A Biography* (2008). Kenneth Neill Cameron, in *The Young Shelley* (1950) and *Shelley: The Golden Years* (1974), is informative on the poet's radical political views. Richard Holmes, *Shelley: The Pursuit* (1974), gives a good sense of the person behind the poetry and prose. See also *The Oxford Handbook of Percy Bysshe Shelley*, edited by Michael O'Neill and Anthony Howe (2013), which provides detailed coverage of the life, work, reputation, and influence. On Shelley's relationship to another great revolutionary poet, see Ian Gilmour, *The Making of the Poets: Byron and Shelley in Their Time* (2002).

On Shelley's literary theory, consult Fanny Delisle, *A Study of Shelley's "A Defence of Poetry": A Textual and Critical Evaluation* (2 vols., 1974). Among the many studies of Shelley's poetic theory and practice are Harold Bloom, *Shelley's Myth-*

making (1959); Earl Wasserman, *Shelley: A Critical Reading* (1971); William Keach, *Shelley's Style* (1984), which deals well with Shelley's complex and contradictory attitudes toward language; and Jerrold E. Hogle, *Shelley's Process: Radical Transference and the Development of His Major Works* (1988). On the relationships between literature and politics in Shelley's life and works, see Timothy Clark, *Embodying Revolution: The Figure of the Poet in Shelley* (1989); Michael O'Neill, *The Human Mind's Imaginings: Conflict and Achievement in Shelley's Poetry* (1989); David Duff, *Romance and Revolution: Shelley and the Politics of a Genre* (1994); and Timothy Morton, *Shelley and the Revolution in Taste: The Body and the Natural World* (1994). Stuart Peterfreund, *Shelley among Others: The Play of the Intertext and the Idea of Language* (2002), explicates Shelley's philosophy of language; and Cian Duffy, *Shelley and the Revolutionary Sublime* (2005), examines Shelley's engagement with British and French discourse on the sublime in an era of radical political change. Among recent studies is Ross Wilson, *Shelley and the Apprehension of Life* (2013), which explores Shelley's fundamental beliefs about life and the significance of poetry.

Helpful on trends in Shelley scholarship are *Shelley: The Critical Heritage*, edited by James E. Barcus (1975); *Deconstruction and Criticism*, by Harold Bloom et al. (1979), which offers a series of exemplary deconstructive readings of "The Triumph of Life"; *Essays on Shelley*, edited by Miriam Allott (1982); *The New Shelley: Later Twentieth-Century Views*, edited by G. Kim Blank (1991); and *Shelley: Poet and Legislator of the World*, edited by Betty T. Bennett and Stuart Curran (1996). For bibliography, look to Clement Dunbar, *Bibliography of Shelley Studies: 1823–1950* (1976) and *Shelley Studies, 1950–1984: An Annotated Bibliography* (1986). *The Cambridge Companion to Shelley*, edited by Timothy Morton (2006), provides a good bibliography on philosophy and politics, poems and poetics, and other important topics in Shelley's life and work.

Sir Philip Sidney

The complete works of Sir Philip Sidney are available in *Complete Works*, edited by Albert Feuillerat (4 vols., 1922–26). The standard edition of *An Apology for Poetry* with copious endnotes may be found in *The Miscellaneous Prose of Sir Philip Sidney*, edited by Katherine Duncan-Jones and Jan Van Dorsten (1973). There are several other editions of the text, including Gavin Alexander's newer edition in *Sidney's "The Defence of Poesy" and Selected Renaissance Literary Criticism* (2004), from which our text is taken. For a seventeenth-century biography, consult *Sir Fulke Greville's Life of Sir Philip Sidney* (1652), available in *The Prose of Fulke Greville*, edited by Mark Caldwell (1987). For a recent biography, see Katherine Duncan-Jones, *Sir Philip Sidney: Courtier Poet* (1991).

Forrest G. Robinson, *The Shape of Things Known: Sidney's Apology in Its Philosophical Tradition* (1972), is an important book-length study of Sidney's famous essay. For an introduction to Sidney, see Katherine Duncan-Jones's excellent contribution to the Oxford Authors series, *Sir Philip Sidney* (1989). *The Ashgate Research Companion to the Sidneys, 1500–1700*, edited by Margaret P. Hannay, Michael G. Brennan, and Mary Ellen Lamb (2015), assesses the current state of scholarship on Sidney family members and their impact as historical and literary figures between 1500 and 1700. Richard Hillyer's *Sir Philip Sidney, Cultural Icon* (2010) is a valuable study of Sidney's reputation from his day to the present. Critical interest in Sidney's "self-fashioning," his creation of images of himself in both his poetry and criticism, is evidenced by such books as Alan Hager's *Dazzling Images: The Masks of Sir Philip Sidney* (1991) and Edward Berry's *Making of Sir Philip Sidney* (1998). Peter C. Herman's *Squitter-wits and Muse-haters: Sidney, Spenser, Milton, and Renaissance Antipoeitic Sentiments* (1996) examines the sixteenth- and seventeenth-century debates about poetry with which Sidney's *Defence* engages. Two works that examine members of the Sidney family and their role in Renaissance culture and politics are Elizabeth Mazzola, *Favorite Sons: The Politics and Poetics of the Sidney Family* (2003), and Michael Brennan, *The Sidneys of Penshurst and the Monarchy, 1500–1700* (2006). For a full-length study of Sidney's aesthetic theory in *The Defence of Poesy*, see R. W. Maslen's introduction to his edition of *An Apology for Poetry (or The Defence of Poesy)* (2002) and Michael Mack, *Sidney's Poetics: Imitating Creation* (2005). Gavin Alexander's *Writing After Sidney: The Literary Response to Sir Philip Sidney, 1586–1640* (2006) examines Sidney's literary reputation in the years immediately following his death. Kent R. Lehnhoff, in "Profeminism in Philip Sidney's *Apologie for Poetrie*," *Studies in English Literature* 48 (2008), argues that Sidney's essay is less a defense of the theater against Stephen Gosson's attack than a critique of his misogyny. In "Sir Philip Sidney's Defense of Prophesying," *Studies in English Literature* 50 (2010), Roger E. Moore argues that Sidney's references to the relationship between poetry and prophecy in the *Defence* point to Sidney's engagement with controversies about inspiration, suggesting that he sees prophecy as a form of moral instruction. William Junker's "'Wonderfully Ravished': Platonic Erotics and the Heroic Genre in Sir Philip Sidney's *Defence of Poesy*," *Ben Jonson Journal* 18 (2011), explores the relationship between the erotic and the ethical in Sidney's *Defence*. Corey McEleney and Jacqueline Wernimont, in "Re-Reading for Forms in Sir Philip Sidney's *Defence of Poesy*," in *New Formalisms and Literary Theory* (ed. Verena Theile and Linda Tredennick, 2013), focus less on what Sidney says in his *Defence* than on how he says it, arguing that the form of the *Defence* has

been undertheorized. In "Sidney's Greek Poetics," *Studies in Philology* 112 (2015), Micha Lazarus argues that Sidney's knowledge of Aristotle's *Poetics* was deeper than previously supposed. Robert E. Stillman, *Philip Sidney and the Poetics of Renaissance Cosmopolitanism* (2008), argues for placing Sidney's poetics and his defense of fiction in a broader cultural context that includes Continental debates about religion and politics. For a bibliography, consult *Sir Philip Sidney: An Annotated Bibliography of Texts and Criticism (1554–1984)*, edited by Donald V. Stump (1994). Stump updated the bibliography online in the *Sir Philip Sidney World Bibliography* (2001–09).

Susan Sontag

A Susan Sontag Reader (1982), though dated, remains a good point of departure. Arranged chronologically, it includes short stories and selections from two novels, *The Benefactor* (1963) and *Death Kit* (1967); essays from *Against Interpretation: And Other Essays* (1966), *Styles of Radical Will* (1969), and *Under the Sign of Saturn* (1980); and an excerpt from *On Photography* (1977). For a fuller selection of Sontag's critical writings, see *Susan Sontag: Essays of the 1960s and 70s*, edited by David Rieff (2013), which includes the full texts of *Against Interpretation*, *Styles of Radical Will*, *On Photography*, *Illness as Metaphor*, and six previously uncollected essays. The selections are annotated, and there is a detailed chronology. For interviews, see *Conversations with Susan Sontag*, edited by Leland Poague (1995). Also important is Jonathan Cott, *Susan Sontag: The Complete Rolling Stone Interview* (2013); in 1978, he had interviewed Sontag first in Paris and later in New York, but only a third of their conversation was published (for that version, see Poague's volume). This book gives the complete transcript, along with Cott's preface and recollections.

Biographies have been written by Jerome Boyd Maunsell, *Susan Sontag* (2014), in the Reaktion Critical Lives series, and by Daniel Schreiber, *Susan Sontag: A Biography* (2007; trans. 2014). An enlightening film, which includes interviews with Sontag, her sister, her son, and others, is the HBO documentary *Regarding Susan Sontag* (2014), produced and directed by Nancy Kates. Also valuable is Alice Kaplan, *Dreaming in French: The Paris Years of Jacqueline Bouvier Kennedy, Susan Sontag, and Angela Davis* (2012). Sontag's son, David Rieff, has published a perceptive, poignant recollection, *Swimming in a Sea of Death: A Son's Memoir* (2008), which focuses on her final months. He also edited and published excerpts from Sontag's journals: *Reborn: Journals and Notebooks, 1947–1963* (2008) and *As Consciousness Is Harnessed to Flesh: Journals and Notebooks, 1964–1980* (2012).

Carl Rollyson and Lisa Paddock, in *Susan Sontag: The Making of an Icon* (2000; rev. ed., 2016), examine Sontag's life and work in the context of

celebrity culture and the mass media. See also Sohnya Sayres, *Susan Sontag: The Elegiac Modernist* (1990), and Liam Kennedy, *Susan Sontag: Mind as Passion* (1995). In *Reading Susan Sontag: A Critical Introduction to Her Work* (2001), Carl Rollyson devotes a chapter to each of Sontag's books and includes a glossary of key terms, references, and allusions. Philip Lopate's *Notes on Sontag* (2009) is shrewd and sympathetic, but also pointed and skeptical in places about Sontag as a personality and as a writer.

The Scandal of Susan Sontag, edited by Barbara Ching and Jennifer A. Wagner-Lawlor (2009), includes essays on Sontag's fiction and nonfiction, reputation, and status as a cultural icon. Carl Rollyson has written *Understanding Susan Sontag* (2016), an introduction to her essays, novels, plays, films, diaries, and uncollected work. Mena Mitran, in *In the Archive of Longing: Susan Sontag's Critical Modernism* (2016), is insightful about Sontag's intellectual debts to the Frankfurt School of critical theory, to deconstruction, and in particular to Walter Benjamin.

For bibliography, see Sherry Lee Linkon, "Susan Sontag," in *Jewish American Women Writers: A Bio-Bibliographical and Critical Sourcebook* (ed. Ann R. Shapiro et al., 1994), and the 672-page *Susan Sontag: An Annotated Bibliography, 1948–1992*, compiled by Leland Poague and Kathy A. Parsons (2000).

Baruch Spinoza

The standard edition of Spinoza's work in Latin is *Spinoza Opera*, edited by Carl Gebhardt (4 vols., 1925; rpt. 1972 [supplementary vol. 5, 1987]). The best English edition is *Complete Works*, edited by Michael L. Morgan (2002). The most exhaustive biography is Steven Nadler's *Spinoza: A Life* (1999), but the newcomer to Spinoza should start with Richard H. Popkin's *Spinoza* (2004), a superb introduction to his life and work.

The secondary literature is vast; we emphasize here works relevant to *Tractatus Theologico-Politicus* (*Theological-Political Treatise*) and to the engagement with Spinoza's work by literary theorists. Gilles Deleuze's two books specifically on Spinoza are *Expressionism in Philosophy: Spinoza* (1968; trans. 1990) and *Spinoza: Practical Philosophy* (1981; trans. 1988). The best introductory volume on Spinoza for literary theorists is Moira Gatens and Genevieve Lloyd's *Collective Imaginings: Spinoza Past and Present* (1999). It can be supplemented by Rebecca Goldstein's idiosyncratic but engaging *Betraying Spinoza: The Renegade Jew Who Gave Us Modernity* (2006) and Michael Della Rocca's *Spinoza* (2008). *The New Spinoza*, edited by Warren Montag and Ted Stolze (1997), includes essays by Louis Althusser, Deleuze, and Antonio Negri among others. Other useful collections of essays are *Interpreting Spinoza: Critical Essays*, edited by Charlie Hueneemann (2008); *Spinoza's "Theological-Political*

Treatise": A Critical Guide, edited by Yitzhak Y. Melamed and Michael A. Rosenthal (2010); *Spinoza Now*, edited by Dimitris Vardoulakis (2011); *Spinoza beyond Philosophy*, edited by Beth Lord (2012); *Spinoza: Basic Concepts*, edited by Andre Santos Campos (2015); and *The Oxford Handbook of Spinoza* (2017), edited by Michael Della Rocca. Monographs devoted to the *Tractatus Theologico-Politicus* include J. Samuel Preus's *Spinoza and the Irrelevance of Biblical Authority* (2001), Steven Nadler's *A Book Forged in Hell: Spinoza's Scandalous Treatise and the Birth of the Secular Age* (2011), and Susan James's *Spinoza on Philosophy, Religion, and Politics: The Theological-Political Treatise* (2012). More general treatments of interest include Jonathan I. Israel's very influential *Radical Enlightenment: Philosophy and the Making of Modernity, 1650–1750* (2001), which places Spinoza at the center of radical thought in the period; Antonio Damasio's *Looking for Spinoza: Joy, Sorrow, and the Feeling Brain* (2003), which connects Spinoza to contemporary neuroscience; Antonio Negri's *Subversive Spinoza: (Un)contemporary Variations* (2004), which links Spinoza's democratic politics to his metaphysics; and Charles Taylor's *A Secular Age* (2007), which discusses Spinoza in relation to secularization. The Melamed and Rosenthal volume has a good bibliography of secondary literature relevant to the *Tractatus*, while *Spinoza: Basic Concepts* has an excellent bibliography both of the primary texts and of secondary works.

Gayatri Chakravorty Spivak

Spivak's first book was *Myself Must I Remake: The Life and Poetry of W. B. Yeats* (1974). Her later theoretical works include *In Other Worlds: Essays in Cultural Politics* (1987), *Outside in the Teaching Machine* (1993), *A Critique of Postcolonial Reason: Toward a History of the Vanishing Present* (1999), *Death of a Discipline* (2003), *Other Asias* (2008), *Nationalism and the Imagination* (2010), *Harlem* (2012), *An Aesthetic Education in the Era of Globalization* (2012), and, with Judith Butler, *Who Sings the Nation-State? Language, Politics, Belonging* (2007). *The Post-Colonial Critic: Interviews, Strategies, Dialogues*, edited by Sarah Harasym (1990), and *Conversations with Gayatri Chakravorty Spivak*, edited by Swapan Chakravorty, Suzana Milevska, and Tani E. Barlow (2006), both provide useful collections of interviews with Spivak. *The Spivak Reader*, edited by Donna Landry and Gerald MacLean (1995), is a one-volume collection of some of Spivak's most influential essays. Spivak is the translator (with substantial introductions) of Jacques Derrida's *Of Grammatology* (1967, trans. 1976; 40th anniversary ed., trans. 2016), and of several novels and short story collections by the contemporary Bengali writer Mahasweta Devi. She is the co-editor, with Ranajit Guha, of *Selected Subaltern Studies* (1988). The various published interviews with Spivak are a good source of biographical information. *An Aesthetic Education*

in the Era of Globalization also includes autobiographical reflections.

The best introduction to Spivak's work is Stephen Morton's *Gayatri Spivak: Ethics, Subalternity and the Critique of Postcolonial Reason* (2007), while Mark Sanders's *Gayatri Spivak: Live Theory* (2006) and Sangeeta Ray's *Gayatri Chakravorty Spivak: In Other Words* (2009) provide more intricately theoretical engagements with her work. Three reviews of *A Critique of Postcolonial Reason* are worth consulting: Terry Eagleton's "In the Gaudy Supermarket," *London Review of Books* May 13, 1999; Mieke Bal's "Three Ways of Misreading," *Diacritics* 30 (2000); and Isabelle V. Barker's (untitled) in *Signs* 27 (2001). A forum on Spivak's work in *PMLA* 123 (2008) provides an excellent overview of her widespread influence. For responses specific to *A Critique of Postcolonial Reason*, see *Can the Subaltern Speak? Reflections on the History of an Idea*, edited by Rosalind C. Morris (2010), and *Postcolonial Reason and Its Critique: Deliberations on Gayatri Chakravorty Spivak's Thoughts*, edited by Purushottama Bilimoria and Dina Al-Kassim (2014). Both volumes include responses by Spivak, and Morris's invaluable prints the two separate versions of her essay "Can the Subaltern Speak?" Ola Abdalkafar's *Gayatri Spivak: Deconstruction and the Ethics of Postcolonial Literary Interpretation* (2015) offers a more general reflection on the ways that Spivak deploys poststructuralist theory in service of her critique of the West. Morris's volume has a superb bibliography of Spivak's own work and a useful bibliography of secondary sources.

Germaine Necker de Staël

In addition to the literary and cultural works mentioned in the headnote, Mme de Staël's writings include many stories and plays, a tribute to Rousseau (*Letters on Rousseau*, 1788), *Reflections on the Trial of the Queen* (1793), *Reflections on Peace* (1794), *The Influence of the Passions* (1796), *Reflections on Suicide* (1813), and "The Spirit of Translation" (1816). Posthumously published were *Considerations on the Principal Events of the French Revolution* (1818), *Ten Years of Exile* (1820), the *Complete Works* (1820), and many volumes of correspondence, some of which is still being discovered. Mme de Staël's work is not all easy to obtain in English translation. A wide range of selections can be found in *Madame de Staël on Politics, Literature, and National Character*, edited and translated by Monroe Berger (1964), and in *An Extraordinary Woman*, edited and translated by Vivian Folkenflik (1987). The biography by J. Christopher Herold, *Mistress to an Age* (1958; rpt. 2002), is, while somewhat dated, informative and well written. Maria Fairweather's *Madame de Staël* (2005) and Anjelica Gooden's *Madame de Staël: The Dangerous Exile* (2008) are equally well-researched and more recent biographies.

In France there is a very active de Staël industry, which publishes a journal, *Cahiers staëliens* (Staël Notebooks), and holds many conferences. The most important figure in this enterprise is Simone Ballayé, whose work has not been much translated into English, but who has contributed an essay to the excellent anthology *Germaine de Staël: Crossing the Borders*, edited by Madelyn Gutwirth, Avriel Goldberger, and Karyna Szmurlo (1991). Madelyn Gutwirth's own *Madame de Staël, Novelist: The Emergence of the Artist as Woman* (1978) is also good, especially in its account of the shift in de Staël studies opened up by feminist criticism. Two fine general studies of Mme de Staël's life and works are Charlotte Hogsett, *The Literary Existence of Germaine de Staël* (1987), and Gretchen Rous Besser, *Germaine de Staël Revisited* (1994). For an analysis of the place of *On Germany* in the rise of Romanticism, see John Claiborne Isbell, *The Birth of European Romanticism: Truth and Propaganda in Staël's "De l'Allemagne," 1810–1813* (1994). And for a study of the complexity of gender roles and models in Rousseau and de Staël, see Lori Jo Marso's excellent *(Un)Manly Citizens* (1999). There is an extensive annotated bibliography of criticism on de Staël in French by Pierre H. Dubé, *Bibliographie de la Critique sur Madame de Staël, 1789–1994* (1998). Goodden's *Madame de Staël* also contains a wide-ranging selected bibliography.

Leo Strauss

Leo Strauss published three books in German and twelve in English, and more than 100 essays and reviews. For his contributions to political thought, especially significant are *Natural Right and History* (1953) and *What Is Political Philosophy? and Other Studies* (1959), which in its first three essays outlines Strauss's conception of and approach to political philosophy, history, and classical philosophy. See also his *The Political Philosophy of Hobbes, Its Basis and Its Genesis* (1936) and *Thoughts on Machiavelli* (1958; rpt. 1978). Strauss wrote extensively on writers of the ancient world, too. *The City and Man* (1964) includes essays on Aristotle's *Politics*, Plato's *Republic*, and Thucydides' *History of the Peloponnesian War*. Also noteworthy is *Studies in Platonic Political Philosophy* (1983), with essays on Plato, Thucydides, and Xenophon, supplemented by essays on Maimonides, Machiavelli, and Nietzsche.

Persecution and the Art of Writing (1952; rpt. 1988) features the title essay and other studies. See also *Leo Strauss: The Early Writings (1921–1932)*, translated and edited by Michael Zank (2002), and *Reorientation: Leo Strauss in the 1930s*, edited by Martin D. Yaffe and Richard S. Ruderman (2014), which contains scholarly commentaries on Strauss and seven texts by him, including "Exoteric Teaching" (1939) and "Lecture Notes for 'Persecution and the Art of Writing'" (1939). *On Tyranny*, first published in 1948, revised and expanded in 1963,

was further expanded in 1991, in a version (edited by Victor Gourevitch and Michael S. Roth) that includes an exchange between Strauss and the Hegelian philosopher Alexandre Kojève as well as their letters to each other. *The Rebirth of Classical Political Rationalism: An Introduction to the Thought of Leo Strauss: Essays and Lectures*, edited by Thomas L. Pangle (1989), includes an introduction, five of Strauss's previously unpublished lectures, and five published writings that display his major interests.

Very important for the study of work by Strauss and other scholars influenced by him is his *History of Political Philosophy*, first published in 1963, revised in 1972, and now in a third edition (1987), edited by Strauss and Joseph Cropsey. The Leo Strauss Center at the University of Chicago is indispensable, with audio, video, and transcripts of materials by and about Strauss. It offers, for example, a near-complete audio recording and transcript of a course (1971–72) on Nietzsche's *Beyond Good and Evil* that Strauss taught at St. John's College (Annapolis, Maryland).

On Strauss as a teacher, see Allan Bloom, "Leo Strauss: September 20, 1899–October 18, 1973," in his *Giants and Dwarfs: Essays, 1960–1990* (1990), and Harry V. Jaffa, *Crisis of the Strauss Divided: Essays on Leo Strauss and Straussianism, East and West* (2012).

For Strauss's life, work, and legacy, see *The Cambridge Companion to Leo Strauss*, edited by Steven B. Smith (2009). Also helpful is Thomas L. Pangle, *Leo Strauss: An Introduction to His Thought and Intellectual Legacy* (2006), which is very good on Strauss's opposition to "liberal relativism," and Steven B. Smith, *Reading Leo Strauss: Politics, Philosophy, Judaism* (2006), which examines Jewish influences and topics and provides a cogent treatment of Strauss's view of liberal democracy. Daniel Tanguay, *Leo Strauss: An Intellectual Biography* (2003; trans. 2007), is illuminating on the first phase of Strauss's career, 1920–38 (before his immigration to the United States), medieval Jewish and Islamic philosophy, the art of esoteric writing, and Strauss's critique of modernity.

On exoteric/esoteric writing and interpretation, see Laurence Lampert, *The Enduring Importance of Leo Strauss* (2013), and Arthur M. Melzer, *Philosophy between the Lines: The Lost History of Esoteric Writing* (2014), a deeply researched exploration of Strauss and the tradition of philosophic esotericism.

Leo Strauss, the Straussians, and the Study of the American Regime, edited by Kenneth L. Deutsch and John A. Murley (1999), containing essays by both supporters and detractors, is illuminating on the implications of Strauss's thought for the interpretation of the U.S. founders and the Revolutionary period and for the study of contemporary politics. Anne Norton, in *Leo Strauss and the Politics of American Empire* (2004), scrutinizes Strauss-influenced neoconservatives who argued for the

invasion of Iraq. In *The Truth about Leo Strauss: Political Philosophy and American Democracy* (2006), Catherine and Michael Zuckert challenge misleading and inaccurate views of Strauss's ideas common in both the academy and the media, and survey his work in general. See also Paul Edward Gottfried, *Leo Strauss and the Conservative Movement in America: A Critical Reappraisal* (2012).

Also valuable are Laurence Lampert, *Leo Strauss and Nietzsche* (1996); David N. Myers, *Resisting History: Historicism and Its Discontents in German-Jewish Thought* (2003), which includes an excellent chapter on Strauss's critique of historicism; and Michael R. and Catherine H. Zuckert, *Leo Strauss and the Problem of Political Philosophy* (2014), which examines Strauss in the context of twentieth-century philosophy (e.g., Carl Schmitt, Edmund Husserl, Martin Heidegger). Liisi Keedus, *The Crisis of German Historicism: The Early Political Thought of Hannah Arendt and Leo Strauss* (2015), considers these thinkers' intellectual formation in Weimar Germany and their attitudes toward modernity, freedom, and the political fate of European Jewry. A related study is Jeffrey A. Bernstein, *Leo Strauss on the Borders of Judaism, Philosophy, and History* (2015): making use of published texts, correspondence, archival materials, and seminar transcripts, Bernstein examines the impact of Jewish thought on Strauss's studies in political philosophy and religion. Shadia B. Drury, *The Political Ideas of Leo Strauss* (1988; rev. ed., 2005), is a stimulating, though highly critical, study that includes a good bibliography. Also recommended is the bibliography in Smith's *Cambridge Companion* (see above).

Thomas Aquinas

Not all of Aquinas's works exist in critical editions, but the many volumes of the still-unfinished *Opera Omnia* (1882, *Complete Works*), edited by the Leonine Commission (commissioned by Pope Leo XIII), provide the best available Latin text. The Marietta editions, in several volumes that appeared throughout the twentieth century, reproduce the Leonine Latin text in a more convenient format with useful research aids. Nor have all Aquinas's works been translated into English. The *Summa Theologica* (also known as the *Summa Theologiae*) is available in a twenty-two-volume English edition by the Fathers of the English Dominican Province (1920–31). More recently, the Aquinas Institute has issued an eight-volume edition of the *Summa Theologiae* with Latin and English in parallel columns (2012). The *Summa Contra Gentiles* was translated by the English Dominican Fathers (1923–29). A selection of translations by various hands of Aquinas's biblical commentaries can be found in the Aquinas Scripture Series (1966–). *Thomas Aquinas: Selected Philosophical Writings*, edited by Timothy McDermott (1993; rpt. 2008), offers selections from Aquinas's writings in translation.

Denys Turner's *Thomas Aquinas: A Portrait* (2014) is a highly readable biography of the saint.

F. C. Copleston's *Aquinas* (1955) is a useful introduction to both Aquinas's philosophy and its historical background, as is *Thomas Aquinas for Beginners: A Brief Introduction to His Philosophy*, edited by Jeffrey Coleman (2012). M. D. Chenu's *Toward Understanding St. Thomas* (1964) offers a classic interpretation of Aquinas's thought. Umberto Eco's *Aesthetics of Thomas Aquinas* (1988) examines the difficulty of deriving an aesthetics from Aquinas's thought, making connections with issues in contemporary aesthetics. Norman Kretzmann and Eleanore Stump's *Cambridge Companion to Aquinas* (1993) provides ten studies designed to introduce all aspects of Aquinas's thought, including his work on biblical commentary. Jean-Pierre Torrell's two-volume study, *Saint Thomas Aquinas* (1993–96; trans. 1996–2003), offers an indispensable guide to the life and works of the saint by a member of the Leonine Commission; his *Aquinas's Summa: Background, Structure, and Reception* (1998; trans. 2005) provides a more advanced historical background for Aquinas, covering his Christian, Greek, Jewish, and Arab sources and surveying the *Summa's* influence up to the twentieth century. In *On Aquinas* (2008), the prominent British theologian Herbert McCabe elucidates the influence of Aquinas on contemporary thought. Bernard McGinn's *Thomas Aquinas's "Summa Theologiae": A Biography* (2014) tells the story of the *Summa* from the medieval world that shaped it to its subsequent influence over the past seven hundred years, while Brian Davies's *Thomas Aquinas's "Summa Theologiae": A Guide and Commentary* (2014) presents a systematic exposition of the work. *The Oxford Handbook of Aquinas*, edited by Brian Davies and Eleanore Stump (2012), includes a section on Aquinas's theory of language, and Olivier-Thomas Venard, OP, examines the central role Aquinas afforded to language in his philosophy in "Religious Imagination and Poetic Audacity in Thomas Aquinas," in *Poetry and the Religious Imagination: The Power of the Word* (ed. Francesca Bugliani Knox and David Lonsdale, 2015). Pasquale Porro examines Aquinas's complete works in chronological order, attending to Aquinas's philosophical development, influences, manuscript evidence, and historical context, in *Thomas Aquinas: A Historical and Philosophical Profile* (2012; trans. 2016). "Thomas Aquinas" by M. V. Dougherty, in the online *Oxford Bibliographies* (2014), is an up-to-date bibliography.

Tzvetan Todorov

Todorov's work falls into three periods. The first and best-known to English-speaking critics is his structuralist phase; books include *Grammar of the Decameron* (1969); *The Fantastic: A Structural Approach to a Literary Genre* (1970; trans. 1973); *The Poetics of Prose* (1971; trans. 1977),

which gathers many important essays on narrative; the *Encyclopedic Dictionary of the Sciences of Language*, coauthored with the philosopher of language Oswald Ducrot (1972; trans. 1979); and *Introduction to Poetics* (1973; trans. 1981), a good starting point in reading Todorov. In addition, he translated into French and edited an influential collection, *Théorie de la littérature: Textes des formalistes russes* (1965, *Theory of Literature: Texts of the Russian Formalists*), which introduced central writings of important Russian formalists to the French scene.

In his second phase, Todorov turned from questions of structure to those of interpretation, publishing *Theories of the Symbol* (1977; trans. 1982), *Symbolism and Interpretation* (1978; trans. 1982), *Genres in Discourse* (1978; abridged trans., 1990), and Mikhail Bakhtin: *The Dialogical Principle* (1981; trans. 1984). He also edited the anthology *French Literary Theory Today: A Reader* (1982) and published the overview *Literature and Its Theorists: A Personal View of Twentieth-Century Criticism* (1984; trans. 1987). Subsequently, Todorov took up broader issues of culture, history, and politics in more than twenty books, including *On Human Diversity: Nationalism, Racism, and Exoticism in French Thought* (1989; trans. 1993), *The Morals of History* (1991; trans. 1995), *Facing the Extreme: Moral Life in the Concentration Camps* (1991; trans. 1996), *Imperfect Garden: The Legacy of Humanism* (1998; trans. 2002), *Hope and Memory: Lessons from the Twentieth Century* (2002; trans. 2003), *The New World Disorder: Reflections of a European* (2003; trans. 2005), *The Fear of Barbarians: Beyond the Clash of Civilizations* (2008; trans. 2010), and *The Inner Enemies of Democracy* (2012; trans. 2014). He also edited two books about Bulgaria during the Holocaust and during Communist rule. The autobiography *L'Homme dépaycé* (1996, *Man without a Country*) gives an account of his life and travels, and *Duties and Delights: The Life of a Go-Between* (2002; trans. 2008) collects interviews with Catherin Portevin about his cross-cultural role.

Todorov's "grammar" of plot remains a touchstone for narrative theory. Gerald Prince's *Narratology: The Form and Functioning of Narrative* (1982) is indebted to Todorov, though it notes the limitations of the grammatical approach. Todorov is a significant actor in François Dosse's *History of Structuralism* (1992; trans. 1997), an excellent account of the major figures and events of the movement. Emma Kafalenos expands on the Propp-Todorov definition of narrative as a disruption of equilibrium; see her contribution to *Narratologies: New Perspectives on Narrative Analysis* (ed. David Herman, 1999). Todorov's seminal work in narrative theory receives comment throughout *What Is Narratology? Questions and Answers Regarding the Status of a Theory*, edited by Tom Kindt and Hans-Harald Müller (2003), and his early concept of literariness was the topic of *What Is Litera-*

ture Now?, a special issue of *New Literary History* (38.1 [2007]). For a comprehensive bibliography of Todorov's work, see David Gorman, "Tzvetan Todorov: An Anglo-French Checklist to 1995," *Style* 31 (1997).

Lionel Trilling

For the complete writings, see the Uniform Edition of the Works of Lionel Trilling, edited by Diana Trilling (12 vols., 1977–80). The best place to begin reading Trilling is the excellent 600-page collection *The Moral Obligation to Be Intelligent: Selected Essays*, edited by Leon Wieseltier (2000). *The Liberal Imagination: Essays on Literature and Society* (1950) is Trilling's most influential book. A superb guide to Trilling's life, work, critical reception, and legacy is *Lionel Trilling and the Critics: Opposing Selves*, edited by John Rodden (1999).

An essential biographical source is Diana Trilling, *The Beginning of the Journey: The Marriage of Diana and Lionel Trilling* (1993). Another important related source is Natalie Robins, *The Untold Journey: The Life of Diana Trilling* (2017). Also noteworthy is Geraldine Murphy's introduction to *The Journey Abandoned: The Unfinished Novel* (2009), one-third of a draft for a novel that Trilling did not complete. Important too are "From the Notebooks of Lionel Trilling, part 1," selected by Christopher Zinn, *Partisan Review* 51.4/52.1 (fall 1984–winter 1985); "From the Notebooks of Lionel Trilling, part 2," selected by Christopher Zinn, *Partisan Review* 54.1 (winter 1987); and Jeffrey Meyers, "Lionel Trilling and the Crisis at Columbia," *New Criterion* 21.5 (January 2003), which examines a 75-page interview with Trilling that took place in May 1968. Significant but controversial is James Trilling, "My Father and the Weak-Eyed Devils," *American Scholar* 68.2 (spring 1999), in which the author says that his father suffered from attention deficit disorder (ADD).

It is important to situate Trilling biographically and intellectually within a larger school or movement, the New York Intellectuals. *The New York Intellectuals Reader*, edited by Neil Jumonville (2007), includes major essays by Trilling, Hannah Arendt, Clement Greenberg, Irving Howe, Alfred Kazin, and others. Also illuminating is Joseph Dorman's work of oral history, *Arguing the World: The New York Intellectuals in Their Own Words* (2000), which focuses on Howe, the political essayist Irving Kristol, and the sociologists Daniel Bell and Nathan Glazer. *Prodigal Sons: The New York Intellectuals and Their World* (1986), by Alexander Bloom, is a fascinating account of the New York Intellectuals' careers and literary and cultural communities. See also Terry A. Cooney, *The Rise of the New York Intellectuals: "Partisan Review" and Its Circle* (1986); Alan M. Wald, *The New York Intellectuals: The Rise and Decline of the Anti-Stalinist Left from the 1930s to the 1980s* (1987); and Neil Jumonville, *Critical Crossings: The New York Intellectuals in Postwar America* (1991).

Useful surveys of Trilling's life and career are Edward Joseph Shoben Jr., *Lionel Trilling: Mind and Character* (1981); Stephen L. Tanner, *Lionel Trilling* (1988); and, especially, Adam Kirsch, *Why Trilling Matters* (2011), which presents Trilling as an inspiring writer and thinker who is relevant for literature and criticism today. See also *Art, Politics, and Will: Essays in Honor of Lionel Trilling*, edited by Quentin Anderson, Stephen Donadio, and Steven Marcus (1977), which includes essays on Trilling by Quentin Anderson and Daniel Bell (on his novel *The Middle of the Journey*), 1947.

For more depth and detail, see William M. Chace, *Lionel Trilling: Criticism and Politics* (1980); Mark Krupnick, *Lionel Trilling and the Fate of Cultural Criticism* (1986); and Daniel T. O'Hara, *Lionel Trilling: The Work of Liberation* (1988), which describes Trilling as a "magnanimous" critic capable of "imaginative sympathy" with minds radically different from his own. Somewhat dated but still stimulating is a chapter in Nathan A. Scott Jr., *Three American Moralists: Mailer, Bellow, Trilling* (1973). Michael Kimmage, *The Conservative Turn: Lionel Trilling, Whitaker Chambers, and the Lessons of Anti-Communism* (2009), studies the emergence of neoconservatism by focusing on the relationship between Trilling and the writer and editor Whitaker Chambers, a Communist Party member and Soviet spy who later renounced communism and became an outspoken opponent of Stalinism and the Soviet Union. Trilling used Chambers as the basis for the character Gifford Maxim in *The Middle of the Journey*.

Also recommended are Philip French, *Three Honest Men: Edmund Wilson, F. R. Leavis, and Lionel Trilling: A Critical Mosaic* (1980), the transcripts of BBC programs on these three critics, with commentaries and reminiscences by others; and Carolyn G. Heilbrun, *When Men Were the Only Models We Had: My Teachers Barzun, Fadiman, and Trilling* (2002), recollections of and reflections on three intellectuals and teachers—Trilling, Jacques Barzun, and Clifton Fadiman—by a leading feminist critic and theorist.

For additional primary and secondary sources, consult Thomas M. Leitch, *Lionel Trilling: An Annotated Bibliography* (1993). Also helpful for further reading are the extensive notes in Kimmage's *The Conservative Turn* (see above).

Giambattista Vico

The standard Italian edition of Vico's works is edited by Benedetto Croce and Fausto Nicolini (8 vols. in 11, 1914–42). English translations include *On the Study Methods of Our Time* (1709; trans. 1990); *On the Most Ancient Wisdom of the Italians* (1710; trans. 1988); *Statecraft: The Deeds of Antonio Carafa* (1716; trans. 2004); *Universal Right* (1720–22; trans. 2000); *The First New Science* (1725; trans. 2002); *The Autobiography of Giambattista Vico* (1725–28; trans. 1944); the third edition of *The New Science of Giambattista*

Vico (1744; trans. 1968, 2001), to which has been added Vico's "Practic of the New Science"; and *On Humanistic Education* (trans. 1993) and *The Art of Rhetoric* (trans. 1996), both translated and edited by Giorgio A. Pinton and Arthur W. Shippee. *Vico: Selected Writings*, edited and translated by Leon Pompa (1982), includes selections from *On the Most Ancient Wisdom of the Italians*, the 1725 version of the *New Science*, and Vico's orations. For information on Vico's life, see his autobiography cited above; Robert Flint's *Vico* (1901; rpt. 1979); and H. P. Adam's *Life and Writings of Giambattista Vico* (1935). A valuable brief introduction to the life and work is Peter Burke's *Vico* (1985).

Benedetto Croce's *Philosophy of Giambattista Vico* (1911; trans. 1913) is an important critical study that put Vico's work on the map in the early twentieth century. For a sense of the wide range and multidisciplinary nature of Vico studies, see the following three collections: *Giambattista Vico: An International Symposium*, edited by Giorgio Tagliacozzo and Hayden White (1969); *Giambattista Vico's Science of Humanity*, edited by Tagliacozzo and Donald Phillip Verene (1976); and *Vico: Past and Present*, edited by Tagliacozzo (1981). Also helpful in this regard are Max Harold Fisch and Thomas Goddard Bergin's introduction to Vico's autobiography cited above and the annual volumes of *New Vico Studies*, published by the Institute for Vico Studies. Illuminating studies of the *New Science* include Verene's *Vico's Science of the Imagination* (1981), Leon Pompa's *Vico: A Study of the New Science* (2d ed., 1990), Ernesto Grassi's *Vico and Humanism: Essays on Vico, Heidegger, and Rhetoric* (1990), Joseph Mali's *Rehabilitation of Myth: Vico's "New Science"* (1992), Giuseppe Mazzotta's *New Map of the World: The Poetic Philosophy of Giambattista Vico* (1999), Robert C. Miner's *Vico: Genealogist of Modernity* (2002), Sandra Rudnick Luft's *Vico's Uncanny Humanism: Reading the "New Science" between Modern and Postmodern* (2003), Donald Phillip Verene's *Knowledge of Things Human and Divine: Vico's "New Science" and "Finnegans Wake"* (2003), Jürgen Trabant's *Vico's New Science of Ancient Signs: A Study of Sematology* (1994; trans. 2004), *Giambattista Vico: Keys to the "New Science": Translations, Commentaries, and Essays*, edited by Thora Ilin Bayer and Donald Phillip Verene (2009), and Verene's *Vico's "New Science": A Philosophical Commentary* (2015). A philosophical and historically informed study of Vico is available in Isaiah Berlin's *Vico and Herder: Two Studies in the History of Ideas* (1976). On the subject of Marx and Vico, see *Vico and Marx: Affinities and Contrasts*, edited by Giorgio Tagliacozzo (1983). For discussions of Vico in relationship to rhetoric, see Michael Mooney's *Vico in the Tradition of Rhetoric* (1985), John D. Schaeffer's *Sensus Communis: Vico, Rhetoric, and the Limits of Relativism*

(1990), and David L. Marshall's *Vico and the Transformation of Rhetoric in Early Modern Europe* (2010). For an account of Vico's axioms, often mentioned in *New Science*, refer to James Goetsch's *Vico's Axioms: The Geometry of the Human World* (1995). Bibliographies of criticism and primary texts appear in Robert Crease's *Vico in English: A Bibliography of Writings by and about Giambattista Vico* (1978), Molly Black Verene's *Vico: A Bibliography of Works in English from 1884 to 1994* (1994), and the annual volumes of *New Vico Studies* (1983–2009), as well as Timothy Costelloe's "Giambattista Vico," in the online *Stanford Encyclopedia of Philosophy* (2014).

Kenneth W. Warren

Warren's books are *Black and White Strangers: Race and American Literary Realism* (1993), *So Black and Blue: Ralph Ellison and the Occasion of Criticism* (2003), and *What Was African American Literature?* (2011). He is co-editor, with Adolph Reed Jr., of *Renewing Black Intellectual History: The Ideological and Material Foundations of African American Thought* (2010) and, with Tess Chakkalakal, of *Jim Crow, Literature, and the Legacy of Sutton E. Griggs* (2013). An in-depth interview with Warren by Jeffrey Williams can be found in *symploke* 25.1–2 (2017). An extensive bibliography of Warren's works can be found at his homepage at the University of Chicago. Kenneth Warren's *What Was African American Literature?* is his most widely reviewed and cited work of scholarship. It generated a symposium in the *Los Angeles Review of Books* (2011) that engages his work from three different perspectives. The Modern Language Association hosted a roundtable featuring Warren and five critics, published as "Assessing *What Was African American Literature?*," or, *The State of the Field in the New Millennium*," *African American Review* 44 (2011). Marlon B. Ross's review essay in *Callaloo* 35 (2012) attacks Warren's thesis for, among other things, arguing that the distinctness of black people producing a particular kind of literature disappeared with the end of Jim Crow in the 1960s. Essays in *Contemporary African American Literature: The Living Canon*, edited by Lovalerie King and Shirley Moody-Turner (2013), provide a nuanced critique of Warren's thesis, while simultaneously recognizing the intentions of his historical methods. The contributions to "What Was African American Literature?," *PMLA* 128 (2013), a forum of seven critics with Warren's response, range from criticizing Warren's periodization to appreciating his call for and praise of certain literary texts that move beyond the past. Avram Alpert's "Epochs, Elephants, and Parts: On the Concept of History in Literary Studies," *Diacritics* 42.4 (2014), uses Warren's work as a starting point for exploring the pitfalls and possible benefits of using history in the study of literature.

Hayden White

White has served as the author, editor, or translator of a dozen books on a wide range of topics in history and literature. He was the coauthor, with Wilson H. Coates and J. Selwyn Schapiro, of the two-volume *Emergence of Liberal Humanism: An Intellectual History of Western Europe* (1966–70). He edited *The Uses of History: Essays in Intellectual and Social History* (1968); with Giorgio Tagliacozzo, *Giambattista Vico: An International Symposium* (1969); and with Wilson H. Coates, *The Ordeal of Liberal Humanism* (1970). He next published *The Greco-Roman Tradition* (1973). *Metahistory: The Historical Imagination in Nineteenth-Century Europe* (1973) was the groundbreaking study that first brought him to the attention of literary critics. His interest in historiography led him to translate from the Italian Carlo Antoni's *From History to Sociology: The Tradition in German Historical Thinking* (1976) and to collect his own 1976 Clark Library lectures into a volume titled *Theories of History* (1978). After the late 1970s, White's work became more literary in its focus, including *Tropics of Discourse: Essays in Cultural Criticism* (1978); *Representing Kenneth Burke* (1982), which he edited with Margaret Brose; *The Content of Form: Narrative Discourse and Historical Representation* (1987); and *Figural Realism: Studies in the Mimesis Effect* (1999). In *The Fiction of Narrative: Essays on History, Literature, and Theory, 1957–2007* (2010), Robert Doran has collected twenty-three of White's most important essays, many hard to find, written between 1957 and 2007. In *The Practical Past* (2014), White reaffirms his commitment to understanding history as narrative about the past, calling on historians to explore the pasts created by artistic works and literary theorists to engage with history. For a biography, see the entry on White in *Twentieth-Century, American Cultural Theorists* (ed. Paul Hansom, 2001).

For an introduction to White's work, see his entry in *Fifty Key Thinkers on History* (3d ed., ed. Marnie Hughes-Warrington, 2015). Herman Paul's *Hayden White: The Historical Imagination* (2011) is an accessible account of the development of White's thought. Two lengthy, thought-provoking reviews of *Metahistory*, Fredric Jameson's "Figural Relativism: or the Poetics of Historiography" and David Carroll's "On Tropology: The Forms of History," appeared in the journal *Diacritics* 6 (1976). The journal *History and Theory* devoted a special issue, *Metahistory: Six Critiques* (19 [1980]), to White's book. Dominick LaCapra, another historian who has written on the linguistic turn in history, offers a sympathetic evaluation in "A Poetics of Historiography: Hayden White's *Tropics of Discourse*," in his *Rethinking Intellectual History: Texts, Contexts, Language* (1983). James M. Mellard's *Doing Tropology: Analysis of Narrative Discourse* (1989) and

Hans Kellner's *Language and Historical Representation: Getting the Story Crooked* (1989) examine, critique, and extend White's approach. Russell Jacoby presents a critique of White's work in his article "A New Intellectual History," *American Historical Review* 97 (1992). By the late 1990s much of the writing on White was dominated by debate over the truth claims of history; for instance, Nancy Partner, "Hayden White (and the content and the form and everyone else) at AHA," *History and Theory* 36 (1997); Chris Lorenz, "Can Histories Be Truth? Narrativism, Positivism, and the 'Metaphorical Turn,'" *History and Theory* 37 (1998); and the cluster of essays published in *History and Theory* in 1998. *Tropes for the Past: Hayden White and the History/Literature Debate*, edited by Kuisma Korhonen (2006), offers a renewed exploration of postmodern debates between literature and historiography, while a 2008 special issue of the journal *Rethinking History* (12.1) is devoted to Hayden White's work. Produced in honor of White's eightieth birthday, *Re-Figuring Hayden White*, edited by Frank Ankersmit, Ewa Domanska, and Hans Kellner (2009), reconsiders the historian's intellectual contributions to history, poststructuralism, and narrative theory, addressing key concepts such as tropes, narrative, figuralism, and the historical sublime. In addition, it contains a bibliography of White's works. Paul's book (cited above) contains a bibliography that includes English works by and about White.

Oscar Wilde

Wilde's *Complete Works* were published in twelve volumes in 1923. *The Complete Works of Oscar Wilde*, edited by Bobby Fong and Karl Beckson, is being published by Oxford University Press (7 vols, to date, 2001–); volume 4 is *Criticism: Historical Criticism, "Intentions," "The Soul of Man,"* edited by Josephine M. Guy (2007). There are a number of one-volume collections, including *Oscar Wilde: Selected Writings*, edited by Richard Ellmann (1961), and *Selected Writings of Oscar Wilde*, edited by Russell Fraser (1969). The best, because it is annotated, is *Oscar Wilde*, edited by Isobel Murray (1989). For the correspondence, see the volumes edited by Rupert Hart-Davis, *Letters* (1962) and *More Letters* (1985), and *The Complete Letters of Oscar Wilde*, edited by Merlin Holland and Rupert Hart-Davis (2000). For his literary criticism, consult *Literary Criticism of Oscar Wilde*, edited by Stanley Weintraub (1968), and *The Artist as Critic: Critical Writings of Oscar Wilde*, edited by Richard Ellmann (1969).

Biographies include Hesketh Pearson, *The Life of Oscar Wilde* (1946), a good overview of Wilde's career that deals well with his shift from poetry to fiction and drama, and Richard Ellmann, *Oscar Wilde* (1988), a major study, especially in its account of Wilde's early life and his response to John Ruskin, Walter Pater, Henry James, and con-

temporary French writers. Neil McKenna, *The Secret Life of Oscar Wilde* (2005), examines Wilde's life as a gay man and shows the centrality of his homosexuality to his identity, literary work, and politics. Vyvyan Holland, *Oscar Wilde: A Pictorial Biography* (1960), is also valuable. H. Montgomery Hyde has edited *The Trials of Oscar Wilde* (1948); see also Hyde's *The Three Trials of Oscar Wilde* (1956) and *Oscar Wilde in Prison* (1956). Other resources include *Oscar Wilde: Interviews and Recollections*, edited by E. H. Mikhail (2 vols., 1979); *Oscar Wilde's Oxford Notebooks*, edited by Philip E. Smith II and Michael S. Helfand (1989); and Norman Page, *An Oscar Wilde Chronology* (1991). A very good resource is *Oscar Wilde in Context*, edited by Kerry Powell and Peter Raby (2013), with a wide range of essays on many topics, including Wilde's influence and reputation. On the twenty-seven-year-old Wilde's eleven-month speaking tour of the United States, which began in New York City in January 1882, see Roy Morris Jr., *Declaring His Genius: Oscar Wilde in North America* (2013); David M. Friedman, *Wilde in America: Oscar Wilde and the Invention of Modern Celebrity* (2014); and *Oscar Wilde in America: The Interviews*, edited by Matthew Hofer and Gary Scharnhorst (2010). See also *The Reception of Oscar Wilde in Europe*, edited by Stefano Evangelista (2010).

Collections surveying the critical and scholarly response to Wilde include *Oscar Wilde: A Collection of Critical Essays*, edited by Richard Ellmann (1969); *Oscar Wilde: The Critical Heritage*, edited by Karl Beckson (1970); *Critical Essays on Oscar Wilde*, edited by Regenia Gagnier (1991); and *Oscar Wilde: A Collection of Critical Essays*, edited by Jonathan Freedman (1996).

Lawrence Danson, *Wilde's Intentions: The Artist in His Criticism* (1997), is an excellent treatment of Wilde's views on literature and criticism. A number of studies in the 1990s focused on the social, sexual, and cultural issues that Wilde's life and, especially, his trial and imprisonment dramatize. Among these are Eve Kosofsky Sedgwick, *Epistemology of the Closet* (1990); Patricia Flanagan Behrendt, *Oscar Wilde: Eros and Aesthetics* (1991); Ed Cohen, *Talk on the Wilde Side: Toward a Genealogy of a Discourse on Male Sexualities* (1993); Melissa Knox, *Oscar Wilde: A Long and Lovely Suicide* (1994); Gary Schmidgall, *The Stranger Wilde: Interpreting Oscar* (1994); Alan Sinfield, *The Wilde Century: Effeminacy, Oscar Wilde, and the Queer Moment* (1994); and John Stokes, *Oscar Wilde: Myths, Miracles, and Imitations* (1996). Julia Prewitt Brown, *Cosmopolitan Criticism: Oscar Wilde's Philosophy of Art* (1997), deals succinctly with Wilde's aesthetic theory and its influence on later writers. Michael S. Foldy, *Trials of Oscar Wilde: Deviance, Morality, and Late-Victorian Society* (1998), describes the range of threats (including, but not limited to, deviant sexuality) that English society associated with Wilde. *Wilde the Irishman*,

edited by Jerusha McCormack (1998), deals with the Irish dimension of Wilde's work and with the responses to Wilde by poets, playwrights, sculptors, and others. See also Bruce Bashford, *Oscar Wilde: The Critic as Humanist* (1999). Recent work includes Kerry Powell, *Acting Wilde: Victorian Sexuality, Theatre, and Oscar Wilde* (2009), which contends that Wilde's plays, fiction, and critical theory are centered on the idea that reality is a mode of performance; S. I. Salamensky, *The Modern Art of Influence and the Spectacle of Oscar Wilde* (2012), on Wilde as "the first modern man"; and Emer O'Sullivan, *The Fall of the House of Wilde: Oscar Wilde and His Family* (2016), which presents a fascinating, detailed account of Wilde's parents and older brother and their impact on his life and career; Dominic Janes, *Visions of Queer Martyrdom from John Henry Newman to Derek Jarman* (2015), has an excellent chapter on Wilde. Reference works include Stuart Mason, *Bibliography of Oscar Wilde* (1914); Thomas A. Mikolyzk, *Oscar Wilde: An Annotated Bibliography* (1993); Ian Small, *Oscar Wilde Revalued: An Essay on New Materials and Methods of Research* (1993); and Karl Beckson, *The Oscar Wilde Encyclopedia* (1998). A good bibliography is included in Powell and Raby's *Oscar Wilde in Context* (see above).

Raymond Williams

Raymond Williams published more than thirty books and approximately six hundred articles during his lifetime, spanning a wide range, from drama, poetry, and novel criticism to cultural history and media studies to literary theory and political commentary. Williams's early books include *Reading and Criticism* (1950), *Drama from Ibsen to Eliot* (1952; rev. as *Drama from Ibsen to Brecht*, 1968); and *Drama in Performance* (1954; rev. ed., 1968). He also published a textbook, *Preface to Film*, coauthored with Michael Orrom (1954). *Culture and Society, 1780–1950* (1958), a key text for British cultural studies, is a good place to enter his work. Its sequels include *Keywords: A Vocabulary of Culture and Society* (1976; new [3d] ed., 2015), originally planned as an appendix, and *The Long Revolution* (1961).

Williams helped pioneer media studies and the emerging discipline of communications with *Communications* (1962; 3d ed., 1976); *Television: Technology and Cultural Form* (1974) is one of the first significant studies of that medium. *Modern Tragedy* (1966; rev. ed., 1979) continued his work in drama. He co-edited *May Day Manifesto*, a response to the political events of the 1960s (1967; 2d ed., 1968), with his student Stuart Hall. Williams returned to literary criticism with *The English Novel from Dickens to Lawrence* (1970), *George Orwell* (1971), and *The Country and the City* (1973).

His *Marxism and Literature* (1977) is a good introduction to Williams's more theoretical considerations of culture and society. *Problems in Material-*

ism and Culture: Selected Essays (1980) elaborates his theory of "cultural materialism," and *Culture* (1981; retitled *The Sociology of Culture*, 1982) is a sequel to *Marxism and Literature*. A lengthy collection of interviews, *Politics and Letters: Interviews with New Left Review* (1979; reprint with new intro., 2015), provides an accessible overview of his life and thought. His collections of occasional writings include *Writing in Society* (1984); the posthumous *The Politics of Modernism: Against the New Conformists*, edited by Tony Pinkney (1989); and *Resources of Hope: Culture, Democracy, Socialism*, edited by Robin Gable (1989). *What I Came to Say* (1990) offers a short political summation. *The Raymond Williams Reader*, edited by John Higgins (2001), and *Raymond Williams on Culture and Society: Essential Writings*, edited by Jim McGuigan (2014), present good selections from the range of Williams's work, and the former includes a good bibliography.

Williams edited a number of anthologies on literary figures, drama, and communications, and he regularly published fiction throughout his career, including a trilogy of working-class life in Wales, *Border Country* (1960), *Second Generation* (1964), and *The Fight for Manod* (1979). He also wrote short stories, plays, and television scripts.

The secondary literature on Williams's life and work is considerable. A comprehensive biography, Fred Inglis's *Raymond Williams* (1995) presents a detailed picture of Williams's life. John and Lizzie Eldridge's *Raymond Williams: Making Connections* (1994) is a useful introduction to the many aspects of Williams's work; see also Alan O'Connor, *Raymond Williams* (2006). There are a number of collections: notably, *Raymond Williams: Critical Perspectives*, edited by his student Terry Eagleton (1989), which gathers essays by Stuart Hall, Said, Eagleton, and others, as well as an interview Eagleton conducted with Williams; *Cultural Materialism: On Raymond Williams*, edited by Christopher Prendergast (1995), which presents examinations by contemporary critics; and *About Raymond Williams*, edited by Monika Seidl, Roman Horak, and Lawrence Grossberg (2010). The best single-authored account, John Higgins's *Raymond Williams: Literature, Marxism and Cultural Materialism* (1999), covers all Williams's work, from his early interest in drama to his political interventions. Stephen Woodhams's *History in the Making: Raymond Williams, Edward Thompson and Radical Intellectuals, 1936–1956* (2001) describes his generation's political formation. *Raymond Williams: A Warrior's Tale* (2008), by Dai Smith, draws on new information to recount Williams's biography up to 1962.

Raymond Williams, edited by Eagleton, appends a chronological bibliography of all of Williams's writing, as well as a selected secondary bibliography. Higgins's *Raymond Williams* also includes a chronological bibliography of his writings and a good listing of secondary sources.

**William K. Wimsatt Jr. and
Monroe C. Beardsley**

Wimsatt's books on eighteenth-century literature include *The Prose Style of Samuel Johnson* (1941) and *Philosophic Words: A Study of Style and Meaning in the "Rambler" and "Dictionary" of Samuel Johnson* (1948). He is best known for his literary theory and criticism, notably *The Verbal Icon: Studies in the Meaning of Poetry* (1954), *Hateful Contraries: Studies in Literature and Criticism* (1965), *Day of the Leopards: Essays in Defense of the Poem* (1976), and, with Cleanth Brooks, *Literary Criticism: A Short History* (1957). Beardsley's books include *Aesthetics: Problems in the Philosophy of Criticism* (1958) and *Aesthetics from Classical Greece to the Present* (1966). Secondary sources on Wimsatt include Eliseo Vivas, "Mr. Wimsatt on the Theory of Literature," in *The Artistic Transaction and Essays on Theory of Literature* (1963); *Literary Theory and Structure: Essays in Honor of W. K. Wimsatt*, edited by Frank Brady, John Palmer, and Martin Price (1973); and René Wellek, "The Literary Theory of William K. Wimsatt," *Yale Review* 66 (1977). See also the overview by Robert Moynihan, in *Dictionary of Literary Biography*, vol. 63, *Modern American Critics, 1920–1955* (ed. Gregory S. Jay, 1988), which contains biographical and bibliographical information. In *Literary Intention, Literary Interpretation, and Readers* (2009), John Maynard explores the concepts and theories at the center of debates about intentionality and interpretation, practical criticism, reception theory, and critique of ideology. Other than the two classic essays he coauthored with Wimsatt, Beardsley's work in philosophical aesthetics has had little impact in the field of literary criticism.

Monique Wittig

Wittig is the author of four novels that have been influential for feminist theorists: *The Opoponax* (1964; trans. 1966); *The Guérillères* (1969; trans. 1971); *The Lesbian Body* (1973; trans. 1975); and *Across the Acheron* (1985; trans. 1987). She also published with Sande Zeig *Lesbian Peoples: Material for a Dictionary* (1976; trans. 1987). *The Straight Mind and Other Essays*, a collection of Wittig's essays (mostly written in English for *Feminist Issues*), was published in 1992. Excerpts of Wittig's early works are included in *The New French Feminisms* (ed. Elaine Marks and Isabelle de Courtivron, 1980). *On Monique Wittig: Theoretical, Political, and Literary Essays*, edited by Namaschar Shaktini (2005), includes previously unpublished work by Wittig, as well as several new critical and theoretical essays by French, Franco-phone, and U.S. writers.

For biographical information on Wittig, see the useful entry by Jeannelle Laillou Savona in *Feminist Writers* (ed. Pamela Kester-Shelton, 1996). Most critical writing on Wittig has focused on her fiction. Alice Jardine's "Pre-Texts for the Transatlantic Feminist," *Yale French Studies* 62 (1981), and

Hélène Vivienne Wenzel's "The Text as Body/Politics: An Appreciation of Monique Wittig's Writings in Context," *Feminist Studies* 7 (1981), are two of the earliest theoretical considerations of Wittig's work to appear in English. Teresa de Lauretis examines Wittig's lesbian materialism in "Sexual Indifference and Lesbian Representation," *Theatre Journal* 40 (1988). Diana Fuss's chapter on Monique Wittig in *Essentially Speaking: Feminism, Nature, and Difference* (1989) and Judith Butler's in *Gender Trouble: Feminism and the Subversion of Identity* (1990) include important discussions of Wittig's contribution to the essentialism debate. Erika Ostrovsky's *Constant Journey: The Fiction of Monique Wittig* (1991) charts the relationship between fiction and theory in Wittig's writing. For an analysis of Wittig as a lesbian theorist, see Dianne Chisholm's "Lesbianizing Love's Body: Interventions and Imaginings of Monique Wittig," in *Reimagining Women: Representations of Women in Culture* (ed. Shirley Neuman and Glennis Stephenson, 1993), and Renate Gunther, "Are Lesbians Women? The Relationship between Lesbianism and Feminism in the Works of Luce Irigaray and Monique Wittig," in *Gay Signatures: Gay and Lesbian Theory, Fiction, and Film in France, 1945–1995* (ed. Owen Heathcote, Alex Hughes, and James S. Williams, 1998). *GLQ: A Journal of Lesbian and Gay Studies* published a special issue, *Monique Wittig: At the Crossroads of Criticism*, edited by Brad Epps and Jonathan Katz (13.4 [2007]); it includes essays by Alice Jardine, Diane Griffin Crowder, Robyn Wiegman, Judith Butler, and Wittig herself. For a bibliography of works by and about Wittig, see *French Feminist Thought: Michèle Le Doeuff, Monique Wittig, Catherine Clément: A Bibliography*, edited by Joan Nordquist (1993). An updated biography and bibliography can be found in Shaktini's *On Monique Wittig*.

Mary Wollstonecraft

Mary Wollstonecraft has been well served by modern editors. Her complete works have been edited in seven volumes by Janet Todd and Marilyn Butler (1989), and *A Vindication of the Rights of Woman* is available in several accessible editions. Her two novels *Mary* and *Maria* (along with *Matilda*, an early novel by Mary Wollstonecraft Shelley, her daughter) have been published in a single volume edited by Janet Todd (1991). An excellent edition of the two *Vindications*, with helpful notes and appendixes, has been prepared by D. L. Macdonald and Kathleen Scherf (1997). Following the first modern scholarly biography, Ralph Wardle's *Mary Wollstonecraft* (1951), numerous others have appeared; particularly noteworthy are Claire Tomalin's *Life and Death of Mary Wollstonecraft* (1974), Gary Kelly's *Revolutionary Feminism: The Mind and Career of Mary Wollstonecraft* (1992), Janet Todd's *Mary Wollstonecraft: A Revolutionary Life* (2000), Lyndall Gordon's *Vindication: A*

Life of Mary Wollstonecraft (2005), and Charlotte Gordon's biography of mother and daughter, *Romantic Outlaws: The Extraordinary Lives of Mary Wollstonecraft and Her Daughter Mary Shelley* (2015). Many general studies of Wollstonecraft devote substantial space to the intertwining of her life and work: good basic introductions include Moira Ferguson and Janet Todd's *Mary Wollstonecraft* (1984), Jennifer Lorch's *Mary Wollstonecraft: The Making of a Radical Feminist* (1990), and Harriet Jump's *Mary Wollstonecraft: Writer* (1994). For a good selection of essays, see *Feminist Interpretations of Mary Wollstonecraft*, edited by Maria Falco (1996), and *The Cambridge Companion to Mary Wollstonecraft*, edited by Claudia L. Johnson (2002). To contextualize Wollstonecraft within the aesthetics and politics of her day, see Mary Poovey, *The Proper Lady and the Woman Writer: Ideology as Style in the Works of Mary Wollstonecraft, Mary Shelley, and Jane Austen* (1984); the debate about Enlightenment "reason" between Timothy Reiss and Frances Ferguson in *Gender and Theory* (ed. Linda Kauffman, 1989); Synda Conger, *Mary Wollstonecraft and the Language of Sensibility* (1994); and Claudia Johnson's discussion of politics, gender, and sentimentality in *Equivocal Beings: Politics, Gender, and Sentimentality in the 1790s* (1995). Susan Gubar's examination of current feminist criticism, *Critical Condition: Feminism at the Turn of the Century* (2000), contains an analysis of Wollstonecraft's own misogyny. Janet Todd's *Mary Wollstonecraft: An Annotated Bibliography* (1976) is helpful for the period before the flowering of contemporary feminist criticism, but it needs updating. The *Cambridge Companion* contains a useful bibliography, as does Gordon's *Romantic Outlaws*.

Virginia Woolf

Most of Woolf's works are available in easily accessible editions. *A Room of One's Own* and *Three Guineas*, edited by Hermione Lee, were published together in 1984. Woolf's other essays on women's writing, edited by Michèle Barrett, were published as *Women and Fiction* (1979). In addition to her novels and her feminist essays, Woolf collected some of her articles in two volumes called *The Common Reader* (1925, 1932). Before he died in 1969, Leonard Woolf edited her *Collected Essays* (4 vols., 1967); he also edited *A Writer's Diary* (1953), now superseded by *The Diary of Virginia Woolf*, edited by Anne Olivier Bell (5 vols., 1977–84), and *A Passionate Apprenticeship: The Early Journals, 1897–1909*, edited by Mitchell Leaska (1990). See also *The Letters of Virginia Woolf*, edited by Nigel Nicolson and Joanne Trautmann (6 vols., 1975–80). *The Platonic Form of Time: Memoirs of Family and Friends*, edited by S. P. Rosenbaum (2007), gives the reader insight into her inner life and writings.

There are more than a dozen biographies of Woolf. The first, *Virginia Woolf*, was written by

her nephew, Quentin Bell, in 1973. The most even-handed and well-researched recent biography is Hermione Lee's monumental *Virginia Woolf* (1996). Julia Briggs's *Virginia Woolf: An Inner Life* (2005) is in many respects a biography of Woolf and her process of writing, as is Alexandra Harris's *Virginia Woolf* (2011). The flavor of the many "diagnostic" biographical studies can be gleaned from Alma Halbert Bond's *Who Killed Virginia Woolf? A Psychobiography* (1989), the kind of Freudian reading that has given Freudian readings a bad name; Louise de Salvo's *Virginia Woolf: The Impact of Childhood Sexual Abuse on Her Life and Work* (1989); and Mitchell Leaska's *Granite and Rainbow* (1998), which attributes all Woolf's creativity to her repressed relationship with her father.

The history of Woolf criticism mirrors the larger changes in twentieth- and twenty-first-century criticism. An invaluable collection of contemporary reviews was published as *Virginia Woolf: The Critical Heritage*, edited by Robin Majumdar and Allen McLaurin (1975), which includes acerbic reviews in the journal *Scrutiny* (the most memorable may be Q. D. Leavis's review of *Three Guineas*). Woolf's canonization as a modernist is perhaps best illustrated by her inclusion in Erich Auerbach's monumental *Mimesis: The Representation of Reality in Western Literature* (1946). Early feminist criticism was often critical of Woolf: Elaine Showalter's *A Literature of Their Own* (1977), despite its title, dismisses Woolf's experience of femininity. But Jane Marcus's edited collections—*New Feminist Essays on Virginia Woolf* (1981) and *Virginia Woolf: A Feminist Slant* (1983)—began revising that picture; and when, in her groundbreaking *Textual/Sexual Politics* (1985), Toril Moi contrasted Anglo-American feminism's desire for realism with French feminism's interest in textuality, she called for a rereading of Woolf's style that has continued to this day. See, particularly, *Virginia Woolf: A Collection of Critical Essays*, edited by Margaret Homans (1993); Ellen Bayuk Rosenman, *A Room of One's Own: Women Writers and the Politics of Creativity* (1995); and Jane Goldman, *The Feminist Aesthetics of Virginia Woolf: Modernism, Post-Impressionism, and the Politics of the Visual* (1998). The emergence of gay and lesbian studies has focused new attention on the relationship between Virginia Woolf and Vita Sackville-West. Suzanne Raitt's *Vita and Virginia* (1993) gives a good overview of the relationship of the two writers, whose letters were dramatized in 1994 by Eileen Atkins in her play *Vita and Virginia* (starring Atkins and Vanessa Redgrave). Other valuable studies include Elizabeth Abel, *Virginia Woolf and the Fictions of Psychoanalysis* (1989); Pamela Caughie, *Virginia Woolf and Postmodernism* (1991); Gillian Beer, *Virginia Woolf: The Common Ground* (1996); and Rachel Bowlby, *Feminist Destinations and Further Essays on Virginia Woolf* (1997). In *Virginia Woolf and the Victorians* (2007), Steve Ellis breaks with

the traditional reading of Woolf as the consummate modernist to argue that her oeuvre is post-Victorian. Finally, Justyna Kostkowska's *Ecocriticism and Women Writers: Environmentalist Poetics of Virginia Woolf, Jeanette Winterson, and Ali Smith* (2013) represents growing interests in ecocriticism, while Alice Wood's *Virginia Woolf's Late Cultural Criticism: The Genesis of "The Years," "Three Guineas" and "Between the Acts"* (2013) examines Woolf's social and political commentaries in her later writings.

There are also two useful resources for Woolf studies: Edward Bishop's day-to-day chronicle of Woolf's activities, *A Virginia Woolf Chronology* (1989), and Mark Hussey's dictionary of Woolf information, *Virginia Woolf A to Z* (1995). The proceedings of the annual Virginia Woolf conference are published by Pace University Press (1992–). B. J. Kirkpatrick and Stuart N. Clarke compiled *A Bibliography of Virginia Woolf* (1997); an online bibliographic update, *The Virginia Woolf Miscellany*, initially published by Sonoma State University (1973–2002), is now issued by Southern Connecticut State University. *The Cambridge Companion to Virginia Woolf*, edited by Susan Sellers (2d ed., 2010), offers a useful selective bibliography, as does Alice Wood's *Late Cultural Criticism* (2013).

William Wordsworth

A new complete edition, under the general editorship of Stephen Parrish, has been published in 21 volumes by Cornell University Press (1975–2007). For the criticism and related prose writings, see *Prose Works*, edited by W. J. B. Owen and J. M. Smyser (3 vols., 1974). Collections of Wordsworth's critical prose include *The Critical Opinions of William Wordsworth*, edited by Markham L. Peacock (1950), which presents 450 pages of primary source quotations divided into three categories—subjects, authors, and works, plus Wordsworth on his own works; *Literary Criticism of William Wordsworth*, edited by Paul M. Zall (1966); and *Wordsworth's Literary Criticism*, edited by W. J. B. Owen (1974). A good single-volume edition of the poetry and prose is *William Wordsworth*, in the Oxford Authors Series, edited by Stephen Gill (1984). *Wordsworth's Poetry and Prose: Authoritative Texts, Criticism*, edited by Nicholas Halmi (2014), is an excellent collection of primary and secondary sources and has a very good bibliography.

The standard biography, *William Wordsworth: A Biography*, is by Mary Moorman (2 vols., 1957–65), but Stephen Gill's *William Wordsworth: A Life* (1989) and Juliet Barker's *Wordsworth: A Life* (2000) are also valuable. On the poet's early adulthood, see Kenneth R. Johnston, *The Hidden Wordsworth: Poet, Lover, Rebel, Spy* (1998). John Worthen, *The Life of William Wordsworth: A Critical Biography* (2014), is especially good on the poet's early years. See also Mark L. Reed, *Wordsworth: The Chronology of the Early Years, 1770–*

1799 (1967) and *Wordsworth: The Chronology of the Middle Years, 1800–1815* (1975). For intellectual and literary contexts, consult Duncan Wu, *Wordsworth's Reading, 1770–1799* (1993) and *Wordsworth's Reading, 1800–1815* (1995). *The Cambridge Companion to Wordsworth*, edited by Stephen Gill (2003), includes essays on Wordsworth's life and career and a stimulating piece by Seamus Perry on the Wordsworth–Coleridge relationship.

For an excellent study of Wordsworth's Preface as well as an edition of the text, see *Wordsworth's Preface to "Lyrical Ballads,"* edited by W. J. B. Owen (1957). Also insightful is Owen's *Wordsworth as Critic* (1969). There is an extensive body of scholarship on the relationship between Wordsworth and Coleridge and its importance for literary theory and criticism. Among the best books on this topic are Lucy Newlyn, *Coleridge, Wordsworth, and the Language of Allusion* (1986); Theresa M. Kelley, *Wordsworth's Revisionary Aesthetics* (1988); Paul Magnuson, *Coleridge and Wordsworth: A Lyrical Dialogue* (1988); Nicholas Roe, *Wordsworth and Coleridge: The Radical Years* (1988); and Susan Eilenberg, *Strange Power of Speech: Wordsworth, Coleridge, and Literary Possession* (1992). For commentary on Wordsworth's theory of poetry, epistemology, and philosophy, see the essays in *Wordsworth's Poetic Theory: Knowledge, Language, Experience*, edited by Alexander Regier and Stefan H. Uhlig (2010). Recent books include Stephen Gill, *Wordsworth's Revisitings* (2011), an illuminating study of Wordsworth's revisions of his poems, especially *The Prelude*; Scott Hess, *William Wordsworth and the Ecology of Authorship: The Roots of Environmentalism in Nineteenth-Century Culture* (2012), an account (and critique) of Wordsworth's motives and commitments as laureate, resident, guide, and defender of England's Lake Country; Mary Jacobus, *Romantic Things: A Tree, a Rock, a Cloud* (2012), which examines Wordsworth's lyric poetry through modern and contemporary philosophy and literary theory; and Adam Potkay, *Wordsworth's Ethics* (2013), which argues that Wordsworth rejects the utilitarianism espoused by his contemporaries James Mill and Jeremy Bentham in favor of a view of ethics founded in relationships with particular persons and things. David Rosen, *Power, Plain English, and the Rise of Modern Poetry* (2006), offers a stimulating account of the influence of Wordsworth's poetic theory and practice on the work of William Butler Yeats, T. S. Eliot, and W. H. Auden.

See also three collections of essays: *The Age of William Wordsworth*, edited by Kenneth R. Johnston and Gene W. Ruoff (1987); *Romantic Revolutions: Criticism and Theory*, edited by Kenneth R. Johnston (1990); and *Wordsworth in Context*, edited by Pauline Fletcher and John Murphy (1992). For further background and bibliography, see the relevant entries in *The English Romantic Poets: A Review of Research and Criticism* (ed. Frank

Jordan, 1985), and *British Romantic Poets, 1789–1832*, first and second series (ed. John R. Greenfield, 1990). *Literature of the Romantic Period: A Bibliographical Guide*, edited by Michael O'Neill (1998), is valuable for the study of Wordsworth and his contemporaries. See also *An Annotated Critical Bibliography of William Wordsworth* by Keith Hanley and David Barron (1995). The list of primary and secondary sources included in William Wordsworth, *The Major Works*, edited by Stephen Gill (rev. ed., 2000) is also helpful. There is a good bibliography in *The Cambridge Companion to Wordsworth*, as well as cogent essays on Wordsworth's views on language, philosophy, politics, and history and his central place in the Romantic movement.

Slavoj Žižek

Perhaps the best way into Žižek's writing is through *The Žižek Reader*, edited by Elizabeth and Edmond Wright (1999), which offers a selection of key essays written before 1999. Rex Butler and Scott Stephens collected important essays of Žižek's in two volumes, *Interrogating the Real* (2005) and *The Universal Exception* (2006). Žižek first emerged in the West with the publication of *The Sublime Object of Ideology* (1989). Since then, he has written or edited at least one and sometimes two or more books almost every year. *Looking Awry: An Introduction to Jacques Lacan through Popular Culture* (1991) and *For They Know Not What They Do: Enjoyment as a Political Factor* (1991; 2d ed., 2008), which explores the place of Lacan's *jouissance* in political theory, was followed by *Everything You Always Wanted to Know about Lacan (But Were Afraid to Ask Hitchcock)* (1992), a collection of essays on Hitchcock that includes the work of his Slovenian colleagues Mladen Dolar, Renata Salecl, and Alenka Zupančič, and *Enjoy Your Symptom! Lacan in Hollywood and Out* (1992; rev. ed., 2001), an exploration of the Lacanian symptom in popular culture. Žižek returned to the subject of ideology in *Tarrying with the Negative: Kant, Hegel, and the Critique of Ideology* (1993). He then published *Metastases of Enjoyment: Six Essays on Women and Causality* (1994); *Mapping Ideology*, edited by Žižek (1994); *The Indivisible Remainder: An Essay on Schelling and Related Matters* (1996); *Gaze and Voice as Love Objects*, edited by Renata Salecl and Žižek (1996); *The Plague of Fantasies* (1997); *The Abyss of Freedom: Ages of the World* (1997), which pairs an essay by the philosopher Schelling with his commentary; *The Spectre Is Still Roaming Around!* (1998), a commentary on Marx's *Communist Manifesto*; and *Cogito and the Unconscious*, edited by Žižek (1998). Žižek then became more focused on politics and religion, publishing *The Ticklish Subject: The Absent Centre of Political Ontology* (1999), *NATO as the Left Hand of God?* (1999), and *The Fragile Absolute, or Why Is the Christian Legacy Worth*

Fighting For? (2000). He also gave a series of lectures at the University of Washington that were published as *The Art of the Ridiculous Sublime: On David Lynch's Lost Highway* (2000) and joined Judith Butler and the Argentinean political theorist Ernesto Laclau in a dialogue on contemporary philosophy and politics in *Contingency, Hegemony, Universality: Contemporary Dialogues on the Left* (2000). In 2001, an extraordinarily productive year even by his standards, Žižek published *Opera's Second Death*, with Mladen Dolar; *The Fright of Real Tears: Krzysztof Kieślowski between Theory and Post-Theory*, a book on film theory; *Did Somebody Say Totalitarianism? Five Essays in the (Mis)Use of a Notion: On Belief; and Repeating Lenin*. There followed *Welcome to the Desert of the Real* (2002), on the attacks of 9/11; *The Puppet and the Dwarf: The Perverse Core of Christianity* (2003); *Organs without Bodies: On Deleuze and Consequences* (2004); and further reflections on contemporary events, *Iraq: The Borrowed Kettle* (2004). He collaborated with the literary scholars Eric L. Santner and Kenneth Reinhard on *The Neighbor: Three Inquiries in Political Theology* (2005), exploring the meaning of the biblical injunction to "love thy neighbor," and then published the book he considers his most significant work to date, *The Parallax View* (2006), which argues for his revision of the Hegelian dialectic. In 2007, Žižek published *How to Read Lacan* in the Norton "How to Read" series. 2008 saw the publications of *In Defense of Lost Causes* (2008) and *Violence* (2008). Žižek explored the post-9/11 world in *Violence: Six Sideways Reflections* (2008), *First as Tragedy, Then as Farce* (2009), *The Year of Dreaming Dangerously* (2012), and *Trouble in Paradise: From the End of History to the End of Capitalism* (2014). Religion and politics came together in *Living in the End Times* (2010). *Less Than Nothing: Hegel and the Shadow of Dialectical Materialism* (2012), *Event* (2014), *Absolute Recoil: Towards a New Foundation of Dialectical Materialism* (2014), and *The Most Sublime Hysteric: Hegel with Lacan* (2014) all investigate challenging problems in contemporary philosophy. With Srećko Horvat, Žižek published *What Does Europe Want? The Union and Its Discontents* (2015). In 2017, the centennial of the Russian Revolution, he published *Lenin 2017: Remembering, Repeating, and Working Through* a monograph reevaluating the political significance of the writing produced by its major architect, Vladimir Lenin. Tony Myers includes a brief but useful biography in his introduction to the theorist, Slavoj Žižek (2003).

Žižek publishes so quickly that his critics and admirers are hard-pressed to keep up with him. There are several introductory volumes, the most useful of which are Sarah Kay, *Žižek: A Critical Introduction* (2003), and, more recently, Kelsey Wood, *Žižek: A Reader's Guide* (2012). Christopher Kul-Want and Piero's *Introducing Slavoj Žižek: A Graphic Guide* (2011) offers an introduc-

tion through cartoons. Ian Parker, *Slavoj Žižek: A Critical Introduction* (2004), contains a helpful discussion of Slovenia's complex history between World War II and the present. Rex Butler, *Slavoj Žižek: Live Theory* (2005), and *Žižek and Politics: A Critical Introduction* (2010) by Matthew Sharpe and Geoff Boucher offer more advanced introductions. Glyn Daly collects his talks with Žižek in a volume titled *Conversations with Žižek* (2004). Matthew Sharpe's *Slavoj Žižek: A Little Piece of the Real* (2004) and Jodi Dean's *Žižek's Politics* (2006) examine his political thinking. Terry Eagleton has a lucid chapter on Žižek in *Figures of Dissent: Critical Essays on Fish, Spivak, Žižek and Others* (2003), as does Geoffrey Galt Harpham in *The Character of Criticism* (2006). In *Žižek's Ontology: A Transcendental Materialist Theory of Subjectivity* (2008), Adrian Johnston offers an account of Žižek's engagement with German idealist philosophy. *Žižek: Beyond Foucault* (2007) by Fabio Vighi and Heiko Feldner stages an encounter between the two contemporary thinkers. Several critical books examine Žižek in relation to other philosophers, including

Thomas P. Brockelman, *Žižek and Heidegger: The Question Concerning Techno-capitalism* (2008); Adrian Johnston, *Badiou, Žižek, and Political Transformations: The Cadence of Change* (2009); and Geoff Boucher, *The Charmed Circle of Ideology: A Critique of Laclau and Mouffe, Butler and Žižek* (2009). Fabio Vighi's *On Žižek's Dialectics: Surplus, Subtraction, Sublimation* (2010) attempts to politicize Žižek's critical method. *Žižek Now: Current Perspectives in Žižek Studies*, edited by Jamil Khader and Molly Anne Rothenberg (2012), explores Žižek's contributions to several disciplines. *Žižek and His Contemporaries: On the Emergence of the Slovenian Lacan*, edited by Jones Irwin and Helena Motah (2014), places Žižek's writing within the context of Slovenian politics and intellectual life, tracking the Slovenian interventions in Lacanian psychoanalysis. *The Žižek Dictionary*, edited by Rex Butler (2014), contains a series of brief essays illuminating keywords in the philosopher's work. It also contains a fairly detailed bibliography; the most up-to-date bibliography can be found on the website of the journal *Lacanian Ink*.
